Dawn brought a significant innovation in air support. Circling above the 11-mile column inching toward Koto-ri was an airborne Tactical Air Direction Center (TADC) installed in an R5D of VMR-152 and operated by Major Harlen E. Hood and his communicators from MTACS-2. Major Christian C. Lee, Commanding Officer of MTACS-2, had made arrangements when he realized that with his radios packed in trucks and jeeps he could not control close air support effectively. Only the addition of one radio to those standard in the aircraft was necessary to provide basic communications, but when being readied for the predawn takeoff the mission faced failure because an engine wouldn’t start. Minus a refueler truck, the crew chief, Technical Sergeant H. C. Stuart, had worked all night to pour 2400 gallons of gas into the craft by hand. Now, in the bitter cold of dawn, he set about to overhaul the starting motor. Two hours later Major John N. Swartley was piloting the plane over the MSR.[30]

No trouble was encountered by 2/7 along the last few miles of the route and the battalion was first to arrive at Koto-ri. Meanwhile, the 3d Battalion had been assigned the additional mission of replacing the Provisional Battalion as protection for the left flank as well as rear of the 7th Marines train. A brief fire fight developed at about 2100 as the Chinese closed to hand-grenade range. Lieutenant Colonel Harris deployed George and Item Companies around the vehicles and drove the enemy back to a respectful distance. Between 0200 and 0430, Item Company of 3/7 and a platoon of tanks were sent back up the road to clear out a troublesome Chinese position near Hell Fire Valley.

About 0200, during a halt for bridge repairs, the 7th Marines train was hit by enemy fire. The regimental command group suffered most. Captain Donald R. France and First Lieutenant Clarence E. McGuinness were killed and Lieutenant Colonel Frederick W. Dowsett was wounded. While Lieutenant (jg) Robert G. Medemeyer, (MC), USN, gave first aid, Chaplain (Lieutenant (jg)) Cornelius J. Griffin entered an ambulance to console a dying Marine. CCF machine gun bullets shattered his jaw and killed Sergeant Matthew Caruso at his side. Lieutenant Colonel Harris and Major Roach supervised the deployment of How Company troops to beat off the attack.

About 0530 Lieutenant Colonel Harris disappeared. A search was made for him to no avail and he was listed as a MIA. It was later determined that he had been killed.

The 1st Battalion of RCT-7, after a relatively uneventful march over the high ground west of the river, moved down the slope to join the regimental column. Major Warren Morris assumed command of the 3d Battalion, which reached Koto-ri about 0700. At about 1100, after a brief rest, the men were ordered together with Lockwood’s troops to move back up along the MSR to the north and set up blocking between Koto-ri and Hill 1182 to keep the road open for other units of the Division.[31] While carrying out this mission, the 2d Battalion helped to bring in 22 British Marines who had been stranded ever since the Task Force Drysdale fight on the night of 29–30 November. Their plight was not known until 4 December, when an OY pilot saw the letters H-E-L-P stamped out in the snow and air-dropped food and medical supplies.

Chapter 13. Regroupment at Hagaru
Advance of the Division Trains

By 1700 on 7 December all elements of RCT-7 were in the perimeter at Koto-ri. Division Train No. 1 was due next, and the planners had hoped that the rifle battalions would clear the way for the vehicles. As it proved, however, the Chinese closed in behind RCT-7 and attacked the flanks of the convoy, with the result that the service troops actually saw more action than the infantrymen.

One of the causes may be traced to the fact that Division Train No. 1 had to wait at Hagaru until 1600 on the 6th before RCT-7 made enough progress toward Koto-ri to warrant putting the convoy on the road. About 2000 yards south of Hagaru elements of the 3d Battalion, 11th Marines, were hit in the early darkness by CCF mortar and small-arms fire. The gunners of George and How Batteries deployed as infantrymen and repulsed the enemy at the cost of a few casualties.

Upon resuming the march, a second fire fight took place after 1500 more yards had been covered. Several vehicles, set afire by Chinese mortar shells, blocked the road and brought the convoy to a halt. At daybreak the enemy swarmed to the attack in formidable numbers. It was nip and tuck as all pieces of How Battery and three howitzers of George Battery were emplaced between the trucks of the 1st MT Battalion. There was no opportunity to dig in the trails of guns employing time fire with fuses cut for ranges of 40 to 500 yards. But the Chinese were stopped cold by two hours of continuous fire after approaching within 40 yards. All but about 50 of an estimated 500 to 800 enemy were killed or wounded before the remainder fled, according to the estimate of the gunners.[32]

The convoy of the Division Headquarters Company also had to fight its way. Small arms ammunition had been distributed throughout the column, and light machine guns were mounted on top of truck loads. All able-bodied men with the exception of drivers and radio operators walked in single file on either side of the vehicles carrying the wounded.

Progress was slow, with many halts caused by CCF fire. At 0130 several trucks were set afame by enemy mortar shells and 2.36 rockets. Headquarters troops deployed in roadside ditches while two machine guns manned by bandsmen kept the Chinese at a distance. At 0200 the clouds cleared enough to permit strikes by night hecklers of VMF (N)-513. They stopped the Chinese until just before daylight, when a company-size group penetrated within 30 yards of the convoy. During this fight First Lieutenant Charles H. Sullivan, who measured six feet four and weighed 240 pounds, emptied his carbine at advancing Chinese. Then he hurled it like a javelin to drive the bayonet into the chest of an opponent at 15 feet.

Under the coaching of the MTACS commander, Major Lee, two more night fighters—Major Albert L. Clark and First Lieutenant Truman Clark—pinned the Chinese down with strafing runs as close as 30 yards from the Marine ground troops. At dawn Major Percy F. Avant, Jr., and his four-plane division from VMF-312 dumped about four tons of explosives and napalm on Chinese who broke and ran for cover. The fire fight had cost Headquarters Battalion 6 KIA and 14 WIA.[33]

The MP Company, just forward of Headquarters Company, had the problem of guarding about 160 Chinese prisoners. Captives unable to walk had been left behind at Hagaru, where Lieutenant Colonel Murray directed that the wounded be given shelter and provided with food and fuel by the departing Marines. The prisoners escorted by the MPs were lying in the middle of the road during the attack when the enemy seemed to concentrate his fire on them while shouting in Chinese. A scene of pandemonium ensued as some of the able-bodied prisoners attempted to make a break. Now the Marines as well as the enemy fired into them and 137 were
killed in the wild melee.

When the convoy got under way again, two Communists were captured and 15 killed after being flushed out of houses in the village of Pusong-ni. At daybreak a halt was called in Hell Fire Valley for the purpose of identifying bodies of MPs and Headquarters troops, killed in the Task Force Drysdale battle, which were to be picked up later. Attempts to start the looted and abandoned vehicles met with no success and the convoy continued the movement to Koto-ri without incident, arriving about 1000 on the 7th.

At this hour the last Marine troops had not yet left Hagaru, so that the column as a whole extended the entire 11 miles of the route. Division Train No. 2 had formed up during the afternoon of the 6th, but was unable to start until after dark. At midnight the train had moved only a short distance out of Hagaru. Lieutenant Colonel Milne requested infantry support and 3/5 was given the mission of advancing at the head of the column, along with the 5th Marines regimental train, to eliminate enemy resistance.[34] Taplett had only two companies, one of which proceeded astride the road while the other echeloned to the left rear. The late start proved to be a blessing, since Division Train No. 2 completed most of its movement by daylight under an umbrella of Marine air and met only light and scattered resistance. The head of the column reached Koto-ri at 1700, and at 2300 all of the major Division units were in the perimeter except 2/5, the rear guard.[35]

Both 1/5 and 3/1 had formed up in Hagaru on the morning of the 7th and moved out as rapidly as traffic would permit, which was slow indeed. They were accompanied by the 41st Commando, which had earned the esteem of all U.S. Marines by valor in combat. British imperturbability was at its best when Lieutenant Colonel Drysdale held an inspection shortly before departing Hagaru. Disdainful of the scattered shots which were still being heard, the officers moved up and down the rigid lines, and men whose gear was not in the best possible shape were reprimanded.

By 1000 nobody was left in the battered town except Roise’s battalion, First Lieutenant Vaughan R. Stuart’s tank platoon and elements of Able Company, 1st Engineer Battalion, commanded by Captain William R. Gould. This unit and CWO Willie S. Harrison’s Explosive Ordnance Section of Headquarters Company engineers were attached to the 5th Marines for the mission of the demolitions at Hagaru.[36]

Gould had formed five demolitions teams, each composed of an officer and four to six men. On the evening of 6 December they began preparations for burning stockpiles of surplus clothing and equipment along with the buildings of the Hagaru train yard. There was also the duty of placing charges in the dumps of mortar and artillery ammunition which could not be transported to Hagaru.

One of the main problems was the disposal of a small mountain of frozen surplus rations. A team of engineers spent hours on the 6th at the task of smashing cans and crates of food with a bulldozer and saturating the dump with fuel oil.

The Able Company engineers came under the operational control of the 2d Battalion after the other units of the 5th Marines departed. Demolitions were to await the order of Lieutenant Colonel Roise on the morning of the 7th. Hagaru was full of combustibles, however, and fires of mysterious origin sent up dense clouds of smoke before the engineers touched off the oil-soaked food supplies and the buildings of the train yard.

As the Marines of 2/5 pulled back toward the southern tip of East Hill, smoke blotted out the surrounding area so that enemy movements could not be detected. Worse yet, premature explosions sent up fountains of debris just as the engineers were setting up their fuses for a 20-minute delay. Detonations shook the earth on all sides. Rockets sliced through the air, shells shattered into vicious fragments, and large chunks of real estate rained down everywhere. Roise was understandably furious, since his troops were endangered during their withdrawal. By a miracle they came off East Hill without any casualties, and the engineers were the last Marines left in Hagaru. Soon the entire base seemed to be erupting like a volcano. Visibility was reduced to zero when the engineers pulled out, after setting a last tremendous charge to blow the bridge.

So compelling was the lure of loot that small groups of Chinese came down from the high ground toward
the man-made hell of flame and explosions. Between clouds of smoke they could be seen picking over the debris, and the Marine tanks cranked off a few rounds at targets of opportunity.

It is not likely that any of Roise’s weary troops paused for a last sentimental look over their shoulders at the dying Korean town. Hagaru was not exactly a pleasure resort, and yet hundreds of Marines and soldiers owed their lives to the fact that this forward base had enabled the Division to evacuate all casualties and fly in replacements while regrouping for the breakout to the seacoast.

If it had not been for the forethought of the Division and Wing commanders, with the concurrence of General Almond, there would have been no R4D airstrip, no stockpiles of ammunition, rations and medical supplies. And though the Marines might conceivably have fought their way out of the CCF encirclement without a Hagaru, it would have been at the cost of abandoning much equipment and suffering much higher casualties.

Only a few weeks before, this Korean town had been merely an unknown dot on the map. But on 7 December 1950 the name was familiar to newspaper readers and radio listeners all over the United States as they anxiously awaited tidings of the breakout. Already it had become a name to be remembered in U.S. Marine annals along with such historical landmarks as Belleau Wood, Guadalcanal, Peleliu and Iwo Jima.

Prospects of a warm meal and a night’s sleep meant more than history to Roise’s troops when the column moved out at last shortly after noon, with the engineers bringing up the rear to blow bridges along the route. A pitiful horde of Korean refugees followed the troops—thousands of men, women and children with such personal belongings as they could carry. Efforts on the part of the engineers to warn the refugees of impending demolitions were futile. Although these North Koreans had enjoyed for five years the “blessings” of Communist government, the prospect of being left behind to the tender mercies of the Chinese Communists was so terrifying that they took appalling risks. Knowing that a bridge was about to blow up at any instant, they swarmed across in a blind panic of flight. Never did war seem more harsh or its victims more pathetic.[37]

The rear guard had less air and artillery support than any of the preceding troops, yet CCF opposition was confined to scattered small-arms fire all the way to Hell Fire Valley. There the enemy lobbed over a few mortar shells during a long halt at dusk, but the rest of the advance was uneventful. Gould’s engineers took chances repeatedly of being cut off when they fell behind to burn abandoned vehicles or blow bridges. On several occasions a small group found itself entirely isolated as the infantry and even the refugees pushed on ahead. Luckily the engineers made it without any casualties, and by midnight the last troops of the 1st Marine Division had entered the perimeter at Koto-ri.

Thus the first stage of the Division breakout came to a close. In proportion to total numbers, the service troops of Division Train No. 1 had taken the heaviest losses—six killed and 12 wounded for the Division Headquarters Company; one killed and 16 wounded for the Military Police Company; four killed and 28 wounded for the 1st Motor Transport Battalion; one killed and 27 wounded for the 1st Ordnance Battalion; and three killed and 34 wounded for the 3d Battalion of the 11th Marines. Battle casualties for the entire 1st Marine Division, including those of the East Hill battle, were as follows:

Click here to view table

About 38 hours were required for the movement of some 10,000 troops and more than 1,000 vehicles. The new arrivals filled the perimeter at Koto-ri to the bursting point, but there was to be no pause at this point. Division OpnO 26–50, issued at 1815 on the 7th, before the last troops had arrived, provided for the advance to be resumed from Koto-ri at first light the following morning.
THE PROGRESS of the 1st Marine Division breakout depended in no small degree on the reliable communications provided by the division radio relay linking up Hagaru, Koto-ri, Chinhung-ni, and Hungnam. At 1440 on 6 December the vehicles of the Hagaru relay terminal joined Division Train No. 1, whereupon the station at Koto-ri became in turn the terminal.[1]

This station was located on the highest point of ground just south of the Koto-ri perimeter. And though it was outside the defense area, the Chinese did not bother it until the Marines were breaking camp. Then the opposition consisted only of harassing small-arms fires instead of the attack which might have been expected.[2]

In fact, the enemy did not launch another large-scale assault on Koto-ri after his costly repulse on the night of 28-29 November. Although the perimeter was surrounded throughout the first six days of December, incipient CCF attacks were broken up in the enemy’s assembly areas. Excellent observation as well as casualty evacuation was provided by the OYs taking off from the Koto-ri airstrip. They were the eyes of an impressive array of Marine fire power—tanks, 4.2-inch, and 81mm mortars as well as aircraft and Captain McClelland’s Easy Battery of 2/11.

“The artillery 105’s and the mortars did a grand job,” commented Major Bartley. “They were always available, shifted their fires quickly and accurately, and serviced their pieces amazingly well in the cold weather.”[3]

As a further asset, the Koto-ri perimeter was defended by adequate numbers in comparison to Hagaru during the first critical week of CCF attacks. On 30 November, when Baker Company of the 1st Tank Battalion returned to Koto-ri after the Task Force Drysdale battle, three platoons of tanks were added to the Dog Company platoon already attached to 2/1. The next day Colonel Puller’s RCT-1 (-) was further strengthened by the arrival of the 2d Battalion of the 31st Infantry, 7th Infantry Division, the last unit to reach Koto-ri from the south. These Army troops had been ordered to Hagaru, but owing to the changing situation they were directed by X Corps on 1 December to remain at Koto-ri. Under the operational control of Colonel Puller, 2/31 took over a sector at the southern end of the perimeter.

Sporadic CCF small-arms fire was received on each of the first six days of December, and enemy troop movements were observed at all points of the compass. On several occasions a few mortar shells were lobbed into the perimeter. Not a single Marine casualty was suffered during the period,[4] though CCF losses were estimated at 646 killed and 322 wounded.

Daily air drops were required to keep the perimeter supplied with ammunition, rations, and other essentials. Captain Norman Vining, the Battalion FAC, who had once been a carrier landing signal officer, guided planes to satisfactory drop zones with makeshift paddles. One day a case of .30 caliber cartridges broke free from its chute and hurtled through the top of Lieutenant Colonel Sutter’s tent during a conference. Narrowly missing several officers, it hit the straw at their feet and bounced high into the air before landing on a crate used as a table.
Koto-ri being second only to Hagaru as an advance base, Colonel Puller at times had responsibilities which are usually shouldered by an ADC. On 29 November he had been the organizer of Task Force Drysdale, and on 6 December it became his task to make ready for the reception of the 10,000 troops from Hagaru. Although the Koto-ri perimeter was already overcrowded, Puller directed that hot food and warming tents be provided for all Hagaru troops upon arrival. More than 14,000 men would then be organized for the next stage of the breakout. Strength estimates were as follows:[5]

- Marine garrison at Koto-ri: 2,640
- U.S. Army units at Koto-ri: 1,535
- Royal Marine Commandos at Koto-ri: 25
- Marines arriving from Hagaru: 9,046
- U.S. Army troops arriving from Hagaru: 818
- Royal Marine Commandos arriving from Hagaru: 125
- ROK police attached to RCT-5: 40
- TOTAL: 14,229

Puller dealt with the problem of casualty evacuation at Koto-ri by ordering that the OY strip be lengthened so that larger aircraft could land. The engineers of Charlie Company started the job on 6 December, and progress speeded up as the Dog Company engineers arrived next day from Hagaru with their heavy equipment.

The strip had been widened by 40 feet and extended by 300 on 7 December when the first TBM landed. These planes had been borrowed from the Navy and 1stMAW administrative flight lines and assigned to VMO-6. They could fly out several litter patients and as many as nine ambulatory cases. Captain Alfred F. McCaleb, Jr., of VMO-6 and First Lieutenant Truman Clark of VMF(N)-513 evacuated a total of 103 casualties. The carrier landing training of the Marines stood them in good stead as Captain Malcolm G. Moncrief, Jr., a qualified landing signal officer of VMF-312, directed the TBMs to their landings at Koto-ri with paddles.[6]

The clearing station established at Koto-ri by Company D of the 1st Medical Battalion (Lieutenant Commander Gustave T. Anderson (MC), USN, had a normal bed capacity of only 60 but somehow continued to handle a total of 832 cases, including non-battle casualties. The Company D medics were assisted during their last few days at Koto-ri by Captain Hering, the Division surgeon, and Commander Howard A. Johnson (MC), USN, the CO of the 1st Medical Battalion. Captain Richard S. Silvis (MC), USN, surgeon of the 2d Marine Division, on temporary duty in Korea as an observer, also took an active part.[7]

Surgical assistance was welcomed by the Company D medics, since operations at Koto-ri were performed under the most difficult conditions. Only tents being available for patients, the hundreds of casualties brought from Hagaru added to the necessity for speedy evacuation. About 200 cases were flown out on the 7th by TBMs and liaison aircraft. By the following morning the engineers had lengthened the OY strip to 1750 feet, but a heavy snowfall put an end to nearly all air activity. In spite of the risks involved, one Air Force C-47 did get through to Koto-ri, where it could be heard but not seen while circling blindly about the perimeter. By a miracle the plane landed safely and took off with 19 casualties. The following day saw air evacuation of casualties in full swing, with about 225 being flown out to clear the hospital tents of all serious cases.[8]
A large tent in the middle of the perimeter served both as office and sleeping quarters for General Smith and his staff. Planning was immediately resumed after they arrived at Koto-ri on the afternoon of 6 December. Before leaving Hagaru it had been recognized that the enemy might be saving his main effort for the mountainous ten-mile stretch from Koto-ri to Chinhung-ni. In such terrain a mere CCF platoon could do a great deal of mischief, and the planners agreed that it would be necessary for 1/1 to attack northward from Chinhung-ni and clear the road. This meant that the battalion must be relieved by an Army unit, and a request was made verbally to General Almond.[9]

X Corps had received orders on 1 December for the 3d Infantry Division to assemble in the Wonsan area prepared for further operations, possibly to join the Eighth Army in west Korea. Although General Almond initiated execution of the order immediately, he sent the highest ranking Marine officer on his staff, Colonel Forney, and the Corps G–2, Lieutenant Colonel William W. Quinn, to Tokyo to explain the implications of the withdrawal of this Army division from northeast Korea. Following a conference with General Hickey, GHQ Chief of Staff, the Division was released back to X Corps on the 3d, and General Almond ordered it to return to the Hamhung area to protect this vital port area and to assist the breakout of the 1st Marine Division by relieving 1/1 at Chinhung-ni.[10]

At 2115 on 6 December the 1st Marine Division requested by dispatch that the relief be completed the next day in order to free 1/1 for the attack to the north. The relief column, designated Task Force Dog and commanded by Brigadier General Armistead D. Mead, ADC of the 3d Infantry Division, consisted of the 3d Battalion, 7th Infantry, the 92d Armored Field Artillery Battalion, plus detachments of engineers, signalmen, and antiaircraft troops. Brushing aside some Chinese roadblocks, it arrived at Chinhung-ni on the afternoon of the 7th and relieved 1/1 immediately.[11]
The Chosin Reservoir Campaign

Chapter 14. Onward from Koto-ri
Air Drop of Bridge Sections

Another problem which the 1st Marine Division planners had faced at Hagaru called for an engineering solution. As early as 4 December the commanding general was notified that a critical bridge three and a half miles south of Koto-ri (see Map 29) had been blown by the enemy for the third time. At this point water from the Chosin Reservoir was discharged from a tunnel into four penstocks, or large steel pipes, which descended sharply down the mountainside to the turbines of the power plant in the valley below. Where the pipes crossed the road, they were covered on the uphill side by a concrete gatehouse, without a floor. On the downhill side was the one-way bridge over the penstocks which the enemy had thrice destroyed. Between the cliff and the sheer drop down the mountainside there was no possibility of a bypass. Thus the gap of 16 feet (24 feet, counting the abutments) must be spanned if the Division was to bring out its vehicles, tanks and guns.[12]

Following the destruction of the original concrete bridge, the enemy had blown a temporary wooden structure and an M-2 steel treadway span installed by Army engineers. No prefabricated bridging was available at Hagaru, and time did not permit the construction of a timber trestle bridge. The possibility of Bailey bridge sections was considered but rejected for technical reasons. Finally, after a detailed study of the break from the air on 6 December, Lieutenant Colonel Partridge estimated that four sections of an M-2 steel treadway bridge would be required. Prospects did not appear bright when a bridge section was badly damaged on the 6th after being test-dropped at Yonpo by an Air Force C-119. Nevertheless, it was decided to go ahead the next day with the drop at Koto-ri.[13]

There were four U.S. Army treadway bridge (Brockway) trucks at Koto-ri, two of which were operative. After conferring with First Lieutenant George A. Babe of the 1st Engineer Battalion and Colonel Hugh D. McGaw of the 185th Engineer (C) Battalion, USA, Partridge decided to request a drop of eight sections in order to have a 100% margin of safety in case of damage.

After analyzing the causes of the unsuccessful test drop, Captain Blasingame of the Air Delivery Platoon had larger parachutes flown to Yonpo from Japan, accompanied by Captain Cecil W. Hospelhorn, USA, and a special crew of Army parachute riggers. Blasingame and a hundred-man work detail from the 1st Amphibian Tractor Battalion worked all night at Yonpo to make ready for the drop next day by eight C-119s of the Air Force.

At 0930 on 7 December three of the 2500-pound bridge sections were dropped inside the Koto-ri perimeter and recovered by the Brockway trucks. The remaining five sections were delivered by noon, one of them falling into the hands of the Chinese and one being damaged.

Plywood center sections were also dropped so that the bridge could accommodate any type of Marine wheel or tracked vehicle. Thus the tanks could cross on the metal spans only, while the trucks could manage with one wheel on the metal span and the other on the plywood center.[14]

All the necessary equipment having been assembled at Koto-ri by the late afternoon of the 7th, the next problem was to transport it three and a half miles to the bridge site. Colonel Bowser, the Division G-3, directed the engineers to coordinate their movements with the progress made by RCT-7 the following morning. Lieutenant Colonel Partridge attended a briefing conducted by Colonel Litzenberg on the eve of the assault, and it was agreed that the trucks with the bridge section would accompany the regimental train. First Lieutenant Ewald D. Vom Orde’s First Platoon of Company D engineers was designated as the escort. First Lieutenant Charles C. Ward’s engineers led the 7th Marines’ trains. Both platoons were assigned the task of installing the bridge sections.
This Page Intentionally Left Blank
On the assumption that the gap over the penstocks would be successfully spanned, the 1st Marine Division issued OpnO 26–50 at 1850 on 7 December. Although the last operation order had specified the Hamhung area as the objective, it was found necessary at Koto-ri to give more explicit instructions for the advance to the southward.

The plan was simple. Recognizing the sharp cleft of Funchilin Pass as the most difficult defile of the entire breakout, General Smith ordered the seizure of the heights overlooking the pass from the north end of Hill 1081, dominating the road through the pass. In its details the plan shaped up as follows:

“(1) RCT-7 (reinforced with the Provisional Army battalion) to attack south from Koto-ri at 0800 on 8 December and seize Objectives A and B—the first being the southern extension of Hill 1328, about 2500 yards southwest of Koto-ri, and the other the second nose due south of Koto-ri.

“(2) RCT-5 to attack and seize Objective D (Hill 1457, two and half miles south of Koto-ri) while RCT-7 continued its attack and seized Objective C (a nose dominating the MSR two and three-fourths miles south of Koto-ri).

“(3) At 0800, as RCT-7 jumped off at Koto-ri, the 1st Battalion of RCT-1 was to attack from Chinhung-ni and seize Objective E (Hill 1081, three miles to the north).

“(4) RCT-1 (less the 1st Battalion but reinforced by 2/31) was to protect Koto-ri until the Division and regimental trains cleared, whereupon it was to relieve RCTs 5 and 7 on Objectives A, B, C and D.

“(5) Upon relief by RCT-1, RCTs 5 and 7 were to proceed south along the MSR to the Hamhung area.

“(6) RCT-1 was to follow RCT-5 and protect the Division rear.”[15]

Artillery plans provided for one battery of 2/11 and one of 3/11 to answer the calls of RCT-7 for supporting fires. The other batteries of 3/11 were to move south with the motor column while two batteries of 1/11 supported RCT-5. The remaining battery of 3/11 was attached to 2/11 with a mission of moving south to Chinhung-ni and taking a position from which to support the withdrawal of RCT-1 as rear-guard. Easy Battery of 2/11, left behind at Koto-ri, was laid to fire to the north and west, while Fox Battery of 2/11 and the 92d Armored Field Artillery Battalion at Chinhung-ni supported the attack of 1/1 on Hill 1081.

The plan of the 1stMAW for air support was essentially the same as the one which proved so effective during the advance from Hagaru to Koto-ri.

An object lesson of that movement had been the personnel and equipment losses suffered by the Division trains as a consequence of a late start. The planners were determined not to repeat this mistake. As a further precautionary measure, General Smith directed that the tanks form the last elements of the motor column.[16] Thus in the event of a breakdown on the twisting, single-lane road, it would not be necessary to abandon all the vehicles behind a crippled tank.

As for the enemy situation, G-2 summaries indicated that early in December the CCF 26th Corps, consisting of the 76th, 77th and 78th Divisions, reinforced by the 94th Division of the 32d Corps, had moved down from the north and taken positions on the east side of the MSR between Hagaru and Koto-ri. There they relieved the 60th Division, which moved into the area south of Koto-ri. The 76th and 77th Divisions occupied positions along the MSR in the Koto-ri area, while the 78th and 94th Divisions were apparently held in reserve. Elements of the 89th Division, operating from the mountainous area southwest of Koto-ri, conducted harassing operations against the MSR in the vicinity of Chinhung-ni as well as Koto-ri.
The 60th CCF Division held prepared positions on the high ground south of Koto-ri commanding Funchilin Pass and the MSR leading to Chinhung-ni. That these positions included Hill 1081, the dominating terrain feature, was revealed by prisoners taken in the vicinity by patrols of the 1st Battalion, 1st Marines, prior to 8 December.
The Chosin Reservoir Campaign

Chapter 14. Onward from Koto-ri  
Battle of 1/1 in the Snowstorm

Division plans had not called for the swirling snowstorm which reduced visibility to 50 feet and precluded air support at first light on 8 December. In spite of weather conditions, the assault battalions of RCT-7 moved out from Koto-ri on schedule after 1/1 attacked northward from Chinhung-ni.

The planners had realized that the success of the movement to Chinhung-ni would depend to a large extent on the seizure of Objective E—Hill 1081. On 2 December Lieutenant Colonel Schmuck had led a reconnaissance patrol into Funchilin Pass as far north as this position. Sighting large numbers of Chinese on both sides of the road, he called for artillery fires with good effect. This reconnaissance did much to establish Hill 1081 as the key terrain feature.

Although 1/1 had patrolled aggressively, the battalion had engaged in no large-scale actions so far in the Reservoir campaign. The men were fresh, well-rested and spoiling for a fight when they moved out at 0200 on 8 December from an assembly area south of Chinhung-ni after being relieved by Task Force Dog.

Schmuck’s battle plan provided for the three companies to advance in column along the MSR in the predawn darkness. Since orders were to attack at 0800, a start at 0200 was considered necessary in order to make the six-mile approach march.

Captain Wray’s Charlie Company, in the lead, was to take Objective 1, the southwestern nose of Hill 1081, and hold it while the other two companies passed through to carry out their missions. Captain Barrow’s Able Company was to attack east of the MSR and fight its way to the summit of Hill 1081; and Captain Noren’s Baker Company to advance to the left flank, along the slopes between Barrow and the MSR.[17]

The combination of snow and darkness reduced visibility almost to zero as 1/1 set out along the slippery MSR five hours before daybreak. All heavy equipment had been sent to the rear from Chinhung-ni, and the only vehicles were two ambulances and a radio jeep.

In the snow-muted silence of the night the men took on protective coloring as feathery flakes clung to their parkas. Objective 1 was seized shortly after dawn, following a difficult approach march against negligible resistance. The battalion commander prepared for the next phase by bringing up 81mm mortars and an attached platoon of 4.2s and emplacing those weapons in Wray’s position. He also directed that the five attached Army self-propelled quad-.50 caliber and twin 40mm guns of B Company 50th AAA (AW) Bn be moved to a little rise off to the left of the road in the vicinity of the village of Pehujang. From this position they covered the MSR as far as the bridge over the penstocks.

At 1000 the main attack was set in motion. Baker Company advanced along the wooded western slope of Hill 1081 as Barrow attacked up the hogback ridge leading to the summit. The snowstorm fought on the side of the Marines by hiding their movements from the Chinese occupying the high ground east of the MSR around the great horseshoe bend where the road passed under the cable car line.

Noren’s men saw hundreds of enemy footprints but met only scattered opposition until they came to the first CCF roadblock on their left flank. There they were stopped by two machine guns, but a Marine patrol worked around on the uphill side and routed the Communists with a machine gun and 60mm mortar attack.

In the absence of air and artillery support, the 4.2s and 81mm mortars emplaced in the Charlie Company position were called upon whenever visibility permitted. Surprise was Noren’s best resource, however, when Baker Company came up against the CCF bunker complex on the western slope of Hill 1081. The enemy had so little warning that the Marines found a kettle of rice cooking in the largest bunker, an elaborate log and sandbag
structure which had evidently been a CCF command post. The entire complex was taken after a brief but savage
fight in which all defenders were killed or routed. Schmuck set up his CP in a captured bunker, where he and his
officers soon discovered that several regiments of Chinese lice had not yet surrendered.

Only enough daylight was left for the sending out of patrols, whereupon Noren secured for the night. His
losses amounted to three killed and six wounded.

Barrow’s men had no physical contact with Baker Company while clawing their way upward along an
icy ridge line too narrow for deployment. A sudden break in the snow afforded the Able Company commander a
glimpse of a CCF stronghold on a knob between him and his objective, the topographical crest of Hill 1081. The
drifting flakes cut off the view before he could direct mortar fire, but Barrow decided to attack without this
support and rely upon surprise. Advancing in column along the steep and narrow approach, he sent Lieutenant
Jones with two squads of the 2d Platoon to execute a wide enveloping movement on the left. Lieutenant
McClelland’s 1st Platoon had a similar mission on the right. Barrow himself led Staff Sergeant William Roach’s
3d Platoon in a front attack.

It took more than an hour for the two flanking forces to get into position. Not until they had worked well
around the Chinese bunker complex did Barrow give the signal for attack. Perhaps because silence had been
enforced during the stealthy advance, the assault troops yelled like Indians as they closed in on the foe. Out of the
snowstorm Barrow’s men “erupted with maximum violence,” and the enemy was too stunned to put up much of a
fight. The only effective resistance came from a single CCF machine gun which caused most of the Marine
casualties before Corporal Joseph Leeds and his fire team knocked it out, killing nine Communists in the process.

More than 60 enemy bodies were counted after the Marines cleaned out the bunkers and shot down
fleeing Chinese. Barrow’s losses were 10 men killed and 11 wounded.

By this time it was apparent that the Chinese had held an integrated system of bunkers and strong points
extending to the summit of Hill 1081. The battalion had been strictly on its own all day, all contact with the
infantry of Task Force Dog having ended with the relief. When communications permitted, however, 1/1 could
count on the excellent direct support of the 92d Armored Field Artillery Battalion, USA, commanded by
Lieutenant Colonel Leon F. Lavoie. The Army cannoneers had set up near Fox Battery of 2/11, using the fire
control data of this Marine artillery unit.

The night was clear, promising air and artillery support in the morning, as Able Company consolidated in
the captured CCF positions. Although the battalion aid station was only 700 yards away, the terrain was so
difficult that litter bearers took several hours to struggle down with the Marine wounded. About midnight the
Chinese interrupted with an attack in estimated platoon strength, but Barrow’s men drove them off with CCF
losses of 18 killed.

The rest of the night passed quietly, and Baker Company had no disturbance on the high ground
overlooking the MSR.

Chapter 14. Onward from Koto-ri
Advance of RCT-7 and RCT-5

While these events were taking place, the attack to the south from Koto-ri also fell short of the day’s objectives. Colonel Litzenberg’s plan called for two of his four battalions (the fourth being the Provisional Battalion of Army troops) to clear the high ground on either side of the road so that a third battalion could advance astride the MSR, followed by the reserve battalion and regimental train.

Major Morris, commanding 3/7, had been assigned the task of attacking on the right at 0800 and seizing Objective A, the southernmost of the cluster of hills known collectively as Hill 1328. He made such slow progress against CCF and small-arms fire that at 1100 Colonel Litzenberg suggested the commitments of 3/7’s reserve company. “All three companies,” replied Morris, “are up there—fifty men from George, fifty men from How, thirty men from Item. That’s it!”[18]

Early in the afternoon of 8 December, Litzenberg committed his reserve, 2/7, to assist 3/7. Lockwood’s battalion was on the road south of 3/7 and attacked west in an attempt to get in the rear of the enemy holding up 3/7. Easy and Fox Companies attacked abreast and by 1800 the two battalions had joined on the northeastern slopes of the objective. In view of the approaching darkness, however, the attack was postponed until morning, and the troops consolidated for the night short of the objective, which was seized the following morning.

Litzenberg’s plan for the seizure of the heights overlooking the northern entrance to Funchilin Pass provided for the Army Provisional Battalion to take Objective B. The soldiers jumped off at 0800, on the left of the MSR, supported by two tanks of the 5th Marines AT Company. By 0900 the battalion had secured its objective without meeting any resistance. Litzenberg then ordered a further advance of 800 yards to the northwestern tip of Hill 1457. At 1330 the Army troops secured their second objective, still without resistance and tied in with 1/5 for the night.[19]

Lieutenant Colonel Davis having become regimental executive officer after Dowsett was wounded, Major Sawyer took over command of 1/7. His plan called for the battalion to advance about 2000 yards down the road and wait for 3/7 to come up on his right flank. Then the two battalions would move along together.

The 1st Battalion jumped off at 0800 and reached its phase line without opposition. First Lieutenant Bobbie B. Bradley’s platoon advanced down the road to gain contact with the Chinese while the remainder of the battalion halted. When 2/7 began its attack in support of 3/7, Sawyer’s battalion moved out. Bradley’s patrol having run into opposition from the northern reaches of Hill 1304, Companies A and C moved west of the MSR in a double envelopment of the enemy position. Company B continued the advance towards Objective C, meeting a heavy cross fire from Chinese to their front and on Hill 1304. Lieutenant Kurcaba was killed and Lieutenants Chew Een Lee and Joseph R. Owen wounded. First Lieutenant William W. Taylor took command and managed to clear the enemy from his front just before dusk.

Able and Charlie Companies faced less resistance in overrunning the foxholes and two bunkers on Hill 1304. With dusk falling, Sawyer did not attempt a further advance. Able and Charlie Companies dug in on Hill 1304 while Baker set up a perimeter slightly short of Objective C. The first serials of the truck convoy had moved closely on the heels of 1/7 and had to be backed up to a level area near Objective A. There they formed a perimeter reinforced with H&S and Weapons Companies of 1/7.[20]

Division OpnO 26-50 had directed Lieutenant Colonel Murray’s RCT-5 to await orders before attacking Objective D. It was nearly noon on the 8th before the 1st Battalion, in assault, was directed to move out from Koto-ri.
Lieutenant Colonel Stevens followed the MSR for a mile, then sent two companies out to the left to occupy the objective, Hill 1457. Baker Company seized the intervening high ground and set up to cover the attack of Charlie Company up the slopes of the ridge leading to the objective. Charlie Company fell in with a patrol from the Army Provisional Battalion attached to the RCT-7, and the two combined forces to drive the enemy off the high ground about 1550. A weak Chinese counterattack was easily repulsed, and at 1700 as darkness fell Baker and Charlie Companies tied in with the Army troops while Able Company formed its own perimeter overlooking the MSR. In reserve, the 41st Commando moved into the high ground behind 1/5 to guard against infiltration.[21]

The day’s story would not be complete without reference to the Treadway bridge train, which moved out about 1400 on the 8th in the trace of 1/7. Instructions were to install the sections at the first opportunity, but the site had not been secured as darkness approached. A few Chinese mortar rounds falling in the vicinity of the vulnerable Brockway trucks influenced a decision to return them closer to Koto-ri.[22]

Summing up the attacks of 8 December, weather and terrain had done more than the enemy to prevent all assault units of the 1st Marine Division from securing their assigned objectives. Casualties had not been heavy, however, and for the most part the troops were in a position for a renewal of their efforts in the morning.

As for the Koto-ri perimeter, the 8th had passed with only scattered small-arms fire being received by the 2d and 3d Battalions of the 1st Marines, in Division reserve. All day the Dog Company roadblock, on the route to Hagaru, was like a dam holding back the human torrent of Korean refugees. From this throng rose a low-pitched wail of misery as homeless men, women, and children huddled without shelter in the snowstorm of the 8th. It was a distressing spectacle to the Marines in the perimeter, yet the refugees could not be admitted because of the probability that Chinese soldiers had infiltrated among them, watching for an opportunity to use hidden weapons. There was little the Marines could offer by way of succor except medical care in some instances. Two women gave birth during the bitterly cold night of the 8th with the assistance of Navy medics. In the morning the crowd of refugees, swollen by new arrivals, waited with the patience of the humble to follow the Marine rear guard to the seacoast.[23]

White is the color of mourning in Korea, and snowflakes drifted down gently over the common grave in which 117 Marines, soldiers, and Royal Marine Commandos were buried on the 8th at Koto-ri. Lack of time had prevented the digging of individual graves in the frozen soil.[24] Although the necessity of conducting a mass burial was regretted, all available space in planes and vehicles was needed for the evacuation of casualties.
The Chosin Reservoir Campaign

Chapter 14. Onward from Koto-ri
Marine Operations of 9 and 10 December

New snow sparkled in the sunlight as the day of 9 December dawned bright, clear, and cold. A brief reconnaissance convinced Captain Noren that in the early darkness of the previous evening he had stopped one ridge short of his objective—the northwest slopes of Hill 1081, covering the approach to the cable underpass. Baker Company of 1/1 moved forward without CCF interference to the position.

Captain Barrow had his men test-fire their weapons before mounting the final assault on the dominating knob of the hill. This proved to be a wise precaution, since many of the mechanisms had frozen. After thawing them out, Able Company attacked in column with the 1st Platoon in the lead. Although the assault troops had the benefit of excellent air, artillery, and mortar support, they came under intense small-arms fire from Communists occupying camouflaged log and sandbag bunkers. McClelland’s men were hard hit but his left flank squad worked its way forward in brief rushes to positions within 200 yards of Objective E, the topographical crest of Hill 1081. At this point Staff Sergeant Ernest J. Umbaugh organized a squad grenade attack which wiped out the first CCF bunker.

A stretch of about 175 yards, swept bare in places by the icy wind, now lay between the Marines and the final knob. Barrow perceived that this deadly CCF field of fire could be skirted by troops working their way around a shelf jutting from the military crest. Under cover of fire from his 60mm mortars and a strike by four Corsairs, he brought up his 2d and 3d platoons. While McClelland profited by the cover of scrub trees to come up behind the objective, Jones built up a base of fire to cover the direct assault of Roach’s platoon as it stormed up the crest. McClelland had to contend with the enemy’s last-ditch stand in two log bunkers which the 1st platoon knocked out by tossing grenades through the embrasures. The Communists resisted to the last gasp, but at 1500 the Marines were in undisputed possession of Hill 1081.

Sergeant Umbaugh paid with his life at the moment of victory, and Barrow had only 111 able-bodied men left of the 223 he had led out from Chinghung-ni. But the Marines had won the decisive battle of the advance from Koto-ri; they held the key height dominating Funchilin Pass, though 530 counted enemy dead testified to the desperation of the CCF defense.

Able Company had the most spectacular part, but the victory owed to the united efforts of all three rifle companies and supporting arms. While Barrow held the crest of the hill, Noren pushed farther along the cable car track, meeting stubborn resistance from scattered enemy groups.[25]

The collapse of CCF resistance on Hill 1081 had a beneficial effect on the Marine advance from Koto-ri. RCT-7 continued its attack on the morning of the 9th with effective air and artillery support. Lieutenant Hovatter’s Able Company of 1/7 seized the remainder of Hill 1304 while Lieutenant Taylor’s Baker Company moved south to Objective C. The Army Provisional Battalion occupied the high ground between Objectives C and D.

These movements were carried out against ineffectual enemy resistance or none at all. Whenever a few Communists dared to raise their heads along the MSR, the airborne TADC in the R5D had the communications equipment to control aircraft on station and to direct their employment in response to ground force units.

The 1st Battalion of RCT-5 maintained its positions on Objective D (Hill 1457) all day. At Koto-ri the other two battalions and regimental headquarters made preparations to move out the following day.

As a preliminary to the withdrawal of RCT-1 (-) from Koto-ri, the 3d Battalion was relieved in its positions along the perimeter by the 41st Commando. Lieutenant Colonel Ridge’s men then moved out to relieve...
3/7 on Objective A and occupy Objective B. The 2d Battalion of RCT-7 (less a company with the regimental train) outposted the MSR between Objectives A and C at about 1630.[26]

Captain Morris’ Charlie Company and a platoon of Baker Company, 1/7, moved down the MSR and secured the bridge site after a short fight. While Charlie Company outposted the area, the Baker platoon crossed behind the broken bridge and suddenly found about 50 Chinese in foxholes. “They were so badly frozen,” reported Sawyer, “that the men simply lifted them from the holes and sat them on the road where Marines from Charlie Company took them over.”[27] Late in the afternoon a patrol from 1/7 attempted to make contact with 1/1 by moving down the MSR. Chinese fire forced the men off the road and they scrambled across the defile below the overpass and into 1/1’s lines.[28]

Lieutenant Colonel Partridge arrived with Weapons Company, 1/7, and the bridge sections followed in the Brockway truck. Even the enemy lent a hand when Communist prisoners were put to work as laborers. After the abutments were constructed, a Brockway truck laid the treads and plywood panels in position so that both trucks and tanks could cross.

At about 1530, three hours after the start, the bridge was in place. Partridge drove his jeep to the top of the pass to inform Lieutenant Colonel Banks, Commanding Division Train No. 1, that he could begin the descent.

Sawyer’s troops had not been idle that afternoon and a total of about 60 CCF prisoners were taken during attacks to drive the enemy back from the bridge site. At about 1700 Partridge returned, and an hour later the first elements of the Division trains began to cross. Only a few vehicles had reached the other side when a disastrous accident threatened to undo everything that had been accomplished. A tractor towing an earth-moving pan broke through the plywood center panel, rendering it useless. And with the treads spaced as they were, the way was closed to wheeled vehicles.

A first ray of hope glimmered when an expert tractor driver, Technical Sergeant Wilfred H. Prosser, managed to back the machine off the wrecked bridge. Then Patridge did some mental calculations and came up with the answer that a total width of 136 inches would result if the treads were placed as far apart as possible. This would allow a very slight margin at both extremes—two inches to spare for the M-26s on the treads; and barely half an inch for the jeeps using the 45-inch interval between the metal lips on the inboard edges of the treads.

Thanks to skillful handling of the bulldozers the treads were soon respaced. And in the early darkness Partridge’s solution paid off when the first jeep crossed, its tires scraping both edges. Thus the convoy got under way again as an engineer detachment guided vehicles across with flashlights while Sawyer’s troops kept the enemy at a distance.[29]

Advance reports of the bridge drop had brought press representatives flocking to Koto-ri in casualty evacuation planes. David Duncan, of Life, a former Marine, took realistic photographs of the troops which attracted nation-wide attention. Keyes Beech sent out daily reports while making notes for a book about his adventures in Korea. Miss Marguerite Higgins, who refused to be outdone by male colleagues, was twice requested to leave Koto-ri before nightfall by Marine officers who respected her pluck as a reporter but felt that the perimeter was no place for a woman in the event of an enemy attack.

Hundreds of words were written about the bridge drop. Some of these accounts were so dramatized as to give Stateside newspaper readers the impression that the span had been parachuted to earth in one piece, settling down neatly over the abutments. Headlines reported the progress of the 1st Marine Division every day, and front-page maps made every American household familiar with the names of such obscure Korean mountain hamlets at Koto-ri and Chinhung-ni.

General Shepherd and Colonel Frederick P. Henderson flew up to the perimeter on the 9th for a conference with General Smith. Before their departure they were informed that all remaining casualties at Koto-ri would be evacuated that day.[30]
All night long on 9-10 December an endless stream of troops and vehicles poured across the span that was doubtless the world’s most famous bridge for the moment. “The sensation throughout that night,” recalled Lieutenant Colonel Partridge in retrospect, “was extremely eerie. There seemed to be a glow over everything. There was no illumination and yet you seemed to see quite well; there was artillery fire, and the sound of many artillery pieces being discharged; there was the crunching of the many feet and many vehicles on the crisp snow. There were many North Korean refugees on one side of the column and Marines walking on the other side. Every once in a while, there would be a baby wailing. There were cattle on the road. Everything added to the general sensation of relief, or expected relief, and was about as eerie as anything I’ve ever experienced in my life.”[31]

Advancing jerkily by stops and starts, the column met no serious opposition from Chinese who appeared to be numbed by cold and defeat. Prisoners taken that night brought the total up to more than a hundred during the movement from Koto-ri to Chinhung-ni. Some of them were suffering from gangrene, the result of neglected frozen limbs, and others showed the effects of prolonged malnutrition. These captives testified that CCF losses from both battle and non-battle casualties had been crippling.

At 0245 on the morning of the 10th the leading elements of the 1st Battalion, RCT-7, began to arrive at Chinhung-ni. A traffic regulating post had been set up at that point the day before by Colonel Edward W. Snedeker, Division Deputy Chief of Staff, for the purpose of controlling the movement of Marine units to the south.[32]

The remaining elements of RCT-7 were strung out from Objective C to the cableway crossing of the MSR. Traffic moved without a hitch until 0400, when two trucks bogged down in a U-shaped bypass across a partially frozen stream about 2000 yards beyond the treadway bridge. Major Frederick Simpson, commanding the 1st Divisional Train, had the vehicles pushed off to one side while the engineers built up the road. After a delay of three hours the column got under way again, with the first vehicles reaching Chinhung-ni at 0830. Ultimately both Division trains got through without a fight, thanks to avoiding the delays which had caused so much trouble during the advance from Hagaru to Koto-ri.[33]

Following the trains, the 7th Marines moved through the Pass. Lieutenant Colonel Lockwood’s 2/7 (less Company E, guarding the regimental train) led the way for the regimental command group, the Provisional Army Battalion, 3/7 and the 3d Battalion of the 11th Marines.[34]

During the early morning hours of the 10th George Company of 3/1 beat off an attack on Objective A by an enemy force estimated at 350 men. This was the only noteworthy instance of CCF activity otherwise limited to scattered shots, and it was believed that the Communists were side-slipping southward, parallel with the MSR. Confirmation of that assumption came at 1200, when Able Company of 1/1 sighted Chinese marching in platoon and company columns through the valley only about 1000 yards east of Hill 1081. Almost simultaneously other dense CCF columns crossed the field of fire of the attached Army self-propelled AAA guns while pouring around an adjacent slope. Lieutenant Colonel Schmuck called immediately for air strikes and artillery fires. Able Company hit the enemy with 4.2” and 81mm mortar rounds, and the Army teams cut loose with .50 cal. and 40mm bursts. The slaughter continued for an hour as the Chinese kept on moving southward with that fatalism which never failed to astonish the Marines.

Baker Company of 1/1 launched an assault with close air support at 1300 on a CCF strong point adjacent to the railroad and north of the battalion’s positions overlooking the MSR. Noren’s men found 3.5 “rocket launchers their most effective weapon when clearing the Communists from heavily timbered and sandbagged bunkers. Excellent close air support was received, though two Marine KIA casualties resulted from an error by Navy planes.[35]

All day the seemingly endless column of vehicles and troops wound southward along the twisting mountain road. At 1030 General Smith and key members of his staff displaced from Koto-ri and proceeded by C-47 and helicopter to the rear CP of the Division at Hungnam. By 1800 both Division trains, all elements of RCT-7
and the 1st, 3d, and 4th Battalions of the 11th Marines had closed Chinhung-ni. There the infantrymen entrucked for Hungnam.[36]

The 5th Marines column followed the 7th, with 3/5 leading the way and 2/5 close behind. Just south of Objective A a brief fire fight was necessary to silence a CCF machine gun, whereupon the movement continued without further incident until the two battalions reached Chinhung-ni at dusk. The 1st Battalion was not relieved by 2/1 until 1800 and did not close Chinhung-ni until the early morning hours of the 11th.[37]

The withdrawal of RCT-1 (–) and attached units from Koto-ri commenced on the afternoon of the 10th. The 3d Battalion, it will be recalled, had relieved RCT-7 units the day before on Objectives A, B and C, and the 1st Battalion occupied Objective E. The regimental plan called for 1/1 to hold the Hill 1081 area and protect the MSR until the other units of the regiment passed through, whereupon Schmuck’s battalion was to pull out with the tanks at the end of the column as the rear guard.

The movement from the Koto-ri perimeter commenced at 1500 when H&S Company of RCT-1 departed. The 2d Battalion (–) of the 11th Marines fell in behind, followed in order by a detachment of the 185th (C) Engineers, USA, the 2d Battalion of the 31st Infantry, USA, the 2d Battalion of RCT-1, the Division Reconnaissance Company and Lieutenant Colonel Milne’s tank column, consisting of Companies B and D of the 1st Tank Battalion, the Tank Company of the 31st Infantry, USA, and the Tank Platoon of the 5th Marines AT Company.[38]

As the last elements left Koto-ri the 92d FA Battalion at Chinhung-ni began laying heavy concentrations on the evacuated base. Only scattered shots were received by the tail of the column from Chinese troops mingling with the Korean refugees. Several small enemy groups on the flanks of the column were taken under fire and dispersed. [39] But with 3/1 guarding Objectives A, B and C, no serious opposition developed during the first stage of the withdrawal.
At dusk on 10 December all indications made it appear that the movement of the 1st Marine Division southward would be completed according to plan with only minor losses of personnel and equipment. Following the seizure of Hill 1081, casualties had been comparatively light and enemy resistance ineffectual. Then, between midnight and 0100 on 11 December, two reverses occurred in areas the Marines supposed to be safe.

The MSR south of Chinhung-ni was under the protection of troops of the 3d Infantry Division—Task Force Dog at Chinhung-ni, and two battalions of the 65th Infantry in the vicinity of Sudong and Majon-dong. It was manifestly impossible, of course, for the Army troops to guard every yard of the road, for the rugged terrain offered many potential ambush sites. Guerrilla activity had been reported near Sudong, but the division trains and the 5th and 7th Marines had passed through without incident.

On the afternoon of the 10th, Korean civilians warned of an impending attack by Chinese soldiers who had infiltrated into this village. As previously indicated, Colonel Snedeker had arrived at Chinhung-ni the previous afternoon. At his suggestion Task Force Dog sent out an infantry patrol which returned with a report of no enemy activity.

At dusk an attack on the traffic turnaround outside Sudong caused Snedeker to halt all traffic at Chinhung-ni until the MSR was cleared. After a fire fight in the darkness, elements of the 65th Infantry reported at dusk that the enemy roadblock had been cleared, and the Marine column resumed its movement southward.

During the next few hours Colonel Snedeker’s worst problem was lack of transport. The Division had requested that the maximum number of trucks, ambulances and narrow-gauge freight cars be collected at Majon-dong, the new railhead. Only about 150 trucks were actually made available, however, 110 of them being from Division service units in the Hungnam area.

In spite of this shortage, the flow of traffic was being maintained when an explosion of CCF activity brought every thing to a stop at Sudong shortly after midnight. Mountain defiles had usually been the scene of enemy ambushes, but this time the Chinese swarmed out from behind houses in the village with grenades and burp guns. Several truck drivers of the RCT-1 regimental train were killed by the first shots and their vehicles set on fire. In the flickering light a confused fight ensued as trucks to the rear stopped. The Marines of the RCT-1 train resisted as best they could, but leadership was lacking until Lieutenant Colonel John U. D. Page, USA, and Marine PFC Marvin L. Wasson teamed up as a two-man task force which routed a group of about 20 Chinese at the head of the vehicle column. The valiant Army artillery officer paid with his life, and Wasson received two wounds from a grenade explosion. Pausing only for first aid, he got back into the fight as another Army officer, Lieutenant Colonel Waldon C. Winston, commanding the 52d Transportation Truck Battalion, USA, directed a counterattack by Marine and Army service troops. Harry Smith, a United Press correspondent, also had a part in the action.

Wasson called for a machine gun to cover him while he fired three white phosphorus rounds from a 75mm recoilless at a house serving the enemy as a stronghold. It burst into flames and the survivors who ran out were cut down by machine-gun fire. The Marine PFC, a jeep driver who was dubbed “The Spirit of ’76” by Winston, then volunteered to help push trucks of exploding ammunition off the road.

Winston gradually brought order out of chaos, but it was daybreak before the MSR was cleared so that the column could start moving again. The RCT-1 regimental train had suffered casualties of eight killed and 21
wounded, while equipment losses consisted of nine trucks and an armored personnel carrier.

Lack of infantry protection was a factor in another reverse which occurred at the tail of the Division column. General Smith’s final orders for withdrawal provided that the tanks were to come out behind the 1st Marines’ train with the infantry of that regiment bringing up the rear. [42] Thus a breakdown in the armored column would not block the road for wheeled vehicles, yet the tanks would have protection against close-in attack.

The 1st Marines prepared detailed plans for the leapfrogging of battalions during the final withdrawal phase. In effect these called for 2/1 to relieve 1/5 on Objective D and remain there until relieved in turn by 2/31. The Army battalion would hold until 3/1 passed through, then follow Ridge’s battalion down the MSR. After 2/1, 3/1 and 2/31 had passed through Lieutenant Colonel Schmuck’s positions around Hill 1081, 1/1 would follow as rear guard. [43]

The first departure from plan occurred when Lieutenant Colonel Sutter discovered, after starting up Hill 1457, that Objective D was so far from the road and so steep that most of the night would be required merely for the battalion to make the climb. No enemy having been sighted, he asked permission to return to the road and continue along the MSR. This request was granted by Colonel Puller and 2/1 resumed the march, followed by 2/11(-), 2/31 and H&S Company of RCT-1 in that order. Lieutenant Colonel Ridge’s 3/1, which remained on Objectives A, B and C until 2100, fell in at the end of the regimental column. [44]

About midnight, after waiting for 3/1 to move down the pass, the tank column began its descent with only Recon Company as protection. Lieutenant Hargett’s platoon of 28 men guarded the last ten tanks and the other two platoons screened the middle and head of the column. [45] Behind the last machine, approaching as close as they dared, were the thousands of refugees. CCF soldiers had mingled with them, watching for an opportunity to strike, and Hargett had the task of keeping the Koreans at a respectful distance.

Progress was slow as the 40 tanks inched around the icy curves with lights on and dismounted crewmen acting as guides. Shortly before 0100 the ninth machine from the rear had a brake freeze which brought the tail of the column to a halt for 45 minutes. The rest of the tanks clanked on ahead, leaving the last nine stranded along the MSR southwest of Hill 1457 and about 2000 yards from the treadway bridge. The enemy took advantage of the delay when five CCF soldiers emerged in file from among the refugees as a voice in English called that they wished to surrender. [46]

Hargett went to meet them cautiously, covered by Corporal George A. J. Amyotte’s BAR. Suddenly the leading Chinese stepped aside to reveal the other four producing hidden burp guns and grenades. Hargett pulled the trigger of his carbine but it failed him in the sub-zero cold. The former all-Marine football star then hurled himself at the enemy group, swinging his carbine. He crushed a Chinese skull like an eggshell, but a grenade explosion wounded him as the ambush developed into an attack from the high ground on the flank as well as the rear.

Before the remaining four Chinese could do Hargett any further harm, Amyotte shot them down, one by one. The fight turned into a wild melee in which friend could hardly be distinguished from foe.

Hargett’s platoon slowly fell back until the last tank was lost to the enemy along with its crew. The men in the next to last tank had buttoned up and could not be aroused to their danger by banging on the hull with rifle butts. While making the effort Hargett was stunned by an enemy explosive charge which blew PFC Robert D. DeMott over the sheer drop at the side of the road, leaving him unconscious on a ledge. The other men of his platoon believed that he had been killed and continued their withdrawal, only to find the next seven tanks abandoned with their hatches open.

Amyotte, wearing body armor, was covering the retirement, firing from prone, when a CCF grenade exploded after landing squarely on his back. The Chinese must have suspected black magic when he went on coolly picking off opponents as if nothing had happened. [47]
It was a precarious situation for Hargett and his remaining 24 men. But they fought their way out without further casualties, and meanwhile tank crewmen had succeeded in freeing the brake of the lead tank and driving two tanks down the road. One of them was brought out by Corporal C. P. Lett, who had never driven before. “I’m going to get this tank out of here even if I get killed doing it!” he told Hargett. By sheer determination, coupled with luck, he maneuvered around the obstacles ahead and down the icy road to safety.

Captain Gould and his demolitions crew of engineers had been waiting for hours to blow the treadway bridge after the last elements of the Division crossed. With the passage of the two tanks and Hargett’s platoon, it was believed that all Marines who could be extricated were safely over the span. On this assumption, which later proved to be erroneous, CWO Willie Harrison set off the demolition charges.

The losses of the Recon platoon were three men MIA (two of them later changed to KIA) and 12 wounded. Crews of the two rear tanks were missing and presumed dead. [48] Hargett’s losses would have been more severe except for the fact that some of his men were wearing Marine body armor made of light-weight plastics.

To another man of Hargett’s platoon went the distinction of being the last Marine out at the finish of the Chosin Reservoir breakout. When durable PFC DeMott recovered consciousness, after being blown over the brink by the CCF pack charge explosion, he found himself precariously perched on a ledge overhanging the chasm. Slightly wounded, he managed to climb back on the road, where he encountered only Korean refugees. Upon hearing a tremendous detonation he realized that the bridge had been blown. He remembered, however, that pedestrians could cross through the gatehouse above the penstocks, and he came down the mountain with the refugees to Chinhung-ni. There he was given a welcome befitting one who has cheated death of a sure thing.

The remaining tanks made it safely to Chinhung-ni without benefit of infantry protection other than what was afforded by Recon Company. [49] Lieutenant Colonel Schmuck did not receive a copy of 1stMar OpnO 16-50, he explained, his only information being a Frag O designating 1/1 as rear guard and “a hasty, 30-second conference” with Colonel Puller when the 1st Marine command group passed through. “I was informed,” he added, “that the tanks were in the rear of the 1st Marines, that 2d Bn, 31st Infantry was bringing up the rear, and that as soon as that unit passed, I would employ my battalion as rear guard. . . . No mention at all was made of the Reconnaissance Company. In order to check off the units that passed endlessly through my lines, I established a check point at the incline railway overpass and kept a close record of movement.”

A great deal of intermingling of units was observed by the 1/1 commander. At 0300, after sighting the lights of the tanks, he gave orders for Able Company to commence the withdrawal, in order “to consolidate my battalion for the rear guard action prior to daybreak. . . . When the first tanks reached my position, I was first startled to find no 2/31 accompanying them and then flabbergasted to discover that the Recon Company was somewhere out there ‘screening’ the movement. This canceled my carefully laid covering plan.” [50]

No further trouble resulted for the tanks and Recon Company. Ahead of them the infantry units continued the movement southward from Chinhung-ni chiefly by marching because of the shortage of trucks. Lieutenant Colonel Sutter’s men proved that footslogging is not a lost art by covering the 22 miles from Koto-ri to Majon-dong in a 20-hour hike with packs, heavy parkas, individual weapons and sleeping bags. [51]

Battle casualties of the division for the final stage, the attack from Koto-ri southward, were as follows: Click here to view table

At 1300 on 11 December the last elements of the Division cleared Chinhung-ni. Majon-dong had been left behind at 1730 without audible regrets; and by 2100 all units, with the exception of the tanks, had reached assigned assembly areas in the Hamhung-Hungnam area. The armored column arrived at the LST staging area of Hungnam half an hour before midnight, thus bringing to an end the breakout of the 1st Marine Division. [52]

Chapter 15. The Hungnam Redeployment

“WAVE AND LOOK HAPPY!” These were the first words to greet some of the weary, unshaven Marines upon arrival in the Hamhung-Hungnam area. They grinned obligingly in response to the press photographers snapping pictures of the motor column from the roadside. They were happy indeed to be back in a world of hot meals and hot baths. They were happy to be alive.

Marines and attached Army troops found it astonishing as well as flattering to learn that such expressions as “epic” and “saga” and “miracle of deliverance” were being applied to the breakout in American newspapers. The press correspondents in turn were astonished to learn that never for a moment had the men doubted that they would slug their way out to the seacoast.

“The running fight of the Marines and two battalions of the Army’s 7th Infantry Division from Hagaru to Hamhung—40 miles by air but 60 miles over the icy, twisting mountainous road—was a battle unparalleled in U.S. military history,” commented Time. “It had some aspects of Bataan, some of Anzio, some of Dunkirk, some of Valley Forge, some of the ‘Retreat of the 10,000’ (401–400 B.C.) as described in Xenophon’s Anabasis.”

Not until the Marines had fought their way as far as Chinhung-ni, the weekly newsmagazine continued, did there appear to be much hope that they would come out as an organized force. Then “for the first time it looked as if most of the 20,000 [Marines] would get through.”[1]

By reading contemporary press accounts it is possible to recapture the mood of the American public upon realization of the disaster which had overtaken the Eighth Army. “It was defeat—the worst defeat the United States ever suffered,” reported Time in the issue of 11 December 1950. “The Nation received the fearful news from Korea with a strange-seeming calmness—the kind of confused, fearful, half-believing matter-of-factness with which many a man has reacted upon learning that he has cancer or tuberculosis. The news of Pearl Harbor, nine years ago to the month, had pealed out like a fire bell. But the numbing facts of the defeat in Korea seeped into the national consciousness slowly out of a jumble of headlines, bulletins, and communiques; days passed before its enormity finally became plain.”[2]

Newsweek called it “America’s worst military licking since Pearl Harbor. Perhaps it might become the worst military disaster in American history. Barring a military or diplomatic miracle, the approximately two-thirds of the U.S. Army that had been thrown into Korea might have to be evacuated in a new Dunkerque to save them from being lost in a new Bataan.”[3]

The situation in west Korea was depressing enough. But at least the Eighth Army had a line of retreat left open. It was with apprehension that the American public stared at front-page maps showing the “entrapment” of the 1st Marine Division and attached U.S. Army units and British Marines by Chinese forces. Press releases from Korea did not encourage much expectation that the encircled troops could save themselves from destruction by any means other than surrender. In either event the result would be a military catastrophe without a parallel in the Nation’s history.

The first gleam of hope was inspired by the news that the Marines had seized the initiative at Yudam-ni and cut a path through Chinese blocking the route to Hagaru. Then came the thrilling reports of the air drops of supplies at Hagaru and the mass evacuation of casualties by air. Much of the humiliation felt by newspaper readers was wiped clean by pride as General Smith’s troops fought through to Koto-ri and Chinhung-ni in sub-zero cold. The air drop of the bridge sections was a dramatic climax to the realization that what had been a hope was now a fact—the Chosin Reservoir troops had saved themselves and inflicted a major defeat on the Chinese Communists in the doing. Testimony of POWs had left no doubt that the mission of the three CCF corps was the
annihilation of the surrounded United States forces, but the result had been enemy losses which did not fall far short of annihilation of the CCF units themselves.

It was in a spirit of prayerful thanksgiving, therefore, that Americans read about the column of grimy, parka-clad men which came out of the mountains of northeast Korea on 11 December 1950. They had come out fighting and they had brought their wounded and most of their equipment out with them.
The Chosin Reservoir Campaign

Chapter 15. The Hungnam Redeployment
Marines Billeted in Hungnam Area

As late as 9 December it had been General Smith's understanding that the 1st Marine Division would occupy a defensive sector south and southwest of Hungnam. Then Colonel McAllister at Hungnam was notified by X Corps that plans for the defense of the Hungnam area had been changed, so that the Marines were to embark immediately for redeployment by water to South Korea. General Smith was informed on the 10th, and so promptly was the new plan put into effect that the first Marine units were already loading out before the last elements of the Division arrived at Hungnam. [4]

No changes were necessary in the plans for the reception of Marine units in the Hungnam area worked out by Colonel Snedeker and Colonel McAllister on orders of General Smith. On 8 December, Snedeker had issued detailed instructions which designated defensive sectors for RCT-1 at Chigyong and for RCT-5 and RCT-7 in the vicinity of Yonpo Airfield. The 1st Amphibian Tractor Battalion was charged with making such preparations to receive the returning troops as putting up tents, installing stoves, erecting heads and equipping galleys. [5]

The Navy, as usual, was ready. On 15 November, it may be recalled, General Smith had candidly expressed his misgivings about the strategic outlook to Admiral Morehouse and Captain Sears. Morehouse was chief of staff to Admiral Joy, ComNavFE, and Sears served in a like capacity under Admiral Doyle, CTF-90. This frank discussion had not fallen upon deaf ears; and on the 28th, only a few hours after the first CCF attacks at Yudam-ni, ComNavFE alerted CTF-90 as to the possible need for a redeployment operation by sea. The following day Joy advised that events in the Chosin Reservoir area made it desirable for ships of TF-90 to be on six hours’ notice either in Korean waters or at Sasebo, Japan. [6]

CTF-90 commenced planning immediately for either an administrative or emergency outloading. His OpnO 19–50, issued on the 28th for planning purposes, provided for half of the amphibious force to conduct redeployment operations on the east coast under Doyle as ComPhibGruOne, while the other half had a similar mission on the west coast under Admiral Thackrey, ComPhibGruThree.

At this time ComPhibGruThree and most of the amphibious units were in Japanese ports for upkeep and replenishment. All were directed by Admiral Joy on the 29th to proceed to Sasebo.

ComPhibGruOne had just completed the opening of Hungnam as a major resupply port and was preparing to withdraw to Japan with the remaining amphibious force. On 30 November, however, the deteriorating situation of ground forces in Korea made it necessary for all units of TF-90 to be in Korean waters. The emergency appeared to be more critical on the west coast, and two-thirds of the smaller amphibious ships were allotted to the Inchon area while the transports were divided equally between Inchon and Hungnam.

The first week of December was devoted to planning and preparing for a redeployment of X Corps by sea which appeared more likely every day. Mine sweeping operations were resumed at Hungnam to enlarge the swept anchorage area and provide swept channels for gunfire support ships.

X Corps OpnO 9–50, issued on 5 December, provided for the defense of the Hungnam area by setting up a perimeter with a final defense line about seven miles in radius. Pie-shaped sectors of fairly equal area, converging on the harbor, were assigned to the following major units from east to west—1st ROK Corps (less one division at Songjin), 7th Infantry Division, 3d Infantry Division (with the 1st KMC Regiment(-)), and the 1st Marine Division. The Marine sector included Yonpo Airfield.

On 8 December a conference held on board the Mount McKinley by ComNavFE and CTF-90 was
attended by Vice Admiral Struble, Com7thFlt, Rear Admiral John M. Higgins, ComCruDivFive, and Lieutenant General Shepherd, CG FMFPac.

General Shepherd was present as “Representative of Commander Naval Forces, Far East, on matters relating to the Marine Corps and for consultation and advice in connection with the contemplated amphibious operation now being planned.”[7]

General Almond was directed on the 9th to redeploy to South Korea and to report to the commanding general of the Eighth Army after assembling in the Ulsan-Pusan-Masan area. He was to release the 1st ROK Corps as soon as possible to the ROK Army in the Samchok area. An assembly area in the vicinity of Masan, widely separated from the other units of X Corps, was specified for the 1st Marine Division.

CTF-90 was assigned the following missions:

“(1) Provide water lift for and conduct redeployment operations of UN forces in Korea as directed;
“(2) Control all air and naval gunfire support in designated embarkation areas;
“(3) Protect shipping en route to debarkation ports;
“(4) Be responsible for naval blockade and gunfire support of friendly units East Coast of Korea, including Pusan;
“(5) Be prepared to conduct small-scale redeployment operations, including ROK forces and UN prisoners of war;
“(6) Coordinate withdrawal operations with CG X Corps and other commands as appropriate;
“(7) Support and cover redeployment operations in the Hungnam or other designated Korean embarkation area.”

No such large-scale sea lift of combined Army, Navy, Air Force, and Marine elements, not to mention the ROK units, had been attempted since Okinawa. The time was so short, moreover, that action could not wait on detailed planning and organization. In any event the job had to be done.

An enormous fleet of shipping must be assembled from every available source in the Far East. More than 100,000 troops must be embarked, and it was estimated at first that 25,000 Korean refugees must be evacuated, though this figure had to be nearly quadrupled. Mountains of supplies and thousands of vehicles must be outloaded from a comparatively small port. While these activities were in progress, the perimeter must be protected with naval gunfire and aircraft against an enemy credited by X Corps G-2 estimates with the capabilities of launching an attack of six to eight depleted divisions against the Hamhung-Hungnam area.

It was aptly dubbed “an amphibious landing in reverse,” since the plan called for the methodical shrinking of the perimeter, under cover of air strikes and naval gunfire, until the last platoon of the ground forces had embarked. Then would come the grand finale of the demolitions.
The Wonsan evacuation was instructive as a rehearsal for the Hungnam redeployment. From 2 to 10 December, Lieutenant Colonel Crowe’s 1st Shore Party Battalion had charge of the outloading while sharing the defense of the harbor with a battalion from the 3d Infantry Division and two KMC battalions. Another Marine outfit, Company A of the 1st Amphibian Truck Battalion, speeded up the operation by making hundreds of round trips between docks and ships with DUKWs.\[8\]

Air cover and naval gunfire from supporting ships of TE-90.21 was so effective that Wonsan had no enemy interference worth mentioning. Covering missions continued to be fired until the last friendly troops withdrew, and operations were completed without the necessity of destroying UN supplies and equipment. Altogether, 3834 troops, 7009 Korean civilians, 1146 vehicles, and 10,013 bulk tons of cargo had been outloaded when the operation was completed on 10 December. One detachment of Shore Party troops sailed for Pusan with the DUKWs in preparation for unloading the 1st Marine Division upon its arrival at that port.

The Hungnam evacuation plan, as outlined in X Corps OpnO 10–50, issued on 11 December, provided for the immediate embarkation of the 1st Marine Division and the 3d ROK Division. A smaller perimeter than the original concept was to be defended meanwhile by the 7th and 3d Infantry Divisions, with the latter having the final responsibility. Major units were to withdraw gradually by side-slippering until only reinforced platoons remained as covering forces holding strong points. Plans called for naval gunfire and air support to be stepped up as the perimeter contracted.

CTF-90 assumed control of all naval functions on 10 December after approving loading plans made at a conference of Navy officers and representatives of X Corps. Colonel Forney, Deputy Chief of Staff, X Corps, was appointed Corps evacuation control officer with responsibility for the operation of the Hungnam port and was assigned a small staff. Major Richard W. Shutts, of General Shepherd’s party, was placed in charge of the Operations Section. Two more former TTUPac Marines on the X Corps staff were assigned sections—Major Charles P. Weiland, the Loading Section; and Major Jack R. Munday, the Navy Liaison Section. Lieutenant Colonel Harry E. Moisell, USA, headed the Movement Section, and Captain William C. Cool, USA, the Rations Section.

Lieutenant Colonel Charles E. Warren served as Colonel Forney’s executive officer until he was incapacitated by pneumonia and relieved by Lieutenant Colonel Crowe.

The 2d Engineer Special Brigade, USA, was responsible for operation of the dock facilities, traffic control in the dock areas, and for furnishing Japanese stevedores, winch operators, cargo handling equipment, and dunnage. A reinforced company from the 1st Shore Party Battalion worked the LST and small craft beaches while controlling the lighterage for ships loading in the stream.

It was decided on 11 December that 1st Marine Division staging to assembly areas should commence immediately. Loading had to be expedited so that ships could be used for a second and even third turn-around. Embarkation Order 3-50, issued by the Division on the 11th, assigned vehicle and cargo assembly areas to units, and an embarkation control office was set up in the dock area.

As compensation for the cramped confines of the Hungnam harbor, the tidal range was less than a foot as compared to the maximum of 31 feet at Inchon. And though the docks had space for only seven ships, Major Weiland planned to double-berth four additional ships and load them from the outboard side. In addition, 11 LSTs could be handled simultaneously—seven at GREEN Beach One, and the others at GREEN Beach Two.
Marine units awaiting shipping remained on a standby basis, ready to begin loading at once upon assignment of space by the embarkation officer. The Division rear CP at Hungnam had become the only CP with General Smith’s arrival; and on the 11th General Craig, the ADC, returned from emergency leave.

General MacArthur flew to Yonpo Airfield on the 11th for a brief conference with General Almond and approved the X Corps plan. A date of 27 December was set for Corps units to pass under the control of the Eighth Army in South Korea.

The outloading of the 1st Marine Division was making good progress on the 12th when General Smith visited the docks on a tour of inspection. That evening he and General Shepherd attended a dinner at the Corps CP in honor of General Almond’s 58th birthday. The Army was represented by Major Generals Barr, Soule, and Clark L. Ruffner, X Corps Chief of Staff.

By the following day the 5th and 7th Marines were ready to sail. Embarkation officers loaded their ships by sight, planning as they went along. Not knowing in advance what type of ship might be assigned, they found that carefully calculated stowage diagrams were out of the question. Under these circumstances, amphibious training and experience were invaluable.

Space in the tent city established by X Corps to the rear of the LST beaches had been made available to Marine units awaiting embarkation. Most of them, however, moved directly from their bivouac areas to the beach.

While the Marines were outloading, the two Army divisions defending the perimeter had only minor patrol actions. Their artillery supplied most of the interdiction fires at the outset, with naval gunfire giving the deep support. Vigorous air support by Navy, Air Force, and Marine planes also did much to discourage any hostile intentions the enemy may have had.

MGCIS-1, the ground control intercept squadron at Yonpo, stopped directing the high altitude fighters on 11 December and passed over to the USS Mount McKinley the task of keeping the perimeter clear of any enemy planes. Over-all control of air still remained ashore with MTACS-2.

At 1500 on the 13th General Smith went aboard the USS Bayfield and opened the Division CP. As his last duty on shore, he attended memorial services held by the Division at the Hungnam Cemetery. While the commanding general paid his tribute to the honored dead, Chinese POWs were making preparations for the interment of the last bodies brought down from Chinhung-ni.

The Marine loading was completed on the 14th. At a conference that day with CTF-90 on board the Mount McKinley, General Smith inquired as to the possibility of having the ships carrying the Marines unload at Masan instead of Pusan, thus saving a 40-mile movement by truck. Admiral Doyle pointed out that this procedure was not feasible because of the lack of lighterage facilities at Masan. The additional turn-around time, moreover, would have delayed the evacuation of remaining Corps units.

The 14th was also the day when Marine air strikes from Yonpo ended with the departure of the last of the Wing’s land-based fighters for Japan. Shortly after midnight the Air Defense Section of MTACS-2 passed control of all air in the Hungnam area to the Navy’s Tactical Air Control Squadron One of TF-90 aboard the USS Mount McKinley. The Marine squadron then set up a standby TACC aboard an LST until the final withdrawal on 24 December.

At 1030 on 15 December, as the Bayfield sailed, the curtain went down on one of the most memorable campaigns in the 175-year history of the Marine Corps. A total of 22,215 Marines had embarked in shipping consisting of an APA, an AKA, 3 APs, 13 LSTs, 3 LSDs, and 7 commercial cargo ships.

The Yonpo airlift continued, however, until 17 December when the field was closed and a temporary airstrip nearer the harbor was made available to twin-engine R4D’s for the final phase of the air evacuation. The only Marine units left in Hungnam were a reinforced Shore Party company, an ANGLICO group and one and a half companies (88 LVTs) of the 1st Amphibian Tractor Battalion. They passed under the operational control of X Corps to assist in the outloading of Army units. Also, Colonel Boeker C. Batterton, commanding MAG-12, had
moved to Hungnam for the final evacuation of his air group from Yonpo and to arrange for loading its heavy equipment and remaining personnel aboard SS Towanda Victory. Then on 18 December he flew his command post to Itami.[9]
With ten days remaining for the embarkation of the two Army divisions, the problem of Korean refugees threatened to disrupt the schedule. But CTF-90 contrived somehow to find the shipping, and the homeless Koreans were willing to put up with any hardships to escape from Communist domination. It became standard practice to embark at least 5000 on an LST, not counting children in arms, and no less than 12,000 human sardines found standing room on one commercial cargo ship.[10]

The most fragile link in the complex chain of operations was represented by the two 390-ton diesel electric tugs. No others were available, nor were spare parts to be had, yet both tugs had clocked more than 5000 running hours since the last overhaul. Thus it seemed almost a miracle that neither broke down for more than three hours in all, and repairs were made with materials at hand.

On the 18th, when the last ROKs sailed for Samchok, the 7th Infantry Division was in the midst of its outloading. By 20 December all troops of this unit had embarked, according to schedule. Responsibility for the defense of Hungnam then passed to Admiral Doyle as General Almond and his staff joined CTF-90 on board the flagship Mount McKinley. General Soule’s 3d Division now manned the shore defenses alone.[11]

When the perimeter contracted to the immediate vicinity of Hungnam, following the evacuation of Hamhung and Yonpo Airfield, two cruisers, seven destroyers, and three rocket-firing craft covered the entire front from their assigned positions in mine-swept lanes. A total of nearly 34,000 shells and 12,800 rockets was fired by these support ships, with the battleship Missouri contributing 162 16-inch rounds at the finish of the bombardment. About 800 more 8-inch shells and 12,800 more 5-inch shells were expended at Hungnam than during the naval gunfire preparation for the Inchon landing.

Seven embarkation sites were employed (see Map 30). From left to right they were designated as PINK Beach, BLUE Beach, GREEN One and Two Beaches, and YELLOW One, Two, and Three Beaches. The 7th RCT, holding the left sector, was to embark from PINK Beach. BLUE and GREEN One Beaches were assigned to the 65th RCT in the center, while the 15th RCT had GREEN Two and the three YELLOW Beaches.

H-hour had been set at 1100 on the 24th, and seven LSTs were beached at 0800 to receive 3d Infantry Division troops. Soon the three regiments were reduced to as many battalions which acted as covering forces while the other troops fell back to assigned beaches. All withdrawals were conducted methodically along specified routes by units using marking panels. Then the battalions themselves pulled out, leaving only seven reinforced platoons manning strong points. The Hungnam redeployment came to an end when these platoons boarded an LST after a search for stragglers. Air and naval gunfire support had made it an uneventful finish except for the accidental explosion of an ammunition dump on PINK Beach, resulting in two men killed and 21 wounded.

All beaches were clear by 1436 on Sunday afternoon, the 24th, with Able and Baker Companies of the Amtrac Battalion sticking it out to the end. Marines of these units provided fires to cover the flanks of the last withdrawals and manned 37 LVTs evacuating Army troops from PINK Beach. With the exception of three LVTs lost in the ammunition dump explosion on that beach, all LVTs and LVT(A)s were safely reembarked on LSDs at the finish of the operation.[12]

Remarkably few supplies had to be left behind for lack of shipping space. Among them were 400 tons of frozen dynamite and 500 thousand-pound bombs. They added to the tumult of an awe-inspiring demolitions scene. The entire Hungnam waterfront seemed to be blown sky-high in one volcanic eruption of flame, smoke,
and rubble which left a huge black mushroom cloud hovering over the ruins.

The chill, misty dawn of Christmas Day found the *Mount McKinley* about to sail for Ulsan with CTF-90 and Generals Almond and Shepherd after an eminently successful operation. It had been pretty much the Navy’s show, in the absence of enemy interference, and the final statistics were staggering—105,000 military personnel, 91,000 Korean refugees, 17,500 vehicles, and 350,000 measurement tons of cargo loaded out in 193 shiploads by 109 ships.

“With naval, air and surface units effectively isolating the beachhead, we were able to take our time and get everything out,” commented Admiral Joy on 26 December. “Admiral Doyle has turned in another brilliant performance. We never, never contemplated a Dunkirk—not even faintly.”[13]
Chapter 15. The Hungnam Redeployment
Marines Arrive at New Assembly Area

While the remaining X Corps units completed outloading at Hungnam, the Marines were landing at Pusan and proceeding by motor march to their new assembly area in the vicinity of Masan. General Craig, the ADC, had gone ahead with the advance party from Hungnam and made arrangements for the reception of the Division.[14]

News from the front in West Korea was not encouraging as the Eighth Army planned further withdrawals, for G-2 reports indicated that the advancing Chinese were about to launch a great new offensive shortly. Despite the persistent rumors that all Korea might be evacuated by UN forces, General MacArthur insisted in his special communiqué of 26 December that operations “were skilfully conducted without loss of cohesion and with all units remaining intact. . . .

“In its broad implications I consider that these operations, initiated on 24 November and carried through to this [Hungnam] redeployment, have served a very significant purpose—possibly in general result the most significant and fortunate of any conducted during the course of the Korean campaign.

“The might of a major military nation was suddenly and without warning thrown against this relatively small United Nations Command but without attaining a decision.

“Due to intervening circumstances beyond our power to control or even detect, we did not achieve the United Nations objective.

“But at a casualty cost less than that experienced in a comparable period of defensive fighting on the Pusan perimeter, we exposed before too late secret political and military decisions of enormous scope and threw off balance enemy preparations aimed at surreptitiously massing the power capable of destroying our forces with one mighty extended blow.”[15]

Questions as to the proper evaluation of the Eighth Army withdrawal turned into a controversy during coming months with political as well as military implications. Press representatives, military critics and soldiers of other nations, while crediting MacArthur with a great victory at Inchon, were for the most part of the opinion that the Eighth Army withdrawal of November and December was a costly reverse.[16]

Marine officers in Korea had no first-hand knowledge of EUSAK operations. It was obvious, however, that an Eighth Army retirement south of the 38th Parallel had made it desirable if not actually necessary for X Corps to withdraw from northeast Korea, even though General Almond held that a Hamhung-Hungnam perimeter could be defended throughout the winter.
The Chosin Reservoir Campaign
Lynn Montross and Nicholas A. Canzona

Chapter 15. The Hungnam Redeployment
Contributions of Marine Aviation

The close coordination of aviation with the ground forces in the Chosin campaign was due in large measure to the assignment of additional pilots to the 1st Marine Division as forward air controllers. They had been plucked from 1st Marine Aircraft Wing squadrons barely in time to join their battalions before embarking at Inchon. Increasing the number of FACs to two per battalion did much to bring air support down to the company level when needed. [17]

Air units frequently had to rely upon charts with place names, grid coordinates, and scales different from those in the hands of the ground troops. Here the Marine system of the man on the ground talking the pilot onto the target by reference to visual land marks paid off.

Cloudy, stormy weather was common. Three night fighter pilots were lost because of icing, disorientation, and insufficient radio aids to navigation. Two VMF-212 land-based pilots saved themselves from destruction only by landing on the Badoeng Strait with their last drops of gas.

With the approach of winter and cold weather, aircraft on the landing strips had to be run up every two hours at night to keep the oil warm enough for early morning takeoffs. Ordnance efficiency dropped. Planes skidded on icy runways. Once, after a six inch snow, 80 men and ten trucks worked all night to clear and sand a 150-foot strip down the runway at Yonpo. [18]

As early as mid-November it once took hours of scraping and chipping on the Badoeng Strait to clear three inches of glazed ice and snow off the decks, catapults, arresting wires, and barriers. Planes which stood the night on the flight deck had to be taken below to the hangar deck to thaw out. On another occasion VMF-214 had to cancel all flight operations because 68-knot winds, heavy seas, and freezing temperatures covered the Sicily’s flight deck and aircraft with a persistent coat of ice.

One pilot of VMF-323 had to return shortly after takeoff because water vapor froze in his oil breather tube in flight. With the back pressure throwing oil all over his windshield and billowing black vapor and smoke out of his cowl, he landed only to have the front of his Corsair burst into flames when the escaped oil dripped on the hot exhaust stacks. Quick work by the deck crews extinguished the fire.

A hazard as great as being shot down was a crash landing or bail-out at sea, where the water was cold enough to kill a man in 20 minutes. Survival clothing and equipment was so bulky that pilots could barely get into their cockpits.

Maintenance and servicing problems ashore, complicated by dirt, dust, and the scarcity of parts, kept mechanics working to the point of exhaustion. Insufficient trucks forced the ground crews to refuel and arm planes by hand, often from rusting fuel drums. Two destructive crashes, one fatal, were attributed to accumulated water in gasoline.

Aboard ship until mid-November, VMF-214 was able to keep 91 per cent of its planes operative. When suddenly deployed ashore to Wonsan, its aircraft availability dropped to 82 per cent and at Yonpo to 67 per cent. Once back at sea again in December, it jumped up to 90 per cent.

Basic difference in close air support doctrine between the Navy and Marines and Air Force were resolved by close and friendly liaison between the 1st Marine Aircraft Wing and the Fifth Air Force commands; by a Marine aviator attached to the Joint Eighth Army-Fifth Air Force Operations Center at Seoul; and by indoctrination of non-Marine units of the X Corps in the Marine-Navy style of close air support. Difficulties in inter-service communications slowed Fifth Air Force operations orders to carrier squadrons, both Navy and
Marine. Messages were routed via FEAF and ComNavFe in Tokyo and arrived hours late. Ashore, even MAG-12 during the first two weeks at Wonsan received its Fifth Air Force mission orders six to 36 hours late. A direct radio teletype between 1st MAW and 5thAF headquarters alleviated the situation. And when the CG 1st MAW received full control of the air over the X Corps area on 1 December, these problems were eased.

Actual control of air support for the scattered ground units demonstrated close cooperation between the Navy and Marine Corps. This was evident from the time the Navy’s Tactical Air Control Squadron One on the USS Mount McKinley passed control to the Air Defense Section of MTACS-2 at Hamhung to the time that control returned to the ship in the Hungnam evacuation.

When the Marines had control, the ship stood by as an emergency TACC and acted as a radar reporting station for MTACS-2. When control was passed back afloat, the Air Defense Section of MTACS-2 stood by as a standby TACC aboard an LST until the last man was pulled off the beach. Furthermore, three officers from MGCIS-1 went aboard Mount McKinley to help out as Air Defense controllers. They were experienced. All through the Wonsan-Chosin campaign, the MGCIS had directed the defensive fighter patrols, circling Wonsan and Yonpo, to check all unidentified aircraft before the latter got close enough to do any damage. MGCIS-1 also steered lost planes to base in bad weather, occasionally vectored them into the GCA radar-controlled landing pattern, and even assisted MTACS-2 in directing air support planes to FACs.[19]

Tactical air support in the X Corps zone was directed to the ground units by the Air Support Section of MTACS-2. From 26 October to 11 December, 3703 sorties in 1053 missions were controlled by the TACPS of Marine, Army, and ROK units. Close air support missions accounted for 599 of the total (468 for 1st Marine Division, 8 for 3d Infantry Division, 56 for 7th Infantry Division, and 67 for ROKs). The remaining 454 missions were search and attack.[20]

When FAC communications failed from valley to valley, aircraft became radio relays and controllers. This was highlighted by the airborne TADC, orbiting over the road from Hagaru.

Approximately half of the Marine air missions were in support of non-Marine ground units. The ROK and the U.S. Army units were not as well supplied with experienced FAC’s as the 1st Marine Division. In these areas four Air Force “Mosquitos” (AT-6 “Texan” training planes) were assigned to X Corps to assist in the control of air support.[21]

When shore-based Marine air support was about to cease with the closing of Yonpo air field, VMF-214 and VMF-212 quickly moved their operations aboard carrier; and during the final phases of the Hungnam evacuation, almost half of the Marine tactical air strength was operating from carrier bases. VMF-214 flew back aboard Sicily on 7 December without missing a mission and VMF-212, which had moved to Itami on 4 December to draw and test a new complement of carrier Corsairs, was aboard the USS Bataan eight days later. When the month ended, still another squadron, VMF-312, was polishing up its carrier landing technique for seaborne duty.[22]

The outcome of the Hagaru withdrawal owed much to air-dropped supplies and to casualty evacuations by General Tunner’s Combat Cargo Command (CCC). Assisting Combat Cargo in Marine support were the Wing’s R4D twin engine transports and TBM World War II type torpedo bombers, both of which were flown largely by the field-desk pilots on the Wing and Group staffs. Most of the Marines’ share of the heavy airlifting, however, was done by the four engine R5D transports of Colonel Dean C. Roberts’ VMR-152. Early in October this squadron had been temporarily shifted from the trans-Pacific airlift of the Navy’s Fleet Logistics Air Wing to support the Marines in the Wonsan campaign. In Korea its operations were controlled by the Combat Cargo Command, which committed an average of five Marine R5D’s a day into the CCC airlift. In such missions these transports supported all UN units from Pyongyang to Yonpo and points north. Marine transports not committed by the CCC for general UN support in Korea were available for Wing use. From 1 November until Christmas, VMR-152 safely carried five million pounds of supplies to the front and evacuated more than 4000 casualties.[23]
The Chosin Reservoir campaign opened two new chapters in Marine aviation history. The first was the use of the airborne TADC to control the air support of the division column between Hagaru and Chinhung-ni. The second was the appearance of VMF-311, the first Marine jet squadron to fly in combat. Beginning on 10 December the newly arrived squadron flew interdiction missions for four days from Yonpo. Then it moved to Pusan to operate for the remainder of the month with 5th Air Force jets streaking up the long peninsula to cover the withdrawal of the Eighth Army.[24]

Appreciation for the assistance given by Marine aviation to Marine ground forces was expressed in a letter of 20 December from General Smith to General Harris, the Commanding General of the 1st Marine Air Wing. The Division Commander said:

“Without your support our task would have been infinitely more difficult and more costly. During the long reaches of the night and in the snow storms many a Marine prayed for the coming of day or clearing weather when he knew he would again hear the welcome roar of your planes as they dealt out destruction to the enemy. Even the presence of a night heckler was reassuring.

“Never in its history has Marine Aviation given more convincing proof of its indispensable value to the ground Marines. A bond of understanding has been established that will never be broken.”[25]

The story of air support in the Chosin Reservoir campaign would not be complete without a summary of the results of VMO-6. Marines took a proprietary interest in Major Gottschalk’s squadron, which had put into effect the helicopter techniques worked out at Quantico by the experimental squadron, HMX-1. Some of these techniques were having their first test in combat, for the development of rotary-wing aircraft in 1950 was at a pioneer stage comparable to that of fixed-wing aircraft in the first year of World War I. On 28 October, VMO-6 had a strength of 25 officers, 95 enlisted men, ten light fixed-wing aircraft (eight OY-2s, two L5Gs) and nine HO3S-1 helicopters. From that date until 15 December the squadron made 1544 flights for a total of 1624.8 hours. The principal missions were as follows:

“Reconnaissance—OYs, 393; helicopters, 64; Transportation—OYs, 130; helicopters, 421; Evacuation—OYs, 29; helicopters, 191; Liaison—OYs, 35; helicopters, 90; Artillery spot—OYs, 39; helicopters, 0; Utility—OYs, 26; helicopters, 60; Rescue—OYs, 0; helicopters, 11.”[26]

But statistics can give no idea of the most significant achievement of VMO-6 in the Reservoir campaign. For during the most critical period the only physical contact between units separated by enemy action was provided by the OYs and helicopters. The importance of this contribution can hardly be overestimated.
The Chosin Reservoir Campaign

Chapter 15. The Hungnam Redeployment
Losses Sustained by the Enemy

Marine losses in northeast Korea, as reported to the Secretary of the Navy, included a total of 4418 battle casualties from 26 October to 15 December 1950—604 KIA, 114 DOW, 192 MIA, and 3508 WIA. The 7313 non-battle casualties consisted largely of minor frostbite and indigestion cases who were soon restored to active duty.[27] Eight Marine pilots were KIA or died of wounds, four were MIA, and three were wounded. General Smith estimated that a third of the non-battle casualties were returned to duty during the operation.[28]

Enemy losses for the same period were estimated at a total of 37,500–15,000 killed and 7500 wounded by Marine ground forces, plus 10,000 killed and 5000 wounded by Marine air. Not much reliance can be placed in such figures as a rule, but fortunately we have enemy testimony as to heavy losses sustained by the Chinese Communists.

This evidence goes far toward explaining why they did not interfere with the Hungnam redeployment. Contrary to expectations, Chinese military critiques have been candid in admitting failures and unsparing in self-criticism. Among captured documents are summaries of the operations of the three CCF armies encountered by the Marines in the Chosin Reservoir area. These major units, representing at least 11 and probably 12 divisions, were as follows:

20th CCF Army—58th, 59th, and 60th Divisions, with the 89th Division of the 30th Army attached;
26th CCF Army—76th, 77th, and 78th Division, with probably the 94th Division of 32d Army attached;
27th CCF Army—79th, 80th, and 81st Divisions, with the 70th Division of 24th Army attached.[29]

All three armies were major units of the 9th Army Group of the 3d CCF Field Army. In mid-October the leading elements of the 4th CCF Field Army had crossed the Yalu to oppose the U.S. Eighth Army. The operations of X Corps in northeast Korea being considered a threat to the left flank, the 42d Army was detached with a mission of providing flank protection, pending relief by units of the 3d CCF Field Army. Three divisions, the 124th, 125th, and 126th were represented. While the last hovered on the left flank of the 4th Field Army, the 124th was hard hit near Sudong during the first week of November by RCT-7 of the 1st Marine Division.

In order to cover the withdrawal of the remnants, the 125th Division moved south of Hagaru from the Fusen Reservoir area. Both CCF divisions then fell back to Yudam-ni, where they were relieved by units of the 20th Army, 3d Field Army. This ended the operations of the 4th Field Army in northeast Korea.

Shortly after the appearance of the 20th Army in the Yudam-ni area, the 27th Army moved into positions north of the Chosin Reservoir. Thus the enemy had available eight divisions for the attacks of 27–28 November on the Marines in the Yudam-ni area and the three 7th Infantry Division battalions east of the Chosin Reservoir. If it may be assumed that these CCF divisions averaged 7500 men each, or three-fourths of full strength, the enemy had a total of 60,000 men in assault or reserve.

The Chinese, as we know, failed to accomplish their basic mission, which prisoners agreed was the destruction of the 1st Marine Division. In every instance the efforts of the first night were the most formidable, with enemy effectiveness declining sharply after a second or third attack. The explanation seems to be that the 12 divisions were sent into northeast Korea with supplies which would have been sufficient only if the first attempts had succeeded. The following comment by the 26th Army supports this conclusion:

“A shortage of transportation and escort personnel makes it impossible to accomplish the mission of supplying the troops. As a result, our soldiers frequently starve. From now on, the organization of our rear service units should be improved.[30]
“The troops were hungry. They ate cold food, and some had only a few potatoes in two days. They were unable to maintain the physical strength for combat; the wounded personnel could not be evacuated. . . . The fire power of our entire army was basically inadequate. When we used our guns there were no shells and sometimes the shells were duds.”

The enemy’s tactical rigidity and tendency to repeat costly errors are charged by the 20th Army to inferior communications:

“Our signal communication was not up to standard. For example, it took more than two days to receive instructions from higher level units. Rapid changes of the enemy’s situation and the slow motion of our signal communication caused us to lose our opportunities in combat and made the instructions of the high level units ineffective. . . .

“We succeeded in the separation and encirclement of the enemy, but we failed to annihilate the enemy one by one. The units failed to carry out the orders of the higher echelon. For example, the failure to annihilate the enemy at Yut’an-ni [Yudam-ni] made it impossible to annihilate the enemy at Hakalwu-ri [Hagaru]. The higher level units’ refusal of the lower level units’ suggestion of rapidly starting the combat and exterminating the enemy one by one gave the enemy a chance to break out from the encirclement.”

One of the most striking instances of the tactical inflexibility which stultified Chinese efforts was found at Hagaru. With only a depleted Marine Infantry battalion and service troops available to defend a perimeter four miles in circumference, the enemy needed mere daylight observation to ascertain and avoid the most strongly defended positions. Yet these were just the positions chosen for the attack, not only on the first night but also the second occasion 48 hours later.

“The [CCF] tactics were mechanical,” commented the 27th Army. “We underestimated the enemy so we distributed the strength, and consequently the higher echelons were overdispersed while the lower echelon units were overconcentrated. During one movement, the distance between the three leading divisions was very long, while the formations of the battalions, companies, and units of lower levels were too close, and the troops were unable to deploy. Furthermore, reconnaissance was not conducted strictly; we walked into the enemy fire net and suffered heavy casualties.”

Summing up the reasons why the Marines at Yudam-ni were not “exterminated promptly,” the 27th Army concludes that it was “because our troops encountered unfavorable conditions during the missions and the troops suffered too many casualties.” This would seem to be another way of saying that the Chinese failed to destroy the 1st Marine Division because they themselves were nearly destroyed in the attempt. At any rate, evidence from the enemy documents points overwhelmingly to crippling losses both from Marine fire power and non-battle casualties chargeable to lack of equipment and supplies.

The 20th Army had a hundred deaths from tetanus caused by improper care of wounds. Hundreds of other soldiers were incapacitated by typhus or ailments of malnutrition and indigestion.

More than 90 per cent of the 26th Army suffered from frostbite. The 27th Army complained of 10,000 non-combat casualties alone out of a strength of four divisions:

“The troops did not have enough food, they did not have enough houses to live in, they could not stand the bitter cold, which was the reason for the excessive non-combat reduction in personnel (more than 10 thousand persons), the weapons were not used effectively. When the fighters bivouacked in snow-covered ground during combat, their feet, socks, and hands were frozen together in one ice ball; they could not unscrew the caps on the hand grenades; the fuses would not ignite; the hands were not supple; the mortar tubes shrank on account of the cold; 70 per cent of the shells failed to detonate; skin from the hands was struck on the shells and the mortar tubes.”

Testimony as to the effects of Marine fire power is also given by the 26th Army:

“The coordination between the enemy infantry, tanks, artillery, and airplanes is surprisingly close.
Besides using heavy weapons for the depth, the enemy carries with him automatic light firearms which, coordinated with rockets, launchers, and recoilless guns are disposed at the front line. The characteristic of their employment is to stay quietly under cover and open fire suddenly when we come to between 70 and 100 meters from them, making it difficult for our troops to deploy and thus inflicting casualties upon us.”

The 20th and 27th Armies appear to have been bled white by the losses of the first week. Early in December, units of the 26th Army appeared on the east side of the MSR between Hagaru and Koto-ri, and this unit furnished most of the opposition from 6 to 11 December.

Seven divisions in all were identified by the 1st Marine Division; and since the taking of prisoners was not a matter of top priority with men fighting for existence, it is likely that other CCF units were encountered. The CCF 9th Army Group, according to a prisoner questioned on 7 December, included a total of 12 divisions. This POW gave the following statement:

“Missions of the four (4) armies in 9th Group are to annihilate the 1st Division which is considered to be the best division in the U.S. After annihilating the 1st Marine Division they are to move south and take Hamhung.”[31]

As to the reason why the Chinese took no advantage of the Hungnam redeployment, there seems little doubt that the 9th Army Group was too riddled by battle and non-battle casualties to make the effort. This is not a matter of opinion. Following the Hungnam redeployment, as the U.S. Eighth Army braced itself to meet a new CCF offensive, UN and FECOM G-2 officers were naturally concerned as to whether the remaining 9th Army Group troops in northeast Korea would be available to strengthen the CCF 4th Field Army. It was estimated that only two weeks would be required to move these troops to West Korea, where they had the capability of reinforcing the CCF attack against the Eighth Army.

Efforts to locate the 9th Army Group were unavailing for nearly three months. Then a prisoner from the 77th Division of the 26th Army was captured by U.S. Eighth Army troops on 18 March 1951. During the following week POW interrogations established that three divisions of the 26th Army were in contact with Eighth Army units northeast of Seoul.

“The only conclusion to be drawn,” comments the Marine Corps Board Study, “based on information collected by 1stMarDiv and X Corps, and that by UN and FEC, is that all corps of 9th Army Group had been rendered militarily ineffective in the Chosin Reservoir operation and required a considerable period of time for replacement, re-equipment, and reorganization.”[32]

Thus it appears that the Marines not only saved themselves in the Chosin Reservoir fights; they also saved U.S. Eighth Army from being assailed by reinforcements from northeast Korea in the CCF offensive which exploded on the last night of 1950.
The Chosin Reservoir Campaign
Lynn Montross and Nicholas A. Canzona

Chapter 15. The Hungnam Redeployment
Results of the Reservoir Campaign

There could be no doubt, after taking into account the CCF mission, that the 9th Army Group, 3d Field Army, had sustained a reverse in northeast Korea which amounted to a disaster. On the other hand, it might have been asked whether a retrograde movement such as the Marine breakout, even though aggressively and successfully executed, could be termed a victory.

This question involves issues too complex for a clearcut positive answer, but it would be hard to improve upon the analysis of results in the Marine Corps Board Study:

“Although the operations of this phase constitute a withdrawal, despite the fact that CG 1stMarDiv characterized them as ‘an attack in a new direction,’ the withdrawal was executed in the face of overwhelming odds and conducted in such a manner that, contrary to the usual withdrawal, some very important tactical results were achieved. These may be summarized as follows:

1. Extricated 1stMarDiv from a trap sprung by overwhelming enemy ground forces by skilful employment of integrated ground and air action which enabled the Division to come through with all operable equipment, with wounded properly evacuated and with tactical integrity.

2. Outfought and outlasted at least seven CCF divisions under conditions of terrain and weather chosen by the enemy and reputedly to his liking. Although frostbite took a heavy toll of the Division it hit CCF units far harder, perhaps decisively.

3. In the process of accomplishing ‘2’ above, rendered militarily noneffective a large part of 9th CCF Army Group. Those units not contacted by 1stMarDiv were fixed in the Chosin Reservoir area for possible employment against the Division and consequently suffered from the ravages of sub-zero cold and heavy air attacks.

4. As a direct result of ‘3’ above, enabled X Corps to evacuate Hungnam without enemy interference and, consequently, as a combat effective unit with all personnel and serviceable equipment. Pressure on X Corps by 9th CCF Army Group during the seaward evacuation of the Corps, a most difficult operation, would undoubtedly have altered the result.”[33]

Improvisations in tactics were now and then made necessary by unusual conditions of terrain, weather or enemy action. But on the whole the Marines saved themselves in the Reservoir campaign by the application of sound military tactics. In the doing they demonstrated repeatedly that the rear makes as good a front as any other for the militarily skilled and stout-hearted, and that a unit is not beaten merely because it is surrounded by a more numerous enemy.

Inevitably the Marine campaign has been compared to that classic of all military breakouts—the march of the immortal Ten Thousand which is the subject of Xenophon’s Anabasis. Stranded in the hostile Persian Empire in the year 401 B.C., these Greek mercenaries cut their way to safety through Asiatic hordes. The following description of the tactics used by Xenophon and his lieutenant Cherisophus to overcome road blocks in mountain country will have a familiar ring to Marine veterans of the Reservoir:

“The enemy, by keeping up a continuous battle and occupying in advance every narrow place, obstructed passage after passage. Accordingly, whenever the van was obstructed, Xenophon, from behind, made a dash up the hills and broke the barricade, and freed the vanguard by endeavoring to get above the obstructing enemy. Whenever the rear was the point attacked, Cherisophus, in the same way, made a detour, and by endeavoring to mount higher than the barricaders, freed the passage for the rear rank; and in this way, turn and turn about, they
rescued each other, and paid unflinching attention to their mutual needs.”[34]

Spears and arrows have been superseded by bazookas and machine guns, but the basic infantry tactics of the Reservoir breakout were essentially those which served Xenophon and the Ten Thousand more than 33 centuries ago. Organization, combat, training, spirit, and discipline enabled the Marines, like the Hellenes before them, to overcome numerical odds and fight their way over Asiatic mountain roads to the sea.

The over-all strategic effects of the Reservoir campaign, as summarized by the Marine Corps Board Study, were as follows:

“1. Played a prominent part . . . in enabling X Corps, a considerable segment of the total UN forces in Korea, to be withdrawn from Hungnam as a combat effective force available for employment with the Eighth Army in South Korea at a time when that Army was retreating and was in critical need of a reinforcement.

“2. Were largely responsible for preventing reinforcement of CCF forces on Eighth Army front by 12 divisions during a period when such reinforcement might have meant to Eighth Army the difference between maintaining a foothold in Korea or forced evacuation therefrom, by being instrumental in rendering 9th CCF Army Group, a force of three corps of four divisions each, militarily noneffective for a minimum period of three months.”

That the breakout of the 1st Marine Division had affected American political and military policy at the highest levels was the assertion of an editorial in Time. Referring to what it termed the “Great Debate,” in December 1950, as to whether American forces should be withdrawn from Korea, the news-magazine commented:

“When the Marines fought their way down to Hungnam through the ‘unconquerable Chinese hordes,’ and embarked for Pusan with their equipment, their wounded, and their prisoners, the war in Asia took on a different look. The news stories, pictures and newsreels of the Hungham action contributed more to forming U.S. policy than all the words in the ‘Great Debate.’ The nation—and the revitalized Eighth Army—now knows that U.S. fighting men will stay in Korea until a better place and a better opportunity is found to punish Communist aggression.”[35]

General Douglas MacArthur as CINCUNC, in his 11th report of operations of UN forces in Korea, submitted the following to the United Nations Organization regarding the Chosin Reservoir operation:

“In this epic action, the Marine Division and attached elements of the 7th Infantry Division marched and fought over 60 miles in bitter cold along a narrow, tortuous, ice-covered road against opposition of from six to eight Chinese Communist Force divisions which suffered staggering losses. Success was due in no small part to the unprecedented extent and effectiveness of air support. The basic element, however, was the high quality of soldierly courage displayed by the personnel of the ground units who maintained their integrity in the face of continuous attacks by numerically superior forces, consistently held their positions until their wounded had been evacuated, and doggedly refused to abandon supplies and equipment to the enemy.

“United Nations Air Forces threw the bulk of their effort into close support of ground forces cutting their way through overwhelming numbers of Chinese Communists. The toll of the enemy taken by the United Nations aircraft contributed in large measure to the successful move of our forces from the Chosin Reservoir to the Hamhung area despite the tremendous odds against them. Air support provided by the United States Marine Air Force and Naval Aircraft in this beleaguered area, described as magnificent by the ground force commanders, represented one of the greatest concentrations of tactical air operations in history.”[36]

Rear Admiral James H. Doyle attributed the successful evacuation at Hungnam in large measure to the Marine breakout. Writing to General Smith several months later, he asserted that he had “filled in what has been a neglected page in the story of the Hungnam redeployment. It is simply this: that the destruction of enemy forces wrought by the First Marine Division on the march down the hill was a major factor in the successful withdrawal; and that the destruction was so complete the enemy was unable to exert serious pressure at any time on the
shrinking perimeter. To my mind, as I told you at Hungnam, the performance of the First Marine Division on that march constitutes one of the most glorious chapters in Marine Corps history.”[37]

Letters of commendation were received by the 1st Marine Division from General Cates, CMC, General Shepherd, Admiral Joy, General Collins, Chief of Staff, USA, General Almond, and many other high-ranking military leaders. But for depth of feeling, for sincerity and emotion, there was no message which appealed more to the officers and men of the Division than the concluding paragraph of this tribute from the commanding general who had guided their destinies with unswerving courage and who had come out with them, Major General Oliver P. Smith:

“The performance of officers and men in this operation was magnificent. Rarely have all hands in a division participated so intimately in the combat phases of an operation. Every Marine can be justly proud of his participation. In Korea, Tokyo and Washington there is full appreciation of the remarkable feat of the division. With the knowledge of the determination, professional competence, heroism, devotion to duty, and self-sacrifice displayed by officers and men of this division, my feeling is one of humble pride. No division commander has ever been privileged to command a finer body of men.”[38]
Appendix A. Glossary of Technical Terms and Abbreviations

ADC—Assistant Division Commander.
AdmO—Administrative Order.
AF—Air Force.
AGC—Amphibious Force Flagship.
AH—Hospital Ship.
AirDelPlat—Air Delivery Platoon.
AirO—Air Officer.
AirSptSec—Air Support Section.
AKA—Assault Cargo Ship.
AKL—Cargo, Ship, Light.
AM—Minesweeper.
AmphTracBn—Amphibian Tractor Battalion.
AmphTrkBn—Amphibian Truc Battalion.
AMS—Auxiliary Motor Minesweeper.
ANGLICO—Air and Naval Gunfire Liaison Company.
AP—Transport.
APA—Assault Transport.
APD—High Speed Transport.
ARG—Internal Combustion Engine Repair Ship.
ARS—Salvage Vessel.
AT—Antitank.
ATF—Ocean Tug, Fleet.
AutoMaint Co—Automotive Maintenance Company.
AutoSupCo—Automotive Supply Company.
BB—Battleship.
BLT—Battalion Landing Team.
Bn—Battalion.
Btry—Battery.
BuMed—Bureau of Medicine and Surgery.
C-47—Douglas Transport (same as R4D).
CA—Heavy Cruiser.
CCF—Chinese Communist Forces.
CG—Commanding General.
CIC—Counter Intelligence Corps, USA.
CinCFE—Commander in Chief, Far East.
CinCPacFlt—Commander in Chief, Pacific Fleet.
CinCUNC—Commander in Chief, United Nations Command.
CL—Light Cruiser.
CO—Commanding Officer.
Co—Company.
ComFltAirWing—Commander Fleet Air Wing.
ComNavFE—Commander Naval Forces Far East.
ComPacFlt—Commander Pacific Fleet.
ComPhibGruOne—Commander Amphibious Group One.
ComSeventhFlt—Commander Seventh Fleet.
ComUNBlockandCortFor—Commander United Nations Blockade and Escort Force.
CP—Command Post.
C/S—Chief of Staff.
CSG—Combat Service Group.
CSUSA—Chief of Staff, U.S. Army.
CTF—Commander Task Force.
CTG—Commander Task Group.
CVE—Escort Aircraft Carrier.
CVL—Light Aircraft Carrier.
DD—Destroyer.
DDR—Radar Picket Destroyer.
DE—Destroyer Escort.
Det—Detachment.
DMS—High Speed Minesweeper.
DOW—Died of Wounds.
EmbO—Embarkation Order.
EmbO—Embarkation Officer.
EngrBn—Engineer Battalion.
EUSAK—Eighth U.S. Army in Korea.
FABn—Field Artillery Battalion (USA).
FAC—Forward Air Controller.
FEAF—Far East Air Force.
FECOM—Far East Command.
F4U—Chance-Vought “Corsair” Fighter-Bomber.
FMFPac—Fleet Marine Force, Pacific.
FO—Forward Observer.
FragOrder—Fragmentary Order.
Fum&BathPlat—Fumigation and Bath Platoon.
GHQ—General Headquarters.
Gru—Group.
H&SCo—Headquarters and Service Company.
HD—Historical Diary.
Hedron—Headquarters Squadron.
HMS—Her Majesty’s Ship.
HMAS—Her Majesty’s Australian Ship.
HMCS—Her Majesty’s Canadian Ship.
HMNZS—Her Majesty’s New Zealand Ship.
HO3S—Sikorsky Helicopter.
HqBn—Headquarters Battalion.
HQMC—Headquarters U.S. Marine Corps.
InfDiv—Infantry Division (USA).
Interv—Interview.
ISUM—Intelligence Summary.
JANIS—Joint Army-Navy Intelligence Studies.
JCS—Joint Chiefs of Staff.
JMS—Japanese Minesweeper.
JSPOG—Joint Strategic Planning and Operations Group.
JTF—Joint Task Force.
KIA—Killed in Action.
KMC—Korean Marine Corps.
Ln—Liaison.
LSD—Landing Ship, Dock.
LSM—Landing Ship, Medium.
LSMR—Landing Ship, Medium-Rocket.
LST—Landing Ship, Tank.
LSTH—Landing Ship, Tank-Casualty Evacuation.
LSU—Landing Ship, Utility.
Ltr—Letter.
LVT—Landing Vehicle, Tracked.
MAG—Marine Aircraft Group.
MAW—Marine Aircraft Wing.
MS—Manuscript. MedBn—Medical Battalion.
MedAmbCo—Medical Ambulance Company, USA.
MIA—Missing in Action.
MISD—Military Intelligence Service Detachment (USA).
MP—Military Police.
MRO—Movement Report Office.
msg—Message.
MSR—Main Supply Route.
MSTS—Military Sea Transport Service.
MTACS—Marine Tactical Air Control Squadron.
MTBn—Motor Transport Battalion.
NavBchGru—Naval Beach Group.
NavFE—Naval Forces Far East.
NCO—Noncommissioned Officer.
NK—North Korea (n).
NKPA—North Korean Peoples Army.
N.d.—Date not given.
N.t.—Time not given.
O—Officer; Order.
OCMH—Office of the Chief of Military History (USA).
OI—Operation Instruction.
OpnO—Operation Order.
OpnPlan—Operation Plan.
OrdBn—Ordnance Battalion.
OY—Consolidated-Vultee Light Observation Plane.
PCEC—Escort Amphibious Control Vessel.
PF—Frigate.
PhibGru—Amphibious Group.
PIR—Periodic Intelligence Report.
PLA—People’s Liberation Army.
Plat—Platoon.
POL—Petroleum, Oil, Lubricants.
POR—Periodic Operation Report.
POW—Prisoner of War.
QMPetDistCo—Quartermaster Petroleum Distribution Company (USA).
QMSubsistSupCo—Quartermaster Subsistence Supply Company (USA).
R4D—Douglas Transport (Navy and Marine designation of C-47).
RCT—Regimental Combat Team.
Recon—Reconnaissance.
Reinf—Reinforced.
RktBn—Rocket Battalion.
RM—Royal Marines.
ROK—Republic of Korea.
R & O File—Records and Orders File.
ROKA—Republic of Korea Army.
ROKN—Republic of Korea Navy.
SAC—Supporting Arms Coordinator.
SAR—Special Action Report.
SCAJAP—Shipping Control Authority, Japan.
Sec—Section.
SecDef—Secretary of Defense.
ServBn—Service Battalion.
SigBn—Signal Battalion.
SigRepCo—Signal Repair Company.
SitRpt—Situation Report.
SP—Shore Party.
SMS—Marine Supply Squadron.
TAC—Tactical Air Coordinator; Tactical Air Commander.
TACP—Tactical Air Control Party.
Tacron—Tactical Air Control Squadron.
TADC—Tactical Air Direction Center.
T-AP—Transport Operated by MSTS.
TBM—General Motors “Avenger” Torpedo Bomber.
TE—Task Element.
T/E—Table of Equipment.
Tel—Telephone Message.
TF—Task Force.
TG—Task Group.
TkBn—Tank Battalion.
Trk—Truck.
T/O—Table of Organization.
TU—Task Unit.
UDT—Underwater Demolitions Team.
U/F—Unit of Fire.
UN—United Nations.
URpt—Unit Report.
USA—United States Army.
USAF—United States Air Force.
USMC—United States Marine Corps.
USN—United States Navy.
VMF—Marine Fighter Squadron.
VMF (N)—All-Weather, Fighter Squadron.
VMO—Marine Observation Squadron.
VMR—Marine Transport Squadron.
WD—War Diary.
WD Sum—War Diary Summary.
WIA—Wounded in Action.
YMS—Motor Minesweeper.
In order to present a true picture of the Task Organization of the 1st Marine Division during its operations in northeast Korea the organization will be presented for the following periods:

1. Wonsan Landing (OpnO 16–50)
2. Advance to the Reservoir (OpnO 19–50)
3. Movement south from Hagaru (OpnO 25–50)
4. Hungnam Evacuation (OpnO 27–50)

Commanding Officer, Antitank Company: 1stLt Earl R. DeLong (to 20 Oct); Maj Walter T. Warren (21 Oct-8 Dec); 1stLt Earl R. DeLong

1st Battalion, 7th Marines
Commanding Officer: LtCol Raymond G. Davis (to 7 Dec); Maj Webb D. Sawyer
Executive Officer: Maj Raymond V. Fridrich
Commanding Officer, Headquarters and Service Company: Capt Elmer L. Starr (to 22 Nov); 1stLt Wilbert R. Gaul
Commanding Officer, A Company: Capt David W. Banks (to 20 Nov); 1stLt Eugenous M. Hovatter
Commanding Officer, B Company: Capt Myron E. Wilcox, Jr. (to 27 Nov); 1stLt Joseph R. Kurcaba (27 Nov-8 Dec); 1stLt William W. Taylor
Commanding Officer, C Company: Capt William E. Shea (to 16 Nov); Capt John F. Morris
Commanding Officer, Weapons Company: Maj William E. Vorhies

2d Battalion, 7th Marines
Commanding Officer: Maj Webb D. Sawyer (to 9 Nov); LtCol Randolph S. D. Lockwood
Executive Officer: Maj Roland E. Carey (to 9 Nov); Maj Webb D. Sawyer (10 Nov-8 Dec); Maj James F. Lawrence, Jr.
Commanding Officer, Headquarters and Service Company: Capt Walter R. Anderson
Commanding Officer, D Company: Capt Milton A. Hull (to 28 Nov); 1stLt James D. Hammond, Jr.
Commanding Officer, E Company: Capt Walter D. Phillips, Jr. (to 28 Nov); 1stLt Raymond O. Ball (28 Nov); 1stLt Robert T. Bey
Commanding Officer, F Company: Capt Elmer J. Zorn (to 6 Nov); Capt William E. Barber (7 Nov-3 Dec); 1stLt John M. Dunne (3-6 Dec); 1stLt Welton R. Abell
Commanding Officer, Weapons Company: Capt Harry L. Givens, Jr. (to 12 Nov); Maj Joseph L. Abel (13-19 Nov); Capt Harry L. Givens, Jr.

3d Battalion, 7th Marines
Commanding Officer: Maj Maurice E. Roach (to 10 Nov); LtCol William F. Harris (11 Nov-6 Dec); Maj Warren Morris
Executive Officer: Maj Warren Morris (to 6 Dec); Maj Jefferson D. Smith, Jr.
Commanding Officer, Headquarters and Service Company: Capt Eric R. Haars (to 29 Nov)
Commanding Officer, G Company: Capt Thomas E. Cooney (to 27 Nov); Capt Eric R. Haars (29 Nov-3 Dec); 1stLt George R. Earnest
Commanding Officer, H Company: 1stLt Howard H. Harris (to 11 Nov); Capt Leroy M. Cooke (12-27 Nov); 1stLt Howard H. Harris (27 Nov-1 Dec); 1stLt Harold J. Fitzgeorge (1-5 Dec); 2dLt Minard P. Newton
Commanding Officer, 1 Company: Capt Richard H. Sengewald (to 14 Oct); 1stLt William E. Johnson (15 Oct-3 Dec); 1stLt Alfred I. Thomas
Commanding Officer, Weapons Company: Maj Jefferson D. Smith (to 5 Dec); 1stLt Austin S. Parker (6-10 Dec); 1stLt Robert E. Hill

11th Marines
Commanding Officer: Col James H. Brower (to 30 Nov); LtCol Carl A. Youngdale
Executive Officer: LtCol Carl A. Youngdale (to 30 Nov)
S-1: Maj Floyd M. McCorkle
S-2: Capt William T. Phillips
S-3: LtCol James O. Appleyard
S-4: Maj Donald V. Anderson
Commanding Officer, Headquarters Battery: Capt Albert H. Wunderly (to 7 Nov); Capt Clarence E. Hixson (15-25 Nov); 1stLt William C. Patton
Commanding Officer, Service Battery: Maj Donald V. Anderson (to 16 Nov); 1stLt Joseph M. Brent
Commanding Officer, Battery C, 1st 4.5-inch Rocket Battalion: 1stLt Eugene A. Bushe

1st Battalion, 11th Marines
Commanding Officer: LtCol Ransom M. Wood (to 15 Nov); LtCol Harvey A. Feehan
Executive Officer: Maj Francis R. Schlesinger
Commanding Officer, Headquarters Battery: Capt James W. Brayshay (to 25 Nov)
Commanding Officer, Service Battery: 1stLt Kenneth H. Quelch
Commanding Officer, A Battery: Capt James D. Jordan
Commanding Officer, B Battery: Capt Arnold C. Hoffstetter (to 8 Oct); Capt Gilbert N. Powell
Commanding Officer, C Battery: Capt William J. Nichols, Jr.

2d Battalion, 11th Marines
Commanding Officer: LtCol Merritt Adelman
Executive Officer: Maj Donald E. Noll (to 25 Oct); Maj Neal G. Newell
Commanding Officer, Headquarters Battery: Capt George J. Batson
Commanding Officer, Service Battery: Capt Herbert R. Merrick, Jr.
Commanding Officer, D Battery: Capt Andrew J. Strohmenger (to 8 Dec); Capt Richard E. Roach
Commanding Officer, E Battery: Capt John C. McClelland, Jr.
Commanding Officer, F Battery: Capt George J. Kovich, Jr. (to 19 Nov); 1stLt Howard A. Blancheri

3d Battalion, 11th Marines
Commanding Officer: Maj Francis F. Parry
Executive Officer: Maj Norman A. Miller, Jr.
Commanding Officer, Headquarters Battery: 1stLt Michael B. Weir (to 11 Nov); 1stLt Eugene H. Brown (12-18 Nov); 1stLt John J. Brackett
Commanding Officer, Service Battery: Capt Robert A. Thompson (to 17 Oct); Capt Ernest W. Payne (18 Oct-30 Nov); Capt Samuel A. Hannah
Commanding Officer, G Battery: Capt Samuel A. Hannah (to 30 Nov); Capt Ernest W. Payne
Commanding Officer, H Battery: Capt Benjamin S. Read (to 8 Dec); 1stLt Wilber N. Herndon
Commanding Officer, I Battery: Capt John M. McLaurin, Jr. (to 30 Nov); Capt Robert T. Patterson

4th Battalion, 11th Marines
Commanding Officer: Maj William McReynolds
Executive Officer: Maj Thomas M. Coggins (to 8 Nov); Maj Maurice J. Coffey
Commanding Officer, Headquarters Battery: Capt Charles S. Cummings (to 25 Oct); Capt Paul L. Hirt
Commanding Officer, Service Battery: Capt Armand G. Daddazio
Commanding Officer, K Battery: 1stLt Robert C. Messman (to 27 Nov); 1stLt Robert C. Parrott (28 Nov-11 Dec); Capt Arthur D. Challacombe
Commanding Officer, L Battery: Capt Lawrence R. Cloern
Commanding Officer, M Battery: Capt Vernon W. Shapiro

1st Amphibian Tractor Battalion
Commanding Officer: LtCol Erwin F. Wann, Jr.
Executive Officer: Maj Arthur J. Barrett
Commanding Officer, Headquarters Company: Capt Frank E. Granucci
Commanding Officer, A Company: Maj James P. Treadwell
Commanding Officer, B Company: Capt Russell Hamlet
Commanding Officer, C Company: Maj Arthur J. Noonan

1st Armored Amphibian Battalion
Commanding Officer: LtCol Francis H. Cooper
Executive Officer: Maj Richard G. Warga
Commanding Officer, Headquarter Company: Capt Roger B. Thompson
Commanding Officer, Service Company: Capt Rex Z. Michael, Jr.
Commanding Officer, A Company: Capt Bernard G. Thobe
Commanding Officer, B Company: Capt Lewis E. Bolts

1st Combat Service Group
Commanding Officer: Col John H. Cook, Jr.
Executive Officer: LtCol Edward A. Clark
Commanding Officer, Headquarters Company: Capt Francis L. Miller
Commanding Officer, Maintenance Company: Maj Edward H. Voorhees
Commanding Officer, Supply Company: Maj Robert W. Hengesback
Commanding Officer, Support Company: Maj Donald B. Cooley, Jr.
Commanding Officer, Truck Company: Capt John A. Pearson (to 11 Nov); 2dLt Alan G. Copp (11-30 Nov); Capt Jack W. Temple
Commanding Officer, 1st Fumigation and Bath Company: 1stLt James L. Dumas
Commanding Officer, 1st Air Delivery Platoon: Capt Hersel D. C. Blasingame

1st Engineer Battalion
Commanding Officer: LtCol John H. Partridge
Executive Officer: Maj Richard M. Elliott
Commanding Officer, Headquarters Company: Capt James H. McRoberts (to 20 Nov); Maj Hewitt A. Snow; Capt Edward B. Newton
Commanding Officer, Service Company: Maj James W. McIllwain (to 22 Nov); Capt Philip A. Terrell, Jr.
Commanding Officer, A Company: Capt George W. King (to 2 Dec); Capt William R. Gould
Commanding Officer, B Company: Capt Orville L. Bibb
Commanding Officer, C Company: Capt Lester G. Harmon (to 12 Nov); 1stLt Ronald L. Glendinning
Commanding Officer, D Company: Capt Byron C. Turner

1st Medical Battalion
Commanding Officer: Cdr Howard A. Johnson, USN
Executive Officer: Cdr William S. Francis, USN
Commanding Officer, Headquarters and Service Company: Cdr William S. Francis, USN
Commanding Officer, A Company: Cdr Byron E. Bassham, USN
Commanding Officer, B Company: LCdr James A. Kaufman, USN
Commanding Officer, C Company: Cdr Harold A. Streit, USN
Commanding Officer, D Company: LCdr Gustave J. Anderson, USN
Commanding Officer, E Company: LCdr John H. Cheffey, USN (to 15 Oct); Lt (jg) Ernest N. Grover, USN (15-30 Oct); LCdr Charles K. Holloway, USN

1st Motor Transport Battalion
Commanding Officer: LtCol Olin L. Beall
Executive Officer: Maj John R. Barreiro, Jr.
Commanding Officer, Headquarters and Service Company: Capt George B. Loveday
Commanding Officer, A Company: Capt Arthur W. Ecklund
Commanding Officer, B Company: Capt James C. Camp, Jr.
Commanding Officer, C Company: Capt Garfield M. Randall (to 30 Nov); 1stLt Norman E. Stow
Commanding Officer, D Company: Capt Bernard J. Whitelock (9 Dec); 1stLt Philip R. Hade
Commanding Officer, Automotive Maintenance Company: Maj Edward L. Roberts
Commanding Officer, Automotive Supply Company: 1stLt Mildridge E. Mangum
Commanding Officer, Amphibian Truck Company, FMF (redesignated Company A, 1st Amphibian Truck Battalion, 15 Nov): Capt John Bookhout

1st Ordnance Battalion
Commanding Officer: Maj Lloyd O. Williams  
Executive Officer: Maj Samuel A. Johnstone, Jr.
Commanding Officer, Headquarters Company: Capt Theodore Tunis (to 13 Nov); Capt Gordon H. Moore  
Commanding Officer, Ordnance Supply Company: Capt Russel S. LaPointe (to 5 Dec); 1stLt Victor F. Brown  
Commanding Officer, Ammunition Company: Capt Harvey W. Gagner (to 30 Nov); 1stLt Charles H. Miller  
Commanding Officer, Ordnance Maintenance Company: Capt George L. Williams

1st Service Battalion
Commanding Officer: LtCol Charles L. Banks  
Executive Officer: Maj John R. Stone  
Commanding Officer, Headquarters Company: Capt Morse “L” Holladay  
Commanding Officer, Service Company: Capt Robert A. Morehead  
Commanding Officer, Support Company: Capt Richard W. Sinclair (to 27 Oct); Capt Thomas M. Sagar

1st Shore Party Battalion
Commanding Officer: LtCol Henry P. Crowe  
Executive Officer: LtCol Horace H. Figuers  
Commanding Officer, Headquarters and Service Company: Capt William T. Miller  
Commanding Officer, A Company: Maj William L. Batchelor (to 22 Nov); Capt Nathaniel H. Carver  
Commanding Officer, B Company: Maj Henry Brzezinski  
Commanding Officer, C Company: Maj George A. Smith (to 24 Nov); Maj Murray F. Rose

1st Signal Battalion
Commanding Officer: Maj Robert L. Schreier  
Executive Officer: Maj Elwyn M. Stimson  
Commanding Officer, Headquarters Company: Capt Howard K. Alberts (to 14 Nov); Capt Earl F. Stanley  
Commanding Officer, Signal Company: Maj Richard A. Glaeser  
Commanding Officer, ANGLICO: Maj Fulton L. Oglesby (to 16 Nov); Maj Frederick M. Steinhauser

1st Tank Battalion
Commanding Officer: LtCol Harry T. Milne  
Executive Officer: Maj Douglas E. Haberlie (to 1 Dec); Maj Philip C. Morrell  
Commanding Officer, Headquarters Company: Capt Bruce W. Clarke (to 18 Nov); 1stLt Frederick L. Adams  
Commanding Officer, Service Company: Capt Philip C. Morell (to 1 Dec); Maj Douglas E. Haberlie  
Commanding Officer, A Company: Capt Gearl M. English (to 1 Dec); 1stLt Robert J. Craig  
Commanding Officer, B Company: Capt Bruce F. Williams  
Commanding Officer, C Company: Capt Richard M. Taylor  
Commanding Officer, D Company: Capt Lester T. Chase (to 18 Nov); Capt Bruce W. Clarke (19 Nov-10 Dec);
1stLt Paul E. Sanders

7th Motor Transport Battalion
Commanding Officer: Maj Joseph F. Stepka (to 7 Nov); LtCol Carl J. Cagle
Executive Officer: Maj Vernon A. Tuson
Commanding Officer, Headquarters Company: 1stLt Reed T. King
Commanding Officer, A Company: Capt Ira N. Hayes
Commanding Officer, B Company: Capt Clovis M. Jones
Commanding Officer, C Company: Capt Fred B. Rogers
Commanding Officer, D Company: Capt Joseph L. Bunker

Marine Observation Squadron 6 (under operational control of 1stMarDiv and administrative control of 1stMAW)
Commanding Officer: Maj Vincent J. Gottschalk
Executive Officer: Capt Victor A. Armstrong (to 13 Nov); Capt Andrew L. McVickers

1st Marine Aircraft Wing
Commanding General: MajGen Field Harris
Assistant Commanding General: BrigGen Thomas J. Cushman
Chief of Staff: Col Kenneth H. Weir (8 Oct-1 Nov); Col Caleb T. Bailey (2 Nov-15 Dec)
Deputy Chief of Staff for Operations (also Deputy C/S, Air Support, X Corps): Col Edward C. Dyer
G-1: Col Raymond E. Hopper
G-2: LtCol Winsor V. Crockett, Jr.
G-3: LtCol Howard A. York (to 9 Nov); LtCol Paul J. Fontana (10 Nov-28 Nov; additional duty); LtCol Howard A. York (29 Nov-15 Dec)
G-4: Col Thomas J. Noon
Commanding Officer, Rear Echelon, Itami: Col Roger T. Carleson
Commanding Officer, Headquarters Squadron, One: Capt Earl “B” Sumerlin, Jr.

Marine Aircraft Group 12
Commanding Officer: Col Boeker C. Batterton
Deputy Group Commander: LtCol Paul J. Fontana
Commanding Officer, Headquarters Squadron 12: Maj John E. Hays
Commanding Officer, Service Squadron 12: Maj Claude H. Welch (to 4 Nov); Maj Charles E. J. McLean

Marine Aircraft Group 33
Commanding Officer: Col Frank C. Dailey
Deputy Group Commander: LtCol Radford C. West
Commanding Officer, Headquarters Squadron 33: Capt Walter “L” Hilton
Commanding Officer, Marine Service Squadron 33: LtCol James C. Lindsay

Squadrons
Commanding Officer, Marine Fighter Squadron 212: LtCol Richard W. Wyczawski
Commanding Officer, Marine Fighter Squadron 214: Maj Robert P. Keller (to 20 Nov); Maj William M. Lundin
Commanding Officer, Marine Fighter Squadron 312: LtCol “J” Frank Cole
Commanding Officer, Marine Fighter Squadron 311: LtCol Neil R. McIntyre (from 8 Nov)
Commanding Officer, Marine Fighter Squadron 323: Maj Arnold A. Lund
Commanding Officer, Marine All-Weather Squadron 513: Maj J. Hunter Reinburg (to 4 Nov); LtCol David C. Wolfe
Commanding Officer, Marine All-Weather Fighter Squadron 542: LtCol Max J. Volcansek, Jr.
Commanding Officer, Marine Transport Squadron 152: Col Deane C. Roberts
Commanding Officer, Marine Ground Control Intercept Squadron 1: Maj Harold E. Allen
Commanding Officer, Marine Tactical Air Control Squadron 2: Maj Christian C. Lee
The Chosin Reservoir Campaign
Lynn Montross and Nicholas A. Canzona

Appendix G. Enemy Order of Battle

1. North Korean

During operations around Wonsan the 1st Marine Division encountered fragments and stragglers from many NKPA divisions. The organized elements were chiefly from the 2d, 5th, and 15th Divisions.

2. Chinese

42d Army, 124th Division

- 370th Regiment
- 371st Regiment
- 372nd Regiment

In action against 7th Marines south of Sudong 2 Nov. Badly cut up in actions of 3-6 Nov.

42d Army, 125th Division

- 373rd Regiment
- 374th Regiment
- 375th Regiment

Not in contact. Probably to west of 124th Division.

42d Army, 126th Division

- 376th Regiment
- 377th Regiment
- 378th Regiment

Screened Chinese retreat to Hagaru. Never heavily engaged.

20th Army, 58th Division

- 172nd Regiment
- 173rd Regiment
- 174th Regiment

First in action at Hagaru 28 Nov. Badly cut up in attacks on Hagaru.

20th Army, 59th Division

- 175th Regiment
- 176th Regiment
- 177th Regiment

In contact with 7th Marines southwest of Yudam-ni 23 Nov. Later defended Toktong Pass.

20th Army, 60th Division

- 178th Regiment
- 179th Regiment
180th Regiment
In contact with 7th Marines southeast of Yudam-ni 25 Nov. Later moved to Funchilin Pass area.

20th Army, 89th Division
266th Regiment
267th Regiment
268th Regiment
First contacted by 7th Marines west of Hagaru 22 Nov. About 2 Dec moved south to Majon-dong area.

20th Army, 89th Division
266th Regiment
267th Regiment
268th Regiment
First contacted by 7th Marines west of Hagaru 22 Nov. About 2 Dec moved south to Majon-dong area.

27th Army, 79th Division
235th Regiment
236th Regiment
237th Regiment
Attacked Yudam-ni 27 Nov.

27th Army, 80th Division
238th Regiment
239th Regiment
240th Regiment
Attacked 7th Infantry Division units east of Reservoir 27 Nov.

27th Army, 81st Division
241st Regiment
242nd Regiment
243rd Regiment
No report of contact until 13 Dec. May have been in Yudam-ni area.

27th Army, 90th Division
268th Regiment
269th Regiment
270th Regiment
No contact reported. May have been in reserve near Hagaru.

26th Army, 76th Division
226th Regiment
227th Regiment
228th Regiment
First contacts east of Hagaru 5 Dec. Suffered heavy losses around Koto-ri.

26th Army, 77th Division
229th Regiment
230th Regiment
231st Regiment
First contacts at Hagaru 5 Dec.

26th Army, 78th Division
232nd Regiment
233rd Regiment
234th Regiment
Not reported in contact. May not have reached area in time for combat.

26th Army, 88th Division
263rd Regiment
264th Regiment
265th Regiment
Not reported in contact. May not have reached area in time for combat.
THE SECRETARY OF THE NAVY
WASHINGTON

The President of the United States takes pleasure in presenting the PRESIDENTIAL UNIT CITATION to the

FIRST MARINE DIVISION, REINFORCED

for service as set forth in the following CITATION:

“For extraordinary heroism and outstanding performance of duty in action against enemy aggressor forces in the Chosin Reservoir and Koto-ri area of Korea from 27 November to 11 December 1950. When the full fury of the enemy counterattack struck both the Eighth Army and the Tenth Corps on 27 and 28 November 1950, the First Marine Division, Reinforced, operating as the left flank division of the Tenth Corps, launched a daring assault westward from Yudam-ni in an effort to cut the road and rail communications of hostile forces attacking the Eighth Army and, at the same time, continued its mission of protecting a vital main supply route consisting of a tortuous mountain road running southward to Chinhung-ni, approximately 35 miles distant. Ordered to withdraw to Hamhung in company with attached army and other friendly units in the face of tremendous pressure in the Chosin Reservoir area, the Division began an epic battle against the bulk of the enemy Third Route Army and, while small intermediate garrisons at Hagaru-ri and Koto-ri held firmly against repeated and determined attacks by hostile forces, gallantly fought its way successively to Hagaru-ri, Koto-ri, Chinhung-ni and Hamburg over twisting, mountainous and icy roads in sub-zero temperatures. Battling desperately night and day in the face of almost insurmountable odds throughout a period of two weeks of intense and sustained combat, the First Marine Division, Reinforced, emerged from its ordeal as a fighting unit with its wounded, with its guns and equipment and with its prisoners, decisively defeating seven enemy divisions, together with elements of three others, and inflicting major losses which seriously impaired the military effectiveness of the hostile forces for a considerable period of time. The valiant fighting spirit, relentless perseverance and heroic fortitude of the officers and men of the First Marine Division, Reinforced, in battle against a vastly outnumbering enemy, were in keeping with the highest traditions of the United States Naval Service.”

The following reinforcing units of the First Marine Division participated in operations against enemy aggressor forces in Korea from 27 November to 11 December 1950:

ORGANIC UNITS OF THE FIRST MARINE DIVISION: First Marine Division (less Detachment Headquarters Battalion; Detachment First Signal Battalion; Detachment First Service Battalion; Detachment Headquarters and Companies A and C, First Tank Battalion; Automotive Supply Company, First Motor Transport Battalion; Automotive Maintenance Company, First Motor Transport Battalion; Detachment First Ordnance Battalion; Detachment Headquarters and Company A, First Medical Battalion; First Shore Party Battalion; 4.5” Rocket Battery and Service Battery, Fourth Battalion, Eleventh Marines).
ATTACHED MARINE CORPS UNITS: Companies A and B, Seventh Motor Transport Battalion; Detachment Radio Relay Platoon.

ATTACHED ARMY UNITS: Provisional Battalion (Detachments, 31st and 32nd Regimental Combat Teams); Company D, 10th Engineer Combat Battalion; Tank Company, 31st Infantry Regiment; Headquarters Company, 31st Infantry Regiment; Company B, 1st Battalion, 31st Infantry Regiment; 2nd Battalion, 31st Infantry Regiment (less Company E); 185th Engineer Combat Battalion (less Company A).

For the President,
R. B. ANDERSON
Secretary of the Navy

GENERAL ORDERS
DEPARTMENT OF THE ARMY
No. 72
Washington 25, D.C., 9 August 1951
DISTINGUISHED UNIT CITATION

1. The 1st Marine Air Wing, Fleet Marine Force, is cited for outstanding performance of duty and extraordinary heroism in action against an armed enemy in the areas of Chosin Reservoir, Hagaru-ri, and Koto-ri, Korea, during the period 22 November to 14 December 1950. The historic role of close-support air missions flown by personnel on land and carrier based aircraft during the operations of the X Corps, United States Army, contributed immeasurably to the successful withdrawal of the X Corps when hordes of Chinese Communist and North Korean troops had encircled their positions endangering the entire operation. In their magnificent employment of close-support doctrine and in their exceedingly effective interdiction missions and night combat air patrols, the 1st Marine Air Wing flew 2,572 day and night sorties during this period, inflicting 10,313 enemy casualties and destroying 723 buildings, 144 vehicles, 17 tanks, 9 bridges, 4 locomotives, 3 command posts, 30 boxcars, 47 gun positions, and 19 supply, ammunition, and fuel dumps. These missions were flown over hazardous mountain terrain under extremely adverse weather conditions and in the face of intense enemy antiaircraft and small-arms fire. The normally ground-based Tactical Air Direction Center was ingeniously improvised into an airborne center in a C-54 aircraft without appreciable loss of efficiency in operations and the responsibility for controlling aircraft was assumed and accomplished in a remarkable manner through day and night operations by controlling personnel. Airborne tactical air coordinators also were established to supplement the airborne center to direct specific strikes in areas not under surveillance of ground control parties to the end that every available sortie was utilized to maximum effectiveness. In the evacuation of friendly casualties by cargo airplanes, the use of helicopters for rescue of air personnel shot down by the enemy and the evacuation of wounded, and the high state of aircraft availability maintained by ground personnel working under hazardous and extremely adverse conditions because of intense cold, personnel of the entire 1st Marine Air Wing displayed fortitude, courage, and marked esprit de corps. Although suffering a considerable loss of personnel and equipment during this trying period, the morale and effectiveness of the 1st Marine Air Wing were sustained at a constantly high level. The
repeated acts of valor and gallantry by the officers and men of the 1st Marine Air Wing, Fleet Marine Force, and their enviable combat record reflect great credit on the members thereof and are in keeping with the highest traditions of the military service.

By order of the Secretary of the Army:

J. LAWTON COLLINS

*Chief of Staff, United States Army*
The Chosin Reservoir Campaign
Lynn Montross and Nicholas A. Canzona

Foreword

Americans everywhere will remember the inspiring conduct of Marines during Korean operations in 1950. As the fire brigade of the Pusan Perimeter, the assault troops at Inchon, and the heroic fighters of the Chosin Reservoir campaign, they established a record in keeping with the highest traditions of their Corps. No less praiseworthy were the Marine actions during the protracted land battles of 1951, the second year of the Korean “police action.”

The 1st Marine Division, supported wherever possible by the 1st Marine Aircraft Wing, helped stem the flood of the Chinese offensive in April. Then lashing back in vigorous and successful counterattack, the Marines fought around the Hwachon Reservoir to the mighty fastness of the Punchbowl. The Punchbowl became familiar terrain to Marines during the summer of 1951, and the Division suffered its heaviest casualties of the year fighting in the vicinity of that aptly named circular depression.

The fighting waxed hot, then cold, as the truce teams negotiated. They reached no satisfactory agreement, and the fighting again intensified. Finally, after a year of active campaigning on Korea’s east-central front, the Marines moved west to occupy positions defending the approaches to the Korean capital, Seoul.

The year of desperate fighting, uneasy truce, and renewed combat covered by this volume saw the operational employment of a Marine-developed technique—assault by helicopter-borne troops. Tactics were continually being refined to meet the ever changing battle situation. However, throughout the period, the one constant factor on which United Nations commanders could rely was the spirit and professional attitude of Marines, both regular and reserve. This is their hallmark as fighting men.

--Gen. David M. Shoup, USMC, Commandant of the Marine Corps

Preface

THIS IS THE FOURTH in a series of five volumes dealing with the operations of United States Marines in Korea during the period 2 August 1950 to 27 July 1953. Volume IV presents in detail the operations of the 1st Marine Division and 1st Marine Aircraft Wing, the former while operating under Eighth Army control and also as part of IX Corps and X Corps, USA, and the latter while controlled by the Fifth Air Force.

The period covered in this volume begins in the latter part of December 1950, when the Division rested in the Masan “bean patch,” and continues through the guerrilla hunt, the Punchbowl fighting, and all other operations during 1951. The account ends when the Marines move to positions in the west during March 1952.

Marines did not fight this war alone; they were a part of the huge Eighth United States Army in Korea. But since this is primarily a Marine history, the actions of the U. S. Army, Navy, and Air Force are presented only sufficiently to place Marine operations in their proper perspective.

Many participants in the fighting during this period have generously contributed to the book by granting interviews, answering inquiries, and commenting on first draft manuscripts. Their assistance was invaluable. Although it was not possible to use all the plethora of detailed comments and information received, the material will go into Marine Corps archives for possible use and benefit of future historians.

The manuscript of this volume was prepared during the tenure of Colonel Charles W. Harrison, Major Gerald Fink, and Colonel William M. Miller as successive Heads of the Historical Branch. Production was accomplished under the direction of Colonel Thomas G. Roe. Major William T. Hickman wrote some of the preliminary drafts and did much valuable research and map sketching. Dr. K. Jack Bauer and Mrs. Elizabeth Tierney assisted the authors in research, and Mr. Truman R. Strobridge assisted in proofreading and preparing the index.

To the Army, Navy, and Air Force officers, as well as Marine officers and NCOs, who submitted valuable comments and criticisms of preliminary drafts, thanks are also extended. These suggestions added to the accuracy and details of the text. Additional assistance was rendered by personnel of the Office of the Chief of Military History, Department of the Army; the Division of Naval History, Department of the Navy; and the Historical Division, Department of the Air Force.

The exacting administrative duties involved in processing the volume from first draft manuscripts through the final printed form were ably managed by Miss Kay P. Sue. All manuscript typing was done expertly by Mrs. Miriam R. Smallwood.

The maps contained in this volume were prepared by the Reproduction Section, Marine Corps Schools, Quantico, Virginia, and the Historical Branch, Headquarters Marine Corps. Official Department of Defense photographs were used.

The Marine Corps mourns the passing of the prime author of this series and other admirable works of Marine Corps and military history. Lynn Montross, after a lengthy illness, died on 28 January 1961.

--Brig. Gen. H. W. Buse, Jr., USMC, Assistant Chief of Staff, G-3
Chapter 1. Interlude at Masan

A NEW CHAPTER in Korean operations began for the 1st Marine Division at 1800 on 16 December 1950 with the opening of the CP at Masan. By the following afternoon all units of the Division had arrived from Hungnam with the exception of VMO–6 and small groups of such specialists as the amphibian tractor troops left behind to assist with the redeployment of remaining X Corps elements to south Korea.

The 1st Marine Division and 1st Marine Aircraft Wing were separated for the first time since the Inchon landing. VMF–311, the new Panther jet squadron, was flying from K–9, an Air Force field near Pusan. Operating together as an all-Marine carrier group taking part in the Hungham redeployment were the three Corsair squadrons: VMF–212 on the CVL (light carrier) Bataan; VMF–214 on the CVE Sicily; and VMF–323 on the CVE Badoeng Strait. The two Japan-based night fighter squadrons, VMF(N)–542 and VMF(N)–513, flying from Itazuke, patrolled the skies between Japan and Korea.

VMO–6, the observation squadron, consisting of helicopters and OY fixed-wing planes, was attached to various ships of the Seventh Fleet for rescue missions when pilots were forced into the sea. A detachment of Marine Ground Control Intercept Squadron–1 (MGCIS–1) and the entire Air Defense Section of Marine Tactical Air Control Squadron–2 (MTACS–2) were also attached to the warships. They assisted in the control of hundreds of planes that flew over the Hungnam beachhead daily in support of the final stages of the X Corps evacuation.

The three Marine Corsair squadrons on the Sicily, Badoeng Strait, and Bataan represented the entire air strength of Escort Carrier Task Group (TG) 96.8, commanded by Rear Admiral Richard N. Ruble. Each squadron came directly under the operational command of the ship on which it had embarked. Supply, engineering, ordnance, billeting, and messing were of course provided through naval channels. The only relationship of the squadrons to their parent organization, MAG–33, derived from the administration of personnel and the storage of equipment at Itami.
Masan, the new Division assembly area, was located about 27 air miles and 40 road miles west of Pusan on the Bay of Masan, which indents the southern coast of the peninsula (Map 1). In order to prepare for the arrival of the Division, Brigadier General Edward A. Craig, the assistant division commander (ADC), had flown from Hungnam with the advance party on 12 December to make necessary arrangements.

The small seaport, which skirts the bay for about two and a half miles, was untouched by the war as compared to the ravaged towns of northeast Korea. It had a protected anchorage, dock facilities, and good rail and road communications. There was an air strip at Chinhae, a few miles to the southeast.

Some sort of cycle seemed to have been completed by veterans of the 5th Marines when they found themselves back again in the familiar surroundings of the Bean Patch on the northern outskirts of Masan. This large, cultivated field is entitled to capital letters because of its historical distinction as bivouac area of the 1st Provisional Marine Brigade after the battle of the Naktong in August 1950. Barely four months had passed since that hard fight, but a great deal more history had been made during the combats of the Inchon-Seoul and Chosin Reservoir operations.

There was room enough in the Bean Patch for all three infantry regiments. Headquarters, the 11th Marines, the 1st Signal, 1st Tank, 1st Amtrac, 1st Ordnance, and 1st Motor Transport Battalions were located on the southern outskirts of town along with the 41 Independent Commando, Royal Marines. The 1st Combat Service Group, the MP Company, and the 1st Service, 1st Shore Party, and 1st Engineer Battalions occupied the dock area of Masan proper. A large building in the center of town housed the Division hospital, and the 7th Motor Transport Battalion was assigned to the Changwon area, four miles to the northeast.[1]

Peaceful as the surroundings may have seemed to troops who had just completed the 13-day running fight of the Chosin Reservoir Breakout, the Chidi San mountain mass some 50 miles northwest of Masan had been for many years the hideout of Korean bandits and outlaws. The Japanese had never been able to clear them out, and the Republic of Korea had met with no better success. After the outbreak of civil war, they made some pretense of aiding the Communist cause but were actually preying upon the ROK army and police for arms, food, clothing, and other loot. Operating in prowling bands as large as 50 or 60 men, the guerrillas were well armed with rifles, machine guns, and at times even mortars.

In order to assure the safety both of its own bivouac areas and the vital port of Masan, Division promptly initiated measures to maintain surveillance over a broad belt of countryside which described an arc from Chinju, some 40 miles west of Masan, around to Changwon (Map 1). The infantry and artillery regiments and the Division Reconnaissance Company were all assigned subsectors of this security belt. Daily motor patrols of not less than platoon strength were to be conducted in each subsector for the purpose of gaining information about the roads and the guerrillas as well as discouraging their activities.[2] As it proved, however, no hostile contacts were made by the Marines during the entire Masan interlude. The guerrillas preferred to restrict their attention to the local police and civilian population.
At 2240 on the 18th a dispatch from Major General Edward M. Almond, USA, commanding general of X Corps, informed the 1st Marine Division that it had passed to the operational control of the Eighth Army.[3]

Major General Oliver P. Smith reported in one of his first dispatches to EUSAK that the Marines had received fresh rations on only three days since landing in Korea. The Division commander invited attention to the importance of building up the physical condition of men who had lost weight during the Chosin Reservoir operation. An information copy went to Commander Naval Forces, Far East, (ComNavFE), who reacted promptly by ordering a refrigeration ship to Masan with 50,000 rations of turkey. The G–4 of Eusak also responded with fresh rations from time to time until the Marines, in the words of General Smith, “had turkey coming out of their ears.”[4]

Games of softball and touch football became popular in the crisp, invigorating weather as the men rapidly recuperated from fatigue and nervous tension. A series of shows was put on by troupes of U.S. Army and Korean entertainers, and the U.S. Navy sent Christmas trees and decorations.

The first Christmas in Korea was observed with a memorable display of holiday spirit by men who had cause to be thankful. A choir from the 5th Marines serenaded Division Headquarters with carols on Christmas Eve, and all the next day the commanding general and ADC held open house for staff officers and unit commanders.[5]

The United States as a whole rejoiced over the news that the last of 105,000 X Corps troops had embarked from Hungnam on 24 December without a single life being lost as a result of enemy action. President Truman spoke for the Nation when he sent this message to General MacArthur:

“Wish to express my personal thanks to you, Admiral Joy, General Almond, and all your brave men for the effective operations at Hungnam. This saving of our men in this isolated beachhead is the best Christmas present I have ever had.”

Photographers and press correspondents flocked to Masan during the holiday season for pictures and interviews about various aspects of the Chosin Reservoir campaign. Among them was Captain John Ford, USNR, a successful motion picture director who had been recalled to active duty to make a documentary film depicting the role of the Navy and Marine Corps in Korea. He used scenes in the Masan area for background material.

General Smith was informed that a motion picture company intended to produce a feature film entitled “Retreat, Hell,” based on a remark attributed to him, “Retreat, Hell, we are just attacking in a different direction!” When asked if these actually were his words, the Division commander had a diplomatic answer. He said that he had pointed out to correspondents at Hagaru that the drive to Hamhung was not a typical withdrawal or retreat, and thus “the statement attributed to me described my thinking, that of my staff and unit commanders, and my situation.”

During the Masan interlude Colonel S. L. A. Marshall, USAR, arrived as a representative of the Operations Research Office of Johns Hopkins University, which had been employed on military research projects by the Far East Command. Marshall, a well-known military analyst who had written several books about World War II operations, based his studies on personal interviews with scores of participants.

The researcher was given a free hand at Masan. Aided by a stenographer, he interviewed officers and men from privates to commanding general. The resulting thousands of words went into a classified report entitled, “CCF in the Attack (Part II), A Study Based on the Operations of the 1stMarDiv in the Koto-ri, Hagaru-ri,
Yudam-ni area, 20 November–10 December 1950.”

Chapter 1. Interlude at Masan
General Ridgway New Eusak Commander

Shortly after arrival at Masan, General Smith called a conference of unit commanders and emphasized that their task was to re-equip, resupply, repair and rehabilitate. Officers and men of replacement drafts were to be integrated and given unit training as soon as possible. Both veterans and newcomers were soon training in regimental areas assigned by Colonel Alpha L. Bowser, the Division G–3, who arranged for a 200-yard rifle range and a mortar range.

On 23 December came the news that Lieutenant General Walton H. Walker, the Eighth Army commander, had been killed in a jeep accident. His successor, Lieutenant General Matthew B. Ridgway, USA, had commanded the U.S. XVIII Airborne Corps in Europe during the final operations of World War II. Commencing his flight from Washington on the 24th, he landed at Tokyo just before midnight on Christmas day. [6]

The new commander’s task was made more difficult by the fact that the Korean conflict, at the end of its first six months, had become probably the most unpopular military venture of American history, both at the front and in the United States. From a mere “police action” at first, the struggle soon developed into a major effort in which the national pride suffered humiliations as a consequence of military unpreparedness. Far from building up the morale of the troops, letters and newspapers from home too often contributed to the doubts of men who asked themselves these questions:

“Why are we here? And what are we fighting for?”

Some of the answers were scarcely reassuring. It was insinuated, for instance, that Americans were fighting “to make South Korean real estate safe for South Koreans.”

“I must say in all frankness,” commented General Ridgway in his memoirs, “that the spirit of the Eighth Army as I found it on my arrival gave me deep concern. There was a definite air of nervousness, of gloomy foreboding, of uncertainty, a spirit of apprehension as to what the future held. There was much ‘looking over the shoulder’ as the soldiers say.”[7]

These criticisms were not applicable to the 1st Marine Division. “Our men were in high spirits and busily engaged in getting ready to fight again,” commented Brigadier General Edward A. Craig, ADC. “In my travels around the various units of the Division, and in talking to the men, I never even once noticed any air of nervousness or apprehension. . . . When General Ridgway visited the Division at Masan he made a tour of the entire camp area and observed training and general arrangements. He stated that he was quite satisfied with the 1st Marine Division and its quick comeback after the Chosin fighting.”[8]

General Ridgway learned soon after his arrival that the Eighth Army staff had prepared a plan for a phased withdrawal to Pusan in case of necessity. He called immediately for a plan of attack. Prospects of putting it into effect were not bright at the moment, but at least it served to announce his intentions.

Rumors were rife at this time that a general withdrawal from Korea, in virtual acknowledgment of defeat, was contemplated. In a letter of 1957, General Douglas MacArthur wrote an emphatic denial: “I have no means of knowing whether such action may have been seriously considered in Washington; but, for my own part, I never contemplated such a withdrawal and made no plans to that effect.”[9]

Click here to view map

The front hugged the 38th Parallel during the last week of December as the Eighth Army held a defensive line along the Munsan-Chunchon-Yangyang axis (Map 2). Three U.S. divisions were in a combat zone
occupied largely by ROK units. The 24th and 25th Divisions both reduced a third in strength by casualties, remained in contact with the enemy in west Korea while the 1st Cavalry Division, also depleted in numbers, occupied blocking positions to the rear. Personnel and equipment losses suffered by the 2d Division during the CCF counteroffensive of late November had rendered it noneffective as a tactical unit until it could be reinforced and re-equipped, and the 3d and 7th Infantry Divisions had just landed in the Pusan-Ulsan area after the Hungnam redeployment.[10]

On 27 December 1950 the commanding general began a three-day tour of Eighth Army units at the front. He talked to hundreds of soldiers ranging from privates to unit commanders. There was nothing the matter with the Eighth Army, he assured them, that confidence wouldn’t cure. “I told them their soldier forbears would turn over in their graves if they heard some of the stories I had heard about the behavior of some of our troop leaders in combat. The job of a commander was to be up where the crisis of action was taking place. In time of battle, I wanted division commanders to be up with their forward battalions, and I wanted corps commanders up with the regiment that was in the hottest action. If they had paper work to do, they could do it at night. By day their place was up there where the shooting was going on.”

It could never have been said that this professional soldier, the son of a Regular Army colonel, had failed to set an example in his own career. As the commander of an airborne division, he had jumped along with his men in Normandy.

Seldom seen in Korea without a grenade attached to his harness, Ridgway insisted that it was not a gesture of showmanship. In mobile warfare a man might be surprised by the enemy when he least expected it, he said, and a grenade was useful for blasting one’s way out of a tight spot.
After completing his tour of the combat area, the commanding general concluded that one thing was still lacking. Soldiers of the Eighth Army hadn’t as yet been given an adequate answer to the questions, “Why are we here?” and “What are we fighting for?” In the belief that the men were entitled to an answer from their commanding general, he sat down in his room and wrote this declaration of faith:

“To me the issues are clear. It is not a question of this or that Korean town or village. Real estate is here, incidental. . . .

“The real issues are whether the power of Western civilization, as God has permitted it to flower in our own beloved lands, shall defy and defeat Communism; whether the rule of men who shoot their prisoners, enslave their citizens and deride the dignity of man, shall displace the rule of those to whom the individual and individual rights are sacred; whether we are to survive with God’s hand to guide and lead us, or to perish in the dead existence of a Godless world.

“If these be true, and to me they are, beyond any possibility of challenge, then this has long since ceased to be a fight for freedom for our Korean allies alone and for their national survival. It has become, and it continues to be, a fight for our own freedom, for our own survival, in an honorable, independent national existence. . . .”[11]

The deep conviction of this declaration could not be doubted. But Ridgway did not confine himself to moral leadership; he also insisted on a return to sound tactical principles. Upon learning that some of the infantry commanders in combat sectors had no knowledge of the enemy’s strength or whereabouts, he ordered that aggressive patrolling be resumed at once. He directed further that every unit make a resolute effort to provide a hot reception for the Red Chinese patrols which had met too little opposition while prodding every night for soft spots along the thinly held 135-mile United Nations line.[12]

In his talks with officers and men, the new commander told them that too many weapons and vehicles had fallen into the hands of the enemy during the withdrawals in west Korea. He made it plain that in the future any man abandoning equipment without good cause would be court-martialed.

Not only did Ridgway stress the increased use of firepower; he requested in one of his first messages to the Pentagon that 10 additional battalions of artillery be sent to Korea. These guns were to provide the tactical punch when he found an opportunity to take the offensive.

Meanwhile, he had the problem of putting up a defense against a Chinese Communist offensive expected within a week. On his first day as Eighth Army commander he sent a request to President Syngman Rhee, of the Republic of Korea, for 30,000 native laborers to dig field fortifications. The energetic, 71-year-old Korean patriot provided the first 10,000 at dawn the following morning and the others during the next two days. Armed with picks and shovels, this army of toilers created two broad belts of defense, one to the north and one south of the river Han. The purpose of the first was to stop the enemy if American firepower could compensate for lack of numbers, and the second was a final line to be held resolutely.

Chapter 1. Interlude at Masan
Marine Personnel and Equipment Shortages

Although the Marine ground forces found themselves in the unusual situation of being 200 miles behind the front, they could be sure that this respite wouldn’t last. Every effort was being pushed to restore the Division to combat efficiency by a command and staff acutely aware of shortages of men and equipment. The effective strength on 29 December 1950 was 1,304 officers and 20,696 men, including 182 attached U.S. Army troops and 143 Royal Marine Commandos. This total also included 28 officers and 1,615 men who had arrived in a replacement draft of 17 December, and 4 officers and 365 men in a draft of three days later.[13]

Authorized Division strength was 1,438 officers and 24,504 men, indicating a shortage of 134 officers and 3,808 men. Most of the deficiencies were in the infantry and artillery units—29 officers and 2,951 men in the three infantry regiments, and 38 officers and 538 men in the artillery.

Division G–1 had been informed by the FMFPac representative in Japan that about 5,000 casualties were hospitalized there, and an unknown number had been evacuated to the United States because of overcrowding of hospitals in Japan. Such factors made it difficult to predict how many would return to the Division, but G–1 estimated from 500 to 1,000 in January.

The situation in regard to Division equipment might be summed up by saying that on 23 December there was a serious shortage of practically all essential items with the single exception of M–1 rifles. Upon arrival at Masan, units had been required to submit stock status reports. These lists were forwarded on 23 December to the Commanding General, Eighth Army, with a notification that requisitions had been submitted to the 2d Logistical Command, USA, in Pusan. It was requested that deliveries of supplies and equipment be speeded up, so that the Division could soon be restored to its former combat efficiency. A comparison of the totals of selected items on 23 and 31 December as listed on the following page shows that considerable progress was made during those eight days.

The 2d Logistical Command in Pusan, commanded by Brigadier General Crump Garvin, USA, deserved much of the credit for the week’s restoration of Marine equipment. Progress passed all expectations, considering that General Garvin was supplying other Eighth Army units which had lost equipment during their withdrawal.[14]

There still existed on 29 December a requirement for clothing and individual equipment, and the spare parts problem remained acute. Ironically, the fact that the 1st Marine Division had brought most of its motor transport out from the Chosin Reservoir was a handicap at Masan. Eighth Army units which had lost their vehicles were given priority for receiving new ones. This meant that the Marines must make the best of war-worn trucks.

Chapter 1. Interlude at Masan
Marine Air Squadrons in Action

While the ground forces trained in the Masan area, the Corsair squadrons and the jet squadron flew combat missions. Support of the Hungnam redeployment had top priority until 24 December, when the last of the 105,000 troops were evacuated by Rear Admiral James H. Doyle’s Task Force 90. Such totals as 91,000 Korean refugees, 17,500 vehicles, and 350,000 measurement tons of cargo were also recorded by the U.S. Navy’s largest operation of the Korean conflict.

No serious trouble was experienced from enemy action during the two weeks of the redeployment, although G–2 reports warned that several Chinese divisions were believed to be in the general area. Air strikes and naval gunfire shared the credit for this result. Nearly 34,000 shells and 12,800 rockets were fired by the support ships, and UN planes were on station or carrying out missions every moment that weather permitted. Marine fighters of VMF–212, VMF–214, and VMF–323, flying from carriers after the closing of Yonpo Airfield, made a noteworthy contribution to the success of the Hungnam redeployment.

VMF–212, commanded by Lieutenant Colonel Richard W. Wyczawski, was assigned the task of gathering the helicopters of VMO–6 from various ships of the Seventh Fleet and returning them to the operational control of the 1st Marine Division at Masan. There the OYs of the observation squadron were waiting after an overland flight, and Major Vincent J. Gottschalk’s unit was complete.

With the Hungnam redeployment ended, the Navy offered to make its primary carrier-borne air effort in support of the Eighth Army. There was no single over-all commander of Navy and Air Force aviation in Korea (other than General MacArthur himself) and the two services were working under a system of mutual agreement and coordination.

The Far East Air Forces (FEAF), under Lieutenant General George E. Stratemeyer, was the senior Air Force command in the Far East, on the same level as ComNavFE, Vice Admiral C. Turner Joy. The largest FEAF subordinate command was the Fifth Air Force, commanded by Major General Earle E. Partridge, with headquarters at Taegu, alongside that of the Eighth Army.

Strictly speaking, land-based Marine air had been under Fifth Air Force operational control throughout the Chosin Reservoir operation. Actually a verbal agreement between General Partridge and Major General Field Harris, commanding the 1st Marine Aircraft Wing (MAW), had given the Marines a good deal of latitude in making decisions relative to close air support. This was often the salvation of Marine units during the breakout, when every minute counted. Later, during the Hungnam redeployment, control of Marine aircraft became the responsibility of Admiral Doyle. His control agency was Tactical Air Control Squadron–1 (TacRon–1) in his flagship, the Mount McKinley. TacRon–1 kept in close touch not only with the 3d Infantry Division, USA, defending the shrinking perimeter, but also with the Eighth Army and Fifth Air Force.

During the last days of 1950 the four Marine air squadrons were kept busy. VMF–212 on the Bataan was attached to TF–77. The coastline of east Korea was its hunting grounds for such missions as knocking out warehouses, bridges, and railway tunnels between the 38th and 39th parallels.

Along the west coast, VMF–214 on the Sicily and VMF–323 on the Badoeng Strait were commanded respectively by Major William M. Lundin and Major Arnold A. Lund. These squadrons were part of Task Group-95.1 under Vice Admiral Sir William G. Andrews, RN. The Marine aviators found themselves in an organization made up of Royal Commonwealth naval forces and of French, Thai, and ROK units. TG–95.1 had the responsibility for patrolling the western coastline to prohibit enemy movement by water in military junks and by
vehicle along the littoral.[19]

VMF-311, the jet squadron commanded by Lieutenant Colonel Neil R. MacIntyre, remained the only land-based Marine air unit in Korea. The Fifth Air Force had made space for it on crowded K–9, seven air miles northeast of Pusan, when General Harris expressed a desire to keep his jets in Korea for possible defense against Red air attacks (Map 3).

MacIntyre exercised his prerogative as squadron commander to fly the unit’s first combat mission on 17 December. He was not, however, the first Marine aviator to pilot a jet in combat. That distinction went to Captain Leslie E. Brown on 9 September 1950. Assigned to the Fifth Air Force’s 8th Fighter-Bomber Squadron as an exchange pilot, he made the first of several routine flights with an F-80 Shooting Star.

On 20 December, 17 officers and 51 enlisted men arrived at K–9 to boost VMF-311’s total to 27 officer pilots and 95 enlisted men. Under Fifth Air Force control, they were employed to attack suspected CCF troop shelters, entrenchments, and gun positions on the eve of the expected enemy offensive. Missions of the jet planes averaged 12 a day at the end of the month.

Chapter 1. Interlude at Masan
The Air Force System of Control

It was seldom realized in the middle of the twentieth century that for the first time since the Middle Ages, a single human being represented in his person a decisive tactical unit. Just as the mailed knight on his barded charger had ruled the battlefields of the medieval world, so did the pilot of a modern aircraft have the power to put an enemy battalion to flight with napalm, or to knock out an enemy stronghold with a 500-pound bomb.

A great deal depended, of course, on how the lightning of this human thunderbolt was controlled. The Marine Corps and the Air Force had different ideas on the subject. At the foundation of the Marine system was the concept that the needs of the ground forces came first, and control of air support should be exercised by the troops being supported. In each Marine infantry battalion a tactical air control party (TACP) included two aviators—one to be employed as a forward air controller (FAC) at the front, and the other as an air liaison officer in the battalion supporting arms center (SAC).

In an emergency both could quickly be assigned to companies or even platoons to “talk” air strikes down on the enemy. The normal chain of command was bypassed in favor of direct radio from the TACP to the cognizant air control agency that had the authority to cross-check the request for possible conflict with other operations and to channel fighter-bombers to the attack.

Intermediate commands kept themselves informed of the over-all air picture and controlled the employment of aviation by their own subordinates as they listened in on these requests. They indicated approval by remaining silent, and disapproval by transmitting a countermand.

The hub of the Air Force system was the Tactical Air Control Center (TACC) of the Fifth Air Force-EUSAK Joint Operations Center (JOC), known by the code name MELLOW. An aviator coming on duty called up MELLOW and received his instructions from JOC.

FACs were assigned to U.S. Army and British units down to corps, division, and regimental levels, and to ROK corps and divisions. Further assignment to smaller front line units was possible but entailed a good deal of time and advance planning. And even the most urgent requests had to be channeled through division and regimental levels to JOC for approval.

If a Marine FAC wasn’t able to control an air strike visually because of terrain conditions, he called for a “tactical air coordinator, airborne” (TACA) to locate the target from the air and direct planes to the attack. The Fifth Air Force also used special airborne coordinators. Known as “Mosquitoes,” they flew low-winged, two-seater North American training planes, designated T–6s by the Air Force and SNJs by the Navy.

This plan was capable under favorable circumstances of providing the Fifth Air Force-EUSAK tactical air control system with a mobile and flexible means of directing air power at the front. Its chief weakness, according to Marine doctrine, lay in the separation of air power from ground force control. The Air Force claimed the advantage of projecting tactical air power deep into enemy territory; but as the Marines saw it, this was deep or interdictory support, and not to be compared to genuine close air support.
The command and staff of the 1st Marine Division could only speculate during this interim period as to what the near future might hold for them. Rumors had been circulated, during the first week at Masan, that the Division would be employed as rearguard to cover an Eighth Army withdrawal from Korea, with Pusan serving as the port of debarkation. And while plans cannot be made on a basis of rumor, General Smith and Colonel Bowser went so far as to discuss the possibility seriously. At last, on 24 December, a more definite prospect loomed when the EUSAK staff requested the Division to furnish logistical data for a move by rail and truck to Wonju, some 130 miles north of Masan.

It was not known whether an actual move was contemplated or the intention was merely to have available a plan for future use if the occasion warranted. General Smith sent the data but added a strong recommendation to the effect that any commitment of the Division be postponed until it was re-equipped and strengthened by replacements.[21]

At this time the Marine general received a copy of a map prepared by the Eighth Army staff which showed the phase lines of a 200-mile withdrawal from the combat zone to the Pusan port of debarkation. No enlightenment as to the employment of the Division was forthcoming until 27 December 1950, however, when a EUSAK dispatch directed that the Marines be detached from Eighth Army reserve and reassigned to the operational control of X Corps.[22]

A message of the 28th requested General Smith to attend a conference at the X Corps CP at Kyongju (about 60 air miles northeast of Masan) on the 30th. He was directed to bring several members of his staff with him and to assign a liaison officer to X Corps.[23]

Two VMO–6 helicopters flew him to Kyongju along with his G–3, Colonel Bowser, and his aide, Captain Martin J. Sexton. Tossed by high winds, they landed just in time to meet General Ridgway, who gave a talk emphasizing the necessity for reconnaissance and maintaining contact with the enemy.

The new plan for X Corps employment, as modified after discussion with the Eighth Army commander, called for the recently reorganized 2d Infantry Division to be placed under operational control of General Almond. It was to move out at once to the Wonju front, followed by the 3d and 7th Infantry Divisions. The 1st Marine Division was to stage to Pohangdong (Map 3) on the east coast, some 65 miles north of Pusan, with a view to being eventually employed on this same front.[24]

“Certainly no one could accuse General Almond, the X Corps commander, of defeatism,” was a tribute paid by General Smith. On the contrary, the Marine general had sometimes differed with him on the grounds that he was aggressive to the point of giving too little weight to logistical considerations and time and space factors.

It was realized at the conference that administrative decisions must depend to a large extent on the outcome of the impending enemy offensive. G–2 officers of the Eighth Army, forewarned by prisoner interrogations, were not surprised when the blow fell shortly before midnight on the last night of the year.

In spite of Air Force bombings of roads and suspected supply dumps, the Chinese Reds had been able to mount a great new offensive only three weeks after the old one ended. Attacking in the bitter cold of New Year’s Eve, they made penetrations during the first few hours in ROK-held sectors of the central and eastern fronts. By daybreak it became evident that Seoul was a major objective, with the UN situation deteriorating rapidly.
ON THE LAST DAY of 1950 the 1st Marine Division was alerted for two missions within an hour. At 1425 it was detached from X Corps, after only four days, and once more assigned to the operational control of the Eighth Army. The Marines were directed to resume their former mission of training, reorganizing, and replacing equipment so that they could be employed either to block enemy penetrations along the Ulchin-Yongju-Yechon axis (Map 4), or to take over a sector along the main line of resistance (MLR).

Forty minutes later another EUSAK dispatch alerted the Division to move to the Pohang-Andong area, where it would be in position to block any CCF penetration. This warning order came as no surprise, since X Corps had already contemplated such employment for General Smith’s troops. In fact, General Craig and Deputy Chief of Staff Colonel Edward W. Snedeker had left Masan that very morning to select assembly areas and command posts.[1]

At a conference of G–3 and G–4 officers held at Masan on New Year’s Day, it was recommended that the administrative headquarters remain in its present location when the rest of the Division moved up to Pohang. Although this headquarters had accompanied the Division CP in the past, it was believed that gains in mobility would result if the large number of clerical personnel and their increasing bulk of documents were left behind.[2] In view of the changing situation at the front, there was less danger of losing valuable records if the headquarters continued to function at Masan, maintaining contact with the forward CP by means of daily courier planes. The plan was approved by the Division commander and worked out to general satisfaction.
Decisions were made during the first few days of 1951 in an atmosphere of suspense and strain as adverse reports came from the firing line. General Ridgway had assumed correctly, on the basis of prisoner interrogations, that the main Chinese effort would be channeled down the historical invasion corridor north of Seoul. He made his dispositions accordingly, and the Eighth Army order of battle on 31 December 1950 (Map 2) was as follows:

U.S. I Corps—Turkish Brigade, U.S. 25th Division, ROK 1st Division, from left to right northwest of Seoul. In Corps reserve, British 29th Brigade.

U.S. IX Corps—ROK 6th Division, U.S. 24th Division, from left to right north of Seoul. In Corps reserve, British Commonwealth 27th Brigade, U.S. 1st Cavalry Division.

ROK III Corps—ROK 2d, 5th, and 8th Divisions, from left to right on central front. In Corps reserve, ROK 7th Division.

ROK II Corps—ROK 3d Division, on east-central front.

ROK I Corps—ROK 9th and Capital Divisions, from left to right on eastern front.

The U.S. X Corps, comprising the newly reorganized U.S. 2d Infantry Division at Wonju and the 7th Infantry Division in the Chungju area, had been given a mission of bolstering the ROK-held line in central and east Korea and blocking enemy penetrations to the rear.

In Eighth Army reserve was the 187th Airborne RCT, with Thailand Battalion attached, in the Suwon area. Also under EUSAK operational control in rear areas were the 1st Marine Division (Masan), the 3d Infantry Division (Kyongju), the Canadian Battalion (Miryang) and the New Zealand Field Artillery Battalion (Pusan).

Altogether, the United Nations forces in Korea numbered 444,336 men as of January 1951. The cosmopolitan character of the fight against Communism is indicated by the aid given to the U.S. and ROK forces by contingents of combat troops from 13 other nations—Australia, Belgium, Canada, Ethiopia, France, Greece, Netherlands, New Zealand, Philippines, South Africa, Thailand, Turkey, and the United Kingdom.[3]

Enemy numbers at this time were estimated at a total of 740,000 men in Korea and near-by Manchuria. Seven CCF armies, the 37th, 38th, 39th, 40th, 42d, 50th, and 66th were identified among the troops attacking on New Year’s Eve. The NKPA I and V Corps also participated. Estimated strength of the assaulting forces was 174,000 Chinese and 60,000 North Koreans.

Previously identified but not reported in contact with U.S. forces on 31 December were the 24th, 48th, 49th, and 65th CCF armies and the NKPA 1st, 3d, and 15th Divisions.

As another possibility which could not be overlooked, the five CCF armies which had opposed X Corps in northeast Korea might also take part in the new offensive. Elements of the 20th, 26th, 27th, 30th, and 32d Armies identified in that area early in December, had more than two weeks in which to reorganize and make their way to the Eighth Army front. If they got into the fight, it would mean a formidable addition to the enemy’s forces.

With only five days at his disposal, after arrival in Korea, General Ridgway’s preparations were limited. His dispositions could not be blamed, but it was the old story of the chain and its weakest link as the enemy scored a major breakthrough at the expense of the 1st ROK Division on the west-central front. Unfortunately, this unit represented the tactical joint between I Corps and IX Corps. The enemy widened the gap before dawn and drove on toward Seoul.
Early in the morning the EUSAK commanding general was on the road, waving his arms in an attempt to stop ROK soldiers streaming rearward in their vehicles after abandoning crew-served weapons. The short training period for these troops, their tactical inexperience, and the language barrier were the dissonant notes tolling the ominous chords of defeat. The whole front was endangered as the enemy poured through an ever widening gap, and Ridgway ordered that roadblocks be set up where MPs could halt the fugitives, rearm them, and send them back to the front. At his request, President Syngman Rhee appealed to ROK soldiers over the radio and exhorted them to make a stand. By that time it was too late to save Seoul, and the commanding general gave orders for its evacuation.

“The withdrawal was initiated in mid-afternoon on the 3d,” he commented in retrospect. “I stayed on the bridge site on the north bank until dark to watch the passage of the most critical loads. These were the 8-inch howitzers and the British Centurion tanks, both of which exceeded the safety limits of the bridge under the conditions existing at the time.”

It was a scene of terror and despair that Ridgway never forgot. Thousands of Korean civilian refugees were making their way over the thin ice of the river Han, many of them carrying children or old people on their backs. What impressed the observer most was the uncanny silence of this mass flight in the freezing winter dusk, broken only by the sound of a multitude of feet shuffling over the ice—a sound strangely like a vast whispering. It was as if these derelicts of war were trying incoherently to confide their misery to someone.

From a strategic viewpoint, the only course left to the Eighth Army was a continued retirement south of Seoul. “We came back fast,” Ridgway admitted, “but as a fighting army, not as a running mob. We brought our dead and wounded with us, and our guns, and our will to fight.”
EUSAK Fragmentary Operations Plan 20, issued as an order on 4 January, called for a further withdrawal to Line D (Map 4). In preparation, X Corps had moved up to the front on the 2d, after assuming operational control of the U.S. 2d and 7th Infantry Divisions and the ROK 2d, 5th, and 8th Divisions and occupied a sector between U.S. IX Corps and ROK III Corps.[6]

By 7 January the UN forces had pulled back to a modified Line D extending from Pyongtaek on the west coast to Samchok on the east and taking in Yoju and Chechon. General Ridgway sent telegrams to all corps commanders expressing dissatisfaction with the personnel and material losses inflicted on the enemy during the withdrawal. “I shall expect,” each message concluded, “utmost exploitation of every opportunity in accordance with my basic directive.”

That evening, foreshadowing the offensive operations he was contemplating, the commanding general ordered a reconnaissance-in-force by a reinforced infantry regiment north to Osan to search out the enemy and inflict maximum punishment. No contacts were made, nor did strong patrols sent out by U.S. IX Corps flush out any sizeable groups of Chinese. But the Eighth Army had served notice that it intended to regain the initiative at the first opportunity.

One more blow remained to be absorbed. On the 8th the Communists struck in the Wonju area with an attack of four divisions. Elements of the newly reorganized 2d Infantry Division were forced to give up that important highway and rail center after counterattacks failed. The enemy now directed his main effort along the Chunchon-Wonju-Chechon corridor, and North Korean guerrilla forces infiltrated through the gap between the U.S. X Corps and ROK III Corps.

The salient created by this CCF attack caused Line D to be modified again so that in the center it dipped sharply downward to Chungju before curving northeast to Samchok (Map 4).
The pilots and aircrewmen of the three carrier squadrons and the land-based jet squadron were the only Marines in a position to take an active part in the battle. With but one TACP per division, close air support was out of the question for the ROKs on New Year’s Day.

Control facilities were severely strained when scores of UN fliers made use of the frequencies which the Mosquitoes employed for tactical air direction. The voices were all in the English language, but with more than one person doing the sending, shrill side noises sliced in to garble the whole into a cacophony of jungle sounds. A Mosquito trying to coach a fighter-bomber attack at the crossings of the Imjin might be drowned out by a distant pilot calling up a controller in the Hwachon Reservoir Area.[7]

As a consequence, there was no coordinated air-ground attack in direct support of the man in the foxhole. Most of the JOC effort was directed to the enemy’s rear in an effort to block supporting arms, reinforcements, and supplies.

The two Marine squadrons attached to Admiral Ruble’s carriers were at sea, some 80 miles south of Inchon when news of the Chinese offensive filtered through the tedious communication channels from JOC and EUSAK. Major Lund, CO of VMF–323, led an eight-plane attack which destroyed enemy trucks and some 40 huts believed to be occupied by CCF troops in a village south of the Imjin.

Another Marine air mission of New Year’s Day was the flight commanded by Major Kenneth L. Reusser for the purpose of wiping out a reported CCF concentration on the central front. Unfortunately, he could not get verification that the target consisted of enemy troops. Before a decision could be made, Reusser heard a Mosquito of the 2d ROK Division calling urgently for any flier in the area to hit another CCF concentration (this time verified) in a village to the enemy’s rear of the Chorwon-Hwachon area. Under the Mosquito’s direction the Corsairs bombed and napalmed the village, then strafed survivors trying to escape.

VMF–212, flying with Navy (Task Force) TF–77 on the eastern side of the peninsula, had a busy New Year’s Day. Two eight-plane interdiction strikes were flown in the morning against rear area targets along the coastal highways. The afternoon brought an emergency call from JOC, and the squadron “scrambled” 14 planes which hit the east flank of an extensive enemy push south of the Hwachon Reservoir.[8]

More than 300 UN fighter-bombers were sent out under JOC, or MELLOW, control on the embattled first day of 1951. On the west coast TacRon–3 received more calls for air support than TG–96.8 could fill. Rear Admiral Lyman A. Thackrey sent a request to Admiral Struble in the Missouri for additional carrier planes, and within a few hours the Marines of VMF–212 were detached and on their way to the west coast to join the other two Corsair squadrons of TG–96.8.

All four Marine fighter-bomber squadrons took part daily in air operations as the Chinese Reds continued their advance south of Seoul. VMF–311 was badly handicapped, however, by mechanical difficulties. Engine or radio trouble accounted for five “aborts” of the 15 sorties launched on 4 January. The remaining pilots could not make radio contacts with their assigned Mosquito controller, and had little choice other than to attack targets of opportunity.

The jets continued in action, but it was realized that they were not giving the maximum of their capabilities. By mid-January the squadron had become almost ineffective through no fault of its own. Technical representatives from the companies that had manufactured both the engine and plane were flown to K–9 (Map 3), and on the 16th all jets were grounded. These inspectors did not work on the planes; they were empowered only to
report the nature of the trouble to the airplane companies concerned. The companies in turn reported to BuAir in Washington, which sent instructions and if necessary mechanics to Itami, where major aircraft maintenance was done.

Meanwhile, the fall of Seoul meant that the Air Force was evicted by enemy action from such major fields as Kimpo and K–16 on an island in the river Han. The Sabre jets and Mosquitoes had to be pulled back, and soon the F–51s were no longer secure at Suwon from an advancing enemy.

Admiral Thackrey’s Western Deployment Group completed the evacuation from Inchon of 70,000 tons of supplies, 2,000 vehicles, and about 5,000 troops. As the Navy closed out activities on the west coast, TG–96.8 sent out its last combat air missions on 7 January. VMF–214 made its final reconnaissance patrols; VMF–212 flew 25 sorties in support of UN troops in central Korea; and VMF–323 took part in a series of Air Force raids on enemy troop assembly areas in the Hoengsong area.

Until the last, the carrier Marines alternated their Eighth Army support missions with routine CAPs, coastal searches, and airfield bombings. Admiral Thackrey’s Redeployment Group, including TacRon–3, completed its task in the Inchon area and departed on the 7th. On that same day HMS Theseus, flying the flag of Admiral Andrewes, was back in west coast waters as the British pilots resumed their coastal patrols and naval air support on that side of the peninsula. Within a week VMF–212 and the Bataan returned to fly alternate tours of duty with the pilots of the Theseus. The other two carrier squadrons found themselves unemployed for the time being. Not only were they out of a job, they were also homeless, since the United Nations had been forced to give up airfields at Yonpo, Wonsan, Seoul, Kimpo, and Suwon. Only K–1, K–2, K–4, K–9, K–10, and two small fields near Taegu remained (Map 2), and they would scarcely serve the needs of FEAF. Thus it was that VMF–214 and VMF–323 found a temporary haven at Itami, along with VMF–311 and most of the administrative and service units of the 1st MAW. There was nothing to do but wait until a new home could be found for the fighter-bomber squadrons.
Chapter 2. The CCF January Offensive
1st Marine Division Assigned Mission

The Marine aviators might have found some consolation in the fact that their comrades of the ground forces were also groping in a fog of uncertainty. At the most critical period of the CCF thrust in the Wonju area, General Smith was summoned to Taegu on 8 January for a conference with General Ridgway. The Eighth Army commander proposed to attach one of the Marine RCTs to X Corps in the Andong area, about 95 air miles north of Masan. The remainder of the Division would then move to the Pohang-Kyongju-Yongchon area, some 60 air miles northeast of Masan (Map 4).

Ridgway asked the Marine general to discuss the prospect with his staff. He realized, he said, that no commander liked to have his division split up, and he assured Smith that as soon as the X Corps zone became stabilized, the RCT would be sent back to him.

They parted with this understanding, but a few hours after his return by air to Masan the following message was received from Ridgway:

“Subsequent your departure, alternate plan occurred to me on which I would like your views soonest. It follows: 1st Mar Div, under Army control, move without delay to general area outlined to you personally today, to take over responsibility at date and hour to be announced later for protection of MSR between Andong and Kyongju, both inclusive, and prevent hostile penetration in force south of Andong-Yongdok road.”[10]

At 1115 on the 9th the plan was made official. An Eighth Army dispatch ordered the 1st Marine Division to move without delay to the Pohang area (Map 4), remaining under EUSAK control, with the following missions:
(a) Prevent enemy penetrations in force south of the Andong-Yongdok road;
(b) Protect the MSR connecting Pohang, Kyongju, Yongchon, Uihung, and Uisong.[11]

Based on these directives, Division OpnO 1–51 was issued at 1600 on the 9th. RCT–1 was directed to move by motor to Yongchon and to protect the MSR, Yongchon-Uisong inclusive, from positions in the vicinity of Yongchon and Uihung. The 1st and 7th Motor Transport Battalions, plus other Division elements, were ordered to provide the required trucks.[12]

General Ridgway arrived at Masan by plane on the morning of 9 January. He was met by General Smith and driven to Headquarters, where the Division staff officers and regimental commanders were presented to him. In a brief talk he reiterated the necessity for reconnaissance and for regaining and maintaining contact with the enemy. The Marine officers were told that limited offensive actions by Eighth Army units would be put into effect soon.[13]

Division OpnO 2–51, issued at 1300 on the 10th, provided for the completion of the Division movement by road and water from Masan to the objective area.[14]

Shortages both of personnel and equipment were much reduced during the first two weeks of January. Returns to duty of battle and nonbattle casualties added 945 to the Division strength. Corresponding improvements had been made in the material readiness of the Division. Early in January a large resupply shipment arrived from Kobe, and a Navy cargo ship brought supplies and equipment which had been left behind at Inchon in October. Thus the situation was generally satisfactory except for nearly 1,900 gaps in the ranks that remained to be filled.[15]

Chapter 2. The CCF January Offensive
Replacements by Air and Sea

Facilities for air transport across the Pacific were limited, since the Army was also moving replacements to the Far East. A piecemeal process of shuttling Marines in plane-load increments could not be completed before 30 January. Lieutenant General Lemuel C. Shepherd, Jr., commanding FMFPac, took a dim view of this delay. It would be better for the Division, he maintained, to receive even a part of its replacements before it went back into action. As a compromise, he proposed a combined air-sea lift which met the approval of Rear Admiral Arthur H. Radford, commanding Pacific Fleet.

Three replacement drafts were already on the way, with the 3d in Japan and the 4th and 5th at Camp Pendleton. General Shepherd scraped the bottom of the manpower barrel so closely that he dug up an additional 700 men from Marine security detachments in Japan, the Philippines, and other Pacific Ocean bases.

Seven trainloads of Marines from Camp Lejeune arrived at San Francisco on 10 January to join those from Camp Pendleton. On the same day 230 of these replacements were flown to Hawaii by the Military Air Transportation Service (MATS), by the R5D’s of Marine VMR–352 and of Navy VR–5, and by the “Mars” flying boats of Navy VR–9. The next day 799 Marines sailed on the fast transport USNS General W. O. Darby. The remainder were transported at the rate of one plane load a day by MATS and at the rate of three or four plane loads a day by the Navy and Marine transport planes of Fleet Logistics Air Wing, Pacific (FLogAirWingPac).[16]

Five days later, on the 16th, the airlift had cleared the last Marine out of Treasure Island. On 21 January, 1,000 men of the special draft were already with the 1st Division at Pohang and the 799 on board General Darby were due to dock at Pusan.

It had been a fast job of coordination by the Navy, Army, Air Force, and virtually all major units of the Marine Corps. Much of the special airlift was flown by the R5Ds of VMR–352 and of VMR–152. The former, commanded by Colonel William B. Steiner, had been flying the El Toro–Tokyo flights since October, but most of its effort had been in shuttling between the mainland and Hawaii. VMR–152 had concentrated on the Hawaii–Japan leg of the long trip. During the Chosin campaign, the squadron commander, Colonel Deane C. Roberts, had maintained his headquarters and 10 planes at Itami to support the shuttle to Korea. He had barely returned to Hawaii from that job when his squadron was alerted not only for the special lift of Marine replacements but also for a return to the Far East.[17]

Hawaii had been the bottleneck in this special troop lift. Land and seaplanes were discharging their human cargo at Barbers Point, Hickam Air Force Base, and Keehi Lagoon. From there FLogAirWingPac had to space the planes over the long stretches of sea at approximately four-hour intervals. The guiding factor was other air traffic over the same route and the servicing, messing, and rescue capabilities of Guam and other points along the way, such as tiny Johnston Island. The latter was barely big enough for its single 6,100-foot runway.

VMR–152 and the Navy’s VR–21 were assigned the mission of flying the long Hawaii-Japan portion of the big lift. Itami became another collection center for the airborne replacements and five of the VMR–152 planes were retained there to shuttle the troops the last 300 miles to K–3, near Pohang (Map 2). On 21 January the troop lift reached virtual completion, but Admiral Radford authorized the 1st MAW to retain a couple of R5D’s at Itami a little longer. Thus the Marines were able to avoid highway and rail traffic jams in Korea by flying men and materials from troop and supply centers in Japan to K–1, K–3, or K–9.

Looking back at the troop lift from a historical distance, the observer is most impressed by its demonstration of teamwork on a gigantic scale. The Marine Corps had functioned as a single great unit, even
though a continent and an ocean separated the vanguard in Korea from the rear echelons in North Carolina.
The seven remaining UN airfields in Korea were of course not enough to accommodate the 25 FEAF and Marine tactical squadrons. Logistics and lack of space proved to be knotty problems. Thirty tank cars of gasoline a day were needed for normal flight operations of K–2 alone. Yet it took these cars eight days to make the 120-mile Pusan-Taegu round trip, such was the strain put on the railway system by the CCF offensive.

FEAF had standby plans to evacuate Korea entirely in an emergency. Some of the secondary airfields of the Itazuke complex in Japan had been reevaluated for this purpose. Originally built by the Japanese for World War II, they were obsolescent by 1951 and because of weather, neglect, and misuse badly deteriorated.[18] The most promising of these secondary airfields were Tsuika, Ozuki, and Bofu (Map 3), ranging from 30 to 65 miles east of Itazuke and facing one another around Japan’s Inland Sea. Nearest to Itazuke and on the same island of Kyushu was Tsuika. Across the narrow Shimonoseki Strait, on the shore line of Honshu, were Ozuki and Bofu.

General Stratemeyer, the FEAF commander, informed General MacArthur that it was necessary to start air operations from Ozuki and Bofu as soon as possible. A good deal of work had already been done on Tsuika, even to moving a major Japanese highway in order to lengthen the runway to 7,000 feet. The Air Force general wanted to repair Ozuki for his F–51 squadrons, and Bofu was to be reserved for the 1st MAW.

This decision meant a revision of plans for the Marines. MAG–12 had recently been lifting a hundred men a day to K–1 (Pusan west) with a view to making it into a major base. These preparations came to an abrupt halt, pending the final decision on Bofu.

A Marine survey of that World War II airfield showed it to be in serious disrepair. The Air Force had already rejected it as a base for night-harassing B-26s. Although the runway was only 7 feet above sea level, a 720-foot hill complicated the traffic pattern. Nevertheless, Bofu was considered suitable for the time being, and the Air Force assured the 1st MAW that its use would be but temporary.

FEAF proposed that the Marines start flying out of Bofu immediately, operating under field conditions. There were, however, essential repairs to be made. The 5,300-foot runway remained in fair condition, but much of the taxiway was not surfaced and couldn’t stand heavy use by the Corsairs. Three of the four hangars needed extensive repairs, as did the barracks and mess hall. Fuel would have to be stored in drums.

The Wing had the capability for minor construction but lacked the equipment, men, and fiscal authority to handle major work on the runways and taxiways. The Air Force offered to furnish the labor and materials, provided that the Navy pay for them. The Navy in its turn was too limited in funds to restore an Air Force field for only temporary use by Marines.

Finally, a compromise solved the problem. The Navy agreed to have the engineering work done by a detachment of its Mobile Construction Battalion 2 (Seabees) and furnish the concrete for patching the runways and rebuilding the warm-up aprons. The Air Force was to provide the pierced steel planking for the runways.

On 15 January MAG–33 sent an advance detachment of 125 officers and men to Bofu to do some of the preliminary work, and on the following day the Seabees initiated the heavy construction. The restoration of K–1 was meanwhile resumed by MAG–12.

Until these two fields were made ready, VMF–212 on the Bataan would be the only Marine squadron in combat.
The middle of January was also a transition period for the 1st Marine Division. In accordance with Division Orders 1–51 and 2–51, the movement from Masan commenced at 0545 on 10 January when the first serial of RCT–1 departed by motor for the Pohang-Andong area. LSTs 898 and 914 sailed the next day with elements of the Tank, Ordnance, Engineer, and Service Battalions. The new Division CP opened at Sinhung, about five miles southeast of Pohang, at 1600 on 16 January; and by the 17th all designated motor and water lifts were completed. Thus the 1st Marine Division and 1st Marine Aircraft Wing were poised to begin new operations which will be described in the following chapter.[19]

By 15 January relative quiet prevailed along the entire front; the Chinese Reds had shot their bolt. In terms of territorial gains (Map 4) the Communists could claim a victory, for they had inflicted heavy losses both in troop casualties and equipment on the UN forces. Yet the CCF January offensive could not compare with the November–December attacks either in moral or material damage done to the Eighth Army. This time the UN divisions had withdrawn for the most part in good order after the rout of ROK units at the outset. Nor were Ridgway’s troops always driven from their positions by enemy action. Whenever he had an option between sacrificing men or Korean real estate, it was the latter he chose. And by his insistence on good combat discipline, he made the enemy pay an exorbitant price.

Nevertheless, the blunt fact remains that the United Nations forces had been beaten in spite of an overwhelming superiority in aircraft, artillery, armor, and transport as well as command of the sea. Stateside Americans can scarcely be blamed for asking themselves why their well-equipped divisions had been defeated twice within six weeks by an Asiatic peasant army using semiguerrilla tactics and depending largely on small arms, mortars, and light artillery.

The answer cannot be given in simplified terms. Although the Chinese Reds were represented by a peasant army, it was also a first-rate army when judged by its own tactical and strategic standards. Military poverty might be blamed for some of its deficiencies in arms and equipment, but its semiguerrilla tactics were based on a mobility which could not be burdened with heavy weapons and transport. The Chinese coolie in the padded cotton uniform could do one thing better than any other soldier on earth; he could infiltrate around an enemy position in the darkness with unbelievable stealth. Only Americans who have had such an experience can realize what a shock it is to be surprised at midnight with the grenades and submachine gun slugs of gnomelike attackers who seemed to rise out of the very earth.

Press correspondents were fond of referring to “the human sea tactics of the Asiatic hordes.” Nothing could be further from the truth. In reality the Chinese seldom attacked in units larger than a regiment. Even these efforts were usually reduced to a seemingly endless succession of platoon infiltrations. It was not mass but deception and surprise which made the Chinese Red formidable.

They also had an advantage over Western soldiers in their ability to withstand hunger and cold while making long night marches. After all, the rigors of a winter campaign in Korea were not much worse than the hardships the Chinese peasant had endured all his life. Usually he was a veteran of at least five years’ combat experience, for China had known little but war since the Japanese invasion of 1935. Many of Mao Tse-tung’s troops, in fact, were former Nationalists who had fought for Chiang Kai-shek.

The Chinese Reds held another advantage in Korean terrain well suited to their tactical system. This factor has been ably summarized by U.S. Military Academy historians: “The mountains are high, and the deep gorges between them are a bar to traffic even when the streams
are dry or frozen. Roads are few, and those that do exist are not suited for heavy traffic. Transportation then becomes a problem for the pack mule and the human back rather than the self-propelled vehicle. Telephone wires are difficult to lay and, with guerrillas on every hand, are doubly hard to maintain. Even radio is limited by such terrain, with a considerable reduction in range. In all, most observers have agreed that American forces have seldom fought in terrain to which modern means of war are less adaptable.”

The fanaticism and political indoctrination of the CCF soldier must also be taken into account. His introduction to Communism began when he was persuaded that China’s small farms would be taken away from the hated landlords and divided among the people. This is the first stage of every Communist upheaval. Next comes a reign of terror calculated to liquidate the entire class of landlords and small shopkeepers. Communist China, almost literally wading in blood, had reached this second phase in 1951, the “year of violence.” Mass trials were held in which the People’s Tribunals, keyed up to a frenzy of fury, sentenced group after group of “Capitalist oppressors” to death without bothering about the evidence. The executions were public spectacles. An estimated million and a half of them took place in 1951 alone as loudspeakers on street corners blared out first-hand descriptions.

Drives were organized for everything in Red China. So rapidly did they multiply that humorless Communist leaders saw no absurdity in announcing a new drive to reduce the number of drives. And when the Youth League tried too zealously to please, a drive was launched “to Correct the Undesirable Habit of Filing False Reports.” Under these circumstances it is understandable that great emphasis was placed on Red China’s “Hate America” drive early in 1951. The illiterate masses were made to believe that Americans practiced all manner of bestialities, including even cannibalism. This was the indoctrination of the CCF soldier in Korea, and political commissars with a captain’s authority were attached to each company to see that no backsliding occurred. In case of doubt, it was a simple matter to compel the suspected political deviate to kneel at the roadside and await a bullet from behind.
The East-Central Front

Chapter 2. The CCF January Offensive
A Tactical Formula for Victory

It might well be inquired where Red China raised the funds, for even wars waged with human cannon fodder do not come cheaply. Much of the money was donated by new farm owners as “voluntary” contributions exceeding by far the rent and taxes of pre-Communist years. The slave labor of millions of Chinese sent to concentration camps also helped to foot the bill. In the long run, however, the Communist lords found perhaps their most effective means in the extortion of ransom from Chinese living outside the country on pain of torturing or killing relatives dwelling within its borders. Enormous sums were collected in spite of the efforts of foreign governments to put an end to this form of secret terrorism.[22]

Altogether, the army of Red China may be appraised as a formidable instrument on terrain suited to its tactics. Several of America’s foremost military thinkers were convinced, nevertheless, that Eighth Army reverses of the first few months in Korea were the penalty paid for a national preoccupation with airborne atomic weapons at the expense of preparations for limited wars.

It was only natural that the American public and its political and military leaders in Washington should have been much concerned about a weapon with the capability of wiping out a medium-size city in a minute.[23] Their anxiety was heightened by President Truman’s announcement on 23 September 1949 that Soviet Russia had exploded an atomic bomb. A great many Americans, probably a majority, sincerely believed that it was hardly worthwhile to prepare for an old-fashioned limited war when the Armageddon of the future would be fought to an awesome finish with thermonuclear weapons. National policy was shaped by this line of reasoning; and though we had every opportunity to study Chinese tactics prior to 1950, few if any preparations were made to cope with them. The outbreak of Korean hostilities found the four U.S. skeleton divisions in Japan woefully unready, both morally and materially.

At a later date three high-placed U.S. Army generals, Matthew B. Ridgway, James M. Gavin, and Maxwell D. Taylor, would retire because they could not reconcile their views with a national policy which they interpreted as placing all our strategic eggs in the basket of intercontinental bombers and guided missiles. Afterwards, as advocates of preparedness for limited as well as atomic warfare, they published books presenting their side of the case.[24]

On 15 January 1951 these developments were still in the future, of course. But even at the time it had already been made evident that the armed forces of Red China were not an exception to the age-old rule that there is no such thing as an invincible army. When they came up against well trained and led U.S. Army outfits in both of their offensives, they always had a fight on their hands and frequently a repulse.

The Marines had proved beyond doubt in their Chosin Reservoir campaign that the Chinese Reds could be beaten by ground and air firepower engendered by sound training, discipline, and combat leadership. Five Chinese armies, of three or four divisions each, were identified in northeast Korea during the November–December operations. Three of them were directly or indirectly opposed to the 1st Marine Division, with a U.S. Army battalion and smaller Army units attached. Yet the beleaguered American forces seized the initiative and fought their way for 13 days and 35 miles through enveloping CCF units which had cut the mountain MSR in five places.

Throughout the CCF January offensive, EUSAK G–2 officers anxiously sought every scrap of evidence as to the whereabouts of the five CCF armies identified in northeast Korea as late as 10 December. Even if reduced by casualties, they would have been a formidable and perhaps even decisive reinforcement to the seven
CCF armies engaged. But they did not appear. Nor were they encountered again until the middle of March 1951, when similarly numbered units filled with replacements reached the front.

The full story may never be known, since the Chinese Reds are not fond of acknowledging their disasters. But it is a likely conjecture that the fatal combination of Marine firepower and General Winter created terrible havoc among Communists who had been so certain of an immediate victory that they were neither armed, clothed, nor supplied for a 13-day campaign in subzero weather.
ON 15 JANUARY 1951 a reinforced regiment of the U.S. 25th Infantry Division drove northward from Line D (Map 4) to a point about half a mile from Suwon in the I Corps sector. VMF-212, flying from the CVE Bataan, supported the movement along with land-based Air Force planes. No CCF troops were encountered during a two-day thrust dignified with the name Operation WOLFHOUND. Its only importance lay in its distinction as the first Eighth Army counter-stroke in reply to the enemy’s January offensive. Other EUSAK advances were soon to follow, each more ambitious than the last and bearing a more bristling code name.

General Ridgway proposed by this means to exert continual and increasing pressure on an enemy paying for victory with extended supply lines. Meanwhile, he hoped to build up the morale of his own troops without asking too much of them at first.

In less than seven weeks, from 1 December 1950 to 15 January 1951, the Eighth Army had been pushed back an average distance of 200 miles. Never before in the Nation’s history had an American army given up so much ground and equipment in so short a time, and damage to morale was inevitable. Yet the commanding general was confident that a cure would be effected by better combat leadership and discipline. He planned to emphasize the need for these remedies until he restored the Eighth Army to tactical health.
Ridgway agreed with Marine generals that the 1st Marine Division had come out of its 13-day battle in the Chosin Reservoir area with its fighting spirit undulled. Minor respiratory ills seemed to be the only consequences felt by the survivors. “A hacking cough,” recalled a Marine staff officer long afterwards, “was the symbol of the Bean Patch.”[1]

Such ills soon responded to rest and medical care, and it was a physically fit division that made the move to the new zone of operations. About one man out of three in the infantry and artillery battalions was a newcomer to Korea. These replacements were shaping up nicely, and the new operation promised to be ideal combat training.

The move took nearly a week. While the other troops proceeded by motor, LSTs 898 and 914 sailed with elements of the Tank, Ordnance, Engineer, and Service Battalions. The Division CP opened at Sinhung (Map 5), about 5 miles southeast of Pohang, on 16 January. By the following day all designated motor and water lifts were completed.

On the 18th the Marines were assigned a three-fold mission by Division OpnO 3-51: (1) the protection of the Pohang-Kyongju-Andong MSR (main supply route); (2) the securing of Andong and the two airstrips in the vicinity; and (3) the prevention of hostile penetrations in force to the south of the Andong-Yongdok road. The following zones of patrol responsibility were assigned to Marine units:

- **Zone A**—RCT-1: an area about 10 miles east and west of the Uisong-Andong road, including both Uisong and Andong.
- **Zone B**—RCT-5: an area some 15 to 20 miles wide astride the Kyongju-Yongchon-Uisong road, including Kyongju but excluding Uisong.
- **Zone C**—RCT-7: an area 20 to 25 miles wide from east to west and extending north from the latitude of Pohang to the Andong-Yongdok road.
- **Zone D**—11th Marines: a strip seven miles wide along the coast astride the road from Pohang to a point about 10 miles north of Yongdok.
- **Zone E**—1st Tank Battalion: the area bounded by the road from Pohang to Kyongju and thence to the east coast at a point about 19 miles southeast of Pohang.

Keeping open the 75-mile stretch of MSR from Pohang to Andong was considered the principal mission of the Division. Strong points were set up at Pohang, Yongchon, Uisong, and Andong.

Captured documents indicated that enemy forces in unknown numbers had already infiltrated through gaps in the eastern sectors of the Eighth Army’s Line D. Guerrilla activity was reported as far west as Tanyang, on the MSR of IX Corps, and as far south as Taejon, threatening the supply line of I Corps. Train ambushes occurred on 13 January in the Namchang area and to the south of Wonju. Other attacks took place on the rail line about 60 miles north of Taegu. In expectation of further attempts, trains were provided with a sand-bagged car, pushed ahead of the engine, to absorb the shock of land-mine explosions. Another car was occupied by guards who had the duty of dealing with direct guerrilla attacks.[2]

The tactical problem of the Marines was quite simple—on paper. About 1,600 square miles, most of them standing on end in mountainous terrain, were included in the new zone of operations. The experience of World War II had demonstrated how effective guerrilla warfare could be as an adjunct to large-scale military
operations. Officers of the 1st Marine Division had no illusions about their mission, therefore, when they received unconfirmed reports of NKPA guerrilla infiltrations behind the EUSAK lines toward Andong.

All uncertainty vanished on 18 January, shortly after the issuing of OpnO 3-51, when a patrol of the 3d Battalion, 1st Marines, flushed out an undetermined number of North Korean troops east of Andong. They took to their heels so earnestly that the Marines barely managed to catch three of them after a long chase.

The prisoners identified their unit as the 27th Infantry of the NKPA 10th Infantry Division. The other two regiments, the 25th and 29th, were also in the general area. All three were supported more in theory than fact by artillery, mortar, medical, and engineer units organic to the division. In reality, however, the estimated total of 6,000 troops consisted largely of infantry. A few mortars, according to the prisoners, were the largest weapons.

Following the Inchon-Seoul operation, the remnants of the badly mauled NKPA 10th Infantry Division had straggled back across the 38th Parallel to the Hwachon area. There they were reorganized by the Chinese for guerrilla operations and placed under the command of NKPA Major General Lee Ban Nam.[3]

Late in December the rebuilt division, still short of arms and equipment, departed Hwachon with a mission of infiltrating through the UN lines to cut communications and harass rear installations of the Andong-Taegu area. Shots were exchanged with United Nations troops near Wonju, but General Lee Ban Nam and his troops contrived to slip to the east through the mountains. Stealthily moving southward, marching by night and hiding by day, they were soon in a position to heckle the rear of the X Corps sector. This advantage did not last long. Before they could strike a blow, the element of surprise was lost along with the three prisoners taken by the Marines.

As the Marine units moved into their assigned zones, General Ridgway flew to Pohang to confer with General Smith. Not only did he express confidence that the Marines would soon have the situation well under control; he also suggested the possibility of small amphibious landings along the east coast. The purpose was to block a possible southward advance of the three CCF armies that had operated in Northeast Korea during the Chosin Reservoir campaign.[4]

The east coast littoral was considered the most likely route of approach. Smith was of the opinion, however, that an amphibious landing should be made in strength, if at all. And there the matter rested.[5]

Chapter 3. The Pohang Guerrilla Hunt
1st MAW Moves to Bofu

During the operations of the first few days the Marine ground forces had to depend for air support on FEAF planes sent by JOC. The 1st Marine Aircraft Wing had its hands full at this time with housekeeping activities. Work began at Bofu (Map 3) on 20 January as a Seabee detachment arrived with its graders and bulldozers. They were assisted by details of Marines from MAG–33.[6]

The job went ahead with typical Seabee efficiency. While specialists installed plumbing for the galleys and barracks, other crews graded taxiways, laid pierced steel planking, and poured concrete to patch up runways, parking ramps, and warmup aprons.

MAG-12 kept busy at the task of moving men and equipment from Itami and other Japanese fields to Korea. Aircraft of VMR-152, commanded by Colonel Deane C. Roberts, provided transportation. Since safety measures precluded the use of the K-1 runway during construction activity, K-9 substituted temporarily. As fast as the planes unloaded, passengers and gear were trucked 15 miles through Pusan to K-1.

It was a transition period in more ways than one for the 1st MAW. Following are the changes of commanders that took place during the last 2 weeks of January:

--Colonel Radford C. West, relieved by Lieutenant Colonel Paul J. Fontana as commanding officer of MAG-33;
--Lieutenant Colonel Frank J. Cole, joined MAG-33 staff as personnel officer after being relieved of VMF-312 command by Major Donald P. Frame;
--Major Arnold A. Lund of VMF-323, relieved by Major Stanley S. Nicolay and assigned to General Harris’ staff as assistant operations officer;
--Major William M. Lundin, relieved of VMF-214 command by Major James A. Feeney, Jr., and transferred to the command of Service and Maintenance Squadron-33 (SMS-33).

This left only Lieutenant Colonel Richard W. Wyczawski of VMF-212 and Lieutenant Colonel Max J. Volcansek, Jr., of VMF (N)-542 still in command of the tactical squadrons they brought to Korea; and the latter was to be relieved by Lieutenant Colonel James R. Anderson in February.

The only combat operations of the 1st MAW during the week of housekeeping from 16 to 23 January were carried out by VMF-212 from the deck of the Bataan.[7] This CVL carrier alternated with the British light fleet carrier HMS Theseus on the Korean west coast blockade. Their activities were coordinated by Vice Admiral Andrewes, RN, commanding the group blockading the Korean west coast.

VMF-212 sent out a morning and afternoon reconnaissance flight each day up the coastline as far as the 39th parallel. On the trip north the pilots scanned the coastal waters for small enemy shipping which might indicate reinforcement from Chinese ports on the Yellow Sea. The return trip along the highways and railroads of the littoral was made to detect signs of any new enemy activity on land. Four aircraft flew each of the two coastal sweeps; eight maintained a defensive patrol over the carrier itself; and any remaining flights were under control of JOC, with FEAF Mosquitoes providing liaison between fighter-bombers and ground forces.

To insure sea room beyond the islands and mudbanks of the west coast, the Bataan had to stay outside the 100-fathom curve. This meant that the pilots must fly across 65 to 80 miles of open sea in order to reach the coast. The winter weather varied from unbelievable to unbearable, and bulky, uncomfortable survival suits were a necessity. They could be a death trap, however, if a leak developed or if they were not adjusted tightly at the throat and wrists. Captain Alfred H. Agan, for instance, was shot down southeast of Inchon and had to choose
between landing in enemy territory and ditching in the sea. He tried for a small island offshore but crash-landed into the surf. Before a helicopter from the *Bataan* could fly 65 miles to the rescue, he died from the shock of icy water which partially filled his survival suit.

The pilots of VMF-212 reported an increase in enemy antiaircraft fire, particularly in CCF rear areas. They were amazed to find troops dug in along the coast as far back as 50 or 60 miles from the battle lines. These precautions were the enemy’s tribute to Marine capabilities for amphibious warfare. The fear of another Inchon caused the Chinese to immobilize thousands of men on both coasts to guard against another such decisive landing far behind the front.

On the squadron’s third day of sea operations, three planes were hit by rifle and machine gun fire on reconnaissance missions. One of them, flown by Captain Russell G. Patterson, Jr., was shot down behind the enemy lines but a FEAF helicopter rescued the pilot. First Lieutenant Alfred J. Ward was not so fortunate. His plane was riddled the following day by enemy fire and he crashed to his death in the midst of CCF soldiers.

Not until 22 January did the reconditioning of Bofu reach such an advanced stage that Lieutenant Colonel Fontana could set up his MAG-33 command post. VMF-312 moved in the next day and the first combat missions were launched to the vicinity of Seoul, 300 miles away. On the 24th General Harris established his headquarters. A few hours later VMF-214 and VMF-323 arrived from Itami, where they had put in an idle week, with no place to go, after their carrier duty. On the 26th, when they flew their first missions as land-based squadrons, MAG-33 was back in business and Bofu was a going concern.

No such claim could have been made for MAG-12 and K-1. Although Colonel Boeker C. Batterton set up his command post on 27 January 1951, two more weeks were to pass before the K-1 runway was fit for the flights to tactical aircraft. Meanwhile, the MAG-12 squadrons had to make out as best they could at K-9.

Chapter 3. The Pohang Guerrilla Hunt
Marine Rice Paddy Patrols

Operations of the first few days demonstrated to 1st Marine Division ground forces that locating the enemy was more of a problem than defeating him. Obviously, the NKPA 10th Division had few if any of the advantages which make for effective guerrilla warfare. Far from receiving any voluntary support from the inhabitants, the Korean Reds had their own movements promptly reported to the Marines. Retaliations on civilians, such as burning mountain villages, were not calculated to improve relations. Nor did the enemy possess any of the other requisites for successful operations in an opponent’s rear—a base, a source of supply, good communications, and a reliable intelligence system.

If it came to a fight, there could be little doubt about the outcome. But Marine staff officers must have been reminded of the old recipe for rabbit pie which begins, “First, catch your rabbit.”

Such a situation called for systematic patrolling in all Marine zones of action. Secondary roads and mountain trails were covered by “rice paddy patrols.” Numbering from four men to a squad, these groups ranged far and wide on foot in an area that was more often vertical than horizontal. On a single day the 5th Marines alone had 29 of these rice paddy patrols in action.[8] No better training for replacements could have been devised.

Sometimes the men were on their own for several days, depending for supplies on helicopter drops. And while casualties were light, there was just enough danger from sniping and potential ambushes to keep the replacements on the alert.

Roads fit for vehicles—especially the 75-mile stretch of MSR from Pohang to Andong—were under the constant surveillance of motorized patrols, each supported by at least one tank or 105mm howitzer. The farthest distance was 15 miles between the main Marine strong points at Pohang, Yongchon, Uisong, and Andong.[9]

Close air support was seldom needed against such an elusive enemy as the Marines faced. General Craig put in a request, however, for an air squadron to be based at Pohang or Pusan (Map 2). The two Marine all-weather squadrons, VMF(N)-513 and VMF(N)-542, were General Harris’ first and second choices. They had been flying under Air Force (314th Air Division) control in the defense of Japan, a mission of dull routine and waiting for something to break the monotony of patrolling.

The twin-engined F7F–3N Tigercats of VMF(N)-542 were well equipped with electronics equipment for night interceptor work. VMF(N)-513 flew F4U–5Ns, the night-fighter modification of the latest Corsair.[10]

General Harris’ plan for VMF(N)-542 to take over the duties of VMF(N)-513 at Itazuke had the approval of General Partridge. This made it possible to send the latter squadron to K-9 at Pusan to replace the VMF-311 jets, which in turn left for Itami to await corrections of engineering defects.

VMF(N)-513 flew its first combat missions from K-9 on 22 January. These consisted of routine armed reconnaissance flights and an occasional deep support mission for the Eighth Army. Not until the 25th did the squadron respond to a request from Marine ground forces. And out of 49 combat missions (110 sorties) during the remaining 6 days of the month, only three (10 sorties) were in support of the 1st Marine Division.

For routine operations the Marine ground forces found the support of VMO–6 sufficient. The nimble little OY observation planes were ideal for seeking out an enemy who had to be caught before he could be fought. And the helicopters did their part by dropping supplies, evacuating casualties, and laying wire.

Meanwhile, the 1st Marine Aircraft Wing strengthened its administrative ties with the 1st Marine Division. Although the two organizations had no common operational commander other than General MacArthur, they maintained a close liaison. Harris attached two TBM Avengers to VMO–6 for use as radio relays when
ground-to-ground communications failed in the mountainous Pohang-Andong area. He also set up daily courier flights, at General Smith’s request, to provide fast administrative liaison between widely dispersed Marine air and ground units in Korea and Japan.
On 25 January two corps of the Eighth Army jumped off in Operation THUNDERBOLT. Advancing side by side, I Corps and IX Corps had orders to launch limited objective attacks and regain solid contact with the enemy, who was obviously preparing for a new offensive.

The EUSAK commander moved his CP from Taegu to Chonan (Map 1), the I Corps headquarters, in order to maintain personal control of the operation. He requested the Navy to step up offshore patrolling on the west coast as left-flank protection. Emphasis was also placed on aerial reconnaissance, both visual and photographic, as well as deep support directed by the Mosquitoes.

Even VMF(N)–542 at Itazuke had orders to conduct long flights to Seoul and maintain continuous patrols to report any attempt of the enemy to retire across the frozen Han River. The F7F-3N pilots shot up camp areas, convoys, and other lucrative targets but found no indications of large-scale crossings over the ice.[11] So varied were the missions of the squadron that it came as no surprise to be assigned to naval gunfire spotting for the USS St. Paul and the other British and American cruisers shelling Inchon.

All Marine tactical squadrons were in action on 28 January for the first time since December. Nearly two-thirds of the flights from Bofu and K-9 were diverted from armed reconnaissance to troop support. A typical operation was carried out by four VMF-312 planes on their second day of duty at Bofu. After reporting to MELLOW they were directed to Mosquito Cobalt, which had received a message that enemy troops were hiding in a village just north of Suwon, occupied that day by the U.S. 35th Infantry. Under the Mosquito’s direction they bombed, strafed, and napalmed some 40 buildings containing CCF soldiers.[12]

The fall of Suwon opened the way to Inchon and Seoul as Chinese resistance stiffened. Eighth Army progress was anything but reckless, but Ridgway had served notice on the enemy that he held the initiative and intended to keep it. Operation ROUNDUP followed on the heels of THUNDERBOLT. Merely a change in name was involved, for the advance continued at the same prudent pace without any important amendments to the original mission.
Chapter 3. The Pohang Guerrilla Hunt
Action in the Pohang-Andong Zone

The Marines in the Pohang-Andong zone had their first brush with the elusive enemy on 22 January. A patrol of the 1st Battalion, 1st Marines, flushed out a guerrilla force near Mukkye-dong, several miles southeast of Andong (Map 5). Captain Robert P. Wray’s Charlie Company deployed for action at sunset and shots were exchanged. The Marines had no casualties and the enemy could not have suffered many losses before he disappeared into the winter dusk.

Even at this early date the Korean Reds seemed to have lost confidence in their guerrilla operations. In a message dated 23 January taken from a prisoner, the commanding general of the II NKPA Corps directed General Lee Ban Nam to withdraw if possible. It read as follows:

“Get all of your troops out of the enemy encirclement and withdraw to north of Pyongchang without delay. Liaison team sent with radio. If you will inform us of your escape route we will assist by clearing your advance. If you cannot escape, stay in the rear of enemy as guerrillas.”[13]

By the 24th an enemy drift southeast from the zones of the 1st and 5th Marines to 7th Marines territory was apparent. The 1/7 command post and Company A received scattered mortar fire late that afternoon. Action picked up the next morning when dawn brought an attack by an estimated 100 guerrillas on the regimental command post. After a brisk 90-minute fire fight the Korean Reds withdrew to the east, leaving seven dead behind and taking with them an unknown number of wounded.

Later that morning the 7th Marines teamed up with the National Police against the Chiso-dong area. Nine bodies were counted as the 3d battalion seized its objective, but 1/7 was slowed by an entrenched enemy who offered an unyielding defense. The Marine battalion ground to a halt just one mile short of Chiso-dong and dug in for the night as artillery continued to pound the enemy. The air strikes on the 25th were flown by VMF(N)-513 and VMF-323, both based at K-9, but the pilots could not contact the FAC and had to make dummy runs over the enemy.

Marine planes and artillery cleared the way on 26 January as 1/7 advanced against scattered opposition. Nearly 400 guerrillas put up a ragged and futile resistance, but by 1530 Marine firepower prevailed and Chiso-dong was taken. The 2d Battalion had meanwhile occupied Hapton-ni, eight miles southeast of Topyong-dong (Map 5). A light enemy counterattack was repulsed with ease.[14] Altogether, enemy casualties for the day amounted to 161 KIA or POW.

The VMF-323 flight led by Captain Don H. Fisher and Captain Floyd K. Fulton’s VMF(N)-513 flight merit recognition as the first successful instance of Marine air-ground cooperation since the Chosin Reservoir campaign.

While the 7th Marines served eviction notices on the enemy in its area, action elsewhere was light. Task Force Puller[15] hastened on the 26th to Chongja-dong, seven miles northeast of Uisong, to investigate a police report that 300 enemy had seized the town. A Marine attack, following an artillery preparation, was planned for 1500. Captain Thomas J. Bohannon led Able Company in but discovered that the shells had fallen on empty huts.[16]

During the next few days the rice paddy patrols continued to range over the countryside, searching out the enemy. Combat units were sent to areas where the G-2 red arrows indicated an NKPA build-up. On the morning of the 29th, the 5th Marines tried to organize an attack on a large enemy force reported near Chachondong, 12 miles west of Topyong-dong. Captain Jack R. Jones’ Charlie Company, moving out at night in small
foot patrols to maintain secrecy, scoured the area in an attempt to pin down the enemy.

Marine intelligence reports had warned of a dawn raid on the town for the purpose of plundering food from the inhabitants and arms from the Korean police station. First Lieutenant Richard J. Schening, executive officer, led a scouting force ahead of the main body to reconnoiter the area. He urged that a trap be set for the enemy, and the company commander has left a description of one of the most elaborate ambushes ever attempted by the Marines during the war:

“Well before daylight, a cordon was stealthily braided around Chachon-dong and we settled down to await the raiders. A later daylight inspection of the deployment showed that the men had done a splendid job of locating themselves so as to avoid detection. They were concealed under porches, beneath the brambles, and in the heaviest foliage and trees. But no guerrilla attack materialized, probably due to a ‘grapevine’ warning of our movement and intent. . . . During the remaining days in the village we conducted extensive patrolling in an attempt to catch at least one guerrilla for our effort. Patrols were kept small to maintain secrecy. We even dressed Marines in clothing worn by the ‘locals’ and sent them out in the hills with wood-gathering details. Larger patrols up to a platoon in size were sent on combat missions at night. One thing was certain: it was easier to talk about capturing guerrillas than it was to lay a hand on them.”[17]

The elusiveness of the enemy could not always be credited to effective guerrilla tactics. Often it was due to distaste for combat. As evidence of low NKPA morale, Major Yu Dung Nam, a battalion commander, was condemned to death and shot late in January because he planned to surrender, according to POW testimony. Rations were at a bare subsistence level and typhus had claimed many victims.[18]

Unrelenting Marine pressure throughout the first week of February wore the guerrillas down until groups larger than 50 men were seldom encountered. On the 3d an NKPA second lieutenant surrendered voluntarily to a RCT-7 patrol and brought three of his men with him. NKPA morale had sunk so low, he divulged, that all ranks were striving only for survival. The division commander, Major General Lee Ban Nam, had apparently become a victim of acute melancholia. He spent nearly all his time, according to the prisoner, in the solitude of foxholes dug into the slopes of hills for added protection. There he brooded constantly over his predicament, but without arriving at any better solution than alternate hiding and flight.[19]

Certainly the military situation didn’t offer much to gladden this Hamlet of the rice paddies, and the Marines continued to give him fresh causes for pessimism. His footsore remnants eluded RCT-5 only to stumble into the zone of RCT-1, northeast of Uisong. Neither rest nor sanctuary awaited them, for the 1st and 2d battalions penetrated into the mountains near Sangyong to surprise and rout a force estimated at 400 men.[20]
Late in January the 1st KMC Regiment got into the fight after being attached once more to the 1st Marine Division by a EUSAK dispatch of the 21st. Lieutenant Colonel Charles W. Harrison headed a new group of Division liaison and advisory officers as the four KMC battalions moved out from Chinhae by LST and truck convoy to the Pohang area. Division OpnO 4-51 (26 January) assigned the regiment Sector F, astride the Yongdok-Andong road, which had been carved out of Sectors C and D, held by the 7th and 11th Marines respectively. The KMCs were ordered to conduct daily patrolling from positions near Yongdok, Chageok-tong, and Chinandong and prevent enemy concentrations in their sector.[21]

Although the ROK Army and Eighth Army had the responsibility for supplying the KMCs, it proved necessary for the 1st Marine Division to cope with some of the gaps in equipment and rations. Contrary to a prevalent Western belief, Koreans did not subsist on a diet of rice alone. They were accustomed to having “side dishes” with their rice, such as eggs, meat, fish, or vegetables. Colonel Kim Sung Eun, the regimental commander, had an allotment of money for these purchases, but the sum was insufficient to meet inflation prices even if there had been enough food left in a district eaten bare. As a consequence, the KMCs had to get along on a monotonous and vitamin-poor diet until the ROK Army belatedly came to the rescue with issues of food for side dishes.

On 29 January the KMC Regiment opened its CP at Yongdok. Regimental OpnO 1 of that date divided Sector F into three parts, assigning the western, central, and eastern subsectors to the 3d, 1st, and 2d Battalions respectively. The 5th Battalion was attached to the 1st Marines and assigned to patrolling operations in the Andong area.[22]

The first few days of February saw a brief flurry of activity before NKPA guerrilla resistance breathed its last gasps. Reports that the remnants of the NKPA 25th and 27th Regiments were in flight toward the zone of the 5th Marines led to a concentration for a knockout blow, but the enemy stole away to the north in the vicinity of Topyong-dong. There he discovered that he had jumped from the frying pan into the fire. The 2d and 3d Battalions of the 1st Marines closed in from one side while the 1st and 3d Battalions of the KMC Regiment blocked roads in the vicinity of Samgo-ri and Paekcha-dong. Only a wild flight in small groups saved the guerrillas from annihilation.

The nearest approach to effective NKPA resistance was encountered on 5 February after the 1st and 2d KMC Battalions had established blocking positions in zone at the request of the 7th Marines, which was driving the enemy northward. A platoon-size patrol of the 2d KMC Battalion came up against Korean Reds dug in with 81mm mortars and heavy and light machine guns a few miles southwest of Yongdok. The KMCs were scattered with losses of 1 KIA, 8 WIA, and 24 MIA in addition to all arms and equipment, though the missing men returned later.

It was the single NKPA success of the entire campaign.

An assault was launched the following morning on this enemy stronghold by a composite KMC battalion, supported by four VMF(N)-513 aircraft which attacked with rockets and bombs. The largest combat of the guerrilla hunt appeared to be in the making, but again the enemy vanished after putting up an ineffectual resistance with small arms and mortars.[23]

An unusual air tactic was tested on 4 February in the 7th Marines zone when an interpreter in an R4D plane hailed the guerrillas by loud speaker in their own language with a demand that they surrender or suffer the consequences. Marine fighter-bombers were on station to back the threat, and about 150 supposed NKPA soldiers
came in with uplifted hands while VMF-323 planes delivered the consequences to the holdouts in the form of bombs, rockets, and napalm. Unfortunately, it developed that practically all of the prisoners were terrified civilians seeking an escape from the slave labor imposed upon them by the guerrillas.[24]
Reports of enemy activity were received daily from Korean civilians and police, and seldom was a smaller number than “about two thousand” mentioned. In reality, Marine patrols had difficulty in tracking down as many as ten of the skulking, half-starved fugitives split up into small bands hiding in the hills. On 5 February the situation was summed up by General Smith in reply to a EUSAK request for an estimate of the time required to complete the Marine mission:

“The original 10th NKPA Div forces in the 1st Marine Division area have been dispersed into many groups, reduced to an effective strength of 40 per cent, and are no longer capable of a major effort while dispersed. . . . It is considered that the situation in the Division area is sufficiently in hand to permit the withdrawal of the Division and the assignment of another mission at any time a new force to be assigned the responsibility for the area assumes such responsibility and the 1st Marine Division can be reassembled.”[25]

Patrolling continued as usual in all Marine regimental zones during the second week in February. Some units, such as the 11th Marines and the Division Reconnaissance Company, had made few enemy contacts throughout the operation. But at least the cannoneers had found good pheasant hunting and enjoyed a change in the bill of fare.

It was just as well that the tactical situation seldom made it necessary to call for air support at this stage, since the 1st MAW was once again in the throes of moves which will be described in the following chapter. Bofu had been only a temporary base for MAG-33 squadrons which were making another transfer to K-9 while MAG-12 completed its shift to K-1.

VMO-6 took care of the reduced air requirements of the Division adequately. Another helicopter “first” was scored when First Lieutenant John L. Scott received credit for the first night casualty evacuation by a HTL (Bell), which then had no instruments for night flying. For a harrowing moment, however, it would be hard to beat the experience of Captain Clarence W. Parkins and Corpsman R. E. Krisky. While they were flying a casualty to the hospital ship Consolation, the patient became wildly delirious. It took the combined efforts of pilot and corpsman to subdue him and make a safe landing.[26]

Any excitement would have been welcomed by the troops in general. For the area was as tranquil as if the guerrillas had never troubled its snowbound heights. Recently arrived Marines might have been pardoned for concluding that the NKPA 10th Division and its gloomy commander were but creatures of the imagination—phantoms to be compared to the crew of the Flying Dutchman, that legendary ship condemned to sail on endlessly until the Day of Judgment. The NKPA 10th Division also seemed doomed to perpetual flight as its ghostly survivors made their way from crag to crag of the remote ridgelines.

Thanks to the rice paddy patrols, the replacements were ready for combat and the Division was organizing a rotation draft for return to the States. Five officers and 600 men had already been selected on a basis of combat time, wounds received, and length of service. Major General Edward A. Craig, who commanded the first Marines to land in Korea, was given a farewell dinner and congratulated on his second star. Two new brigadier generals were named, with Lewis B. “Chesty” Puller relieving Craig as ADC and Gregon A. Williams accompanying him on the voyage back to the States. Captain Eugene R. “Bud” Hering, (MC) USN, was also returning with the gratitude of all Marines for his care of casualties in the “frozen Chosin” campaign.[27]

All Marine missions in the guerrilla hunt had been successfully accomplished, so that the Division could be relieved at any time by the 2d ROK Division. There were 120 counted enemy dead and 184 prisoners. Only
estimates are available for the wounded, but there is no doubt that the total NKPA casualties were crippling. At any rate, the NKPA 10th Division was destroyed as a fighting force without accomplishing any of its objectives. Marine casualties from 18 January to 15 February were 19 KIA, 7 DOW, 10 MIA, 148 WIA, and 1,751 of a nonbattle classification, largely frostbite cases soon restored to duty.[28]
On 11 February, General Smith flew to Taegu to discuss the next Marine mission with General Ridgway. The EUSAK commander spoke favorably of employing the 1st Marine Division to relieve the 24th Infantry Division in the critical Han River corridor, where recent UN advances had been made. He also recognized the advantages of committing the Marines to the east coast, so that they could be held in readiness for an amphibious operation. A third possibility was the Yoju corridor of the IX Corps zone (Map 1). As “the most powerful division in Korea,” said Ridgway, “the Marines would be astride what he considered the logical route for an expected enemy counterthrust.”[29]

No decision was reached that day. At midnight the CCF attack materialized; and the central front was the area of decision, as Ridgway had predicted.

Naturally, the next mission for the Marines had to be reconsidered in the light of this development. On 12 February EUSAK warning orders alerted the 1st Marine Division to be prepared to move to Chungju, in the rear area of the IX Corps front where the heaviest CCF attacks were taking place. The Division was further directed to make an immediate reconnaissance of the Chungju area while the 1st KMC Regiment prepared for a move to Samchok on the east coast and attachment to the ROK Capitol Division. The following day brought orders from the Eighth Army to initiate these movements on 15 February 1951.[30] Thus the Pohang-Andong guerrilla hunt came to an end with the Marines on their way to new employment in the battle line of the Eighth Army.
Chapter 4. Operation Killer

THE CCF COUNTERATTACK which began northeast of Wonju on 11 February 1951 came in reaction to the unremitting pressure exerted during the previous month by the Eighth Army. Twice beaten during a recent six-week period and pushed back some 200 miles, EUSAK had shown amazing powers of recuperation.

“It is hard for me to put into words the magnificent competence, the fierce, combative, aggressive spirit of that force once it picked itself off the ground and waded back into the fight,” commented General Ridgway in retrospect.[1]

During Operations THUNDERBOLT and ROUNDUP he had kept a tight rein on the Eighth Army by insisting on vigorous artillery preparations and close lateral contacts between units. On 10 February, however, caution was relaxed as CCF resistance suddenly collapsed west and south of Seoul. That day the U.S. 24th Infantry Division forged ahead 11,000 yards to occupy the port of Inchon and Kimpo Airfield, both so wrecked that weeks of repair would be necessary to make them operational. Seoul was within sight of the U.S. forces on the left bank of the Han when an aroused enemy struck back on the subzero night of the 11th.

Apparantly the CCF drive on the central front had as its objective the relieving of UN pressure on the Seoul area to the west. The CCF 40th and 66th Armies and NKPA V Corps struck in the IX Corps sector north of Hoengsong (Map 6). Two ROK divisions being dislodged by the initial blows, their retreat made necessary the withdrawal of other IX Corps units. As a consequence, Hoengsong had to be abandoned on 12 February to the Communists hammering out a salient northeast of Wonju.[2]

The UN forces were not bound by any unrealistic concept of holding ground to the last ditch. General Ridgway deemed it more important to inflict maximum punishment on the enemy at a minimum cost in casualties. While fighting on the defensive, he had already made up his mind to launch an offensive of his own to catch the Chinese off balance the moment their counterattack ground to a halt. His new limited objective operation emphasized the destruction of the enemy’s fighting strength as the major objective rather than the acquisition of territory. A high attrition rate would preclude the Communists’ capacity to hold and enable EUSAK commander to recover the critical hill mass north of Wonju. It was for this purpose, he informed Major General Bryant E. Moore, IX Corps commanding general, that the 1st Marine Division would be employed.

“The force which holds Wonju,” he said, “has the situation in hand.”[3]

Chapter 4. Operation Killer
The Move to the Chungju Area

The 1st Marine Division had instructions to report its order of march to the Eighth Army, and to keep the Taegu headquarters informed of progress. Meanwhile, the Marines were to remain under EUSAK operational control but would pass to IX Corps control at a date and hour to be announced.

General Puller flew to Chungju with a reconnaissance party on 13 February to look over the road and select CP sites. On the following morning Major Walter Gall’s Division Reconnaissance Company arrived at Chungju for patrol duty, and movement by rail and road commenced on the 15th in accordance with Division OpnO 5-51, issued the day before.

The 1st Marines, with the 7th Motor Transport Battalion attached, led the motor march, and the 5th and 7th Marines followed in that order. Tracked vehicles were outloaded by rail from Andong and Pohang in a total of 67 flat cars. Owing to a shortage of cars, Company B and H&S Company of the 1st Tank Battalion made the move of 120 miles by road. These tankers claimed the all-time Marine Corps distance record for armor.[4]

While the Marine move was in progress, the CCF counterattack went on full blast along the central front. Driving southeast from the IX Corps area to the X Corps front, the Chinese cut off and surrounded the 23d Infantry of the 2d Infantry Division, USA. Colonel Paul Freeman and his men put up a fight that is one of the classics of the war. Supported by Marine and Air Force planes, they gave more fire than they received and held out until rescued by a tank column.[5]

February was also a transition period for Marine fighter squadrons which had been more or less on the move since the middle of January. Even before the transfer to Bofu, it had been decided that K–3, four miles south of Pohang, was to be the ultimate home of MAG–33. While awaiting completion of this field, VMFs–214, –312, and –323 would find temporary lodging at K–1, near Pusan, recently assigned to MAG–12.[6]

On 6 February, Brigadier General Thomas J. Cushman, assistant commanding general of the 1st MAW, radioed General Harris that K–1 would be ready to receive a squadron a day, starting on the 8th. Harris ordered Squadrons 323, 214, and 312 to make their moves on 8, 9, and 10 February respectively. Transport aircraft were to lift ground crews, extra pilots, and light equipment directly to K–1. Pilots had orders to fly combat missions en route.

By the 13th most of the vehicles, heavy equipment, and general supplies had been loaded on a train for Kobe, there to be transshipped on LSTs to Pohang. That same day Lieutenant Colonel Fontana set up his MAG–33 command post at K–3 and directed the three fighter squadrons to report from K–1.

The new field occupied a bench overlooking a wide, sandy beach. Built originally by the Japanese, the strip had 5,200 feet of concrete runway. The Air Force had extended it to 5,700 feet with pierced steel planking. This addition brought the end of the runway to the brink of a 60-foot drop-off—a hazard in the event of a “hot” landing to the northwest or too low an approach from the southeast.

Next to arrive at K–3 were the F9F–2Bs of VMF–311. Four weeks of adjustments at Itami had restored the jets to operative condition. An advance echelon went ahead to establish squadron living and operating areas, and the pilots ferried the 19 aircraft. Ground crews and equipment followed on transport planes.

Plans were made for VMF(N)–513 to move from Itami to K–3 before the end of the month. The other all-weather squadron, VMF(N)–542, now commanded by Lieutenant Colonel James R. Anderson, completed the transfer from Itami and Itazuke to K–1.

This field was also the destination of the photo pilots of Headquarters Squadron, 1st MAW, who flew their F7F–3P and F4U–5P fighters from Itami. Major Donald S. Bush commanded a unit, formerly a squadron,
which had been one of the first aviation organizations to see action in Korea. Among its accomplishments were the preliminary beach studies for the Inchon and Wonsan landings.

With the completion of the moves of February 1951, the 1st MAW was again based on Korean soil. Fifteen types of Marine aircraft were being flown. For the heavy hauling, the R4D and R5D transports shifted troops and supplies. Included among the fighters were F9F Panthers, F4U Corsairs, and two models of F7F Tigercats—a stripped-down photo plane, and a radar-armed night fighter. Stinson OY Grasshoppers, TBM Avengers, and Beechcraft SNBs rounded out the list of conventional planes. Three types of rotary-wing aircraft were represented: the Sikorsky HO3S-1, and two models of the Bell HTL.[7]
By 15 February the brief CCF counterstroke had spent its force. Hoengsong had fallen to Communists who hammered out a salient on a 20-mile front extending as far southward as the outskirts of Wonju (Map 6). But the enemy’s main purpose had failed of accomplishment, for the grip of the Eighth Army on Inchon and Kimpo Airfield was not shaken. Nor did the Chinese gain a breathing spell in their preparations for a third great offensive as a follow–up to the December and January drives.

More by coincidence than design, the Fifth Air Force launched a new system of air tactics a few days after the beginning of the CCF counterstroke. Called “Reconnaissance Plan Fighter,” it was based on a division of enemy-held Korea into 22 sections. Squadrons were given the mission of making hourly surveys of the same areas, day after day, until pilots became so familiar with them that any change hinting at CCF activity would be noticed at once.[8]

If these surveys revealed any sign of any enemy concentration, either of men or supplies, JOC scrambled special bombing strikes against them.

Although Marine fliers could readily see the advantages of covering the same ground daily, it made for monotony on reconnaissance missions. Only a highly unusual spectacle would startle a pilot, but First Lieutenant Weldon R. Mitchell blinked when he saw a camel in his gunsights.[9] Shaggy little Mongolian horses were no novelty as ammunition bearers, and after recovering from his first astonishment the VMF–311 pilot cut loose with .50 caliber machine gun slugs. As he suspected, the camel’s pack contained ammunition and the animal was all but vaporized in the explosion.

Major Bush’s photographic unit had an important part in keeping the enemy under constant surveillance. The Fifth Air Force directed on 16 February that all photo requests were to be screened by the Fifth Air Force’s 543d Tactical Support Group at Taegu. Under the tactical coordination of this Group, the Marine unit was to fill all Navy and Marine requests. When not on such missions, it would be fitted into the Fifth Air Force photographic reconnaissance program.[10]

Pinpoint photos of suspected troop areas and such terrain features as defiles, junctions, detours, and bridges were in demand. The fact had to be faced that the enemy was almost unbelievably clever at camouflage and concealment. In one instance it was found that the Chinese had constructed bridge sections which they hid by day and put to use at night.[11] On another occasion they sank a bridge by means of weights so that it remained far enough beneath the surface of the water in the daytime to avoid detection by reconnaissance aircraft.

When the photo planes carried out missions as far north as MIG Alley[12] they flew in pairs. A fighter circled overhead to protect the photo pilot from an enemy air attack while he paid full attention to the task of “shooting” the terrain with his camera.
Adaptability to changing circumstances had already become perhaps the outstanding quality of the revitalized Eighth Army. No better example could be found than the evolution of Operation KILLER, which completed the cycle from concept to plan and execution in just three days.

On 18 February 1951, General Ridgway learned that the enemy was apparently withdrawing. IX Corps and X Corps units had probed forward that morning without meeting any opposition. Before nightfall the commanding general decided to launch a limited objectives offensive by the entire Eighth Army. He called a planning conference for the 19th and set the 21st as D-Day for the new operation.

The 1st Marine Division found itself detached from X Corps on the 19th and placed under the operational control of General Moore of IX Corps. This was not the first time in Marine Corps history, of course, when “soldiers of the sea” have fought alongside U.S. Army units in conventional land warfare. One of the best-known occasions was in World War I, when two Marine regiments distinguished themselves in France as a brigade of the U.S. 2d Infantry Division.

The Marines had been a part of X Corps in 1950, but always under tactical circumstances which permitted more or less independent operations with the support of organic aircraft. Now the Division was to be closely integrated with the other major IX Corps units, the 24th Infantry Division, the 1st Cavalry Division, the 6th ROK Division, and the 27th British Commonwealth Brigade. Marine calls for air strikes would continue to be made through JOC, as they had been since the Hungnam redeployment.

General Ridgway was on hand for the planning conference held on 19 February in General Moore’s CP at Yoju and attended by officers from IX and X Corps. General Smith, Colonel McAlister, and Colonel Bowser represented the 1st Marine Division.

The scheme of maneuver called for the Marines to relieve elements of X Corps and attack in a northeasterly direction from a line of departure north of Wonju (Map 6) through the Wonju basin. The object was to cut off enemy forces which had penetrated south and east of Hoengsong, and to recover control of the roads running eastward by seizing the high ground just south of the town.[13]

In the X Corps zone to the east, on the right flank of the Marines, the 7th Infantry Division was to attack to the north along the Yongwol-Pyongchang road. On the other Marine flank would be elements of the 6th ROK Division.

Simultaneous advances were planned for I Corps to the west, where patrols had found evidence that Seoul was lightly held.

Two U.S. Army units were designated at the 19 February conference to support the 1st Marine Division—the 74th Truck Company and the 92d Armored Field Artillery, then en route to the Chungju area.[14] These cannoneers and their commanding officer, Lieutenant Colonel Leon F. Lavoie, USA, were well and favorably known to the Marines, having given effective support during the Chosin Reservoir operations.

First Marine Division OpnO 6–51, issued on 20 February, directed the two assault regiments, the 1st and 5th Marines, to jump off at 0800 on the 21st and seize the first objective, the ridgeline about three and a half miles south of the high ground dominating Hoengsong (Map 6). RCT–1, with Division Recon Company and C/Engineers attached, was to pass through elements of the 2d Infantry Division in zone while RCT–5, with A/Engineers attached, passed through elements of the 187th Airborne Infantry, USA. RCT–7 had been designated the reserve regiment; but since it could not arrive from the Pohang-Andong area in time, a battalion of the 5th Marines was assigned this mission.[15]
The objective area was believed to be defended by the 196th Infantry Division of the 66th CCF Army and unknown elements of the 39th and 40th CCF Armies. Ahead of the Marines and other IX Corps units lay some uninviting terrain. Rocky heights and narrow valleys were laced by swift streams, the largest being the river Som, running from northeast to southwest through a defile cutting across the western part of the Division sector. Bordering this twisting stream was the Wonju-Hoengsong “highway”—a poor dirt road even by Korean standards. Through the right half of the Division zone an even more primitive road, scarcely fit for vehicular traffic, wound northeast from Wonju.[16]

All Eighth Army forces were to be tightly buttoned up and to keep in close physical contact while maintaining integrity of units. Patrol observation and reconnaissance were stressed by the EUSAK commanding general, and even lack of opposition would not justify a unit in advancing ahead of schedule. Again, as in previous operations, real estate was to be secondary to the inflicting of maximum personnel and materiel damage.

On the eve of Operation KILLER, a message from IX Corps emphasized to all units the necessity for making sure “that no hostile force of sufficient strength to jeopardize the safety of your forces has been bypassed. Maintenance of lateral contact between all units is of prime importance.”[17]

Marine ground force and aviation officers alike realized that the forthcoming offensive would be the first real test of the operational control of the 1st MAW by the Fifth Air Force and the Eighth Army. General Smith was uneasy about the outlook. On 13 February 1951, the day he was alerted for the move to Chungju, he had requested in a message to EUSAK that the 1st MAW be assigned to the support of his division. Both Marine ground and air officers, he said, believed that this change would fit into the JOC overall air control system without any disruption.[18] But no approval of General Smith’s proposal had been received before D-Day.
From the outset the transport and supply situation was a G–4 officer’s nightmare. Heavy traffic broke the back of the MSR before the jumpoff, so that mud delayed the 5th Marines in reaching the line of departure (LD). General Puller, the ADC, telephoned the Division commander for a decision in the event that all elements of the regiment were unable to arrive in time. This question was already under discussion between General Moore and General Smith in the new 1st Marine Division CP, just opened at Wonju. After later reports of troop arrivals reached him, Smith decided with few minutes to spare that he would attack with only the troops able to reach the LD in time—three battalions of the 1st Marines, a battalion of the 5th Marines, two battalions of the 11th Marines, and a company of tanks. Moore then confirmed 1000 as H-hour and notified Puller of the decision.

The last-minute arrival of the 1st Battalion, 5th Marines, reminded Smith of the occasion in France, 32 years before, when the 5th Marines of World War I had to double-time across the wheat fields in order to attack on schedule at Soissons on 18 July 1918. For at Wonju the lone battalion scrambled out of trucks on the double and advanced without taking time for reorganization.[19]

Snarled traffic conditions were complicated by the arrival of high-ranking officers for the jumpoff. General MacArthur visited the zone of the 187th Airborne RCT, recently attached to X Corps. General Ridgway and General Moore were on hand when the Marines attacked. The EUSAK commander, surveying the scene from a snow-covered embankment, was disturbed to see a Marine corporal stumbling over an untied shoe lace while carrying a heavy radio.

“I hesitated just a moment,” commented Ridgway, “knowing that what I wanted to do might be misconstrued as showmanship. Then I slid down the bank on my tail, landed right at his feet, knelt down and tied his shoe. Later, when this incident was reported in the States, there were some who did report it as a theatrical gesture. This was not true. It was purely an impulse to help a fighting soldier, a man in trouble.”[20]

The Eighth Army commander was not the only one to see the advantages of tobogganing in terrain consisting of mud on the sunny slope of hills and snow on the shady side. When Captain Jack R. Jones’ Charlie Company of 1/5 reached its first steep decline, the Marine leading the 2d Platoon slipped and fell in the snow, sliding about a hundred feet down the embankment. The man behind him profited from his example to make a purposeful slide, as did the rest of First Lieutenant William E. Kerrigan’s men.[21]

This was but one of the unwarlike incidents which enlivened the jumpoff of Operation KILLER. Seldom if ever have Marines taken part in an offensive which began so inoffensively, for 21 February was distinguished for lack of enemy resistance in the Marine zone. Only a few rounds of scattered rifle fire were encountered until late afternoon. Then the 1st Battalion, 5th Marines, leading the column of attack, had two long-distance fire fights before digging in for the night. Three Marines were slightly wounded and the enemy withdrew with such casualties as he may have suffered.[22]

The word “light” could never have been applied to the resistance put up by the weather and terrain. Lieutenant Colonel Joseph L. Stewart, commanding 3/5, described it as “a mixture of thawing snow, rain, mud, and slush.” His men spent the night in foxholes half filled with water. Every one of them was “wet to the bones, including his clothes, parka, weapons, and ammo.”[23]

The 1st Marines led the attacking column of battalions on 22 February, with 1/1 in the lead. More long-distance small-arms fire was encountered than on the first day, but again there were no close contacts with a retreating enemy.[24]
Chapter 4. Operation Killer
Stiffening of Chinese Resistance

Not until the 23d did either Marine regiment run into determined opposition. Then the 1st and 2d Battalions of the 1st Marines, advancing abreast, had a fight while going up against two hills of a ridge just south of the first phase objectives.

So far the Marines had found JOC air support satisfactory in quantity. The statistics show that the Fifth Air Force supported the Eighth Army during the first phase of Operation KILLER (21–24 February, inclusive) with an average of 600 sorties a day.[25] There was no room for complaint until the morning of the 23d, when an air strike the 5th Marines requested the preceding evening for 0800 failed to materialize on time. On this occasion the combination of an intense Marine artillery preparation and light enemy resistance compensated for lack of air support and the hill was taken with ease.

That afternoon it took a brisk fight to evict an enemy in estimated battalion strength from log-covered bunkers on the second hill. This time JOC responded to Marine requests with two effective air strikes. Sixty Chinese dead were counted, and the Marines reported 1 KIA and 21 WIA.[26]

On the whole, however, the 5th Marines encountered only slight resistance. “About all we did was walk—walk—walk!” recalled Captain Franklin B. Mayer, commanding Easy Company of 2/5. “I don’t think I’ve ever been so tired or footsore in my life—exception the retreat from Chosin, but not by much.”[27]

On the 24th the 1st and 3d Battalions of the 5th Marines had little trouble in taking two hills designated as the main Phase 1 objectives. The 1st Marines on the left sent a tank and infantry patrol into Hoengsong after artillery preparation and an air strike. Captain Robert P. Wray, commanding Charlie Company of 1/1 and a platoon of tanks, entered the ruins of the town only to encounter machine gun and mortar fire from the hills to the west.[28]

When the antennae were shot off two tanks, Wray directed their 90mm fire by runner and knocked out the enemy positions. After proceeding further into the town, he was recalled by his battalion commander, Lieutenant Colonel Donald M. Schmuck, because an aerial observer had reported that Chinese were waiting to ambush the patrol.

An air strike was directed on them while Wray rescued several survivors of “Massacre Valley,” northwest of Hoengsong, where a U.S. Army truck convoy had been ambushed during the recent CCF counterattack. The patrol returned before the ground had completely thawed. Only a few hours later a jeep passing over the same road was blown up by a land mine which killed the driver. This was one of the first object lessons illustrating the danger from enemy mines which were harmless until the midday sun thawed out the ground.

Chinese artillery fire from the hills north of Hoengsong accounted for one Marine KIA and four WIA late that afternoon before counter-battery fire by 2/11 silenced the enemy. This exchange ended the first phase of Operation KILLER at dusk on 24 February with all preliminary objectives seized.[29]

Air support had been rendered, for the most part, by Fifth Air Force planes. This gave rise to grumbling by Marine ground forces, who felt that they had been unnecessarily deprived of their own close air support. The fact was, however, that U.S. Army and British Commonwealth troops also preferred Marine air and were outspoken about it. As a disgruntled Marine ground force officer put it, Marine air was “too good for our own good.”

During the first phase of Operation KILLER most of the sorties by 1st MAW planes were in support of U.S. Army units. On 23 February the Marines flew 101 of the Fifth Air Force total of some 800 sorties for the day.[30] The experience of VMF–312 was fairly typical of the other Marine fighter-bomber squadrons. In the
morning VMF–312 took part in a 16-plane strike behind the CCF lines. That afternoon two special flights of four planes each were scrambled in support of 2d and 7th Infantry Division units of X Corps. The following morning Major Daniel H. Davis, executive officer of the squadron, scrambled with four planes and reported to a FAC attached to the Canadian and Australian battalions of the British Commonwealth Division. These troops were engaged near Chipyong-ni in the hottest fight of the first phase of Operation KILLER. After the FAC marked the CCF strongholds with white phosphorus, the Corsairs came snarling in with napalm, rocket, and strafing runs just ahead of the infantry. The enemy was driven out of positions defended by 20mm antipersonnel fire, but Major Davis paid with his life on his eighth run when he lost a wing and crashed to his death.
On 24 February 1951 came the news that General Moore had suddenly died as the indirect result of a helicopter accident. The aircraft had plunged into the Han River, after hitting a telephone wire, and the IX Corps commander was rescued unhurt only to die of a heart attack half an hour afterwards.

Commander of the 8th Infantry Division in European operations of World War II, General Moore later became Superintendent of the U.S. Military Academy at West Point. As his successor, pending a permanent appointment, General Ridgway named General Smith to the command of IX Corps. When announcing this decision, the Eighth Army commander said, “General Smith is to be taken into their hearts in IX Corps, and, by definite action, made to feel that he belongs there.”[31]

Marines with an interest in Corps history could recall only two similar occasions when Marines commanded major U.S. Army units. Major General John A. Lejeune had headed the 2d Infantry Division in World War I, and Major General Roy S. Geiger led the U.S. Tenth Army to victory during the closing days of the Okinawa operation after a Japanese shell killed Lieutenant General Simon Bolivar Buckner, Jr., USA.

On 24 February, with General Puller taking command of the 1st Marine Division, General Smith flew to Yoju by helicopter to begin his new duties. His military competence and complete lack of ostentation made him cordially accepted at the IX Corps CP. The following day General Ridgway arrived for a conference. Wishing to change the boundary between IX and X Corps, so as to orient the former more to the north, he directed the Marine general to reach an agreement with X Corps. He also asked for a recommendation as to future operations of the Marines, and General Smith replied that he knew of no better employment for his division than to continue attacking along the Hoengsong-Hongchon axis.[32]

The change in boundaries, as decided at a conference of corps commanders, meant that in the zone of the 1st Marine Division the 5th Marines on the right would be pinched out by the 3d ROK Division of X Corps. On the left, the zone was to be extended by bringing the 7th Marines into line to the left of the 1st Marines while the 5th Marines dropped back into reserve.[33]

Logistics became the better part of valor on 25 February as Ridgway called a halt in the fighting until enough ammunition, fuel, and other supplies could be brought up for a resumption of the attack toward the final objective, Phase Line ARIZONA (Map 6). Napoleon’s famous remark that mud should be recognized as a separate element was apt as violent rains turned all roads into swamps. Operations might have come to a standstill except for air drops. On the 25th the Combat Air Command flew 480.7 tons of freight and 1,004 passengers, followed by 604.9 tons and 1,193 passengers the following day.[34] Corps and Division engineers strove meanwhile with indigenous labor to repair the roads.

By a prodigious effort, enough progress in logistics was made so that the EUSAk commanding general could issue orders on 25 February for the second phase of Operation KILLER to commence on 1 March. He made it known that he was not satisfied with results so far. The assigned physical objectives had been taken, but the enemy’s withdrawals had saved him from the full extent of the personnel and material losses Ridgway had hoped to inflict. He called on his staff officers, therefore, for plans aiming at a new operation “having the primary intent of destroying as many enemy and as much equipment as possible and, by continued pressure, allowing the enemy no time to mount a counteroffensive.”[35] A secondary mission was that of outflanking Seoul and the area between Seoul and the Imjin River, “so that this territory may be taken either by attack from the east or by enemy default.”

The name of the new drive was to be Operation RIPPER, and it was to jump off as soon as possible after
the finish of KILLER.
From newly won positions in the high ground south of Hoengsong, the Marines could look across the soggy plain to their Phase II objectives, the hills to the north of the battered town. Hoengsong occupied a valley at the confluence of two rain-swollen streams. Thus a triangular area of low, flat ground lay between the ruins and the hills which must be taken in the final phase of Operation KILLER. The 1st and 7th Marines were the combat units, with the 5th Marines in reserve. (The KMC Regiment, it may be recalled, had been temporarily detached for service with the ROK army.)

Before the 1st and 7th Marines could launch their combined attack, the latter had to fight its way up to the point of junction after relieving elements of the 6th ROK Division. The scheme of maneuver then called for Lieutenant Colonel Virgil W. Banning’s 3/1 to sideslip into the zone of Major Maurice E. Roach’s 3/7, in order to be in position for the advance across the Hoengsong plain. This meant a crossing of the river Som for 3/1 and a combined assault with 3/7 on the high ground along the west bank.

The problem of crossing the river, 200 feet wide and chest-deep at the most likely site, was turned over to Banning with the explanation that the engineer company supporting the regiment could not be diverted from road repairs. To meet this emergency Major Edwin H. Simmons, commanding Weapons Company of 3/1, produced a field manual with instructions for building a “Swiss bent bridge.” His Antitank Assault Platoon was given the task under the command of energetic Technical Sergeant Carmelo J. Randazzo, a veteran on his third enlistment.

There was no lack of trees for timbers, and rolls of telephone wire were sworn to be beyond salvaging by the battalion communications officer. The A-shaped bents, or trusses, were lashed together with wire and enthusiasm, then carried out into the ice-cold water to be attached to spars and stringers.

It was a great triumph for “war by the book.” Before dark on 28 February two spans, one 120 feet long and another half that length, were linked by a sandbar in midstream. The improvised bridge stood up well next morning when the battalion crossed to the west bank. There 3/1 echeloned itself behind 3/7, which gained the first 1,000 yards under cover of a vigorous artillery preparation and belated air strikes.

On the left, Major James I. Glendinning’s 2d Battalion of the 7th Marines ran into increasingly stubborn opposition from CCF mortar and small-arms fire. Before noon the attacks of both battalions of the 7th Marines were brought almost to a halt in difficult terrain which the Communists had booby-trapped. Neither artillery nor air strikes had a decisive effect against an enemy sheltered by log-covered bunkers. So many delays were encountered that it was decided in mid-afternoon to postpone the advance until the following morning, 2 March.

Artillery and air strikes supported 2/7, 3/7, and 3/1 as they attacked at 0800 west of the river. Meanwhile, 1/7 patrolled on the division left flank while maintaining contact with the 6th ROK Division.

Apparently the enemy put up a hard fight only when he could not withdraw in time to avoid one. Resistance was light on the west bank, and east of the river Lieutenant Colonel Allen Sutter’s 2/1, supported by tanks, had little trouble. His battalion linked up with 3/1 in the afternoon and dug in after taking its assigned objective, Hill 208, with casualties of three men wounded.

The only determined opposition of 2 March took place during the afternoon in the zone of 2/7. There the attackers could only inch forward over rocky terrain which the enemy defended, ridge by ridge, in spite of air strikes and 1,600 artillery rounds fired by the 11th Marines.

At daybreak on the 3d the men of the 1st and 7th Marines could look to the north and see their final objectives. Five hills lay along Phase Line ARIZONA from west to east—Hills 536 and 333 in the zone of the 7th
Marines, and Hills 321, 335, and 201 in the zone of the 1st Marines.

The last two positions were in the path of 2/1, which seized them after several brisk fire fights. Casualties of three KIA and 28 WIA were incurred while inflicting losses of 70 counted CCF dead. The terrain gave 3/1 more trouble than the enemy in taking Hill 321, where the CCF troops had already begun their withdrawal.

It was in the zone of the 7th Marines that Communist resistance was hottest. The 1st battalion was summoned to cover the regimental left flank and aid in the attack of 2/7 on Hill 536 while 3/7 continued its struggle for Hill 333. Both battalions had their hardest fight of the entire operation that afternoon. They lost most of the 14 KIA and 104 WIA which the Division reported for 3 March, and the enemy still held the topographical crests.

The 1st Marines had reached the mopping-up stage on 4 March, while the 7th Marines prepared to go up against an expected last-ditch stand of the enemy on Hills 536 and 333. The parkas of the assault troops were powdered with snow as the men moved out to the attack at 0800, following an intensive artillery preparation. There was something ominous about the silence in the objective area, but no trap had been set for the attackers. The Communists actually had pulled out under cover of darkness, leaving behind only enough outpost troops for delaying operations.

Operation killer ended at nightfall on the 4th for the Marines, though mopping up continued throughout the following day. Total Marine casualties for the 8 days of fighting were 395—48 KIA, 2 MIA, and 345 WIA. Enemy losses amounted to 274 counted dead and 48 prisoners. It is certain, however, that the actual KIA and WIA figures were much higher, since the withdrawing Communists buried their dead and took their wounded with them.

Any evaluation of this limited objective operation must credit it with achieving its main purpose—keeping the Communists off balance while they were striving desperately to make ready for another great offensive (Map 7). This explains why the enemy as a whole put up a half-hearted resistance. He preferred to withdraw whenever possible and fight another day.
Chapter 4. Operation Killer
JOC Air Control System Criticized

Operation KILLER was the first real test of the JOC system as far as the Marines were concerned, and both the flying and ground-force Marines felt that it had shown grave shortcomings. Air support on 1 March proved so disappointing that General Puller, as temporary commander of the 1st Marine Division, reported the situation to General Shepherd, commanding FMFPac. His letter is quoted in part as follows:

“We are having very little success in obtaining Marine air for CAS missions and practically no success in having Marine air on station for CAS missions. . . . Most of our CAS missions in the current operation have been Air Force or Navy Carrier planes. They do a good job and we are glad to have them, but our Marine air, with whom we have trained and operated, can do a better job. We have attempted to insure that Marine air would support us, and to cut down the delays in receiving such support, as evidenced by the attached dispatches. We have received no decision relative to our requests. Apparently, the answer is no by default.”[38]

General Puller’s report was obviously written for the record, since General Shepherd was present at the 1st Marine Division CP at the time. He witnessed personally the Marine attacks of 2 and 3 March and the air support they received. On the 3d, the day of heaviest fighting in the entire operation, there could be no complaint that few Marine aircraft supported Marine ground forces. The Corsairs flew 26 CAS sorties that day and cleared the way more than once for the 2d and 3d Battalions of the 7th Marines. The trouble was that air support as administered by JOC was so often late in arriving, even when requested the evening before. More than once the infantry had to go ahead with only artillery support. Such delays threw the whole plan of attack out of gear, for air and artillery had to be closely coordinated to be at their best.

General Shepherd had a series of talks with General Harris. Both then conferred with General Partridge, commander of the Fifth Air Force. They requested that he authorize the 1st MAW to keep two planes on station over the 1st Marine Division whenever it was engaged. General Partridge did not concur. He maintained that Marine aircraft should be available to him if needed elsewhere in an emergency. He did consent, however, to permit 1st MAW armed reconnaissance sorties to check in with Devastate Baker for any CAS requests.[39]

This conference did much to clear up the situation. On 5 March no less than 48 Marine sorties reported to Devastate Baker, though there was little need for them in mopping-up operations. And during the next two weeks an average of 40 sorties a day was maintained.

Chapter 5. Operation Ripper

THE NEW IX CORPS COMMANDER, Major General William H. Hoge, USA, arrived at Yoju on 4 March 1951. He relieved General Smith the next day and a color guard turned out to render honors to the Marine commander when he returned by helicopter to his own Division CP. Upon Smith’s arrival, General Puller resumed his former duties as ADC.

The jumpoff of the new operation was scheduled for 0800 on 7 March, so little time remained for last-minute preparations. The basic plan called for the drive of IX and X Corps toward the 38th Parallel on the central front. Protection was to be given on the left flank by I Corps in the area south and east of Seoul. On the right the ROK divisions had the mission of maintaining lateral security with a limited northward advance.

It was no secret that General Ridgway had been disappointed in the numbers of enemy soldiers put out of action during Operation KILLER. The primary purpose of RIPPER was to inflict as many Communist casualties as possible, and by means of constant pressure to keep the enemy off balance in his buildup for a new offensive. A secondary purpose was to outflank Seoul and the area between that city and the river Imjin, thus compelling the enemy to choose between default and a defense on unfavorable terms.[1]

CCF strategy in the early spring of 1951 was obviously conditioned by preparations for a third great offensive. The enemy’s emphasis on caution is shown in a translation of a CCF training directive of this period:

“There must absolutely be no hasty or impatient attitude toward warfare. Consequently, even though we have a thorough knowledge of the enemy situation and the terrain, if one day is disadvantageous for us to engage in combat, it should be done the next day; if day fighting is disadvantageous, fighting should be conducted at night, and if engagements in a certain terrain are not to our advantage, another location should be selected for combat engagement. When the enemy is concentrated and a weak point is difficult to find, one must be created (by agitating or confusing them in some way), or wait until the enemy is deploying. Engagements must be conducted only when the situation is entirely to our advantage.”[2]
Chapter 5. Operation Ripper
Light Resistance the First Day

United Nations forces held a line extending across the peninsula from Inchon (Map 8) in the west by way of Hoengsong to the east coast in the vicinity of Chumunjin. The IX Corps order called for the 1st Marine Division to maintain lateral contact with the 1st Cavalry Division on the left and the 2d Infantry Division on the right. Hongchon and Chunchon, two of the main objectives of Operation RIPPER, lay directly in the path of the IX Corps advance. Both were important communications centers which could be utilized to advantage by the enemy for his forthcoming offensive.

The first phase line in the IX Corps zone was ALBANY. The Marines did not need a map to locate an objective just beyond Oum Mountain, a stark 2,900-foot peak about five and a half miles from the line of departure. Distance in this area was conditioned by terrain, and it was a natural fortress of wooded hills and swift streams that confronted the 1st Marine Division. Highways were conspicuous by their absence, and extensive maintenance would be required to utilize the Hoengsong-Hongchon road as a MSR. So few and poor were the secondary roads that it would sometimes prove necessary for vehicles to detour along the rocky stream beds.[3]

The last offensive had not developed major or prolonged resistance at any point. Yet that possibility had to be anticipated by Marine planners. At least the enemy was an old acquaintance—the 66th CCF Army,[4] commanded by General Show Shiu Kwai. The 196th Division was on the left and the 197th on the right, with the 198th in reserve. These units were believed to comprise about 24,000 men.

Wednesday, 7 March, dawned cold and clear, with snow falling in the afternoon. The Hoengsong-Hongchon road, winding through Kunsamma Pass, paralleled the boundary between the two Marine assault regiments, the 7th Marines on the left and the 1st Marines on the right. They jumped off to attack in line abreast, employing all three battalions when the broken terrain permitted, while the 5th Marines continued its patrolling activities in the Hoengsong area as Division reserve.

The 11th Marines had to ration its artillery ammunition, owing to supply shortages. JOC came to the rescue nobly by ordering MAG-33 to place 11 flights of four planes each at the disposal of DEVASTATE BAKER on D-minus-one. These aircraft reported at hourly intervals to work over targets in the area of the next day’s Marine operations. For the ground forces, it was an embarrassment of riches. They had more air support than they could use at times, and DEVASTATE BAKER sent the surplus to hit reserve concentrations and other targets of opportunity in the enemy’s rear.[5]

The two Marine assault regiments met with light resistance on D-Day. Both took their objectives with little trouble except for scattered bursts of machine gun fire. Total casualties for the day were seven men wounded.

It was like old times to have Marine planes supporting Marine ground forces. MAG-12 aircraft were on the job the next day, when CCF resistance stiffened without ever becoming serious. Heavy CCF mortar and small-arms fire was received by 3/1, supported by Company A of the 1st Tank Battalion. Well placed rounds by the 11th Marines silenced the enemy in this quarter, and both battalions of the 1st Marines reached their assigned positions by nightfall.

The second day’s advances gave added proof that the enemy was up to his old trick of putting up a limited defense while pulling back before the Marines could come to grips. Log bunkers were ideal for these CCF delaying tactics; each was a little fortress that might enable a squad to stand off a company while larger CCF units
The Marine assault troops found that a preliminary treatment of napalm from MAG-12 aircraft, followed by well-aimed 90mm fire from the tanks, did much to soften up the bunkers for an infantry attack with hand grenades.

Company A of the 7th Marines had the hardest fight of all Marine units on 8 March. Second Lieutenant Clayton O. Bush and the 2d Platoon led the attack on the company objective, a hill mass to the left of Oum San. With 300 yards still to be covered, the Marines were pinned down by well aimed CCF small-arms and mortar fire, including white phosphorus. A high explosive shell scored a direct hit on the platoon, killing two men and wounding three. Bush was evacuated, with his right arm mangled. First Lieutenant Eugenous Hovatter, the company commander, ordered the 1st Platoon to pass through the 2d and continue the attack with air and tank support. The flat-trajectory fire of the 90mm rifles did much to help the company clear the enemy from the hill and the 7th Marines reached all assigned regimental objectives for the day.[6]

The Marine advance came to a halt on 9 March to wait for Army units to catch up on the right. While the 2d Battalion of the 1st Marines took blocking positions, the 1st and 7th Marines sent out patrols on both flanks in an effort to regain lateral contact. For the next two days, 1st Marine Division operations were limited to patrolling. A good deal of activity took place in the rear, however, as Marine service units moved up to Hoengsong.
The advance was resumed on 11 March after the relief of 2/1 by Major Walter Gall’s Division Reconnaissance Company, reinforced by a platoon of tanks. Although the enemy withdrew from most of his positions without putting up much resistance, a patrol of George Company, 3/1, had a hot fire fight on Hill 549. Opening fire at 50 yards from camouflaged, log-faced bunkers, the Chinese killed one man and wounded nine. Marine infantrymen, supported by flat-trajectory 90mm fire, approached within grenade-throwing range to destroy five bunkers and kill 16 of the defenders. As the patrol withdrew, it called on the 11th Marines to finish the job. The cannoneers were credited with several direct hits. [7]

Chinese resistance continued to be light as the two Marine regiments occupied rather than seized ground on 12 and 13 March. By the 14th all units were dug in along Phase Line ALBANY.

CCF withdrawals were also reported by other Eighth Army units. On 15 March a patrol from the 1st ROK Division of I Corps found Seoul abandoned by the enemy. The Chinese Reds had made their choice and UN forces took over a devastated city with some 200,000 civilians dragging out a miserable existence in the ruins. Dead power lines dangled over buildings pounded into rubble, and even such a famous landmark as the enormous red, brass-studded gates of the American Embassy Compound had been destroyed.

It was the fourth time that Seoul had changed hands in 9 months of war. Air reconnaissance having established that the enemy had withdrawn about 15 miles to entrenched positions in the Uijongbu area, General Ridgway enlarged the mission of I Corps by directing it to advance on the left of IX Corps. [8]

During the first phase of Operation RIPPER, from 7 to 13 March, counted casualties inflicted on the enemy by X Corps amounted to 6,543 KIA and 216 POW. IX Corps casualties during the same period were reported as 158 KIA, 965 WIA, and 35 MIA—a total of 1,158. [9]

The total strength of the Eighth Army (less the Marines) was 185,229 officers and men in March 1951. Adding the 25,642 of the 1st Marine Division, the 4,645 of the 1st Marine Aircraft Wing, plus 11,353 of the American Air Force and 355 attached from the U.S. Navy, 227,119 Americans were serving in Korea. This does not count 13,475 South Koreans serving in various U.S. Army divisions. [10]

The 1st Marine Aircraft Wing, with an authorized total of 728 officers and 4,216 enlisted men, had an actual strength of 626 and 4,019 respectively on 31 March 1951. Of an authorized 29 officers and 93 enlisted men from the Navy, 22 and 83 in these categories were on duty. [11]

Troops to the number of 21,184 from the ground forces of other United Nations were represented as follows:

- United Kingdom and Australia: 10,136
- Turkey: 4,383
- Philippines: 1,277
- Thailand: 1,050
- Canada: 858
- New Zealand: 816
- Greece: 777
- France: 749
- Belgium-Luxembourg: 638
- Netherlands: 500 [12]
The 249,815 officers and men of the ROK Army make a total UN combat strength of 493,503. There were an additional 671 in three noncombat units: the Danish hospital ship *Jutlandia*, 186; the 60th Indian Ambulance Group, 329; and the Swedish Evacuation Hospital Unit, 156.[13]

Chinese forces in Korea, including confirmed and probable, totaled 16 armies, each comparable to a U.S. corps. Eight others were reported. Assuming that these CCF units averaged a field strength of 24,000 officers and men, the total would have been 384,000 for the 16 armies. The reorganized forces of the North Korean People’s Army (NKPA) were credited with five armies. Adding these 120,000 men to the 16 Chinese armies, the enemy had 504,000 troops in Korea plus whatever might have been the strength of the eight reported armies and the rear area service elements. In addition, large reserves stood just over the border in Manchuria.[14]

Chapter 5. Operation Ripper
Second Phase of the Operation

With scarcely a pause on Phase Line ALBANY, the second phase of Operation ripper began on 14 March with a drive toward Phase Line buffalo (Map 8). Despite the difficulty of maneuver over muddy roads in mountainous terrain, an Eighth Army directive of that date called for a pincers movement to be initiated by means of a rapid advance of the 1st Marine Division on the right and the 1st Cavalry Division on the left. It was hoped that the Chinese forces south of Hongchon might be trapped and destroyed after the 187th Airborne Regiment cut off escape by landing north of the town. General Ridgway having urged his corps commanders to stress maneuver, IX Corps sent this message to division commanders:

“It is desired that more use be made of maneuver within and between division zones with a view toward trapping and annihilating the enemy through such maneuver. Movements should be less stereotyped; it is not desirable that units always advance toward the enemy abreast. Well planned and successfully executed maneuver using companies and battalions has previously been conducted; this should be extended to include regiments. This Headquarters is studying and will continue to study and order into execution the maneuver of divisions with the same intent and purpose.”[15]

Both the 1st Marine Division and 1st Cavalry Division made rapid progress toward Phase Line Baker (Map 9), established by IX Corps as an intermediate control. Unfortunately for the purposes of the envelopment maneuver, the Chinese withdrew from the Hongchon area before the pincers could close or the 187th Airborne make an air drop. CCF resistance was confined to machine gun fire covering hasty retirements. The 7th Marines on the left occupied its objective without once calling for air or artillery support, and the 1st Marines was virtually unopposed. Division casualties for the 14th were six men wounded.

Flash floods and roads churned into hub-deep mud were the greatest enemies of progress. Serious as the resulting supply problems were, they might have been worse but for the efforts of the recently organized Civil Transport Corps formed from members of the ROK National Guard who lacked the necessary training for military duties. There was no shortage of willing indigenous labor, for these auxiliaries received pay as well as rations and clothing. Formed into companies, they worked with the wooden “A-frames”—so-called because of their shape—used from time immemorial in Korea as a rack for carrying heavy burdens.

The Civil Transport Corps proved to be a boon for the Eighth Army. Veteran porters could manage a load of 100 to 125 pounds over ground too rugged for motor vehicles. Several hundred were attached to each regiment during Operation RIPPER.

Any lingering hope of rounding up Chinese prisoners in the Hongchon area was blasted on the 15th when evidence of Chinese withdrawal came in the form of an enemy radio message intercepted at 1230. “We cannot fight any longer,” the translation read. “We must move back today. We will move back at 1300 or 1400. Enemy troops approaching fast.”[16]

Hongchon fell without a fight to the 1st Battalion of the 7th Marines on the afternoon of 15 March. Major Webb D. Sawyer, the commanding officer, sent a motor patrol through the ruins without flushing out any Chinese, but on the return trip a truck was damaged by a “butterfly bomb.” This led to the discovery that the Hongchon area was covered with similar explosives that had been dropped by U.S. planes to slow up the CCF counterattacks in the middle of February.

Butterfly bombs, so-called because of the whirling vanes that controlled the drop and armed the 4-pound...
projectiles, could be set for air or ground bursts. Usually, however, they were dropped in clusters to remain on the ground until disturbed. Apparently the enemy had not troubled to clear them from the Hongchon area, and that three-day task was begun by Company D of the 1st Engineer Battalion while 1/7 seized the high ground northwest of the town. [17]

Chapter 5. Operation Ripper
Changes in 1st MAW Units

Air support for the ground forces continued to be more than adequate in quantity. Since the agreement between Generals Partridge and Harris, 40 1st MAW sorties a day had been allotted to the 1st Marine Division. The timing was not all that could have been asked on occasion, but on the whole the Marine infantry had no complaint.

The 1st MAW had undergone an extensive reshuffling of units on the eve of Operation RIPPER. VMF (N)-542 was sent back to El Toro, California, for conversion to F3D jet all weather fighters. The squadron’s F7F–3N’s and two F–82’s were left with VMF(N)–513. The former commanding officer of 542, Lieutenant Colonel James R. Anderson, assumed command of 513. He relieved Lieutenant Colonel David C. Wolfe, who returned to the States.

The California-bound cadre of 542 included 45 officers and 145 enlisted men under Major Albert L. Clark. VMF(N)-513 was now a composite squadron, attacking from K-1 during the day with its F4U-5N’s and at night with its F7F-3N’s.

Another change took place when VMF-312 replaced VMF-212 on the CVE Bataan. The former squadron had been preparing for weeks to perform carrier duty, so that the change was made without a hitch. VMF-212, after nearly 3 months on the Bataan, established itself at K-3 under a new commanding officer, Lieutenant Colonel Claude H. Welch, who relieved Lieutenant Colonel Wyczawski.

The transportation jam in Korea made necessary the permanent assignment of a VMR-152 detachment to 1st MAW Headquarters. Transports had heretofore been sent to the Wing on a temporary basis and returned to Hawaii when missions were completed.

Mud and inadequate rail facilities doubled the demands on FEAF’s aerial supply of combat forces. The Wing’s courier service to Marine air and ground forces scattered over Korea reached the limit of its capabilities. As a solution General Harris requested a five-plane VMR-152 detachment on a long-term assignment, and Colonel Deane C. Roberts took command of this forward echelon at Itami.

It was now possible to handle cargo and troop transport at the cargo and passenger terminals of all Marine air bases. In one 4-day period, early in April, approximately 2,000 replacement troops were lifted from Masan to Hoengsong by the five R5Ds. About a thousand rotated veterans were flown back on the return trips. [18]

A further change involved the coordination of the Wing’s air control organizations. As the enemy’s air power increased, obviously the problems of UN air defense multiplied. At K-1 the Marine Ground Intercept Squadron-1 (MGCIS-1) and the Air Defense Section of Marine Tactical Air Control Squadron-2 (MTACS-2) were hard pressed to identify and control the hundreds of aircraft flying daily over Korea.

There was no adequate system of alerting these air defense stations to the effect that planes were departing or incoming. Many of them failed to send out their standard identification friend or foe (IFF) signals; and those that did so were still suspect, since U.S. electronics equipment on UN planes had fallen into enemy hands. As a consequence MGCIS-1 was kept busy vectoring air defense fighters to verify that certain bogeys were friendly transports, B-29s, or enemy bombers.[19]

In an effort to cope with the situation, General Harris requested that another Marine ground control intercept squadron, MGCIS-3 be sent to Korea. He desired that Marine Air Control Group-2 (MACG-2) also be made available to coordinate the Wing’s air control functions. These units sailed on 5 March from San Francisco.
Until March 1951 the Air Force’s 606th Aircraft Control and Warning Squadron had participated in the air surveillance of the Pusan area from the top of 3,000-foot Chon-San—the encroaching mountain that made K-9’s traffic pattern so hazardous. This Air Force unit displaced to Taejon early in March, and the MGCIS-1 commanding officer, Major H. E. Allen, moved his radio and radar vans to the mountain top to take over the job. [20]
Following the occupation of Hongchon on the 15th, the Marine ground forces ran into stiffening enemy opposition during the next two days. The 2d and 3d Battalions of the 7th Marines were pinned down by intense CCF mortar and artillery fire when attacking Hill 356 (Map 9). Three out of six friendly 81mm mortars were knocked out on 15 March in the 3d Battalion area, and at dusk 2/7 and 3/7 had barely won a foothold on the hill. [21]

The 1st Marines also met opposition which indicated that the enemy planned to make a stand on the high ground east and north of Hongchon. An intricate maneuver was executed when Lieutenant Colonel Robert K. McClelland’s 2/1 swung from the right flank, where no enemy was encountered, to the extreme left. As a preliminary, the battalion had to circle to the rear, then move by truck up the MSR and through the zone of the 7th Marines as far as the village of Yangjimal (Map 9). Dismounting, the men made a difficult march across broken country toward Hill 246. At 1230 on the 15th the column deployed to attack Hill 428 in conjunction with Lieutenant Colonel Virgil W. Banning’s 3d Battalion.

Easy Company (Captain Jack A. Smith) and Item Company (First Lieutenant Joseph R. Fisher) engaged in a hot fire fight with the enemy. Both sides relied chiefly on mortars, but the Chinese had the advantage of firing from camouflaged bunkers. Smith called for an air strike and four planes from VMF-214 responded immediately. Fox Company (Captain Goodwin C. Groff) and Dog Company (Captain Welby D. Cronk) were committed in the attempt to carry Hill 428, but the enemy continued to resist stubbornly until dusk. McClelland then ordered a withdrawal to night defensive positions around Hill 246. The two assault battalions had suffered 7 KIA and 86 WIA casualties. Counted enemy dead were reported as 93.[22]

Lieutenant Colonel Donald R. Kennedy’s 3/5 was attached to the 1st Marines to protect the right flank as the Marines prepared to resume the attack on the morning of the 16th. But the enemy had pulled out from Hill 428 during the night and patrols advanced more than 300 yards without making contact.

Another hard action awaited the 7th Marines on the 16th, when Major Sawyer’s 1st Battalion moved up to Line BAKER (Map 9). The Chinese resisted so hard on Hill 399 that the Marines had to attack bunker after bunker with grenades.

The following morning was the occasion of a visit to the front by General MacArthur. Accompanied by Generals Ridgway and O. P. Smith, he drove in a jeep from Wonju over the mountain pass to Hongchon, where Marine engineers were still clearing mines. The jeep stalled after crossing the Hongchon-gang at a ford and a tow was necessary. This did not deter the commander in chief, who had asked to visit a Marine battalion in a combat area. He was taken to the CP of Major Sawyer, whose 1/7 was mopping up on Hill 399 after the hard fight of the day before.

Five hours of riding over miserable roads had not daunted the 71-year-old veteran of two World Wars. He seemed fresh and rested as he shook hands with 1/7 officers. “Although we had not passed the word regarding General MacArthur’s visit,” commented General Smith, “there were dozens of cameras in evidence.”[23]

IX Corps orders were received on the 17th for the 1st Marine Division to attack from Line BAKER to Line BUFFALO (Map 9). The Division plan of maneuver called for the 5th Marines to pass through and relieve the 7th Marines while the 1st Marines continued to advance on the right.

Again the enemy chose withdrawal to resistance, and five of the six Marine battalions reached Line BUFFALO on 20 March after encountering only sniper fire and a few scattered mortar rounds. Enemy opposition
was reserved for 2/1 on the 19th, when Fox Company was pinned down by enemy small-arms and mortar fire from a long, narrow ridge running north and south to the west of Hill 330.

Fortunately for the attackers, a parallel valley enabled a platoon of tanks from Baker Company, 1st Tank Battalion, to knock out unusually strong CCF bunkers with direct 90mm fire while Fox Company riflemen followed along the ridgeline with a grenade attack before the enemy had time to recover. Thanks to intelligent planning, not a single Marine was killed or wounded as the battalion dug in for the night on Hill 330.

Adopting the same tactics on the 20th, after artillery preparation and an air strike by VMF-214 and VMF-323 planes, Easy Company of 2/1 advanced along the ridgeline connecting Hills 330 and 381 while tanks moved forward on either side providing direct flat-trajectory 90mm fire. By 1315 the Marines had overrun the enemy’s main line of resistance without a casualty. [24]

Chapter 5. Operation Ripper
1st KMC Regiment Returns to Division

As the Eighth Army jumped off on 20 March from Line BUFFALO toward Line CAIRO (Map 9), the 1st KMC Regiment was attached again to the 1st Marine Division. This was the third time that Lieutenant Colonel Charles W. Harrison had been directed to reorganize and reassemble a KMC liaison advisory group. The 3d Battalion of the 11th Marines, commanded by Lieutenant Colonel William McReynolds, was placed in direct artillery support. When the advance was resumed, the KMCs attacked between the 1st Marines on the right and the 5th Marines on the left.[25]

The high esprit de corps of the KMCs shines forth from a comment written in his own English by First Lieutenant Kim Sik Tong: “The KMC ideal is to complete the mission, regardless of receiving strong enemy resistance, with endurance and strong united power, and always bearing in one’s mind the distinction between honor and dishonor.”[26]

The zone of the KMC Regiment was a roadless wilderness, making it necessary to air-drop ammunition and supplies for the attack on Hill 975. This was the hardest fight of the Division advance to Line CAIRO. Excellent artillery support was provided for the 2d and 3d Battalions as they inched their way forward in three days of bitter combat. Not until the morning of 24 March was the issue decided by maneuver when the 1st Battalion moved around the left KMC flank into a position threatening the enemy’s right. Resistance slackened immediately on Hill 975 and the KMCs took their objective without further trouble.

The 1st and 5th Marines were already on Line CAIRO, having met comparatively light opposition from NKPA troops who had relieved the 66th and 39th CCF Armies. Apparently the enemy was using North Koreans as expendable delaying elements while massing in the rear for an offensive that could be expected at any time. A smoke screen, produced by burning green wood, shrouded the front in an almost constant haze.

Although the objectives of Operation RIPPER had been reached, General Ridgway planned to continue the UN offensive for the purpose of keeping the enemy off balance during his offensive preparations. The Eighth Army had been attacking with few and brief pauses for regrouping even since 21 February, and the commanding general wished to maintain its momentum.

An advance of the 1st Marine Division to a new Line CAIRO was ordered by IX Corps on 26 March. This was simply a northeast extension of the old line to the boundary between IX and X Corps (Map 9). There was no need for the 5th Marines to advance, and the 1st Marines and KMC Regiment moved up to the new line on schedule without opposition.

Eighth Army units had made average gains of about 35 miles during the last three weeks while driving nearly to the 38th Parallel. On 29 March, General Ridgway published a plan for Operation RUGGED. It was to be a continuation of the offensive, with Line KANSAS (Map 8) as the new objective. While other 1st Marine units were being relieved by X Corps elements, the 7th Marines was to be moved up from reserve near Hongchon and attached to the 1st Cavalry Division for the attack beyond Chunchon, evacuated by the retreating enemy.[27]

On 1 April the Marines were informed of sweeping changes in IX Corps plans. Instead of being relieved, the 1st Marine Division was to continue forward with two infantry regiments plus the KMCs. Its new mission called for a relief of the 1st Cavalry Division (with the 7th Marines attached) north of Chunchon. This modification gave General Smith the responsibility for nearly 20 miles of front.[28]

“I visited this front frequently,” commented Major General A. L. Bowser, the G-3 of that period, “and it was difficult at times to even locate an infantry battalion. . . . Visitors from the States or FMFPac were shocked at
the wide frontages.”[29]
Further IX Corps instructions on 2 April directed that the 1st Marines go into Division reserve near Hongchon while the 5th Marines and 1st KMC Regiment attacked. The deep, swift Soyang-gang, fordable in only a few places, lay squarely in the path of the 5th Marines. Speculations as to the method of crossing became rife just as air mattresses were issued. And though the officers denied any such intent, the troops were convinced that inflated mattresses would be used.

As it happened, the regimental executive officer, Lieutenant Colonel Stewart, worked out a plan that did not include any such novelty. A narrow ford was discovered that would get the 1st and 2d Battalions across while the 3d rode in DUKWs. Light enemy opposition of a rear guard nature was encountered but the regiment completed the operation without casualties. Stewart reported to the regimental CP and learned that a jeep waited to take him on the initial lap of his homeward journey. He was the last man to leave Korea of the 1st Provisional Marine Brigade, which had landed at Pusan on 2 August 1950.\[30]\n
After reaching their prescribed objectives, the 5th Marines and KMC Regiment were relieved on 5 April by elements of the 7th Infantry Division of X Corps. Meanwhile, the 7th Marines, attached to the 1st Cavalry Division, advanced northward with the 7th and 8th Cavalry Regiments. Little opposition developed and on 4 April the Marines were among the first Eighth Army troops to recross the 38th Parallel.

General Ridgway published another operation plan on 6 April 1951 and designated new Eighth Army objectives to the northward. The purpose was to threaten the buildup for the forthcoming CCF offensive that was taking place behind the enemy lines in the so-called “Iron Triangle.”

This strategic area, one of the few pieces of comparatively level real estate in central Korea, was bounded by Kumhwa, Chorwon, and Pyongyang (Map 14). A broad valley containing a network of good roads, it had been utilized by the Chinese for the massing of supplies and troops.

Experience had proved that interdictory bombing could not prevent the enemy from nourishing an offensive, even though the FEAF had complete control of the air over roads and rail lines of a mountainous peninsula. The Chinese, though hampered in their efforts, had been able to bring up large quantities of supplies under cover of darkness. General Ridgway determined, therefore, to launch his ground forces at objectives threatening the Iron Triangle, thus forcing the enemy to fight.

On 8 April, in preparation for the new effort, the 1st Marine Division was directed by IX Corps to relieve the 1st Cavalry Division on Line KANSAS and prepare to attack toward Line QUANTICO (Map 8).
Chapter 5. Operation Ripper
Renewal of Division’s CAS Problems

By this time, after three months of various sorts of operational difficulties, VMF-311 was riding a wave of efficiency. The distance from the operating base to the combat area emphasized the superior speed of the F9Fs. The Panther jets could get into action in half the time required by the Corsairs. The jets were more stable in rocket, bombing, and strafing runs. They were faster on armed reconnaissance and often were pouring it into the enemy before he could disperse. These advantages offset the high fuel consumption of the F9Fs and made them ideal planes for close air support.

On the morning of 8 April an opportunity arose for the Marine jets to help the 7th Marines. It started when 3/7 patrols encountered 120mm mortars, small arms, automatic weapons, and grenades employed by an enemy force dug in on a ridge looming over the road near the west end of the Hwachon reservoir. The battalion forward air controller radioed DEVASTATE BAKER at Hongchon for air support.[31]

At the time Major Roy R. Hewitt, an air officer on General Shepherd’s FMFPac staff, was visiting the Air Support Section of Marine Tactical Air Control Squadron-2 (MTACS-2). His blow-by-blow report of events is as follows:

“a. At 0900 a request for an air support strike on an enemy mortar position was received from the 7th Marines. It took the Air Support Section until 0945 to get through to JOC and then it had to be shunted through K-1 in order to get the request in.

“b. The G-3 1st Marine Air Wing had arranged with JOC to have four (4) F9F ‘scramble alert’ for use by the 1st Marine Division. The F9Fs were requested, and JOC authorized their use, but when Marine Aircraft Group-33 was contacted they informed the Air Support Section that JOC had already scrambled the aircraft and sent them to another target.

“c. Air Support Section again contacted JOC, and JOC said aircraft would be on station in one (1) hour. At the end of one (1) hour JOC was again contacted concerning aircraft. This time JOC said they would have two (2) flights on station within one (1) hour. At the end of the second one (1) hour period no aircraft were received.

“d. Again the Air Support Section contacted JOC and was informed that any air support for the 7th Marines would have to be requested through the 1st Cavalry Division to which the 7th Marines were attached.”[32] In fact, JOC notified DEVASTATE BAKER that any such requests from the 1st Marine Division would not be honored until the Division went back into action.

During all this time ten Marine planes—six from VMF-311 and four from VMF-214—had reported in and out of the area. They had been sent by MELLOW to work under the control of Mosquito STRATEGY, the tactical air controller (airborne) (taca) of the 1st Cavalry Division. The flights also supported the 6th ROK Division patrols on the Marines’ left, hit troops in a small settlement 3 miles to the Marines’ front, and aided the 7th and 8th Cavalry regiments which were encountering resistance on the commanding ground to the right. None of the flights supported the Marines.

Meanwhile, the 3/7 Marines employed artillery and tanks on the enemy positions, and late in the day a Mosquito brought in a flight of four Air Force F-80s. Major Hewitt’s report continued:

“e. At the end of six (6) hours air support was finally received by the 7th Marines. It was brought in by a Mosquito who would not relinquish control of the aircraft to the Forward Air Controller who could see the target much better than the Mosquito.

“f. After having the fighters make a couple of passes the Mosquito took the fighters and went to another
target without having completely destroyed the position.”

This was the beginning of a deterioration in air support for Marine ground forces that can be charged in large measure to the JOC system of control. Major Hewitt’s report was read with great interest by high-ranking Navy and Marine Corps officers. By now they were devoting a lot of thought to the breakup of the Marine air-ground team.
ON 10 APRIL 1951 the 1st Marine Division was poised on Line KANSAS for a drive to Line QUANTICO. Then a new IX Corps directive put on the brakes, and for 10 days Marine activities were limited to patrolling and preparation of defensive works. Boundary adjustments between the Division and the 6th ROK Division on the left extended the Marine zone about 2,000 yards to the west; and General O. P. Smith’s CP was advanced to Sapyong-ni, just south of the 38th Parallel (Map 8).

Out of a blue sky came the announcement on the 11th that General MacArthur had been recalled by President Truman for failure to give wholehearted support to the policies of the United States Government and of the United Nations in matters pertaining to his official duties. General Ridgway was appointed to the UN command, and he in turn was relieved on 14 April by Lieutenant General James A. Van Fleet, USA.

The new Eighth Army commander, youthful in appearance for his 59 years, was no novice at fighting Communists. In 1949 and 1950 he had been Director of the Joint Military Aid Group that saved Greece from falling into the clutches of Communism after Moscow fomented a civil war. Van Fleet also brought to his new command a World War II reputation as a vigorous leader with a preference for offensive doctrines.
Chapter 6. The CCF Spring Offensive
Prisoners Reveal Date of Offensive

Chinese prisoners taken during the first three weeks of April 1951 told all they knew with no apparent reluctance, just as Japanese captives had given information in World War II. Inconsistent as it may seem that fanatical Asian soldiers should prove so cooperative, such was the penalty the enemy paid for insisting on resistance to the last ditch. Since the possibility of surrender was not considered, CCF prisoners were taught no code of behavior and answered questions freely and frankly.

POW interrogations were supplemented by captured documents revealing that the Chinese prided themselves on a new tactical doctrine known as “the roving defensive,” put into effect in the spring of 1951. It meant “not to hold your position to the death, but to defend against the enemy through movement,” explained a secret CCF directive dated 17 March 1951. “Therefore, the wisdom of the roving defensive is based on exhausting the enemy without regard for the loss or gain of some fighting area or the immediate fulfillment of our aims.”[1]

It was admitted that the CCF soldier must work harder, “because the troops will have to construct entrenchments and field works in every place they move.” But the advantages were that “roving warfare can conserve our power, deplete the enemy’s strength, and secure for us more favorable conditions for future victory. Meanwhile, the enemy will make the mistake once again, and collapse on the Korean battlefield.”

The last sentence evidently refers to the UN advance of late November 1950 that was rolled back by a surprise CCF counteroffensive. Chinese strategists seem to have concluded that their “roving defensive” had made possible another such offensive victory in the spring of 1951. At any rate, prisoners questioned by the 1st Marine Division and other IX Corps units agreed that the CCF 5th Phase Offensive was scheduled to begin on 22 April 1951. The IX Corps zone was said to be the target area for an attempted breakthrough.[2]

Marine G-2 officers recalled that prisoners gave information on the eve of the CCF offensive in November 1950 that proved to be astonishingly accurate in the light of later events. For it was a paradox that the Chinese Reds, so secretive in other respects, let the man in the ranks know about high-level strategic plans. In the spring of 1951 it mattered little, since air reconnaissance had kept the Eighth Army well informed as to the enemy buildup.

Prisoners were taken in the IX Corps zone from the following major CCF units during the first three weeks of April:

20th Army (58th, 59th, and 60th Divisions), estimated strength, 24,261;
26th Army (76th, 77th, and 78th Divisions), estimated total strength, 22,222;
39th Army (115th, 116th, and 117th Divisions), estimated total strength, 19,538;
40th Army (118th, 119th, and 120th Divisions), estimated total strength, 25,319.

The 20th and 26th, it may be recalled, were two of the CCF armies opposing the 1st Marine Division during the Chosin Reservoir breakout. It was a satisfaction to the Marines that their opponents of December 1950 had evidently needed from three to four months to reorganize and get back into action.

In CCF reserve on 21 April 1951 were the 42d and 66th Armies, both located in the Iron Triangle to the enemy’s rear. The former included the 124th, 125th, and 126th Divisions—the 124th being the unit cut to pieces from 3 to 7 November 1950 by the 7th Marines in the war’s first American offensive action against Chinese Red adversaries.
At 0700 on the 21st the 1st Marine Division resumed the attack toward Line QUANTICO with the 7th Marines on the left, the 5th Marines in the center, the KMC Regiment on the right, and the 1st Marines in reserve. Negligible resistance awaited the Marines and other IX Corps troops during advances of 5,000 to 9,000 yards. An ominous quiet hung over the front as green wood smoke limited visibility to a few hundred yards.

On the Marine left the 6th ROK Division lost touch, opening a gap of 2,500 yards, according to a message from Corps to the 1st Marine Division. The ROK commander was ordered by Corps to restore lateral contact. This incident would be recalled significantly by the Marines when the CCF blow fell.[3]

The KMC Regiment had the mission of finishing the fight for control of the Hwachon Reservoir area. Early in April the 1st Cavalry Division and the 4th Ranger Company, USA, had been repulsed in attempts to fight their way across the artificial lake in rubber boats. The enemy retaliated by opening the penstocks and spillway gates. Considering that the dam was 275 feet high and the spillway 826 feet long, it is not surprising that a wall of water 10 feet high roared down the Pukhan Valley into areas recently occupied by IX Corps units.[4]

Both Army and Marine engineers were on the alert, having been warned by aerial observers. They cut three floating bridges loose from one bank or another, so that they could ride out the crest of the flood. Thanks to this precaution, only temporary damage and interruption of traffic resulted.[5]

The 1st Engineer Battalion, commanded by Lieutenant Colonel John H. Partridge, was given the mission by Corps of jamming the gates of the dam at the open position. Compliance would have to wait, of course, until the KMCs took the dam. Partridge conferred meanwhile with Colonel Bowser, and it was decided to take no action after the anticipated capture until a demolitions reconnaissance could be made.[6]

As early as 18 April a KMC patrol had crossed the Pukhan into the town of Hwachon, which was found abandoned except for 11 Chinese soldiers, who were taken prisoner. Marine engineers installed a floating bridge on the 21st for the advance of one KMC battalion the next morning. The other two battalions were to cross the river several miles downstream by DUKWs.[7]

Corps plans for the attack were made in full realization of air reconnaissance reports for 20 and 21 April indicating that the enemy offensive buildup was in its final stages. This intelligence was gleaned in spite of all enemy efforts to frustrate the airmen. CCF spotters were placed on mountain tops to give the alarm, and relays of men fired shots to pass on warnings of approaching planes. Antiaircraft defenses were increased at such vital spots as bridges and supply areas. The Communists even went so far as to put out decoys—fake trucks, tanks, and tank cars—to lure UN fighter-bombers within range of antiaircraft guns.

These efforts resulted in 16 Marine planes being shot down from 1 to 21 April 1951. Nine of the pilots were killed, one was captured, three were rescued from enemy territory, one walked back to friendly outposts, and two managed to bail out or crash-land behind the UN lines.[8]

This total was equivalent to two-thirds of the average tactical squadron. Because of the disruption to the 1st MAW pilot replacement program, the Commandant arranged for 20 pilots to be flown to Korea to augment the normal rotation quotas.[9]

Direct opposition from enemy aircraft was also on the increase. CCF flights even reached the EUSAK battle line as unidentified light planes flew over positions or dropped small bombs. Evidently the enemy was using well camouflaged airfields in North Korea.

An air battle took place on 20 April when two VMF-312 pilots from the Bataan, Captain Philip C.
DeLong and First Lieutenant Harold D. Daigh, encountered four YAK fighters in the heavily defended Pyongyang-Chinnanpo area. They gave chase and shot down three of the enemy planes.[10]

Marine aircraft were on station when Marine ground forces resumed their forward movement at 0830 on the morning of 22 April. A CCF prisoner taken that very afternoon confirmed previous POW statements that the 22d was the opening day of the Fifth Phase Offensive. The front was quiet, however, as the three Marine infantry regiments advanced almost at will.

A motorized patrol of Division Reconnaissance Company, led by the commanding officer, Major Robert L. Autrey, had the initial contact with the enemy while advancing on the Division left flank. The two platoons, supported by Marine tanks, found their first indications when searching a Korean roadside hut. Although the natives denied having seen any Chinese soldiers, Corporal Paul G. Martin discovered about 50 hidden rice bowls waiting to be washed. Upon being confronted with this evidence, the terrified Koreans admitted that Chinese soldiers had reconnoitred the area just before dawn.

Farther up the road, an ammunition dump of hidden mortar shells was discovered. The enemy had also put up several crude propaganda signs with such sentiments as YOUR FOLKS LIKE SEE YOU HOME and HALT! FORWARD MEANS DEATH.

The patrol dismounted and proceeded with caution, guided by an OY overhead. Although the “choppers” were the favored aircraft of VMO-6, the OYs also earned the gratitude of the troops on many an occasion such as this. The pilot gave the alarm just before hidden Communists opened fire. Thus the Marines of the patrol were enabled to take cover, and the tanks routed the enemy force with well placed 90mm shells.[11]

The KMCs met no resistance worth mentioning when they secured the town of Hwachon and the north bank of the Pukhan just west of the reservoir. Only light and scattered opposition awaited the 5th Marines (Colonel Richard M. Hayward) and the 7th Marines (Colonel Herman Nickerson, Jr.) on their way to the occupation of assigned objectives on Line QUANTICO.
For weeks the Communist forces in Korea might have been compared to an antagonist backtracking to get set for taking aim with a shotgun. There could be no doubt, on the strength of daily G-2 reports, about both barrels being loaded. And on the night of 22 April the enemy pulled the trigger.

The KMCs, after taking their objectives, reported a concentration of enemy small-arms fire. At 1800 the command of the 1st Marine Division directed a renewal of the advance at 0700, on the morning of the 23d. This order was cancelled at 2224 by a message calling for all Marine units to consolidate and patrol in zone, pending further instructions.[12]

One of the reasons for the sudden change was the receipt of a message by the 1st Marine Division at 2120, informing that the 6th ROK Division was under heavy attack to the west of the Marines. Meanwhile, an on-the-spot questioning of a CCF prisoner just taken by the KMCs convinced the command and staff of the 1st Marine Division that the CCF 5th Phase Offensive was only hours away and gathering momentum. Thanks to this timely interpretation, all forward Marine units were alerted two hours before the main blow fell.

It was on the left of the 1st Marine Division that the situation first became critical. The 6th ROK Division had never quite succeeded in closing up the gap on its right and restoring contact with the Marines. But this failure was trivial as compared to the collapse of the entire ROK division an hour before midnight, leaving a gap wide enough for a major breakthrough.

The 1st Marine Division took prompt measures to cope with the emergency. As early as 2130, the 1st Marines, in reserve just north of Chunchon, were alerted to move one battalion to contain a possible enemy threat to the Division left flank. A second message an hour later called for immediate execution. And at midnight the Division Provost Marshal was directed to stop ROK stragglers and place them under guard. The Division Reconnaissance Company received orders to aid the military police.[13]

Colonel Francis M. McAlister, commanding the 1st Marines, selected Lieutenant Colonel Robley E. West’s 1st Battalion to carry out Division orders. “By midnight we were all on trucks and rolling on the roads north,” wrote Second Lieutenant Joseph M. Reisler in a letter home. “Mile after mile, all the roads were covered with remnants of the ROKs who had fled. Thousands of them [were] straggling along the roads in confusion.”[14]

Despite these preparations for trouble on the left flank, the KMCs on the right and the 5th Marines in the center were first in the Division to come under attack. During the last minutes of 22 April the 2d KMC Battalion held it hot and heavy on Hill 509. To the left the 1st KMC Battalion, partially encircled, notified the 5th Marines of a penetration.

The effects were felt immediately by 1/5, with its CP in Hwachon. Hill 313 was the key to the town, being located at the Hwachon end of a long ridge forming a natural avenue of approach from the northeast. Captain James T. Cronin’s Baker Company of 1/5 had the responsibility for protecting the CP and shifting troops to the right flank if necessary. He sent Second Lieutenant Harvey W. Nolan’s platoon to run a race with the enemy for the occupation of Hill 313. Attached in excess of T/O for familiarization was Second Lieutenant Patrick T. McGahn.[15]

About 220 yards from the summit the slope was so steep that the Marines clawed their way upward on hands and knees. The company commander posted the attached light machine gun section while Nolan, McGahn, and Sergeant William Piner organized the assault. The three squads of riflemen advanced a few yards, only to be pinned down by well directed CCF machine gun fire. Another rush brought the Marines closer to the enemy but a
stalemate ensued in the darkness. Seven of the platoon were killed and 17 wounded.

The situation in the 1/5 area was so serious that Fox Company of 2/5 (Lieutenant Colonel Glen E. Martin) sent reinforcements. At dawn, however, Hill 313 proved to be abandoned by the enemy. A vigorous KMC counterstroke had swept the Communists from Hill 509, so that the front was relatively quiet in this area. The courage and determination of the KMC Regiment were praised by General Smith, who sent this message on the morning of the 23d to Colonel Kim, the commanding officer:

“Congratulate you and your fine officers and men on dash and spirit in maintaining your positions against strong enemy attacks. We are proud of the Korean Marines.”[16]

It is taking no credit away from the KMCs and 5th Marines to point out that they appear to have been hit by enemy holding attacks. The main CCF effort was directed at the left of the Division line, held by the 7th Marines.

The heaviest fighting took place in the sector of 1/7 on the extreme left, commanded by Major Webb D. Sawyer. It was obvious that the enemy planned to widen the penetration made at the expense of the 6th ROK Division. The 358th Regiment of the 120th Division, CCF 40th Army, hurled nearly 2,000 men at the Marine battalion. Charlie Company, commanded by Captain Eugene H. Haffey, took the brunt of the assault.[17]

The thin battalion line bent under sheer weight of numbers. But it did not break. It held through three hours of furious fighting, with the support of Marine and Army artillery, until the 1st Battalion of the 1st Marines came up as reinforcements under the operational control of the 7th Marines. The newcomers took a position to the left of 1/7, so that the division flank was no longer completely “in the air.”

This was one of the first examples of the Corps and Division maneuvering that played such a large part throughout in the blunting of the CCF offensive. Troops were not left to continue a desperate fight when a shift of units would ease the pressure.
Chapter 6. The CCF Spring Offensive
Marine Air in Support Everywhere

At first light on the 23d the FEAF Mosquitoes and fighter-bombers went into action. The Marines had four two-plane flights of Corsairs airborne before sun-up. VMF-323 responded to a call from Baker Company, 1/5, only to find that the enemy had abandoned Hill 313. A low-flying OY of VMO-6, commanded by Major D. W. McFarland, guided the Corsairs to the withdrawing Chinese, who were worked over thoroughly. VMF-214 planes meanwhile supported 1/7 in that battalion’s desperate fight at the left of the line.[18]

A pilot’s-eye view showed fighting in progress from one coast to another, although the enemy was making his main effort in the IX Corps sector. The U.S. 24th Infantry Division, to the left of the 6th ROK Division, was having to bend its right flank southward to defend against the CCF penetration. Toward the rear the 27th Brigade of the British Commonwealth Division, in IX Corps reserve, was being alerted to meet the Communists head on and bring the breakthrough to a halt.

Elements of the U.S. 24th and 25th Divisions on the edge of the Iron Triangle were giving ground slowly. Seoul was obviously an objective of CCF units that had crossed the Imjin in the moonlight. But General Ridgway had decided that the city was not to be abandoned. “Considerable importance was attached to the retention of Seoul,” he explained at a later date, “as it then had more value psychologically than its acquisition had conferred when we were still south of the Han.”[19]

Near the junction of X Corps and I ROK Corps the 7th ROK Division had been hard hit, although the enemy attack in this area was a secondary effort. Air support helped this unit to hold its own until it could be reinforced.

Of the 205 Marine aircraft sorties on 23 April, 153 went to support the fighting front. The 1st Marine Division received 42 of these CAS strikes; 24 went to the ROK 7th Division; 59 to I Corps to check the advance on Seoul; and 28 to pound the Communists crossings the Imjin.[20]

Only about 66 percent of the landing strip at K-3 (Pohang) could be used; the remainder was being repaired by the Seabees. In order to give the Panther jets more room, VMF-212 shifted its squadrons for two days to K-16 near Seoul. A detachment of VMF-323 planes from K-1 (Pusan) also made the move. Since K-16 was only 30 miles from the combat area along the Imjin, the Corsairs were able to launch their attacks and return for rearming and refueling in an hour or less.[21]
At first light on 23 April the entire left flank of the 1st Marine Division lay exposed to the Chinese who had poured into the gap left by the disintegration of the 6th ROK Division. IX Corps orders called for the ROKs to reassemble on the KANSAS line, but most of them straggled from 10 to 14 miles behind the positions they held prior to the CCF attack. The 1st Marine Division ordered Reconnaissance Company to stop ROK stragglers at the river crossing, and several groups were turned back.

The reasons for the ROK collapse are variously given. Weak command and low morale have been blamed for the debacle, yet the shattered division did not lack for defenders. No less an authority than General Van Fleet declared himself “... reluctant to criticize the 6th ROK Division too severely. I do not believe they deliberately threw away their equipment—I am inclined to believe such equipment was abandoned due to the terrain, lack of roads and weight. Our check at the time indicated that the Korean soldiers held on to their hand weapons. It is interesting to know that General Chang who commanded 6th ROK Division at the time... is today [March 1958] Vice Chief of Staff of the Korean Army.”

As a first step toward setting up a defense in two directions, the 1st-Marine Division received orders from IX Corps to fall back to Line PENDLETON (Map 10). This was one of the Eighth Army lines assigned to such profusion that they resembled cracks in a pane of glass. PENDLETON ran generally southwest to northeast through the 7th Marines sector, then turned eastward just north of the town of Hwachon.

By occupying this line, the 7th Marines could bend its left to the south in order to refuse that flank. Still farther to the south, the 1st and 3d Battalions of the 1st Marines were to take positions facing west. Thus the line of the 1st Marine Division would face west as much as north. On the center and right the KMCs and 5th Marines would find it necessary to withdraw only about 1,000 yards to take up their new positions.

It was up to 1/1 to make the first move toward plugging the gap. At 0130 on the 23d Captain John Coffey’s Baker Company led the way. Moving north in the darkness along the Pukhan and then west along a tributary, the long column of vehicles made its first stop about 1,000 yards from the assigned position. Here the 92d Armored Field Battalion, USA, was stationed in support of the 6th ROK Division and elements of the 1st Marine Division. The commanding officer, Lieutenant Colonel Leon F. Lavoie, was an old acquaintance of 1/1, having supported that battalion during the final days of the Chosin Reservoir breakout. Lavoie was held in high esteem by the Marines, who found it characteristic of him that in this fluid situation his cannoneers were formed into a tight defensive perimeter, ready to fight as infantry if need be.

Another Army artillery unit, the 987th Armored Field Artillery Battalion, had been roughly used by the Chinese who routed the ROK division. Losses in guns and equipment had resulted, and Coffey moved with his company about 1,500 yards to the west to assist in extricating from the mud all the 105s that could be saved. Resistance was encountered in the form of machine gun fire from Chinese who had set up a road block.

Upon returning to 1/1, Coffey found it occupying what was in effect an outpost to the southwest of the 7th Marines. Baker Company was assigned to the left of Captain Robert P. Wray’s Charlie Company, holding the curve of a horseshoe-shaped ridge, with Captain Thomas J. Bohannon’s Able Company on the right. In support, along the comparatively level ground to the immediate rear, was Weapons Company (Major William L. Bates).

With 1/1 facing in three directions to block a CCF attack, 1/7 managed to disengage and withdraw through 3/7, which occupied a position on Line PENDLETON. VMO-6 helicopters and troops of 2/7 helped to
evacuate the 1/7 casualties incurred during the night’s hard fighting. 

During the early morning hours of the 23d the Marines of 3/1 had boarded trucks to the village of Todun- 
ni (Map 11) on the west bank of the Pukhan. Their assigned position was Hill 902, a 3,000-foot height dominating 
the surrounding terrain. The Chinese also were interested in this piece of real estate, since it overlooked the river 
crossing of the 1st Marine Division. Pressure to beat the Communists to the crest mounted as NCOs urged the 
men to their utmost efforts over steep uphill trails.

The Marines won the race. Once in position, however, it was evident to Lieutenant Colonel Banning that 
three ridge lines leading up to the hill mass would have to be defended. This necessity imposed a triangular 
formation, and he placed Captain Horace L. Johnson’s George Company at the apex, with First Lieutenant 
William J. Allert’s How Company on the left, and First Lieutenant William Swanson’s Item Company on the 
right. The heavy machine gems of Major Edwin A. Simmons’ Weapons Company were distributed among 
the rifle companies and the 81mm mortars placed only 10 to 20 yards behind the front lines. [25]

The KMCs and 5th Marines completed their withdrawal without interference. Thus the line of the 1st 
Marine Division on the afternoon of 23 April might have been compared to a fishhook with the shank in the north 
and the barb curling around to the west and south. The three Marine battalions plugging the gap were not tied in 
physically. Major Maurice E. Roach’s 3/7 was separated by an interval of 1,000 yards from 1/1, and the other two 
Marine battalions were 5,500 yards apart (Map 11). But at least the 1st Marine Division had formed a new front 
under fire and awaited the night’s attacks with confidence.
Chapter 6. The CCF Spring Offensive

Repulse of Communist Attacks

Bugle calls and green flares at about 2000 announced the presence of the Chinese to the west of 1/1 on Horseshoe Ridge.

“They came on in wave after wave, hundreds of them,” wrote Lieutenant Reisler, whose platoon held an outpost in advance of Charlie Company. “They were singing, humming and chanting, ‘Awake, Marine. . . .’ In the first rush they knocked out both our machine guns and wounded about 10 men, putting a big hole in our lines. We held for about 15 minutes, under mortar fire, machine gun fire, and those grenades—hundreds of grenades. There was nothing to do but withdraw to a better position, which I did. We pulled back about 50 yds. and set up a new line. All this was in the pitch-black night with Chinese cymbals crashing, horns blowing, and their god-awful yells.”[26]

For four hours the attacks on Horseshoe Ridge were continuous, particularly along the curve held by Wray’s company. He was reinforced during the night by squads sent from Coffey’s and Bohannon’s companies. Wray realized that the integrity of the battalion position depended on holding the curve of the ridge, but his main problem was bringing up enough ammunition. Men evacuating casualties to the rear returned with supplies, but the amount was all too limited until Corporal Leo Marquez appointed himself a one-man committee. His energy equalled his courage as he carried grenades and small-arms ammunition all night to the men on the firing line. Marquez emerged unhurt in spite of bullet holes through his cartridge belt, helmet, and a heel of his shoe.

About midnight it was the turn of 3/1. These Marines had dug in as best they could, but the position was too rocky to permit much excavation. Ammunition for the mortars had to be hand-carried from a point halfway up the hill.

Several hours of harassing mortar fire preceded the CCF effort. George Company, at the apex of the ridge, was almost overwhelmed by the first Communist waves of assault. The courage of individual Marines shone forth in the ensuing struggle. Technical Sergeant Harold E. Wilson, second in command of the center platoon, suffered four painful wounds but remained in the fight, encouraging his men and guiding reinforcements from How Company as they arrived.[27]

Steady artillery support was provided by Colonel McAlister, who rounded up a jury-rigged liaison party and three forward observer teams composed mainly of officers from the 987th AFA Battalion. They registered 11th Marines and 987th Battalion defensive fires which had a large part in stopping the CCF attack as it lapped around George Company and hit How and Item on the other two ridges.

Colonel McAlister and Colonel Nickerson paid a visit to the CP of 1/1, which remained under the operational control of the 7th Marines until morning. The two regimental commanders arranged for artillery and tank support to cover the gap between 1/1 and 3/7.[28] The enemy, however, seemed to be wary about infiltrating between the three battalion outposts. This reluctance owed in large part to the deadly flat-trajectory fire of the 90mm rifles of Companies A and B of the 1st Tank Battalion, whose commanding officer, Lieutenant Colonel Holly F. Evans had relieved Lieutenant Colonel Harry T. Milne that day.

Attacks on 3/1 and 3/7 also continued throughout the night. At daybreak the close air support of Marine aircraft prevented further Communist efforts, though dug-in enemy groups remained within machine gun range. Identification of Chinese bodies at daybreak indicated that the 359th and 360th Regiments, 120th Division, 40th CCF Army, had been employed.
Now came the problem for the three Marine battalions of letting loose of the tiger’s tail. Corps orders were received on the morning of 24 April for all units of the Division to pull back to Line KANSAS. This was in accordance with General Ridgway’s policy, continued by General Van Fleet, of attaching more importance to destruction of enemy personnel than the holding of military real estate.

Some of the most seriously wounded men of 1/1 required immediate evacuation, in spite of the obvious risks. A VMO-6 helicopter piloted by First Lieutenant Robert E. Matthewson attempted a landing at the base of Horseshoe Ridge. As he hovered over the panel markings, CCF small-arms fire mangled the tail rotor. The machine plunged to earth so badly damaged that it had to be destroyed. Matthewson emerged unhurt and waved off a helicopter flown by Captain H. G. McRay. Then the stranded pilot asked for a rifle and gave a good account of himself as an infantryman.[29]

While First Lieutenant Norman W. Hicks’ second platoon fought as the rear guard, First Lieutenant Niel B. Mills’ first platoon of Charlie Company led the attack down the hill, carrying the wounded behind. In an attempt to rout the Chinese from a flanking hill, Mills was wounded in the neck by a bullet that severed an artery. Corpsman E. N. Smith gripped the end of the artery between his fingers until a hemostat could be applied, thus saving the lieutenant’s life. Just before losing consciousness, Mills looked at his watch. It was 1000 and 1/1 had weathered the storm.[30]

The 3d Battalion of the 7th Marines, which had beaten off probing attacks all night, coordinated its movements with those of the two Marine battalions as they slowly withdrew toward the Pukhan. Despite Marine air attacks, the Communists not only followed but infiltrated in sufficient numbers to threaten the perimeter of Lavoie’s cannoneers. The training this Army officer had given his men in infantry tactics now paid off as the perimeter held firm while mowing down the attackers with point blank 105mm shells at a range of 1,000 yards. The Marines of Captain Bohannon’s company soon got into the fight, and the 92d repaid the courtesy by supporting 1/1 and 3/7 during their withdrawal. Counted CCF dead numbered 179 at a cost to the 92d of 4 KIA and 11 WIA casualties.[31]

As the morning haze lifted, the OYs of VMO-6 spotted for both Army and Marine artillery. DEVASTATE BAKER fed close support to the forward air controllers as fast as it could get planes from K-16 at Seoul, only a 15-minute flight away. Not only 49 Corsairs but also 40 of the Navy ADs and Air Force F-51s and jets aided the Marine ground forces in their withdrawal to Line KANSAS. To speed the fighter-bombers to their targets, some of the Marine pilots were designated tactical air coordinators, airborne (TACA). Their familiarity with the terrain was an asset as they led incoming pilots to ground force units most in need of support.[32]

It was a confusing day in the air. The mutual radio frequencies to which planes and ground controllers were pretuned proved to be inadequate. The consequence was all too often the blocking out of key information at a frustrating moment. Haze and smoke made for limited vision. The planes needed a two-mile circle for their attacks, yet the battalions were at times less than 1,000 yards apart. DEVASTATE BAKER had to deal with this congested and dangerous situation as best it could.

In addition to its strong support of Marine ground forces, the 1st MAW sent 10 sorties to the ROKs in east Korea and 57 to I Corps in its battle along the Imjin. By this time the Gloucestershire Battalion of the 29th British Brigade was isolated seven miles behind enemy lines and receiving all supplies by air-drop. The outlook grew so desperate that officers ordered their men to break up and make their way back to the UN lines if they
could. Only 40 ever succeeded.

In the former 6th ROK Division sector units of the 27th Brigade of the British Commonwealth Division had done a magnificent job of stopping the breakthrough. The 2d Battalion of the Princess Patricia’s Canadian Light Infantry and the 3d Battalion of the Royal Australian Regiment distinguished themselves in this fight, which won a Distinguished Unit Citation for the division.[33]
Spring had come at last to war-ravaged Korea and the hills were a misty green in the sunshine. Looking down from an aircraft on the warm afternoon of 24 April 1951 the Marine sector resembled a human anthill. Columns of weary men toiled and strained in every direction. Chaotic as the scene may have seemed, however, everything had a purpose. The 1st Marine Division was in full control of all troop movements, despite enemy pressure of the last two nights.

The 5th Marines and KMCs had no opposition as they continued their withdrawal. Marine air reduced to a minimum the harassing efforts of the Chinese following the 1st Marines. As front-line units disengaged and fell back, the length of the main line of resistance was contracted enough for the 7th Marines to be assigned a reserve role. The 1st and 2d Battalions were given the responsibility for the defense of Chunchon as well as the crossing sites over the Pukhan and Soyang Rivers. Major Roach had reached the outskirts of Chunchon when 3/7 was ordered back across the Chunchon, to be attached to the 1st Marines on the left flank.[34]

Throughout the night of 24-25 April the enemy probed the Marine lines, seeking in vain a weak spot where a penetration could be made. It was already evident that the breakthrough in this area had given the Communists only a short-lived advantage. By the third night they were definitely stopped. Only minor patrol actions resulted except for two attacks in company strength on 2/1 at 0050 and 0150. Both were repulsed with total CCF losses of 25 counted dead.

Contrary to the usual rule, the Marines saw more action during the daylight hours. A company-size patrol from 1/1 became heavily engaged at 1350 and three Company A tanks moved up in support. The fight lasted until 1645, when the enemy broke off action and the tanks evacuated 18 wounded Marines.

Early in the afternoon a 3/1 patrol had advanced only 200 yards along a ridgeline when it was compelled to withdraw after running into concentrated mortar and machine gun fire. Sporadic mortar rounds continued until a direct hit was scored on the battalion CP, wounding Colonel McAlister, Lieutenant Colonel Banning, Major Reginald R. Myers, the executive officer, and Major Joseph D. Trompeter, the S-3. Banning and Myers were evacuated and Trompeter assumed command of 3/1.

Losses of 18 KIA and 82 WIA for 24-25 April brought the casualties of the 1st Marines to nearly 300 during the past 48 hours.[35]

A simple ceremony was held at the 1st Marine Division CP on the afternoon of the 24th for the relief of General Smith by Major General Gerald C. Thomas. The new commanding general, a native of Missouri, was educated at Illinois Wesleyan University and enlisted in the Marine Corps in May 1917 at the age of 23. Awarded the Silver Star for bravery at Belleau Wood and Soissons, he was commissioned just before the Meuse-Argonne offensive, in which he was wounded.

During the next two decades, Thomas chased bandits in Haiti, guarded the U.S. mails, protected American interests in China, and served as naval observer in Egypt when Rommel knocked at the gates of Alexandria in 1941. As operations officer and later chief of staff of the 1st Marine Division, he participated in the Guadalcanal campaign in 1942. The next year he became chief of staff of I Marine Amphibious Corps in the Bougainville operation. Returning to Marine Headquarters in 1944 as Director of Plans and Policies, he was named commanding general of the Marines in China three years later.

General Smith had won an enduring place in the hearts of all Marines for his magnificent leadership as well as resourceful generalship during the Inchon-Seoul and Chosin Reservoir campaigns.
Marines of April 1951, he paid them this tribute in retrospect:

“The unit commanders and staff of the Division deserve great credit for the manner in which they planned and conducted the operations which resulted in blunting the Chinese counteroffensive in our area. In my opinion, it was the most professional job performed by the Division while it was under my command.”[36]

The night of 25-26 April passed in comparative quiet for the Marines. A few CCF probing attacks and occasional mortar rounds were the extent of the enemy’s activity. All Marine units had now reached the modified Line KANSAS, but General Van Fleet desired further withdrawals because the enemy had cut a lateral road.

IX Corps also directed that the 1st Marine Division be prepared on the 26th to move back to Chunchon, where it would defend along the south bank of the Soyang until service units could move out their large supply dumps. The Division was to tie in on the right with the lower extension of the Hwachon Reservoir, and contact was made in that quarter with the French battalion of the 2d Infantry Division, X Corps. On the Marine left flank the 5th Cavalry of the 1st Cavalry Division had relieved elements of the British Commonwealth Division.

Marine regimental officers met with Colonel Bowser, G-3, to plan the continued withdrawal. It was decided that four infantry battalions—1/1, 2/1, 3/5, and 3/7—were to take positions on the west bank of the Pukhan to protect the Mojin bridge and ferry sites while the other units crossed. The execution of the plan went smoothly, without enemy interference. After all other Marine troops were on the east side, 3/7 disengaged last of all and forded the chest-deep stream as a prelude to hiking to Chunchon.[37]

The enemy was kept at a discreet distance throughout the night by continuous artillery fires supplemented by ripples from Captain Eugene A. Bushe’s Battery C, 1st 4.5” Rocket Battalion. An acute shortage of trucks made it necessary for most of the troops to hike. Then came the task of organizing the new Division defenses on a line running northeast and southwest through the northern outskirts of Chunchon (Map 10). Planning continued meanwhile for further withdrawals to positions astride the Hongchon-Chunchon MSR.[38]

It was apparent by this time that the enemy had been badly mauled on the IX Corps front. The Communists were now making a supreme effort to smash through in the I Corps area and capture Seoul. It was believed that they had set themselves the goal of taking the city by May Day, the world-wide Communist holiday.

In this aspiration they were destined to be disappointed. They tried to work around the Eighth Army’s left flank by crossing the river Han to the Kimpo Peninsula, but air strikes and the threat of naval gunfire frustrated them. Another flanking attempt 35 miles to the southeast met repulse, and before the end of the month it was evident that the Chinese Reds would not celebrate May Day in Seoul.

Generally speaking, the Eighth Army had kept its major units intact and inflicted frightful losses on the enemy while trading shell-pocked ground for Chinese lives. The night of 27-28 April saw little activity on the IX Corps front, adding to the evidence that the enemy had shot his bolt. The next day the 1st Marine Division, along with other Eighth Army forces, continued the withdrawal to the general defensive line designated NO NAME Line (Map 10). Further withdrawals were not contemplated, asserted the IX Corps commander, who sent this message to General Thomas:

“It is the intention of CG Eighth Army to hold firmly on general defense line as outlined in my Operation Plan 17 and my message 9639, and from this line to inflict maximum personnel casualties by an active defense utilizing artillery and sharp armored counterattacks. Withdrawal south of this line will be initiated only on personal direction of Corps commander.”[39]

FEAF placed the emphasis on armed reconnaissance or interdiction flights for Marine aircraft during the last few days of April. 1st MAW pilots reported the killing or wounding of 312 enemy troops on the 29th and 30th, and the destruction of 212 trucks, 6 locomotives, and 80 box cars. On the other side of the ledger, the Wing lost a plane a day during the first eight days of the CCF offensive. Of the fliers shot down, five were killed, one was wounded seriously but rescued by helicopter, and two returned safely from enemy-held territory.[40]

The shortage of vehicles slowed the withdrawal of Marine ground forces, but by the 30th the 5th
Marines, KMC Regiment, and 7th Marines were deployed from left to right on NO NAME Line. The 1st Marines went into reserve near Hongchon. On the Division left was the reorganized 6th ROK Division, and on the right the 2d Infantry Division of X Corps.[41]

Nobody was in a better position to evaluate Marine maneuvers of the past week than Colonel Bowser, the G-3, and he had the highest praise. “Whereas the Chosin withdrawal was more spectacular than the April ‘retrograde,’” he commented seven years later, “the latter was executed so smoothly and efficiently that a complex and difficult operation was made to look easy. The entire Division executed everything asked of it with the calm assurance of veterans.”[42]
UN estimates of enemy casualties ranged from 70,000 to 100,000. The Fifth Phase Offensive was an unmitigated defeat for the Communists so far, but EUSAK G-2 officers warned that this was only the first round. Seventeen fresh CCF divisions were available for the second.

General Van Fleet called a conference or corps commanders on 30 April to discuss defensive plans. In the reshuffling of units the 1st Marine Division was placed for the third time in eight months under the operational control of X Corps, commanded by Lieutenant General Edward M. Almond. The Marines were to occupy the western sector of X Corps after its boundary with IX Corps had been shifted about 12 miles to the west.

Van Fleet put into effect a reshuffling of units all the way across the peninsula in preparation for the expected renewal of the CCF offensive. Thus on 1 May the UN line was as follows from left to right:

**US I Corps**—1 ROK Division, 1st Cavalry Division and 25th Infantry Division in line; the 3d Infantry Division and British 29th Brigade in reserve;

**US IX Corps**—British 27th Brigade, 24th Infantry Division, 5th and 6th ROK Divisions and 7th Infantry Division in line; the 187th Airborne RCT in reserve;

**US X Corps**—1st Marine Division, 2d Infantry Division, 5th and 7th ROK Divisions;

**ROK III Corps**—9th and 3d Divisions;

**ROK I Corps**—Capitol Division and ROK 11th Division.

“I don’t want to lose a company—certainly not a battalion,” Van Fleet told the corps commanders. “Keep units intact. Small units must be kept within supporting distance. . . . Give every consideration to the use of armor and infantry teams for a limited objective counterthrust. For greater distances, have ready and use when appropriate, regiments of infantry protected by artillery and tanks.”

From the foxhole to the command post a confident new offensive spirit animated an Eight Army which only four months previously had been recuperating from two major reverses within two months. The Eighth Army, in short, had been welded by fire into one of the finest military instruments of American military history; and the foreign units attached to it proved on the battlefield that they were picked troops.

With the Hwachon dam now in enemy hands, the Communists had the capability of closing the gates, thus lowering the water level in the Pukhan and Han rivers to fording depth. As a countermeasure, EUSAK asked the Navy to blast the dam. It was a difficult assignment, but Douglas AD Skyraiders from the *Princeton* successfully torpedoed the flood gates on 1 May.

An atmosphere of watchful waiting prevailed during the next two weeks as the Marines on NO NAME Line improved their defensive positions and patrolled to maintain contact with the enemy. Eighth Army evolved at this time the “patrol base” concept to deal with an enemy retiring beyond artillery range. These bases were part of a screen, called the outpost line of resistance (OPLR), established in front of the MLR. Their mission was to maintain contact with the enemy by means of patrols, give warning of an impending attack, and delay its progress as much as possible.

When it came to artillery ammunition, the 11th Marines found that it had progressed from a famine to a feast. Where shells had recently been rationed because of transport difficulties, the Eighth Army now directed the cannoneers along NO NAME Line to expend a unit of fire a day. The 11th Marines protested, since the infantry was seldom in contact with the enemy. One artillery battalion submitted a tongue-in-cheek report to the effect that the required amount of ammunition had been fired “in target areas cleared of friendly patrols.” The requirement
was kept in force, however, until the demands of the renewed CCF offensive resulted in another ammunition shortage for the 11th Marines.

Marine tanks were directed by Division to use their 90mm rifles to supplement 11th Marine howitzers in carrying out Corps fire plans. The tankers protested that their tubes had nearly reached the end of a normal life expectancy, with no replacements in sight. This plaint did not fall upon deaf ears at Corps Headquarters and two Army units, the 96th AFA Battalion and 17th FA Battalion, were assigned to fire the deep missions. [47]

Eighth Army staff officers concluded that the enemy would launch his next effort in the center. Intelligence, according to General Van Fleet, “had noted for some 2 weeks prior to the May attack that the Chinese Communists were shifting their units to the east.” Nevertheless, the blow fell “much farther east than [was] expected.” [48]

Although the east offered the best prospects of surprise, a rugged terrain of few roads imposed grave logistical handicaps on the enemy. Moreover, UN warships dominated the entire eastern littoral. Despite these disadvantages, an estimated 125,000 Chinese attacked on the morning of 16 May 1951 in the area of the III and I ROK Corps between the U.S. 2d Infantry Division and the coast. Six CCF divisions spearheaded an advance on a 20-mile front that broke through the lines of the 5th and 7th ROK Divisions. Pouring into this gap, the Communists made a maximum penetration of 30 miles that endangered the right flank of the U.S. 2d Infantry Division.

General Van Fleet took immediate steps to stabilize the front. In one of the war’s most remarkable maneuvers he sent units of the 3d Infantry Division, then in reserve southeast of Seoul, on a 70-mile all-night ride in trucks to the threatened area. [49]

The 1st Marine Division was not directly in the path of the enemy advance. During the early morning hours of 17 May, however, an enemy column made a thrust that apparently was intended as an end-run attack on the left flank of the 2d Infantry Division. Avoiding initially the Chunchon-Hongcheon highway, Chinese in estimated regimental strength slipped behind the patrol base set up by a KMC company just west of the MSR (Map 12).

For several days Colonel Nickerson and his executive officer, Lieutenant Colonel Raymond G. Davis, had been apprehensive over the security of this road on which the 7th Marines depended for logistical support. On the afternoon of the 17th they pulled back Lieutenant Colonel Bernard T. Kelly’s 3/7 (less Company G) to establish a blocking position, generally rectangular in shape, at the vital Morae-Kogae pass on the Chunchon road. This move was not completed until sunset and George Company did not rejoin the battalion until midnight, so that the enemy probably had no intelligence of the new position. The main road ran along a shelf on one shoulder of the pass, but the Chinese avoided it and came by a trail from the northwest (Map 12).

The surprise was mutual. A platoon of D/Tanks, a Weapons Company platoon, and an Item Company platoon, defending the northern end of the perimeter, opened up with everything they had. A desperate fire fight ensued as the enemy replied with a variety of weapons—mortars, recoilless rifles, satchel charges, grenades, and machine guns.

Two CCF soldiers were killed after disabling a Marine tank by a grenade explosion in the engine compartment. A satchel charge knocked out another tank, and the enemy made an unsuccessful attempt to kill a third by rolling up a drum of gasoline and igniting it.

Captain Victor Stoyanow’s Item Company, at the critical point of the thinly stretched 3/7 perimeter, was hard-pressed. The enemy made a slight penetration into one platoon position but was repulsed by a counterattack that Stoyanow led. Marine infantry and tanks were well supported by artillery that sealed off the Chinese column from the rear. The action ended at daybreak with the routed enemy seeking only escape as Marine artillery and mortars continued to find lucrative targets. Air did not come on station until about 1030, when it added to the
slaughter. Scattered enemy groups finally found a refuge in the hills, leaving behind 82 prisoners and 112 counted dead. Captures of enemy equipment included mortars, recoilless rifles, and Russian 76mm guns and machine guns. Friendly losses were 7 KIA and 19 WIA.[50]

1st MAW squadrons were kept busy furnishing close air support to the 2d Infantry Division and the two ROK divisions hit by the enemy’s May offensive. Because of the patrolling Marine sector, the OYs of VMO-6 took over much of the task of controlling air strikes. They flew cover for the infantry-tank patrols, and in the distant areas controlled almost as many air strikes as they did artillery missions. From the 1st to the 23d of May, VMO-6 observers controlled 54 air strikes involving 189 UN planes—159 Navy and Marine F4Us, F9Fs, and ADs, and 30 Air Force F-80s, F-84s, and F-51s. About 40 percent of the aircraft controlled by the OYs were non-Marine planes.[51]

On the 18th the 1st Marine Division, carrying out X Corps orders, began a maneuver designed to aid the U.S. 2d Infantry Division on the east by narrowing its front. The 7th Marines pulled back to NO NAME Line to relieve the 1st Marines, which side-slipped to the east to take over an area held by the 9th Infantry. The 5th Marines then swung around from the Division left flank to the extreme right and relieved another Army regiment, the 38th Infantry. This permitted the 2d Infantry Division to face east and repulse attacks from that direction.

By noon on 19 May the enemy’s renewed Fifth Phase Offensive had lost most of its momentum as CCF supplies dwindled to a trickle along a tenuous line of communications. That same day, when Colonel Wilbur S. Brown took over the command of the 1st Marines from Colonel McAlister, all four Marine regiments were in line—from left to right, the KMCs, the 7th Marines, the 1st Marines, and the 5th Marines. A new NO NAME Line ran more in a east-west direction than the old one with its northeast to southwest slant. Thus in the east of the Marine sector the line was moved back some 4,000 yards while remaining virtually unchanged in the west.

Enough enemy pressure was still being felt by the 2d Infantry Division so that General Van Fleet ordered a limited offensive by IX Corps to divert some of the CCF strength. While the rest of the 1st Marine Division stood fast, the KMC Regiment advanced with IX Corps elements.

At the other end of the line the Marines had the second of their two fights during the CCF offensive. Major Morse L. Holliday’s 3/5 became engaged at 0445 on the 20th with elements of the 44th CCF Division. Chinese in regimental strength were apparently on the way to occupy the positions of the Marine battalion, unaware of its presence.

This mistake cost them dearly when 3/5 opened up with every weapon at its disposal while requesting the support of Marine air, rockets, and artillery. The slaughter lasted until 0930, when the last of the routed Chinese escaped into the hills. Fifteen were taken prisoner and 152 dead were counted in front of the Marine positions.[52]

From 20 May onward, it grew more apparent every hour that the second installment of the CCF Fifth Phase Offensive had failed even more conclusively than the first. The enemy had only a narrow penetration on a secondary front to show for ruinous casualties. Worse yet, from the Chinese viewpoint, the UN forces were in a position to retaliate before the attackers recovered their tactical balance. The Eighth Army had come through with relatively light losses, and it was now about to seize the initiative.
ONLY FROM THE AIR could the effects of the UN counterstroke of May and June 1951 be fully appreciated. It was more than a CCF withdrawal; it was a flight of beaten troops under very little control in some instances. They were scourged with bullets, rockets, and napalm as planes swooped down upon them like hawks scattering chickens. And where it had been rare for a single Chinese soldier to surrender voluntarily, remnants of platoons, companies, and even battalions were now giving up after throwing down their arms.

There had been nothing like it before, and its like would never be seen in Korea again. The enemy was on the run! General Van Fleet, after his retirement, summed up the double-barreled Chinese spring offensive and the UN counterstroke in these words:

“We met the attack and routed the enemy. We had him beaten and could have destroyed his armies. Those days are the ones most vivid in my memory—great days when all the Eighth Army, and we thought America too, were inspired to win. In those days in Korea we reached the heights.”[1]

Communist casualties from 15 to 31 May were estimated by the Eighth Army at 105,000. This figure included 17,000 counted dead and the unprecedented total of some 10,000 prisoners, most of them Chinese Reds taken during the last week of the month in frantic efforts to escape. Such results were a vast departure from past occasions when Mao Tse-tung’s troops had preferred death to surrender.

In all probability, only the mountainous terrain saved them from a complete debacle. If the Eighth Army had been able to use its armor for a mechanized pursuit, it might have struck blows from which the enemy could not recover. As it was, the Communists escaped disaster by virtue of the fact that a platoon could often stand off a company or even a battalion by digging in and defending high ground commanding the only approach. Every hill was a potential Thermopylae in this craggy land of few roads.

It was the misfortune of the 1st Marine Division to have perhaps the least lucrative zone of action in all Korea for the peninsula-wide turkey shoot. A chaos of jagged peaks and dark, narrow valleys, the terrain alone was enough to limit an advance. Even so, the Marines inflicted 1,870 counted KIA casualties on the Communists in May and captured 593, most of them during the last eight days of the month.

General Almond congratulated the Division for its accomplishment of “a most arduous battle task. You have denied [the enemy] the opportunity of regrouping his forces and forced him into a hasty retreat; the destruction of enemy forces and materiel has been tremendous and many times greater than our own losses.”[2]
Priority of air support on 31 August was assigned to the two KMC battalions. They jumped off in column against light to moderate resistance, with Hill 924 as their first objective. Mine fields gave the KMCs more trouble at first than scattered NKPA mortar and machine gun fire. Forward movement and maneuver were restricted as 1/KMC passed through 3/KMC at 1445 to continue the attack against stiffening resistance.

On the right 3/7 also encountered light resistance in the morning which increased as the assault troops neared the objective. The slopes of Hill 702 proved to be heavily mined, and forward elements of 3/7 were hit by a concentration of mortar and artillery fire.

East of the river, on the regimental right flank, where Objective 1 had been occupied without a fight, 1/7 supported the attack of 3/7 with mortar fire. Both 3/7 and the KMCs were within 1,000 yards of their objectives late in the afternoon when a halt was called for the day. Casualties had been light, thanks in large measure to excellent air and artillery support.

When the attack was resumed on 1 September, 3/KMC moved through positions of 3/7 to reach, a ridgeline on the flank of the regimental objective. While 3/KMC advanced from the northeast, 1/KMC closed in from the southeast. Both battalions took heavy losses from enemy mines and mortars as well as machine guns and automatic weapons fired from hidden bunkers. The converging attack made slow but steady progress, however, until one company of 3/KMC drove within 200 meters of the top of Hill 924 at 1700. Even so, it took four more hours of hard fighting to secure the objective. That evening 2/KMC was relieved of its defensive responsibility along the KANSAS Line by 3d Battalion, 5th Marines, enabling the KMC battalion to join in the attack.

Throughout the day 3/7 slugged it out in the vicinity of 702 with an NKPA battalion. Four counterattacks were launched from Hill 602, the northeastern fork of YOKE Ridge. More than 500 men were employed in this effort, some of them penetrating briefly into 3/7 positions. Two air strikes, called by patrols of 1/7 from across the river, helped to break up the main NKPA attack, and the 11th Marines (Colonel Custis Burton, Jr.), poured in a deadly concentration of artillery fire. Lieutenant Colonel B. T. Kelly’s battalion continued to be engaged until dusk.

The tenacity of the NKPA defense was demonstrated at the expense of the KMCs when they were driven from the top of Hill 924 by a surprise enemy counterattack at midnight. The Korean Marines came back strongly at daybreak and a terrific fight ensued before the North Koreans were in turn evicted shortly before noon. As a measure of the artillery assistance rendered, Major Gordon R. Worthington’s 1st Battalion, 11th Marines, fired 1,682 rounds of 105 ammunition in support of the KMC’s during the 24 hours ending at 1800 on 2 September. During the same period Lieutenant Colonel William McReynold’s 3/11 fired 1,400 rounds in support of 3/7. The other battalions of the Marine artillery regiment, reinforced by the 196th, 937th, and 780th Field Artillery Battalions, USA, brought the number of rounds to a grand total of 8,400 for this 24-hour period.

After the securing of Hill 924, the 2d Battalion of the KMC Regiment passed through the 1st and 3d Battalions to spearpoint the attack west toward Hill 1026. In the zone of 3/7, an NKPA counterattack was repulsed at 0700 on 2 September. Two hours later George Company, supported by How Company with mortar and machine gun fire, moved out to resume the attack on Hill 602. Lieutenant Colonel B. T. Kelly ordered his battalion heavy machine guns set up in battery to deliver overhead supporting fires.

In slightly less than two hours the Marines of 3/7 swept the crest of Hill 602, securing Division Objective 2. Three company-size enemy counterattacks were repulsed before the North Koreans withdrew to the north at
The 2d KMC Battalion fought its way to a point within 800 yards of Hill 1026 before dusk. So aggressive and persistent was the NKPA defense that several light enemy probing attacks were launched during the night of 2-3 September, not only against forward Marine elements but also against the 5th Marines units on the KANSAS Line, 5 miles to the rear. The front was where you found it.

While 3/7 constructed emplacements and obstacles on Hill 602, the KMCs continued their attack on the morning of 3 September toward Hill 1026. With the extending of the 7th Marines zone to the left to decrease the width of the KMC front, 2/7 was brought up from regimental reserve to help cover a new sector that included Hill 924.

The attack led by 2/KMC collided with a large-scale enemy counterattack. It was nip and tuck for 3 1/2 hours before the North Koreans broke, but, by midmorning, the KMCs were in possession of Division Objective 3 and consolidating for defense. They were not a moment too soon in these preparations, for the enemy counterattacked at 1230 and put up a hot fight for two hours before retiring.

This action completed the battle for Corps Objective YOKE. At 1800 on 3 September, the 1st Marine Division was in full possession of the HAYS Line, dominating the entire northern rim of the Punch-bowl (Map 18). Reports from the U.S. 2d Infantry Division and 5th ROK Division, attacking in sectors to the west, indicated that the pressure exerted by the Marines was assisting these units. Large gains had been made on the west side of the Punchbowl against comparatively light resistance.

On 4 September, with all objectives consolidated, 1st Marine Division units patrolled northward from defensive positions. Plans were being formed for the second phase of the Division attack—the advance to seize the next series of commanding ridgelines, 4,000 to 7,000 yards forward of the present MLR.

The victory in the four-day battle had not been bought cheaply. A total of 109 Marine KIA and 494 WIA (including KMCs) was reported. NKPA casualties for the period were 656 counted KIA and 40 prisoners.

As evidence that the enemy had profited by the breathing spell during the Kaesong truce talks, it was estimated that NKPA artillery fire in the Punchbowl sector almost equalled the firepower provided by the organic Marine artillery and the guns of attached U.S. Army units. NKPA strength in mortars and machine guns also compared favorably with that of Marines.
The 187th Airborne Regimental Combat Team, released from IX Corps reserve, arrived in the Hongchon area on 21 May and took a position between the 1st Marine Division on the left and the 2d Infantry Division on the right. Two days later X Corps gave the Marines the mission of securing the important road center of Yanggu at the eastern end of the Hwachon Reservoir (Map 13). Elements of the 2d Infantry Division, with the 187th Airborne RCT attached, were meanwhile to drive northeast to Inje after establishing a bridgehead across the river Soyang. From Inje the 187th (reinforced) would continue to advance northeast toward its final objective, Kansong on the coast. After linking up with I ROK Corps, the Army regiment might be able to pull the drawstring on a tremendous bag of prisoners—all the CCF forces south of the Inje-Kansong road. There was, however, a big “if” in the equation. The Communists were falling back with all haste, and it was a question whether the bag could be closed in time.

The 1st Marine Division jumped off at 0800 on 23 May with the 1st and 5th Marines abreast, the 1st on the left. Both regiments advanced more than 5,000 yards against negligible opposition. During the course of this attack the 1st Marines experimented by calling an air strike in the hope of detonating an entire mine field. The results were disappointing. Live mines were blown to new locations, thus changing the pattern, but few exploded. The 7th Marines was relieved on the 23d by elements of the 7th Infantry Division (IX Corps) and moved to the east for employment on the Marine right flank. The KMC Regiment, relieved by other IX Corps units, went into Division reserve.

Captain John A. Pearson, commanding Item Company, could observe the enemy on Hill 1051, holding up the attack with flanking fire. He directed air and artillery on the crest and on the Communists dug in along the southeastern slopes. Soon the enemy troops were seen retiring northward. This eased the pressure on the center, and Captain Samuel S. Smith’s Dog Company managed to work forward and gain the summit of Hill 883 by 1300. Tanks moved up in support and at midnight Colonel Hayward reported his portion of the Division objective secured.

The 7th Marines, moving forward in the right rear of the 5th, veered to the left and drove into the center of the Division zone, reaching the southern bank of the Soyang by nightfall on the 26th. That same day 2/7 overran an enemy ammunition dump and took 27 CCF prisoners, some of them wounded men who had been left behind. The captured material included 100,000 rounds of small-arms ammunition, 12,000 rounds of mortar ammunition, 1,000 rounds of artillery ammunition, 6,000 pounds of explosive charges, and 9,000 hand grenades. Five U.S. trucks and jeeps were “released to higher headquarters.” Two CCF trucks, two mules, and a horse were “integrated into the battalion transportation system and profitably employed thereafter.”

The 187th Airborne RCT reported on the 24th that its advance was being held up by increasing enemy
resistance. It was already evident that the CCF flight had frustrated the plan of cutting off decisively large numbers in the X Corps zone. Air observation established, however, that hundreds of Chinese Reds had merely escaped from the frying pan into the fire. By fleeing westward along the south shore of the Hwachon Reservoir, they stumbled into the IX Corps zone. There the remnants of whole units surrendered, in some instances without striking a blow. Along the route they were pitilessly attacked by UN aircraft. 1st MAW units had never before known such good hunting as during the last week in May 1951.

Despite the “murky instrument weather” of 27 May the all-weather fighters of VMF(N)-513 reported the killing of an estimated 425 CCF soldiers. Two F7F pilots killed or wounded some 200 Chinese Reds in the I Corps zone. On the following day the 1st MAW claimed a total of 454 KIA casualties inflicted on the enemy.

Estimates of enemy dead by pilots are likely to be over-optimistic, but there can be no doubt that UN aircraft slaughtered the fleeing Communists in large numbers. Only poor flying weather saved the enemy from far worse casualties. So intent were the Chinese on escape that they violated their usual rule of making troop movements only by night. When the fog and mist cleared briefly, Marine pilots had glimpses of CCF units crowding the roads without any attempt at concealment. Napalm, bombs, and machine guns left heaps of dead and wounded as the survivors continued their flight, hoping for a return of fog and mist to protect them.
As the Marine ground forces advanced, they found fewer and fewer Chinese Reds opposing them. The explanation was given by a prisoner from the 12th Division, V Corps, of the North Korean People’s Army (NKPA). His unit had the mission, he said, of relieving troops in the Yanggu-Inje area and conducting delaying actions. The purpose was to allow CCF units to escape a complete disaster and dig in farther north. The North Koreans, in short, were being sacrificed in rear guard delaying actions in order that the Chinese Reds might save their own skins.

U.S. interrogators asked NKPA prisoners why they put up with such treatment. The answer was that they couldn’t help themselves. The Chinese had impressed them into service, armed them, and trained them after the NKPA collapse in the fall of 1950. They were under the thumb of political commissars holding life and death authority over them. Any NKPA soldier suspected of trying to shirk his duty or escape was certain to be shot like a dog. At least the man on the firing line had a chance to come out alive; the man who defied the system had none.

This attitude accounts to a large extent for the many occasions when NKPA troops literally resisted to the last man in delaying actions. Marines in general, judging by their comments, considered the Chinese Red the better all-around soldier; but they credited the Korean Red with more tenacity on the defensive.

Because of the stubborn NKPA opposition in East Korea, the Eighth Army staff and command gave some thought to the possibility of an amphibious operation in the enemy’s rear by the 1st Marine Division. Plans were discussed on 28 May for a landing at Tongchon (Map 8). The Marines were to drive southward along the Tongchon-Kumhwa road to link up with the IX Corps units attacking toward the northeast along the same route. After meeting, the two forces would systematically destroy the pocketed enemy units. It was decided that 6 June would be D-day. And then, to the great disappointment of Generals Thomas and Almond, the plan was suddenly cancelled by EUSAK on 29 May after a single day’s consideration.\[10\]

Another scheme for cutting off large enemy forces was abandoned on 28 May when the 187th Airborne got as far as Inje. Most of the CCF units having escaped, this regiment was given a new mission of securing the high ground to the north of Inje.

During the last five days of May the 5th and 7th Marines continued to advance steadily. On the morning of the 31st the 7th faced the task of breaking through a stubbornly contested pass leading into Yanggu. With a battalion on each ridge leading into the pass, Colonel Nickerson found it a slow yet precarious prelude to get the men down. Adding to their trials were some 500 enemy 76mm and mortar shells received by the regiment.

General Van Fleet, an onlooker while visiting the 7th Marines OP, shook his head wonderingly. “How did you ever get the men up those cliffs?” he asked Colonel Nickerson.

The answer was short and simple. “General,” said the regimental commander, “they climbed.”

As the day wore on, Nickerson called for what his executive officer, Lieutenant Colonel Davis, described as “a through-the-middle play. A company of tanks [Company C, 1st Tank Battalion, commanded by Captain Richard M. Taylor] was launched up the road with infantry on foot hugging the protective cover of the steep road embankments. As the tanks drew fire, the infantry could spot the source and . . . quickly cleaned the enemy out. This rapid thrust caused the enemy defenders to flee as fire was poured into them from our center force as well as the flank attackers.”\[11\]

By nightfall on the 31st the 7th Marines had control of Yanggu, its airfield, and the hills surrounding that
burnt-out town. The 5th Marines had reached a point 6,000 yards northeast of Yanggu, astride the north-south ridgeline between that road center and Inje.

Losses for the 1st Marine Division in May added up to 75 KIA, 8 DOW, and 731 WIA. The ratio of wounded to killed, it may be noted, is more than nine-to-one. This proportion, so much more favorable than the usual ratio, rose to an even more astonishing 15-to-1 in June. Various explanations have been offered, one of them being the spirit of cool professionalism of Marines who had learned how to take cover and not expose themselves to needless risks. But this doesn’t account for the unusual ratio, and it may perhaps be concluded that the Marines were simply lucky in this operation.

The comparatively low death rate has also been credited in part to the alertness with which Marine officers adapted to changing situations. War is a grim business on the whole, but Colonel Wilburt S. Brown took an amusing advantage of enemy propaganda accusing Americans of all manner of crimes against humanity. At the outset he had requested colored smoke shells for signaling. But upon learning from POW interrogations that NKPA soldiers were terrified by what they believed to be frightful new gases, the commanding officer of the 1st Marines had an added reason for using green, red, and yellow smoke. Unfortunately, Lieutenant Colonel Merritt Adelman, commanding officer of the 2d Battalion, 11th Marines, soon had to inform him that the inadequate supply was exhausted.[12] It was never renewed during Brown’s command.

Major David W. McFarland, commanding officer of VMO-6, also exploited enemy ignorance. His original purpose in initiating night aerial observation by OY planes was to improve artillery accuracy. Soon he noticed that the mere presence of an OY overhead would silence enemy artillery.

“The aerial observer,” McFarland explained, “was often unable to determine the location of enemy artillery even though he could see it firing, because he would be unable to locate map coordinates in the dark—that is, relating them to the ground. Fortunately, this fact was unknown to the enemy. From their observation of the OYs in the daytime, they had found that the safest thing to do whenever an OY was overhead was to take cover. This they continued to do at night.”[13]

VMO-6 also put into effect an improvement of 1st Marine Division aerial photographic service at a time when the 1st MAW photo section had missions all over the Korean front. Lieutenant Colonel Donald S. Bush, commanding officer of the section, is credited with the innovation of mounting a K-17 camera on an OY. Only a 6-inch focal length lens could be installed on one of these small planes. This meant that in order to get the same picture as a jet the OY must fly at half the altitude. The pilot would be in more danger but haze problems were reduced.

The experiment was an immediate success. The Division set up a photo laboratory near the VMO–6 CP for rapid processing and printing. A helicopter stood by for rapid delivery to the units concerned.[14]

Not all the variations in tactics were innovations. Lieutenant Colonel Bernard T. Kelly, commanding officer of 3/7, revived an old device on 31 May by using indirect automatic weapons fire with good effect. Four water-cooled heavy machine guns provided long range (2,600 yards) plunging fires on the reverse slopes of hills in support of his leading elements during the final attack on Yanggu.[15]
Delay and uncertainty were still the two great stumbling blocks to adequate air support for the ground forces under the JOC control system. Marine officers contended that infantry units sometimes took unnecessary casualties as a consequence. Worse yet, there were occasions when the expected planes did not arrive at all.

Statistics kept by the 1st MAW and Navy during the spring of 1951 upheld these conclusions. During the Inchon-Seoul operation, the average delay in receiving air support had been 15 minutes as compared to 80 minutes in May and June of 1951. Approximately 35 minutes of this time was required to process the request through JOC. And only 65 to 70 percent of the sorties requested were ever received by Marine ground forces.[16]

Generals Shepherd and Harris had discussed the problem during the early spring of 1951 with General Partridge of the Fifth Air Force. Several compromises were reached, and for brief periods the 1st Marine Division received more air support than it could use. Unfortunately, these periods were at times of the least need. When the chips were down, the old delays and uncertainties reappeared. General Partridge commented:

“The 1st Marine Air Wing was assigned for operational control by the Fifth Air Force and it was used just as any of the other units of the Fifth were employed, that is, in support anywhere along the battle front where it appeared to be most urgently needed.

“In every action such as took place in Korea when the resources and especially the air resources are far too few, ground commanders inevitably feel that they are being shortchanged. They are trying to accomplish their objectives under the most difficult circumstances and with the minimum number of casualties and they want all the assistance from the air that they can get. I am sure I would feel the same in similar circumstances. However, there was never enough air support to satisfy everyone and I was most unhappy that this was the case.

“From time to time I was called upon to denude one section of the front of its close air support in order to bolster some other area where the situation was critical. Sometimes this worked to the advantage of the Marines as in the case of operations near the Chosin Reservoir in December 1950, and at other times it worked to their disadvantage. In retrospect, however, I would estimate that, day in and day out, the Marine ground units had more air support than any other division which was engaged.”[17]

With all due respect to General Partridge, Marine officers felt that the discussion should not be limited merely to the amount of air support. It was not so much the delay and unreliability under JOC control that constituted the problem as the Marines saw it. On 24 May, while on one of his periodic tours of the Far East, General Shepherd brought up the matter of CAS with General Ridgway. He agreed with the UN commander in chief that it would be improper for a Marine division to expect the exclusive support of a Marine air wing in Korea. The main difficulty, he reiterated, lay in the slowness and uncertainty of getting air support when needed.[18]

At this time an extensive reshuffling of Air Force commanders was in progress. On 21 May General Partridge relieved Lieutenant General George E. Stratemeyer, CG FEAF, who had suffered a heart attack. Partridge in turn was relieved by Major General Edward J. Timberlake, who assumed temporary command of Fifth Air Force until Major General Frank E. Everest arrived to take over a few days later.

The 1st MAW was also undergoing changes in command. General Harris was relieved on 29 May by his deputy commander, Major General Thomas J. Cushman. Brigadier General William O. Brice, just arrived from the States, became the Wing’s new deputy commander.

After several “get acquainted” discussions, the new Air Force and 1st MAW generals agreed on a plan to
cut down delays in air support. It was a simple solution: the aircraft were merely to be brought nearer to the Marine ground forces. This was to be managed by moving the MAG-12 forward echelon from K-16 at Seoul to K-46 at Hoengsong (Map 16). The new field, if such it could be called, was nothing more than a stony dirt strip. But it was only 40 miles, or a 10- to 15-minute flight, from the firing line. The first missions from the new field were flown on 27 May. VMFs-214 and -323 kept an average of 12 Corsairs at K-46 thereafter, rotating them from K-1.[19]

On the surface this seemed to be a practical solution, especially after a four-plane alert was established at K-46 for use by the 1st Marine Division when needed. DEVASTATE BAKER was permitted to put in an alerting call directly to the field. The rub was that JOC must be called in order to make the original request. Before the planes could take off, the MAG-12 operations officer at the field was likewise required to call JOC and confirm the fact that the mission had been approved.

Communications were poor at first for the 40 miles between the field and the front. DEVASTATE BAKER got better results by calling 1st MAW Headquarters at K-1, 140 miles south, and having the Wing call K-46 and JOC. This meant delays such as General Thomas described in a letter to General Almond. On 29 May, he said, the 5th and 7th Marines were up against severe enemy fire in their attack. The TACPS had enemy targets under observation and were ready to control any aircraft they could get. The Marines requested 92 sorties and received 55. Of these, 20 were flown by Corsairs or Panther Jets, and 35 by Air Force jets and Mustangs. And though 55 sorties were considerably less than optimum air support, practically all arrived from two to four hours late. On the firing line the enemy’s resistance, concluded General Thomas, was broken not by air power but by Marine riflemen.[20]

On other days the new plan made a more encouraging showing. There was, for instance, the occasion when the OYs discovered an enemy regiment near the 1st Marine Division right flank. DEVASTATE BAKER called the 1st MAW direct on 31 May for 16 fighters as soon as possible. Wing called JOC for approval to launch the flight and put in a call to K-46 to alert the planes. In just 48 minutes after the initial call from DEVASTATE BAKER, 16 pilots had jumped into their flight gear at K-46, had been briefed, and were airborne on what proved to be a timely strike with excellent results.[21]

A new tactic of night air support was introduced late in May when Marine R4D transports were outfitted to operate as flare planes. Not only did these unarmed aircraft light up targets along the front lines for the VMF (N)-513 night fighters; they were also on call for use by the 1st Marine Division. Later, on 12 June, the Navy provided the 1st MAW with PB4Y-2 Privateers for the nightly illumination missions.[22]
During the heyday of the battleship, every midshipman dreamed of some glorious future day when he would be on the bridge, directing the naval maneuver known as crossing the T. In other words, his ships would be in line of battle, firing converging broadsides on an enemy approaching in column. Obviously, the enemy would be at a disadvantage until he executed a 90° turn under fire to bring his battered ships into line to deliver broadsides of their own.

It was a mountain warfare variation of crossing the T that the Korean Reds were using against the Marines. Whenever possible, the enemy made a stand on a hill flanked by transverse ridgelines. He emplaced hidden machine guns or mortars on these ridgelines to pour a converging fire into attackers limited by the terrain to a single approach. It meant that the Marines had to advance through this crossfire before they could get in position for the final assault on the enemy’s main position.

There were two tactical antidotes. One was well directed close air support. The other was the support of tanks advancing parallel to enemy-held ridgelines and scorching them with the direct fire of 90mm rifles and 50 caliber machine guns.

On 1 June the two regiments in assault, the 5th and 7th Marines, found the resistance growing stiffer as they slugged their way forward toward Line KANSAS (Map 15). Within an hour after jumping off, 2/5 was heavily engaged with an estimated 200 enemy defending Hill 651 tenaciously. At noon, after ground assaults had failed, a request was put in for air support. Four VMF-214 planes led by Captain William T. Kopas bombed and strafed the target. This attack broke the back of NKPA opposition, and 2/5 moved in to seize the objective.[23]

Early on the morning of the 2d, Lieutenant Colonel Hopkins’ 1/5 moved out to secure the southwest end of the long ridge line that stretched northeast from Yanggu (Map 15) and afforded a natural avenue of approach to Taem-san and the KANSAS line on the southern rim of the Punchbowl. The Marine advance got under way at 0915. After two four-plane strikes by VMF-214 and a “preparation” by 1/11 and the 1st Rocket Battery, the battalion attacked across a valley with Baker Company (First Lieutenant William E. Kerrigan) on the right and Charlie Company (First Lieutenant Robert E. Warner) on the left to seize the terminal point on the ridge leading to Hill 610 (Map 15). Able Company (Captain John L. Kelly) followed Charlie as Company C (Captain Richard M. Taylor) of the 1st Tank Battalion moved into supporting position.

Converging fire from transverse ridges had the Marine riflemen pinned down until the tankers moved along the valley road running parallel. Direct 90mm fire into NKPA log bunkers enabled C/1/5 to advance to the forward slope of Hill 610. The enemy fought back with machine guns and grenades while directing long-range rifle fire against 2/5, attacking along a parallel ridge across the valley.

By 1945 the last bunker on Hill 610 had been overrun. Meanwhile, 2/5 had pushed ahead some 5,000 yards to the northeast.

The capture of Hill 610 will never have its glorious page in history. It was all in the day’s work for Marines who could expect a succession of such nameless battles as they clawed their way forward. That night the weary men of 1/5 were not astonished to receive a counterattack in the darkness. It was all part of the job, too. After driving off the unseen enemy, the new tenants of Hill 610 snatched a few hours of sleep. They were on their feet again at dawn, ready to go up against the next key terrain feature in a rocky area that seemed to be composed
entirely of Hill 610s.

The next knob along the ridge happened to be Hill 680, about 1,000 yards to the northeast. VMF-214 planes from K-46 napaled and strafed the enemy, and Able Company led the 1/5 attack. During the air strike the Koreans had taken to cover in their holes on the reverse.

They were back in previously selected forward slope firing positions by the time the Marines came in sight. Close-in artillery support enabled the attackers to get within grenade range and seize the last NKPA bunker by 1400. Able Company pushed on.

Midway from Hill 680 to the next knob, Hill 692, the advance was stopped by enemy small-arms and mortar fire. An air strike was requested on the bunkers holding up the assault, but fog closed in and the planes were delayed more than two hours.

At 1600, after Able Company had renewed the assault without air support, four VMF-214 Corsairs started a target run controlled by a liaison plane from VMO-6. The foremost Marines, almost at the summit by this time, had to beat a hasty retreat to escape the napalm and 500-pound bombs being dumped on Hill 692. Fortunately, there were no friendly casualties. Some were caused indirectly, however, when hostile mortar fire caught Marines withdrawing along a connecting saddle to the comparatively safe reverse slope of Hill 680. When the danger passed, Able Company returned to the attack on 692 and routed the remaining defenders.[24]

The 1st Marine Division made it a policy thereafter that only the forward air controllers on the ground were to direct close air support along the front. Control of air strikes farther behind the enemy lines was reserved for the OYs.
Sightings of enemy vehicles during the month of May totaled 54,561—seven times those of January. This increase prompted General Van Fleet to ask the Fifth Air Force and Seventh Fleet to initiate a program of cutting off all possible enemy road traffic between the latitudes 38° 15' N and 39° 15' N.

Earlier in 1951 the interdiction program had been aimed chiefly at the enemy’s rail lines and bridges. The Communists had countered by using more trucks. The new program, known as Operation STRANGLE, was to be concentrated against vital road networks. Flight leaders were briefed to search out critical spots where truck and ox cart traffic could be stopped. Roads skirting hills were to be blocked by landslides caused by well placed bombs. Where cliffside roads followed the coast, as they so often did in East Korea, naval gunfire started avalanches of dirt and rocks which sometimes reached a depth of 20 feet. Roads running through a narrow ravine or rice paddy could often be cut by a deep bomb crater.[25]

The 1st MAW was given the assignment of stopping traffic on three roads in East Korea—from Wonsan to Pyonggang, from Kojo to Kumhwa, and along a lateral route linking the two (Map 16). Since Kumhwa and Pyonggang were two of the three Iron Triangle towns, these roads were of more than ordinary importance.

The Communists reacted to the new UN pressure by increasing their flak traps. UN pilots were lured with such bait as mysterious lights, tempting displays of supposed fuel drums, or damaged UN aircraft that called for investigation. The cost of the UN in planes and pilots showed an increase during the first two months of Operation STRANGLE. From 20 May to the middle of July, 20 Marine planes were shot down. Six of the pilots returned safely; two were killed and 12 listed as missing.[26]

The demands of Operation STRANGLE added to the emphasis on interdiction and armed reconnaissance by the Fifth Air Force. Statistics compiled by the 1st Marine Division for 1-17 June 1951 show that 984 close air support sorties had been requested and 642 received—about 65 percent. The ratio of Marine planes to other UN aircraft reporting to the Division was about four to one.[27]

The statistics of the 1st MAW indicate that out of a total of 1,875 combat sorties flown from 1 to 15 June 1951, about a third were close air support—651 day CAS and 19 night CAS. Of this number, 377 sorties went to the 1st Marine Division, which received more than half. Next in line were the 7th Infantry Division (41 sorties), the 3d Infantry Division (31 sorties), and the 25th Infantry Division (28 sorties).[28]

The effect of Operation STRANGLE on the enemy must be left largely to conjecture. There can be no doubt that it added enormously to the Communists’ logistical problem. It is equally certain that they solved these problems to such an extent that their combat units were never at a decisive handicap for lack of ammunition and other supplies. Operation STRANGLE, in short, merely added to the evidence that interdictory air alone was not enough to knock a determined adversary out of the war, as enthusiasts had predicted at the outbreak of hostilities in Korea.
The East-Central Front

Chapter 7. Advance to the Punchbowl
KMC Regiment Launches Night Attack

On the night of 1-2 June, Colonel Nickerson was notified that the 7th Marines would be relieved next day by the 1st Marines, which would pass through and continue the attack. The 1st Marines moved into assembly areas at 0630. Lieutenant Colonel Homer E. Hire, commanding officer of 3/1, went forward at 0800 with his command group to make a reconnaissance of the area. As his staff paused for a conference in a supposedly enfiladed location, a Communist mortar barrage hit the group by complete surprise. The artillery liaison officer was killed instantly. His assistant, two forward observers, four company commanders, the S-3 and 32 enlisted men were wounded. So hard hit was the battalion that its attack had to be postponed until the following day.[29]

The first Division objective was designated X-RAY. 2/1 had the mission of taking the high point, Hill 516 (Map 15). Across the valley 3/1 advanced up a parallel ridge. Planes from VMF-214 and VMF-323 cleared the way for the securing of this battalion’s objective at 1900. Aircraft from these same squadrons also aided 2/1 in over-running the last opposition on Hill 516, where 80 NKPA dead were counted.[30]

The KMC regiment, in reserve only two days, was ordered to relieve the 5th Marines on 4 June. This would permit Colonel Hayward to shift over to the right flank, thus extending the 1st Marine Division zone 5,000 yards to the east with a north-south boundary of the Soyang river valley (Map 15). The purpose of this maneuver was to free 2d Infantry Division troops for a mission of mopping up in the X Corps rear area.

Three Marine regiments were now in line, the 1st on the left, the KMCs in the center, the 5th on the right, and the 7th in reserve. A reshuffling of units also took place in the 1st MAW when VMF-312 ended its tour of duty on the CVL Bataan. The replacement involved a change of carriers when VMF-323 was alerted for west coast duty on the CVE Sicily a week later.[31]

Ahead of the KMCs stretched the most difficult of the regimental zones of action—the main mountain range extending northeast from Yanggu to Hill 1316, known to the Koreans as Taeam-san. Along these ridges the Chinese had placed North Korean troops with orders to “hold until death.”[32]

From the air, the ground in front of the KMCs resembled a monstrous prehistoric lizard, rearing up on its hind legs. The 1st Battalion was to ascend the tail and the 2d the hind legs. The two would meet at the rump, Hill 1122 (Map 15). From this position the backbone ran northeast to the shoulders, Hill 1218. Still farther northeast, along the neck, was the key terrain feature—Taeam-san, the head of the imagined reptile.

The 1st and 2d Battalions ran immediately into the opposition of an estimated NKPA regiment. In an effort to outflank the enemy, the 3d Battalion ran northeast over to the east and attacked up the ridge forming the forelegs. Seizure of the shoulders (Hill 1218) would render enemy positions along the back, rump, hind legs, and tail untenable. Major General Choe Am Lin, commanding the 12th NKPA Division, was quick to recognize the tactical worth of this height and exact a stiff price for it.

That the KMCs could expect little mercy from their fellow countrymen was demonstrated when the bodies of ten men reported missing were found. All had been shot in the back of the head.

For five days the fight raged with unabated fury. The terrain limited the advance to a narrow front, so that the attack resembled the thrust of a spear rather than a blow from a battering ram. When the KMCs did gain a brief foothold, the enemy launched a counterattack.

At 2000 on 10 June, after six days of relatively unsuccessful fighting, the KMCs decided to gamble on a night attack. This had heretofore been the enemy’s prerogative, and the Korean Reds were caught unaware in a devastating surprise. Most of the NKPA troops were attending to housekeeping duties at 0200 when all three
KMC battalions fell upon them like an avalanche. Hill 1122, the rump of the lizard, was seized; and under pressure the enemy withdrew from the shoulders. This made the fall of Taeam-san inevitable, and only mopping-up operations remained for KMCs who had suffered more than 500 casualties. General Thomas sent the regiment this message on 12 June:

“Congratulations to the KMC on a difficult job well done. Your seizure of objectives on the KANSAS Line from a determined enemy was a magnificent dash of courage and endurance. Your courageous and aggressive actions justify our pride in the Korean Marines.”

Logistical support of the three regiments in the attack presented a problem to the Division supply echelons. The KMCs in the center and the 1st Marines on the left could be supplied over a narrow, winding mountain road that scaled a high pass before dropping down into an east-west valley giving relatively easy access to the center and left. The 5th Marines had to receive its supplies over another mountain road leading north of Inje, then west into the regimental zone.[33]

Both of the Division supply routes needed a good deal of engineering work before trucks could move over them freely. Landslides were frequent and many trucks skidded off the slippery trail while rounding the hairpin turns.

The 1st Marines moved northward on north-south ridges, and the KMCs in the center had spurs leading to their objectives. It was the misfortune of the 5th Marines to have a topographical washboard effect ahead. The axis of advance was south to north, but the ground on the way to the final objectives on the KANSAS Line consisted of five sharply defined ridgelines running northwest to southeast. Instead of attacking along the ridgelines Colonel Hayward’s men had to climb some 1,200 feet, then descend 1,200 feet, five separate times while covering an advance of 8,000 yards (Map 15).

Artillery fired for more than two hours on the morning of 6 June to soften defenses on the next regimental objective, Hill 729. An air strike was attempted but fog with low-hanging clouds forced the flight leader to abort the mission. At 1300 the assault battalions moved across the LD against small-arms and machine gun fire. The fog lifted sufficiently at 1400 to allow four F9Fs from VMF-311 to deliver an effective attack. And by 2100 both 2/5 and 3/5 were consolidating their positions on the first of the five ridges.

This assault is typical of the fighting as the 5th Marines took the remaining four ridges, one by one, in a slugging assault on an enemy defending every commanding height. The advance resolved itself into a pattern as the Korean Reds probed the Marine lines at night and continued their tough resistance by day. For 10 days the regiment plugged ahead, step by step, with the support of artillery, air, mortars, and 75mm recoilless rifles.[34]
Chapter 7. Advance to the Punchbowl
1st Marines Moves Up to BROWN Line

On the left flank, the 1st Marines devoted several days to consolidating its position and sending out reconnaissance patrols in preparation for an attack on the ridge just north of the Hwachon Reservoir. From this height the Communists could look down the throats of Colonel Brown’s troops.

From 6 to 8 June, Lieutenant Colonel Hire’s 3d Battalion led the attack against moderate but gathering resistance. A gain of 1,500 yards was made on the right flank by 2/1, commanded by Major Clarence J. Mabry after the evacuation of Lieutenant Colonel McClellan, wounded on the 5th. On the left, Lieutenant Colonel Robley E. West’s 1/1 held fast as the 5th ROK Regiment, 7th ROK Division, X Corps, passed through on its way to a new zone of action to the west.

Early on the 9th, as 2/1 was preparing to launch its attack, an intense artillery and mortar barrage fell upon the lines, followed by the assault of an estimated NKPA company. The Korean Reds were beaten off with heavy losses. And though the enemy fire continued, 2/1 jumped off on schedule, fighting for every inch of ground. Colonel Brown committed 1/1 on the left. It was an all-day fight for both battalions. After taking one ridge in the morning, it was used as the springboard for an assault on the second objective. The weapons of the regimental Anti-Tank Company built up a base of fire that enabled this ridge to be secured by 1600.

The 5th ROK Regiment took its objectives by the morning of the 10th. The 1st Marines provided additional fire support by diverting all its antitank guns and tank rifles to the aid of the ROKs.

The pressure, which had been building up for several days, reached a new high on 10 June. Late that morning Colonel Brown met General Almond and the Division G-3, Colonel Richard G. Weede, at a conference. By 1100 the entire 2d Battalion of the 1st Marines was committed. On the left, Lieutenant Colonel West had to hold up the 1st Battalion until 1330, when the ROKs completed the occupation of the high ground dominating the route of advance.

For several hours it appeared that the Marines had met their match this time. A tenacious enemy defended log bunkers expertly, refusing to give ground until evicted by grenade and bayonet attacks. At every opportunity the Communists counterattacked. So effective was their resistance that at dusk the two Marine battalions were still short of their objectives in spite of casualties draining the strength of both units.

Colonel Joseph L. Winecoff, commanding officer of the 11th Marines, remained on the telephone for hours with Colonel Brown. He gave all possible artillery support, not only of his own regiment but also nearby Corps units. By nightfall, with the attacking battalions still held up, the atmosphere was tense in the regimental forward CP. Lieutenant Colonel Adelman, commanding the supporting artillery battalion, 2/11, helped to coordinate air strikes and artillery with Lieutenant Colonel Donald M. Schmuck, executive officer of the 1st Marines, and the air liaison officers.

“Everything I had ever hoped to see in years of teaching such co-ordination of fires seemed to come true that night,” commented Colonel Brown at a later date. “I stayed in my regular CP until I was sure all I could do through Winecoff was done, and then went forward to see the finale. It was a glorious spectacle, that last bayonet assault. In the last analysis 2/1 had to take its objective with the bayonet and hand grenades, crawling up the side of a mountain to get at the enemy. It was bloody work, the hardest fighting I have ever seen.”[35]

This was no small tribute, coming from a veteran officer whose combat service included three major wars, not to mention Nicaragua and China. It was nearly midnight before Mabry’s battalion took its final objective. Casualties for the day’s attack were 14 KIA and 114 WIA exclusive of slightly wounded, who were
neither counted nor evacuated. West’s battalion, which seized Hill 802, overlooking the Soyang River, had won its all-day fight at a cost of 9 KIA and 97 WIA.

Unfailing support had been given throughout the daylight hours by aircraft of VMF-214. VMF(N)-513 took over on the night shift, and planes came screeching in as late as 2200 to attack moonlit targets a hundred yards ahead of the leading infantry elements.

The 1st Marines had outfought and outgamed a tough enemy. Never again, after the 10th, was the NKPA resistance quite as determined. The 3d Battalion led the other two during the next few days. There was plenty of fighting for all three, but the result was never again in doubt.

By the late afternoon of 14 June the regiment was in position on the BROWN Line. This was the unofficial name for an extension of the KANSAS Line some 3,000 yards north. It had been requested by Colonel Brown when he realized that positions along the KANSAS Line were completely dominated by the next ridge to the north.

The change made necessary a continued advance by the KMCs on the right to tie in with the 1st Marines. The so-called BROWN Line was then officially designated the modified KANSAS Line.

Chapter 7. Advance to the Punchbowl
7th Marines Committed to the Attack

For several days General Thomas had been concerned over the heavy casualties suffered by his command. In order to give greater impetus to the Division effort, he decided to commit the reserve infantry regiment, the 7th Marines (minus one battalion held back as Division reserve) to complete the occupation of the modified KANSAS Line.

On 8 June, Colonel Nickerson’s regiment (minus 3/7) moved into an assembly area between the 1st Marines and the KMCs, ready to attack in the morning. Ahead stretched a narrow but difficult zone of advance up the valley of the So-chon River (Map 15). Tank-infantry patrols went forward to select favorable positions for the jumpoff, and engineers worked throughout the daylight hours to clear the valley roads of mines. Despite their best efforts, 10 Marine tanks were lost to mines during the first week.[36]

As the two battalions advanced on the morning of the 9th they came under heavy enemy artillery and mortar fire. Nevertheless, they secured Hill 420 and dug in before nightfall.

On the 10th Rooney’s 1/7 advanced along the ridgeline to support the attack of Meyerhoff’s 2/7 up the valley floor. The maneuver was carried out successfully in spite of NKPA automatic weapons and mortar opposition. Contact was established with KMC forward units at dusk. Sixteen POWs were taken by the 7th Marines and 85 North Korean dead were counted on the objectives.

The two battalions continued the attack throughout the next week. The 3d Battalion of the 7th Marines remained General Thomas’ sole Division reserve until he committed it on the afternoon of 18 June.

As the newcomers got into the fight just in time for the enemy’s all-out effort to defend the steep east-west ridge marking the BROWN Line. The nature of the terrain made maneuver impossible—a frontal assault was the only answer. Defending the ridge was the 1st Battalion, 41st Regiment, 12th NKPA Division. Waiting on the reverse slope, the enemy launched a counterattack when the Marines neared the crest. George Company, commanded by First Lieutenant William C. Airheart, met five successive repulses at the hands of superior numbers. Item Company (First Lieutenant Frank A. Winfrey) also took part in the fifth assault, and both companies held their ground near the summit when the fighting ended at dusk. They expected to resume the attack at dawn, but the enemy had silently withdrawn during the night. All three 7th Marines battalions occupied their designated positions on the BROWN Line without further interference.

By early afternoon on the 20th, the Division was in complete control of the modified KANSAS Line and construction of defenses began in earnest. The next day the 1st Marines and KMCs extended their right and left flanks respectively and pinched out the 7th Marines, which dropped back into reserve.

Thus ended two months of continual hard fighting for the 1st Marine Division, beginning on 22 April with the great CCF offensive. Few and far between were the interludes of rest for troops which saw both defensive and offensive action. After stopping the enemy’s two drives, they launched a month-long counterstroke that had the enemy hardpressed at times for survival. Only the ruthless sacrifice of NKPA troops in defensive operations enabled the Chinese Reds to recover from the blows dealt them in late May and early June.

The cost in Marine casualties had been high. Throughout the entire month the 1st Marines alone suffered 67 KIA and 1,044 WIA, most of them being reported during the first 2 weeks. This was a higher total than the regiment incurred during the Chosin Reservoir operation. Reflecting on the caliber of these men, their regimental commander had this to say:

“They were war-wise when I got command; I contributed nothing to their training because they were in
battle when I joined them and I left them when they came out of the lines for a rest. They used cover, maneuvered beautifully, used their own and supporting arms intelligently, were patient and not foolhardy; but when it came to the point where they had to rely on themselves with bayonet, hand grenade and sheer guts, they could and did do that too. I have long ago given up telling people what I saw them do on many occasions. Nobody believes me, nor would I believe anyone else telling the same story of other troops.”[37]

Colonel Brown, of course, paid this tribute to the troops of his regiment. But it is safe to say that any commanding officer of the 1st Marine Division would have felt that these sentiments applied equally to his own men. All the combat Marines of the 60-day battle had shown themselves to be worthy heirs of the traditions of Belleau Wood, Guadalcanal, Iwo Jima, and the Chosin Reservoir.

Chapter 8. The Truce Talks at Kaesong

It is not likely that the date 25 June 1951 meant much to the Marines on the KANSAS Line. In all probability few of them recalled that it was the first anniversary of the Communist aggression which started the war in Korea.

Since that surprise attack on a June Sunday morning in 1950, some 1,250,000 men had been killed, wounded or captured in battle—a million of them from the Communist forces of Red China and the North Korean People’s Republic. This was the estimate of J. Donald Kingsley, Korean reconstruction agent general for the United States. He reckoned the civilian victims of privation, violence, and disease at two million dead. Another three million had been made homeless refugees.[1]

On 25 June 1951 the Communists held less territory by 2,100 square miles than they occupied when they began their onslaught with an overwhelming local superiority in arms and trained troops. Losses of Communist equipment during the first year included 391 aircraft, 1,000 pieces of artillery, and many thousands of machine guns, automatic rifles, and mortars. North Korea, formerly the industrial region of the peninsula, lay in ruins. Cities, factories, and power plants had been pounded into rubble.

In short, the thrifty conquest planned by the Koreans and their Soviet masters had backfired. Not only had the Communist offensives of April and May been stopped; the United Nations forces had rebounded to win their greatest victory of the war’s first year. While X Corps was advancing to the Punchbowl, other major Eighth Army units had also gained ground. Perhaps the most crushing blow was dealt by I Corps in its attack on the Iron Triangle. Units of two U.S. infantry divisions fought their way through extensive mine fields into Chorwon and Kumhwa on 8 June. By the end of the month, I Corps held defensive positions about midway between the base and apex of the strategic triangle that had been the enemy’s main assembly area for the troops and supplies of his spring offensives.[2]

On the east-central front, units of IX Corps pushed within 10 miles of Kumsong while I ROK Corps advanced along the east coast to Chodo-ri. Thus the UN forces occupied the most favorable line they had held since the great CCF offensive early in January. From the mouth of the Imjin this line ran northeast to the middle of the Iron Triangle, eastward across the mountains to the southern rim of the Punchbowl, then northeast to the coast of Chodo–ri (Map 14).
Chapter 8. The Truce Talks at Kaesong
Communists Ask for Truce Talks

The first anniversary of the Korean conflict was overshadowed two days earlier by the news that the Communists had taken the initiative in proposing truce talks. The suggestion was made in a New York radio address of 23 June by a Soviet delegate to the United Nations—Jacob Malik, Foreign Minister of the USSR. On the 25th the idea was unofficially endorsed in a radio broadcast by the Chinese Communist government. UN officials immediately indicated their willingness to discuss preliminary terms. The outcome was an agreement that representatives of both sides would meet on 7 July at Kaesong, then located between the opposing lines in west Korea.

Why had the Communists been first to ask for a truce conference? Both Generals Van Fleet and Almond believed that the answer might have been traced to military necessity rather than any genuine desire for peace. “I felt at that time that the Chinese Communists and the North Korean armies were on the most wobbly legs that they had been on to that date,” said General Almond when interviewed shortly after his retirement in 1953. “They were punch drunk and ineffective, and I, personally, thought at that time that it was the time to finish off the effort.”[3]

Raymond Cartier, representing a Paris newspaper, probably spoke for most of the correspondents at the front when he suspected that the proposal for truce talks “was possibly just a crafty trick devised by the Communists to gain time and build up again the badly mauled Chinese armies.”[4]

It might have been recalled at this time that the Communists had used truce negotiations for military purposes during the Chinese Civil War. In 1945 and 1946, when prospects for a Nationalist victory were bright, the enemy took advantage of American peace efforts by agreeing on several occasions to meet for truce conferences. And while prolonging the talks by all manner of subterfuges, the Communists profited from the breathing spells by regrouping their forces and planning new offensives. Their final triumph, in fact, owed in no small measure to interludes when the conference table served a military purpose.[5]

History repeated itself in June and July 1951 when events of the next two years were shaped by the political decisions of a few summer weeks. Indeed, Admiral C. Turner Joy believed that the war was actually prolonged rather than shortened as a result of the negotiations.

“Military victory was not impossible nor even unusually difficult of achievement,” wrote the Senior Delegate and Chief of the UN Command delegation at the truce talks. “Elimination of the artificial restraints imposed on United States forces, coupled with an effective blockade on Red China, probably would have resulted in military victory in less time than was expended on truce talks.”[6]

Mao Tse-tung’s forces had lost face by the failure of their long heralded 5th Phase Offensive. They had been badly beaten during the UN counteroffensive. Pretensions of high CCF morale could no longer be maintained when troops were laying down their arms without a fight. Nor could charges of low UN morale be supported when the fighting spirit of the Eighth Army was being shown every day at the front.

In view of these circumstances, it would appear that the Communists had poor cards to play against United Nations trumps at a truce conference. But they played them so craftily, with such a sly sense of propaganda values, that the victors of the May and June battles were soon made to appear losers begging for a breathing spell.

To begin with, the Chinese knew that the mere public announcement of the possibility of truce talks would have a tremendous appeal in the United States, where the war was unpopular. Pressure would be brought
upon Washington to meet the enemy immediately for negotiations. And while a cease fire remained even a remote prospect, American public opinion would demand a slackening of offensive military operations with their attendant casualties.

From the outset it was apparent that the United Nations Command was no match for the Communists in low cunning. The UN suggested, for instance, that the truce teams meet on the Danish hospital ship Jutlandia. Here, surely, was neutral ground, since the Danes had no combat forces in Korea. Moreover, the ship was to be anchored in Wonsan harbor within range of CCF shore batteries.

The Reds won the first of many such concessions with their refusal. They insisted that the talks be held at Kaesong, and the UN Command let them have it their way. The reason for the Communist decision was soon made evident. Kaesong was in the path of the advancing Eighth Army, which meant that an important road center would be immune from attack. And though the ancient Korean town was originally in no man’s land, the Communists soon managed to include it within their lines.

All delegates were requested to display white flags on their vehicles for identification. Communist photographers were on hand to snap countless pictures of UN delegates which convinced Asia’s illiterate millions at a glance that the beaten United Nations had sent representatives to plead for terms. If any doubt remained, other photographs showed the unarmed UN delegates being herded about Kaesong by scowling Communist guards with burp guns.

No detail of the stage setting was too trivial to be overlooked. Oriental custom prescribes that at the peace table the victors face south and the losers face north. Needless to add, the UN delegates were seated at Kaesong with a view to enhancing Communist prestige.

Some of the propaganda schemes bordered on the ridiculous. “At the first meeting of the delegates,” Admiral Joy related, “I seated myself at the conference table and almost sank out of sight. The Communists had provided a chair for me which was considerably shorter than a standard chair. Across the table, the senior Communist delegate, General Nam II, protruded a good foot above my cagily diminished stature. This had been accomplished by providing stumpy Nam II with a chair about four inches higher than usual. Chain-smoking Nam II puffed his cigarette in obvious satisfaction as he glowered down on me, an obviously torpedoed admiral. This condition of affairs was promptly rectified when I changed my foreshortened chair for a normal one, but not before Communist photographers had exposed reels of film.”

[8]
The war went on, of course, during the negotiations. But the tempo was much reduced as the UN forces consolidated their gains, and the enemy appeared to be breaking off contact at every opportunity. Generally speaking, the Eighth Army had shifted from the offensive to the defensive. In keeping with this trend, the 1st Marine Division occupied the same positions for nearly three weeks after fighting its way to the BROWN Line.

On 22 June all three infantry regiments were directed to establish battalion-size patrol bases on the BADGER Line—1 ½ to 2 ½ miles forward of their present positions. In the 1st Marines sector 3/7 was attached to Colonel Brown and ordered to relieve 3/1 on the left flank of the regiment. The purpose was to free 3/1 to move forward and establish a patrol base on Hill 761, about 1,000 yards forward of the MLR.

While these arrangements were being carried out, General Almond called at the 1st Marines CP. He expressed surprise that the establishment of patrol bases was being contemplated by EUSAK when some of the front-line units were still in contact with the enemy.\[9\]

Execution of these orders was accordingly suspended. The following day, however, Division again alerted the infantry regiments to be prepared to occupy patrol bases on order. This was by direction of Corps, which in turn had been directed by EUSAK.

The Marine regimental and battalion commanders were not happy about this turn of affairs. The patrol base concept had been tried out early in May, during the lull between the enemy’s two offensives, and found wanting. In theory it was a good means of keeping contact with an enemy who had pulled back out of mortar and light artillery range. In practice the enemy had shown that he could bypass patrol bases at night for probing attacks on the MLR. The bases themselves ran the constant risk of being surrounded and overwhelmed. As a final objection, a regiment was often deprived of its reserve battalion, which was the logical choice for such duty.

In compliance with orders, 3/1 moved out on 26 June and established a patrol base on Hill 761. This position received such a bombardment of large caliber mortar fire that Colonel Brown pulled the battalion back to the MLR the following day.\[10\]

General Thomas gave his opinion of the patrol base concept after his retirement when he summed it up as “an invitation to disaster.”\[11\] He could only carry out orders, however, when Corps directed early in July that a patrol base be established on Taeu-san.

This 4,000-foot peak, located some 2 miles north of the MLR, afforded excellent observation eastward into the Punchbowl and westward into the So-chon River Valley. The enemy, of course, was aware of these advantages and had made Taeu-san a strongpoint of his MLR. This was clearly indicated by the stiff resistance encountered by KMC reconnaissance patrols.\[12\]

Nevertheless, Division G–3 was suddenly alerted on the morning of 7 July by the Marine Liaison Officer with X Corps to expect an order directing the setting up of a patrol base on Taeu-san the following day. The KMC Regiment, warned by telephone, had little time for planning and organizing an attack. Since the KMCs could not be relieved for responsibility for their sector, it was necessary to form a composite battalion of the three companies that could most conveniently be relieved. Unfortunately, they contained a large proportion of recruits, and the battalion commander was a new arrival.

There were two avenues of approach. One was along an open, fairly level, ridgeline that extended from the KMC positions. The other called for a descent into the stream-bed generally paralleling the MLR and a steep climb up a ridge leading directly north to Taeu-san.
Both routes of approach were used. One company advanced on the right by way of the stream bed and two companies took to the ridge-line on the left. The assault was to have been preceded by air strikes and an artillery bombardment, but bad weather kept the aircraft grounded.

The attack jumped off at 1030 on 8 July. All three companies were greeted by enemy mortar and machine gun fire that pinned down the company on the right. The two companies on the left won a foothold on Hill 1100, about a mile in front of Ta-eu-san. Here the advance ground to a halt.

These KMCs dug in for the night and repulsed a series of counter-attacks. On the morning of the 9th the KMC regimental commander, Colonel Kim Tai Shik, committed the entire 1st Battalion to the attack on the right. It had no better success than the company of the day before. Meanwhile, the two companies were driven off Hill 1100.

Colonel Gould P. Groves, senior liaison officer with the KMCs, recommended that the remnants of the two companies be withdrawn. The 1st Battalion had managed to capture Hill 1001, but it was plain that the KMC regiment could not come close to Ta-eu-san. On 12 July the 1st Marine Division informed X Corps that the position held by the KMCs just forward of Hill 1001 fulfilled the requirements of an advance patrol base. As far as the Marines were concerned, the sad affair was permitted to rest there.

As evidence of the valiant effort made by the KMCs, they suffered 222 casualties. A sequel to this story was written late in July after the 2d Infantry Division relieved the Marines. X Corps again ordered the capture of Ta-eu-san as a patrol base, and it required the commitment of the major part of the division to accomplish the task.

Although the fighting had not been severe for other units of the 1st Marine Division during the first two weeks of July, the casualties (including KMC losses) were 55 KIA, 360 WIA, and 22 MIA—a total of 437. Relief of the Marines was completed by the 2d Infantry Division on 15 July, and by the 17th all units were on their way back to assembly areas in X Corps rear.

It was the second time since the landing of the 1st Provisional Marine Brigade on 2 August 1950 that the Marines had been away from the firing line for more than a few days.
Chapter 8. The Truce Talks at Kaesong

Red Herrings at Kaesong

It is not changing the subject to switch to the truce talks. Kaesong was actually a second UN front. After the preliminaries had been settled—most of them to Communist satisfaction—the UN delegation, headed by Admiral Joy, held a first meeting on 10 July 1951 with his opposite number, NKPA Major General Nam II, and the Communist truce team. This was the first of the talks that were to drag on for two dreary years.

Nam II, a Korean native of Manchuria, born in 1911, had been educated in Russia and had served with the Soviet army in World War II. His career in Korea began when he arrived as a captain with Soviet occupation troops in 1945. Rising to power rapidly, he took a prominent part in the creation of a Soviet puppet state in North Korea.

An atmosphere of sullen hatred surrounded the UN delegates at Kaesong. The CCF sentinel posted at the entrance to the conference room wore a gaudy medal which he boasted had been awarded to him “for killing forty Americans.” When Admiral Joy tried to send a report to General Ridgway, the messenger was turned back by armed Communist guards. These are samples of the indignities heaped upon the UN truce team. After several UN delegates were threatened by guards with burp guns, Joy protested to Nam II, “demanding prompt elimination of such crudities.”

In order to give their battered armies more time for recuperation, the Communist delegates met every issue with delaying tactics. They proved themselves to be masters of the ancient art of dragging a red herring across the trail. Going back on their word did not embarrass them in the least if they found it to their advantage to renege.\[14\]

The truce negotiations were bound to have an immediate effect on military operations. In the United States it seemed a pity to newspaper readers that American young men should have to die in battle at a time when headlines were hinting at the possibility of peace. Mothers wrote to their congressmen, requesting a halt in Korean operations.

General Van Fleet minced no words after his retirement when he commented on the effect of the truce talks on strategy:

“Instead of getting directives for offensive action, we found our activities more and more proscribed as time went on. Even in the matter of straightening out our lines for greater protection, or capturing hills when the Reds were looking down our throats, we were limited by orders from the Far East Command in Japan, presumably acting on directives from Washington.”\[15\]

It was the opinion of Admiral Joy that more UN casualties were suffered as a consequence of the truce talks than would have resulted from an offensive taking full advantage of Red China’s military weaknesses in June 1951.

“As soon as armistice discussions began,” he wrote, “United Nations Command ground forces slackened their offensive preparations. Instead, offensive pressure by all arms should have been increased to the maximum during the armistice talks. . . . I feel certain that the casualties the United Nations Command endured during the two long years of negotiations far exceed any that might have been expected from an offensive in the summer of 1951.”\[16\]
Most of the 1st Marine Division units were in X Corps reserve during the last two weeks of July 1951. The 5th Marines, however, remained in “ready reserve” near Inje under the operational control of X Corps. Toward the end of the month, the 3d Battalion of the 11th Marines passed to the operational control of the 2d Infantry Division. Meanwhile, the 7th Marines and Division Reconnaissance Company displaced to the Yanggu area to aid in the construction of defensive positions and undergo special training.

1st Marine Division Training Order 2-51, covering the period from 23 July to 20 August 1951, provided for a stiff daily schedule of general and specialist military subjects. The objectives were “to maintain each individual and unit of the command at a very high state of proficiency, while emphasizing rest and rehabilitation of personnel and repair and maintenance of equipment . . . . A minimum of 33% of all technical training was to be conducted at night, stressing individual and unit night discipline. Formal unit schools and on-the-job training were utilized extensively.”[17]

Most thoroughly covered among general military subjects were mechanical training, capabilities, tactical employment, and firing of individual and infantry crew-served weapons. Lectures and demonstrations were combined to good effect with instruction in basic infantry tactics.

“The prescribed periods of physical conditioning,” the Division report continued, “were supplemented by extensive organized athletic programs outside of training hours, resulting in the maintenance of a high degree of battle conditioning of all hands. Special military subjects encompassed the whole range of activities necessary to the accomplishment of any mission assigned the Division. Building from the duties of the individual Marine, infantry, artillery, engineer, and tank personnel progressed through small unit employment and tactics as it applied to their respective specialities. Meanwhile such diverse training as tank repair and watch repair was conducted in various units.”[18]

Fortification came in for study after a tour of the KANSAS Line by Major General Clovis E. Byers, who had relieved General Almond as X Corps commander. He listed the weaknesses he found and directed that “special attention [be] given to the thickness, strength and support of bunker overheads, and to the proper revetting and draining of excavations.”[19]

The KMC Regiment received the most thorough training it had ever known, considering that it had been in combat continually since its organization. Each of the Division’s three other regiments sent four training teams consisting of a lieutenant, an NCO, and an interpreter to the KMCs on 22 July. The 12 teams had orders to remain until 20 August. Attached to various KMC companies, they acted as advisers for the entire training period.

Another organization of Koreans that had won its way to favorable recognition was the newly formed Civil Transport Corps (CTC). The use of indigenous labor for logistical purposes dated back to March 1951, when the Eighth Army’s advance was slowed up by supply problems caused by muddy roads. Plans were made to equip and train a special corps to assist in the logistical support of combat troops in areas inaccessible to normal motor transportation.[20]

The project began on 29 March with 720 South Koreans—all from the Korean National Guard—being assigned to I Corps. Plans were developed for a Civil Transport Corps of 82 companies, each containing 240 men. The CTC was to be supervised by a staff of eight U.S. Army officers and four enlisted men under the operational control of the Transportation Section, EUSAK.

The ROK Army had the added responsibility for logistical support, of hospitalization and medical
services other than emergency treatment in forward areas. Support for the CTC from UN units was to be provided in a manner similar to that in effect for the ROK forces.[21] No difficulty was found in filling the CTC ranks, for the pay meant food and clothing to a Korean and his family.

The Marines were always astonished at the heavy loads the Korean cargadores could carry uphill on their “A-frames,” which looked like sturdy easels with a pair of arm-and-shoulder carrying straps. Humble and patient, these burden bearers were the only means of supply in remote combat areas.
The truce talks continued to be front-page news in August. Some of the more impulsive newspaper and radio commentators hinted at the possibility of a cease fire before the end of summer. As for the Marine command and staff, they were not so optimistic, judging from this sentence in a report:

“All Division units were notified on 14 August that requisitions had been sent to EUSAK for cold weather clothing and equipment.”

The training period afforded an opportunity to glance back over the first year of fighting in Korea and evaluate the results. There could be no doubt that the war’s foremost tactical innovation so far was the combat helicopter. The Marine Corps had taken the lead in its development when VMO–6, made up of OYs and Sikorsky HO3S–1 helicopters in roughly equal numbers, got into action with the 1st Provisional Marine Brigade in the Pusan Perimeter. Brigadier General Edward A. Craig had the historical distinction, insofar as is known, of being the first commanding general to see the advantages of a “chopper” as a command vehicle.

Evacuation of casualties was the principal job of the rotary-wing aircraft, and 1,926 wounded Marines were flown out during the first year. No less than 701 of these mercy flights took place during the three months from 1 April to 30 June 1951, covering the period of the two CCF 5th Phase offensives and the UN counterstroke. By that time the Bell HTL–4, with its built-in litters on both sides sheltered by plexiglas hoods, had taken over most of the evacuation missions from the HO3S–1.

The zeal of the pilots contributed substantially to the successful results. Captain Dwain L. Redalen gave a demonstration of the VMO–6 spirit at the height of the first CCF offensive in the spring of 1951. During the 13 ½ hours from 0600 to 1930 on 23 April, he was in the air constantly except for intervals of loading or unloading casualties. Logging a total of 9.6 flight hours, he evacuated 18 wounded men under enemy fire that left bullet holes in the plexiglas of his HTL–4.[22]

Practically all the helicopter techniques put into effect by VMO–6 had originally been developed by the Marine experimental squadron, HMX–1, organized late in 1947 at Quantico. Despite the enthusiasm for rotary-wing aircraft then prevailing, HMX–1 decided that an observation squadron should combine OYs with helicopters. The wisdom of this conclusion was proved in Korea, where the test of combat showed that both types were needed. The OYs were the superiors at reconnaissance and artillery spot missions, while the helicopters excelled at transportation and liaison and evacuation flights.

VMO–6 as a whole was the only Marine organization linking the ground and air commands. An administrative unit of the 1st MAW, the squadron was under the operational control of the 1st Marine Division.[23]

Thanks to the ability of the helicopter to land “on a dime,” staff liaison missions and command visits were greatly facilitated. The helicopter had become the modern general’s steed, and the gap between staff and line was narrowed by rotary wings.

The importance of wound evacuation missions can hardly be overestimated. Surgeons stressed the value of time in treating the shock resulting from severe wounds. The sooner a patient could be made ready for surgery, the better were his chances of survival. Definitive care had waited in the past until a casualty was borne on a jolting stretcher from the firing line to the nearest road to begin a long ambulance ride. Such a journey might take most of a day, but there were instances of a helicopter evacuee reaching the operation table only an hour after being wounded at the front, 15 or 20 miles away.
Captain J. W. McElroy, USNR, commanding the famous hospital ship *Consolation*, asserted that his experience had “proved conclusively the superiority of the helicopter method of embarking and evacuating casualties to and from the ship.” A helicopter loading platform was installed on the *Consolation* in July 1951, during an overhaul at the Long Beach Naval Shipyards in California. Marine helicopter pilots advised as to landing requirements, and eventually all the hospital ships had similar platforms.

At a conservative estimate, the 1,926 wounded men flown out by VMO–6 helicopters during the squadron’s first year in Korea included several hundred who might not have survived former methods of evacuation.
Another far-reaching tactical innovation was being launched at this time as Lieutenant Commander Frederick J. Lewis (MSC) USN, supervised a joint Army-Navy three-month field test of Marine armored vests made of lightweight plastics.

A glance at the past reveals that body armor had never quite vanished from modern warfare. European cavalry lancers wore steel cuirasses throughout the 19th century. During the American Civil War two commercial firms in Connecticut manufactured steel breastplates purchased by thousands of Union soldiers. So irksome were the weight and rigidity of this protection, however, that infantrymen soon discarded it.

World War I dated the first widespread adoption of armor in the 20th century. The idea was suggested when a French general noted that one of his men had survived a lethal shell fragment by virtue of wearing an iron mess bowl under his beret. France led the way, and before the end of 1915 steel helmets were being issued to all armies on the Western Front.

When the United States entered the war, General John J. Pershing put in a request for body armor. Some 30 prototypes using steel or aluminum plates were submitted but rejected. In every instance the weight and rigidity were such that too high a price in mobility would be paid for protection.[25]

During the 1930’s new possibilities were opened up by developments in lightweight plastics. The Japanese attack at Pearl Harbor interrupted experiments that were not resumed until 1943. Then a new start was made with the formation of a joint Army-Navy committee headed by Rear Admiral Alexander H. Van Kueren and Colonel George F. Doriot.

Wound statistics indicated that the great majority of fatal wounds were received in a comparatively small area of the body. The following table shows the regional frequency:

Table: Regional Frequency of Fatal Wounds

<table>
<thead>
<tr>
<th>Region</th>
<th>Percentage</th>

<tr>
<td>Mortar</td>
<td>20%</td>
</tr>
<tr>
<td>Grenade</td>
<td>10%</td>
</tr>
<tr>
<td>Rifle</td>
<td>10%</td>
</tr>
</tbody>
</table>

Shell, mortar, or grenade fragments caused 60 percent of the fatal wounds, the statistics revealed, with the remainder being charged to rifle or machine gun fire. It was futile to hope for lightweight protection against high-velocity bullets. But researchers hoped that plastic body armor could stop enough shell or mortar fragments to reduce serious wounds to light wounds while preventing light wounds altogether.

Doron and nylon were the materials approved by the joint Army-Navy committee. The first, named in honor of Colonel Doriot, consisted of laminated layers of glass cloth filaments, bonded under heavy pressure to form a thin, rigid slab. That a 1/8-inch thickness could stop and partially flatten a submachine gun bullet with a muzzle velocity of 1,150 feet per second was demonstrated by ballistic tests at a range of eight yards.

The committee recommended 12-ply, laminated, basket-weave nylon for use where flexibility was required. Both the doron and nylon protected the wearer by offering enough resistance to absorb the energy of the missile, which spent itself at the impact. Thus the shock was spread out over too large a surface for a penetration, although the wearer could receive a bad bruise. If a penetration did result from a missile of higher velocity, its effects would be much reduced in severity.

Aircraft pilots and crewmen, who could tolerate more weight than foot-sloggers, were first to benefit. Flak suits and curtains were being manufactured in quantity for airmen by 1944, and the Eighth Air Force claimed a 50 percent reduction in casualties as a result.

The infantry stood most in need of protection. Statistics from 57 U.S. divisions in the European theater of operations during World War II indicated that foot soldiers, comprising 68.5 percent of the total strength, suffered
94.5 percent of the casualties. It was further established that shell or mortar fragments caused from 61.3 to 80.4 percent of the wounds.

Unfortunately, progress lagged for the ground forces, owing to conflicting requirements. Several prototype armored vests were submitted and rejected. The Marine Corps planned to conduct combat tests in the spring of 1945 by providing the ordinary utility jacket with sheaths to hold slabs of doron. A battalion of the 2d Marine Division had been selected to wear the garment on Okinawa, but the experiment was interrupted by the end of the campaign.

The Navy and Marine Corps renewed their research in 1947 at Camp Lejeune. There a new ballistics center, established for the development and evaluation of body armor, was set up by the Naval Medical Field Research Laboratory (NMFRL). Lieutenant Commander Lewis was placed in charge of experiments.

Scientific precision seemed more important than haste in time of peace, and the NMFRL was not ready with an armored vest when Communism challenged the free world to a showdown in Korea. Five hundred of the armored utility jackets of the proposed Okinawa test were available, however, and were air-shipped to the 1st Marine Division during the Inchon-Seoul operation.

Many of them went astray during the sea lift to Wonsan and subsequent Chosin Reservoir operation. Only the 50 garments issued to the Division Reconnaissance Company were worn in combat. And though this unit kept no records, the doron slabs were credited by Major Walter Gall, the commanding officer, with saving several lives.

By the summer of 1951, Lieutenant Commander Lewis and his researchers had designed a new Marine armored vest, weighing about 8 1/2 pounds, combining curved, overlapping doron plates with flexible pads of basket-weave nylon. This garment, according to the official description, was capable of “stopping a .45 caliber USA pistol or Thompson submachine gun bullet; all the fragments of the U.S. hand grenade at three feet; 75 percent of the U.S. 81mm mortar at 10 feet; and full thrust of the American bayonet.”

Only 40 vests were available for field tests in the summer of 1951. Lewis rotated them among as many wearers as possible in the three regiments selected for the test, the 5th Marines and the 23d and 38th regiments of the U.S. 2d Infantry Division. There was, as he saw it, a psychological question to be answered—would body armor win the acceptance of troops in combat? The hackneyed phrase “bullet-proof vest,” for instance, put the wearer in a class with the buyer of a gold brick. Nylon was associated in the minds of the men with alluring feminine attire rather than protection from shell fragments. Finally, there could be no denying that undesired weight had been added, that doron plates hampered movement to some extent, and that nylon pads were uncomfortably warm for summer wear.

Despite these drawbacks, Lewis found that troop acceptance was all that could be asked. The locale of the tests was the Inje area and the approaches to the KANSAS Line in June and early July. “By keeping these few vests almost constantly in use,” the Medical Service Corps officer commented, “the maximum amount of troop wear was obtained. Included in the wide sampling were company aid men, riflemen, BAR men, mortar (60mm) men, radio (backpack type) men—each carrying his basic weapon, ammunition load and a one-meal ration.”

When Lewis returned to Camp Lejeune, he reported “that body armor, protection of some type for the vital anatomic areas, is almost unanimously desired by all combat troops, particularly the combat veteran of several actual fire fights with the enemy.”[26]

Infantry body armor had at last made the transition from a dream to a reality. The M–1951 was put into production by a Philadelphia sportswear firm. And it was estimated that by the spring of 1952 nearly all Marines would be protected by the vest in combat.

Saving of American lives, of course, was a primary consideration. But there was a tactical as well as humanitarian advantage to be gained. For if body armor could reduce fatal and serious wounds by as much as 50 percent, as NMFRL researchers hoped, it would mean that a large percentage of the enemy’s best antipersonnel
weapons had in effect been silenced.

Chapter 8. The Truce Talks at Kaesong
MAG-12 Moves to K-18

There was no respite for 1st MAW while the 1st Marine Division remained in reserve. Operation Strangle was at its height, and interdiction flights called for nearly all the resources of Marine aviation during the summer of 1951.

Close air support missions were made secondary. This principle was upheld by Air Force Major General Otto P. Weyland:

“I might suggest that all of us should keep in mind the limitations of air forces as well as their capabilities. Continuous CAS along a static front requires dispersed and sustained fire power against pinpoint targets. With conventional weapons there is no opportunity to exploit the characteristic mobility and fire power of air forces against worthwhile concentrations. In a static situation close support is an expensive substitute for artillery fire. It pays its greatest dividends when the enemy’s sustaining capability has been crippled and his logistics cut to a minimum while his forces are immobilized by interdiction and armed reconnaissance. Then decisive results can be obtained as the close-support effort is massed in coordination with determined ground action.”[27]

Marine aviation officers, of course, would have challenged some of these opinions. But General Weyland insisted that in the summer and fall of 1951 “it would have been sheer folly not to have concentrated the bulk of our air effort against interdiction targets in the enemy rear areas. Otherwise, the available firepower would have been expended inefficiently against relatively invulnerable targets along the front, while the enemy was left to build up his resources to launch and sustain a general offensive.”[28]

The UN interdiction program was costly to the Communists. Yet it remained a stubborn fact that the enemy had not only maintained but actually increased his flow of supplies in spite of bombings that might have knocked a Western army out of the war. That was because CCF and NKPA troops could operate with a minimum of 50 short tons per day per division—an average of about 10 pounds per man. It was about one-fifth of the supply requirements for an equal number of U.S. troops.

Try as they might, the UN air forces could not prevent the arrival of the 2,900 tons of rations, fuel, ammunition, and other supplies needed every day by the 58 Communist divisions at the front.

The enemy during this period was increasing his own air potential. On 17 June the Fifth Air Force warned that the Communists had stepped up their number of planes from an estimated 900 in mid-May to 1,050 in mid-June. Their Korean airfields were being kept under repair in spite of persistent UN air attacks.

In June enemy light planes made night raids along the UN front lines and even into the Seoul area. VMF (N)–513 pilots, flying the nightly combat patrol over Seoul, had several fleeting contacts with these black-painted raiders. The Marines were unable to close in for the kill, since the opposing planes were nonmetal and difficult to track by radar. Soon, however, the VMF(N)–513 pilots had better hunting. On 30 June Captain Edwin B. Long and his radar operator, CWO Robert C. Buckingham, shot down a black, two-place PO-2 biplane. And on 13 July Captain Donald L. Fenton destroyed another.[29]

Despite the Air Force emphasis on interdiction, better close air support remained a major objective of the 1st MAW. One of the requirements was a shorter flying distance from air base to combat area. K-46, the MAG-12 field near Hoengsong, had qualified with respect to reduced flying time. Maintenance problems caused by the dusty, rocky runway of this primitive strip led to its abandonment. On 14 July the squadrons pulled back temporarily to K–1, and on the 26th MAG–12 withdrew its maintenance crews.
The Group’s new field was K–18, a 4,400-foot strip on the east coast near Kangnung and just south of the 38th Parallel. Situated only 40 miles behind the 1st Marine Division and on the seacoast, the new field seemed to be ideally located. The runway, reinforced with pierced steel planking, extended inland from a beach where water-borne supplies could be delivered, as at K–3.[30]
Political causes had a good deal to do with the renewal of activity for the 1st Marine Division late in August 1951. Apparently the Communist armed forces had been given enough time to recuperate from their hard knocks in May and June. At any rate, the Red delegates walked out on the truce talks after falsely charging on 22 August that UN planes had violated the neutrality of the Kaesong area by dropping napalm bombs. Although the Reds were unable to show any credible evidence, the negotiations came to an abrupt end for the time being.\[31\]

On the 26th all Marine units received a Division warning that offensive operations were to be initiated in the immediate future. The effective strength of the Division (including the KMCs) had been reported as 1,386 officers and 24,044 enlisted men on 1 August 1951. Attached to the Division at that time were 165 interpreters and 4,184 Korean CTC cargadores.

On the 26th the regiments were disposed as follows: the 1st Marines near Chogutan; the 5th Marines near Inje; the 7th Marines near Yanggu; and the 1st KMC Regiment at Hangye. Service units and the Division CP were located along the Hongchon-Hangye road in the vicinity of Tundong-ni.

The 11th Marines (–), with the 196th FA Battalion, USA, attached, constituted the 11th Marine Regiment Group, an element of X Corps artillery. Throughout the training period 2/11 remained under the control of the 1st Marine Division and 3/11 was attached to the 2d Infantry Division.

The 5th Marines, 7th Marines, and KMCs were alerted to be prepared to move up to the combat areas south and west of the Punchbowl on 27 August. The 1st Marines was to remain in Division reserve, and the 11th Marines reverted to parent control.\[32\]

It was only about a five hour motor march from Tundong-ni to the forward assembly area under normal road and weather conditions. But recent rains had turned roads into bogs and fordable streams into torrents. Bridges were weakened by the raging current in the Soyang, and landslides blocked the road in many places.

The 1st Marine Division was back in action again. But it would have to fight its first battles against the rain and the mud.
The East-Central Front

Chapter 9. Renewal of the Attack

IT WAS to a large extent a new 1st Marine Division on 27 August 1951. Very few veterans of the Reservoir campaign were left, and even the Marines of the hard fighting in April and May had been thinned by casualties and rotation. Whatever the new arrivals lacked in experience, however, they had made up as far as possible by intensive and realistic training while the Division was in reserve.

The new Marine zone of action, in the Punchbowl area, was as bleak and forbidding as any expanse of terrain in Korea. Dominating the Punchbowl from the north and blocking any movement out of it was YOKE Ridge, looking somewhat like an alligator on the map (See Map 17). Hill 930 represented the snout. Hill 1000 was the head, and the body extended eastward through Hills 1026 and 924.

Two smaller hills, 702 and 602, spread off southeast and northeast respectively to the Soyang River and its unnamed tributary from the west. On either side of YOKE Ridge were numerous sharp and narrow ridges. Some of the hills were wooded with enough scrub pine to afford concealment for outposts and bunkers. Altogether, it was an area eminently suited to defense.

The defenders were identified by Division G-2 as troops of the 6th Regiment, 2d Division, II NKPA Corps. Apparently they did not lack supporting weapons, for 3/7 positions on Hill 680 were hit by an estimated 200 mortar and artillery rounds during daylight hours of the 30th.

Chapter 9. Renewal of the Attack
Crossing the Soyang in Flood

The 7th Marines and KMC Regiment, ordered to relieve U.S. and ROK Army units on the KANSAS Line, started their march in a downpour on 27 August. The 5th Marines (less 1st Battalion) at Inje had orders to follow the 7th up the narrow Soyang valley.

Typical of the wet weather difficulties were those experienced by 3/7. Scheduled to depart early for the forward positions, the companies struck tents. Trucks failed to arrive and they remained to eat the noon meal, a gustatorial bonus of all food the galley crew could not carry with them. Unfortunately, the trucks were delayed further and the men shivered in the rain as they ate an evening meal of “C” rations.

When the vehicles finally arrived at 2100 the rain had reached torrential proportions. Progress was so slow over muddy roads that it took until 0330 on the 28th to reach the CP of the 7th Marines at Sohwari (Map 18), just southeast of the junction of the Soyang and a tributary from the east.

The bivouac area assigned to 3/7 for the night proved to be a foot deep in water, and Lieutenant Colonel Kelly directed his men to catch what sleep they could in the trucks while he and his staff attempted to straighten out the snarled traffic situation.[1]

It took the rest of the night for the 3/7 officers to walk the length of the convoy, cutting out trucks with less essential cargo. With only a small space available for a turn-around, the 3/7 vehicles were ordered to back into it, unload their troops and equipment, and return along a narrow road, which had been churned into a quagmire.

The battalion assembly area was on the other side of the rain-swollen Soyang. How Company and the command group managed to cross over a waist-deep ford, but the crossing was so perilous that DUKWs were requested for the other two rifle companies. Lieutenant Colonel Louis C. Griffin’s 2/7 also found the river crossing an operation requiring DUKWs. By the afternoon of the 29th all elements of the two 7th Marine battalions were on the west bank, occupying their assigned assembly areas.

The relief proceeded slowly. Two KMC battalions on the left of the 7th Marines took over the zone formerly held by elements of the 2d Infantry Division and the 8th ROK Division. The cosmopolitan character of the Eighth Army was revealed when 2/KMC relieved the French Battalion of the 2d Infantry Division. Linguistic chaos was averted only by the best efforts of the exhausted interpreters.

By the 30th, the 1st and 3d KMC Battalions were behind the line of departure on Hill 755, ready to attack in the morning. The 2d Battalion assumed responsibility for the regimental zone on the KANSAS Line.

The 2d and 3d Battalions of the 7th Marines had meanwhile completed the relief of elements of the 8th ROK Division. On the other side of the river Lieutenant Colonel James G. Kelly’s 1/7 had relieved units of the ROK division on the hill mass a mile and a half north of Tonpyong (Map 17). These Marines were first to come under fire as the enemy sent over a few mortar rounds after dark on the 29th.

Division OpnO 22-51 directed the two assault regiments, the 7th Marines and KMCs, to attack at 0600 the following morning and seize their assigned positions on Corps Objective YOKE, the ridgeline running from Hill 930 on the west through Hills 1026 and 924 on the east (Map 17). Objective 1, the hill mass 1 1/2 miles northeast of Tonpyong, was already occupied by 1/7.

The 3d Battalion, 7th Marines, was ordered to seize Objective 2, generally that part of YOKE Ridge east of Hill 924. The KMC Regiment was assigned Objective 3, consisting of Hills 924 and 1026.
Other 1st Marine Division units had the following missions on 31 August:

5th Marines—to patrol the Division zone along the KANSAS Line and protect defensive installations;
1st Marines—to remain in the rear in the Hongchon area in X Corps reserve;
1st Tank Battalion—to move up in readiness to support the assault regiments;
Division Reconnaissance Company—to continue to patrol the Punchbowl and mop up bypassed enemy.

Land mines were a constant menace to troop movements as the assault regiments adjusted positions in preparation for the attack. As usual, neglected “friendly” mines were encountered as well as those planted by the enemy. [2]

POW information and air reports indicated a southward movement of two to three enemy regiments with artillery and supplies. Prisoners stated that an attack was due on 1 September, leading to the G-2 conjecture that the enemy’s Sixth Phase Offensive might be about to start.
Logistical shortages made it necessary for the 1st Marine Division to call a six-day halt and build up a new reserve of artillery and mortar ammunition.

During the first phase of the Division attack, the main burden of transport and supply had fallen upon three Marine units—the 1st Ordnance Battalion (Major Harold C. Borth), the 1st Motor Transport Battalion (Lieutenant Colonel Howard E. Wertman), and the 7th Motor Transport Battalion (Lieutenant Colonel Carl J. Cagle). The extraordinary expenditure of artillery shells for these four days posed a resupply problem that was aggravated by an almost impassable supply route. The three Marine battalions had to strain every resource to meet minimal requirements.

Ammunition Supply Point (ASP) 60-B, a U.S. Army installation manned by elements of the Marine 1st Ordnance Battalion, was located about five miles behind the gun positions. From this dump it was 48 miles to Hongchon, the source of supplies for ASP 60-B. A well maintained, two-lane dirt road led from that base to Inje, but northward it deteriorated into a narrow, twisting trail following the Soyang valley. Recent rains, resulting in earth slides and mudholes, had reduced the road to such a condition that the round trip between ASP 60-B and Hongchon took 25 hours.[3]

As an added complication, it was necessary to build up a 10-day reserve of ammunition at ASP 60–B so that Division transport would be available for lifting 2,000 rotated troops to Chunchon some time between 3 and 15 September. This meant that 50 to 60 Marine trucks must be employed daily to haul ammunition, with the result of a drastic shortage of motor transport for other purposes.

Only human transport was available for supplying Marines on the firing line. X Corps started the month of September with 20,070 Korean Service Corps, the successor to CTC, and civilian contract laborers—the equivalent in numbers of a U.S. Army infantry division. Even so, 14 air drops were necessary during the month, only one of which went to a Marine unit. This took place on 1 September, when 20 Air Force cargo planes from Japan dropped ammunition and rations to the KMCs. A 90 percent recovery was reported.[4]

It generally took a full day in the 1st Marine Division zone during the first week of September for a cargador to complete the trip from a battalion supply point to the front lines and return. This made it necessary to assign from 150 to 250 Korean laborers to each infantry battalion. And as the Marines advanced farther into the rugged Korean highlands, the logistic problem was increased.
Enemy groups moving southward into the zone of the 1st Marine Division during the six-day lull were sighted by air observation. POW interrogations and other G–2 sources established that the 2d NKPA Division, II Corps, had been relieved by the 1st NKPA Division, III Corps. Accurate 76mm fire from well-hidden guns was received by the Marines throughout the interlude, and patrols ran into brisk mortar fire when they approached too near to enemy bunkers on Hill 673.

For the second time, during the night of 4–5 September, 5th Marines units were assailed on the KANSAS Line, 5 miles to the rear of the 7th Marines troops similarly deployed along the HAYS Line. Yet a large 7th Marines patrol ranged forward some 2,000 yards the next day without enemy contacts. A like result was reported by a patrol representing almost the entire strength of the Division Reconnaissance Company (Major Robert L. Autry) after it scoured the area north of the Punchbowl.[5]

1st Marine Division OpnO 23–51, issued on the morning of 9 September, called for the 7th Marines to jump off at 0300 on the 11th and attack Objectives ABLE and BAKER—Hills 673 and 749 respectively—while maintaining contact with the 8th ROK Division on the right. Other Division units were given these missions:

1st Marines—to be released from X Corps reserve near Hongchon to Division control; to be prepared to pass through the 7th Marines, when that regiment secured its objectives, and continue the attack to seize Objective CHARLIE, the ridgeline leading northwest from Hill 1052.

5th Marines—to maintain one company on KANSAS Line while occupying positions in Division reserve along HAYS Line in rear of 7th Marines.

KMC Regiment—to patrol aggressively on Division left to exert pressure on enemy defenses south and southeast of Objective CHARLIE.

11th Marines—to displace forward to support attack of the 7th Marines.

Division Reconnaissance Company—to patrol northward in the Soyang valley as far as Hwanggi to deny the enemy this area.

The area ahead of the 7th Marines was ideal for defense. From YOKE Ridge the assault troops had to descend into a narrow valley formed by a small tributary of the Soyang-gang, cross the stream, and climb Kanmubong Ridge on the other side. This formidable piece of terrain was dominated by three enemy positions, Hills 812, 980, and 1052 (Map 17). Thus the attack of the 7th Marines had as its primary purpose the securing of initial objectives on Kanmubong Ridge that would give access to the main NKPA defense line, some 4,000 yards to the north.

The 7th Marines was to seize the eastern tip (Objective ABLE) of this commanding terrain feature and “run the ridge” to Hill 749, Objective BAKER. While Lieutenant Colonel Louis G. Griffin’s 2/7 maintained its patrolling activities on the left, tied in with the KMCs, Lieutenant Colonel B. T. Kelly’s 3/7 in the center and Lieutenant Colonel J. G. Kelly’s 1/7 on the right were to attack.

As an intermediate regimental objective on the way to Kanmubong Ridge, the 680-meter hill directly north of B. T. Kelly’s position on Hill 602 was assigned to his battalion. He ordered How Company to move forward under cover of darkness and be prepared to attack at dawn. Rain and poor visibility delayed the attempt until surprise was lost, and after a fierce fire fight How Company was stopped halfway up the southeast spur.

In order to relieve the pressure, the battalion commander directed Item Company to attack on the left up the southwest spur. This maneuver enabled How Company to inch forward under heavy mortar and machine gun
fire to a point with 50 yards of the topographical crest. Item Company became confused in the “fog of war” and finally wound up on How’s spur at 1245.

Twice the two companies made a combined assault after artillery and mortar preparation and air strikes with napalm, rocket, and strafing fire. Both times the North Koreans swarmed out of their bunkers to drive the Marines halfway back to the original jump off line. It was anybody’s fight when the two battered companies dug in at dusk.

Across the valley to the east, J. G. Kelly’s 1/7 had no better fortune in its attack on Hill 673. Heavy enemy mortar and machine gun fire kept the assault troops pinned down until they consolidated for the night.

With both attacking battalions in trouble, Colonel Nickerson ordered 2/7 to advance up the narrow valley separating them. His plan called for the reserve battalion to move under cover of darkness around the left flank of 1/7 and into a position behind the enemy before wheeling to the northeast to trap the North Koreans defending Hill 673.

The maneuver succeeded brilliantly. Griffin’s troops were undetected as they filed northward during the night, making every effort to maintain silence. By daybreak on 12 September 2/7 had two platoons in position behind the enemy to lead the attack.[6]

The assault exploded with complete surprise as 2/7 swept to the crest of Hill 673 against confused and ineffectual opposition. Griffin’s battalion and 1/7 had the enemy between them, but the jaws of the trap could not close in time because of NKPA mine fields. Thus 1/7 continued to be held up on the forward approaches to Hill 673 by NKPA mortar and small-arms fire. Grenades were the most effective weapons as J. G. Kelly’s men slugged their way to the summit at 1415 while 2/7 was attacking Objective BAKER, Hill 749.

On the other side of the valley, 3/7 had seized its initial objective. While How and Item Companies attacked up the southeast spur, where they had been stopped the day before, George Company launched a surprise assault up the southwest spur. This was the blow that broke the enemy’s will to resist. George Company knocked out seven active enemy bunkers, one by one, thus taking the pressure off the troops on the other spur. At 1028 all three companies met on the summit.

The 2d Battalion, 7th Marines, radioed that Objective BAKER had been secured at 1710 after a hard fight, but this report proved to be premature. Enough NKPA troops to give the Marines a good deal of trouble were still holding the wooded slopes of Hill 749, and it would take the attack of a fresh battalion to dislodge them. Along the ridgeline from Hill 673 to Hill 749, an undetermined number of enemy soldiers had been caught between 2/7 and 1/7, and events were to prove that they would resist as long as a man remained alive.

Casualties of the 1st Marine Division on 11 and 12 September were 22 KIA and 245 WIA, nearly all of them being suffered by the assault regiment. Enemy losses included 30 counted KIA and 22 prisoners.

Chapter 9. Renewal of the Attack
The Mounting Problem of CAS

With the Division in reserve from 15 July until the latter part of August, close air support (CAS) was not a vital problem; however, upon return to the Punchbowl area the situation became serious. The difficulties arose from the time lag between the request for air support to the time the planes arrived over target. The 1st Marine Aircraft Wing operating under the control of the Fifth Air Force was busily employed on interdiction missions. On 30 August, a tactical air observer, spotting what appeared to be a division of NKPA troops moving toward the Marines, hurriedly flashed back a request for a multi-plane strike. The enemy troops were beyond artillery range, but they were bunched up—a good target for a concentrated air strike. It was more than three hours later that four fighter bombers arrived on the scene; by that time, the enemy formation had dispersed and the desired number of casualties could not be inflicted.[7]

The reason for this lack of timely air support was apparent. Most of the UN air power was being funneled into Operation STRANGLE, the interdiction operation designed to cut off the enemy’s vehicular and rail traffic in the narrow waist of North Korea. With the emphasis on air interdiction, close air support sorties were limited to only 96 per day for the entire Eighth Army.[8] The 1st Marine Division received only a proportionate share.

Marine close air support was needed because of the enemy’s determined resistance to the Division’s attack. The Reds hurled frequent night counterattacks and pounded the Marine positions with artillery and mortars hidden in the precipitous Punchbowl area. At one time it was estimated that the enemy was using 92 pieces of artillery. The Marines had only 72 field pieces, but in one 24-hour period they expended more than 11,000 rounds of artillery ammunition on a 6,000-yard frontage. The enemy emplacements, hewn out of solid rock, were hard to knock out.

To support the hard-working infantrymen, Marine Aircraft Group 12 (MAG–12) had moved VMF–214 and VMF–312 from the Pusan area to K–18, an airfield on the east coast at Kangnung. By moving closer to the Division area, planes were able to extend their time over the target area and render more effective support to the infantry. Also, Marine Air Support Radar Team One (MASRT-1) was sent to Korea and established positions to support the Division. Using its support radar the team began to evaluate its capability of guiding unseen fighter-bombers at night or under conditions of poor visibility.[9]

Even though the Corsairs at K–18 were less than 50 miles from the 1st Marine Division, very few were available to the Marines. Operation STRANGLE, in full swing, was not achieving the desired results. Since sightings of enemy vehicles were increasing, more and more Marine and Navy air sorties were channeled into interdiction. During 18 days of rugged fighting from 3 to 21 September, forward air controllers made 182 tactical air requests. Fighter-bombers were provided on 127 of these requests; however, in only 24 instances did the planes arrive when needed. The average delay time in getting CAS in response to requests during September was slightly less than two hours, but in 49 cases the planes were more than two hours late.[10] As a consequence, General Thomas reported, many of the 1,621 casualties suffered by the 1st Marine Division during the hard fighting in September were due to inadequate close air support. Furthermore, he said, the tactical capabilities of his battalions were strongly restricted.

During the planning of attacks, infantry commanders almost always desired and requested close air support. It was also desirable to have planes on station overhead should an immediate CAS need arise, for the lack of an air strike when needed could jeopardize success. However, with restricted availability of CAS planes due to participation in STRANGLE, many times desired air cover was not to be had. Attacks under those circumstances
were often costly.

Chapter 9. Renewal of the Attack
First Helicopter Supply Operation of History

The relief of the three battalions of the 7th Marines by their corresponding numbers of Colonel Thomas A. Wornham’s 1st Marines took place during the night of 12-13 September. By daybreak 3/1 and 1/1 had assumed responsibility for the zones of 3/7 and 1/7, which were on their way to Division reserve at Wontong-ni at the junction of the Inje and Kansong roads. In the center, however, 2/1 could not complete the relief of 2/7. Not only was that battalion engaged most of the day with the enemy, but the units were separated—one company south of Hill 749 being unable to join the other two companies on separate spurs northwest of that height. All three were under persistent NKPA mortar and 76mm fire.[11]

The attack of the 1st Marines, originally scheduled for 0500 on 13 September, had been changed to 0900 by Division orders. One reason for the postponement was the serious shortage of ammunition and other supplies after the urgent demands of the last two days. Another reason was the inability of VMO–6 helicopters, lifting two wounded men at most, to cope with the mounting casualty lists. Enemy interdiction of roads added in several instances to the complications of a major logistical problem, particularly in the zone of Lieutenant Colonel Franklin B. Nihart’s 2d Battalion, 1st Marines.

The hour had struck for HMR-161, and the world’s first large-scale helicopter supply operation in a combat zone would soon be under way. It was not the development of a day. On the contrary, its roots went all the way back to 1945, when the atomic bomb of Hiroshima rendered obsolescent in 10 seconds a system of amphibious assault tactics that had been 10 years in the making. Obviously, the concentrations of transports, warships, and aircraft carriers that had made possible the Saipan and Iwo Jima landings would be sitting ducks for an enemy armed with atomic weapons.

The problem was left on the doorstep of the Marine Corps Schools, which had reared the Fleet Marine Force from infancy to maturity during the 1930’s. A Special Board and Secretariat were appointed for studies. They assigned two general missions to Marine Helicopter Experimental Squadron 1 (HMX–1), organized late in 1947 before the first rotary-wing aircraft had been delivered. These missions were:

(1) Develop techniques and tactics in connection with the movement of assault troops by helicopter in amphibious operations;

(2) Evaluate a small helicopter as a replacement for the present OY type aircraft to be used for gunfire spotting, observation, and liaison missions in connection with amphibious operation.[12]

The second mission resulted in the small Sikorsky and Bell helicopters of VMO–6 which landed in Korea with the 1st Provisional Marine Brigade in August 1950. Although it was originally believed that rotary wing aircraft might replace the OYs, combat experience soon demonstrated that the best results were obtained by retaining both types in fairly equal numbers.

Landing exercises under simulated combat conditions were conducted by HMX–1 in fulfillment of the first mission. At first the squadron had only three-place helicopters. Later, when the usefulness of the helicopter was fully realized, even the new 10-place “choppers” were never available in sufficient numbers. The capacity designs of these machines, however, were more ideal than real, for the helicopters could lift only four to six men in addition to the pilot, copilot, and crewman. Despite such drawbacks, HMX–1 developed tactical and logistical techniques for helicopter landings to be made from widely dispersed carriers against an enemy using atomic weapons.

Belated deliveries of aircraft delayed the commissioning of the world’s first transport helicopter.
squadron, HMR–161, until 15 January 1951 at El Toro. Lieutenant Colonel George W. Herring was designated
the commanding officer and Lieutenant Colonel William P. Mitchell the executive officer.

Nearly three months passed before the first three transport helicopters arrived. The squadron was
gradually built up to a strength of 43 officers and 244 enlisted men with a full complement of 15 HRS–1
helicopters. These Sikorsky aircraft, designed to Marine specifications, were simply an enlarged three-place
HO3S in configuration, with a similar main rotor and vertical tail rotor. About 62 feet long with maximum
extension of rotor blades, the HRS–1 was 11 1/2 feet wide with the blades folded. Following are some of the other
statistics:

Gross weight at sea level, 7,000 pounds; cruising speed, 60 knots; payload at sea level, 1,420 pounds;
troop-lifting capacity, four to six men with full combat equipment or three to five casualties in litters.[13]

Capabilities varied, of course, according to such factors as altitude, temperature, and pilot experience.

Marine Transport Helicopter Squadron 161 arrived in Korea on the last day of August, and by the 10th of
September it had moved up to the front, sharing Airfield X–83 (see Map 18) with VMO–6.[14] The 11th was
dedicated to reconnaissance flights in search of landing sites, and on the 12th the transport squadron was ready for
its first combat mission. A new means of logistical and tactical support that was to revolutionize operations and
create front page headlines had arrived in Korea.

Prior to the squadron’s arrival, the Division chief of staff, Colonel Victor H. Krulak, had held numerous
planning conferences with Division staff officers, and preparations for the employment of HMR-161 had made
noteworthy progress. Then General Thomas ordered executed the first operation of the squadron under combat
conditions, and the major logistical problem of moving supplies and evacuating casualties was well on the way to
being solved. At 1600 on 13 September 1951—a date that would have historical significance—Operation
WINDMILL I was set in motion.

Lieutenant Colonel Herring had attended the final planning conference at Division headquarters at 0830
on the 13th, and he was told that the operation would involve a lift of one day’s supplies to 2/1 over a distance of
seven miles. The commanding officer of 2/1 was to select suitable landing points and the commanding officer of
1st Shore Party Battalion had the responsibility of providing support teams to operate at the embarkation and
landing points.[15]

Only two days had been available for training and rehearsals, but not a minute was wasted. All morning
on the 13th the embarkation point section separated the supplies into balanced loads of about 800 pounds per
helicopter. Loading commenced at 1520. Half an hour later, seven aircraft were ready to depart while four others
went ahead to carry the landing point section to the previously reconnoitered site.

The route followed the valleys as much as possible, so that the helicopters were in defilade most of the
way. Smoke was laid down by the 11th Marines for concealment.

The landing point section managed in 20 minutes to clear an area of 20 x 40 feet (later enlarged to 100 x
100 feet) and mark it with fluorescent panels. At 1610 the first HRS-1 hovered with cargo nets suspended from a
hook released by manual control. A few minutes later it took off with five walking wounded and two litter cases.

Each helicopter carried out as many casualties as possible, depending on the amount of gasoline in the
fuel tanks. Only 30 minutes passed from the time one Marine was wounded and the time of his arrival at a
hospital clearing station 17 miles behind the firing line.

Radio provided communications between helicopters in flight, HMR–161 headquarters, 2/1 CP, and the
Shore Party team at the landing site.

Fifteen aircraft were employed for one hour, three for two hours, and one for two hours and 45
minutes—a total of 28 flights in over-all time of 2 ½ hours. The helicopters landed at intervals of two minutes and
took off as soon as the landing point section could put the casualties aboard. And though an altitude of 2,100 feet
restricted loads, 18,848 pounds of cargo had been lifted into the area and 74 casualties evacuated when the last
“chopper” returned to X–83 at 1840.

To even the most pessimistic observer Operation WINDMILL I was a complete success, so successful that a similar operation, WINDMILL II was conducted on the 19th. Two days later the first helicopter lift of combat troops was completed. A new era of military transport had dawned.
Chapter 9. Renewal of the Attack
The Fight for Hill 749

Although 2/1 alone had 240 Korean cargadores attached, the 7 1/2 tons of helicopter-borne supplies, largely ammunition, were vitally needed by the two assault battalions of the 1st Marines. After relieving Fox Company of 2/7 south of Hill 749 at 1100 on the 13th, Lieutenant Colonel Nihart’s 2/1 jumped off to the attack an hour later. Stiff opposition was encountered from the beginning. The relief of the remaining two companies of 2/7 was complicated by the fact that they were some 400 yards from the position reported, on the reverse slope of Hill 749. Throughout the day these Marines were heavily engaged with the enemy.[16]

On the left of 2/1, the 3d Battalion (Lieutenant Colonel Foster C. La Hue) could not make much progress toward its regimental objective, Hill 751, while the enemy was active on Hill 749. A second attack of 2/1 at 1500 drove to the summit of that height after fierce fighting with small arms, automatic weapons, and hand grenades. There was still much fighting to be done before the entire objective would be secured since many enemy bunkers hidden among the trees remained to be neutralized.

At 1600 a gap of about 300 yards separated 2/1 from the two 2/7 companies. So fierce was enemy resistance in this area that it took until 2025 for Nihart’s men to complete the relief after fighting for every foot of ground.

Air and artillery support had been excellent on the 13th despite the fact that neither could be called by 2/1 in some instances because of the danger of hitting elements of 2/7. Even so, 2/11 (Lieutenant Colonel Dale H. Heely) and other artillery units fired 2,133 rounds and Company C of the 1st Tank Battalion (Lieutenant Colonel Holly H. Evans) contributed 720 rounds of 90mm fire which knocked out six enemy bunkers. The 4.2” mortars had a busy day firing 261 HE and 28 WP rounds, and Company C of the 1st Engineer Battalion (Lieutenant Colonel John V. Kelsey) supported the attack by clearing mine fields.

Mortar fire was received by the 1st Marines throughout the night, and 3/1 repulsed a series of counterattacks by an estimated 300 enemy. Colonel Wornham’s regiment continued the attack at 0800 on 14 September. Both the 2d and 3d Battalions inched their way forward against a heavy volume of well-aimed enemy mortar, artillery, and automatic weapons fire.

NKPA resistance persisted on the wooded northern slope of Hill 749, where hidden bunkers had to be knocked out, one by one. It took constant slugging for 2/1 to advance 300 meters before dusk, enabling 3/1 to fight its way to the summit of Hill 751. Again the flat trajectory fire of Company C tanks had been helpful as 400 rounds were directed against NKPA bunkers, while the 11th Marines fired 3,029 rounds.

The 15th was a relatively quiet day as compared to the previous 48 hours. In preparation for an expected passage of lines, the action took a slower tempo as units consolidated their positions. The principal fight of the day was a continuation of the attack by 2/1 north of Hill 749. Although the battalion commander had arranged for a heavy artillery preparation, the attack, which jumped off at 1710, was stopped at 1800 by a terrific pounding from NKPA mortars and artillery coupled with a crossfire of machine guns from concealed bunkers. The assault troops withdrew under effective covering fire by the 11th Marines to positions occupied the previous night. Objective Baker yet remained to be secured.

The Marines could not help paying reluctant tribute to the skill as well as obstinacy of the NKPA defense. Enemy bunkers were so stoutly constructed that the North Koreans did not hesitate to direct well aimed mortar fire on their own positions when the Marines closed in for the final attack.

NKPA fields of fire were laid out for the utmost effect. Marines with recent memories of college football
referred to the enemy’s effective use of terrain as the “North Korean T Formation.” On Hill 749, for example, the main ridgeline leading to the summit was crossed by another wooded ridgeline at right angles. Attackers fighting their way up the leg of the “T” came under deadly crossfire from the head of the imaginary letter—a transverse ridgeline bristling with mortars and machine guns positioned in bunkers.

In accordance with Division OpnO 25–51, the 5th Marines (Colonel Richard C. Weede) moved up to assembly areas on 15 September in preparation for passing through 3/1 on the 16th to continue the attack. The 3d Battalion, 1st Marines in turn would relieve 1/1 (Major Edgar F. Carney, Jr.), so that it could pass through 2/1 and carry on the assault to complete the securing of Hill 749.

The KMCs and Division Recon Company were to relieve the 5th Marines of responsibility for the Hays Line, while the 7th Marines remained in reserve at Wontong-ni.

The comparative quiet of the 15th was shattered a minute after midnight when the enemy launched a savage four-hour attack to drive 2/1 off Hill 749. The NKPA hurricane barrage that preceded the attempt, according to the Division report, “reached an intensity that was estimated to surpass that of any barrage yet encountered by the 1st Marine Division in Korea.”[17]

The thinned companies of 2/1 took a frightful pounding from 76mm, 105mm, and 122mm artillery supplemented by 82mm and 120mm mortars. Bugles and whistles were the signal for the onslaught. It was stopped by weary Marines who demonstrated at NKPA expense that they, too, could put up a resolute defensive fight.

Wave after wave of attackers dashed itself at the thinned Marine platoons, only to shatter against a resistance that could be bent but not broken. The fight was noteworthy for examples of individual valor. When one of the forward Marine platoons was compelled to give ground slowly, Corporal Joseph Vittori of Fox Company rushed through the withdrawing troops to lead a successful local counterattack. As the all-night fight continued, “he leaped from one foxhole to another, covering each foxhole in turn as casualties continued to mount, manning a machine gun when the gunner was struck down and making repeated trips through the heaviest shell fire to replenish ammunition.”[18]

Vittori was mortally wounded during the last few minutes of the fight, thus becoming the second Marine of 2/1 within a 48-hour period to win the Medal of Honor. His predecessor was Pfc Edward Gomez of Easy Company. When an enemy grenade landed in the midst of his squad on 14 September, he “unhesitatingly chose to sacrifice himself and, diving into the ditch with the deadly missile, absorbed the shattering violence of the explosion in his own body.”[19]

Not until 0400 on the 16th did the enemy waves of attack subside on Hill 749. NKPA strength was estimated at a regiment. A combined assault by an estimated 150 enemy on 3/1 positions to the west in the vicinity of Hill 751 was repulsed shortly after midnight, as were three lesser efforts during the early morning hours of the 16th.

When the 1st Battalion, 1st Marines moved out at 0830 to pass through 2/1 and continue the fight, it was the first day of command for Lieutenant Colonel John E. Gorman.[20] The passage of lines was slowed by enemy mortar fire, and NKPA resistance stiffened as 1/1 attacked along the ridgeline leading toward Hill 749. At 1800, after a hard day’s fighting, Objective Baker was occupied and defensive positions were organized for the night.

Thus was the attack of the 1st Marines terminated. Around Hill 751, 3/1 remained in control. The regiment’s other two battalions, 1/1 and 2/1, held a defensive line about 1,500 yards long on both sides of Hill 749.

Hill 749 had finally been secured. A number of mutually supporting hidden enemy bunkers had been knocked out in a ruthless battle of extermination, and veterans of the World War II Pacific conflict were reminded of occasions when Japanese resistance flared up in similar fashion after ground was thought to be secure.

Casualties of the 1st Marine Division during the four-day fight for Hill 749, most of them suffered by the
attacking regiment, were 90 KIA, 714 WIA, and 1 MIA. Enemy losses for the same period were 771 counted KIA (although more than twice that number were estimated KIA) and 81 prisoners.
Chapter 9. Renewal of the Attack
5th Marines Attack Hill 812

Division OpnO 25–51 assigned the 5th Marines the mission of passing through 3/1 in the vicinity of Hill 751 and attacking to secure Objective Dog, the bare, brown hill mass which loomed approximately 1,000 yards ahead. The last few hundred yards were certain to be long ones, for the main east-west ridgeline leading to Hill 812 was crossed by a north-south ridgeline—the leg and head of another “T” formation. Again, as on Hill 749, the attackers had to fight their way through a vicious crossfire.

Lieutenant Colonel Houston Stiff’s 2/5 on the right had the main effort. The 3d Battalion, 5th Marines (Lieutenant Colonel Donald R. Kennedy) was to advance on Stiff’s left with the mission of supporting his attack on Objective Dog, prepared to seize Hill 980 on order. Lieutenant Colonel William P. Alston’s 1/5 remained in regimental reserve.

Fox Company spearheaded the 2/5 attack by moving initially up the low ground between Hill 673 on the right hand and 680 on the left. Owing to delays in completing the relief of 1st Marines elements, it was early afternoon on 16 September before the assault got underway. Progress was slow against heavy mortar and machine gun fire, and a halt came at 1700 for regrouping and evacuation of casualties.

Dog Company, in support on the ridge to the left, sighted troops approaching the objective and requested that the positions of the assault company be identified. In order to pinpoint the locations, a white phosphorous grenade was used as a mark. It attracted the attention of aircraft summoned by 3/5 against Hill 980 (Map 17), from which fire had been received. The planes, assuming that another target had been designated, attacked the forward platoons of Fox Company with napalm and machine guns. By a miracle, recognition panels were put out before a single casualty resulted, but the men found it a harrowing experience.

Darkness fell before the attack could be resumed, and Fox Company pulled back along the ridgeline to set up a perimeter defense and evacuate the wounded. The night passed without enemy action. Bright moonlight made for unusual visibility which discouraged enemy attacks and permitted the Marine assault platoons more sleep than might otherwise have been expected.

Regimental orders called for 2/5 to resume the attack at 0400 on the 17th, supported by the fires of 3/5, while 1/5 continued in reserve. Fox Company of 2/5 had some difficulty in orienting itself after the confusion of the night before and was delayed until 0700 in jumping off. This proved to be a stroke of luck, for dawn gave the Marines a good view of unsuspecting enemy troops eating breakfast and making ready for the day’s fighting. Fox Company called artillery on them with good effect.

Surprise gave the attack an opening advantage and rapid progress was made at first along the main ridgeline leading west to Hill 812. Then Fox Company was stopped by the cross-fire from the head of the “T.” Easy Company passed through at 0830 to continue the assault, reinforced by a platoon of Fox Company that had become separated from its parent unit, although it kept in touch by radio.

An air strike was called but did not materialize. After waiting for it in vain, Easy Company drove toward the summit with the support of artillery and mortars.

Two hours after passing through Fox Company, the attackers had advanced only about a hundred yards against the NKPA cross-fire. At 1100, Lieutenant Colonel Stiff ordered an all-out drive for the objective, following a preliminary barrage of everything that could be thrown at the enemy—artillery, 75mm recoilless, rockets, and 81mm and 4.2” mortars. As soon as the bombardment lifted, Easy Company was to drive straight ahead along the ridgeline while the 2d Platoon of Fox Company made a flank attack.
This maneuver turned the trick. The blow on the flank took the enemy by surprise, and in just 36 minutes the assault troops were on the summit after a hard fight at close quarters with automatic weapons and grenades. Since regimental orders had specified “before nightfall,” Objective DOG had been seized ahead of schedule.

With scarcely a pause, Easy Company continued along the ridgeline leading west from Hill 812 toward Hill 980. Remarkably fast progress was made against an enemy who appeared to be thrown off balance. Permission was asked to seize Hill 980. The regimental commander refused because of instructions from Division to the effect that this position could not be defended while the enemy remained in possession of Hill 1052, the key terrain feature. Easy Company was directed to withdraw 600 yards toward Hill 812.

Late in the evening of 17 September, Colonel Weede directed his two assault battalions to consolidate on the best ground in their present locations and prepare to hold a defensive line.

When the brakes were put on the attack, 3/5 was strung out over a wide area to the north of Hill 751. This battalion was not tied in with 2/5, which occupied positions coordinated for the defense of Hill 812—Easy Company to the west, on the ridgeline leading to 980; Dog and Weapons Company to the south, protecting the left flank; and Fox Company to the east.

Both Easy and Fox Companies were under fire from Hills 980 and 1052, and daytime movement on 812 was restricted to the northern slope. Even so, sniping shots from well aimed North Korean 76mm mountain guns inflicted a number of casualties.
Chapter 9. Renewal of the Attack

The Struggle for the "Rock"

An abrupt change in the enemy’s strategy became evident throughout these September operations. Where he had previously contented himself with an elastic defense, every position was now bitterly fought for and held to the last man. When it was lost, counterattacks were launched in efforts to regain it.

One of these attempts hit the western outpost of 2/5’s Easy Company at 0430 on 18 September, compelling the Marines to give ground. A second counterattack at 0840 was repulsed. Enemy fire from Hills 980 and 1042 continued all day long, and Colonel Stiff’s battalion suffered most of the 16 KIA and 98 WIA casualties reported by the Division for 18 September.

The night of 18–19 September passed in comparative quiet, but at daylight the enemy on Hills 980 and 1052 was still looking down the throats of the 2/5 Marines. None of the participants will ever forget a landmark known simply as “the Rock”—a huge granite knob athwart the ridgeline approximately 700 yards west of Hill 812. Only 12 feet high, its location made it visible from afar. The Marines outposted the top and eastern side, while the enemy held tenaciously to the western side. Along the northern slope of the ridge leading west to the Rock were the only positions affording protection to the dug-in forward elements of the battalion.

The need for fortification materials such as sand bags, barbed wire, and mines aggravated the already serious supply problems of 2/5. A request for helicopter support was sent at 1100 on the 19th and approved immediately by General Thomas. Loading commenced early the same afternoon, and Operation WINDMILL II was launched. A total of 12,180 pounds were lifted by 10 HRS–1 aircraft in 16 flights during the overall time of one hour.[22]

Again, on 19 September, 2/5 incurred most of the casualties reported by the Division. During the day 1/5, after relieving the 1st and 2d Battalions of the 1st Marines, moved up on the right of 2/5 to occupy a defensive line stretching two miles east along the ridge almost to the Soyang-gang.

NKPA action was confined to incessant long-range fire during the daylight hours of the 19th, but at 0315 the following morning the enemy made a desperate effort to retake Hill 812. After a brief but intense mortar and artillery barrage, North Koreans in at least company strength came pouring around the northern side of the Rock to attack with grenades and burp guns at close range. The left platoon of Easy Company counterattacked but was pushed back by superior numbers to positions on the left flank of the hill.

The enemy immediately took possession of evacuated ground which enabled him to fire into the front lines of Easy Company. At 0500 another Marine counterattack began, with Easy Company making a frontal assault and the 2d Platoon of Fox Company striking the enemy flank. It was the same platoon that had delivered the flank attack resulting in the capture of Hill 812. Again 2/Fox struck the decisive blow with grenades and automatic weapons. The surprise was too much for enemy troops who hastened back to their own side of the Rock, leaving 60 counted dead behind.[23]

This was the last action of a battle that had occupied all three Marine regiments from 11 to 20 September inclusive while the KMC Regiment patrolled aggressively on the Division left flank. Three of the four Division objectives had been secured after savage fights, but Objective CHARLIE (the ridgeline northwest of Hill 1052 in the KMC zone) had yet to be attacked when Division OpnO 26–51 put an abrupt stop to offensive movement.

Not only was the fight west of Hill 812 the last action of the 1st Marine Division’s nine-day battle; it was the last action of mobility for Marines in Korea. As time went on, it would become more and more apparent that 20 September 1951 dated a turning point in the Korean conflict. On that day the warfare of movement came to an
end, and the warfare of position began.
TWO AND A HALF weeks of hard fighting had taken place along the X Corps front when General James A. Van Fleet paid a visit on 16 September 1951. The commanding general of EUSAK wished to inspect the operations and determine the morale of the 1st Marine Division and 2d Infantry Division, both of which had suffered heavy casualties. He found the morale of these X Corps units good and had no adverse criticisms of their operations. While on this tour of inspection, however, he issued the following three directives to X Corps:

“(1) That replacements would be integrated into units only when the battalion or larger-sized unit to which they were assigned was in reserve;

“(2) that certain ‘choke points’ [General Van Fleet pointed out the locations on the map] be interdicted to prevent enemy reinforcements or withdrawals through these points;

“(3) that the Corps Commander firm up his line by 20 September and to plan no further offensives after that date, as it was unprofitable to continue the bitter operation.”[1]

General Van Fleet reiterated his instructions on the 18th in a confirming directive to the effect that X Corps continue making limited attacks “until 20 September, after which . . . units were to firm up the existing line and to patrol vigorously forward of it.”[2]

Chapter 10. The New Warfare of Position
Sectors of Major EUSAK Units

Click here to view map

At this turning point the Eighth Army had 14 divisions from four corps committed along a 125-mile front across the peninsula. These units were distributed (Map 19) as follows:

U.S. I CORPS
- ROK 1st Division holding the left anchor in the Munsan-ni area and controlling the 5th KMC Battalion on the Kimpo Peninsula;
- British 1st Commonwealth Division across the river Imjin to the northeast;
- U.S. 1st Cavalry Division (Greek and Thai Battalions attached) still farther to the northeast in the Yonchon area;
- U.S. 3rd Infantry Division (Belgian Battalion and Philippine 20th BCT attached) having the responsibility for the vital Chorwon area;

U.S. IX CORPS
- U.S. 25th Infantry Division (Turkish Brigade attached) defending the area west of Kumhwa;
- ROK 2d Division holding a sector east of Kumhwa;
- U.S. 7th Infantry Division (Ethiopian Battalion attached) on the right;
- ROK 6th Division with a narrow sector as far east as the Pukhan River, the Corps boundary;
- U.S. 24th Infantry Division (Colombian Battalion attached) in Corps reserve south of Hwachon;

U.S. X CORPS
- ROK 8th Division on the left flank;
- U.S. 2d Infantry Division (French and Netherlands Battalions attached) in left-central portion of Corps front;
- ROK 5th Division occupying a narrow sector to the east;
- U.S. 1st Marine Division holding eastern portion of the Corps sector;

ROK I CORPS
- ROK 11th Division responsible for left of the Corps front;
- ROK Capitol Division holding the line eastward to the Sea of Japan;
- ROK 3d Division in reserve at Yangyang for a period of training.\[3\]

Some rather complicated juggling of units took place on the X Corps front, giving the effect of a game of musical chairs in the tactical sphere. From 18 to 21 September the 1st Marine Division extended its line eastward to relieve the 8th ROK Division on the extreme right of the Corps area. That Division in turn relieved the 5th ROK Division on the extreme left, whereupon the latter leapfrogged the 2d Infantry Division to occupy a new sector on the left of the Marines.
“Theirs not to reason why” could never have been written about American fighting men. From 1775 to the present day, they have always taken a keen interest in the high-level strategic and tactical decisions governing their operations. This applies with particular force to the Marines, who have seldom had a voice in the shaping of operations above the division level.

As if in direct reply to unspoken questions, the commanding general of the Eighth Army made a statement on 30 September explaining the purpose of his strategy. “My basic mission during the past four months,” he said, “has been to destroy the enemy, so that the men of Eighth Army will not be destroyed. . . . Each loaded enemy weapon was a definite threat to the Eighth Army. It was imperative that we knock out as many of those weapons as we could find. . . .”

“In prodding the enemy in the deep belly of the peninsula,” continued General Van Fleet, “we have taken many casualties. . . . It was mandatory that we control the high ground features, so that we could look down the throat of the enemy and thereby better perform our task of destruction. . . . In seizing these hills we lost men, but in losing a comparative few we saved other thousands.”

Estimated casualties, inflicted on the enemy by UN ground forces alone from 25 May to 25 September, were announced as 188,237 by the EUSAK commander. “As we open our autumn campaign,” he added, “the enemy potential along the front line has been sharply reduced by our hill-hopping tactics. The Communist forces in Korea are not liquidated but they are badly crippled.”[4]

Even so, EUSAK G–2 summaries credited the enemy on 1 October 1951 with more than 600,000 troops at the front, or in reserve and available as immediate reinforcements. Six CCF armies and one NKPA corps were capable of reinforcing the units on the MLR or participating in an offensive. The enemy also had an estimated 7,000 men in guerrilla forces behind the UN lines.[5]

The maximum strength of UN forces in Korea during October was 607,300. This total included 236,871 U.S. Army troops, 21,020 Fifth Air Force personnel, 30,913 U.S. Marines (including 5,386 officers and men of the 1st Marine Aircraft Wing), 286,000 men in ROK units, and 32,172 Allied troops.[6]

Although it might appear that the opposing forces were about equal, it must be remembered that well over one-fourth of the UN troops were engaged in administrative or maintenance duties behind the front. Thus the Communists had a numerical advantage of at least four to three on the firing line. This was not at all unusual, since they had enjoyed a preponderance in manpower from the beginning.
Chapter 10. The New Warfare of Position
Hill 854 Secured by 3/1

In accordance with EUSAK instructions, X Corps OI–235 directed the 1st Marine Division to organize and construct defensive positions after relieving the 8th ROK Division on the right and taking over its sector. On the Corps boundary, elements of the 11th ROK Division, I ROK Corps, were to be relieved on Hill 884 (Map 20). This meant the addition of some 9,000 yards to the Marine front, making a total of about 22,800 yards or more than 13 miles.

Click here to view map

First Marine Division OpnO 27–51, issued on 18 September, relayed the X Corps directions. It also called for such offensive action as might be necessary to complete the securing of Hill 854, in the sector of the 8th ROK Division, if not in friendly hands at the time of the relief.[7]

That the enemy had put up a desperate fight to hold this position is indicated by the EUSAK report for 15–16 September: “The ROK 8th Division, employing all three regiments, attacked against heavy and stubborn resistance to wrest Hill 854 from the three battalions of North Koreans who held the position. The ROK 21st Regiment forced one of these battalions to withdraw and occupied a part of the hill, but at the close of the day were engaged in heavy hand-to-hand fighting to retain the position.”[8]

On 20 September, after three weeks of continual combat, the major units of the 1st Marine Division were disposed from left to right (Map 20) as follows:

1st KMC Regiment (Colonel Kim Dae Shik, commanding; Colonel Walter N. Flournoy, senior adviser) occupying the HAYS line on the left flank and patrolling vigorously to the north;
5th Marines (Colonel Richard G. Weede) holding a wide sector in the center, with Hill 812 as the principal terrain feature;
1st Marines (Colonel Thomas A. Wornham) in process of extending eastward to the Corps boundary just beyond Hill 884;
7th Marines (Lieutenant Colonel John J. Wermuth) in Division reserve at Wontong-ni.[9]

Division OpnO 27–51 designated the 1st Marines to relieve the ROKs on Hill 854 and complete the seizure of that terrain feature, if necessary. As a preliminary, the 1st Battalion of the 5th Marines (Lieutenant Colonel William P. Alston) took over the front of the 1st Marines on the HAYS line. This enabled 1/1 and 3/1 to enlarge the Division sector by side-slipping to the east while Lieutenant Colonel Franklin B. Nihart’s 2/1 went into immediate reserve just behind the main line of resistance.[10]

The 1st Battalion of the 1st Marines (Lieutenant Colonel John E. Gorman) relieved two battalions of the 10th ROK Regiment in the Hill 854 area. No opposition from the enemy was encountered, but the Marines suffered 11 casualties from mines as a consequence of incorrect charts supplied by the ROKs.

By this time it had become an open question whether “friendly” mines did more harm to friend or foe. Certain it was, at any rate, that the prevailing system—or lack of system—resulted in Marine casualties during nearly every offensive operation in zones where the action shifted back and forth.

Lieutenant Colonel Foster C. La Hue’s 3/1 relieved two battalions of the 21st ROK Regiment. Although the ROKs had fought their way to the summit of Hill 854, the ridgeline to the southwest remained in the enemy’s hands. An attack by 3/1 was planned for 1530 on 20 September, supported by artillery and an air strike. Delays in the arrival of the planes caused a postponement until 1720. How Company jumped off and had advanced 50 yards when a man was killed and another wounded by mines. The attack was called off at dusk so that the ROKs could remove the explosives they had planted.
Air support was requested for 0700 on the morning of the 21st, but it was 1040 before four Air Force F–51s arrived for a strike directed by an observation plane of VMO–6 and a forward air controller. At 1220, following a 10-minute artillery preparation, How Company spearpointed a battalion attack which met stiff resistance. Another air strike was requested but did not materialize. The assault continued with mortar and artillery support until 1745, when How Company reported the ridge line secured.

Casualties of 3/1 for the two days were nine KIA and 55 WIA. Enemy losses totaled 159 counted and 150 estimated KIA, 225 estimated WIA, and 29 prisoners.[11]

“A large number of mines and booby traps were discovered within the battalion sector,” the 3/1 report for the 23d concluded, “most of these being U.S. types which were placed by ROK troops, with only a few enemy mines scattered in the central portion of the sector.”[12]
Division OpnO 27–51, it may be recalled, had directed the Marines to extend the X Corps boundary eastward by taking over the sector of the 11th Regiment, I ROK Corps. Even under ordinary circumstances this would have meant an exhausting 15-hour march for the relieving troops merely to climb Hill 884 (Map 20). The position was accessible only on foot, and supplies had to be brought on the backs of cargadores.

Because of the isolation of this wildly mountainous area, a reconnaissance was deemed essential. Major General Gerald C. Thomas, commanding general of the 1st Marine Division, assigned that mission to the Division Reconnaissance Company after deciding on a troop lift by helicopter.

He was aware, of course, that no such operation had ever been undertaken during the brief history of rotary-wing aircraft. Large-scale helicopter troop lifts were still at the theoretical stage.

Lieutenant Colonel George W. Herring, commanding officer of HMR–161, had but 48 hours for preparation. He and his executive officer, Lieutenant Colonel William P. Mitchell, worked out a tactical and loading plan with the commanding officer of Recon Company, Major Ephraim Kirby-Smith, and the acting Division Embarkation Officer, First Lieutenant Richard C. Higgs.[13]

An air reconnaissance of Hill 884 disclosed only two acceptable locations for landing sites, both approximately 50 feet square with a sheer drop on two sides. About 100 yards apart and some 300 feet below the topographical crest, each could be cleared sufficiently for the landing of a single aircraft.

Major Kirby-Smith decided on the order in which troops of his company and attached units would be landed. The assignment and loading tables were completed on 20 September in time for a rehearsal. All participants were instructed as to their team numbers and embarkation points.

H-Hour of Operation SUMMIT (Map 21) was set for 1000 on 21 September. The plan called for a preliminary landing of a Recon Company rifle squad to provide security. Next, a landing point team from the 1st Shore Party Battalion (Lieutenant Colonel Harry W. Edwards) had the mission of clearing the two sites. These two groups were to disembark from hovering helicopters by means of knotted 30-foot ropes. Strong winds at the 2,900-foot altitude made landing quite hazardous.

The execution was delayed half an hour by the ground fog so prevalent at this time of year. As soon as the two landing sites were cleared (about 40 minutes), word was transmitted by radio for the loading to begin at Field X–83 (Map 21), about 14 miles southwest of Hill 884 by the defiladed route of flight.

Control over the landings and takeoffs on the two Hill 884 sites was exercised by a hovering helicopter. Aircraft landed at 30-second intervals, each carrying five fully equipped men who disembarked in average time of 20 seconds. Two radio nets maintained communications between the landing sites and orbiting aircraft. Voice contact could not be established between the landing point team and X–83, however, and it became necessary for a helicopter to return within sight of the field to restore communications for incoming aircraft.

A total of 224 men, including a heavy machine gun platoon from 2/7, was lifted in flight time of 31.2 hours and over-all time of four hours. In addition, 17,772 pounds of cargo were landed.

Operation SUMMIT ended with the laying of two telephone lines between Recon Company on Hill 884 and the CP of the 1st Marines, about eight miles to the rear. Fifteen minutes were required for dropping each line. The ROKs, following their relief, proceeded on foot to their own Corps area.

From a tactical viewpoint, the importance of Hill 884 lay in its domination of enemy-held terrain. The difficulty of reaching the remote position had been overcome by the helicopter, and Operation SUMMIT was
recorded in front page headlines by Stateside newspapers.

Congratulations poured in from all sides. Lieutenant General Lemuel C. Shepherd, Jr., commanding general of FMFPac, complimented HMR–161 on “a bright new chapter in the employment of helicopters by Marines.” Major General Clovis E. Byers, commanding X Corps, praised the “organic and attached units of the 1st Marine Division that participated in the first relief of units on the battle position. Your imaginative experiment with this kind of transport is certain to be of lasting value to all the services.”[14]

Nobody was more enthusiastic than General Thomas. “Operation SUMMIT, the first helicopter-borne landing of a combat unit in history, was an outstanding success,” said his message. “To all who took part, well done!”
Chapter 10. The New Warfare of Position
Helicopter Operation BLACKBIRD

It is not surprising, considering their training, that the Marines found it a difficult transition from offensive to defensive operations after 20 September. As evidence that patrols were conducted with customary aggressiveness, Marine casualties (including the 1st KMC Regiment) for the last 10 days of the month were 59 KIA, 1 MIA, and 331 WIA. Enemy losses for the same period were 505 counted KIA, and 237 prisoners.

1st Marine Division casualties of 2,416 (including 594 reported by the KMCs) for September as a whole were the most severe suffered during any month of the war so far with the exception of December 1950 and June 1951. NKPA losses of the month were 2,799 counted KIA and 557 prisoners.[15]

On the 23d the 1st Marines extended to the eastern boundary of X Corps and relieved the Division Reconnaissance Company on Hill 884. That same day the enemy was treated to a novelty when 100 well aimed 16-inch projectiles, fired from a range of 40,000 yards, roared in like meteors on his positions in the area of Hill 951 (Map 20). Naval gunfire from the USS New Jersey was being conducted by Marine spotters in forward OPs, who reported good coverage for the 2,000-pound rounds. Ammunition dumps and artillery pieces were destroyed while NKPA troops in the open suffered heavy personnel casualties, according to observers.

Several more bombardments were contributed by the New Jersey at the request of 1/1 and 3/1 during the balance of the month. Marine and attached Army artillery also gave excellent support with fire so accurate as to break up enemy counterattacks before they could be launched. Ammunition restrictions hampered the efforts of the 11th Marines (Colonel Custis Burton, Jr.) but the cannoneers never failed to respond to an emergency. The 90mm rifles of the 1st Tank Battalion (Lieutenant Colonel Holly H. Evans) continued to show good results with direct observed fire on enemy bunkers. Air support in September, concluded the Division report, was “generally inadequate and unsatisfactory.”[16]

By the last week of September the Division right (east) flank was well protected, considering the rugged terrain. Not as much could be said for the other flank, northwest of the Punchbowl, where the sector of the Marines joined that of the 5th ROK Division. Since the Division sector was divided by high, roadless mountains, there was no rapid way of moving reserves other than by helicopter. In short, the 1st Marine Division was hard pressed to man a 22,800-yard MLR while keeping in reserve enough troops to help defend this sensitive area in an emergency.

Plans were completed by General Thomas and the Division staff for the rapid displacement of a company from 2/1, the reserve battalion of the 1st Marines, to meet any such threat. Since a surprise attack was most likely to occur at night, it was decided that a helicopter lift of an element of the Division reserve should be made in the darkness of 27 September after a detailed daytime rehearsal.[17]

In contrast to former Marine helicopters, which had no night-flying aids, the HRS–1 was equipped with few attitude of flight instruments. They were primitive compared to the sophisticated instrumentation of fixed-wing planes, and Lieutenant Colonel Herring sent his pilots on preliminary night indoctrination flights to memorize terrain features.

The route, five air miles in length, amounted to a round trip of 13 miles because of the detours necessary for purposes of concealment. The aircraft were to take off from a dry river bed southeast of Hill 702 (Map 21) and land near the northwestern rim of the Punchbowl, where the troops would march a mile to their final assembly area.

The infantry unit selected for Operation BLACKBIRD was Easy Company of 2/1, commanded by
Second Lieutenant William K. Rockey. Lieutenant Colonel Nihart and Major Carl E. Walker, the battalion commander and his executive officer, supervised the daylight rehearsal on the morning of the 27th. Six helicopters lifted 200 men in the overall time of two hours and 10 minutes to a landing site of 50 by 100 feet cleared by a team of the 1st Shore Party Battalion. The troops were proceeding on foot to their assembly area when an antipersonnel mine wounded a man. Nihart called a halt immediately and investigation revealed that the area was filled with mines. Plans were changed to abandon the march, although the landing site remained the same.

Operation BLACKBIRD got under way at 1930 on 27 September. The night was dark when the first HRS–1 took off with five combat-equipped men. Three-minute intervals were required between aircraft operating on a shuttle system, so as to avoid the danger of collisions. Different altitudes were assigned to outgoing and incoming helicopters which used running lights only two minutes before entering or leaving the debarkation zone. A total of 223 troops were landed in over-all time of two hours and 20 minutes instead of the nine hours a movement by foot would have required. Nevertheless, some of the results were not reassuring. Rotor wash blew out many of the flare pots lighting the embarkation area, and the battery-powered beach lanterns on the landing site proved inadequate. Pilots were temporarily blinded by the glare on windshields; and artillery flashes bothered them while making their way through three mountain passes. Fortunately, good radio communications aided pilots who had trouble in locating the landing site in spite of night rehearsals.

Operation BLACKBIRD remained the only night helicopter troop lift during the war in Korea. “Present equipment,” said the Marine report, “indicates that under present conditions in Korea these night lifts should be limited to movements within friendly territory.”[18]
Chapter 10. The New Warfare of Position  
“To Organize, Construct and Defend”

“The Division continued to organize, construct and defend positions along a 13½-mile front; patrol forward of the MLR and screen rear areas; and maintain one U.S. Marine regiment which could not be committed without authority from X Corps in a reserve area 17 miles behind the lines.”

The above quotation, from the opening paragraph of the report of the 1st Marine Division for October 1951, sums up in a nutshell the new trend of operations since 20 September. It is significant that for the first time in 1951 the Division Historical Diary departs from a daily account of events and divides the month into two equal parts for a chronicle of operations. Not enough had happened to justify a day-by-day summary.

This does not mean that the Marines neglected any opportunity to do the enemy hurt. It means only that the opportunities of defensive warfare were limited as compared to the preceding six months of offensive operations. That the Marines made the best of such opportunities is shown by the fact that the ratio of enemy to friendly casualties increased from the 4-to-1 of September to the 20-to-1 of October, even though the totals of the former month were larger.[19]

As a result of his new defensive policies, the enemy often avoided a fight. Day after day passed during the first two weeks of October without far-ranging Marine patrols being able to make contact.

Line MINNESOTA, the new MLR (Map 20), ran roughly parallel to the HAYS line but included advanced positions taken in the September offensive. During the first 10 days of October the 2d Battalion of the 1st Marines continued to be the Division forward reserve in readiness for a quick shift to any threatened point in the MLR, and the Division Reconnaissance Company had the mission of maintaining daily contact with the 11th ROK Division on the Marines’ right flank.

It might seem that the 7th Marines, 17 miles to the rear at Wontong-ni, would be entirely becalmed. Yet this regiment saw as much action on some days as any of the three regiments ranging forward of the MLR. The explanation was that the rear area was infested with elusive North Korean guerrillas who kept the 7th Marines patrols busy.

Early in October the question arose as to how quickly a reserve battalion could be shifted from one point to another. By this time a company-size helicopter lift had become commonplace, having been successfully completed twice by HMR–161 since Operation SUMMIT. It remained to be seen whether a battalion could be transported with comparable celerity, and, on 9 October, Division issued an order warning of 3/7’s move.

The 7th Marines was due to exchange places with the 5th Marines on the 11th after relieving that regiment in the center of the Division front. While 1/7 and 2/7 completed a conventional relief of their opposite numbers, 3/7 was selected for a helicopter lift. Lieutenant Colonel Edwards, the new commanding officer, had recently commanded the Shore Party Battalion and helped to train its landing site and loading point teams. He took part in the planning along with Colonel Krulak, Lieutenant Colonels Herring and Mitchell, and the new commanding officer of the Shore Party Battalion, Lieutenant Colonel George G. Pafford.

Planning went on as if for an amphibious operation. Assignment and loading tables were worked out, and each Marine of the six-man embarkation teams had his designated place in the helicopter. On 10 October all officers and men of 3/7 attended a familiarization class at which trial teams were loaded.

Operation BUMBLEBEE began at 1000 on the 11th. Field X–77 (Map 21) had been selected as the loading zone because of its proximity to the assembly area of the 7th Marines. The landing site was just behind the 5th Marines MLR, northeast of Hill 702. A flight path of 15 miles took advantage of the concealment afforded by valleys and defiladed areas.
The two dispatchers in the loading zone were provided with a checkoff flight list containing the names of every team of 3/7. In order to avoid delays, replacements could be summoned from a casual pool to fill understrength teams to plane capacity. Average time for loading was 20 seconds.

Ten to 12 minutes were required for the flight. As the helicopters landed at intervals of a minute, a team could exit and allow the craft to be airborne in an average time of 17 seconds. “Time was saved,” according to one Marine report, “when the Shore Party personnel, after opening the door, vigorously assisted the passengers by grasping their arms and starting them away from the craft. The last man out checked to see if any gear had been forgotten. Guides furnished by the battalion directed the passengers toward their respective company assembly areas, thus keeping the landing areas clear at all times.”[20]

Twelve helicopters were employed in 156 flights. The flight time was 65.9 hours and over-all time five hours and 50 minutes. A total weight of 229,920 pounds included 958 combat-equipped troops averaging 240 pounds.

These statistics of Operation BUMBLEBEE made it certain that Stateside headlines would proclaim another Marine “first.” Only four days later HMR-161 demonstrated its ability to carry out on short notice an emergency resupply and evacuation operation in a combat zone. Help was requested in the IX Corps sector to the west for a completely surrounded ROK unit in need of ammunition and of casualty evacuation. Lieutenant Colonel Mitchell led six HRS-1 aircraft which flew in 19,000 pounds of ammunition. Lieutenant Donald L. Hilian (MC), USN, surgeon of HMR—161, landed to supervise the evacuation of 24 wounded ROKs, several of whom would otherwise have died. Captains James T. Cotton and Albert A. Black made four flights each into the beleaguered area, and all Marine pilots of Operation WEDGE were congratulated in person by Major General Claude F. Ferenbaugh, commanding general of IX Corps.[21]

Seven infantry battalions, with 2/1 in immediate reserve, manned the MLR from 1 to 13 October—three KMC battalions on the left of the Division sector; two 5th Marines battalions (relieved by the 7th Marines on the 11th) in the center; and two 1st Marines battalions on the right. Scout and sniper teams were employed throughout the period, with contacts few and far between. More destruction was inflicted on the enemy by observed artillery, tank, and mortar fire.[22]

A new emphasis was placed on psychological warfare during these defensive operations. Eighty-seven NKPA soldiers surrendered from 1 to 13 October, but whether they responded to leaflets fired by the 11th Marines could not be determined.

Early in October the 1st Marine Division was granted permission by EUSAK to use Sokcho-ri (Map 19) as a port of embarkation and debarkation instead of Pusan. The change proved satisfactory even though troops had to be lightered from ship to shore. A 68-mile truck movement through the I ROK Corps zone replaced the airlift of 200 miles from Pusan to Chunchon, followed by a motor march of 70 miles. It was estimated that the new routing would add from 8,000 to 10,000 man-days a month to the combat potential of the Division.

An improvement in logistics resulted when the Division asked and received permission from EUSAK to use field K–50 near Sokcho-ri for an airhead instead of K–51 at Inje. Although the Marines were limited to five or six sorties a day while sharing K–50 with I ROK Corps, they were able to transfer many airhead activities to the new field.

The mission of the Division remained essentially unchanged from 14 to 31 October. Foot patrols ranged farther into enemy territory, and tank-infantry raids in company strength, supported by air and artillery, were launched at every opportunity.

Typical of these operations was the raid staged on 16 October by elements of the 1st Battalion, 7th Marines, (Lieutenant Colonel James G. Kelly) supported by tanks, air, artillery, and engineers. Captain John R. McMahon’s Charlie Company was the principal unit involved. The Marine column had as its objective an NKPA strong point overlooking the village of Changhang (Map 2) on the east and the flats on both sides of the Soyang-
gang to the south and southwest. Captain McMahon’s mission was “to reduce all fortifications and installations . . .” [and] “. . . to seize, occupy and hold ground until the area was thoroughly mined, booby-trapped and infested with trip flares.”[23]

A small-scale battle flared up for a few minutes as the enemy put up a stiff resistance with artillery, mortar, and automatic weapons fire. Superior Marine firepower soon prevailed, and at 1540 the attackers reached their objective. During the next hour and 20 minutes enemy installations were destroyed and the strong point rendered untenable by mines and booby traps. The Marines withdrew at 1700 after sustaining casualties of 3 KIA and 18 WIA. Enemy losses were 35 counted KIA.

The next day a reinforced KMC company, supported by tanks, air, artillery, and engineers made a similar raid on enemy positions about 875 yards northwest of Hill 751 and 1,500 yards south of Hill 1052 (Map 20). Twenty-five NKPA bunkers were destroyed with losses to the enemy of 15 counted KIA, 3 prisoners, and 5 captured machine guns.[24]

On 21 October the front of the 1st Marine Division was reduced a mile when elements of the 3d ROK Division relieved the 2d KMC Battalion on the Marine left flank in accordance with instructions of X Corps. Six infantry battalions now manned an MLR of 12 ¼ miles.

A strong enemy position, menacing the forward elements, had developed to the north of the 1st Battalion, 1st Marines’ sector. Three days of reconnaissance and detailed preparation preceded the destructive raid carried out on 30 October. Captain George E. Lawrence’s Charlie Company, reinforced with heavy machine guns, was held up by NKPA resistance in estimated company strength. The Marines fought their way up a ridgeline, throwing white phosphorus grenades into enemy bunkers. Pinned down momentarily by NKPA mortar and small-arms fire, they reached a defiladed position and withdrew under cover of Marine artillery, air, mortars, and heavy machine guns. At a cost of only one WIA, the raiders inflicted 65 counted KIA casualties on the enemy and destroyed an estimated 40 NKPA bunkers.[25]

All three Marine regiments on Line MINNESOTA were directed by General Thomas to fight the enemy whenever possible with his own weapons in the form of ruses and night ambushes. On 31 October the 3d Battalion of the 1st Marines feigned preparations for an attack even to the extent of a brief artillery barrage. When the firing let up, the Marines sounded an NKPA bugle call as a signal for enemy troops to rush out of bunkers and man open trenches. Thus exposed, they became the victims of intense Marine mortar and artillery fire which inflicted an estimated 47 KIA and 48 WIA casualties.

During the last 2 weeks of October, 11 missions were fired by the battleship USS New Jersey and 41 missions by the heavy cruiser USS Toledo. Appreciation was expressed in a message to the Toledo by General Thomas: “Your accurate and effective fire during period 24–29 October made an important contribution to operations of this division. Many thanks and come again.”[26]

Antiguerrilla raids behind the MLR were carried out by Marine ground forces relying upon HMR–161 helicopters for transportation. In Operation BUSHBEATER teams from 1/1 were landed on the Division’s east flank to sweep westward toward the Soyang-gang on 22 October while teams from Recon Company patrolled from the opposite direction.

Operations HOUSEBURNER I and II were planned to deprive guerrillas of shelter during the coming winter. As the name implies, helicopter-borne teams set Korean huts afire with flame throwers and incendiary grenades.[27]

Enemy forces facing the Marines at various times in October were believed to comprise the 2d Division, II NKPA Corps, the 1st and 15th Divisions of III Corps, and the 19th Division of VI Corps. NKPA casualties during the month were announced by the 1st Marine Division as 709 counted and 2,377 estimated KIA, 4,927 estimated WIA, and 571 prisoners. The Marines (including the 1st KMC Regiment) suffered losses of 50 KIA, 2 MIA, and 323 WIA.[28]
On 1 November 1951 the front line strength of the opposing forces was nearly equal—195,000 for the UN, and 208,000 for the enemy. In reserves the Communists held their usual numerical advantage with nine CCF armies totaling 235,000 men plus 138,600 in four NKPA corps. All were readily available either as reinforcements or as assault troops for a great offensive.[29]

Even though the Eighth Army was committed to a warfare of position, General Van Fleet meant to keep the initiative. “If we had stagnated on any one of our many positions since the tide turned in April,” he said in a recorded statement of 3 November, “the hydra-headed Communists—who seem to grow two soldiers for each one cut down—would soon have been at our throats. With the enemy’s prolific capacity posing an ever-present threat, we had no choice but to destroy the menace before it matured.”[30]

Throughout November the 1st Marine Division continued to occupy the eastern portion of the X Corps defense sector in east-central Korea. From left to right the 1st KMC Regiment, 7th Marines, and 1st Marines held the 12 1/4-mile MLR with two battalions each. The 5th Marines remained in reserve until the 11th, when it relieved the 1st Marines. That regiment went into the new reserve area at Mago-ri (Map 19).[31]

Elements of the 1st, 15th, and 19th Divisions, III NKPA Corps, manned the opposing lines. The Marines continued to organize artillery- and air-supported tank-infantry-engineer task forces in company strength for raids. Squad-size patrols were sent out nightly to ambush the enemy, employing ruses whenever possible.

The howitzers of the 11th Marines and the 90mm rifles of the 1st Tank Battalion were kept busy throughout the month. On 7–8 November, for instance, Marine artillery fired 257 observed missions in 24 hours—including 34 on enemy artillery positions, 32 on mortar positions, 25 on bunkers, 22 on machine gun positions, 4 in support of friendly patrols, 3 on supply dumps, 2 on trucks, and 1 each on a bridge, a CP, and a 57mm recoilless rifle position.

In spite of such daily pounding, aerial photographs proved that NKPA defenses in depth had become more intricate and formidable in November 1951 than during any previous month.

On the 7th the 14th Replacement Draft added 2,756 officers and men to the 1st Marine Division. Within a few hours 2,066 officers and men of the 10th Rotation Draft were detached. And on the 27th the 11th Rotation Draft represented a further loss of 2,468 Marines whose departure was hastened so that they could be home by Christmas.

A note of grim humor crept into proceedings on 9 November. Division OpnO 50–51 directed that all supporting arms and weapons commemorate the Marine Corps Birthday the next day by firing a TOT on Hill 1052, the key enemy observation point overlooking the friendly sector.[32] While the cruiser USS Los Angeles contributed naval gunfire, the Commanding General of 1st MAW, Major General Christian F. Schilt, led an air strike of 83 Marine planes to blast this enemy strong point.

The performance was embellished on the 10th when Marine tanks, mortars, and machine guns added their fire to the grand crescendo of exploding shells and bombs. The Communists were also bombarded with 50,000 leaflets inviting them to the Marine birthday dinner that evening. Twenty Korean Reds actually did surrender, though some doubt remained whether they had responded to the invitation or the TOT. General Van Fleet sent a message to all Marines in his command, congratulating them on “a job well done” in Korea.[33]

On 11 November the 5th Marines carried out its relief of the 1st Marines on Line MINNESOTA. This was the occasion for the largest helicopter troop lift so far, involving the transportation of nearly 2,000 combat-equipped men.
Operation SWITCH began at 0635 on D-Day when three helicopters took off from Field X-83 with Shore Party specialists to signal aircraft into landing sites and supervise the unloading and reloading of troops. Twelve helicopters were employed, each carrying five men and supplies from the 1st Battalion, 5th Marines (Lieutenant Colonel Kirt W. Norton), and returning to Field X–83 with a like load from Lieutenant Colonel Clifford E. Quilici’s 2d Battalion, 1st Marines.[34]

Naval gunfire from the USS *New Jersey* helped to keep the enemy quiet during the relief. All told, 950 men were flown to Hill 884—soon to be known unofficially as “Mount Helicopter”—and 952 lifted to Field X–83 in return flights. Total flight time was 95.6 hours and over-all time 10 hours. Once again the Marine Corps had made tactical history.

Ground forces operations throughout November seldom varied from the familiar pattern of squad-size patrols nightly and an occasional daytime raid by a company-size task force with the support of artillery and air. Supporting arms kept enemy strongholds under almost constant fire, and North Korean activity in the construction or improvement of bunkers provided frequent targets of opportunity.

Contacts seemed to be avoided by enemy troops. On the night of 29 November, for instance, 11 Marine ambush patrols ranged from 1,500 to 2,500 yards ahead of the MLR with only a single contact before returning at daybreak. One enemy KIA was inflicted and one prisoner taken at a cost of four Marine WIA casualties.

Total Marine casualties (including the KMCs) during November were 34 KIA and 250 WIA. Enemy losses amounted to 408 counted and 1,728 estimated KIA, 2,235 estimated WIA, and 104 prisoners.
Chapter 10. The New Warfare of Position
The Second Marine Christmas in Korea

Marine operations in December were shaped in advance by the resumption of armistice negotiations. This time Panmunjom was agreed upon as a conference site instead of Kaesong. Literally a wide place in the road, the tiny hamlet was located just north of the 38th Parallel between Munsan and Kaesong (Map 19). In the lack of houses, tents provided shelter for the UN and Communist delegates who renewed their meetings on 25 October 1951 for the first time since the Reds walked out at Kaesong on 23 August.

Discussions during November were largely devoted to the question of a cease fire based upon a line of demarcation. On the 23d it was agreed to accept a line linking up the farthest points of repeated contacts up to 2,000 yards forward of the United Nations MLR. Three days later, representatives of both sides initialed maps to indicate acceptance.\[35\]

The effect of the so-called cease fire on EUSAK operations was immediate. General Van Fleet sent his corps commanders a letter of instructions warning that active defensive operations were to continue until a full armistice had been concluded. If such an event took place within 30 days after 27 November 1951, the demarcation line would not be altered. But if an agreement had not been reached by that time, the line would be revised in accordance with actual changes.\[36\]

EUSAK instructions to corps commanders were relayed in a X Corps message of 27 November to the 1st Marine Division:

“Part I. The conference at Panmunjom has fixed a military demarcation line as a preliminary step to ending hostilities within a 30-day period.

“Part II. Every US, UN, and ROK soldier will be informed that hostilities will continue until armistice agreement is signed.

“Part III. While negotiations continue, X Corps will: (1) Demonstrate its willingness to reach an agreement by reducing operations to those which are essential to insure maintenance of present positions. Counterattacks to regain key terrain lost to enemy assault are authorized, but other clearly offensive actions will be taken only by direction of this Headquarters; patrolling only to that line beyond which contact has been repeatedly established; limiting supporting fires, including air strikes, to destruction of those targets which appear to constitute a major threat, or to improve the enemy’s offensive capability. (2) Prepare for offensive action by: Conserving ammunition; maintaining combat effectiveness through intensified training; preparation for and rehearsal of limited-objective attacks, to be launched near the end of the 30-day period in order to improve the MLR.

“Part IV. Every effort will be made to prevent unnecessary casualties.”\[37\]

In view of these instructions, it is understandable that a lull set in along the X Corps front in December 1951. Most of the cold weather clothing had been issued during the preceding month, and work was largely completed for the “winterizing” of bunkers. It remained only to improve defensive installations as front line elements continued to send out patrols to maintain pressure against the enemy. And since the Communists were putting similar military policies into effect, both sides kept in contact with relatively small units.\[38\]

The enemy also busied himself with extending already formidable defenses in depth. And though he did not seek a fight, he showed no hesitation about accepting one.

From 5 to 20 Marine patrols went out nightly during December, some of them manning night outposts called “duck blinds;”\[39\] occasional raids continued with relatively few contacts. In the rear of the Division area, helicopter patrols continued against guerrillas.
The 13 aircraft of HMR–161 had a busy month with 390 missions and 621 flights. Six thousand pounds of rations, 9,000 pounds of fuel oil in drums, 15,000 pounds of fortification material, and 15,000 pounds of cold weather clothing were among the supplies flown to the front. Personnel to the number of 2,022 were lifted, and cargo to the amount of 149,477 pounds.

The first breakthrough in truce negotiations, at Kaesong, occurred on 18 December, when lists of prisoners held by both sides were exchanged. Prior to this exchange of lists the UN Command could only speculate on the number carried as missing in action who were in reality held as prisoners of war. The Communists had previously reported only a few dozen names, and then only if it suited their propaganda purposes. Radio Peking, in releasing names piecemeal, had broadcast recordings made by UN prisoners under duress. Far Eastern monitors reported these broadcasts were slanted to give the Communist viewpoint.

The 18 December list of 3,198 American POWs revealed only 61 Marines including 2 Navy hospital corpsmen. (Information received from 18 Marines who gained their freedom in May 1951 was sketchy concerning others held at the time and was never accredited as official or authoritative.)[40] Interestingly enough when the Communist negotiators saw the list given them by the UN representative they became irate and tried to withdraw their list. The names of the Chinese and Korean prisoners had been Anglicized and caused considerable difficulty in retranslating the names into oriental characters.

Negotiations hit a snag at this point, and no other list was offered by the Red officials until the first prisoner exchange (Operation LITTLE SWITCH in April 1953). Notwithstanding the protracted and exasperating tactics of the Reds at the truce table, the exchange of prisoner of war lists presaged infinitely better treatment to the UN prisoners than had been accorded them prior to that time. The so-called lenient treatment policy by the Chinese, promulgated in July 1951, was initiated after the exchange of lists.”[41]

The lists given by the Communists did not include several Marines captured during the months of October, November, or December of 1951. The families of these men were to sit in anguish waiting for these names until April of 1953. These and other instances of perfidy and treachery at the truce table by the Communist negotiators were to become legion.[42]

On 19 December the 2d Battalion, 5th Marines (Major William E. Baugh) was relieved just behind the MLR by Lieutenant Colonel Norton’s 1/5 in helicopter Operation FAREWELL. It was the last flight in Korea for Lieutenant Colonel Herring, who returned to Quantico as commanding officer of Marine Helicopter Experimental Squadron (HMX)–1. His relief as commander of HMR-1 was Colonel Keith B. McCutcheon, and Lieutenant Colonel Mitchell remained as executive officer.[43]

The Marine helicopters of VMO–6 had also been setting records during the last half of 1951 under four commanding officers, Major David W. McFarland (5 April–5 October), Major Allan H. Ringblom (6 October–31 October), Major Edward R. Polgrean (1 November–25 November), and Major Kenneth C. Smedley (26 November–31 January 1952). A total of 1,096 Marine wounded had been flown out during this period, many of whom would otherwise have lost their lives.[44]

The supposed vulnerability of the helicopter was whittled down to a myth by VMO–6 experience. Returning from a front line mission with bullet holes was too commonplace for mention, yet the year 1951 passed without a single helicopter pilot being lost to enemy action, even though several aircraft were shot down. The experience of these 12 months also proved anew the wisdom of combining rotary-wing and fixed-wing aircraft in an observation squadron in fairly equal numbers. When it came to reconnaissance and artillery spotting, the nimble little OYs and OEs (both types are light observation planes) were much better suited than the “choppers.”

As for close air support, increased Air Force emphasis on an interdiction campaign beyond artillery ranges added to the limitations imposed on Marine requests. Of the 22 strikes requested in December 1951, only five were approved.

From the 1st to the 10th, units of the Division along the MLR consisted from left to right of the 1st KMC
Regiment, 7th Marines, and 5th Marines. The only major change took place on the 11th, when the 1st Marines relieved the 7th and the latter went into Division reserve. Enemy units were believed to be the 1st, 15th, and 19th (soon relieved by the 47th) NKPA Divisions with an estimated strength of 25,750.

Permission was rarely granted by X Corps for Marine raids to cross the EUSAK military limiting line known as Line DUCK, which generally coincided with the line of demarcation. Christmas passed like any other day except for the holiday feast. Nineteen patrols went out on Christmas Eve, two of which had brief fire fights with enemy patrols before returning at dawn. During the day 40 rounds of naval gunfire from the heavy cruiser USS St. Paul were credited with destroying seven enemy bunkers.

More than a third of the Marines partaking of Christmas turkey were comparative newcomers who had reached Korea since the warfare of movement ended on 20 September. The 15th Replacement Draft brought 38 officers and 2,278 men early in December, and 127 officers and 1,805 men departed with the 12th Rotation Draft. No Marines who had arrived prior to 1 January 1951 were left among the 1,495 officers and 23,040 men in Korea at the close of the year.

Heavy snow on 26 December impeded foot-patrol activity and increased the danger of mines. Next day, when the 30-day cease-fire agreement ended, it was announced at Panmunjom that the terms had been renewed and that operational restrictions would be extended indefinitely.

Thus December came to an end on a note of troubled uncertainty. Not a single large-scale combat had been reported, yet 24 Marines were killed (including KMCs) and 139 wounded in patrol actions. That the enemy had sometimes succeeded in the grim quest of both sides for prisoners is shown by the unwonted entry of eight Marines missing in action. NKPA losses for the month consisted of 246 counted KIA, and 56 prisoners.

The year 1951 passed into history at 2400 on 31 December as the 11th Marines saluted 1952 by firing a “toast” at enemy strongholds. The thud of the snow-muffled howitzers was also a fitting farewell to the past year of a war that was not officially a war. Indications were that it would doubtless be concluded by a peace that was not a peace, judging from the attitude of the Communist delegates at Panmunjom. And meanwhile the Marines and other Eighth Army troops would keep on fighting in accordance with the terms of a cease fire that was not a cease fire.
AS THE NEW YEAR began, the 1st Marine Division occupied practically the same front it had held along Line MINNESOTA for the last three months (Map 20) and would continue to hold for the next two and a half. The major units were disposed from left to right on 1 January 1952 as follows:

1st KMC Regiment (Colonel Kim Dong Ha commanding, LtCol Alfred H. Marks, senior advisor);
1st Marines (Colonel Sidney S. Wade);
5th Marines (Colonel Frank P. Hager, Jr.);
11th Marines (Colonel Bruce T. Hemphill) in artillery support.

The 7th Marines (Colonel John J. Wermuth) was in reserve until 10 January, when it relieved the 5th Marines on line. That regiment then went into reserve and could not be committed to action without the approval of X Corps.[1]

Tactical units not organic to the 1st Marine Division but attached at this time were, in addition to the 1st KMC Regiment, the 1st Korean Artillery Battalion, the 1st Platoon, 92d U.S. Army Searchlight Company, and Battery C, 1st 4.5” Rocket Battalion.

The new Korean artillery battalion consisted of two medium (155mm) and two light (105mm) howitzer batteries. Major General Gerald C. Thomas, commanding general of the 1st Marine Division, approved a plan for placing this unit in the Punchbowl on 9 January to reinforce Lieutenant Colonel Sherman W. Parry’s 1st Battalion, 11th Marines.

Enemy units opposing the 1st Marine Division up to 23 January 1952 were the 1st, 15th, and 47th NKPA Divisions with an estimated combined strength of 25,750 men. On the 23d the 15th Division was relieved by the 45th.

The enemy, according to the Division report, showed “greater caution than he had in previous months, and friendly outposts and ambuscades noted fewer contacts. His harassing mortar and artillery fires increased in volume through the month. Meanwhile, extensive efforts to improve his defenses continued with particular attention being given to reverse slope installations.”[2]
Chapter 11. Winter Operations in East Korea
Ambush Patrol on New Year’s Eve

The new year was but a few minutes old when the first Marine action took place. Captain Charles W. McDonald’s Baker Company had been directed by Lieutenant Colonel Kirt W. Norton, commanding the 1st Battalion, 5th Marines, to send out an ambush patrol on New Year’s Eve.

A rifle squad, a light machine gun squad, an interpreter, and a corpsman composed the little column wearing white camouflage clothing which made the men all but invisible against a background of snow. After getting into position, the patrol settled down for the usual long wait. Darkness was the enemy’s element, and Marine ambushers ran the risk of being ambushed themselves. This time, however, a six-man North Korean patrol came within five yards before the Marines let the enemy have it with machine gun and rifle fire which inflicted one KIA and four estimated WIA casualties. Efforts to take a prisoner were frustrated as the NKPA survivors melted away into the darkness. The Baker Company patrol returned without casualties at 0400.[3]

Marine operations were still limited by the EUSAK “cease fire” directive which went into effect for a month on 27 November 1951 in accordance with a decision reached during the armistice negotiations at Panmunjom. UN and Communist delegates agreed on a line of demarcation, known to the Eighth Army as Line DUCK. It linked up points of repeated EUSAK patrol contacts, not to exceed 2,000 yards beyond the MLR. Operations past this line, running generally parallel with Line MINNESOTA, could not be launched without permission from corps commanders.

When the agreement expired on 27 December, it was renewed indefinitely. Actually, it brought about few changes in the warfare of position which had replaced a warfare of movement on 20 September 1951. Each Marine infantry regiment on the MLR continued to send out several squad-size patrols nightly for such purposes as ambush, reconnaissance, and taking prisoners. Raids were employed for special missions where formidable enemy resistance might be expected. These forces usually ranged from a platoon to a company in strength, reinforced by supporting weapons. Operations of this sort were planned with meticulous thoroughness and carried out with minimal risks.
Chapter 11. Winter Operations in East Korea
Marine Raid in Company Strength

The first company-size raid of the new year was conducted by units of the 3d Battalion of the 1st Marines (Lieutenant Colonel Spencer H. Pratt) in the darkness of 1–2 January 1952. Captain James B. Ord, Jr.’s How Company was alerted on 30 December to prepare for a night raid with a mission of reconnaissance and capturing or destroying any enemy that might be encountered. On the afternoon of the 30th, Ord made a preliminary reconnaissance with Second Lieutenants Milo J. See and John E. Watson, commanding the 2d and 3d Platoons respectively. That evening the company commander held a briefing at his OP (observation post) which was attended by the sergeants and squad leaders of the two platoons selected for the raid.[4]

This command group carried out a second reconnaissance forward of the MLR on 31 December, proceeding until they ran into enemy sniper fire. Captain Ord requested aerial reconnaissance and three missions were flown by observation planes of Major Kenneth C. Smedley’s VMO–6.

Line DUCK and the assigned battalion sector limited the objective area. On a basis of these restrictions as well as reconnaissance reports, Ord recommended an operational area containing three objectives, each of which represented a point where the enemy was not likely to be encountered. These objectives were approved by Lieutenant Colonel Pratt and formed the basis of the battalion order.

The task organization for the raid included two attached How Company units, the machine gun platoon (−), and 60mm mortar section, commanded by Second Lieutenants John D. Koutsandreas and James J. Hughes respectively. Another infantry unit, the 1st Platoon of Item Company, 3/1 (Second Lieutenant William E. Harper), was also attached.

First Lieutenant Francis E. White, How Company executive officer, remained at the OP with the tactical air-control party, which had an observation plane on strip alert in case the raiders ran into artillery or mortar fire. A forward air controller with radioman accompanied the raiding party as well as artillery, 4.2”, and 81mm mortar forward observers. An interpreter, the assistant battalion surgeon, and a corpsman were included, and wiremen had the assignment of laying a line.

Hill 812 (Map 20) was the jumping-off place for the column of files in ghostly white snow suits with hoods. Boots were dark in contrast but the snow was deep enough to hide them. The drifts slowed up the wiremen and an infantry fire team protected them at their work.

The first objective consisted of bunkers and suspected mortar positions which had been reported by tactical air observers as recently occupied by the enemy. They were empty when the raiding party reached them, and the Marine column proceeded toward Objective 2, an ambush site overlooking and commanding a crossing of the Soyang-gang.

The selected area for the support group was located nearby, and there the machine gun section and riflemen took positions on a nose with the wiremen, radiomen, and corpsman in the center. While these elements peeled off, the raiding party continued toward the ambush site, where it was planned to lie in wait two hours for the enemy. A suspected mine field had to be crossed and Captain Ord directed his men to advance in single file, stepping carefully in the footprints ahead. Twelve Marines had passed safely when the 13th became the victim of a mine explosion. The corpsman found broken bones but none of the usual torn flesh and hemorrhaging, thanks to the new thermal boots issued during the winter of 1951–1952.[5]

The temperature was zero with a sharp wind blowing. Some of the Marines had to shed clothing to keep the casualty warm during the forced immobility, and the raiding party commander broke radio silence by requesting permission of Captain Ord, in the support group area, to pull back to that position and set up the
Ambush.

Permission was granted by Ord after radio consultation with the battalion commander on the How Company OP. The raiding party remained in ambush formation on Objective 2 for two hours without seeing or hearing an enemy. By that time the condition of the mine casualty had deteriorated to such an extent that Lieutenant Colonel Pratt gave permission for a return to the MLR without proceeding to Objective 3.

He directed that the raiders split and take two routes in the hope of capturing a prisoner, since a light enemy probing attack on the MLR had just been reported by Item Company of 3/1. This proved to be a fortunate decision, for two NKPA soldiers were seized. The main object of the raid had thus been fulfilled, even though little action was seen during the five-hour operation.

Raids of this sort may seem anticlimactic when compared to the fights in the same area during the first three weeks of September. But the Marines were showing adaptability in conforming to a warfare of position that was contrary to all their offensive training. Careful reconnaissance, detailed planning, and minimal risks—these were the elements of defensive tactics in which large forces had to content themselves with small gains.
On 11 January 1952 the 1st Marine Division had its second change of command in Korea when Major General John T. Selden relieved General Thomas. The new commanding general was born at Richmond, Virginia, and educated there at McGuire’s University School. Before the United States entered World War I, he tried to join the Canadian Army but was warned that he would lose his American citizenship. In January 1915, at the age of 21, he enlisted as a private in the Marine Corps and saw two years of active duty on jungle patrols in Haiti. Commissioned as a second lieutenant in 1918, he served in ocean convoys during World War I.

Sea duty, China duty, and more Haiti duty occupied him during the postwar years. The outbreak of World War II found him a Scouting Force Marine Officer aboard the *Indianapolis*. After that he had three main assignments: personnel and intelligence officer of I Marine Amphibious Corps; commanding officer of the 5th Marines in the New Britain operation; and chief of staff of the 1st Marine Division at Peleliu.

Brigadier General William J. Whaling remained on duty as Assistant Division Commander. The new staff officers were Colonel Richard G. Weede, Chief of Staff; Colonel Walter N. Flournoy, G–1; Lieutenant Colonel James H. Tinsley, G–2; Lieutenant Colonel Gordon D. Gayle, G–3; and Colonel Custis Burton, Jr., G–4.

A change of FMFPac command had taken place on 1 January. Lieutenant General Franklin H. Hart relieved General Shepherd, who became Commandant of the Marine Corps as General Cates finished his four-year term. General Hart paid his first visit to the 1st Marine Division late in January.

The new FMFPac commander found the Marines occupying essentially the same positions they had defended since late September. About two-thirds of the 12¼-mile MLR on Line MINNESOTA (Map 20) was good defensive ground. It had been strengthened by an elaborate system of trenches and bunkers behind miles of barbed wire.[6]

In the left-central portion of the Marine sector, the enemy held the dominating terrain. This was particularly true of the rugged area just west of Hill 812, where the opposing trenches were only 50 to 150 yards apart. There a fire-raked landmark, known to the Marines as Luke the Gook’s Castle, had been made into a strong point by the enemy. Its base was a maze of trenches and bunkers, and the 20-foot granite knob could have been taken only at an excessive cost in casualties. Although this bastion was hit repeatedly by almost every type of supporting ordnance, it was never completely destroyed nor denied to the enemy.

Operations of trench warfare had inevitably shaken down into a daily routine of sniping by day and patrols or raids by night. Marine artillery, mortars, and stationary tank fire, occasionally reinforced by naval guns, played an increasingly important part in the coordinated destruction of NKPA defenses. As a result the enemy was limited for the most part to well camouflaged reverse slope positions.

Because of the 1st Marine Division’s defensive mission and the constant rotation of the more experienced personnel back to the United States, it was considered that men assigned to infantry elements, in particular, needed additional training in small unit leadership and offensive tactics. Consequently the regiments were rotated at monthly intervals to the reserve area near Wontong-ni, where Camp Tripoli had been established for training. An average of 84 NCOs a week completed a 168-hour special course of instruction over a four-week period. The program for the rank and file was so intensive, according to one report, that “it was considered a relief by some Marines to cease training and return to the relatively quiet life on the front lines.”[7]

The truce talks at Panmunjom continued to influence operations at the front. A demilitarized zone having been proposed in anticipation of an armistice, preparations were begun by the 1st Marine Division to develop the defenses along Line ICELAND, generally conforming to the Line KANSAS of Marine fights early in September.
It was to be used as a new line of defense if the UN and Communist delegates reached an agreement.

Perhaps because other offensive tactics were so curtailed, psychological warfare had its heyday in the winter months of 1952. Propaganda leaflets were dropped from planes or fired by 105mm howitzers. At vantage points along the front, loud speakers bombarded the Communists with surrender appeals in their own language. The effects could not be evaluated with any degree of certainty, but it was hoped that the enemy did not respond with the amused indifference shown by the Marines toward Red propaganda.
The average low temperature for January 1952, was 11 degrees Fahrenheit. This was mild weather as compared to the subzero readings of the previous winter. Only 10 slight frostbite cases were reported for the month in contrast to the 3,083 nonbattle casualties, nearly all frostbite cases, incurred during the two weeks (27 November to 10 December 1950) of the Chosin Reservoir breakout.

The improvement in January 1952 could not be credited entirely to more clement weather. It was due in greater measure to one of the most noteworthy innovations of the Korean war—the insulated rubber combat boot, which proved much superior to the shoe pac of the past winter.

U.S. Army experiments dated back to 1944. They were dropped three years later after efforts to perfect a boot with sealed insulation failed to meet the test of long marches. The Navy had more promising results with the boot during the winter of 1948–1949 when Arctic clothing tests were conducted at Point Barrow, Alaska. Army and Navy tests at Mt. Washington, New Hampshire, the following winter were inconclusive. Marine Corps tests were held during the first four months of 1951 at the following places: MCEB, Quantico; Fort Churchill, Manitoba; Big Delta, Alaska; Pickel Meadows, California; and the Naval Medical Field Research Laboratory (NMFRL), Camp Lejeune.

“...In addition to engineering tests,” states the Marine report, “the insulated rubber boots have been worn by test subjects selected from a variety of backgrounds; under conditions of activity varying from strenuous marching for 20 miles to complete immobility; in ambient temperatures from 58° to –42° F.; over terrain ranging from soft snow to hard snow, ice, sand, rocky ground, mud, gravel, water, and iced river banks; for periods of time corresponding to a normal working day and more than 72 hours. As now constructed, the insulated rubber boot, employing the vapor barrier principle, meets the requirements outlined previously and is satisfactory for use by Marine Corps ground troops in cold climate areas, supplanting the shoe-pac combination. . . .”[8]

The distinguishing feature of the “thermal boot,” as it came to be popularly known, is an air space between the inner and outer layers of wool pile insulation, both of which are completely sealed off by latex from any contact with moisture. This air space, under pressure, produces a vapor barrier such that heat cannot readily escape when it is emitted from the foot. Thus the wearer of the boot supplies his own warmth, which is retained as long as he is active, regardless of prevailing temperatures. If, however, the walls of the air space are punctured and the insulation becomes wet, the moisture collected within the boot freezes at low temperatures if the wearer remains inactive. In such cases, severe frostbite may result.

Some of the tests were spectacular. One subject poured water containing pieces of ice into his boots and donned frozen socks before putting on the footgear. After 10 minutes of walking, the ice in the boots had turned to warm water, and there was no harmful effect on the man.

Another subject waded across a knee-deep creek at a temperature of zero. Before he had marched a mile in the snow, his feet had warmed the water in the boots, although his pants were frozen so stiff that he could scarcely walk.

Seldom has a military innovation been tested so thoroughly and scientifically in such a short time. Colonels Ion M. Bethel and John F. Stamm of Marine Corps Headquarters took a leading part in the development and procurement phases along with Lieutenant Colonel Gordon A. Hardwick. Major Vernon D. Boyd and Captain David R. McGrew, Jr. were active in the troop acceptance tests.

A good many “bugs” had to be eliminated before the boot met with complete Marine approval. The
manufacturer’s modifications were effected with minimal delay.

It is perhaps needless to add that the thermal boot was not fool-proof. Protection continued in subzero weather for at least an hour after the termination of activity, but it was inviting frostbite to remain motionless much longer. Socks had to be changed every 12 hours, and foot cleanliness and hygiene could not be neglected.

If a few such simple rules were observed, a man had virtually perfect frostbite protection in the coldest weather. In fact, it was seriously proposed that a Marine casualty of this sort should be charged with misconduct if he acquired his frostbite while provided with thermal boots and a change of socks.

In view of the tests and negotiations with the manufacturers, it was a marvel of promptness when the first shipment of boots reached the 1st Marine Division in August 1951, long before the advent of cold weather.

Distribution to the Division was completed by 15 November. Throughout the winter the experience of all units concerned was reported to Division headquarters. And in a memorandum of 26 August 1952 to the Commandant, General Selden expressed his approval: “The boot, rubber, insulated, is considered an excellent item of cold weather equipment. It is far superior to the shoe pac.”

The acceptance by the rank and file went so far that the “Mickey Mouse boot,” as it was sometimes dubbed, acquired a reputation for protecting the wearer against antipersonnel mines. Some wounds apparently were reduced in severity by this protection, but it could not be claimed that the boot qualified as armor.

Production by the manufacturer kept pace with Division and Air Wing requirements in Korea. By 14 December 1951 about 90,000 pairs of boots and 2,000 patching kits had been received at San Francisco—more than enough to take care of the 6,500 pairs needed monthly for resupply under combat conditions.

The thermal boot was here to stay.

Chapter 11. Winter Operations in East Korea
500 Armored Vests Flown to Korea

Marine body armor was just then about to meet its first large-scale test in the field. It had cleared its preliminary hurdle during the tests from 14 June to 13 October 1951 (see Chapter VIII) when a joint Army-Navy Medical Commission endorsed 40 vests worn in action by troops of the 5th Marines and two Army infantry regiments.

On 9 November, at Marine Corps Headquarters, Marine officers were briefed on the successful results in Korea by the two Navy officers who helped supervise the tests, Commander John S. Cowan (MC) USN, and Lieutenant Commander Frederick J. Lewis (MSC) USN.

That same day the commanding general of FMFPac stated an operational requirement for 500 armored vests to be sent to the 1st Marine Division. And on 16 November the Commandant approved the standardization and procurement of vests to be designed by the Naval Medical Field Research Laboratory at Camp Lejeune and air-shipped to Korea not later than 31 January 1952.[9]

So many problems remained to be solved that it was nip and tuck whether Lieutenant Commander Lewis and his NMFRL colleagues would make the deadline. On 11 December 1951 another body armor meeting was held at Marine Corps Headquarters, attended by Marine representatives. Lieutenant Commander Lewis and Mr. John F. Quinlan, reporting for the NMFRL, explained that as a consequence of changes in design to speed up manufacture, samples submitted to them weighed as much as 10 pounds.

Under no circumstances, said Lewis, would he approve a vest weighing more than eight pounds, since its success depended so much on troop acceptance. Despite the fact that only a few weeks remained before the deadline, Lewis exhibited a vest that he and Quinlan had redesigned by working around the clock until the armor came within the weight limit without any sacrifice in protection. This vest was immediately put into production as the M–1951.

A plastic fibre manufacturer agreed to supply 70,000 Doron plates, and a Philadelphia sportswear company contracted to manufacture the first 500 vests, plus an additional 2,500 to be delivered by 30 March 1952. The M–1951 was described in Marine reports as “a zippered, vest-type, sleeveless jacket constructed of water-resistant nylon incorporating two types of armor. One, a flexible pad of basket-weave nylon, covers the upper chest and shoulder girdle; the other, overlapping curved Doron plates, covers the lower chest, back and abdomen. These Doron plates consist of several layers of fibre glass cloth, bonded or laminated together with a resin. . . . Although the ballistic properties of the flexible pads of basket-weave nylon and the Doron plates are virtually the same, by using the rigid plates where flexibility is not mandatory the problem of protrusion and the resultant wounds under the armor is reduced.”[10]

Marine wearers of the M–1951 were warned that it would not stop rifle or machine gun bullets unless they had lost much of their velocity at long ranges. The vest was protection against most grenade, mortar, and artillery fragments, as well as .45 caliber pistol and burp gun slugs of less than 1,000 feet per second initial muzzle velocity. Wearers did not escape entirely unscathed, for the impact of the fragment or slug left painful bruises.

It was a close squeak but the first 500 vests reached Korea with only a few days to spare. Captain David R. McGrew, Jr. accompanied the shipment as project officer with a mission of supervising and observing the use made of the M–1951 in action. His first letter to Headquarters Marine Corps, dated 4 February 1952, commented that “up to tonight we have had nine men hit while wearing the vest. One was killed outright as a 120mm mortar
round landed right in his lap. However, the other eight showed excellent results. All of the eight were wounded in other places not covered by the vest—but they are all WIA instead of KIA.”[11]

Captain McGrew cited the instance of a Pfc of the 2d Battalion, 7th Marines, wounded by the explosion of an 82mm mortar shell only 15 feet in front of him. He received several fragments in the face and his leg was fractured. But there were some 45 holes in his vest, without any penetrations. Fifteen of the fragments had been large enough to inflict mortal chest or abdomen wounds.

The 500 vests were issued only to troops in particularly hazardous situations, such as patrols to the enemy lines. Upon returning from a patrol or raid, the wearers turned in their armor to be worn by other Marines under fire.

“The reaction of the user to the vest,” reported McGrew, “is closely related to the amount of enemy activity. In sectors of the OPLR and MLR [outpost and main lines of resistance] where heavy incoming mortar and artillery fire was received, there were no complaints regarding the weight or restrictive features of the vest. In other sectors where there was little or no enemy activity, approximately 15 percent of the personnel complained that the vest was heavy and restricted movement to some degree. Approximately 2 percent of the wearers in these sectors thought the vest was not worth the trouble and would wear it only when ordered to do so.”[12]

The project officer believed that a “significant reduction” in KIA casualties could be credited to the M–1951, but that WIA figures were only slightly lessened. That was because so many wearers were wounded who would have been killed save for the armor. Captain McGrew listed the following case histories, confirmed by medical officers:

- Men who would have been killed instead of wounded if they had lacked armor protection—23:
- Men who had potentially severe wounds reduced to superficial wounds—29;
- Men who had superficial wounds prevented altogether—31.

The project officer had no opportunity to compare the casualties of vest wearers with those of an equal number of unprotected Marines taking part in the same action. It was his conclusion, based on observation, that “use of the vest by all personnel who are habitually forward of battalion command posts may result in as much as a 30 percent reduction in battle casualties. Because many WIA cases are the result of wounds of the extremities and/or multiple wounds, there probably will not be a large reduction of casualties in this category. It is believed that the largest reduction will occur in the KIA category and that this reduction will be substantial.”[13]

The introduction of body armor was not heralded in the press by page one headlines such as had announced the first transport helicopter operations in Korea. Occasionally a photograph on page eight showed a Marine grinning triumphantly while pointing to a hole in his armored vest and holding aloft the jagged mortar fragment that might otherwise have killed him. But it is safe to say that a majority of Stateside newspaper readers and radio listeners in 1951 were unaware of the Marine revival of armor adapted to 20th-century warfare.

Press correspondents in Korea did not appear to grasp the tactical significance of an innovation which they regarded entirely as a humanitarian achievement. From a strictly military viewpoint, however, it was apparent that if the M–1951 could reduce casualties by 30 percent, as Captain McGrew estimated (and his estimate was later regarded as conservative), it would mean that a like reduction had been effected in the destructive potential of the enemy’s best anti-personnel weapons. It was as if the Marines were able to slip behind the enemy’s lines and silence 3 out of 10 of his howitzers, mortars, burp guns, and grenades.

This was of particular importance in overcoming the numerical superiority of the Communists. Not only did each American wound casualty reduce the effectiveness of a unit, but four or more comrades were often neutralized as stretcher bearers in Korean mountain terrain. If body armor could prevent 3 casualties out of 10, therefore, it would be a significant addition to a unit’s numerical strength as well as combat morale.

Any doubts about Marine troop acceptance of the M–1951 were laid to rest by the approval of the 500 vests issued early in February 1952. An additional 2,500 arrived early in March and on the 13th of that month the
Division ordered 25,000 more. The armored vest, like the thermal boot, had needed only a thorough trial to become standard equipment.
Chapter 11. Winter Operations in East Korea
Helicopter Operations MULETRAIN and CHANGIE-CHANGIE

The combat helicopter, oldest of the three Marine tactical innovations in Korea, had already managed to make routine performances out of operations that once claimed headlines. Battalion troop lifts were no longer a novelty, and supplying a front-line company by air was taken for granted. But nothing quite as ambitious as Operation MULETRAIN had ever been attempted—the mission of completely supplying a battalion on the MLR for a week with a daily average of four helicopters.

Hill 884 was again the objective. Colonel Keith B. McCutcheon’s HMR-161 was given the task of flying tentage, stoves, rations, and ammunition from supply dumps to the 1st Battalion of the 1st Marines, commanded by Lieutenant Colonel John E. Gorman.

It was the first opportunity for HMR–161 to try out improvements in helicopter “flying crane” techniques credited to Major Charles E. Cornwell. He had adapted the underslung nets, controlled manually from the cabin, which did a better job than the pallet, or portable platform, for many types of cargo.

An average altitude of 2,300 feet for the five landing places made it necessary to reduce the payload to 850 pounds. Yet HMR–161 handled the assignment during the first week of 1952 with about one-third of its aircraft while the remainder went about routine chores. So well did four helicopters keep ahead of schedule that sometimes they flew in more cargo than could be immediately unloaded at the objectives. Following are the statistics of the seven days:

- Pounds lifted, 150,730
- Hours of flight time, 91.7
- Loads lifted, 219
- Average of miles flown, 9.6

Three days later, Operation CHANGIE-CHANGIE began on 10 January 1952. Like Operation BUMBLEBEE three months earlier, this was a battalion relief lift. Yet it differed from its predecessors in that troops were to be flown from Field X–83 to sites on the company instead of battalion level, the former being only 200 yards behind the front line.[14]

In December the loading zone and landing site duties formerly assigned to a platoon of the 1st Shore Party Battalion, were taken over by the 1st Air Delivery Platoon, Service Command, FMFPac. First Lieutenant William A. Reavis and 35 enlisted men had a mission “to prepare and deliver supplies by air, whether by parachute, air freight, or helicopter.” These specialists were in charge during Operation CHANGIE-CHANGIE when the 2d Battalion, 7th Marines (Lieutenant Colonel Edward G. Kurnfield) relieved Lieutenant Colonel Norton’s 1st Battalion, 5th Marines. The operation was conducted smoothly by helicopters flying in defilade throughout the approach, landing, and return phases.

Operation MOUSETRAP, from 14 to 17 January, was planned primarily as a test of the ability of HMR–161 to launch an antiguerrilla attack on short notice. Colonel McCutcheon and Lieutenant Colonel Mitchell were alerted at 0100 in regard to a two-company lift scheduled for 1000 that same morning. With “only minor difficulties” they transported 500 Marines to a landing site cleared by the Air Delivery Platoon. Three similar troop movements were completed by HMR–161 during the next three days.

If ever a bronze plaque is awarded in commemoration of the first history-making helicopter troop and supply lifts, it would be fitting to install it on Hill 884. That bleak and roadless height had its fifth large-scale operation on 24 February when Lieutenant Colonel Harold C. Howard’s 1st Battalion, 7th Marines, relieved the 2d Battalion, of that same regiment on “Mount Helicopter.” Operation ROTATE was completed without incident as further evidence that battalion reliefs by helicopter were now routine.

In spite of the demands made upon HMR–161 helicopters in cold weather and mountainous terrain, it is
noteworthy that no serious mechanical defects had developed. This six-month record came to an end on 24 February 1952 when Captain John R. Irwin was returning from Seoul to X–83. Warned by alarming vibrations, he landed to discover that the broken remnants of the tail assembly had dropped behind him in the snow.

Four days later, while flying a load of logs for bunkers, Captain Calvin G. Alston’s aircraft was so shaken by vibrations that he suspected damage from enemy artillery fragments. He made a forced landing in the snow only to discover another instance of a tail assembly breakdown.

Colonel McCutcheon grounded all HMR-161 aircraft until the trouble could be corrected. Not until 14 March, after 16 modified tail assemblies had been flown to Korea did the Marine transport helicopter squadron take to the air again.
Ground operations continued with little change during February and the first two weeks of March. The only departure from the well-worn tactical norm came on 10 February, when EUSAK put Operation CLAM-UP into effect across the entire UN front.

The purpose was to feign a withdrawal and lure the enemy into sending out patrols which would yield prisoners to Eighth Army units. A EUSAK letter of instruction, dated 4 February 1952, asserted that “a policy of aggressive patrolling has led the enemy to rely upon our patrols for the maintenance of contact. This situation enables him to maintain contact without subjecting his troops to the hazard of capture or casualty.”[15]

All corps were directed to “... attempt to decoy the enemy into dispatching patrols against our lines and ambush and capture such patrols.”

First Marine Division orders called for an elaborate series of deceptions. Immediately prior to CLAM-UP, on 9–10 February, the 11th Marines fired 471 harassing and interdiction missions, as if to cover a large-scale withdrawal. Over 12,000 artillery rounds were expended.[16] Then CLAM-UP commenced, and the three regiments on the MLR—from left to right, the KMCs, 1st Marines, and 7th Marines—did their part to hoodwink the enemy. Reserve battalions executed daylight marches on foot to the rear and returned after dark by means of motor lifts. The 5th Marines, in Division reserve at Camp Tripoli, executed similar feigned withdrawals.

After the Marine cannoneers completed their supposed covering fires, the front was plunged into an eerie silence. It did not take long, of course, for the enemy’s curiosity to be aroused. NKPA patrols reconnoitred the Marine lines on the night of 10-11 February without being fired upon. The following night a patrol attempted to draw Marine fire in the Hill 812 area by advertising its presence with loud talk. The enemy’s fire was not returned until the patrol attacked a Marine position with white phosphorous grenades. In sheer self-defense the Marines retaliated, and the North Koreans made a hurried exit, leaving behind 10 dead and 2 wounded men who became prisoners.

At first light on the 12th another enemy patrol tried to penetrate the wire in front of a 1st Marines position and paid the penalty with nine men killed and three wounded in a 15-minute fire fight.

On 13 February the Marines were pounded with the month’s heaviest concentration of NKPA fire—344 artillery and 1,469 mortar rounds. Thus did the enemy serve notice of his realization that Marine positions on the MLR were being held in strength. NKPA patrol actions on the nights of the 13th and 14th were launched at Marine trenches on Hills 812 and 854 at the estimated cost of heavy casualties.

When Operation CLAM-UP came to an end on 15 February, it had admittedly fallen short of EUSAK expectations. Although NKPA patrol losses had been considerable, they were offset by fewer casualties in rear areas enjoying a five-day immunity from UN artillery fire. Worse yet, the enemy was enabled during this period of grace to bring up ammunition and other supplies without interference. As a final disillusionment, it was reckoned that across the whole Eighth Army front the Communists had lost fewer prisoners than during the preceding five-day period.

In the Marine combat zone a gain was recorded in enemy casualties. General Selden congratulated the Division on “the fire discipline practiced by MLR troops and by platoon and company commanders. As a consequence of the fire discipline, the line companies were able to kill 56 enemy and wound 54.” These totals, it was pointed out, were larger than the losses normally inflicted on the enemy in a five-day period.[17]

On the other hand, five deserters from the mortar company of the 1st Battalion, 91st Regiment, 45th
NKPA Division revealed that advantage had been taken of Operation CLAM-UP by detailing mortar personnel and men from the rifle companies to carry ammunition. During the five-day lull, according to the prisoners, 2,600 rounds were brought up for the company’s nine mortars.[18]

After the brief flurry of Operation CLAM-UP the front quickly settled down to its old routine of patrols. An average of eight Marine night ambush patrols and five daylight reconnaissance patrols forward of the MLR was maintained. The results left much to be desired. Of the last 110 ambushes and 75 reconnaissance patrols reported in February, only 1 of the former and 6 of the latter claimed contacts. All but one of the contacts had negligible results.

The Marine fire attack did the enemy more damage. Artillery fired 679 observed missions during the month—211 on troops, 175 on bunkers, 121 on mortars, 96 on artillery, and 75 on such miscellaneous targets as OPs, vehicles, machine guns, and supply points. This total was recorded in spite of an ammunition shortage which would ultimately become the subject of debate in Congress.

Even with supplies of ammunition limited by X Corps orders, Marine artillery drove the enemy from untenable forward-slope positions to underground fortifications on the reverse slope.

Naval gunfire was limited by the extreme range to the Division zone of action.[19] Only large targets forward and to the right of center could be taken under fire. Even so, the Wisconsin and the St. Paul scored some devastating hits in February on enemy reverse slope positions.

On one occasion, the Wisconsin erroneously calculated its deflection. Two 16-inch rounds landed between the front line and the 3/7 mortar positions before the fire could be stopped. Fortunately, no one was injured. The Wisconsin Marine officer happened to be visiting the Division CP that day, and on hearing the news he came up to 3/7 and collected a large shell fragment. He stated that he intended to mount the jagged piece of steel in the ship’s CIC room as a reminder to future gunners to make no errors in plot.

Observed direct fire by the 90mm rifles of the 1st Tank Battalion (Major Walter E. Reynolds, Jr.) continued to be effective against NKPA bunkers and gun emplacements. Utilizing the high ground along the MLR, particularly on Hills 812 and 854, tanks sniped at the enemy both by day and night.

This was made possible by the powerful lights of a platoon from the 92d U.S. Army Searchlight Company, attached to the 11th Marines. The mountainous terrain in East Korea was not particularly suited to “artificial moonlight”—the indirect illumination of a large area which results from “bouncing” the rays of searchlights off low-lying clouds. But direct illumination permitted aimed 90mm fire in the darkness and had the further advantage of blinding the enemy to the tanks themselves as well as to troop movements behind them. Not a single light was shot out during the winter in spite of persistent NKPA attempts.

The lessons taught by battlefield illumination in Korea were to be incorporated into two instructive bulletins after the war. “The enemy does not have any better night vision than we do,” asserted USMC Landing Force Bulletin No. 6. “No racial or national group of people has any inherent physical advantage over another as to capability for seeing in darkness. . . . [20] The apparent advantage which the enemy sometimes displays in night operations is due only to a difference in training. In the case of the Oriental soldier, or the Eskimo, for example, training usually begins early in life, where he does not have the convenience of artificial light to the degree we have, and has been forced to make maximum use of his natural night vision in many of his normal activities.

“U.S. Forces have conducted many successful night operations after adequate training. Some units have reported that after intensive night training, personnel have become so proficient that they sometimes prefer night operations to daylight operations.”

In support of this conclusion, records for the winter of 1951–1952 reveal that the Marines held their own very well in the night combats of no man’s land, where the outcome depended upon immediate decisions based upon seeing in the dark.

Marine casualties for February, the last full month in East Korea, were 23 KIA, 102 WIA, and 1 MIA,
including the KMC Regiment. Enemy losses were reported as 174 counted and 381 estimated KIA, 606 estimated WIA, and 63 prisoners.[21]

After a winter of positional warfare, the Marines could recall with better understanding the tales their fathers had told them about France in World War I. For history was staging one of its repetitions; and, allowing for improvements in weapons, the trenches of Korea in 1951-1952 differed but slightly from the trenches of the Western Front in 1917-1918.
NO CHRONICLE of activities in Korea would be complete without a discussion of the truce talks which began in the summer of 1951. When the Communists proposed these meetings early in June, their motives were transparent; they were hurt, staggering, and badly in need of a breathing spell. Pretending a sudden interest in peace, the hard-pressed enemy requested talks at Kaesong for the purposes of recuperation.

The enemy would never admit the real damage he suffered. A typical excuse for the smashing CCF defeat was given in a book by Wilford G. Burchett, an Australian Communist who was a press correspondent behind the Chinese lines.

"Immediately prior to the beginning of the talks," he explained, "the Korean-Chinese troops had withdrawn extensively along the East Coast, hoping to entice the Americans as deep as possible into a trap which would be sprung and would cut them off by an encircling move. The Americans were seriously nibbling at the bait when the proposal for cease-fire talks was made. The line was immediately frozen and Korean-Chinese troops started to dig in."[1]

This beginning of static warfare was unquestionably the great turning point of a war whose course from that time on was to be decided at the conference table of Kaesong and later Panmunjom. Any doubts as to the actual motives of the Communists might have been dispelled upon reading in Burchett’s book this naive boast of the advantage taken of the truce talks by the Reds:

"Digging in is an understatement of the way the Korean-Chinese troops literally burrowed into the mountains, constructed two and three story dwellings underground, linked mountains and hills by underground tunnels and carved deep communication trenches linking flank with flank and front with rear. They raked the insides out of mountains as you would rake ashes out of a furnace. Each hill, mountain or ridge was connected with its neighbors by deep, zig-zagged inter-communication trenches, at least two yards below ground level and with yard-high antiblast walls. In emergency, troops could be switched from hill-top to hill-top with the enemy never knowing. Similar trenches extended well to the rear, so that supplies could be brought up and withdrawals if necessary made in comparative safety. . . . Everything was deep underground with many yards of rock and earth between them and shells and bombs, atomic or otherwise. Back of the front line positions, similar scooped-out mountain ridges stretched all the way back to Pyongyang and further. It was against these positions that Van Fleet began hurling his troops in August, 1951."[2]

The breathing spell provided by preliminary truce talk discussions gave the Communists an opportunity they had not previously enjoyed. Not only did they have time to prepare sturdy and effective entrenchments, but they were able to bring up additional mortars and artillery to equal those of the Allied forces. As a further advantage, while “free from the compulsion of impending military disaster,”[3] they made use of the interlude to reorganize and train NKPA divisions to a new and increased level of effectiveness.

Communists are never embarrassed in the least to deny an agreement already reached, and once having accomplished their intermediate goal, the Red delegates broke off the Kaesong talks for a while. Once the pressure on them was reduced, the enemy was in a position to try to obtain the most favorable terms for armistice talks, even if it meant prolonging the fighting.

The change in tactics soon became apparent. “Since the opening of the Kaesong conference,” commented a FECom G–2 report, “the enemy has deviated from his usual tactics of ‘flexible defense’ which he so skilfully employed during the buildup period prior to all his past offensives—to that of a more orthodox ‘fixed defense.’ Where the enemy in the past has defended key terrain features with relatively small groups to delay friendly
forces, he has now changed over to tactics of a fixed line of defense to be defended at all costs.”[4]

“The most extended delay imposed upon the Korean Armistice Conference by the Communists was in connection with the exchange of prisoners of war,”[5] which subject will be discussed in Volume V of this series. The United Nations contended that all prisoners should be “screened” to determine whether they wished to return to their side of origin. No prisoner was to be returned against his wishes. The Communists claimed this treatment consisted of a reign of terror in which CCF prisoners were held at gunpoint.

Some prisoners held in UN camps rioted and injuries and deaths resulted. This provided the Communists with excellent propaganda on which to denounce our principles of no forced repatriation.[6] In the end, after a delay of more than 14 months of war, the Communists finally did accept this principle, and an armistice was achieved.

The Communist delaying tactics were not entirely without benefits to the Allied forces, for the major part of the 1st Marine Division had the opportunity to go into reserve and engage in several weeks’ intensive training. While the 1st Marine Aircraft Wing was busily participating in the interdiction activities of Operation STRANGLE, General Van Fleet and his ground commanders felt frustrated over their orders to “sit tight” rather than attack and prevent further enemy buildup.

An agreement to resume cease-fire talks, this time at Panmunjom, led to a EUSAK order which committed the 1st Marine Division and other major units to a defensive stand behind a fixed line of demarcation on 20 September 1951 (Map 19). Further negotiations resulted in a month’s lull which was brought about by the fact that the delegates could not agree on where the lines would remain if the fighting stopped. The United States delegates pressed for a settlement within a 30-day period. The Communists continued to stall. The United States then consented to accept the present (then current) demarcation line if the Communists agreed within the 30-day period.[7]

The significance of these dates was to become more and more plain as the conflict dragged on into 1952 with both sides on the defensive, limiting themselves to the raids and patrols of positional warfare while the appointed representatives haggled for a truce. Although the Marines did not realize it, the war had already turned into a contest of watchful waiting and fierce local fights.

This line of demarcation left the Eighth Army holding a MLR across one of the narrowest parts of the peninsula (Map 22). Just behind the Communist MLR the peninsula bulged to the west. This meant that the enemy had to devote much of his effort to mining the waters and defense of many beaches against a surprise amphibious attack, and it necessitated keeping in operation long and vulnerable supply lines.

It is probable that a UN breakthrough or successful amphibious operation could have been mounted at this time.[8] for several high ranking officers expressed such opinions. All the necessary ingredients were available, yet the high level decision for such an operation was not made.
Until World War II, it had been a deserved reproach throughout the brief history of our country that Americans were never prepared at the outset of a war. A welcome departure from this tenet came in 1942 when the Marine Corps and Navy introduced the new amphibious tactics they had developed during the 1930s. Victory in the Pacific War was due in large measure to the techniques, landing craft, and vehicles of the Navy-Marine Corps ship-to-shore attack.

As a result, North Africa, Europe, and the Japanese-occupied islands of the Pacific were opened to invasion without a single major reverse. In contrast, Hitler’s *Wehrmacht* lacked both the techniques and equipment to launch a cross-channel attack on England in 1940, and Operation SEA LION was of necessity abandoned by an army that dominated the rest of Europe as a result of victories in land warfare.

Again, in Korea, the Marines demonstrated their foresightedness by taking a prominent part in the development of such important innovations as combat helicopters, body armor, and thermal footwear. By the first month in 1952 the combat helicopter had proved to be of immeasurable assistance in modern warfare. In the beginning of the Korean War the “chopper” was initially used for command and liaison flights and reconnaissance missions. Evacuation of casualties and rescue missions also became routine duties, and within a short time the helicopter became the favorite “workhorse” for a variety of tasks. In September of 1951 tactical troop movements began. These operations made newspaper headlines everywhere.

Of greater tactical importance, at least in the opinion of the frontline rifleman, was the physical protection provided him. The armored vest and the new thermal boots were first tested by Marines late in 1951 and soon came to be highly desired items of equipment.

The fighting men in Korea would not disagree with Benjamin Franklin’s statement that “there never was a good war,” but modern inventions certainly improved conditions by providing for the safety and comfort of the fighting men. Marine transport helicopters and body armor were of particular importance because they added to the human resources of UN forces opposed by an enemy with a contempt for life, based on seemingly endless reserves of manpower. UN commanders in their fight against the Communist forces could not recklessly expend lives as did the enemy; therefore, the Allies had need of tactical innovations and life-saving devices in order to compensate for a lack of numbers.
Chapter 12. The Move to West Korea
The Marines in Operation MIXMASTER

In the spring of 1952, when the UN and Communist forces were facing each other from static positions and fighting local engagements, Operation MIXMASTER took place. MIXMASTER was a complicated rearrangement of UN divisions across the entire Korean front during March, and involved the shuffling of about 200,000 men and their equipment over distances from 25 to 180 miles. It was a severe test of Eighth Army mobility.[10]

General Van Fleet visited the 1st Marine Division CP on 12 March 1952, and announced an important command decision. After six months of defensive warfare in the same sector along Line MINNESOTA (20 September 1951 to 16 March 1952) the Division was to move across the peninsula to West Korea.

The Marines had orders to relieve the 1st ROK Division and take over a sector at the extreme left of the Eighth Army line under the operational control of I Corps (Map 22). There they would have the responsibility for blocking Korea’s historic invasion route to Seoul. The reasons behind this EUSAK decision were summarized in the 1st Marine Division report as follows:

“(1) The abandonment of plans to carry out an amphibious envelopment somewhere on the east coast;
“(2) Concern over weaknesses in the Kimpo area defenses;
“(3) The overall situation would not permit loss of ground on the EUSAK left (South Korea) as this would endanger the capital at Seoul; that if retraction of lines was necessary, territory could better be sacrificed on the right (North Korea) where the country was mountainous and had little economic or strategic value.”[11]

Up to this time the four corps of the Eighth Army had defended a 125-mile front across the peninsula (Map 22) with the following units in line from left to right on 15 March 1952.

I CORPS—ROK 1st Division; British Commonwealth Division; U.S. 3d Infantry Division (–); U.S. 45th Infantry Division (Oklahoma National Guard); ROK 9th Division. In reserve were the ROK 8th Division and RCT–65 of the U.S. 3d Infantry Division.

IX CORPS—U.S. 2d Infantry Division; ROK 2d Division; U.S. 40th Infantry Division (California National Guard); ROK 3d Division. In reserve were the U.S. 7th Infantry Division (–), RCT–17 of that Division, and the ROK Capitol Division.

X CORPS—ROK 7th Division; U.S. 25th Infantry Division; U.S. 1st Marine Division (including 1st KMC Regiment). In reserve was the ROK 6th Division (–).

I ROK CORPS—ROK 5th Division (–). In reserve was the ROK 11th Division (–).[12]

Allowing for a few changes, these were the positions held by major EUSAK units through the winter of 1951–1952.

The Marine move was launched by Division Operation Plan 2–52 and provided that the 1st Marine Division would be relieved by the 8th ROK Division as a preliminary to movement overland and by sea to the relief of the 1st ROK Division and defense of Line JAMESTOWN in the I Corps sector in the west. According to verbal orders later confirmed by EUSAK OI 272, transportation by truck and ship was specified, and the move was to be completed prior to 1 April.[13]

Obviously such a transplacement—moving entire divisions great distances from one sector of the MLR to another—necessitated careful timing and close coordination, but the planners involved were equal to the task. In referring to detailed plans by the Division G–3 Section (Lieutenant Colonel Gordon D. Gayle) and the G–4
Section (Colonel Robert A. McGill), several unit commanders expressed the opinion that “the move from east to west was a masterpiece of logistical efficiency with no unnecessary paper work and no undue harrassment.”[14]

In addition to transporting the Division, the arrival of replacements and departure of personnel to be rotated to the United States were smoothly coordinated into the over-all plan. The transport General W. H. Gordon anchored at Sokcho-ri on 16 March with 174 officers and 1,135 enlisted men of the 18th Replacement Draft. The newly arrived Marines scarcely had time to drop their seabags before they joined the motor march to West Korea. The Gordon departed with 103 officers and 1,135 Marines homeward bound, and the 2d Logistical Command (Army) received a 1st Marine Division request to route the 19th Replacement Draft, due in April, to Inchon instead of Sokcho-ri.

At K-50, near Sokcho-ri on the east coast, air freight and passenger service was discontinued and diverted to the new Division airhead, K-16, at Seoul. The Division railhead was changed to Munsan-ni (Map 22).

The first Marine unit to depart for West Korea was the KMC Regiment with its organic battalion of artillery. Since the artillery had to be moved and repositioned all across the front with as little interruption as possible in overall support available at any one time, the 11th Marines CO planned to move his battalions directly into their new firing positions. This was preceded by an initial detailed reconnaissance.

Elements of the U.S. 25th Infantry sideslipped to the right and assumed responsibility for the Marine sector on the 17th (Map 22), and the KMCs and the 1st Battalion, 11th Marines moved into their new positions on 18 March. The other artillery battalions followed at two-day intervals, all battalions firing from their new positions by 24 March.

The movement of the 1st Armored Amphibian Battalion (less Company A), commanded by Lieutenant Colonel John T. O’Neill, was an unforgettable experience. Embarking on LSTs manned by a skeleton Japanese crew, the vessels headed for the Kimpo Peninsula. The weather was squally and foggy throughout, and the ships were completely blacked out at night with no facilities for emergency transmission of messages. There were many navigational hazards, but in spite of this, and the lack of adequate navigational equipment, the LSTs arrived at their destination without incident.

Two days later, on 20 September, the 1st Tank Battalion and the antitank companies of the three infantry regiments also took the sea route to the new Division area in the west.

Division Operation Order 8–52, dated 18 March, directed the 1st Marines to proceed by motor march from the Division reserve area at Camp TRIPOLI to the new Division area east of Munsan-ni, and there to move into front line positions. The 7th Marines, after being relieved on the 20th by elements of the 8th ROK Division, assembled at Camp TRIPOLI and moved by truck to West Korea. Colonel Austin R. Brunelli, who had replaced Colonel Custis Burton, Jr., as chief of staff, moved the forward CP personnel and prepared the new Division command post.

After being relieved by the ROKs on the 23d, the 5th Marines departed their east coast area. Two days later the regiment arrived in the Munsan-ni area behind the 7th Marines and the remaining elements of the artillery regiment.

The 5th Marines had originally been scheduled to occupy reserve positions on the Kimpo Peninsula, but plans were changed en route. The commanding general and his G–3 were appalled at the Division sector’s width, and after General Selden had a chance to inspect the areas to be defended and talk over the situation with the commanders of the 1st and 7th Marines (Col Sidney S. Wade and Col Russell E. Honowetz), he decided that the 5th Marines should go into the line.[15]

A few hours after the 5th Marines convoy left the east coast on their 140-mile trans-Korea move, helicopters picked up the regimental and battalion commanders from their respective vehicles in the convoy and took them to the new Division CP. There they were assigned new defensive sectors and immediately reconnoitered the ground while awaiting the arrival of their units. By the time the regiment arrived, all
preparations were made for them to move into positions and relieve a portion of the thinly stretched line of the 1st Marines.

It had been a busy week for the 1st and 7th Motor Transport Battalions, commanded respectively by Lieutenant Colonel Howard E. Wertman and Major Herbert E. Pierce. Two hundred Division trucks and a like number of U.S. Army vehicles made up the long columns that shuttled back and forth across the peninsula. The plan provided for moving an infantry regiment every third day. For the drivers this meant a 140-mile trip, a return trip the following day, and a one-day layover for maintenance before commencing the new cycle. The artillery battalions, by order of X Corps, were retained until the latest possible date.

The statistics of Operation MIXMASTER are impressive. It took 5,716 truck loads and 80 DUKW loads to move most of the Division personnel, gear, and supplies. Sixty-three lowboys (flat-bed trailers) and 83 railroad cars were also utilized in addition to hundreds of jeeps and jeep trailers. Three LSDs and 11 LSTs sailed from Sokcho-ri to Inchon with the heaviest equipment.

During the previous winter a sizable number of prefabricated shelters had been set up for supporting and headquarters units. Since timber, logs, and salvage materials were in short supply, the 1st Marine Division moved large quantities of these materials to the west coast in order to live as comfortably as possible under static warfare conditions.

The operations of the 1st Marine Division in defense of the western sector of Line JAMESTOWN do not come within the scope of Volume IV. The account of Marine activities in the new sector, under the operational control of I Corps, will be discussed in the fifth and final volume of this series.
During 1951 the Korean War became a most unpopular military venture among Americans. As a consequence, letters and newspapers from home caused a certain amount of anxiety among citizen-soldiers in Korea. To counter any spirit of doubt which may have arisen, military leaders issued frank and honest replies to inquiring politicians.

The *esprit de corps* of Marines was high, and they were well aware of their purpose in Korea. One noted author, on spending a couple of days among front-line Marines during January of 1952, told a group of officers at the Division CP that he “was impressed with the morale of the Marines on the MLR.” He stated that he “had been prepared to find that they didn’t know what they were fighting for or why they were there.” However, he was encouraged to find that they knew exactly their purpose in the Korean fighting.[16]

The period of nearly 15 months covered by Volume IV was at that time the longest stretch of land warfare ever experienced by a major Marine unit. Even during the numerous island-hopping campaigns of World War II, the periods of combat were relatively brief for each.

Glancing back over the year 1951 with the benefit of hindsight, it is evident that Marine “uncommon valor” during this period was supplemented by such outstanding innovations as helicopter-borne assaults and lightweight body armor, concepts brought to fruition by the pressure of combat.

It is also apparent that Marine training, both for officers and enlisted men, paid off handsomely under the demands of practically every type of land warfare. The Division chalked up a commendable record of service fighting on the east-central front. Since the UN commander desired to have EUSA’K’S only amphibious trained and equipped division near a coast offering a suitable selection of landing beaches, the Division was originally positioned in the east. Not since the Inchon landing, however, had the Marines been employed in their specialty, amphibious assault.

Subsequent to the unprecedented Chosin Reservoir campaign of late 1950 the Division reorganized and refitted in South Korea near Masan. Then in January and February of 1951 came the prolonged guerrilla-hunting campaign (Map 5) some 60 air miles north of Masan. Division operations in this area covered more than 1,000 square miles.[17]

The mountainous terrain offered cover and concealment for the clandestine operations of far too many enemy groups. A solution to this problem was found in “rice paddy patrols”—groups ranging from a fire team to a squad in size which penetrated the mountain areas on foot to flush out small enemy bands. In retrospect, had one squadron of helicopters been available at that time, and its quick lift capabilities utilized, the increased mobility and surveillance would have made quite a difference in the conduct of the action.

Although land-based Marine air power had been under operational control of the Fifth Air Force during the Chosin Reservoir fighting, a verbal agreement allowed the 1st MAW commander to provide directly necessary support to the 1st Marine Division. At the same time, carrier-based Marine planes were flying on the west coast along with other Allied planes harrassing enemy traffic.

During the guerrilla hunt VMO–6 planes provided air support to the 1st Marine Division while Marine attack aircraft were busy elsewhere along the Eighth Army front. Marine pilots, operating under JOC control, felt frustrated because they were unable to provide the timely close air support desired by the infantry. The Marine viewpoint held that too many links in the Air Force system of control caused an excessive delay in bringing air power over the target. This system continued for the remainder of the year.
As an operation, the guerrilla hunt was merely a series of minor engagements, but it accomplished its purpose of clearing out most of the North Korean irregulars who had been a constant threat in the Eighth Army’s rear. In addition, the numerous small patrols provided excellent training for the newly arrived replacements.

The Eighth Army seemed to gain new vitality under General Ridgway. On the 18th of February, when the general learned that the enemy was withdrawing, he ordered a limited offensive. Operation KILLER began three days later, and was followed by Operation RIPPER on 7 March. The purpose of these operations was twofold: (1) General Ridgway wanted to restore his army’s fighting spirit after its two defeats during the 1950–1951 winter; and (2) he wished to keep the Chinese Reds off balance while they prepared for another Communist offensive.

For the Marines these two operations were an experience with a strictly limited offensive. The advance was “buttoned up” as major units paid close attention to lateral contact. As the advance continued in March and April, mud proved to be an adversary second only to a formidable enemy using delaying tactics, and the Division as a whole had a thorough workout in the logistics of the offensive under adverse conditions.

In early April the Division, as part of the Eighth Army, crossed the 38th parallel and continued the attack to the north, the purpose being to threaten the suspected enemy buildup for an offensive. EUSAK forces rolled onward while the enemy, using his roving defensive tactics, fought vigorously and withdrew.

The long-expected enemy counterblow fell on the night of 22 April and resulted in the 1st Marine Division bearing the brunt of a 48-hour attack (Map 10). This opening CCF assault in the IX Corps area of east-central Korea was intended to throw the Eighth Army off balance as a preliminary to aiming the main blow at I Corps in west Korea.

The CCF attack opened a hole in the MLR large enough for a major breakthrough, and the Communists apparently expected to exploit this success to the fullest. However, the Allied line pulled back, consolidated, and held, as the Division’s reserve regiment was thrown in to stem the tide. As the Marine flank was refused, the units on the left found themselves facing to the west while stopping the enemy thrust. Slowly, trading space for time, the Marines contained the enemy attack while the entire Eighth Army line organized new positions.

The enemy effort ground to a halt in the east-central sector, and the Chinese Reds were contravened in their attempt to take Seoul by May Day. Surprise and impetus were lost on the western front when they struck several days later, only to be stopped with frightful losses after a few gains on regimental fronts. The Allied line now held firm.

The Division’s war of maneuver had worked well in halting this round of the CCF offensive, but the Communists were far from finished. As 17 enemy divisions were still available to attack, the Marine division was shifted to the east on 1 May in preparation for an expected battle.

On the 16th of May the Chinese offensive again opened, with the enemy hitting more to the east than had been expected, and making a deep but narrow penetration near the coast. The Marines moved eastward, established blocking positions, and engaged fringe units of the drive. This allowed the right flank Army division to move farther east and brake the enemy’s rush.

The enemy was dangerously overextended when the UN counter-stroke hit him late in May. For a month the Eighth Army attacked and advanced, the Marines slugging ahead day after day in the X Corps zone of action. CCF casualties mounted high, and Marine veterans of only a few months of Korean service saw scores of enemy corpses left behind on the battlefield as the enemy withdrew northward.

This great UN counteroffensive netted prisoners all along the EUSAK front as remnants of CCF platoons and even companies threw down their arms. Marines captured their share. Upwards of 10,000 Chinese surrendered to the Allies in a 10-day period—more prisoners than had been taken up to this time.

As the Chinese withdrew northward they left determined NKPA troops behind. The 1st Marine Division moved slowly forward, fighting for every inch of ground. So fierce was the enemy’s resistance that at times
during June the division commander was forced to commit all four regiments (the KMCs included) in the attack at
the same time in order to seize designated objectives. This was a modification of accepted tactical doctrine,
necessitated by the situation.

Throughout March, April, and part of May, Marine pilots continued to provide close air support not only
for the 1st Marine Division, but also for other Allied units as directed by JOC. From the beginning of Operation
STRANGLE on 20 May this interdiction effort had first priority, and close air support to all infantry units was
secondary. Difficulties in air-ground communication continued as radio frequencies were heavily burdened with
traffic. Although the 1st Marine Division received a proportionate share of the few air support missions flown, the
frustrating time lag between requests for air support and the arrival of planes on target continued into the next
year.

Some planes were always available for front line support, although rarely ever enough according to
infantrymen’s opinion. When they had the chance, 1st MAW pilots viciously attacked the fleeing enemy to ease
the way for advancing ground troops. During June the unremitting pressure of combined air-ground attacks
sometimes caused large groups of enemy to surrender. Marines also captured thousands of rounds of enemy
ammunition and other equipment.

By the last week in June the Marines had entrenched themselves along the Division’s assigned portion of
the MLR and “caught their breath” after two months of hard fighting. In driving from the Hwachon Reservoir area
to the Punchbowl, they had employed practically every weapon and tactic that could be used in an all-out
offensive. The Division then settled down to stable positions for a while, and some units had the opportunity to go
into reserve and train.

It was a recharged 1st Marine Division (the 5th and 11th Marines did not go into reserve during this
period) which moved back into the lines at the end of August. The offensive which opened northeast of the
Punchbowl on the 30th and lasted with few and brief interludes until 20 September was the equal of the June
fighting in sustained ferocity. All four infantry regiments (including the KMCs) went up against seemingly
impregnable opposition.

The enemy’s “stubborn defense of strong positions and many well-placed log and earth bunkers was
similar to the tenacious tactics of the Japanese in World War II,” according to a Navy report. “His artillery and
mortar fires were effective, his minefields continued to be hazardous for many weeks, and his ability to dig in and
fortify his positions [was] always impressive.”[18]

After the 20th of September the EUSAK commander ordered that no further offensives be launched and
that the MLR be stabilized. This was a period of aggressive patrolling, local attacks for more advantageous pieces
of terrain, and watchful waiting to determine the outcome of truce negotiations. In spite of Operation
STRANGLE, enemy vehicular movements increased at the end of the year, but 1st MAW pilots continually
attempted to provide more support for all the infantry divisions.

The mission of the 1st Marine Division at this time was to organize, construct, and defend its sector of
the MLR, a front of more than 13 miles. Although there were heavy local skirmishes, during the latter months of
1951 and the first 3 months of 1952, no great offensive drives were launched. Essentially, the Marines were
engaged in an aggressive defense of their positions until they moved to West Korea.

While all Marines were hoping that the conflict would soon end, there was no slackening of the
customary vigilance. All hands remembered General Ridgway’s words of the previous year, that it was “...a
fight for our own freedom, our own survival ...,”[19] and this was their creed.

These lines would have made a fitting epitaph for Marines who gave their lives in Korea. They had as
worthy a cause as any fighting men of our history, for it had become increasingly plain since World War II that a
stand must eventually be made against Communist encroachments. By going halfway around the world to fight
the enemy on his own doorstep, Americans may well have spared themselves a more bloody and costly future
struggle nearer to their own homeland if not actually on their own soil. The designs of Red China and Soviet Russia were unmasked in Korea, and the people of the United States awakened to their peril after neglecting the Nation’s defenses since 1945. To that extent, therefore, the operations in Korea were a defeat for Communism.
Appendix A. Glossary of Technical Terms and Abbreviations

ADC—Assistant Division Commander
AdmO—Administrative Order
AD—Douglas “Skyraider” single engine attack plane
AF—Air Force
AH—Hospital Ship
AirDelPlat—Air Delivery Platoon
AirO—Air Officer
AirSptSec—Air Support Section
AmphTracBn—Amphibian Tractor Battalion
AmphTrkBn—Amphibian Truck Battalion
ANGLICO—Air and Naval Gunfire Liaison Company
ArmdAmphBn—Armored Amphibian Battalion
AT—Antitank
AutoMaintCo—Automotive Maintenance Company
AutoSupCo—Automotive Supply Company
BB—Battleship
BLT—Battalion Landing Team
Bn—Battalion
Btry—Battery
BuMed—Bureau of Medicine and Surgery
C-47—Douglas Transport used by Air Force (same as R4D)
CA—Heavy Cruiser
CCF—Chinese Communist Forces
CG—Commanding General
CIC—Counter Intelligence Corps, USA
CinCFE—Commander in Chief, Far East
CinCPacFlt—Commander in Chief, Pacific Fleet
CinCUNC—Commander in Chief, United Nations Command
CL—Light Cruiser
CO—Commanding Officer
Co—Company
ComFltAirWing—Commander Fleet Air Wing
ComNavFe—Commander Naval Forces Far East
ComPacFlt—Commander Pacific Fleet
ComPhibGruOne—Commander Amphibious Group One
ComSeventhFlt—Commander Seventh Fleet
ComUNBlockandCortFor—Commander United Nations Blockade and Escort Force
CP—Command Post
CR—Command Report
C/S—Chief of Staff
CSG—Combat Service Group
CSUSA—Chief of Staff, U. S. Army
CTF—Commander Task Force
CTG—Commander Task Group
CVE—Escort Aircraft Carrier
CVL—Light Aircraft Carrier
DD—Destroyer
DE—Destroyer Escort
Det—Detachment
DOW—Died of Wounds
EmbO—Embarkation Order/Officer
EngrBn—Engineer Battalion
EUSAK—Eighth U. S. Army in Korea
FABn—Field Artillery Battalion (USA)
FAC—Forward Air Controller
FAF—Fifth Air Force
FEAF—Far East Air Force
FECOM—Far East Command
F4U—Chance-Vought “Corsair” Single-Engine Fighter-Bomber
F4U-5N—Chance-Vought “Corsair” Single-Engine Night Fighter
F7F-3N—Grumman “Tigercat” Twin-Engine Night Fighter
FMFPac—Fleet Marine Force, Pacific
FO—Forward Observer
FragOrder—Fragmentary Order
Fum&BathPlat—Fumigation and Bath Platoon
GHQ—General Headquarters
Gru—Group
H&SCo—Headquarters and Service Company
HD—Historical Diary
Hedron—Headquarters Squadron
HO3S—Sikorsky Helicopter
HqBn—Headquarters Battalion
HQMC—Headquarters, U.S. Marine Corps
InfDiv—Infantry Division (USA)
Interv—Interview
ISUM—Intelligence Summary
JANIS—Joint Army-Navy Intelligence Studies
JCS—Joint Chiefs of Staff
JMS—Japanese Minesweeper
JSPOG—Joint Strategic Planning and Operations Group
JTF—Joint Task Force
KIA—Killed in Action
KMC—Korean Marine Corps
Ln—Liaison
LSD—Landing Ship, Dock
LSM—Landing Ship, Medium
LSMR—Landing Ship, Medium-Rocket
LST—Landing Ship, Tank
LSTH—Landing Ship, Tank-Casualty Evacuation
LSU—Landing Ship, Utility
Ltr—Letter
LVT—Landing Vehicle, Tracked
MAG—Marine Aircraft Group
MAW—Marine Aircraft Wing
MS—Manuscript
MedBn—Medical Battalion
MedAmbCo—Medical Ambulance Company (USA)
MIA—Missing in Action
MISD—Military Intelligence Service Detachment (USA)
MLR—Main Line of Resistance, the main front line
Mosquito—North American AT-6 “Texan” Trainer; Single Engine Plane used as Airborne FAC and Target Spotting
MP—Military Police
MRO—Movement Report Office
Msg—Message
MSR—Main Supply Route
MSTS—Military Sea Transport Service
MTACS—Marine Tactical Air Control Squadron
MTBn—Motor Transport Battalion

The East-Central Front

Lynn Montross, Hubard D. Kuokka and Norman W. Hicks

Appendix C. Command and Staff List, December 1950-March 1952

1st Marine Division

Commanding General

MajGen Oliver P. Smith (to 23 Feb 1951)
BrigGen Lewis B. Puller (from 24 Feb)
MajGen Oliver P. Smith (from 5 Mar)
MajGen Gerald C. Thomas (from 25 Apr)
MajGen John T. Selden (from 11 Jan 1952)

Asst Division Commander

BrigGen Edward A. Craig (to 20 Jan 1951)
MajGen Edward A. Craig (from 21 Jan)
BrigGen Lewis B. Puller (from 2 Feb)
BrigGen William J. Whaling (from 20 May)

Chief of Staff

Col Gregon A. Williams (to 22 Jan 1951)
BrigGen Gregon A. Williams (from 23 Jan)
Col Edward W. Snedeker (from 27 Jan)
Col Francis M. McAlister (from 23 May)
Col Richard G. Weede (from 10 Jun)
Col Victor H. Krulak (from 29 Jun)
Col Richard G. Weede (from 26 Nov)
Col Custis Burton, Jr. (from 15 Feb 1952)
Col Austin R. Brunelli (from 23 Mar)

G-1

LtCol Bryghte D. Godbold (to 13 Feb 1951)
Col Bryghte D. Godbold (from 14 Feb)
Col Wesley M. Platt (from 31 May)
Col Gould P. Groves (from 27 Sep)
Col Walter N. Flournoy (from 20 Nov)

G-2

Col Bankson T. Holcomb, Jr. (to 5 Feb 1951)
LtCol Ellsworth G. Van Orman (from 6 Feb)
LtCol Joseph P. Sayers (from 8 Mar)
LtCol James H. Tinsley (from 13 Aug)
G-3

Col Alpha L. Bowser, Jr. (to 7 May 1951)
Col Richard G. Weede (from 8 May)
Col Bruce T. Hemphill (from 30 Jul)
LtCol Gordon D. Gayle (from 14 Nov)

G-4

Col Francis M. McAlister (to 25 Jan 1951)
LtCol Charles L. Banks (from 26 Jan)
Col Charles L. Banks (from 14 Feb)
Col Frank P. Hager (from 24 May)
Col Custis Burton, Jr. (from 19 Nov)
Col Robert A. McGill (from 9 Feb 1952)

Special Staff

Adjutant

Maj Philip J. Costello (to 18 Feb 1951)
LtCol Foster C. LaHue (from 19 Feb)
LtCol Homer E. Hire (from 19 Jun)
Maj James K. Young (from 15 Oct)

Air Officer

Maj James N. Cupp (to 20 Apr 1951)
LtCol Edward V. Finn (from 21 Apr)

Amphibian Tractor Officer

LtCol Erwin F. Wann, Jr. (to 26 Sep 1951)
LtCol Michiel Dobervich (from 27 Sep)

Anti-Tank Officer

Maj John H. Blue (to 27 Apr 1951)
Maj William L. Bates (from 28 Apr)
Maj Robert E. Baldwin (from 3 Sep)
Maj Franklin J. Harte (from 9 Nov)
Maj John P. Lanigan (from 31 Dec)
Maj Harold C. Howard (from 2 Mar 1952)

Armored Amphibian Officer

LtCol Francis H. Cooper (to 15 Jun 1951)
Maj George M. Warnke (from 16 Jun)
LtCol John T. O'Neill (from 2 Oct)

Artillery Officer

LtCol Carl A. Youngdale (to 5 Mar 1951)
Col Joseph L. Winecoff (from 6 Mar)
LtCol Custis Burton, Jr. (from 5 Aug)
LtCol George B. Thomas (from 8 Nov)
LtCol Dale H. Heely (from 1 Jan 1952)
Col Bruce T. Hemphill (from 11 Jan)
Col Frederick P. Henderson (from 27 Mar)

Chaplain
 Cmdr Robert M. Schwyhart, USN (to 17 Feb 1951)
 Cmdr Francis W. Kelly, USN (from 18 Feb)
 Cmdr Walter S. Peck, Jr., USN (from 8 Oct)

Chemical Warfare and Radiological Defense Officer
 Maj John H. Blue (to 15 Jul 1951)
 Maj Robert E. Baldwin (from 3 Sep)
 Maj Luther H. Hake (from 21 Nov)
 Maj John P. Lanigan (from 31 Dec)
 Maj Harold C. Howard (from 29 Feb 1952)

Dental Officer
 Capt Mack Meradith, USN (to 20 May 1951)
 Cmdr James L. Bradley, USN (from 21 May)
 Capt Francis C. Snyder, USN (from 15 Jul)

Embarkation Officer
 Maj Jules M. Rouse (to 9 Mar 1951)
 LtCol Louis C. Griffin (from 10 Mar)
 LtCol Clifford E. Quilici (from 11 Aug)
 LtCol Corbin L. West (from 26 Oct)
 LtCol John H. Papurca (from 6 Dec)

Engineer Officer
 LtCol John H. Partridge (to 10 Jun 1951)
 LtCol John V. Kelsey (from 11 Jun)
 LtCol August L. Vogt (from 19 Sep)

Exchange Officer
 Capt Wilbur C. Conley (to 16 May 1951)
 1stLt Frank C. Trumble (from 17 May)
 1stLt George W. Krahn (from 29 Aug)
 Capt Robert W. Schmidt (from 26 Oct)
 Capt Robert J. McKay (from 6 Mar 1952)
 Capt Benjamin Reed (from 26 Mar)

Food Director
LtCol Norman R. Nickerson (to 6 May 1951)
LtCol George G. Pafford (from 7 May)
1stLt Herbert E. McNabb (from 16 Aug)

**Historical Officer**
1stLt John M. Patrick (to 26 Jun 1951)
1stLt Theodore L. Richardson (from 27 Jun)
2dLt Francis X. Goss (from 8 Jan 1952)

**Inspector**
Col John A. White (to 26 Apr 1951)
Col Gould P. Groves (from 27 Apr)
LtCol Charles W. Harrison (from 21 Jun)
Col Russell N. Jordahl (from 30 Jun)
LtCol Alfred H. Marks (from 1 Oct)
Col William K. Davenport, Jr. (from 19 Nov)

**Legal Officer**
LtCol Albert H. Schierman (to 8 May 1951)
LtCol Randolph S. D. Lockwood (from 9 May)
Cmdr Geoffrey E. Carlisle, USN (from 28 Oct)
LtCdr Arnold W. Eggen, USN (from 6 Mar 1952)

**Motor Transport Officer**
LtCol Henry W. Seeley, Jr. (to 26 Jun 1951)
LtCol Howard E. Wertman (from 27 Jun)
Maj Herbert E. Pierce (from 17 Aug)
Maj Walter R. O’Quinn (from 3 Jan 1952)

**Naval Gunfire Officer**
LtCol Loren S. Fraser (to 12 Aug 1951)
Maj Charles A. Lipot (from 13 Aug)
Maj John V. Downes (from 23 Mar 1952)

**Ordnance Officer**
Capt Donald L. Shenaut (to 9 Jul 1951)
Maj Frank W. Keith (from 10 Jul)
Maj James M. Rogers (from 1 Nov)
Maj Harold G. Borth (from 11 Jan 1952)

**Postal Officer**
Maj Frederick Bove (to 13 May 1951)
1stLt Robert P. Sanders (from 14 May)
1stLt Robert W. Blum (from 26 Jul)
1stLt Edward D. Gelzer, Jr. (from 10 Aug)
CWO George C. Hunter (from 9 Feb 1952)

Provost Marshall
   Capt John H. Griffin (to 20 Apr 1951)
   Capt Donald D. Pomerleau (from 21 Apr)
   Maj Raymond L. Luckel (from 6 Aug)
   LtCol William F. Pulver (from 18 Oct)

Public Information Officer
   Capt Michael C. Capraro (to 14 Apr 1951)
   1stLt Jeremiah A. O’Leary, Jr. (from 15 Apr)
   1stLt Robert S. Gray (from 27 Dec)

Shore Party Officer
   LtCol Henry P. Crowe (to 10 May 1951)
   LtCol Horace S. Figuers (from 11 May)
   LtCol Harry W. Edwards (from 7 Jul)
   LtCol George G. Pafford (from 29 Sep)
   LtCol Franklin B. Nihart (from 20 Dec)
   LtCol Warren S. Sivertsen (from 9 Mar 1952)

Signal Officer
   LtCol Robert L. Schreier (to 7 Jun 1951)

Maj William G. MacLean, Jr. (from 21 Nov)

Marine Helicopter Transport Squadron 161
Commanding Officer
LtCol George W. Herring (to 17 Dec 1951)
Col Keith B. McCutcheon (from 18 Dec)

Executive Officer
Maj William P. Mitchell (to 19 Mar 1952)
Maj James R. Dyer (from 20 Mar)

First Marine Aircraft Wing (1st MAW), 1 January 1951-31 March 1952
Commanding General
MajGen Field Harris (to 28 May 1951)
BrigGen Thomas J. Cushman (from 29 May)
MajGen Christian F. Schilt (from 27 Jul)
Asst Commanding General
BrigGen Thomas J. Cushman (to 28 May 1951)
BrigGen William O. Brice (from 29 May)
BrigGen Frank H. Lamson-Scribner (from 29 Sep)
Chief of Staff
Col Caleb T. Bailey (to 18 Aug 1951)
Col Arthur F. Binney (from 19 Aug)
Col Carson A. Roberts (from 2 Jan 1952)
Col Arthur F. Binney (from 26 Mar)
Asst Chief of Staff, G-1
Col Raymond E. Hopper (to 10 Feb 1951)
Col Alexander G. Bunker (from 11 Feb)
LtCol Owen M. Hines (from 1 Nov)
Col Robert O. Bisson (from 27 Feb 1952)
Asst Chief of Staff, G-2
Col Roger T. Carleson (to 18 Feb 1951)
LtCol Winson V. Crockett (from 19 Feb)
Capt John E. Buckle (from 21 Jun)
Capt William G. Redel (from 1 Aug)
LtCol Chester A. Henry, Jr. (from 1 Sep)
LtCol John W. Stage (from 12 Jan 1952)
Asst Chief of Staff, G-3
Col Edward C. Dyer (to 28 Feb 1951)
LtCol Howard A. York (from 1 Mar)
LtCol Neil R. MacIntyre (from 12 Mar)
Col Rivers J. Morrell, Jr. (from 26 Jun)
Col Stanley W. Trachta (from 19 Aug)
Col Rivers J. Morrell, Jr. (from 7 Sep)
Col Guy M. Morrows (from 14 Sep)
Col Stanley W. Trachta (from 21 Jan 1952)

Asst Chief of Staff, G-4
Col Thomas J. Noon (to 14 May 1951)
Col Wallace T. Breakey (from 15 May)
LtCol Carl M. Longley (from 21 Jul)
Col Luther S. Moore (from 5 Sep)
Col Elmer T. Dorsey (from 7 Jan 1952)
Col Robert E. Galer (from 12 Mar)

Marine Aircraft Group 33 (MAG-33)
Commanding Officer
Col Frank G. Dailey (to 29 Dec 1950)
LtCol Radford C. West (from 30 Dec)
LtCol Paul J. Fontana (from 15 Jan 1951)
LtCol Richard A. Beard, Jr. (acting) (from 2 Apr)
Col Guy M. Morrow (from 9 Apr)
Col Carson A. Roberts (from 31 Jul)
Col Arthur F. Binney (from 2 Jan 1952)
Col Martin A. Severson (from 27 Mar)

Executive Officer
LtCol Richard A. Beard, Jr. (to 18 May 1951)
LtCol James B. Moore (from 19 May)
LtCol Nathan T. Post, Jr. (from 14 Jul)
LtCol John W. Stage (from 2 Sep)
LtCol Nathan T. Post, Jr. (from 12 Jan 1952)
LtCol Vernon O. Ullman (from 6 Feb)

Marine Air Base Squadron 33 (MABS-33)
Commanding Officer
LtCol Nathan T. Post (to 10 Jan 1952)
LtCol Finley T. Clarke, Jr. (from 11 Jan)
Maj Frank P. Barker, Jr. (from 27 Mar)

Executive Officer
Maj George K. Harshbarger (to 24 Apr 1952)

Marine Aircraft Maintenance Squadron 33 (MAMS-33)
Commanding Officer
LtCol Joseph W. Kean, Jr. (2 Dec 1951 to 21 Jan 1952)
Maj Zadik Collier (from 22 Jan)

Executive Officer
Maj Alton C. Bennett (to 4 Dec 1951)
Maj Zadik Collier (from 5 Dec)
Maj Alton C. Bennett (from 22 Jan 1952)

Headquarters Squadron 33 (HQSQ, MAG-33)
Commanding Officer
Capt Grover C. McClure, Jr. (to 14 Apr 1951)
Maj William D. Armstrong (from 15 Apr)
Maj Raymond F. Scherer (from 28 Jul)
Maj Morgan C. Webb, III (from 27 Aug)
Capt Allen R. Schutter (from 27 Mar 1952)

Marine Service Squadron 33 (SMS-33)
(SMS disestablished 1 Dec 1951--concurrently, MABS-33 and MAMS-33 formed.)

Commanding Officer
LtCol James C. Lindsay (to 23 Jan 1951)
Maj Edward J. Montagne (from 24 Jan)
Maj William M. Lundin (from 26 Jan)
Maj Elmer P. Thompson, Jr. (from 1 Apr)
LtCol Allen T. Barnum (from 2 Jul)
LtCol Joseph W. Kean, Jr. (from 12 Nov)

Executive Officer
Maj Edward J. Montagne, Jr. (To 13 Mar 1951. No Exec listed after Montagne was detached sometime in March 1951 until July 1951. Thompson came aboard 13 Mar 1951, which may well be date that Montagne was detached as Exec--however, nothing is recorded to this effect.)
Maj Elmer P. Thompson, Jr. (From 2 Jul. It is quite possible and logical that Thompson was Exec from 13 Mar to 2 Apr 1951--when he became CO.)
Maj George K. Harshbarger (from 7 Aug)

Marine Aircraft Group 12 (MAG-12)
Commanding Officer
Col Boeker C. Batterton (to 28 May 1951)
Col Stanley W. Trachta (from 29 May)
Col Richard C. Mangrum (from 1 Aug)
Col Luther S. Moore (from 2 Jan 1952)
Col Elmer T. Dorsey (from 1 Apr)

Executive Officer
LtCol Donald K. Yost (to 24 Feb 1951)
LtCol Rivers J. Morrell, Jr. (from 25 Feb)
LtCol Richard W. Wyczawski (from 26 Jun)
LtCol William G. Thrash (from 18 Jul)
LtCol Hugh M. Elwood (from 8 Aug)
LtCol Jens C. Aggerbeck, Jr. (from 17 Nov)
LtCol Robert J. Hoey (from 27 Feb 1952)

Headquarters Squadron, (HQSQ, MAG−12)
Commanding Officer
Maj John E. Hays (to 31 Dec 1950)
Capt William E. Lesage (from 1 Jan 1951)
Maj Bradley K. Schwarz (from 4 Apr)
Maj David P. John (from 2 Sep)
Capt Joseph E. Givens (from 9 Oct)
Capt George Byers, Jr. (from 1 Feb 1952)

Marine Service Squadron 12 (SMS-12)
(SMS disestablished 1 Dec 1951--concurrently, MABS-12 and MAMS-12 formed and commissioned.)
Commanding Officer
LtCol Charles E. McLean, Jr. (to 28 Jul 1951)
Maj Perry L. Shuman (from 29 Jul)

Executive Officer
Maj Joseph W. Mackin (to 2 Apr 1951)
Maj Howard W. Bollmann (from 3 Apr)
Maj Raphael Ahern (from 8 Aug)
Maj Robert E. Wall (from 3 Oct)

Marine Air Base Squadron 12 (MABS−12)
(Commissioned 1 Dec 1951.)
Commanding Officer
Maj Perry L. Shuman (To 5 Jan 1952. Narrative of Jan 1952 CD MABS-12 states Shuman det 4 Jan 1952
and Bryson on same date took over as CO. Assumption of command order states that 6 Jan 1952 was date Bryson
became CO.)
Maj Robert L. Bryson (from 6 Jan)
LtCol Carl M. Longley (from 1 Mar)

Executive Officer

Maj Floyd C. Kirkpatrick (to 18 Dec 1951)
Maj Robert L. Bryson (from 19 Dec)
Maj Floyd C. Kirkpatrick (from 6 Jan 1952)
Maj Robert A. Collett (from 1 Mar)

Marine Aircraft Maintenance Squadron 12 (MAMS−12)
(Commissioned 1 Dec 1951.)

Commanding Officer

Maj Robert E. Wall (to 10 Feb 1952)
LtCol Carl M. Longley (from 11 Feb)
LtCol Joseph A. Gray (from 1 Mar)

Executive Officer

Capt Kenneth A. Anderson (to 26 Dec 1951)
Maj “S” “D” G. Peterson (from 27 Dec)
Maj Robert E. Wall (From Feb/Mar 1952. The dates for Peterson and Wall are from the Station Lists. The diary records nothing--except in the case of Beatty [20 Feb 1952]--that would either prove or disprove these dates as being correct.)

Marine Wing Service Squadron 1 (MWSS−1; decommissioned 1 Jul 1953) and
Marine Wing Service Group 17 (MWSG-17; commissioned 1 Jul 1953)

Commanding Officer

CWO Aubrey D. Taylor (to 23 Jan 1951)
LtCol James C. Lindsay (from 24 Jan)
Col Roger T. Carleson (from 19 Feb)
Col Elmer T. Dorsey (from 9 Sep)
Col John Wehle (from 7 Jan 1952)

Executive Officer

None shown prior to 19 Feb 1951.
LtCol James C. Lindsay (to 16 Jul 1951)
LtCol Alton D. Gould (from 17 Jul)
Maj Edward J. McGee (from 13 Nov)
LtCol Robert M. Haynes (from 2 Dec)
LtCol Birney B. Truitt (from 15 Mar 1952)

Marine Ground Control Intercept Squadron 1 (MGCIS-1)

Commanding Officer
Maj Harold E. Allen (to 10 Jun 1951)
LtCol Manual Brilliant (from 11 Jun)
Maj Edward R. Polgrean (from 18 Aug)
LtCol William T. Herring (from 18 Sep)
Maj Milton M. Cook (from 1 Feb 1952)
LtCol Herbert D. Raymond, Jr. (from 16 Feb)
Maj Fred A. Steele (from 28 Mar)

Executive Officer
Maj Richard Hey, Jr. (to 3 Apr 1951)
Maj Casper F. Hegner (from 4 Apr)
Maj Edward R. Polgrean (from 31 Jul)
Maj William T. Porter (from 21 Nov)
Maj Milton M. Cook, Jr. (from 11 Dec)
Maj Marvin R. Bridges, Jr. (from 2 Feb 1952)
Maj Fred A. Steele (from 16 Feb)
Maj Marvin R. Bridges, Jr. (from 28 Mar)

Marine Transport Squadron 152 (VMR-152)
Commanding Officer
Col Deane C. Roberts (to 15 Jul 1951)
LtCol John S. Carter (from 16 Jul)
Col William B. Steiner (from 27 Jul)

Marine Fighter Squadron 212 (VMF-212)
(Re-designated Marine Attack Squadron 212 [VMA-212] on 10 Jun 1952.)
Commanding Officer
LtCol Richard W. Wyczawski (to 9 Mar 1951)
LtCol Claude H. Welch (from 10 Mar)
LtCol Manual Brilliant (from 21 Aug)
LtCol Joseph A. Gray (from 11 Dec)
LtCol Robert L. Bryson (from 1 Mar 1952)

Executive Officer
Maj Elmer P. Thompson, Jr. (to 18 Mar 1951)
Maj Edward J. Montagne, Jr. (from 19 Mar)
Maj Joseph W. Mackin (from 13 Apr)
Maj Floyd C. Kirkpatrick (from 16 Jul)
Maj William H. Rankin (from 20 Sep)
Maj Robert A. Collett (from 11 Dec)
Maj Richard B. Elliott (from 23 Feb 1952)

1st 90mm AAA Gun Battalion
(Arrived Pusan, Korea, on 29 Aug 1951.)
Battalion Commander
   LtCol Charles W. May (KIA) (to 21 Dec 1951)
   LtCol Kenneth P. Dunkle (from 22 Dec)
   Col John F. Dunlap (from 30 Jan 1952)
   Col Max C. Chapman (from 23 Mar)
Executive Officer
   Maj Kenneth P. Dunkle (to 21 Dec 1951)
   None shown 22-25 Dec 1951.
   Maj David H. Simmons (from 26 Dec)
   LtCol Kenneth P. Dunkle (from 30 Jan 1952)

Marine Fighter Squadron 311 (VMF-311)
Commanding Officer
   LtCol Neil R. MacIntyre (to 10 Mar 1951)
   LtCol John F. Kinney (from 11 Mar)
   Maj Frank S. Hoffecker (from 28 Jul)
   LtCol James B. Moore (from 1 Aug)
   LtCol John S. Payne (from 1 Dec)
   LtCol Darrell D. Irwin (from 27 Feb 1952)
Executive Officer
   Maj John R. Stack (to 20 Feb 1951)
   Maj Samuel Richards, Jr. (from 21 Feb)
   Maj Samuel B. Folsom, Jr. (From Apr. The absence of a specific date indicates that no specific date of assignment is shown in unit records.)
   Maj Frank S. Hoffecker, Jr. (from 1 Jun) (KIA)
   Maj Frank C. Drury (from 25 Aug)
   Maj Carroll E. McCullah (from 1 Jan 1952)
   Maj Jay E. McDonald (from 16 Feb)

Marine Night-Fighter Squadron 513 (VMF(N)-513)
Commanding Officer
   LtCol David C. Wolfe (to 22 Feb 1951)
   LtCol James R. Anderson (from 23 Feb)
   LtCol Robert R. Davis (from 1 Jul)
LtCol Allen T. Barnum (from 22 Nov)
Maj Frank H. Simonds (from 1 Feb 1952)
LtCol John R. Burnett (from 1 Mar)

Executive Officer
Maj Albert L. Clark (to 18 Dec 1950)
Maj George B. Herlihy (from 19 Dec)
Maj William G. Johnson (From Feb 1951. The absence of specific dates indicates that no specific assignment dates can be found in existing records.)
Maj Evans C. Carlson (from 23 Apr)
Maj John E. Reynolds (from 7 May)
Maj Leo F. Tatro, Jr. (from 25 Aug)
Maj Judson C. Richardson, Jr. (MIA) (from 4 Oct)
Maj Frank H. Simonds (from 14 Dec)
Maj Leroy T. Frey (from 1 Feb 1952)
Maj Frank H. Simonds (from 1 Mar)

Marine Night-Fighter Squadron 542 (VMF(N)-542)

Commanding Officer
LtCol Max J. Volcansek, Jr. (to 5 Feb 1951)
LtCol James R. Anderson (from 6 Feb)
Maj Albert L. Clark (From 23 Feb. VMF(N)-542: At sea bound for United States 12-21 Mar 1951-- arrived El Toro on 24 Mar 1951.)
LtCol Peter D. Lambrecht (from 24 Mar)

Executive Officer
Maj Robert T. Whitten (to 23 Jan 1951)
LtCol James R. Anderson (from 24 Jan)

Marine Fighter Squadron 323 (VMF-323)

Commanding Officer
Maj Arnold A. Lund (to 24 Jan 1951)
Maj Stanley S. Nicolay (from 25 Jan)
Maj Donald L. Clark (from 1 Mar)
Maj Charles M. Kunz (from 3 May)
LtCol George F. Vaughan (from 25 Sep)
Maj John L. Dexter (from 26 Oct)
LtCol Richard L. Blume (from 16 Jan 1952)

Executive Officer
Maj Robert E. Johnson (to 31 Jan 1951)
Maj Donald L. Clark (from 1 Feb)
Maj Wilbur F. Evans, Jr. (from 1 Mar)
Maj John L. Dexter (from 7 Jul)
Maj Floyd C. Kirkpatrick (from 25 Oct)
Maj Andrew J. Voyles (from 22 Nov)
Maj Howard E. Cook (from 18 Dec)
Maj Herbert D. Raymond, Jr. (from 13 Jan 1952)
Maj Howard E. Cook (from 14 Feb)
Maj William A. Weir (from 16 Mar)

Marine Air Control Group 2 (MACG-2)
(Arrived in Korea 11 Apr 1951.)
Commanding Officer
LtCol Manual Brilliant (from 10 Apr 1951)
Col Edwin P. Pennebaker, Jr. (from 30 Apr)
Col Martin A. Severson (from 1 Jan 1952)
Col Frederick R. Payne, Jr. (from 1 Mar)
Executive Officer
None shown during period LtCol Brilliant was CO.
LtCol Manual Brilliant (from 30 Apr 1951)
LtCol Joseph W. Kean (from 10 Jun)
LtCol Robert R. Davis (from 4 Dec)
LtCol Russell D. Rupp (from 6 Feb 1952)

Marine Tactical Air Control Squadron 2 (MTACS-2)
Commanding Officer
Maj Christian C. Lee (to 30 Apr 1951)
Maj James A. Etheridge (from 1 May)
Maj Milton M. Cook, Jr. (from 6 May)
Maj Wade W. Larkin (from 28 May)
LtCol Henry W. Bransom (from 25 Jun)
LtCol Hensley Williams (from 1 Dec 1951)
Executive Officer
Maj Harlen E. Hood (to Mar/Apr 1951)
Maj James A. Etheridge (From 26 Apr. His date of attachment is vague.)
Maj Wade W. Larkin (from 1 May)
Maj Milton M. Cook, Jr. (from 28 May)
Maj Clinton E. Jones (from 23 Sep)

Marine Ground Control Intercept Squadron 3 (MGCIS-3)

Commanding Officer
  Maj Raymond H. George (to 15 Feb 1951)
  Maj Jack R. Moore (from 16 Feb)
  LtCol Hoyle R. Barr (from 1 Nov)
  LtCol Owen W. Hines (from 2 Mar 1952)

Executive Officer
  Maj David M. Hudson (to 15 Aug 1951)
  Maj Daniel L. Cummings (from 16 Aug)
  Maj James H. Foster (from 17 Feb 1952)

Marine Attack Squadron 121 (VMA-121)

(Departed El Toro 2 Oct 1951 for Korea; 21 Oct 1951 reported to CG, 1stMAW, for duty; 22 Oct 1951 CO arrived Pohang [K-3], Korea.)

Commanding Officer
  LtCol Alfred N. Gordon (KIA) (to 17 Nov 1951)
  Maj Frank P. Barker, Jr. (from 18 Nov)
  LtCol Phillip B. May (from 1 Dec)
  LtCol William A. Houston, Jr. (from 15 Mar 1952)

Executive Officer
  Maj Frank P. Barker, Jr. (to 17 Nov 1951)
  Maj Edward B. Harrison (from 18 Nov)
  Maj Frank P. Barker, Jr. (from 1 Dec)
  Maj Edward B. Harrison (from 1 Jan 1952)
  Maj Richard J. Flynn, Jr. (from 15 Feb)
  Maj Henry W. Horst (from 26 Mar)

Marine Fighter Squadron 214 (VMF-214)

Commanding Officer
  Maj William M. Lundin (to 25 Jan 1951)
  Maj James A. Feeley, Jr. (from 26 Jan)
  Maj Edward Ochoa (from 5 May)
  LtCol James W. Poindexter (from 16 May)
  Maj Charles M. Kunz (From 4 Nov. VMF-214 departed Korea for Itami on 4 Nov 1951--en route to United States (El Toro) aboard the Lenawee, 8-27 Nov 1951.)

Executive Officer
Maj Edward Ochoa (to 31 Jan 1951)
Maj Hugh B. Calahan (from 1 Feb)
Maj Herbert C. Langenfeld (From 1 Jun. Records do not indicate specific date.)

Marine Fighter Squadron 115 (VMF-115)
(Arrived Pohang [K-3], Korea, on 25 Feb 1952.)
Commanding Officer
   LtCol Thomas M. Coles (25 Feb-20 May 1952)
Executive Officer
   Maj Conrad G. Winter (25 Feb-26 Apr 1952)

Marine Fighter Squadron (VMF-312)
(Re redesignated Marine Attack Squadron [VMA-312] on 1 Mar 1952.)
Commanding Officer
   LtCol “J” Frank Cole (to 28 Jan 1951)
   Maj Donald P. Frame (KIA) (from 29 Jan)
   Maj Frank H. Presley (from 4 Apr)
   Maj Edward J. McGee (from 20 Jun)
   LtCol Harry W. Reed (KIA) (from 22 Jul)
   Maj Edward J. McGee (from 31 Jul)
   LtCol Russell D. Rupp (from 15 Aug)
   LtCol Joe H. McGlothlin, Jr. (from 8 Jan 1952)
Executive Officer
   Maj Frank H. Presley (to 3 Apr 1951)
   Capt Phillip C. DeLong (from 4 Apr)
   Maj Robert J. Shelley, Jr. (from 22 Jun)
   Maj Edward J. McGee (from 22 Jul)
   Maj Robert J. Shelley, Jr. (from 31 Jul)
   Maj Edward J. McGee (from 4 Aug)
   Maj James H. Crutchfield (KIA) (from 25 Oct)
   Maj Jay W. Hubbard (from 4 Nov)
   Maj Richard J. Webster (From 19 Dec. Records do not indicate specific date.)
   Maj Fred A. Steele (From Jan 1952. Records do not indicate specific date.)
   Maj Alexander S. Walker, Jr. (from 28 Jan)
   Maj Edmond P. Hartsock (from 30 Mar)

Photographic Unit
(Commissioned Marine Photographic Squadron 1 [VMJ-1] on 25 Feb 1952.)
Commanding Officer
  Maj Donald S. Bush (to 14 Jun 1951)
  Maj Edgar L. Smith (from 15 Jun)
  Maj James W. Dougherty (from 27 Jul)
  Capt Edward A. Fitzgerald (from 29 Oct)
  LtCol Alton D. Gould (from 12 Nov)
  Maj Robert R. Read (from 26 Mar 1952)

Executive Officer
  Maj Robert R. Read (to 25 Mar 1952)
  Maj Albert E. James (from 26 Mar)

HQSQ, 1st MAW
Commanding Officer
  Capt Earl B. Sumerlin, Jr. (to 12 Jan 1951)
  Maj John A. Reeder (from 13 Jan)
  Capt Edwin H. McCaleb, III (from 17 Jun)
  Maj Herbert C. Langenfeld (from 11 Oct)
  Maj Earl C. Miles (from 2 Dec)
THE SECRETARY OF THE NAVY
WASHINGTON

The President of the United States takes pleasure in presenting the PRESIDENTIAL UNIT CITATION to the
FIRST MARINE DIVISION, REINFORCED
for service as set forth in the following CITATION:

“For extraordinary heroism in action against enemy aggressor forces in Korea during the periods 21 to 26 April, 16 May to 30 June, and 11 to 25 September 1951. Spearheading the first counteroffensive in the spring of 1951, the First Marine Division, Reinforced, engaged the enemy in the mountainous center of Korea in a brilliant series of actions unparalleled in the history of the Marine Corps, destroying and routing hostile forces with an unrelenting drive of seventy miles north from Wonju. During the period 21 to 26 April, the full force of the enemy counteroffensive was met by the Division, north of the Hwachon Reservoir. Although major units flanking the Marine Division were destroyed or driven back by the force of this attack, the Division held firm against the attackers, repelling the onslaught from three directions and preventing the encirclement of the key center of the lines. Following a rapid regrouping of friendly forces in close contact with the enemy, the First Marine Division, Reinforced, was committed into the flanks of the massive enemy penetration and, from 16 May to 30 June, was locked in violent and crucial battle which resulted in the enemy being driven back to the north with disastrous losses to his forces in the number of killed, wounded and captured. Carrying out a series of devastating assaults, the Division succeeded in reducing the enemy’s main fortified complex dominating the 38th Parallel. In the final significant offensive of the action in Korea, from 11 to 25 September 1951, the First Marine Division, Reinforced, completed the destruction of the enemy forces in Eastern Korea by advancing the front against a final desperate enemy defense in the ‘Punch Bowl’ area in heavy action which completed the liberation of South Korea in this locality. With the enemy’s major defenses reduced, his forces on the central front decimated, and the advantage of terrain and the tactical initiative passing to friendly forces, he never again recovered sufficiently to resume the offensive in Korea. The outstanding courage, resourcefulness and aggressive fighting spirit of the officers and men of the First Marine Division, Reinforced, reflect the highest credit upon themselves and the United States Naval Service.”

The following reinforcing units of the First Marine Division participated in operations against enemy aggressor forces in Korea during the cited periods:

FLEET MARINE FORCE UNITS AND DETACHMENTS: “C” Battery, 1st 4.5 Rocket Battalion; 1st Combat Service Group; 1st Amphibian Tractor Battalion; 7th Motor Transport Battalion; 1st Armored Amphibian Battalion; “A” Company, 1st Amphibian Truck Battalion (Redesignated 1st Amphibian Truck Company 18 July 1951); Team #1, 1st Provisional Historical Platoon; 1st Fumigation and Bath Platoon; 1st Air Delivery Platoon; Radio Relay Team, 1st Signal Operations Company; Detachment, 1st Explosive Ordnance Disposal Company; 2nd Platoon, Auto Field Maintenance Company; 1st Provisional Truck Company; Detachment, 1st Air Naval Gunfire Liaison Company.

UNITED STATES ARMY UNITS: (For such periods not included in Army Unit Awards) 1st Bn, 32d Regt, 7th Inf Div; 7th Inf Div; 74th Truck Co; 513th Truck Co; 1st Ord Medium Maint Co, USA; 3d Plt, 86th Engr Searchlight Co (passed to operational control of 11th Marines); 558th Trans Truck Co (Amphibious, was attached to 7th MT Bn, FMF); 196th Field Arty Bn; 92d Army Engr Searchlight Plt; 181st CIC Det USA; 163d MIS Det
USA; TLO Det USA; UNMACK Civil Affairs Team USA; 61st Engr Co; 159th Field Arty Bn (155 Howitzer); 623d Field Arty Bn; 17th Field Arty Bn “C” Btry; 204th Field Arty Bn “B” Btry; 84th Engr Construction Bn; 1st Bn, 15th US Inf Regt; 1st Bn, 65th US Inf Regt; 1st Bn, 9th Regt, 2d US Div (attached to KPR); Recon Co, 7th US Inf Div; 461st Inf Bn; Heavy Mortars, 7th Inf Div; 204th Field Arty Bn “A” Btry; 69th Field Arty Bn; 64th Field Arty Bn; 8th Field Arty Bn; 90th Field Arty Bn; 21st AAA-AW Bn; 89th Tank Bn; 441st CIC Det, USA; Prov Bn, USA (Dets 31st and 32d RCTS); Co D, 10th Engr (C) Bn, USA; Tank Co, 31st Inf, USA; Hqr Co, 31st Inf, USA; Co B, 1st Bn, 31st Inf, USA; 2d Bn, 31st Inf, USA (less Co E).

For the President,
CHARLES S. THOMAS
Secretary of the Navy

THE SECRETARY OF THE NAVY
WASHINGTON

The President of the United States takes pleasure in presenting the PRESIDENTIAL UNIT CITATION to the

FIRST MARINE AIRCRAFT WING, REINFORCED

for service as set forth in the following CITATION:

“For extraordinary heroism in action against enemy aggressor forces in Korea from 8 March to 30 April, 18 May to 30 June, and 3 August to 29 September 1951. Carrying out ‘round-the-clock’ combat flights during these periods, often under hazardous conditions of weather and terrain, the First Marine Aircraft Wing, Reinforced, provided unparalleled close air support for friendly ground forces, effectively reducing the enemy’s power to resist and contributing materially to the sweeping victories achieved by our ground forces. Operating continuously in the most advanced areas under fire, the Wing consistently maintained a high degree of combat readiness and struck savage blows to inflict tremendous damage and heavy casualties upon the enemy. Individually capable and determined, the gallant officers and men of this indomitable team achieved a distinctive combat record during a period of vital operations against a stubborn foe. This record is a lasting tribute to the courage and fighting spirit of all members of the First Marine Aircraft Wing, Reinforced, and reflects the highest credit upon the United States Naval Service.”

All organic units (excepting Marine Fighting Squadrons 214 and 323 for the periods 8 March to 30 April 1951 and 18 May to 30 June 1951, and Marine Observation Squadron 6 for the entire three periods) and the following reinforcing units of the First Marine Aircraft Wing participated in operations against enemy aggressor forces in Korea during one or more of the above cited periods: 1st 90mm Anti-Aircraft Artillery Gun Battalion and Ground Control Approach Unit 41M.

For the President,
CHARLES S. THOMAS

Secretary of the Navy
The East-Central Front
Lynn Montross, Hubard D. Kuokka and Norman W. Hicks

Foreword

MENTION THE KOREAN WAR and almost immediately it evokes the memory of Marines at Pusan, Inchon, Chosin Reservoir, or the Punchbowl. Americans everywhere remember the Marine Corps’ combat readiness, courage, and military skills that were largely responsible for the success of these early operations in 1950-1951. Not as dramatic or well-known are the important accomplishments of the Marines during the latter part of the Korean War.

In March 1952 the 1st Marine Division redeployed from the East-Central front to West Korea. This new sector, nearly 35 miles in length, anchored the far western end of I Corps and was one of the most critical of the entire Eighth Army line. Here the Marines blocked the enemy’s goal of penetrating to Seoul, the South Korean capital. Northwest of the Marine Main Line of Resistance, less than five miles distant, lay Panmunjom, site of the sporadic truce negotiations.

Defense of their strategic area exposed the Marines to continuous and deadly Communist probes and limited objective attacks. These bitter and costly contests for key outposts bore such names as Bunker Hill, the Hook, the Nevadas (Carson-Reno-Vegas), and Boulder City. For the ground Marines, supported by 1st Marine Aircraft Wing squadrons, the fighting continued until the last day of the war, 27 July 1953.

The Korean War marked the first real test of Free World solidarity in the face of Communist force. In repulsing this attempted Communist aggression, the United Nations, led by the United States, served notice that it would not hesitate to aid those nations whose freedom and independence were under attack.

As events have subsequently proven, holding the line against Communist encroachment is a battle whose end is not yet in sight. Enemy aggression may explode brazenly upon the world scene, with an overt act of invasion, as it did in Korea in June 1950, or it may take the form of a murderous guerrilla war as it has more recently, for over a decade, in Vietnam.

Whatever guise the enemy of the United States chooses or wherever he draws his battleline, he will find the Marines with their age-old answer. Today, as in the Korean era, Marine Corps readiness and professionalism are prepared to apply the cutting edge against any threat to American security.

--Gen. L. F. Chapman, Jr., USMC, Commandant of the Marine Corps
Operations in West Korea
Pat Meid and James M. Yingling

Preface

THIS IS THE CONCLUDING VOLUME of a five-part series dealing with operations of United States Marines in Korea between 2 August 1950 and 27 July 1953. Volume V provides a definitive account of operations of the 1st Marine Division and the 1st Marine Aircraft Wing during 1952-1953, the final phase of the Korean War. At this time the division operated under Eighth U.S. Army in Korea (EUSAK) control in the far western sector of I Corps, while Marine aviators and squadrons functioned as a component of the Fifth Air Force (FAF).

The period covered by this history begins in March 1952, when the Marine division moved west to occupy positions defending the approaches to Seoul, the South Korean capital. As it had for most of the war the 1st Marine Aircraft Wing, operating under FAF, flew close support missions not only for the Marines but for as many as 19 other Allied frontline divisions. Included in the narrative is a detailed account of Marine POWs, a discussion of the new defense mission of Marine units in the immediate postwar period, and an evaluation of Marine Corps contributions to the Korean War.

Marines, both ground and aviation, comprised an integral part of the United Nations Command in Korea. Since this is primarily a Marine Corps history, actions of the U.S. Army, Navy, and Air Force are presented only in sufficient detail to place Marine operations in their proper perspective.

Official Marine Corps combat records form the basis for the book. This primary source material has been further supplemented by comments and interviews from key participants in the action described. More than 180 persons reviewed the draft chapters. Their technical knowledge and advice have been invaluable. Although the full details of these comments could not be used in the text, this material has been placed in Marine Corps archives for possible use by future historians.

The manuscript of this volume was prepared during the tenure of Colonel Frank C. Caldwell, Director of Marine Corps History, Historical Division, Headquarters Marine Corps. Production was accomplished under the direction of Mr. Henry I. Shaw, Jr., Deputy Director and Chief Historian, who also outlined the volume. Preliminary drafts were written by the late Lynn Montross, prime author of this series, and Major Hubard D. Kuokka. Major James M. Yingling researched and wrote chapters 1-6 and compiled the Command and Staff List. Lieutenant Colonel Pat Meid researched and wrote chapters 7-12, prepared appendices, processed photographs and maps, and did the final editing of the book.

Historical Division staff members, past or present, who freely lent suggestions or provided information include Lieutenant Colonel John J. Cahill, Captain Charles B. Collins, Mr. Ralph W. Donnelly, Mr. Benis M. Frank, Mr. George W. Garand, Mr. Rowland P. Gill, Captain Robert J. Kane, Major Jack K. Ringler, and Major Lloyd E. Tatem. Warrant Officer Dennis Egan was Administrative Officer during the final stages of preparation and production of this book.

The many exacting administrative duties involved in processing the volume from first draft manuscripts through the final printed form, including the formidable task of indexing the book, were handled expertly and cheerfully by Miss Kay P. Sue. Mrs. Frances J. Rubright also furnished gracious and speedy assistance in obtaining the tomes of official Marine Corps records. The maps were prepared by Sergeants Kenneth W. White and Ernest L. Wilson. Official Department of Defense photographs illustrate the book.

A major contribution to the history was made by the Office of the Chief of Military History, Department of the Army; the Naval History Division, Department of the Navy; and the Office of Air Force History,
Department of the Air Force. Military history offices of England, Canada, and South Korea provided additional
details that add to the accuracy and interest of this concluding volume of the Korean series.

--Col. F. C. Caldwell, USMC (Ret.), Director of Marine Corps History
Operations in West Korea

Chapter 1. Operations in West Korea Begin
From Cairo to JAMESTOWN

DURING THE LATTER PART of March 1952, the 1st Marine Division, a component of the U.S. Eighth Army in Korea (EUSAK), pulled out of its positions astride the Soyang River in east-central Korea and moved to the far western part of the country in the I Corps sector. There the Marines took over the EUSAK left flank, guarding the most likely enemy approaches to the South Korean capital city, Seoul, and improving the ground defense in their sector to comply with the strict requirements which the division commander, Major General John T. Selden, had set down. Except for a brief period in reserve, the Marine division would remain in the Korean front lines until a cease-fire agreement in July 1953 ended active hostilities.

The division CG, Major General Selden,[2] had assumed command of the 25,000-man 1st Marine Division two months earlier, on 11 January, from Major General Gerald C. Thomas while the Marines were still in the eastern X Corps sector. The new Marine commander was a 37-year veteran of Marine Corps service, having enlisted as a private in 1915, serving shortly thereafter in Haiti. During World War I he was commissioned a second lieutenant, in 1918, while on convoy duty. Between the two world wars, his overseas service had included a second assignment to Haiti, two China tours, and sea duty. When the United States entered World War II, Lieutenant Colonel Selden was an intelligence officer aboard the carrier Lexington. Later in the war Colonel Selden led the 5th Marines in the New Britain fighting and was Chief of Staff of the 1st Marine Division in the Peleliu campaign. He was promoted to brigadier general in 1948 and received his second star in 1951, prior to his combat assignment in Korea.

American concern in the 1950s for South Korea’s struggle to preserve its independence stemmed from a World War II agreement between the United States, the United Kingdom, and China. In December 1943, the three powers had signed the Cairo Declaration and bound themselves to ensure the freedom of the Korean people, then under the yoke of the Japanese Empire. At the Potsdam Conference, held on the outskirts of Berlin, Germany in July 1945, the United States, China,[3] and Britain renewed their Cairo promise.

When the Soviet Union agreed to join forces against Japan, on 8 August, the USSR also became a party to the Cairo Declaration. According to terms of the Japanese capitulation on 11 August, the Soviets were to accept surrender of the defeated forces north of the 38th Parallel in Korea. South of that line, the commander of the American occupation forces would receive the surrender. The Russians wasted no time and on 12 August had their troops in northern Korea. American combat units, deployed throughout the Pacific, did not enter Korea until 8 September. Then they found the Soviet soldiers so firmly established they even refused to permit U.S. occupation officials from the south to cross over into the Russian sector. A December conference in Moscow led to a Russo–American commission to work out the postwar problems of Korean independence.

Meeting for the first time in March 1946, the commission was short-lived. Its failure, due to lack of Russian cooperation, paved the way for politico-military factions within the country that set up two separate Koreas. In the north the Communists, under Kim Il Sung, and in the south the Korean nationalists, led by Dr. Syngman Rhee, organized independent governments early in 1947. In May of that year, a second joint commission failed to unify the country. As a result the Korean problem was presented to the United Nations (UN). This postwar international agency was no more successful in resolving the differences between the disputing factions. It did, however, recognize the Rhee government in December 1948 as the representative one of the two dissident groups.

In June 1950, the North Koreans attempted to force unification of Korea under Communist control by
crossing the 38th Parallel with seven infantry divisions heavily supported by artillery and tanks. Acting on a resolution presented by the United States, the United Nations responded by declaring the North Korean action a “breach of the peace” and called upon its members to assist the South Koreans in ousting the invaders. Many free countries around the globe offered their aid. In the United States, President Harry S. Truman authorized the use of U.S. air and naval units and, shortly thereafter, ground forces to evict the aggressors and restore the status quo. Under the command of General of the Army Douglas MacArthur, then Far East Commander, U.S. Eighth Army occupation troops in Japan embarked to South Korea.

The first combat unit sent from America to Korea was a Marine air-ground team, the 1st Provisional Marine Brigade, formed at Camp Pendleton, California on 7 July 1950, under Brigadier General Edward A. Craig. The same day the UN Security Council passed a resolution creating the United Nations Command (UNC) which was to exercise operational control over the international military forces rallying to the defense of South Korea. The Council asked the United States to appoint a commander of the UN forces; on the 8th, President Truman named his Far East Commander, General MacArthur, as Commander in Chief, United Nations Command (CinCUNC).

In Korea the Marines soon became known as the firemen of the Pusan Perimeter, for they were shifted from one trouble spot to the next all along the defensive ring around Pusan, the last United Nations stronghold in southeastern Korea during the early days of the fighting. A bold tactical stroke planned for mid-September was designed to relieve enemy pressure on Pusan and weaken the strength of the North Korean People’s Army (NKPA). As envisioned by General MacArthur, an amphibious landing at Inchon on the west coast, far to the enemy rear, would threaten the entire North Korean position south of the 38th Parallel. To help effect this coup, the UN Commander directed that the Marine brigade be pulled out of the Pusan area to take part in the landing at Inchon.

MacArthur’s assault force consisted of the 1st Marine Division, less one of its three regiments,[4] but including the 1st Korean Marine Corps (KMC) Regiment. Marine ground and aviation units were to assist in retaking Seoul, the South Korean capital, and to cut the supply line sustaining the NKPA divisions.

On 15 September, Marines stormed ashore on three Inchon beaches. Despite difficulties inherent in effecting a landing there,[5] it was an outstandingly successful amphibious assault. The 1st and 5th Marines, with 1st Marine Aircraft Wing (1st MAW) assault squadrons providing close air support, quickly captured the port city of Inchon, Ascom City[6] to the east, and Kimpo Airfield. Advancing eastward the Marines approached the Han River that separates Kimpo Peninsula from the Korean mainland. Crossing this obstacle in amphibian vehicles, 1st Division Marines converged on Seoul from three directions. By 27 September, the Marines had captured the South Korean government complex and, together with the U.S. Army 7th Infantry Division, had severed the enemy’s main supply route (MSR) to Pusan. In heavy, close fighting near the city, other United Nations troops pursued and cut off major units of the NKPA.

Ordered back to East Korea, the Marine division re-embarked at Inchon in October and made an administrative landing at Wonsan on the North Korean coast 75 miles above the 38th Parallel. As part of the U.S. X Corps, the 1st Marine Division was to move the 5th and 7th Marines (Reinforced) to the vicinity of the Chosin Reservoir, from where they were to continue the advance northward toward the North Korean-Manchurian border. The 1st Marines and support troops were to remain in the Wonsan area.

While the bulk of the division moved northward, an unforeseen development was in the making that was to change materially the military situation in Korea overnight. Aware that the North Koreans were on the brink of military disaster, Communist China had decided to enter the fighting. Nine Chinese divisions had been dispatched into the area with the specific mission of destroying the 1st Marine Division.[7] Without prior warning, on the night of 27 November, hordes of Chinese Communist Forces (CCF, or “Chinese People’s Volunteers” as they called themselves) assaulted the unsuspecting Marines and nearly succeeding in trapping the two Marine
regiments. The enemy’s failure to do so was due to the military discipline and courage displayed by able-bodied and wounded Marines alike, as well as effective support furnished by Marine aviation. Under conditions of great hardship, the division fought its way out over 78 miles of frozen ground from Chosin to the port of Hungnam, where transports stood by to evacuate the weary men and the equipment they had salvaged.

This Chinese offensive had wrested victory from the grasp of General MacArthur just as the successful completion of the campaign seemed assured. In the west, the bulk of the Eighth Army paced its withdrawal with that of the X Corps. The UNC established a major line of defense across the country generally following the 38th Parallel. On Christmas Day, massed Chinese forces crossed the parallel, and within a week the UN positions were bearing the full brunt of the enemy assault. Driving southward, the Communists recaptured Seoul, but by mid-February 1951 the advance had been slowed down, the result of determined Eighth Army stands from a series of successive defensive lines.[8]

Following its evacuation from Hungnam, the 1st Marine Division early in 1951 underwent a brief period of rehabilitation and training in the vicinity of Masan, west of Pusan. From there, the division moved northeast to an area beyond Pohang on the east coast. Under operational control of Eighth Army, the Marines, with the 1st Korean Marine Corps Regiment attached for most of the period, protected 75 miles of a vital supply route from attack by bands of guerrillas. In addition, the Marines conducted patrols to locate, trap, and destroy the enemy. The Pohang guerrilla hunt also provided valuable training for several thousand recently arrived Marine division replacements.

In mid-February the 1st Marine Division was assigned to the U.S. IX Corps, then operating in east-central Korea near Wonju. Initially without the KMCs,[9] the Marine division helped push the corps line across the 38th Parallel into North Korea. On 22 April, the Chinese unleashed a gigantic offensive, which again forced UN troops back into South Korea. By the end of the month, however, the Allies had halted the 40-mile-wide enemy spring offensive.

Once again, in May, the Marine division was assigned to the U.S. X Corps, east of the IX Corps sector. Shortly thereafter the Communists launched another major offensive. Heavy casualties inflicted by UNC forces slowed this new enemy drive. Marine, Army, and Korean troops not only repelled the Chinese onslaught but immediately launched a counteroffensive, routing the enemy back into North Korea until the rough, mountainous terrain and stiffening resistance conspired to slow the Allied advance.

In addition to these combat difficulties, the Marine division began to encounter increasing trouble in obtaining what it considered sufficient and timely close air support (CAS). Most attack and fighter aircraft of the 1st MAW, commanded by Major General Field Harris[10] and operating since the Chosin Reservoir days under Fifth Air Force (FAF), had been employed primarily in a program of interdicting North Korean supply routes. Due to this diversion of Marine air from its primary CAS mission, both the division and wing suffered—the latter by its pilots’ limited experience in performing precision CAS sorties. Despite the difficulties, the Marine division drove northward reaching, by 20 June, a grotesque scooped-out terrain feature on the east-central front appropriately dubbed the Punchbowl.

Eighth Army advances into North Korea had caused the enemy to reappraise his military situation. On 23 June, the Russian delegate to the United Nations, Jacob Malik, hinted that the Korean differences might be settled at the conference table. Subsequently, United Nations Command and Communist leaders agreed that truce negotiations would begin on 7 July at Kaesong, located in West Korea immediately south of the 38th Parallel, but under Communist control. The Communists broke off the talks on 22 August. Without offering any credible evidence, they declared that UNC aircraft had violated the neutrality zone surrounding the conference area.[11] Military and political observers then realized that the enemy’s overture to peace negotiations had served its intended purpose of permitting him to slow his retreat, regroup his forces, and prepare his ground defenses for a new determined stand.
The lull in military offensive activity during the mid-1951 truce talks presaged the kind of warfare that would soon typify the final phase of the Korean conflict. Before the fighting settled into positional trench warfare reminiscent of World War I, the Marines participated in the final UN offensive. In a bitter struggle, the division hacked its way northward through, over, and around the Punchbowl, and in September 1951 occupied a series of commanding terrain positions that became part of the MINNESOTA Line, the Eighth Army main defensive line. Beginning on the 20th of that month, it became the primary mission of frontline units to organize, construct, and defend positions they held on MINNESOTA. To show good faith at the peace table, the UNC outlawed large-scale attacks against the enemy. Intent upon not appearing the aggressor and determined to keep the door open for future truce negotiations, the United Nations Command in late 1951 decreed a new military policy of limited offensives and an aggressive defense of its line. This change in Allied strategy, due to politico-military considerations, from a moving battle situation to stabilized warfare would affect both the tactics and future of the Korean War.

Even as Allied major tactical offensive operations and the era of fire and maneuver in Korea was passing into oblivion, several innovations were coming into use. One was the Marine Corps employment of helicopters. First used for evacuation of casualties from Pusan in August 1950, the versatile aircraft had also been adopted by the Marine brigade commander, General Craig, as an airborne jeep. On 13 September 1951, Marines made a significant contribution to the military profession when they introduced helicopters for large-scale resupply combat operations. This mission was followed one week later by the first use of helicopters for a combat zone troop lift. These revolutionary air tactics were contemporary with two new Marine Corps developments in ground equipment—body armor and insulated combat boots, which underwent extensive combat testing that summer and fall. The latter were to be especially welcomed for field use during the 1951-1952 winter.

Along the MINNESOTA Line, neither the freezing cold of a Korean winter nor blazing summer heat altered the daily routine. Ground defense operations consisted of dispatching patrols and raiding parties, laying ambushes, and improving the physical defenses. The enemy seemed reluctant to engage UN forces, and on one occasion to draw him into the open, EUSAK ordered Operation CLAM-UP across the entire UN front, beginning 10 February. Under cover of darkness, reserve battalions moved forward; then, during daylight, they pulled back, simulating a withdrawal of the main defenses. At the same time, frontline troops had explicit orders not to fire or even show themselves.[12]

It was hoped that the rearward movement of units from the front line and the subsequent inactivity there would cause the enemy to come out of his trenches to investigate the apparent large-scale withdrawal of UNC troops. Then Marine and other EUSAK troops could open fire and inflict maximum casualties from covered positions. On the fifth day of the operation, CLAM-UP was ended. The North Koreans were lured out of their defenses, but not in the numbers expected. CLAM-UP was the last action in the X Corps sector for the 1st Marine Division, which would begin its cross-country relocation the following month. (See Map 1.)

Code-named Operation MIXMASTER, the transfer of the 1st Marine Division began on 17 March when major infantry units began to move out of their eastern X Corps positions, after their relief on line by the 8th Republic of Korea (ROK) Division. Regiments of the Marine division relocated in the following order: the 1st KMCs, 1st, 7th, and 5th Marines. The division’s artillery regiment, the 11th Marines, made the shift by battalions at two-day intervals. In the motor march to West Korea, Marine units traveled approximately 140 miles over narrow, mountainous, and frequently mud-clogged primitive roads. Day and night, division transport augmented by a motor transport battalion attached from Fleet Marine Force, Pacific (FMFPac) and one company from the 1st Combat Service Group (CSG) rolled through rain, snow, sleet, and occasional good weather.

Marines employed 5,800 truck and DUKW (amphibious truck) loads to move most of the division personnel, gear, and supplies. Sixty-three flatbed trailers, 83 railroad cars, 14 landing ships, 2 transport aircraft,
the vehicles of 4 Army truck companies, as well as hundreds of smaller jeep trailers and jeeps were utilized. The division estimated that these carriers moved about 50,000 tons of equipment and vehicles\textsuperscript{13} with some of the support units making as many as a dozen round trips. The MIXMASTER move was made primarily by truck and by ship\textsuperscript{14} or rail for units with heavy vehicles.

Impressive as these figures are, they almost pall in significance compared with the meticulous planning and precision logistics required by the week-long move. It was made, without mishap, over main routes that supplied nearly a dozen other divisions on the EUSAK line and thus had to be executed so as not to interfere with combat support. Although the transfer of the 1st Marine Division from the eastern to western front was the longest transplacement of any EUSAK division, MIXMASTER was a complicated tactical maneuver that involved realignment of UNC divisions across the entire Korean front. Some 200,000 men and their combat equipment had to be relocated as part of a master plan to strengthen the Allied front and deploy more troops on line.

Upon its arrival in West Korea, the 1st Marine Division was under orders to relieve the 1st ROK Division and take over a sector at the extreme left of the Eighth Army line, under I Corps control, where the weaknesses of Kimpo Peninsula defenses had been of considerable concern to EUSAK and its commander, General James A. Van Fleet. As division units reached their new sector, they moved to locations pre-selected in accordance with their assigned mission. The first Marine unit into the I Corps main defensive position, the JAMESTOWN Line, was the 1st KMC Regiment attached to the division, with its organic artillery battalion. The KMCs, as well as 1/11, began to move into their new positions on 18 March. At 1400 on 20 March, the Korean Marines completed the relief of the 15th Republic of Korea Regiment in the left sector of the MLR (main line of resistance). Next into the division line, occupying the right regimental sector adjacent to the 1st Commonwealth Division, was Colonel Sidney S. Wade’s 1st Marines with three battalions forward and 2/5 attached as the regimental reserve. Relief of the 1st ROK Division was completed on the night of 24-25 March. At 0400 on 25 March the Commanding General, 1st Marine Division assumed responsibility for the defense of 32 miles of the JAMESTOWN Line. That same date the remainder of the Marine artillery battalions also relocated in their new positions.

As the division took over its new I Corps mission on 25 March, the Marine commander had one regiment of the 1st ROK Division attached as division reserve while his 5th Marines was still in the east. Operational plans originally had called for the 5th Marines, less a battalion, to locate in the Kimpo Peninsula area where it was anticipated Marine reserve units would be able to conduct extensive amphibious training. So overextended was the assigned battlefront position that General Selden realized this regiment would also be needed to man the line. He quickly alerted the 5th Marines commanding officer, Colonel Thomas A. Culhane, Jr., to deploy his regiment, then en route to western Korea, to take over a section of the JAMESTOWN front line instead of assuming reserve positions at Kimpo as originally assigned. General Selden believed that putting another regiment on the main line was essential to carrying out the division’s mission, to aggressively \textit{defend} JAMESTOWN Line, not merely to \textit{delay} a Communist advance.

Only a few hours after the 5th Marines had begun its trans-Korea move, helicopters picked up Colonel Culhane, his battalion commanders, and key regimental staff officers and flew them to the relocated division command post (CP) in the west. Here, on 26 March, the regimental commander officially received the change in the 5th Marines mission. Following this briefing, 5th Marines officers reconnoitered the newly assigned area\textsuperscript{15} while awaiting the arrival of their units. When the regiment arrived on the 28th, plans had been completed for it to relieve a part of the thinly-held 1st Marines line. On 29 March, the 5th Marines took over the center regimental sector while the 1st Marines, on the right regimental flank, compressed its ranks for a more solid defense.

Frontline units, from the west, were the 1st KMCs, the 5th, and 1st Marines. To the rear, the 7th Marines, designated as division reserve, together with organic and attached units of the division, had established an extensive support and supply area. As a temporary measure, a battalion of the division reserve, 2/7, was detached
for defense of the Kimpo Peninsula pending a reorganization of forces in this area. Major logistical facilities were
the division airhead, located at K-16 airfield, just southwest of Seoul, and the railhead at Munsan-ni, 25 miles
northwest of the capital city and about five miles to the rear of the division sector at its nearest point. Forward of
the 1st Marine Division line, outposts were established to enhance the division’s security. In the rear area the
support facilities, secondary defense lines, and unit command posts kept pace with development of defensive
installations on the MLR. Throughout the 1st Marine Division sector outpost security, field fortifications, and the
ground defense net were thorough and intended to deny the enemy access to Seoul.
Operations in West Korea
Pat Meid and James M. Yingling

Chapter 1. Operations in West Korea Begin
The Marines’ Home in Western Korea[16]

In western Korea, the home of the 1st Marine Division lay in a particularly significant area. (See Map 2.) Within the Marine boundaries ran the route that invaders through the ages had used in their drive south to Seoul. It was the 1st Marine Division’s mission to block any such future attempts. One of the reasons for moving the Marines to the west[17] was that the terrain there had to be held at all costs; land in the east, mountainous and less valuable, could better be sacrificed if a partial withdrawal in Korea became necessary. At the end of March 1952, the division main line of resistance stretched across difficult terrain for more than 30 miles, from Kimpo to the British Commonwealth sector on the east, a frontage far in excess of the textbook concept. Click here to view map

Although Seoul was not actually within the area of Marine Corps responsibility, the capital city was only 33 air miles south of the right limiting point of the division MLR and 26 miles southeast of the left. The port of Inchon lay but 19 air miles south of the western end of the division sector. Kaesong, the original site of the truce negotiations, was 13 miles northwest of the nearest part of the 1st Marine Division frontline while Panmunjom was less than 5 miles away and within the area of Marine forward outpost security. From the far northeastern end of the JAMESTOWN Line, which roughly paralleled the Imjin River, distances were correspondingly lengthened: Inchon, thus being 39 miles southwest and Kaesong, about 17 miles west.

The area to which the Marines had moved was situated in the western coastal lowlands and highlands area of northwestern South Korea. On the left flank, the division MLR hooked around the northwest tip of the Kimpo Peninsula, moved east across the high ground overlooking the Han River, and bent around the northeast cap of the peninsula. At a point opposite the mouth of the Kongnung River, the MLR traversed the Han to the mainland, proceeding north alongside that river to its confluence with the Imjin. Crossing north over the Imjin, JAMESTOWN followed the high ground on the east bank of the Sachon River for nearly two miles to where the river valley widened. There the MLR turned abruptly to the northeast and generally pursued that direction to the end of the Marine sector, meandering frequently, however, to take advantage of key terrain. Approximately 2½ miles west of the 1st Commonwealth Division boundary, the JAMESTOWN Line intersected the 38th Parallel near the tiny village of Madam-ni.

Within the Marine division sector to the north of Seoul lay the junction of two major rivers, the Imjin and the Han, and a portion of the broad fertile valley fed by the latter. Flowing into the division area from the east, the Imjin River snaked its way southwestward to the rear of JAMESTOWN. At the northeastern tip of the Kimpo Peninsula, the Imjin joined the Han. The latter there changed its course from south to west, flowed past Kimpo and neighboring Kanghwa-do Island, and emptied eventually into the Yellow Sea. At the far western end of the division sector the Yom River formed a natural boundary, separating Kanghwa and Kimpo, as it ran into the Han River and south to the Yellow Sea. To the east, the Sachon River streamed into the Imjin, while the Kongnung emptied into the Han where the MLR crossed from the mainland to Kimpo.

In addition, two north-south oriented rivers flanked enemy positions opposite the Marines and emptied into major rivers in the Marine sector. Northwest of Kimpo, the Yesong River ran south to the Han; far to the northeast, just beyond the March 1952 division right boundary, the Samichon River flowed into the Imjin.

Although the rivers in the Marine division were navigable, they were little used for supply or transportation. The railroads, too, were considered secondary ways, for there was but one line, which ran north out of Seoul to Munsan-ni and then continued towards Kaesong. Below the division railhead, located at Munsan-
ni, a spur cut off to Ascom City. Roads, the chief means of surface transport, were numerous but lacked sufficient width and durability for supporting heavy military traffic. Within the sector occupied by the Marines, the main route generally paralleled the railroad. Most of the existing roads south of JAMESTOWN eventually found their way to the logistic center at Munsan-ni. Immediately across the Imjin, the road net was more dense but not of any better construction.

From the logistical point of view, the Imjin River was a critical factor. Spanning it and connecting the division forward and rear support areas in March 1952 were only three bridges, which were vulnerable to river flooding conditions and possible enemy attack. Besides intersecting the Marine sector, the Imjin formed a barrier to the rear of much of the division MLR, thereby increasing the difficulty of normal defense and resupply operations.

When the Marines moved to the west, the winter was just ending. It had begun in November and was characterized by frequent light snowfalls but otherwise generally clear skies. Snow and wind storms seldom occurred in western Korea. From November to March the mean daily minimum Fahrenheit readings ranged from 15° to 30° above zero. The mean daily maximums during the summer were between the upper 70s and mid-80s. Extensive cloud cover, fog, and heavy rains were frequent during the summer season. Hot weather periods were also characterized by occasional severe winds. Spring and fall were moderate transitional seasons.

Steep-sided hills and mountains, which sloped abruptly into narrow valleys pierced by many of the rivers and larger streams, predominated the terrain in the I Corps sector where the Marines located. The most rugged terrain was to the rear of the JAMESTOWN Line; six miles northeast of the Munsan-ni railhead was a 1,948-foot mountain, far higher than any other elevation on the Marine or Chinese MLR but lower than the rear area peaks supporting the Communist defenses. Ground cover in the division sector consisted of grass, scrub brush, and, occasionally, small trees. Rice fields crowded the valley floors. Mud flats were prevalent in many areas immediately adjacent to the larger rivers which intersected the division territory or virtually paralleled the east and western boundaries of the Marine sector.

The transfer from the Punchbowl in the east to western Korea thus resulted in a distinct change of scene for the Marines, who went from a rugged mountainous area to comparatively level terrain. Instead of facing a line held by predominantly North Korean forces the division was now confronted by the Chinese Communists. The Marines also went from a front that had been characterized by lively patrol action to one that in March 1952 was relatively dormant. With the arrival of the 1st Marine Division, this critical I Corps sector would witness sharply renewed activity and become a focal point of action in the UNC line.
“To defend” were the key words in the 1st Marine Division mission — “to organize, occupy, and actively defend its sector of Line JAMESTOWN” — in West Korea. General Selden’s force to prevent enemy penetration of JAMESTOWN numbered 1,364 Marine officers, 24,846 enlisted Marines, 1,100 naval personnel, and 4,400 Koreans of the attached 1st KMC Regiment. The division also had operational control of several I Corps reinforcing artillery units in its sector. On 31 March, another major infantry unit, the Kimpo Provisional Regiment (KPR) was organized. The division then assumed responsibility for the Kimpo Peninsula defense on the west flank with this Marine-Korean force.

A major reason for transfer of the 1st Marine Division to the west, it will be remembered, had been the weakness of the Kimpo defense. Several units, the 5th KMC Battalion, the Marine 1st Armored Amphibian Battalion, and the 13th ROK Security Battalion (less one company), had been charged with the protection of the peninsula. Their operations, although coordinated by I Corps, were conducted independently. The fixed nature of the Kimpo defenses provided for neither a reserve maneuver element to help repel any enemy action that might develop nor a single commander to coordinate the operations of the defending units.

These weaknesses become more critical in consideration of the type of facilities at Kimpo and their proximity to the South Korean Capital. Seoul lay just east of the base of Kimpo Peninsula, separated from it only by the Han River. Located on Kimpo was the key port of Inchon and two other vital installations, the logistical complex at Ascom City and the Kimpo Airfield (K-14). All of these facilities were indispensable to the United Nations Command.

To improve the security of Kimpo and provide a cohesive, integrated defense line, CG, 1st Marine Division formed the independent commands into the Kimpo Provisional Regiment. Colonel Edward M. Staab, Jr., was named the first KPR commander. His small headquarters functioned in a tactical capacity only without major administrative duties. The detachments that comprised the KPR upon its formation were:

- Headquarters and Service Company, with regimental and company headquarters and a communication platoon;
- 1st Armored Amphibian Battalion, as supporting artillery;
- 5th KMC Battalion;
- 13th ROK Security Battalion (–);
- One battalion from the reserve regiment of the 1st Marine Division (2/7), as the maneuver element;
- Company A, 1st Amphibian Tractor Battalion;
- Company B, 1st Shore Party Battalion, as engineers;
- Company D, 1st Medical Battalion;
- Reconnaissance Company (–), 1st Marine Division;
- Detachment, Air and Naval Gunfire Liaison Company (ANGLICO), 1st Signal Battalion;
- Detachment, 181st Counterintelligence Corps Unit, USA;
- Detachment, 61st Engineer Searchlight Company, USA; and the
- 163rd Military Intelligence Service Detachment, USA.

The Kimpo Regiment, in addition to maintaining security of the division left flank, was assigned the mission to protect supporting and communication installations in that sector against airborne or ground attack.”[19] Within the division, both the artillery regiment and the motor transport battalion were to be prepared
to support tactical operations of Colonel Staab’s organization.

For defense purposes, the KPR commander divided the peninsula into three sectors. The northern one was manned by the KMC battalion, which occupied commanding terrain and organized the area for defense. The southern part was defended by the ROK Army battalion, charged specifically with protection of the Kimpo Airfield and containment of any attempted enemy attack from the north. Both forces provided for the security of supply and communication installations within their areas. The western sector, held by the amphibian tractor company, less two platoons, had the mission of screening traffic along the east bank of the Yom River, that flanked the western part of the peninsula. Providing flexibility to the defense plan was the maneuver unit, the battalion assigned from the 1st Marine Division reserve.

The unit adjacent to the KPR[] in the division line in late March was the 1st Korean Marine Corps Regiment, which had been the first division unit to deploy along JAMESTOWN. The KMC Regiment, command by Colonel Kim Dong Ha,[21] had assumed responsibility for its portion of JAMESTOWN at 0400 on 20 March with orders to organize and defend its sector. The regiment placed two battalions, the 3d and 1st, on the MLR and the 2d in the rear. Holding down the regimental right of the sector was the 1st Battalion, which had shared its eastern boundary with that of Colonel Wade’s 1st Marines until 29 March when the 5th Marines was emplaced on the MLR between the 1st KMC and 1st Marines.

The 1st Marines regimental right boundary, which on the MLR was 1,100 yards north of the 38th Parallel, separated the 1st Marine Division area from the western end of the 1st Commonwealth Division, then held by the 25th Canadian Infantry Brigade. In late March, Colonel Wade’s 2/1 (Lieutenant Colonel Thell H. Fisher) and 3/1 (Lieutenant Colonel Spencer H. Pratt) manned the frontline positions while 1/1 (Lieutenant Colonel John H. Papurca), less Company A, was in reserve. The regiment was committed to the defense of its part of the division area and improvement of its ground positions. In the division center sector Colonel Culhane’s 1/5 (Lieutenant Colonel Franklin B. Nihart) and 3/5 (Lieutenant Colonel William S. McLaughlin) manned the left and right battalion MLR positions, with 2/5 (Lieutenant Colonel William H. Cushing) in reserve. The latter unit was to be prepared either to relieve the MLR battalions or for use as a counterattack force.

It did not take the Marines long to discover the existence of serious flaws in the area defense which made it questionable whether the Allied line here could have successfully withstood an enemy attack. While his Marine units were effecting their relief of JAMESTOWN, Colonel Wade noted that “field fortifications were practically nonexistent in some sections.”[22] General Selden later pointed out that “populated villages existed between opposing lines. Farmers were cultivating their fields in full view of both forces. Traffic across the river was brisk.”[23] A member of the division staff reported that there was “even a school operating in one area ahead of the Marine lines.”[24] In addition to these indications of sector weakness, there was still another. Although the ROK division had placed three regiments in the line, when the two Marine regiments relieved them there were then more men on JAMESTOWN due to the greater personnel strength of a Marine regiment. Nevertheless, the division commander was still appalled at the width of the defense sector assigned to so few Marines.

At division level, the reserve mission was filled by Colonel Russell E. Honsowetz’, 7th Marines, minus 2/7 (Lieutenant Colonel Noel C. Gregory), which on 30 March became the maneuver force for the Kimpo Regiment. As the division reserve, the regiment was to be prepared to assume at any time either a defensive or offensive mission of any of the frontline regiments. In addition, the reserve regiment was to draw up counterattack plans, protect the division rear, improve secondary line defenses, and conduct training, including tank-infantry coordination, for units in reserve. The 7th Marines, with 3/7 (Lieutenant Colonel Houston Stiff) on the left and 1/7 (Lieutenant Colonel George W. E. Daughtry) on the right, was emplaced in the vicinity of the secondary defense lines, WYOMING and KANSAS, to the rear of the 5th and 1st Marines.

Another regiment located in the rear area was the 11th Marines. Its artillery battalions had begun displacement on 17 March and completed their move by 25 March. Early on the 26th, the 11th Marines resumed
support of the 1st Marine Division. While the Marine artillery had been en route, U.S. Army artillery from I Corps supported the division. With the arrival on the 29th of the administrative rear echelon, the Marine artillery regiment was fully positioned in the west.

For Colonel Frederick P. Henderson, who became the division artillery commander on 27 March, operational problems in western Korea differed somewhat from those experienced in the east by his predecessor, Colonel Bruce T. Hemphill. The most critical difficulty, however, was the same situation that confronted General Selden—the vast amount of ground to be covered and defended, and the insufficient number of units to accomplish this mission. To the artillery, the wide division front resulted in spreading the available fire support dangerously thin. Placement of 11th Marines units to best support the MLR regiments created wide gaps between each artillery battalion, caused communication and resupply difficulties, prevented a maximum massing of fires, and made redeployment difficult.[25]

In making use of all available fire support, the artillery regiment had to guard not only against the duplication of effort in planning or delivery of fires, but also against firing in the Panmunjom peace corridor restricted areas, located near the sector held by the Marine division’s center regiment. Moreover, the artillerymen had to maintain a flexibility sufficient to place the weight of available fire support on call into any zone of action.

Other difficulties were more directly associated with the nature of the sector rather than with its broad expanse. The positioning of the division in the west, although close to the coast, put the Marines beyond the range of protective naval gunfire. The sparse and inadequate road net further aggravated the tactical and logistical problems caused by wide separation of units. Finally, the cannoneers had exceptionally heavy demands placed on them due to the restricted amount of close air support allocated to frontline troops under operational procedures employed by Fifth Air Force. This command had jurisdiction over the entire Korean air defense system, including Marine squadrons.

Manning the main line of resistance also frequently presented perplexing situations to the infantry. There had been little time for a thorough reconnaissance and selection of positions by any of the frontline regiments. When the 1st Marines moved into its assigned position on the MLR, the troops soon discovered many minefields, “some marked, some poorly marked, and some not marked at all.”[26] Uncharted mines caused the regiment to suffer “some casualties the first night of our move and more the second and third days.”[27] As it was to turn out, during the first weeks in the I Corps sector, mines of all types caused 50 percent of total Marine casualties.

A heavy drain on the limited manpower of Marine infantry regiments defending JAMESTOWN was caused by the need to occupy an additional position, an outpost line of resistance (OPLR). This defensive line to the front of the Marine MLR provided additional security against the enemy, but decreased the strength of the regimental reserve battalion, which furnished the OPLR troops. The outposts manned by the Marines consisted of a series of strongpoints built largely around commanding terrain features that screened the 1st Marine Division area. The OPLR across the division front was, on the average, about 2,500 yards forward of the MLR. (See Map 3.)

Click here to view map

To the rear of the main line were two secondary defensive lines, WYOMING and KANSAS. Both had been established before the Marines arrived and both required considerable work, primarily construction of bunkers and weapons emplacements, to meet General Selden’s strict requirement for a strong defensive sector. Work in improving the lines, exercises in rapid battalion tactical deployment by helicopter, and actual manning of the lines were among the many tasks assigned to the division reserve regiment.

Rear and frontline units alike found that new regulations affected combat operations with the enemy in West Korea. These restrictions were a result of the truce talks that had taken place first at Kaesong and, later, at Panmunjom. In line with agreements reached in October 1951:

“Panmunjom was designated as the center of a circular neutral zone of a 1,000 yard radius, and a three
mile radius around Munsan and Kaesong was also neutralized, as well as two hundred meters on either side of the Kaesong-Munsan road.”

To prevent the occurrence of any hostile act within this sanctuary, Lieutenant General John W. O’Daniel, I Corps commander, ordered that an additional area, forward of the OPLR, be set aside. This megaphone-shaped zone “could not be fired into, out of, or over.” It was adjacent to the OPLR in the division center regimental sector, near its left boundary, and took a generally northwest course. Marines reported that the Communists knew of this restricted zone and frequently used it for assembly areas and artillery emplacements.
Chapter 1. Operations in West Korea Begin

The 1st Marine Aircraft Wing

When the 1st Marine Division moved to western Korea in March 1952, the two 1st Marine Aircraft Wing units that had been in direct support of the ground Marines also relocated. Marine Observation Squadron 6 (VMO–6) and Marine Helicopter Transport Squadron 161 (HMR–161) completed their displacements by 24 March from their eastern airfield (X–83) to sites in the vicinity of the new division CP. HMR–161, headed by Colonel Keith B. McCutcheon, set up headquarters at A–17, on a hillside 3 ½ miles southeast of Munsan-ni, the division railhead, “using a couple of rice paddies as our L. Z. (Landing Zone).” The squadron rear echelon, including the machine shops, was maintained at A–33, near Ascom City. About 2 ½ miles south of the helicopter forward site was an old landing strip, A–9, which Lieutenant Colonel William T. Herring’s observation squadron used as home field for its fixed and rotary wing aircraft. (For location of 1st MAW units see Map 4.) In West Korea, VMO–6 and HMR–161 continued to provide air transport for tactical and logistical missions. Both squadrons were under operational control of the division, but administered by the wing.

Commanding General of the 1st MAW, since 27 July 1951, was Major General Christian F. Schilt, a Marine airman who had brought to Korea a vast amount of experience as a flying officer. Entering the Marine Corps in June 1917, he had served as an enlisted man with the 1st Marine Aeronautical Company in the Azores during World War I. Commissioned in 1919, he served in a variety of training and overseas naval air assignments. As a first lieutenant in Nicaragua, he had been awarded the Medal of Honor in 1928 for his bravery and “almost superhuman skill” in flying out Marines wounded at Quilali. During World War II, General Schilt had served as 1st MAW Assistant Chief of Staff, at Guadalcanal, was later CO of Marine Aircraft Group 11, and participated in the consolidation of the Southern Solomons and air defense of Peleliu and Okinawa.

As in past months, the majority of General Schilt’s Marine aircraft in Korea during March 1952 continued to be under operational control of Fifth Air Force. In turn, FAF was the largest subordinate command of Far East Air Forces (FEAF), headquartered at Tokyo. The latter was the U.S. Air Force component of the Far East Command and encompassed all USAF installations in the Far East. The FAF–EUSAK Joint Operations Center (JOC) at Seoul coordinated and controlled all Allied air operations in Korea. Marine fighter and attack squadrons were employed by FAF to:

“Maintain air superiority.

“Furnish close support for ground units.

“Provide escort [for attack aircraft].

“Conduct day and night reconnaissance and fulfill requests.

“Effect the complete interdiction of North Korean and Chinese Communist forces and other military targets that have an immediate effect upon the current tactical situation.”

Squadrons carrying out these assignments were attached to Marine Aircraft Groups (MAGs) 12 and 33. Commanded by Colonel Luther S. Moore, MAG–12 and its two day attack squadrons (VMF–212 and VMF–323) in March 1952 was still located in eastern Korea (K–18, Kangnung). The Marine night-fighters of VMF(N) –513 were also here as part of the MAG–12 group. Farther removed from the immediate battlefront was Colonel Martin A. Severson’s MAG–33, located at K–3 (Pohang), with its two powerful jet fighter squadrons (VMFs–115 and –311) and an attack squadron (VMA–121). A new MAG–33 unit was Marine Photographic Squadron 1 (VMJ–1), just formed in February 1952 and commanded by Major Robert R. Read.
In addition to its land-based squadrons, one 1st MAW unit was assigned to Commander, West Coast Blockading and Patrol Group, designated Commander, Task Group 95.1 (CTG 95.1). He in turn assigned this Marine unit to Commander, Task Element 95.11 (CTE 95.11), whose ships comprised the West Coast Carrier Element. Marine Attack Squadron 312 (VMA–312) was at this time assigned to CTE 95.11. In late March squadron aircraft were based on the escort carrier USS Bairoko but transferred on 21 April to the light carrier Bataan.[36] Operating normally with a complement of 21 F4U–4 propeller-driven Corsair aircraft, VMA–312 had the following missions:

- “To conduct armed air reconnaissance of the West Coast of Korea from the United Nations front lines northward to latitude 39°/15’ N.
- “Attack enemy shipping and destroy mines.
- “Maintain surveillance of enemy airfields in the Haeju-Chinnampo region.[37]
- “Provide air spot services to naval units on request.
- “Provide close air support and armed air reconnaissance services as requested by Joint Operations Center, Korea (JOC KOREA).
- “Conduct air strikes against coastal and inland targets of opportunity at discretion.
- “Be prepared to provide combat air patrol to friendly naval forces operating off the West Coast of Korea.
- “Render SAR [search and rescue] assistance.”

Because they were under operational control of Fifth Air Force, 1st MAW flying squadrons, except those assigned to CTG 95.1 and 1st Marine Division control, did not change their dispositions in March. Plans were under way at this time, however, to relocate one of the aircraft groups, MAG–12, to the west.

On 30 March the ground element of the night-fighters redeployed from its east coast home field to K–8 (Kunsan), on the west coast, 105 miles south of Seoul. Lieutenant Colonel John R. Burnett’s VMF (N)–513 completed this relocation by 11 April without loss of a single day of flight operations. On 20 April the rest of MAG-12,[38] newly commanded since the first of the month by Colonel Elmer T. Dorsey, moved to K-6 (Pyongtaek), located 30 miles directly south of the South Korean capital.

Marine aircraft support units were also located at K–3 and at Itami Air Force Base, on Honshu, Japan. Under direct 1st MAW control were four ground-type logistical support units with MAG–33, a Provisional Automatic Weapons Battery from Marine Air Control Group 2 (MACG–2), and most of wing headquarters. This last unit, commanded by Colonel Frederick R. Payne, Jr., included the 1st 90mm AAA Gun Battalion (based at Pusan and led by Colonel Max C. Chapman), and a detachment of Marine Transport Squadron 152 (VMR–152), which had seven Douglas four-engine R5D transports. This element and the wing service squadron were based at Itami.

Marines, and others flying in western Korea, found themselves restricted much as Marines on the ground were. One limitation resulted from a FAF–EUSAK agreement in November 1951 limiting the number of daily close air support sorties across the entire Eighth Army line. This policy had restricted air activity along the 155-mile Korean front to 96 sorties per day. The curtailment seriously interfered with the Marine type of close air support teamwork evolved during World War II, and its execution had an adverse effect on Marine ground operations as well. A second restriction, also detrimental to Marine division and wing efficiency, was the prohibitive cushion Fifth Air Force had placed around the United Nations peace corridor area north of the Marine MLR. This buffer no-fly, no-fire zone which had been added to prevent violation of the UN sanctuary by stray hits did not apply, of course, to the Communists.
Directly beyond the 1st Marine Division sector, to the west and north, were two first-rate units of the Chinese Communist Forces, the 65th and 63d CCF Armies. Together, they totaled approximately 49,800 troops in late March 1952. Opposite the west and center of the Marine division front was the 65th CCF Army, with elements of the 193rd Division across from the KPR and the 194th Division holding positions opposing the KMC regiment. Across from the Marine line in the center was the 195th Division of the 65th CCF Army, which had placed two regiments forward. North of the division right sector lay the 188th Division, 63d CCF Army, also with two regiments forward. The estimated 15 infantry battalions facing the Marine division were supported by 10 organic artillery battalions, numbering 106 guns, and varying in caliber from 75 to 155mm. In addition, intelligence reported that the 1st CCF Armored Division and an unidentified airborne brigade were located near enough to aid enemy operations.

Chinese infantry units were not only solidly entrenched across their front line opposite the Marine division but were also in depth. Their successive defensive lines, protected by minefields, wire, and other obstacles, were supported by artillery and had been, as a result of activities in recent months, supplied sufficiently to conduct continuous operations. Not only were enemy ground units well-supplied, but their CCF soldiers were well disciplined and well led. Their morale was officially evaluated as ranging from good to excellent. In all, the CCF was a determined adversary of considerable ability, with their greatest strength being in plentiful combat manpower.

Air opposition to Marine pilots in Korea was of unknown quantity and only on occasion did the caliber of enemy pilots approach that of the Americans. Pilots reported that their Chinese counterparts generally lacked overall combat proficiency, but that at times their “aggressiveness, sheer weight of numbers, and utter disregard for losses have counterbalanced any apparent deficiencies.” The Communists had built their offensive potential around the Russian MIG–15 jet fighter-interceptor. Use of this aircraft for ground support or ground attack was believed to be in the training stage only. The Chinese had also based their air defense on the same MIG plus various types of ground antiaircraft (AA) weapons, particularly the mobile 37mm automatic weapons and machine guns that protected their main supply routes. In use of these ground AA weapons, enemy forces north of the 38th Parallel had become most proficient. Their defense system against UNC planes had been steadily built up and improved since stabilization of the battle lines in 1951, and by March 1952 was reaching a formidable state.

As the more favorable weather for ground combat approached toward the end of March, the CCF was well prepared to continue and expand its operations. Enemy soldiers were considered able to defend their sector easily with infantry and support units. Division intelligence also reported that Chinese ground troops had the capability for launching limited objective attacks to improve their observation of Marine MLR rear areas.
Chapter 1. Operations in West Korea Begin

Initial CCF Attack[42]

Whether by intent or default, the Chinese infantry occupying the enemy forward positions did not interfere with the Marine relief. With assumption of sector responsibility by the division early on 25 March, the initial enemy contact came from Chinese supporting weapons. Later that day the two division frontline regiments, the 1st and 5th Marines, received 189 mortar and artillery shells in their sectors which wounded 10 Marines. One man in the 1st Marines was killed by sniper fire on 25 March; in the same regiment, another Marine was fatally wounded the following day. Forward of the lines, the day after the division took over, there was no ground action by either side.

During the rest of the month, the tempo of activities on both sides increased. Marines began regular patrol actions to probe and ambush the enemy. Division artillery increased its number of observed missions by the end of the month. By this time the CCF had also begun to probe the lines of the Marine regimental sectors. In these ground actions to reconnoiter and test division defenses, the Chinese became increasingly bold, with the most activity on 28 March. Between 25-31 March, the first week on JAMESTOWN, some 100 Chinese engaged in 5 different probing actions. Most of these were against the 1st KMC Regiment on the left flank of the division MLR.

It was no wonder that the Chinese concentrated their effort against the Korean Marines, for they held the area containing Freedom Gate, the best of the three bridges spanning the Imjin. Both of the other two, X-Ray and Widgeon, were further east in the division sector. If the enemy could exploit a weak point in the KMC lines, he could attack in strength, capture the bridge, and turn the division left flank, after which he would have a direct route to Seoul.[43] Without the bridge in the KMC sector, the division would be hard pressed, even with helicopter lift, to maneuver or maintain the regiments north of the Imjin.

On 1 April, at about 2130, the CCF began pounding the front-line companies in the KMC area with an artillery preparation. A half hour later, the enemy attacked an outpost and the main line. First to engage the Chinese were the OPLR troops of the KMC 1st Company, 1st Battalion, on the regimental right. There, a Chinese company forced an opening between friendly outposts and reached a point about 200 yards short of the MLR and just north of a road leading to the main bridge over the Imjin. While this attack was in progress, another CCF company hit the outpost line further south. This attack, less successful, ended far short of the MLR and about a half-mile south of the bridge road. Both enemy companies withdrew at about 2345.

To the left of the 1st Battalion, the 3d was receiving the brunt of this initial CCF attack. The 9th, 11th, and 10th Companies (deployed in that order from west to east, in the left battalion sector), had been engaged by the same preliminary 30-minute shelling. At 2200, when four CCF squads attacked the two companies on the left, an enemy company hit the left end of the 10th Company, occupied by the 2d Platoon. About midnight the South Koreans, under fire from both flanks and under heavy frontal assault, were forced to withdraw. In the rear, the company commander pulled the 1st Platoon from the line, ordered the 3d to extend left to cover both sectors, and led a counterattack with the 1st Platoon and elements of the 2d. Positions were quickly restored by the KMC action.

Soon after it had hurled the Chinese back across the OPLR, the 1st Battalion was subjected to a second attack. An enemy unit, estimated to be a company, engaged a 1st Company platoon briefly. When the KMCs returned heavy defensive fires, the Communists pulled back but struck again at 0300. After a 20-minute fire fight, the Chinese company retreated.
This action on 1–2 April cost the attackers 2 killed, 34 estimated killed, and 10 estimated wounded. For the KMC, casualties were 2 killed, 10 wounded. To all 1st Division Marines, the successful defense by the 1st KMC regimental Marines was heartening. It had preserved not only the division western flank but also the vital link over the Imjin.
Operations in West Korea

Chapter 1. Operations in West Korea Begin
Subsequent CCF Attacks[44]

Following his attempted assault against the KMC regiment, the enemy opposite the 1st Marine Division reverted to a passive defense. Except for a probe late on 2 April of the far eastern line held by Lieutenant Colonel Pratt’s 3/1 and two patrols that scouted MLR positions in the western Korean Marine area that same date, Communist offensive measures consisted largely of artillery and mortar fire. Chinese line units appeared to concentrate on improving their dugouts and trench systems. Marines reported frequent sightings of enemy groups working in and around their forward trenches.

Marine division troops, too, were busy fortifying their defensive positions. On the Kimpo Peninsula they dug gun emplacements and erected camp facilities for the newly activated Kimpo Provisional Regiment. North of the Han, mine clearance and construction of trenchworks and fortifications was the order of the day for most Marines. Other Marines patrolled forward of the lines as a major aspect of the division’s continuous active defense. During daylight hours, MLR regiments dispatched reconnaissance and combat patrols and sent out snipers, armed with telescope-equipped M–1 rifles. Division tanks firing from temporary gun slots on the main line and artillery batteries emplaced in rear area dugouts hammered away at enemy positions and disposed of his patrols. At night, harassing and interdicting (H&I) artillery fires and infantry raids continued to keep the Communists off-balance.

A combat raid on 5 April typified the extensive Marine division night activities forward of the line. Conducted by three platoons, less a squad, of the KMC 10th Company, the raiding party had the mission of capturing prisoners. Departing the MLR at 2300, the Korean Marines worked their way over the low ground and then crossed the Sachon River. Immediately thereafter the raid leader, who was the 10th Company commander (First Lieutenant No Won Keun) dispatched two squad-sized ambushes along the patrol route. The raiders then continued northwest toward their objective, an area near the village of Tonggang-ni, a half mile beyond the river. When about 50 yards from its objective, the patrol ran into tactical wire and an enemy sentry, who alerted his unit by rifle fire. The KMC raiders opened up and called in pre-planned mortar and artillery support. The CCF defenders replied immediately with rifles and machine gun fire.

To complete the maneuver, the patrol leader positioned his machine guns to fire on the Communist flanks and directed one platoon to prepare for a frontal assault on the defenders. At 0148, the 1st Platoon attacked from the right. A minute later the 2d Platoon charged headlong at the defenders. Hand-to-hand fighting followed until the Chinese broke contact and disappeared into bunkers within the trenchline. From inside, the CCF soldiers continued the battle, firing through gun revetments and wounding several KMC pursuers in the legs. After 30 minutes had passed, the South Korean assault troops observed enemy reinforcements moving in from the northwest. At 0230, the Marine patrol withdrew under the cover of artillery, reaching its battalion MLR at 0400. The raiders brought back seven civilians found in the area and several Russian-made carbines. At the cost of 2 killed and 18 wounded, the KMCs inflicted casualties totaling 12 counted killed and 25 estimated wounded.

Other division patrols similarly took into custody civilians living between the MLR and OPLR. It was also the job of these patrols to destroy buildings that the enemy had used. On the night of 5 April, 5th Marines patrols apprehended 34 civilians, and a wounded enemy soldier. The day before, a patrol from 2/1 had also captured a Chinese soldier.

On 12 and 13 April, the enemy stepped up his ground actions. He launched two probes against the 5th Marines occupying the center regimental sector. Both attempts were beaten back. The 1st Marines on the extreme
right flank encountered little hostile activity, but in the western KMC sector, Chinese shelling increased noticeably. The following day the artillery picked up again, accompanied by several infantry probes directed against the two KMC frontline battalions. To the right, the Chinese also tested 5th Marines lines again. On the far right, in the area held by the 1st Marines, an air alert was sounded from 0410 to 0726, but no enemy aircraft appeared. By mid-month, the Chinese were dispatching fewer infantry probes but firing a greater number of artillery and mortar shells toward the division line. The enemy even sent 25 rounds to Kimpo, where a total of only 4 had fallen during the first two weeks in April.

Ushering in the second half of April was another Communist attack, this one on 15–16 April and to be the last that month against the central part of the Marine Division sector. This attempt to breach the Marine lines was directed against Company E of 2/5, manning an outpost position on the OPLR. The rest of the battalion was now holding the left sector of the center regimental front, having assumed its new mission on line three days earlier in relief of 1/5, which reverted to the role of regimental reserve. Northwest of the 5th Marines MLR, the Company E commander, Captain Charles C. Matthews, had placed a reinforced rifle platoon. His Marines had occupied several dug-in positions near the top of a 400-foot hill, known as Outpost 3 (OP 3). (See Map 5.) The platoon had been improving this outpost area and fortifications so that the bunkers could be employed for living and fighting.[45] During the afternoon and again at dusk on 15 April the Communists had shelled this location. One Marine was wounded in the second firing.

At 2330 on 15 April, Company E reported that a green flare cluster had just burst over Hill 67, approximately 1,900 yards southwest of OP 3 and just beyond the OPLR. This signal triggered a 20-minute heavy enemy preparation of 76mm artillery and 120mm mortars on the friendly outpost and its supporting mortar position. Ten minutes before midnight, another green flare exploded over the same height, and the shelling stopped. After five minutes the signal reappeared. Immediately thereafter, the Chinese shifted their artillery and mortar fire to an area west of the OP 3 mortar site and north of a Company F observation post. At the same time, the enemy attacked Outpost 3.

Initially, the Chinese struck the Marine defenses in a frontal assault, but as the fighting progressed enemy forces quickly enveloped the outpost and charged it simultaneously from three sides. The vastly outnumbered Marine defenders withdrew into a tight perimeter at the southeastern corner of the outpost where their defending firepower prevented the enemy from seizing the position. Within 15 minutes the enemy had surrounded the Marines and severed the outpost communications, but could not take the outpost. The CCF soldiers then pulled back and let their artillery soften OP 3 while they regrouped for another assault. The Chinese soon stormed the outpost a second time, but were again unsuccessful. Moreover, they lost three of their men who were captured by the tenacious 2/5 defenders.

The fighting continued until 0315, reaching a hand-to-hand clash at one stage. In addition to mortar and artillery fire, the enemy employed small arms, automatic weapons, hand and stick-type grenades, bangalore torpedoes, and 57mm recoilless rifles. During the attack, patrols were sent out from the MLR and OP 2, to the west, to reestablish contact and help with casualty evacuation.

Well to the rear of the outpost and unknown to its occupants, intelligence personnel intercepted a Chinese message ordering the Communists to withdraw. Immediately, friendly artillery fired on all known escape routes available to the attackers. Despite this interdicting fire, the enemy soldiers managed to withdraw without further loss. Their unsuccessful thrust against the 2/5 OPLR cost the Chinese 25 known killed, 25 estimated killed, 45 known wounded, and 3 prisoners. Marine casualties were 6 killed, 5 missing, and 25 wounded and evacuated.[46]

Why the Chinese had selected OP 3 for their mid-April attack is not known. Several theories, however, have been advanced by those involved in the action. Colonel Culhane, the regimental commander, believed that the enemy incursion “was the direct result of the aggressive patrols that frequently used the outpost as a point of
Just before its OPLR was withdrawn in favor of an observation line, the 1st Korean Regiment was struck by the Chinese in the area immediately north of the 1–2 April clash. Beginning at 0100 on 17 April, the enemy placed a 15-minute preparatory fire on the left flank of the 3d Battalion, occupying the regimental right sector. The CCF then probed friendly lines in and around the area pounded during the preliminary fires. Three separate attacks took place before 0400, when the Communists withdrew. In these probes, the Chinese made free use of automatic weapons; the enemy’s well-coordinated action attested to their training and discipline. Confirmed casualties were 36 CCF and 2 Koreans killed. The KMCs suffered 5 wounded and estimated that 70 Chinese had been wounded. Although the South Koreans frequently called down artillery support during the attack, most of the casualties inflicted on the enemy were from rifle and machine gun fire. The 17 April probe was to mark the last major infantry action for the 1st Marine Division during its second month on JAMESTOWN.

Throughout the month a total of 5,000 rounds of artillery fire and 3,786 rounds of mortar fire fell in the division sector. On 2 April the greatest volume for any single day was received: 3,000 artillery and 118 mortar rounds. An average day’s incoming, during April, was approximately 167 artillery and 125 mortar rounds.
Even before the Communists had launched their mid-April attacks against JAMESTOWN, the 1st Marine Division had implemented plans to strengthen its line in western Korea. Besides the digging, timbering, and sandbagging to accomplish a major improvement of the physical defenses, General Selden required Marine infantry regiments to conduct an aggressive defense of their sector of responsibility. He ordered MLR units to employ snipers all along JAMESTOWN and to dispatch daily patrols forward of the line to ambush, raid, kill, or capture Chinese and their positions. The division commander further directed that supporting arms such as artillery, tank, and air, when available, be used to destroy hostile defenses, harass the enemy, and break up his assemblies as well as to protect Marine positions.

As a result of an I Corps directive, the 1st Marine Division assumed responsibility for an additional 6,800 yards of front on 14 April from the 1st Commonwealth Division sector to the right of the division. In preparation, the 5th Marines had taken over the western end of the 1st Marines sector, held by 2/1, two days earlier. On the 14th the 1st Marines, newly commanded by Colonel Walter N. Flournoy, extended its line eastward to assume new limiting points and part of the MLR in the western part of the Canadian Brigade sector. Relief of the Commonwealth unit was completed without any difficulty or enemy interference. This additional yardage, plus the Kimpo Peninsula front, now stretched the Marine division MLR to 35 ½ miles.

As a result, General Selden found it necessary to withdraw the division general outpost line in order to build up his main line of resistance. On 17 April, the 1st KMC Regiment reduced its OPLR to an OPLO (outpost line of observation) and the left battalion pulled its MLR back to more defensible ground. The Marine division center and right regiments withdrew their outpost lines on 23 and 24 April. Both regiments then established forward outposts and listening posts which, in many cases, utilized former OPLR positions. Many of these posts were manned during daylight hours only.

Abandonment of the forward OPLR added strength to the main line, but it also meant that frontline battalions had to commit all their companies on line, thus losing their reserve. To prevent Chinese occupation of desirable terrain features on the former OPLR, the division dispatched combat and reconnaissance patrols forward of its line. In the KMC sector, the only Marine area favorable for tank operations forward of JAMESTOWN, tank-infantry patrols were periodically employed.

To the west of the KMC sector, the Marine 1st Amphibian Tractor Battalion (Lieutenant Colonel Michiel Dobervich) was assigned a section of the KANSAS Line to defend, beginning 16 April. Reinforced by attachment of the Division Reconnaissance Company (Major Ephraim Kirby-Smith) that same day, Lieutenant Colonel Dobervich employed Company C (two platoons), the headquarters LVT platoon, and the reconnaissance unit to man 30 defensive positions from the Han River eastward to the KMC western boundary.

Two other measures to strengthen his sector of JAMESTOWN were utilized by the Marine division commander. On 18 April, he asked General O’Daniel to reconsider the no-fire zone recently established by the corps commander. General Selden, who had received reports of Chinese use of the sanctuary located within Marine Corps territory—for firing positions and assembly areas primarily—recommended, after I Corps had refused him permission to fire into the haven, a redrawing of the O’Daniel line to coincide more closely with the boundaries established by the UN. Approval along the lines submitted by the division was given by I Corps that same day. The second measure employed by General Selden was use of an additional defensive line, WYOMING FORWARD. This position, closely paralleling JAMESTOWN in the KMC and 5th Marines sectors, added depth
to the sector defenses.

A unique rescue and recovery operation also came into existence about this time. On 19 April the division ordered the 5th Marines, occupying the center regimental sector, to organize a tank-infantry force for rescue of the United Nations Truce Team, should such action become necessary. The regimental plan, published on 22 April, utilized a reinforced rifle company-tank company organization directly supported by organic 5th Marines 4.2-inch mortars and 1/11. The Everready Rescue Force, from the regimental reserve, occupied the high ground (OP 2) east of and dominating Panmunjom.

In addition to setting forth organizational details of the task unit, the 5th Marines Operational Plan 6–52 specified the method of operation for the rescue force. Taking advantage of the peace corridor in the western end of the center sector, a Forward Covering Force would speed tank-riding infantry to the high ground one-half mile beyond the objective, Panmunjon. Following would be the Pick Up Force, from the 1st Tank Battalion Headquarters Platoon, which would retrieve the principal UN delegates and take them quickly to the assembly area two miles to the rear of the MLR. A Rear Covering Force, composed of a tank-infantry element, would follow the Pick-Up force both on its way towards the objective and on the return trip. Withdrawal of both covering forces was regulated by a series of phase lines.
Operations in West Korea
Pat Meid and James M. Yingling

Chapter 1. Operations in West Korea Begin
Marine Air Operations[52]

Even though the Marine air-ground team had been shorn of much of its tactical aviation, what remained was well utilized. Helicopter troop operations had become commonplace by the end of April 1952. That month there were three exercises to further evaluate tactical concepts of helicopter employment. Operation PRONTO, conducted on 5 April, was the first major troop lift in the new I Corps sector. In this maneuver approximately 670 troops of 2/7 and 10,000 pounds of rations were transported by helicopter and truck from the Munsan-ni vicinity across the Han River to the Kimpo Peninsula. Here the reserve battalion served as a counterattack force in a hypothetical enemy landing. Due to the necessity for avoiding the neutrality zone in the Munsan area, round-trip flights averaged about 57 miles.

The exercise combined the shortest notice and longest distance of any large-scale helicopter troop movement conducted by HMR–161. It pointed to the fact that a helicopter unit could successfully lift a troop organization virtually as an “on call” tactical tool and without the benefit of previous liaison.

Operation LEAPFROG, on 18–19 April, transported one KMC battalion across the Han to the peninsula and lifted out another the following day. The purpose of this test was to determine the feasibility of a replacement movement conducted over water, with “consideration given to the language barrier existing between the troops and the transporting facility.”[53] The six-mile round trip was the shortest troop haul yet made by the transport chopper squadron. Consequently, it took the 12 HRS–1 single-engine Sikorsky aircraft only 3 hours and 26 minutes to complete the exchange of the 1,702 KMC troops.

Colonel McCutcheon’s HMR–161 pilots found that their helicopters could carry six combat-equipped Korean Marines instead of five American Marines, due to the smaller size and weight of the average Korean. Since the U.S. and KMC Marine battalions were the same size, the larger load factor for the Korean Marines enabled their unit to be moved faster. In LEAPFROG the language difference proved to be no handicap, since there were sufficient interpreters on hand and the troops were cooperative. Helicopter pilots could use landing sites close together because the terrain was open and the area of operations beyond the reach of Chinese artillery.

Close on the heels of LEAPFROG came a third airlift. Operation CIRCUS, conducted on 23 April, provided for the air deployment of the 7th Marines reserve regiment, minus two battalions, across the Imjin to landing sites just to the rear of the secondary defensive line, WYOMING FORWARD. Ten helicopters carried 1,185 Marines over the river barrier to blocking positions in 90 minutes. The CIRCUS exercise illustrated that a minimum distance should be maintained between loading and unloading sites for a safe and efficient transport operation. It also pointed up that “consideration must be given to the number of aircraft assigned to each traffic pattern during short hops over a river.”[54] This successful maneuver came three days before all HRS-1 aircraft were grounded due to a defect in the tail rotors. By mid-May the problem had been corrected and the aircraft returned to flying status.

During April, Lieutenant Colonel Herring’s VMO–6 employed its 11 single-engine OE–1 observation planes for a total of 508 fixed-wing combat flights. More than half of these, 275, were for artillery spotting; of the remainder, 166 were flown for reconnaissance and 67 represented photo, weather, liaison, and area check-out maneuvers. Combat flights by the squadron helicopters[55] during the month were 110 liaison, 45 reconnaissance, and 93 evacuations. Of the total 756 combat flights performed by both fixed-wing and rotary craft, 511 were over enemy territory.

During that same month, Marine squadrons operating under the Fifth Air Force put a total of 2,708
planes into the air despite restrictive or prohibitive weather on 20 days. Continuing its emphasis on attacking the North Korean transportation system, the Air Force command dispatched 1,397 Marine planes on interdiction missions. Marine-piloted close air support sorties flown to assist the 1st Marine Division numbered only 56 throughout April; those piloted by Marines for 16 other UN divisions totaled 547.

Not all the air sortie records were made by land-based Marine squadrons. On 18 April, VMA–312, the CTE 95.11 squadron provided by the 1st Marine Aircraft Wing, flew 80 sorties, a Korean record for a carrier-based squadron to that date and twice the daily average for the initial six months of 1952.

By 20 April the three tactical squadrons of MAG–12—VMF(N–)513, VMF–212, and VMF–323—had completed their relocations on the Korean west coast. Two days later, combined MAG–12 attack and -33 jet aircraft participated in what was a Fifth Air Force one-day combat record: 1,049 sorties.

One MAG–33 unit, the newly-formed Marine Photographic Squadron 1, was already flying a large number of aerial reconnaissance missions directed by Fifth Air Force. It provided almost one-third of the daylight photo effort required by FAF with but one-quarter of the aircraft.[56] VMJ-I’s complement of a dozen 550 mph McDonnell twin-jet Banshee F2H-2P aircraft mounted three cameras and were capable both of high altitude work and good speed. Introduction of this single-seat jet was considered the “first important development in aerial photography in the Korean War”[57] since the Banshee could outproduce any photo plane in Korea.

The month of April also marked change of command ceremonies for the 1st Marine Aircraft Wing. On 11 April at K–3, General Schilt turned over wing responsibility to Brigadier General Clayton C. Jerome. Among the numerous civilian and military dignitaries attending the ceremony at the Pohang 1st MAW headquarters were the Honorable John J. Muccio, U.S. Ambassador to Korea; Air Force Lieutenant Generals Otto P. Weyland and Frank F. Everest, commanders of FEAF and FAF respectively; and the Marine division CG, Major General Selden.

The new wing commander, General Jerome, like his predecessor, had a distinguished flight career. A 1922 graduate of the Naval Academy, he had served in various foreign and U.S. aviation billets and was a veteran of five World War II campaigns. In 1943 Colonel Jerome was operations officer for Commander, Aircraft, Solomon Islands. Later he was named Chief of Staff, Commander, Aircraft, Northern Solomons and Commander, Aircraft and Island Commander, Emirau, in the northern Solomons. Before returning to the States, Colonel Jerome had participated in the recapture of the Philippines, commanding MAG–32 and directing all Marine air support in the Luzon fighting. Brigadier General Jerome became Director of Aviation and Assistant Commandant of the Marine Corps for Air in September 1950 and served in this capacity until taking command of the 1st Marine Aircraft Wing in Korea.[58]

During the command ceremonies the outgoing 1st MAW commander, General Schilt, was presented the Distinguished Service Medal for his outstanding leadership of the wing. The award was made by Lieutenant General Weyland. Shortly before his Korean tour ended, General Schilt had also received from ROK President Syngman Rhee the Order of Military Merit Taiguk, for his contribution to the military defense of South Korea.
Because of the command relationships existing in Korea, with all ground units under operational control of CG, EUSAK, the majority of the logistical support to the Marines was handled by the Army. Eighth Army, 2d Logistical Command (2d LogCom) provided for resupply of items used commonly by both Marine and Army personnel; the Marine Corps (Commanding General, FMFPac) furnished those supplies and equipment used by Marine units only.

When the division moved to the west, the 1st Shore Party Battalion opened a rear service area at Ascom City. Here the division established and maintained Class II (organizational equipment) and IV (special equipment) dumps for its units, as well as Class I (rations) and III (petroleum products) facilities for both the Kimpo regiment and the service units stationed at Ascom. Class I shipments were forwarded to the Munsan-ni railhead and stored there. Fuels and lubricants and Class V items (ordnance) were received from the U.S. Army. A forward ammunition supply point (ASP) was located north of the Imjin to assure a steady flow of ammunition to frontline combat units in the event that either an enemy attack or emergency flooding conditions of the river prevented use of the bridges. For the same reason a truck company was positioned near this supply point each night.

Reinforcing the division logistic effort was the 1st Combat Service Group. Commanded by Colonel Russell N. Jordahl, the 1st CSG in late April had nearly 1,400 Marines and Navy medical personnel stationed at various points between Japan and Korea. At Kobe, Japan, the Support Company processed Marine drafts arriving and departing Korea. At Masan, the Supply Company, 1st CSG, requisitioned for the division those Class II and IV items peculiar to the Marine Corps needs and forwarded them upon request. Heavy maintenance of all technical equipment was performed by the Maintenance Company. Supporting the 1st Motor Transport Battalion operation was the Motor Transport Company, 1st CSG. Most of the group, including Headquarters Company, was based at Masan. Splinter detachments from the group also operated transport facilities at other locations in Korea.

In western Korea, good rail transport into Munsan-ni and an adequate but not all-weather road system improved the division’s logistical situation. Greater storage facilities also existed in the JAMESTOWN rear supply areas than in the X Corps sector just vacated by the Marines. Division motor equipment did not suffer any appreciable damage due to the rigors of the MIXMASTER transplacement. Vehicle maintenance also presented a favorable outlook, due to the expected decreased use during the period of positional warfare. On the other hand, an unduly large number of tanks developed engine troubles in March, which were traced back to defective oil cooling fans. This condition was corrected in April and May by installation of new fan assemblies.

Guns of the 1st Tank Battalion immediately began to render valuable support to Marine frontline regiments with the division’s new assignment in the west. Companies A, B, and C were placed in direct support of the three forward infantry regiments. Company D drew the reserve mission, which included tank-infantry training with the 7th Marines and preparation for reinforcing division artillery fires. Tank companies were used almost daily in the forward sectors for destruction by direct fire of the Chinese MLR fortifications. For such missions the M–46 tanks, equipped with high-velocity 90mm guns, lumbered forward from secure assembly areas to the rear of JAMESTOWN to temporary firing positions on the line.

After pouring direct fire on preselected targets and completion of the fire mission, the armored vehicles then returned to the rear. Less frequently, a five-vehicle tank platoon accompanied a reinforced rifle platoon and conducted daylight reconnaissance missions of forward areas to engage the Chinese and to gain intelligence about
enemy positions and terrain. During April six such tank-infantry patrols, all in the KMC regimental area, failed to establish direct contact with the enemy but did draw mortar and artillery fire.

Marine artillery, which had been receiving its share of attention from Communist field guns,[61] was faced by problems in two other respects. Although the enemy held only four more artillery weapons than did the Marines, General Selden still lacked the ability to mass artillery fires to the same degree as did the Chinese.[62] This limitation stemmed directly from the wide physical separation of 11th Marines batteries and the frontline infantry regiments being supported. A second problem, the loss of qualified forward observers—reserve officers due to return to the States for release from active service—forced the 11th Marines to begin a school to train infantry officers for this function. To make the course realistic, all firing was done at live targets.[63]

In April 1952, the 11th Marines organization had three light 105mm howitzer battalions (54 guns), one medium 155mm howitzer battalion (12 guns), the KMC 105mm howitzer battalion (18 pieces), and a 4.5-inch rocket battery (6 launchers). Attached to the 1st Marine Division and located in its sector were one battalion and one battery of the I Corps field artillery. The mission of the Marine artillery regiment was to provide accurate and timely fires in support of both the MLR and OPLR defenses, until withdrawal of the latter late in April. Batteries of the 11th Marines also fired on known and suspected Chinese gun emplacements and on targets of opportunity. The regiment also provided intelligence on enemy artillery.

Throughout April, Colonel Henderson’s units continued to improve their tactical and administrative areas, concentrating on field fortifications, wire communications, and road trafficability. In the last category, the artillery dozers and dump trucks not only did nearly all of this work for the 11th Marines but also provided “a fair amount of ‘direct support’ bulldozing to the infantry regiments and occasionally loaned dozers and operators to the engineers.” [64]

Within a Marine aircraft wing, personnel and equipment for logistic support are purposely limited to carrying out the wing primary mission—providing air support during an amphibious operation. The wing T/O (Table of Organization) provides a streamlined organization with light, transportable organic equipment. Additional logistical support personnel and equipment are not included since this would result in (1) a duplication of support effort between the wing and landing force and (2) a great increase in wing transport shipping requirements. When the wing moves ashore, organic units render support necessary for operations on the airfield only. Responsibility for activities beyond this basic mission—airfield construction, maintenance of runways, and movement of supplies to the airfield—must come from more senior commands. Usually such assistance is obtained by attaching elements of a naval construction battalion and other logistical support units.

In April 1952, Naval Construction Battalion Unit 1804 assisted in the construction and maintenance received by MAG–33 at K–3. Here at the port of Pohang, a detachment from the 1st Combat Service Group controlled the movement of fuels, oils, lubricants, and ordinance to wing dumps. Amphibian tractors (LVTs) of Company B, 1st Amphibian Tractor Battalion, provided most of the transportation required for these supplies excepting ordinance. Assistance in the form of amphibious trucks (DUKWs) was furnished by a platoon from the 1st Amphibian Truck Company. When required, Marines of these two companies manhandled the supplies.

Logistical support for the Marine wing was governed by the same general procedures that applied to the division; 1st MAW supply requirements beyond its augmented capability became the responsibility of Eighth Army (2d LogCom) which furnished items common to both Marine and Army units. If this EUSAK agency did not stock the requisitioned item, it provided a substitute. Responsibility for resupply of aviation items rested with the U.S. Navy. Commander, Naval Forces, Far East (ComNavFE) replaced unserviceable aviation technical equipment such as aircraft parts and special maintenance tools. Commander, Service Force, Pacific (ComServPac) replenished aviation ordnance. Responsibility for supplying items peculiar to the Marine Corps rested with CG, FMFPac.

The repair and maintenance of 1st MAW equipment posed far less of a problem than the construction and
upkeep of airfields. Major repair work on aircraft was satisfactorily performed in Japan by the wing support squadron at Itami, and by the U.S. Navy Fleet Air Service Squadron 11 (FASRon–11), located at the Naval Air Station, Atsugi. The establishment in Japan of the wing heavy maintenance facility depended, in part, upon its proximity to the wing flying squadrons. Other considerations were the availability to the wing commander of adequate air transport for continuous resupply of both routine and emergency items and reliable communications between the users and the maintenance unit. Because these conditions favoring removal of the heavy maintenance facility from the immediate combat area existed throughout Korean hostilities, it was possible for the maintenance units to operate successfully in Japan away from the combat zone.

Air base construction and maintenance of airfield runways and taxiways had plagued wing operations since the early days of the Korean War. During the first winter these problems had appeared repeatedly at those installations where Marine air was either not properly supported or insufficiently augmented by the operational commander. Shortly after MAG–33 had moved to K–3 in early 1951, the wing commander requested emergency repairs for the runway and a permanent solution to the airfield maintenance difficulties. Assistance was made available, but it was insufficient. The repair force had to be augmented by Marines pulled away from their own vital jobs and by native laborers. Later, in the spring of 1952, when the Air Force assigned some of its engineers to assist, the maintenance problem almost disappeared.

Motor transport within the wing was a continuing source of logistical problems. Vehicles for handling the heavier aviation ordnance were unsatisfactory because their configuration, of World War II vintage, did not permit them to service the newer aircraft. Other trucks lacked engine power or rigidity to withstand sustained use under primitive airfield conditions. World War II vehicles that had been preserved and placed in open storage required reconditioning before their use in Korea. Mechanics’ general and special tools had a high replacement rate throughout the entire period of wing operations in Korea.

Aircraft fuel handling in April 1952 followed outmoded World War II methods. For K–3, amphibian vehicles received drummed fuel from ships and landed it at the beach. There MAG–33 personnel transferred the gasoline to 1,200-gallon fuel trucks, which then moved it to the airfield servicing area, where other Marines transferred it again, this time to 3,200-gallon stationary refuelers for dispensing into the aircraft. Although this method became highly developed, it was extremely slow and wasteful of manpower and vehicles in comparison to the tank farm system, which was soon to reach K–3.

Two areas of logistics continued to remain almost trouble free for division and wing Marines. Medical problems existed but were not extensive. During a five-day period in late March, Marine Air Control Group 2 experienced 13 cases of scarlet fever but no fatalities. That same month, the Pacific Fleet Medical Officer noted that MAG–12 sick bays were in excellent condition and that medical “personnel have shown great ingenuity in fabricating various items of medical equipment from scrap metal and lumber.”[65]

Evacuation of casualties and the utilization of air vehicles for transport of passengers and cargo proved to be the second asset in logistical operations. The Itami-based detachment of VMR–152 moved 7,757 personnel from the division and wing and 738.7 tons of cargo during April 1952. In addition, the R5D craft hauled a total of 325.2 tons of U.S. mail that month for the two Marine organizations. Speedy removal of patients to better equipped facilities in the rear by VMO–6 and HMR–161 helicopters was a giant step forward in life-saving techniques. VMO–6 usually provided this service, but early in April, Colonel McCutcheon’s squadron was assigned emergency medical evacuation duties to augment the observation squadron.[66] Pilots flew these evacuation missions with almost total disregard for adverse weather or darkness, and without radar control or adequate instrumentation for all-weather operations.[67]
An additional responsibility the 1st Marine Division inherited when it moved to western Korea was control of civilians within the division boundary. In eastern Korea, all nonmilitary personnel had been evacuated from the vicinity of the MINNESOTA Line in the division sector; they had not been removed from the JAMESTOWN area. Prior to the arrival of the division in the west, the STAYBACK Line, averaging seven miles to the rear of the Imjin River and running in a generally northeast-southwest direction, had been established to limit the movement of civilian personnel in the forward areas. The Marines soon found that their predecessors must have been lax, however, in requiring that Korean civilians remain behind STAYBACK. What seemed equally unsuitable to the division was the poor military-civilian relationship that had apparently existed for some time.

To correct the situation, General Selden cautioned his units to avoid unnecessary damage or destruction to the civilian economy. He directed his commanding officers to keep unauthorized Koreans away from Marine installations. Military police set up check points and instituted roving patrols to enforce division controls. Civil violators were turned over to Korean authorities or held for investigation before release. Civilians who lived in the forward areas were removed to the rear. They were prevented from going beyond STAYBACK until August 1952, when a controlled passage system was instituted.
MOVEMENT OF the 1st Marine Division to the west was part of an Eighth Army master plan to strengthen UN defenses and at the same time to enable South Korean forces to assume increased responsibility in the defense of their homeland. The tactical realignment in the spring of 1952 put more South Korean infantry units on the main line of resistance and buttressed the fighting front with five corps sectors instead of four. In the far west, the I Corps positions were newly manned (left to right) by the 1st Marine, 1st Commonwealth, 1st ROK, and the U.S. 45th Infantry Divisions. Next in line was IX Corps, whose left boundary General Van Fleet had shifted further west, which now had a divisional line up of the ROK 9th on the left, the U.S. 7th in the center, and the U.S. 40th on the right.

To fill in the central part of the EUSAK front where the change of IX Corps boundary had created a gap in the line, the UN commander inserted the ROK II Corps with three divisions (ROK 6th, ROK Capital, and ROK 3d) forward. Immediately to the right of this new ROK corps sector, the X Corps continued in approximately its same position on the east-central front. Its ROK 7th and U.S. 25th Divisions remained on line, while the ROK 8th had advanced to the former sector of the Marine division in the wild Punchbowl country. At the far right of the UN line, the ROK I Corps front was held by the ROK 11th Division at the X Corps boundary and the ROK 5th along the Sea of Japan. By 1 May 1952, nine Republic of Korea divisions had been emplaced on the UNC main defense line, three more than had been there in mid-March.

Throughout Korea in March and April there had been a general stagnation of offensive action on both sides because of fog, rain, and mud. In May, however, the Chinese launched no less than 30 probing attacks against the ROK 1st Division in the I Corps sector, without gaining any significant advantage. To the right, the enemy and the U.S. 45th Division traded blows in several patrol actions. In June, major EUSAK combat action was still centered in the 45th’s sector, but the following month was marked by sharp battlefront clashes in nearly all Eighth Army division areas. For a two-week period in July and August, heavy seasonal rains limited both ground and air action. With the return of normal weather, heavy fighting again broke out, this time concentrated in the I Corps sector. This action did not abate until late August, when the onset of the heaviest rains of the season again drastically reduced military operations.

Communist ground activity in the spring of 1952 was marked by increased artillery support which resulted in telling damage to UN infantry and artillery positions. Thus, during May, the enemy expended approximately 102,000 artillery and mortar rounds against the Allied front, roughly 12 times the number fired the previous July, just prior to the period of stabilized battlelines in Korea. The artillery buildup was accompanied by a sharp decrease in hostile air support activities. While the Chinese had flown 3,700 jet sorties during the first month of 1952, by June the monthly total had dropped to 308.

As part of the balanced military forces, Allied air and sea units continued their active defense in support of UN ground units. Beginning in late May, Fifth Air Force shifted the emphasis of its destructive effort from interdiction of communication routes to the bombing of selected industrial targets. Naval air was committed to support the FAF programs. At sea, ships steamed almost at will to sustain the U.S. lifeline. Underscoring the complete UN control of Korean waters, large naval vessels offshore fired their big guns in support of ground troops. Off both the west and east coasts, Task Force (TF) 95 maintained its blockade of North Korean ports and reduced the extent of water travel that enemy craft could safely undertake. This same naval force was responsible for the Allied defense of islands located off the east and west coasts of Korea.

Chapter 2. Defending the Line
Defense of West and East Coast Korean Islands

Just off the northwest Korean mainland a string of islands extends from the mouth of the Yalu River down around the peninsula to Pusan in the southeast. Most of these islands are tiny and are located south of the 38th Parallel. Only a few lie off the east coast, and these are clustered primarily in the North Korean harbor of Wonsan. By early 1951, UN forces exercised control over most of the Korean islands. Their tactical importance is shown from their diverse use as sites for UN Command intelligence activities, USAF radar installations, locations for the emergency landing strips used by Allied planes, bases for U.S. search and rescue operations, and as springboards for possible thrusts into enemy rear areas.

Another reason for holding some of the islands had come to light during truce negotiations in December 1951. At that time, in an attempt to expedite the successful conclusion of the truce meetings, UN representatives had offered the Communists all the islands north of the 38th Parallel. Brushing aside the tactical value of the proposal, the enemy boasted that he could capture the islands at any time. In November 1951 the Communists had, in fact, seized two western islands near the mouth of the Yalu. The 1,000 defending guerrillas there—former North Koreans working for the UNC—had been unable to stem the assault. The UN Command promptly reviewed the island situation and on 6 January 1952 gave TF 95, the United Nations Blockading and Escort Force, responsibility for both overall defense and local ground defense for the 11 coastal islands north of the 38th Parallel and the 4 islands immediately south of this boundary. Two subordinate blockade task groups, one in the west and another in the east, were responsible for the defense of these islands.

In the west, Task Group (TG) 95.1 was charged with the defense of six islands. (See Map 6.) Two of these, Sok-to and Cho-do, lie between the 38th and 39th Parallels; the four remaining islands, Paengyong-do, Taechong-do, Yongpyong-do, and Tokchok-to, are above the 37th Parallel. In the east, TG 95.2 was responsible for keeping nine islands north of the 38th Parallel in friendly hands. Situated in Wonsan harbor are Mo-do, Sin-do, So-do, Tae-do, Hwangto-do, Ung-do, and Yo-do, the largest. (See Map 7.) Another island, Yang-do, actually a two-island group further north in the area of the 41st Parallel, is 18 miles northeast of the coastal city of Songjin. The southernmost island, tiny Nan-do, is below Wonsan and the 39th Parallel and lies 10 miles northeast of Kojo, another coastal city.

Ground defense of the islands had been, at best, a haphazard arrangement before TF 95 took over the responsibility. Many of the islands, especially those inhabited by friendly guerrillas, had neither plans for a proper defense nor commanders experienced in organizing resistance to enemy attack. Soon after the two islands near the mouth of the Yalu were taken, ROK Marines were rushed to those islands considered most strategic for South Korean defense. Late in 1951, U.S. Marines had been assigned to the area in an advisory capacity. By early 1952, Marine Corps detachments were in command of the island defense activities for both task groups. Korean Marines provided a majority of the actual defending forces.

Although the 1st Marine Division initially had supplied the officers and men for the island security missions, in January 1952 FMFPac took on direct responsibility for furnishing personnel and providing for their administrative and logistical support through the 1st Provisional Casual Company, FMFPac. Located at Otsu, Japan, the company was the administrative headquarters for seriously wounded Marine division and wing personnel recuperating in service hospitals in Japan. Recovered patients who volunteered for duty with the
offshore commands provided the bulk of the Marines used in this defense. Major responsibilities were to plan, organize, and conduct the defense of these islands off the Korean west and east coasts. A task element under each task group was created for this purpose.

With its headquarters at Paengyang-do, Task Element (TE) 95.15, the West Coast Island Defense Element (WCIDE), was organized early in January 1952. The following month, the initial complement of U.S. Marines arrived. Colonel William K. Davenport, Jr., element commander, assigned his 5 officers and 29 enlisted men to the 4 most critical islands and to his staff. Those islands garrisoned were Cho-do and Sok-to, north of the Parallel and both within range of enemy mainland guns, and Paengyang-do and Yongpyong-do, to the south. Taechong-do, near the command island, and Tokchok-to, southwest of Inchon, were both considered secure and not provided with U.S. Marine commanders. At each of the four occupied islands, Marines reconnoitered the terrain, drew up plans for preparation of defensive positions, organized and trained the troops available, and began the laborious task of constructing the defense. Protection against long-range hostile artillery fire was emphasized for the northern Sok-to and Cho-do garrisons.

Off the other long coast of Korea, TE 95.23, the East Coast Island Defense Element (ECIDE), commanded until early May 1952 by Colonel Frank M. Reinecke, had an almost entirely different situation. Eight of the nine islands in the vicinity of Wonsan Harbor or north of Songjin that ECIDE was responsible for were within range of Communist shore batteries and thus frequently fired upon. Even before the January 1952 decision, the U.S. Navy had been charged with the security of these east coast islands north of the 38th Parallel. For these reasons ECIDE defenses had to maintain a greater state of readiness and were more advanced than in the west. Fire support ships and land based U.S. Marine naval gunfire spotting teams from 1st ANGLICO (Air and Naval Gunfire Liaison Company), FMF, which also provided forward air controllers for the KMC regiment, stood by at all times to silence unfriendly artillery fire emanating from the mainland. The Marines had also trained Korean Marines to handle the spotting missions.

A number of events of major interest occurred during those first difficult weeks following organization of the two offshore island commands. On 19 and 20 February, elements of two North Korean infantry battalions launched an unsuccessful assault against the two Yang-do islands. The combined “action of the island garrison and UN surface forces” repulsed the enemy attempt, which had been planned to gain intelligence and kill as many of the defenders as possible. On the heels of this action, with the first enemy effort to take an east coast island, came an unexpected bonus in the form of a defector. Brigadier General Lee II, NKPA, came ashore on 21 February at Taedong in a stolen sampan with a briefcase full of top secret papers, a head full of top secret plans, and a strong desire to make himself useful. He was rushed immediately to Eighth Army intelligence officers.

The next day command personnel of the west coast TE 95.15 were treated to a surprise, though not so pleasant as the unforeseen defection of the NKPA general. Rear Admiral George C. Dyer, Commander Task Force (CTF) 95, and his staff were engaged in an inspection of the WCIDE islands. While the party was looking over the antiaircraft defenses at Paengyang-do:

“... an aircraft of VMA–312 made a pass at the CP, followed closely by a second plane. The second aircraft made a message drop and accidentally released a 500-pound bomb, which landed from 75–100 feet west of the CP, shattering all windows and blowing all the doors off their hinges. Personnel harbored within the CP were thrown to the floor by the concussion, a few sustaining minor cuts and bruises, but no fatalities were incurred... Commanding Officer, USS Bairoko [the carrier to which VMA–312 was assigned], sent a note of apology to CTE 95.15 and later followed up with material to repair the CP.”

In March, CTG 95.1 directed the occupation of Ho-do, barely more than a speck of dirt 4,000 yards south of Sok-to and within 400 yards of the Communist mainland. Despite Colonel Davenport’s objection that the proposed action was beyond the defensive mission of his command and that the proximity of Ho-do to the enemy shore made the island untenable, the task group commander would not rescind the directive. After a detailed
reconnaissance by First Lieutenant Wallace E. Jobusch, Colonel Davenport ordered a reinforced Korean Marine Corps platoon to occupy the island. This order was carried out, but during the night of 25–26 March the platoon lost its newly gained objective to a well-coordinated enemy amphibious attack. Not a single Korean Marine survivor could be accounted for at daylight. On 2 April, however, after the enemy force had departed Ho-do, six of the platoon turned up on Sok-to. They had survived by hiding out at Ho-do. None of the others were ever seen again. After the island was overrun, it was not reoccupied by Allied forces.

After this latest offensive action in the west, the Communists made no further attempts to seize any of the islands. U.S. and ROK Marines enjoyed a period of relative freedom from enemy harassment, except for frequent shore battery shelling directed against the east coast islands. For WCIDE command members the quiet island duty was interrupted only occasionally by hostile artillery fire although rumors of imminent enemy landings abounded. On 13 October, however, the enemy bombed Cho-do in the first air attack made against an island garrison since the U.S. Marines had been assigned the west coast island command responsibility. No casualties resulted from this raid. The lull in enemy activity that then ensued enabled island personnel to devote increased efforts towards improvement of their defenses.

Marines instructed, drilled, and conducted tactical exercises for the island forces. Island commanders supervised the construction and improvement of gun pits and other defense installations. At the ECIDE command island, Yo-do, a 2,700-foot airstrip (Briscoe Field) for emergency landings and intelligence flights had been completed by June. Since much of the labor was performed by Koreans, the language barrier sometimes created difficulties. In all these activities the Marines found that they were hampered but not unduly burdened by this problem.

One condition, however, did handicap operations of the island Marines. This was the supply situation which was prevented from becoming desperate only because the Marines were able to borrow and obtain necessities from other service activities. The inability of the island Marines to draw needed supplies from the responsible U.S. Army agency developed as a result of the slowness of the Marines in approving the task element tables of equipment (T/E),[10] and from insistence of the supplying activity that it would deal only with those units that had approved tables of equipment. The urgency of the situation was alleviated in May when weekly supply flights were begun by the 1st MAW. Even when surface ships did arrive with provisions, Marines frequently discovered that items which had been invoiced were missing.[11] Consumables, especially, had a high rate of disappearance.
Operations in West Korea

Chapter 2. Defending the Line
Marine Air Operations[12]

Close air support of ground troops remained an almost forgotten mission of Fifth Air Force tactical aircraft. When planes were allotted for close support, both their customary late arrival over the target area and pilot inefficiency left Marine ground commanders less than satisfied.[13] The particular concern of General Jerome, the new 1st MAW commander, was the continuing limited opportunity for his Marines to execute their normal primary mission—close air support of frontline troops. Although FAF assigned Marine pilots to support the 1st Marine Division whenever possible, the infrequent number of close air support missions performed under the existing sortie limit was beginning to detract from the quality of delivery. General Jerome set out to remedy this unfavorable situation.

Working with General Selden, the Marine wing commander prevailed upon the Air Force to permit close air support training of wing pilots and of forward air controllers with the Marine division. On 19 May, CG, FAF lifted the close air support restriction that he had imposed in front of General Selden’s MLR. By agreement between the FAF and the two Marine commanders, Fifth Air Force would permit the scheduling of 12 close air support sorties daily for a one-month period, MAG–12 was given this training mission, to begin on 21 May.[14]

The objective of the CAS program, in addition to providing operational training and practice for Marine ground officers, air controllers, and pilots, was to inflict maximum casualties on Chinese troops and to increase the destruction and damage to their positions. Before assigning a pilot to the actual training flights, MAG–12 sent him on a tour of the front lines to become better familiarized with the topography, the restricted (“no-fly”) areas, and probable enemy targets. Air strikes requested by the division went directly to MAG–12. Initially, a limitation of 12 sorties per day was established, but on 17 July—the program having already been extended beyond its original 30-day limit—a new ceiling of 20 daily sorties went into effect. The division was also allowed additional flights above this prescribed daily sortie number when air support was needed to repel a large-scale enemy attack or to assist in a major Marine ground assault.

Almost as soon as the Marines began to derive the benefit of the training program, the flights were terminated by FAF. On 3 August 1952, following a complaint by CG, Eighth Army that Marines were Fifth Air Force notified General Jerome that the special program getting a disproportionate share of the close air support sorties, the would end the next day. General Selden was instructed to request air support “in the same manner as other divisions on the Army front.”[15] Despite the abrupt termination of the training program, the division had derived substantial benefits from the 12 weeks of Marine-type close air support. “Air attacks were the most useful weapon for dealing with enemy dug-in on the reverse slopes,”[16] according to an official analysis. One regimental commander reported that the 1,000-pound bombs were effective in destroying enemy bunkers and further noted that the strikes had produced good results in the “destruction or damaging of enemy artillery and mortar pieces.”[17] Another senior officer commented that air overhead kept the Communists “buttoned up,” which permitted Marines greater freedom of movement for tactical and logistical operations.[18]

A second type of Marine close air support aided the mission of Marine infantrymen in western Korea during the summer of 1952. This was controlled radar bombing, which permitted delivery of aviation ordnance at night or under other conditions of limited or poor visibility. The Air Force had introduced the concept into Korea in January 1951, had tested and evaluated it in combat, and shortly thereafter had put it to good use against the Communist spring offensives that year. Based on a concept oriented towards deep support of troops in extended land campaigns, the Air Force system made use of 20-ton vans to house its ground components.[19]
The Marine equipment, on the other hand, was more mobile since it was to be employed close to friendly lines. Referred to as the MPQ-14, the Marine radar bombing system was designed so that the largest piece could be put into a one-ton trailer. Major ground items were a generator power supply, a tracking radar, and a computer; the last essential component, an automatic bombing control, was mounted in the aircraft.

Developed and hand built after World War II by Marines under Major Marion C. Dalby at the Naval Air Materiel Test Center, Point Mugu, California, the MPQ-14 was first used in Korea in September 1951. Initially, considerable mechanical difficulty was experienced with radar bombing, which affected the accuracy of the bombs, but later the system became sufficiently reliable to permit bomb drops within one mile of friendly lines. Subsequent use confirmed the tactical precision of the MPQ-14. By the middle of summer 1952, the Marines had obtained Fifth Air Force permission to use radar bombing, controlled by a forward observer on the ground, in a close support role.

Before this policy change took place another one, at a still higher command level, had occurred. On 23 June, FAF planes struck at eight North Korean hydroelectric plants in the central and northwestern part of the country. The attack represented a departure from the intense interdiction of enemy lines of communication (Operation STRANGLE) which, since May 1951, had characterized FAF support operations. The shift came about after a Far East Air Forces study on the effectiveness of the interdiction campaign had concluded, in part, that the program had been indecisive.

For more than a year preceding the 23 June attack, the Fifth Air Force had concentrated its ground support efforts on the disruption of Communist communication lines so that the enemy would be unable “to contain a determined offensive . . . or to mount a sustained offensive himself.” During the lifetime of the doctrine, no major offensive had been launched by the enemy, and on this fact was based the claim for success of the interdiction program. Opponents, however, pointed out that despite this maximum FAF air effort, the Communists had built up their strength, including support areas immediately to the rear of their front lines and resupply installations. As the recent UN commander, General Matthew B. Ridgway, told members of the Senate Committee on Armed Services on 21 May 1952, the same month that FAF had begun to shift its air effort away from interdiction, “I think that the hostile forces opposing the Eighth Army . . . have a substantially greater offensive potential than at any time in the past. . . .”

A number of factors contributed to the reduced emphasis on the interdiction strategy. Three, however, appear to have most influenced the inauguration of Operation PRESSURE, the name given the new policy of concentrating aerial attacks on major industrial targets considered of greatest value to the North Korean economy. Mounting FAF aircraft losses due to enemy flak (fire from ground-based antiaircraft weapons) and an insufficient number of replacements helped shape the new program. By April 1952 FEAF had received “only 131 replacement aircraft of the types engaged in rail interdiction against the 243 it had lost and the 290 major-damaged aircraft on interdiction sorties.” These heavy losses had resulted from the increasing accuracy of Communist antiaircraft ground weapons, a capability Air Force planners had failed to consider sufficiently.

Although significant, this loss factor was not the final consideration in executing PRESSURE attacks against the power plants. More directly responsible were two other recent developments. These were the decision of the new UN commander, General Mark W. Clark, to take forceful action to bring the Communists around to an armistice agreement and a top-level Defense Department change of policy that had removed a major North Korean hydroelectric facility from the restricted bombing list. This was the Suiho plant, fourth largest in the world. Adjacent to the Yalu River, about 75 miles northeast of its mouth, Suiho supplied approximately 25 percent of the electrical power used in nearby northeast China.

Results of the PRESSURE strikes, carried on from 23-27 June, were highly successful. Marine, Navy, and Air Force planes flew 1,654 attack and escort sorties in these raids. Of the 13 target plants attacked during this period, 11 were put out of commission and 2 others were presumably destroyed. North Korea was almost
lacked out for two weeks. Chinese and Russian experts were rushed to North Korea to lend a hand in restoration. The hydroelectric strikes marked the first time that Marine, Navy, and Air Force pilots had flown a combined mission in Korea. The 23 June strike, moreover, was of particular significance to 1st MAW since it was also the first time that MAGs–12 and –33 were assigned group strikes at specific adjacent targets at the same time.

Led by Colonel Robert E. Galer, the new MAG–12 commander since 25 May, group pilots struck and leveled the single power complex, Chosin 3, in the 23–24 June runs. Colonel John P. Condon, who had taken over MAG–33 on 24 May, put 43 jets from VMFs–311 and –115 into the air during the two-day mission. The first time that its F9Fs had ever been massed for a strike of this type, the MAG–33 jets similarly destroyed the Chosin 4 plant, 11 miles northwest of Hamhung.

Although the jets carried a smaller payload than the Corsairs and ADs of MAG–12 (approximately 37 gross tons to more than 150 tons), the extremely precise bombing record made by the Grumman Panther jet pilots forever put to rest the doubts about jet accuracy that had been held by some in 1st MAW. As the group commander later recalled, “The capability of jet strike aircraft for extremely accurate bombing, an item of open discussion prior to this time, was never questioned in the 1st Marine Aircraft Wing after this mission.”[28] Another gratifying result was that flight personnel on all of the 150 Marine aircraft returned safely. In fact, of the total 1,645 FAF sorties, only 2 aircraft were downed; rescue aircraft successfully picked up these two pilots, both U.S. Navy officers.

It was the high probability of being rescued, if forced to abandon their aircraft, that not only eased the minds of pilots on missions north of the 38th Parallel but also permitted the fliers a greater degree of success. As the MAG–12 commander, Colonel Galer, who was shortly to escape imminent capture by the enemy, later declared, “I do know that every pilot flying in this theatre should have the highest possible morale with the knowledge that so many are ready and willing to risk so much to get them.”[29]

A Medal of Honor holder from World War II, Colonel Galer was leading a flight of 31 aircraft on 5 August. His objective was the supply area and tungsten mines in the mountainous northeastern part of North Korea, just below the 39th Parallel and 35 miles southwest of Wonsan. After several hits had killed his engine, the MAG–12 commander, preparing to parachute, climbed out over the side of his plane, but found that he had one foot stuck inside the cockpit, probably on the shoulder straps or the loop of the belt. He then pulled himself partially back towards the cockpit, freed his foot with a vigorous kick, cleared the plane, and headed in spread-eagle fashion towards the ground. Almost immediately the plane, falling in a nose dive, caught the descending pilot on the shoulder and pulled him into a spin. Colonel Galer recovered in time, however, to pull the ripcord and thus ease his impact onto enemy terrain. He landed within ten feet of his crashed AU.[30]

“Immediately upon getting free of the chute, I ran as rapidly as possible, staying low, down through a corn field.”[31] At the end of the field, the Marine aviator paused momentarily to survey the terrain for an escape route. Spotting a dry stream bed nearby, Colonel Galer dashed toward it and quickly but cautiously moved up it some 100 yards. Then he halted to put into operation a small survivor radio to report his position. The message was received by the rescue air patrol orbiting overhead which relayed the information to pickup aircraft. The patrol advised the downed pilot that a rescue helicopter had already departed for the crash area.

Before breaking radio contact, Colonel Galer told the air patrol his planned movements in order to facilitate pickup. He then quickly left the area which was located too near the crashed aircraft for a rescue attempt. Evading detection by enemy soldiers and curious teenagers moving towards the wreckage, the Marine worked his way to higher ground, keeping the air patrol advised of his changing position. By 1845, a search of the area was underway. Of the events that followed, Colonel Galer wrote:

“At 1908 I heard the helicopter go down the next valley and saw it disappear. I called, told them to make a 180-degree turn since I was in the valley to the southwest and on the north slope. I did not get an answer but soon the helicopter came through a saddle in the ridge. . . . I immediately let the red smoke (day flare) go, and
came out of the bushes . . . calling the helicopter on the radio also. They apparently saw me immediately and came over and hovered. The mechanic leaned out and swung the hoisting sling back and forth . . . Finally, I grabbed it and got in . . . and the pilot took off . . . The mechanic pulled me up and into the helicopter as we crossed the valley.”[32]

The colonel was not yet out of the woods. The trip to a rescue ship at Wonsan was marked by intermittent bursts of enemy antiaircraft fire. On one occasion the chopper was hit hard enough to spin it completely around. As the rescue craft neared the coast patches of fog added to the hazards of night flying. About this time the warning light indicating low fuel supply came on but “the pilot gambled on making the sea at the risk of having to autorotate through the overcast into the mountains.”[33] It was a correct decision. The fuel lasted until the helicopter landed on the rescue vessel. It was then 2100.

Quite naturally the episode brought forth high praise for the rescue system, and particularly for those individuals whose skills, initiative, and courage made downed crew rescues of this type possible. But Colonel Galer also saw some weaknesses. He pointed out that rescue helicopter pilots should be kept up to date on changing enemy flak positions. The Marine group commander also stressed the need for rescue helicopters to establish and maintain a minimum safe fuel level which would depend largely upon the position of the downed aircraft. One final suggestion, not about the system but the aircraft itself, was that fixed-wing aircraft have ejection-type seats. Remembering his own difficulties, the MAG–12 commander further cautioned pilots to be certain they were free of all straps and cords before bailing out.

In addition to attack missions by tactical aircraft and rescue work by its helicopters, the Marine wing was also responsible for providing antiaircraft defense. It was not until July 1951, 13 months after the NKPA invasion of South Korea, that a formal air defense had been established for the country. Fifth Air Force was given the command responsibility of coordinating the aerial defense net for South Korea and its adjacent sea frontiers. In mid-November 1951, the FAF commander had revised the defensive system, dividing his area into a northern and southern sector, at a point exactly halfway between the 36th and 37th Parallels.

FAF commanded the northern air defense sector while the southern sector became the responsibility of CG, 1st MAW. In turn, these two sectors were further divided into subsectors. Each of these, through a tactical air direction center (TADC), maintained radar surveillance of its assigned area and performed plotting and identification functions. Each subsector was charged with being “directly responsible for sector air defense.”[34]

Although the 1st MAW commander had been designated as the Air Defense Commander, Southern Sector, Korea, he was not actually given the means to carry out this responsibility. He still did not have command over his tactical squadrons, nor could he exercise control over operations of his tactical air coordination center (TACC) or TADC.[35] Moreover, his southern sector could not originate practice air warning messages. The wing commander had to obtain permission from JOC before he could begin practice intercepts for training his radar intercept controllers.

Several other deficiencies existed in the air defense system that the 1st Marine Aircraft Wing had inherited. There were no ground antiaircraft weapons at the Marine fields until a .50 caliber automatic weapons battery was detached from the 1st 90mm Antiaircraft Artillery Battalion, FMF, early in 1952 and sent to K–3, the home field of MAG–33. Other inadequacies were deficient equipment—a search radar limited to 30 miles out and 20,000 feet up—and lack of an interceptor aircraft capable of rising to meet the faster swept-wing jets the enemy was employing. Airfields housing Marine air groups did not have revetments for either aircraft parking areas or ordnance dumps.

Not all of these weaknesses were acquired with assumption of the air defense mission. There had been a general lack of concern about air defense throughout South Korea. This attitude had resulted from the air supremacy which the Fifth Air Force had quickly established. Camouflage was seldom practiced. Dispersal of aircraft, supply dumps, and servicing facilities was employed only rarely. In fact, at K–6, there was not sufficient
land to properly scatter installations and aircraft.

Defense of the southern sector was commanded from K–3 (Pohang), the site of the TACC (Major Fred A. Steel). Marine Ground Control Intercept Squadron 1 (MGCIS–1) was set up on the west coast at K–8 and MGCIS–3 (Lieutenant Colonel Owen M. Hines), on the east coast, near Pohang. Each of these intercept units had an early warning detachment operating off the mainland. Antiaircraft artillery was provided by the 90mm AAA battalion, which was controlled, however, by EUSAK. The 1st MAW commander specified a ready alert status for two aircraft during daylight hours. Just before sunrise and sunset, four planes were put on strip alert. Aircraft for night alert were provided by VMF(N)–513 until April, when the requirement was withdrawn. By 30 June 1952, 1st MAW air defense operations had destroyed a total of five enemy planes. The F7F night fighters flown by VMF(N)–513, moreover, had frequently been scrambled to intercept hostile night intruders that had penetrated into the Seoul area, or northern sector.

This low kill rate did little to atone for the steadily increasing number of Marine aircraft lost to enemy flak. Although the number of friendly planes destroyed or damaged in air-to-air combat during the latter half of Korean hostilities diminished sharply compared to the early period, losses due to ground fire were reaching alarming proportions in early and mid-1952. In May 1952 Navy and Marine air losses to enemy action were twice the total for April, and the June figure was even higher. By June, the Communists had massed more than half of their antiaircraft artillery along communication routes that FAF struck nearly every day.

Remedial action was soon taken. Stress on flak evasion was emphasized in pilot briefings and debriefings. The MAG–33 intelligence section came up with a program that attempted to reduce losses by a detailed analysis of flak information. The originator of this system, First Lieutenant Kenneth S. Foley, based his method on:

“. . . photo interpretation of an up-to-date flak map, scale 1:50,000, and an intelligent utilization of flak reports disseminated by the 67th Tactical Reconnaissance Squadron of the 5th Air Force. Frequent briefings were given to each squadron on the enemy AA capabilities. Elaborate overlays were drawn up and displayed. Target maps, clearly showing AA positions and flak clocks [danger areas], were given to flight leaders to aid them in evading known AA guns in their target area. Through flak analysis, the safest route to the target area was determined and an actual attack and retirement route was suggested. These recommendations appeared in a flak summary presented at each combat briefing.”[36]

Other measures attempted to reduce mounting losses of personnel and aircraft. In all Marine air units, evasion and escape tactics were stressed. In addition to the FAF de-emphasis on interdiction of communication routes that had come about, in part, due to heavy aircraft losses, Fifth Air Force decreed that beginning 3 June, “with the exception of the AD and F4U aircraft [1st MAW types] only one run will be made for each type of external ordnance carried and no strafing runs will be made.”[37] CTF 77 ordered that in all attack runs, aircraft would pull out by the 3,000-foot altitude level. The Marines, combining their air and ground efforts, came up with a positive program of their own. It was to become the first known instance of Marine ground in support of Marine air.

Although the originator of the idea cannot be positively identified, the time that artillery flak suppression firing was first employed can be traced back to late 1951, when the division was still in East Korea.[38] It was not until June 1952, however, that a published procedure for conducting flak suppression firing appeared in Marine division records. That same month another type of flak suppression, this by an aircraft, was utilized by the 1st Marines, commanded at the time by Colonel Walter N. Flournoy. The procedure called for the FAC [forward air controller] to relay gun positions to friendly strike planes which temporarily diverted their attack to silence the located gun. Although the method “worked with good results,”[39] it was not destined to become the system adopted by the Marines.

The more frequently used flak suppression called for artillery to fire on hostile gun positions that could
impede the success of a friendly close air support strike. Several Marine officers appear to have had a major role in the development and employment of this technique. Among them were Brigadier General Frank H. Lamson-Scribner, Assistant Commanding General, 1st MAW; Colonel Henderson, the 11th Marines commander; and Lieutenant Colonel Gerald T. Armitage, 3/1 commander.

The 1st Marines battalion commander explained how the system operated in late spring 1952:

“I was in an outpost watching an air strike. I asked Captain Shoden [John C., the battalion forward air controller] to work out some idea of flak suppression. Shoden, G–2, and others worked two or three weeks to complete the first plot of antiaircraft positions. My idea was to have a plane start a run and then pull up before finishing the dive. The enemy antiaircraft gunners could not tell that the pilot was pulling out at an extremely high level. The batteries would fire and Marine observers would plot their positions from their fires. Then, the Marine artillery would lay a heavy barrage on these positions.”[40]

While observing an air strike from the Marine division sector, General Lamson-Scribner noted that prior to the strike there had been no preparatory firing on enemy antiaircraft artillery positions. After the strike he discussed this matter with General Selden, who “directed me to discuss with his chief of staff what I had observed and my suggestions that division firepower for ‘flak suppression’ be coordinated with air strikes.”[41] The shot of this was that the division chief of staff suggested that the 11th Marines regimental commander and his staff members develop an SOP[42] for using artillery flak suppression fires in support of close air support strikes. It was believed that proper utilization of these fires would reduce aircraft losses and further increase the opportunity for a successful close air support mission by destruction of enemy antiaircraft weapons.[43]

On 30 June 1952, the 11th Marines published the SOP. Since the objective was to prevent enemy fire from interfering with friendly strike planes, the key to the entire procedure was the precise coordination of artillery fire with the delivery of aircraft ordinance. As Colonel Henderson described the system:

“When the infantry regiment received word of an air strike, the air liaison officer plotted on the map . . . the target of the strike, the orbit point, the direction of approach, and the altitude . . . and direction of pullout. Then the artillery liaison officer, by looking at the map, could determine which of the Chinese positions could bring effective fire on the strike aircraft. The artillery battalion had prearranged code names and numbers for every antiaircraft position. All the artillery liaison officer had to do was pick up the phone and tell the F.D.C. [fire direction center] ‘flak suppression’ and read off what targets he wanted covered.

“These fires were then delivered on the request of a forward observer who was with the forward air controller . . . When there was a forward air controller up in the front lines controlling the strike, we would put a forward observer with him. When the planes were . . . ready to go, the F.O. [forward observer] got the word ‘Batteries laid and loaded,’ and he would tell them to fire. The minute the FO would get the word, ‘On the way,’ the forward air controller would tell the planes to start their run. As a result, we had cases where the planes were in their bombing run within 30 seconds after the flak suppression was fired, which meant that they were in on the target while the positions were still neutralized. The question of control and split second timing is of exceeding importance because the aircraft are going 300 to 400 miles an hour. . . .”[44]

Early in the program the MAG–12 commander reported that although the flak suppression procedure was not flawless, it was proving “very capable and workable.”[45] An indication of the success of 1st Marine Division pioneering efforts in flak suppression is seen in the fact that shortly after it was put into operation “there was a steady stream of visitors to the 11th Marines CP to find out what [it was] and how we were doing it and to get copies of our SOP.”[46] The procedure was eventually adopted by other Eighth Army units.

Marine air losses from hostile ground fire during CAS strikes immediately began to drop from the June peak and never again reached this level. In 124 close support sorties flown by 1st MAW on 13 August, not one plane was shot down and only four received minor damage from enemy flak. Although there were some complaints as to execution of the flak suppression program these would be corrected, in the main, by a revised
procedure which the 11th Marines would undertake in the winter of 1952.
Earlier in the year the Marines had revised their estimate of enemy capabilities after the lengthening of the division MLR by I Corps and the subsequent heavy enemy attack. The re-evaluation placed the most likely course of Chinese action as defending their present positions with the 21 infantry battalions assigned and also cautioned that the Communists could mount a limited objective attack at any time of their choosing. Division intelligence estimated that the Chinese could muster up to “57 infantry battalions supported by 12 artillery battalions and 40 tanks and/or self-propelled guns” for a thrust into the Marine sector.

The enemy, however, showed little disposition for any concerted ground attack during the remainder of April. But before the month ended, Marines, in conjunction with other I Corps divisions, had deluged the enemy with artillery and tank fire in Operation CLOBBER. The purpose of this shoot was to inflict maximum casualties and damage by employment of the element of tactical surprise. The reinforced 11th Marines, augmented for this occasion by Company D, 1st Tank Battalion and nine of the battalion’s 105mm howitzer and flame tanks, blasted Chinese CPs, bivouac areas, artillery and mortar positions, and observation posts. Marine frontline regiments joined in with their organic mortars. Since most of the firing took place at night when results were unobserved, no estimate could be made as to the effect of the operation on the enemy.

A new Marine artillery tactic about this time was the counter-counterbattery program instituted by the 11th Marines. The regiment had developed this technique to counter superior enemy artillery strength. This situation, as well as the fact that I Corps artillery available to the division was considered inadequate for counterbattery support, led the Marine division to adopt the new program in May 1952. One provision required a battery in each battalion to select counter-counterbattery positions and occupy them for 24 consecutive hours each week. Another proviso of the program was the selection by each battalion of 10 roving gun positions that were to be occupied by a single weapon rotated to each place at least once weekly. By these tactics, the artillery regiment hoped not only to mislead the Chinese in their estimate of the strength and location of Marine artillery but also to dilute enemy counterbattery intelligence by causing him to fire into areas just vacated by friendly guns. “The effectiveness of the program was demonstrated on numerous occasions when the enemy fired counterbattery into unoccupied positions.”

Still another concept regarding the employment of artillery developed during the early days of the JAMESTOWN defense. The 11th Marines had advised the infantry regiments that it could effectively fire on enemy troops attacking friendly positions if the Marines had overhead cover. The idea was to use variable time (VT) fuzes with the standard high explosive (HE) shells. Artillery battalions supporting the frontline regiments registered on positions occupied frequently by patrols going forward from JAMESTOWN.

According to the recollections of veteran artillery and infantrymen in the division, the first occasion that pre-planned artillery fire was placed on friendly positions occurred in May 1952. The episode involved a 2/7 platoon patrol that late on 18 May was ordered to return to the MLR from an outpost on the former OPLR. Operating forward of the center regimental sector, the platoon commander, Second Lieutenant Theodore H. Watson, directed that two of the three Marine squads return to the MLR. The remaining unit, surrounded by about 50 Chinese, engaged them in a brisk firefight.

When the artillery fire to seal off the enemy and box-in the defensive position failed to discourage the hostile force, Lieutenant Watson ordered his men into the shelter of two nearby bunkers. He then requested the artillery to place VT directly over his positions. The volleys of overhead fire and effective Marine small arms
fire then forced the enemy to call off his assault. Although the exact number of Chinese casualties could not be determined, the new fire technique fully accomplished its purpose—repelling the enemy force.

Initiating the infantry action in May was the 1st KMC Regiment, holding the division left flank, with its 2d and 1st Battalions on line. At dusk on 3 May a platoon-size raiding party, under Second Lieutenant Kim Young Ha, left an outpost forward of the 1st Battalion line on a prisoner-taking mission and headed for the objective, Hill 34, adjacent to the rail line to Kaesong and about a half-mile west of the Sachon River. When the platoon was within approximately 1,000 yards of its goal, a support squad was detached near a trail and stream juncture to ambush any enemy attempting to attack the raiders from the rear. The remainder of the platoon, two assault squads, then continued towards the objective, moving cautiously and halting for an hour because of the bright moonlight.

After midnight the moon disappeared behind the clouds, and the Koreans again emerged. They advanced towards a village immediately south of the objective. After searching a few houses and not finding any enemy, the KMCs started on the last leg to Hill 34. As soon as the objective came into view the raiders deployed for the assault. At 0410 the two squads of Korean Marines charged the knoll, immediately drawing heavy Chinese small arms fire. When the raiders continued their assault, the enemy retreated to his trench-works and bunkers where he continued to fire on the KMCs. Since it now appeared to the patrol leader that the probability of taking a prisoner was unlikely, he prepared to return to friendly lines. He first arranged for artillery to cover the withdrawal of the patrol, and then broke off the 18-minute fire fight, taking his only casualty, a wounded rifleman, with him. The KMCs counted 12 enemy dead. No prisoners were taken. In the preliminary action, the support squad had also suffered three killed and seven wounded.

As the KMC raiders were making their way back to the MLR, a combat patrol from 1/5, the reserve battalion of the 5th Marines, prepared to move out. This patrol was one of many dispatched by the battalion during the first week of May in accordance with its mission of patrolling in front of the OPLR, between the MLR and the OPLR, and throughout the regimental sector. On this occasion, the patrol was to occupy the high ground south of former Outpost 3, which had become the focal point of activity in the center sector. When used as a base of fire, this ground provided a position from which automatic weapons could readily cover enemy lines or tie in with adjacent friendly defenses. In addition, the 1/5 patrol was to drop off friendly snipers to cover the former OPLR position, to maintain surveillance, and to ascertain to what extent the Chinese were developing the outpost. The task went to a Company A platoon, which the unit commander, First Lieutenant Ernest S. Lee, reinforced with light and heavy machine guns.

At sunup the Marines crossed line JAMESTOWN and before 0900 had reached the high ground they were to occupy. Here the patrol leader set up his base of fire, then pushed on with the rest of his men to the outpost, receiving occasional mortar fire before reaching the old position. While organizing his men at the objective, Lieutenant Lee received word by radio that the Chinese were preparing to attack. Almost immediately, intense shelling struck the forward slope of the hill. A Marine aerial observer (AO) detected 60–70 Chinese advancing from the next hill, some 800 yards to the front of the Marines. The AO also reported that the enemy was firing mortars towards OP 3.

Shortly thereafter the Chinese fire ceased. Moments before it lifted, the patrol received a second warning that an enemy attack was imminent. Even as this message was being received, about 30 Chinese rushed the patrol. The Marines immediately took the hostile assault force under fire, killing 14 CCF with well-placed small arms fire. Overhead, four 1947-vintage Marine Corsair fighters (F4U-4Bs) struck at troublesome mortar positions previously located by the AO. At 1330 another aerial strike against Chinese mortars and enemy positions on the hill north of OP 3 was executed. These two air missions were credited with destroying six mortars, damaging two others and wrecking seven personnel bunkers. During the second strike the 1/5 patrol began its withdrawal.

On two occasions during the patrol’s return to its base the enemy attempted to ambush it. Each time the
attempt was thwarted, once by the patrol itself and the second time, with the help of friendly artillery. On the way back several loud explosions suddenly halted the patrol. Investigation revealed that the Marines, carrying their casualties of one dead and four wounded, had inadvertently stumbled onto a path not cleared of mines. Two members of the stretcher bearer detail were killed and three others wounded by the AP (anti-personnel) mines that had not been charted on friendly maps by the Marines’ predecessors in the defense sector. A mine clearance team promptly disposed of the danger. With the aid of fires from a 2/5 patrol on the nose of a nearby hill, the 1/5 platoon was able to break contact. After pulling back several hundred yards, the patrol reached a forward medical aid station where jeeps picked up the more seriously wounded and took them to helicopters, which completed the evacuation. Patrol members reported 27 known enemy dead, including one that had been propelled into the air by a direct hit from an artillery round.

The next major Marine ground action soon involved the same Company A platoon, but this time as part of a larger force. Colonel Culhane, the regimental commander, directed his 1st Battalion to launch a new raid on the Outpost 3 area in an attempt to oust the Chinese and thereby deny the enemy use of the critical terrain. Inflicting casualties and capturing prisoners were additional tasks assigned. On 8 May Lieutenant Colonel Nihart issued Operation Order 12–52, calling for 1/5 to seize a series of three intermediate objectives (S, V and X) en route to OP 3 (Y). (See Map 8.) The combat patrol, reinforced by regimental elements, less Company B, was to be prepared to move north of OP 3 to occupy the next hill mass (Z), if necessary.

Operational plans called for Lieutenant Lee’s Company A to do most of the leg work as the assault unit. Captain Leland Graham’s Company C, the diversionary force, was to make a feint against Hill 67, an enemy position southwest of OP 3, and to neutralize it by fire. Weapons Company, under First Lieutenant Ross L. Tipps, in support of the Company A force, was to set up a base of fire at a designated position (T), southeast of OP 3. Artillery support was to be furnished by 1/11, 4/11, and the attached 4.5-inch Rocket Battery. A section of regimental 4.2-inch mortars was also assigned. One platoon of Company B tanks was to assist the assault force by firing both on designated positions and targets of opportunity. Close air support flights were to be on station at two periods during the 9 May daylight operation.

In the early morning hours, under cover of darkness, all units moved into position. At 0430 the 1st Platoon of Company A crossed the line of departure heading for Objective S, a small ridge south and west of OP 3. The 2d Platoon followed and moved out on the right, while the 3d Platoon covered the rear. This hill, lightly defended, was quickly overrun by the Marines. The 1st Platoon then turned northeast towards the four peaks (designated as V, X, Y, and Z), its main objectives. These four positions were all situated at approximately the same elevation, 450 feet. A distance of some 1,300 yards separated the first and fourth hills in the north-south ridgeline.

As the 1/5 platoon neared Objective V, friendly rockets lashed the crest of the hill, which was held by a reinforced enemy platoon in mutually supporting fighting holes. Assisted by this fire, Marine two-man teams with rifles and grenades assaulted the fighting holes occupied by the Chinese. As the Marines proceeded to clear the objective, half of the Chinese were forced to retreat to safer ground. Marines estimated that 15 enemy were killed and a like number wounded. By this time, three hours after setting out on the raid, the platoon had seized one prisoner and sustained five wounded.

While reorganizing for the attack against Objectives X and Y, the 5th Marines patrol came under a heavy artillery and mortar barrage that killed one Marine and wounded three others. As the main body of the assault force advanced towards Objective X to support the attack, the lead elements of the company headed for OP 3. Throughout this maneuver, the company remained under heavy artillery fire.

Proceeding along the eastern slope of the ridgeline to assault knobs X and Y, the platoon had a good view of the effectiveness of their friendly supporting artillery fire. In fact, the combined rocket, howitzer, mortar,
tank, and machine gun fire threw up so much dust that at times it restricted the vision of the Marine assault team. As platoon members neared the summit of Objective X they encountered a heavy stream of defending fire. A strong counterattack from the front and left flank assailed the 1st Platoon, but the Marines repulsed the enemy with accurate small arms fire, killing six CCF. Infiltrators then attempted to envelop the Marine platoon and isolate it from the rest of the Company A assault force. Successive waves of Chinese, employing a wedge formation, tried to overrun the main body of the assault force. In repulsing this latest counterattack, Company A killed 12 and wounded 5 enemy.

Quickly sizing up the situation, the company commander ordered the 1st Platoon to rejoin the rest of the assault force. As the platoon began to pull back at 1435 the Chinese blanketed the route with a heavy barrage, firing “over four hundred rounds in a five minute period.”[57] This intense shelling took the lives of three Marines, wounded a number of others, and halted the assault force just short of its final goal. Even though the Chinese had been driven from the three intermediate objectives, the devastating enemy mortar and artillery fire made the Marine position untenable. A third of the platoon moved back to Objective V; the rest worked their way along a route east of that objective. While the rest of Company A and Weapons Company elements occupied Hill T, the diversionary force, Company C, reinforced by other Weapons Company personnel, had remained at a strongpoint not far from Objective S. All supporting ground weapons assisted in the withdrawal. In addition to lending direct fire support, Marine tanks brought forward emergency supplies and evacuated casualties. By 1730, the assault force had returned to friendly lines, followed shortly by the rest of the battalion.

Although the battalion failed to seize and hold all of its objectives, that part of the mission calling for inflicting casualties and taking prisoners had been successfully executed.[58] Marines counted 35 enemy dead, 53 wounded, and 1 POW, and estimated that an additional 70 CCF had been killed and 105 wounded. Seven Marines were killed and 66 wounded in the action described by some observers as “the largest offensive effort the 1st Marine Division [has] made since last September.”[59] The battalion fire support was well controlled and coordinated from an observation post on the MLR. Five air strikes, including one MPQ-14 mission, were credited with destroying three artillery pieces and an equal number of mortars, damaging two other mortars, and demolishing six personnel bunkers.

As the regiment noted, the earlier withdrawal of the OPLR had “altered to a considerable extent the tactics employed in this area. This is especially apparent in the number of patrol contacts close to the MLR and displayed the eagerness of the enemy to move in on any ground not held by friendly forces.”[60] At the same time the increased number of troops made available for the MLR defense considerably strengthened the JAMESTOWN Line itself. Sector responsibility changed on 11 May. Colonel Russell E. Honsowetz’ 7th Marines relieved the 5th Marines in the center regimental sector, with 2/7 and 1/7 occupying the left and right battalion positions, respectively.

When it took over the peace corridor sector the 7th Marines also assumed the responsibility for emergency rescue of the Allied truce delegates at Panmunjom.[61] The regiment advanced a mile nearer the objective when it moved the pick-up force’s assembly area to within 400 yards of the line of departure. The 7th Marines also replaced the tanks in the force with M-39 personnel carriers, a U.S. Army-developed tracked vehicle similar in appearance to the Marine amphibian tractor. Another vehicle the 7th Marines retained in its task force was a medium tank equipped with additional radios. This armored communication and control vehicle was used as a radio relay station on the MLR to assist in liaison between moving infantry and tank units. Marine riflemen dubbed this command tank the porcupine, to describe the effect of many bristling antennas sticking out from its top. While the Marine division right sector, occupied by the 1st Marines, remained relatively quiet during the spring months on JAMESTOWN, the 7th Marines in the center MLR would shortly be involved in the division’s major ground action in late May.

As part of the active defense of its JAMESTOWN line, Lieutenant Colonel Daughtry, commanding 1/7,
issued a directive on 26 May intended to deny to the enemy key terrain remaining on the old OPLR. Operation Plan 16-52 called for an attack to seize two parcels of high ground to the regiment’s right front. At the same time, the battalion was to neutralize two Chinese positions west of the main objectives, Hill 104 (Objective 1) and the Tumae-ri Ridge (Objective 2), approximately a half-mile further north. The designated attack force, Captain Earl W. Thompson’s Company A, was heavily reinforced. While Company A pursued its mission to the right, a Company C reinforced platoon under Second Lieutenant Howard L. Siers would conduct a feint on a pair of enemy positions to the left. Support for the operation would come from 2/11, two tank platoons, and from air, which was to be on call.

H-Hour was set for 0300 on 28 May. Attack and diversionary forces on schedule crossed the line of departure, a half-mile north of the MLR. Captain Thompson’s main force advanced nearly to the base of Hill 104 before the Chinese, in estimated reinforced platoon strength, began to counterattack. The fight came to an abrupt end when Second Lieutenant John J. Donahue led his platoon to the top with bayonets fixed.[62] As the Marines dug in they came under heavy mortar and artillery fire from CCF strongholds to the north. On the left, meanwhile, Lieutenant Siers had received orders to seize the closer of his two objectives, former OPLR 5, instead of merely placing suppressive fire on it.

Moving forward from its base of fire, the platoon soon established contact with the enemy. At 0554 the platoon began its attack on the objective. Despite the close-in, hand-to-hand fighting, when it became apparent the assault could not be stopped the enemy gave way to Marine persistence in seizing the hill. By 0700 the Company C, 7th Marines platoon had secured its objectives and begun preparations for defense of the positions as well as continued support of the main attack force. Heavy casualties, however, forced Lieutenant Colonel Daughtry to recall the platoon and it returned to the lines by 0930.

Up on Hill 104, Company A, 1/7 faced practically the same situation. Taking Objective 1 had been costly and the advance through withering enemy fire was adding to the casualties. A reinforcing platoon was sent from the MLR to help the company disengage and return to friendly lines. Contact with the enemy was broken shortly after noon. With the aid of air and artillery, the company was able to make its way to the MLR by 1405.

Advancing only as far as it did, the attack, like the one earlier that month, failed to take all the designated objectives. Casualties to the 1/7 Marines were placed at 9 killed[63] and 107 wounded. Most of the latter were evacuated for further treatment. Forty-five of the enemy were counted dead and 40 more wounded.[64] The action resulted in a casualty toll that was the highest to date for any Marine company in western Korea. All three Company A rifle platoon leaders—Second Lieutenants Donahue, Jules E. Gerding, and Kenneth A. Seal—were wounded. This battle also became the occasion for another unwelcomed record—4,053 rounds of enemy incoming, during a 24-hour period.

Following this late May offensive, a brief period of relative calm settled over the MLR. Marine and Chinese units continued the active defense of their respective sectors, with generally only a limited number of contacts. Fire fights between Marine patrols and CCF defenders lasted only a short time and usually ended when artillery fire caused the patrol to pull back. Even though this state of affairs remained essentially unchanged through June, several other events that month would affect Marine defense of the westernmost sector in I Corps.
A second realignment of the Marine-Commonwealth boundary along Line JAMESTOWN was made on 1 June. Part of the rear of the MLR was moved eastward to enable the Marine division to assume full responsibility for a key ridgetop. Prior to this date the hill mass had been divided along its crest, a factor that made it a potential trouble spot for both divisions. On 23 and 24 June, the 7th Marines MLR battalions relocated their positions towards the enemy along JAMESTOWN. This readjustment of the line varied from 1,300 yards in the center of the regimental sector to 400 yards near its right. The additional terrain strengthened the division front by placing the center regiment on improved and more defensible ground.

A week before this MLR change took place, there had been a shift in occupants in its far right sector. Colonel Culhane’s 5th Marines replaced the 1st on line, which then went into division reserve. Manning the MLR were 2/5 on the left and 1/5 to the right.

In early June the recently appointed UN commander, General Clark, made his first visit to the 1st Marine Division front. During his briefing, General Selden reviewed the unusual combat difficulties confronting his Marines. In addition to the unfavorable terrain, the division commander noted the special operational restrictions caused by proximity to the truce talk site. Presence of a large number of uncharted minefields created another obstacle. Herculean efforts were required of the Marines to simultaneously man and construct defenses over 35 miles of JAMESTOWN. Adding to Marine problems were the facts that ground units were not receiving sufficient close air support and the capabilities of the Chinese were constantly increasing.

Chinese order of battle (OOB) information was fed into the division intelligence network by higher commands, I Corps and EUSAK, and adjacent units, but a large part of the data about Communist forces was produced by the division itself. Frontline units in contact with the enemy, by observation of his activities, supplied the bulk of intelligence about enemy defense tactics, employment of weapons, and combat characteristics. Supporting Marine division units, particularly artillery and armor, fed more facts into the system, mostly through identification of the caliber of enemy shells fired at the Marines. As a result of its missions forward of the line and actions in defense of it, the division reconnaissance company also contributed to the intelligence network. Individual Marines, performing as tactical air observers and artillery air observers, as well as the VMO and HMR pilots, were other important sources readily available to the 1st Marine Division.

G–2 directed the division intelligence effort, including processing of raw material and supplying of updated reports to 1st Division units. The G–2 section also maintained OOB and target identification data on Chinese units and their commanders. Members of the G–2 staff also assisted in interrogation of prisoners of war (POWs), screened the civilians apprehended in unauthorized areas, debriefed Marines exposed to enemy intelligence, and conducted inspections of division internal security. In areas where the 1st Marine Division had only a limited intelligence capability it turned to EUSAK for assistance.

Eighth Army teams augmented the division counterintelligence efforts and provided most of the translation service. In addition, three radio intercept units furnished information to the Marines. The critical importance of this service had been proven during several combat patrols in May when additional information was instantly radioed to a friendly unit under fire.

Other intelligence activities were less beneficial to the Marines. These operations were conducted by Tactical Liaison Officers (TLOs, friendly Koreans trained by U.S. intelligence teams), and members of a Higher Intelligence Detachment (HID), a Korean unit assigned from EUSAK. Both the TLO and HID proved of limited
value to the division, due to the generally poor educational background of the agents, their inadequate training, and frequent failure to return from assignments behind enemy lines. Some Marines believed the basic fault in these operatives lay in “an exaggerated opinion of their importance.”

Several division intelligence Marines, in conjunction with training and shore party personnel, took part in an informational activity of a different type. These Marines reconnoitered several friendly islands off western Korea to determine their suitability for division landing exercises. The second one inspected, Tokchok-to, 30 miles southwest of Inchon, was selected. By early June planning had progressed to the point where a program had been developed for bimonthly battalion landing team exercises. The KPR maneuver force, appropriately reinforced, was designated as a participating unit. Landings were to employ boat teams, amphibian tractors, and helicopters. The entire program was designed to provide refresher training for Marines in carrying out their primary mission of amphibious assault. By the end of June, 3/5 and 3/1, in turn, had captured Tokchok-to.

Other training concentrated more on the task at hand. Division units in reserve rehearsed tactics for offensive and defensive warfare. Most ground units conducted extensive schooling in both mine and booby trap detection and clearance. Recognizing that patrolling was an important part of a Marine’s life on the MLR, the division included in its Noncommissioned Officers’ (NCO) Leadership School a thorough indoctrination in patrolling tactics. More than 50 percent of the training at all levels was at night. In addition, an extensive orientation was conducted for newly arrived combat replacements, who could not be committed to action for 72 hours after joining the division.

A week after the division’s June replacements landed at Inchon, General Selden’s headquarters received a directive that would affect a number of these new Marines. On 10 June CG, EUSAK ordered his corps commanders to make continuous efforts to secure the identification and changes in the enemy order of battle. Two days later I Corps followed the Eighth Army order with a letter of instruction which called for each I Corps division to “prepare plans for launching swift, vigorous, and violent large-scale raids to capture prisoners, to gain intelligence, to destroy enemy positions and material and/or strong limited objective attacks to improve and strengthen Line JAMESTOWN.” Large scale was defined as an “attacking force limited to battalion or regimental (brigade) size with appropriate armor and artillery support.” Divisions were required to submit detailed proposals for future action by 21 June. Marine division plans for limited objective attacks during July by units of the 7th Marines and KMCs were subsequently prepared and forwarded to I Corps.

One operation conducted north of the 2/5 left battalion sector early on 22 June was not, however, in response to this enemy identification mission. Late the previous day, Company G had sent out a 16-man ambush. Before the Marines reached their destination, a small enemy force, itself lying in wait, began to pour a heavy volume of fire on the Marines. At this point the patrol was ordered to pull back. One group of 10 made it back to the MLR; the remaining Marines headed for a nearby combat outpost in friendly hands. Reports to the company revealed one Marine not accounted for. The outpost commander was directed to search the area for the missing Marine. This reconnaissance by a fire team failed, but a reinforced squad sent out later brought back the body of the Marine who had been killed by Chinese artillery.

While this rescue effort was in progress, another similar action was under way. Not long after its arrival on the MLR, Company E, 2/5 had spotted in the No-Man’s-Land between the two main defensive lines a figure that appeared to be the body of a Marine. Since one man had been reported missing from an earlier 1st Marines patrol, recovery of the body, which had been propped up against a mound of dirt in the open, was undertaken. A special Company E patrol left the main line shortly before dawn on the 22d and reached the recovery area at daybreak. After artillery had laid down smoke, the patrol moved in, quickly recovered the body, and set out for friendly territory. Before the Marines had advanced very far on their return trip, the Chinese interdicted their route with heavy mortar fire, which killed one member of the patrol and wounded another. When the 5th Marines patrol returned to JAMESTOWN shortly after 0700, it carried not only the body it had recovered but also that of the
Marine who had been killed on the recovery mission.

By the end of June, major command changes had taken place within the 1st Marine Division as well as in several other UNC components. On 13 June, Brigadier General Robert O. Bare took over the second spot from Brigadier General Twining. Both ADCs were graduates of the Naval Academy and both were native mid–Westerners (General Bare—Iowa, General Twining—Wisconsin). Before joining the 1st Marine Division in Korea General Bare had served at Camp Pendleton, California where most recently he had been commanding general of the Training and Replacement Command. His World War II experience included participation in both European and Pacific campaigns. He was the Staff Officer, Plans, in the U.S. Naval Section for the Allied naval group that planned the amphibious assault at Normandy, France. Later he served in the Peleliu and Okinawa campaigns and, with the ending of hostilities, had participated in the surrender and repatriation of the Japanese in north China.

The outgoing ADC, General Twining, was being reassigned to the Office of the Commandant, HQMC. For his outstanding service as assistant division commander from March through May 1952, he received a Gold Star in lieu of his second Legion of Merit with Combat “V.”

Other high-level changes in command that had also recently taken place had included the UNC commander himself, General Ridgway, who had been succeeded in mid-May by General Clark. Major General Glenn O. Barcus, USAF, had assumed command of Fifth Air Force, replacing Lieutenant General Everest on 30 May. On 4 June, Vice Admiral Robert P. Briscoe had been named the new Commander, Naval Forces Far East to succeed Vice Admiral C. Turner Joy who had held the position since August 1949. And in I Corps, Major General Paul W. Kendall, USA, took over as corps commander on 29 June from Lieutenant General O’Daniel.

The end of the second year of the Korean fighting and the beginning of the third was observed by the Chinese with an attack against the 2d Battalion, 5th Marines, manning JAMESTOWN positions to the left of the regimental sector. Commanded at that time by Lieutenant Colonel Thomas J. Cross, 2/5 was new on line, having relieved 2/1 during the night of 15–16 June.

Late in the afternoon of 24 June, the enemy began registering his mortars and artillery on MLR company positions of 2/5 and a portion of the rear area occupied by the battalion 81mm mortars. Chinese incoming, sometimes intense, sometimes sporadic, continued until shortly after 2130. By this time the CCF were moving down their trenches toward a key outpost, Yoke, known also as Hill 159, which was still occupied on daytime basis by the Marines and lay north of the Company F Sector (Captain Harold C. Fuson). Moments later, the 34 men temporarily outposting Yoke saw the Chinese and opened with small arms fire, but the Marine positions were quickly enveloped by the Chinese. The Americans occupying the forward slopes of Yoke suffered many casualties from the intense fires supporting the enemy rush.

While the initial attack was in progress, the Chinese were able to position and fire machine guns from behind the outpost and in trenches on the forward slopes. Communist mortars interdicted the Marine supply routes to make normal withdrawal and reinforcement measures difficult. The Marines moved into bunkers, called down pre-planned fires, and continued the defense. Although the Chinese had overrun Yoke, they could not evict the Marines. At about 0300, the enemy withdrew. When the 2/5 troops followed to reoccupy the forward slopes of Yoke, the enemy renewed his attack and struck again. As before, the Marines took to bunkers and called in defensive artillery fires. These boxing fires fell around the outpost perimeter until first light when the attackers withdrew for the second time.

Four other outposts in the battalion area were involved in the anniversary attack, but the action around Yoke was by far the heaviest. It resulted in 10 Marines of 2/5 killed and 36 wounded. At Yoke alone, 9 were killed and 23 wounded. Enemy dead were 12 known and 50 estimated killed. Chinese wounded were estimated at 100. At one point during the attack on Yoke, the outpost commander reported that the enemy were wearing gas masks and using tear-gas grenades. Investigation revealed that the Chinese had carried and even worn the masks,
but that they had employed white phosphorus grenades rather than tear gas. This was the first instance Marine division personnel had ever encountered of CCF soldiers carrying gas masks in an attack and it was “believed part of the enemy’s hate campaign to impress their troops with the possible use by the UN Forces of CBR (Chemical, Biological and Radiological) warfare.”[70]

This violent eruption of enemy activity on the night of 24 June was followed by a brief period of greatly reduced ground action. Late on the 29th, however, the battlefront lull was broken when the 1st KMC Regiment sent out a raiding party to capture Chinese soldiers and their weapons and equipment, to inflict casualties, and to destroy positions. Second Lieutenant Kwak Sang In had his reinforced platoon from the 3d Company, 1st Battalion, equipped with rifles, carbines, machine guns, flamethrowers, and explosives. Target for the attack was an enemy outpost four miles south of Panmunjom that overlooked the Sachon River.

The patrol followed the general pattern of previous raids. It made use of supporting elements positioned on high ground in front of the objective. In this action the patrol struck from the rear, using artillery fire for both the assault and the withdrawal. Another similarity existed in that the results were nearly the same—no prisoners taken but fewer casualties to the attackers. One difference from earlier operations was that this patrol employed flamethrowers and TNT for destroying bunkers and inflicting casualties. Both weapons were credited in the killing of 12 and the wounding of 6 Chinese, in destroying 1 mortar and 7 bunkers, and in burning 3 other bunkers and numerous automatic weapons and rifles. Because of the heavy weight of a loaded flamethrower and the small size of the Korean Marines carrying these weapons, the flamethrower operators were fairly well exhausted by the end of the patrol.
Operations in West Korea  
Pat Meid and James M. Yingling

Chapter 2. Defending the Line  
A Long Fourth of July

The approach of the American Fourth of July holiday marking an earlier struggle for freedom was appropriately accompanied by ground action initiated by all of the mainland MLR regiments. In the KMC area, a 3 July raiding party struck at forward enemy positions before dawn, killing nine Chinese. In the center regimental sector Colonel Thomas C. Moore’s 7th Marines were also engaged in an active sector defense. In the left battalion spot 3/7, which had replaced 2/7 on line, dispatched raids on each of the first three nights of the month. Its Company G patrol on the night of 2–3 July was to be involved in one of the most costly small unit actions in the western Korea tour of duty for the Marine division.

Operational plans called for the platoon night raid on the 2d to be followed by a dawn attack the next morning. In both actions, the prisoner-taking aspect of the mission was considered a primary one. The early part of the operation was uneventful. One platoon moved forward toward the objective, Hill 159 (Yoke), 1,200 yards beyond combat outpost (COP) White, to the regimental left, without making contact with the enemy. The platoon then established a base of fire on favorable terrain from which the attack by the second platoon could be supported.

The second platoon passed through the forward position of the first shortly before 0630 and moved out into enemy terrain. It advanced less than 300 yards before its progress was halted by a Chinese force of battalion strength occupying the objective, Hill 159. Heavy enemy rifle and machine gun fire, hand grenades, mortar and artillery deluged the advancing Marines. Many of them quickly became casualties, but the operation continued, due in part to the determination and initiative of the NCOs. One of these was Staff Sergeant William E. Shuck, Jr., in charge of a machine gun squad. When the leader of one of the rifle squads became a casualty, Sergeant Shuck assumed command of that squad in addition to his own. Although wounded, he organized the two units and led them against the objective. Nearing the summit of the hill, the sergeant was hit a second time. Still he refused evacuation, remaining well forward in the lines to direct his assault force.

It was not until he had received orders to break contact with the enemy that the sergeant pulled back from the attack. During the withdrawal he looked after the other Marine casualties, making certain that all dead and wounded had been evacuated from the zone of action. While directing the last of the evacuation, Sergeant Shuck was struck by a sniper’s bullet and killed by this third hit. He was one of four Marines killed in the engagement. Forty others were wounded. Although no Chinese were captured, Marines estimated the enemy suffered losses of 50 killed and an additional 150 wounded.

To the east of the 7th Marines, the 5th Marines in the right MLR sector ordered a company-size patrol, also on the night of 2–3 July. Company A, 1/5 was directed to attack successively three outposts in the vicinity of the village of Samichon along the river bearing the same name and two miles beyond the point where the MLR crossed the river. After the reinforced company had taken the first two objectives, which were unoccupied, it received orders from division to return to the battalion area. Despite the fact the patrol had ventured far beyond the Marine lines, it did not come into contact with any Chinese forces.

A 2/5 combat patrol leaving the MLR just after dawn was successful in inflicting casualties on the enemy, taking prisoners, and destroying enemy field fortifications. The patrol made good progress until a Marine inadvertently set off an enemy mine. This mishap gave away the patrol’s location and prompted reprisal by the Chinese. A one-hour fire fight followed. Then the patrol called in smoke and returned under its cover to JAMESTOWN. Marine casualties were 1 killed and 11 wounded. The second 2/5 patrol that same date was a
successful ambush completed 10 minutes before midnight. In the brief clash that developed, Marine ambushers killed 6 enemy and wounded 8 more. The Marine force suffered no casualties.

The ambush patrol returned 15 minutes after midnight on 4 July. Even at that early hour division artillerymen had already initiated an appropriate ceremony to mark the Fourth. On 2 July, I Corps had directed the massing of fires on 4 July on the most remunerative targets in each division area. All objectives in the corps sector were to be attacked simultaneously at specified times for a one-minute period by employing a firing technique known as time on target (TOT). Normal daily fires were also to be carried out. Designated as Operation Firecracker, the shoot expended 3,202 rounds in the division sector. Light and medium battalions of the 11th Marines, plus its 4.5-inch Rocket Battery destroyed some enemy trenches, bunkers, mortar and artillery positions, and damaged others. The division reported that the special fires on 4 July had also resulted in 44 known CCF casualties, including 21 dead, and 12 more who were estimated to have been injured.

More casualties, however, resulted from the issuing of another I Corps directive, this one dealing with the conduct of raids to seize prisoners, obtain information about the enemy, and to destroy his positions, supplies, and equipment. Back in June, the Eusak commander had first stressed to his corps commanders the increased importance of combat raids to obtain additional intelligence during this period of stabilized conflict.

Although General Selden had submitted two division plans, he strongly believed that smaller patrols could accomplish the objective with fewer casualties and loss of life. In particular, the division commander pointed out to I Corps that adequate defense of the 35-mile-long Marine division front did not permit the withdrawal of a sizable force for patrol missions without endangering the security of the entire Corps sector. The attack order was issued, however, on 3 July for the first large-scale raid to be conducted prior to 7 July. The code name BUCKSHOT 2B was assigned for this particular raid. As soon as he received the date of execution for the proposed operation, the Marine division commander advised I Corps that designation of 7 July as the cut-off date for the raid precluded proper rehearsal of attack plans. The operation would also conflict with rotation to the States of 2,651 Marines, whose replacements would not be available until 11 July. Corps turned a deaf ear; division then ordered a battalion-size attack for the night of 6–7 July.

Before dusk on 6 July, Lieutenant Colonel Daughtry’s reinforced 1st Battalion, 7th Marines moved into position—the left, a tank-infantry force, A/1/7 (still under Captain Thompson), to create a diversion; in the center, the main assault force, Company C (Captain Robert A. Owens); and on the right, a reinforced platoon from Company B (Captain Lyle S. Whitmore, Jr.) to support the attack by fire from positions close to the objective, Yoke. Earlier, three reinforced squads from Captain Thompson’s unit had occupied combat outposts in the area of operations to deny the use of key terrain to the enemy and to provide additional fire support in the attack. At 2200, Captain Owens’ Company C crossed the line of departure and set its course for Yoke, three-quarters of a mile northeast. Five minutes later the Company B support unit moved out to occupy the intermediate objective, COP Green, one-half mile southeast of Yoke. As it took up positions on COP Green, Captain Whitmore’s Company B platoon discovered that no Chinese were in its vicinity; in fact, the platoon was not to encounter any enemy forces during BUCKSHOT.

Even though Company B failed to engage any Chinese, the remainder of the battalion encountered more than its share. About 450 yards southwest of the objective the Company C attack force was hit by an enemy ambush, which cut off Captain Owens’ lead element. Although the Chinese directed strong efforts at halting the Marine advance, they were unsuccessful in this attempt. The Marines pressed the attack and seized Yoke 20 minutes after midnight.

On the left, the diversionary attack unit, Company A supported by the five tanks of the 2d Platoon, Company D, 1st Tank Battalion, and by a section of flame tanks from the armored battalion headquarters, began its mission at 2355. In three-quarters of an hour, the tank-infantry unit reached its objective, the first high ground southwest of Yoke. Tanks turned their 90mm guns on known Chinese positions on the hill to the north. During the
next hour, the big guns of the M–46 medium tanks sent 49 rounds into enemy emplacements. The Marine tanks ceased fire at 0113 when Captain Thompson was alerted to assist Company C. He left one rifle platoon with the tanks.

Over on the high ground to the north and east, the attack force was under heavy fire from Communist mortars and artillery and was also receiving a number of enemy small-unit probes. At 0200, Company A made contact with Company C. Captain Thompson found the main force somewhat disorganized as a result of the wounding of the company commander, Captain Owens, the loss of several key officers and NCOs, and the effects of the lead element of Company C being ambushed and cut off. After being briefed on the situation by Captain Owens and conducting a reconnaissance, Captain Thompson recommended to the battalion commander that the entire force be recalled before daylight. At 0310 the two companies at Yoke began to disengage, returning to the MLR by 0636 on the 7th, without further casualties.

The one platoon of Company A and seven tanks of the diversion unit were still in their forward positions on the left and had prepared to resume firing. At dawn the M–46s relaid their guns on targets that had become visible. Tank gunners destroyed two observation posts and three machine gun positions and damaged many feet of trenchlines. At one point in the firing, the tank platoon commander, Second Lieutenant Terry K. Donk, using a power scope, observed “... two officers in forest green uniforms without equipment. They were definitely giving orders to machine gunners and infantry.”[76] These 2 were among the 19 counted casualties (10 wounded) that the tankers inflicted during BUCKSHOT.

With the return at 0645 of the tank-infantry diversion force, the special operation for obtaining prisoners and information ended. No Chinese had been captured and no data gleaned from Communist casualties, listed as the 19 reported by the tankers and an estimated 20 more wounded or killed. Marine casualties from the operation were out of proportion to the results achieved—12 dead, 85 wounded, and 5 missing. It had been a high price to pay for a venture of this type, particularly when the primary objectives went unaccomplished.

During the entire 4–7 July period, 22 Marines had lost their lives in combat operations. Division reported that 268 Marines had been wounded during the long Fourth of July. These figures were the highest since September 1951 when large scale attacks by UN forces had first been abolished in line with the new tactic of positional warfare that would be waged until the truce talks resulted in an armistice.
Chapter 2. Defending the Line
Changes in the Lineup

Division casualties were considerably higher during the first week in July than they were for the rest of the month. Once the pace of combat slowed, following the initial flurry of activity, the front again settled down to the patrol, raid, and ambush routine that had marked the static period of the Korean fighting. In accordance with the orders previously issued by higher authority the division placed continued emphasis on gathering all information it could about the enemy, his dispositions, and tactics. To assist in this effort, General Selden in July removed his reconnaissance company from defense of its small sector of JAMESTOWN and directed the unit to conduct training for its primary mission, obtaining intelligence about the enemy. Its place on the MLR was assumed by the two amphibian tractor companies then on line.

Another change of lineup took place on 14 July. At this time a battalion from the 15th Regiment, U.S. 3d Infantry Division took over the role of the maneuver element in the Kimpo Provisional Regiment, then held by 1/1, thereby releasing that battalion to its parent unit. With this change, the 1st Marine Division had a full regiment in reserve for the first time since its arrival in western Korea. A later shift in units occurred on 26 July when the 7th and 1st Marines traded places and missions. At that time the MLR, from west to east, was manned by the KPR, 1st AmTrac Bn, KMC, 1st Marines, and 5th Marines.

Opposing them in mid-July were an estimated 27 infantry battalions, whose primary missions were to defend the sectors assigned. The division credited these units with the capability of launching limited objective attacks at any time or of taking part in a major attack with a force of up to 57 infantry and 16 artillery battalions, augmented by 40 tanks or self-propelled guns. It was estimated also that the enemy could cross the Han in battalion strength in the vicinity of the northern shore of Kimpo Peninsula at any time and that Communist aircraft could attack anywhere in the division sector. Enemy forces identified at the end of July, from west to east, were the 193d, 195th, and 194th Divisions of the 65th CCF Army; the 189th Division of the 63d CCF Army; and the 118th Division, 40th CCF Army, which had recently moved from a position opposite the Commonwealth and U.S. 3d Infantry Divisions. Infantry strength of the Communists was established at 28,328.
Marine infantry strength at the end of July 1952 was little more than half of the Chinese total. The division personnel strength was maintained by the monthly replacement and rotation program of Marines to fill vacancies created by the return of Marine combat personnel to Conus (Continental United States) and combat losses. In the second quarter of 1952, the division rotated 433 officers and 6,280 enlisted men from Korea. In exchange, 506 officers and 7,359 enlisted men arrived from the States in replacement drafts. A new arrival could expect to stay with the division about 10 1/2 months.

In the late spring of 1952 many of the division’s new replacements were “dental cripples”—Marines requiring dental treatment, even emergency care in some cases.[79] General Selden directed that contact teams be formed to meet the replacement drafts in Japan. During the last leg of the trip to Korea dental personnel screened the new combat Marines on shipboard. By the time the division area had been reached, the dentists knew what remedial work would be required by incoming troops. At the end of the summer the problem was well under control.

Even though the 1st Marine Division in July continued to be somewhat in excess of its authorized strength in total personnel, it had certain imbalances and was in rather short supply of certain ranks and specialists. While the normal tour for most infantry officers ranged from 9 to 12 months, an excess of company grade officers, particularly lieutenants, had resulted in a reduction of the Korean tour for them to just six months. This brief period of duty plus an intra-division rotation policy that caused a mass shifting of duty assignments every three-to-five months tended to reduce unit combat efficiency. On the other hand the change of assignments had a favorable effect in that it broadened the experience of individual Marines. Beginning in the summer of 1952, however, the division modified this policy to reduce its number of intra-division transfers.

Personnel shortages existed in both the artillery and tank MOSs (Military Occupational Specialty). Mass rotation of reservist company grade artillery officers had necessitated the transfer of infantry officers to the 11th Marines for training and reassignment within the regiment. During the time when the supply of artillery officers was limited, however, the quality of support rendered remained high.[80] The other major shortage in the division was that of qualified crewmen—both drivers and gunners—for the M–46 tanks. Neither tank driving nor gunnery for the M–46 was taught in the tank crewmen’s course conducted at Camp Pendleton, California. General Selden requested of Lieutenant General Franklin A. Hart (CG, FMFPac) that “tank crewmen be thoroughly trained prior to leaving the U.S.”[81]

Fundamental to the tank problem was a shortage of the M–46 itself. At the training facility, Training and Replacement Command, Camp Pendleton, M–46 engines had been available for maintenance instruction but no tanks for the training of gunners and drivers.[82] General Hart pointed out this deficiency to the Commandant, General Lemuel C. Shepherd, Jr. On 13 August the Commandant directed the transfer of five tanks to the training installation from the 7th Tank Battalion,[83] also located at Camp Pendleton. At the same time General Shepherd ordered an increase in the school quota for tank crewmen. The first graduates would not reach the division in Korea, however, until the November draft.

The presence of not fully trained personnel in a combat zone was not limited to the division. In the summer and fall of 1952, a large number of volunteer reservists, both pilots and enlisted replacements with little experience since the end of World War II, joined the 1st MAW. It had not been possible for the Stateside training and tactical squadrons, themselves short of personnel and aircraft, to qualify all pilots as combat ready. It fell
upon the wing in Korea, therefore, to take the needed corrective action. The more experienced 1st MAW pilots, after completing their combat missions, flew instructional flights to help prepare the rusty fliers. Some reserve pilots, away from regular daily flying since 1945, found the adjustment too difficult and turned in their wings. MACG–2 operated “Pohang U,” a training course for forward air controllers. In practically every squadron, there were shortages of electronics personnel. Jet squadrons found mechanics hard to come by. There were never enough motor transport replacements. For unqualified enlisted Marines, squadrons operated on-the-job training programs.

To maintain a reasonable degree of unit proficiency, the wing limited the monthly turnover of pilots to 25 percent. Like the division, the wing employed split tours between an officer’s primary duty and staff work to broaden his experience. In some cases the amount of time required by administrative work as compared to a pilot’s actual flying time reduced his proficiency in the air. In June, Task Force 95 reported that the proportionately large number of take-off and landing accidents on the carrier Bataan was caused by the rapid turnover of pilots and their need for frequent carrier qualification.[84]

A Marine pilot joining the wing could expect his assignment to last for 6 to 9 months. Personnel in a nonflight status had longer tours of 10 months to a year. Wing replacements were made on an individual basis, although there were plans that by mid-1953 a new policy of at least partial squadron replacement would be in effect. That 1st MAW squadrons were able to operate effectively on an individual replacement system was attributable to the peculiarity of combat conditions in Korea. Absence of real enemy aerial opposition permitted the use of basic, parade-type flight formations and non-tactical approaches and attacks. An unusually high-level of experienced pilots in each of the two wing groups helped in the establishment of training programs and operational doctrine. The FAF limitation of four aircraft per flight eliminated the problem of large-scale, precombat squadron training as well as the difficulty of controlling and coordinating a large number of planes in a strike.
Logistical support of the division and wing remained largely unchanged through July. Several modifications did take place, however, and these were:

1. The change of responsibility for logistical support of ground-based units in Korea from Commanding General, 2d Logistical Command to the Commanding General, Korean Communication Zone (CG, KComZ).
2. The opening of a pipeline system for resupply of aviation fuel at K-3, beginning in May.
3. The beginning of increased support for airbase maintenance at those airfields housing Marine squadrons.

Resupply of common items used by both Marine and Army units was still being hampered by the Marines’ limited knowledge of the Army supply system in effect and by their inability to obtain the catalogues, orders, and directives essential for requisitioning.

Two logistical operations, both of an engineering nature, took place between May and July 1952 in western Korea. One was Operation TIMBER, undertaken to provide lumber required to complete the bunker construction on the JAMESTOWN, WYOMING, and KANSAS lines. The division had estimated that three million linear feet of 4 x 8-inch timbers would be needed. Since lumber in this amount was not available through supply channels or standing timber in the division sector, Corps assigned the Marines a wooded area 50 miles to the east in the U.S. 45th Infantry Division sector. On 12 May a reinforced engineer platoon, under Second Lieutenant Roger E. Galliher, a truck platoon, and 500 Korean Service Corps (KSC) laborers, began the cutting, processing, and hauling of timbers which were then trucked to the railhead. Between 500 and 1,000 logs were cut daily. When the operation ended in July a total of 35,194 sections of timber had been cut. This was still not enough lumber to complete the required construction. Eighth Army then made up the difference, mostly with 12 x 12-inch timbers 30 feet long; these the Marine engineers cut to 4 x 8s for standard bunker construction.

Operation AMAZON, published by I Corps on 12 June, ordered that bridging preparations be made for the approaching summer flood season. The previous August at the Honker Bridge, the one nearest the railhead, the Imjin had crested some 27 feet above normal. One reason for the precautionary efforts taken to insure bridge security during the flood season was the potential damage the Chinese could cause. Since they controlled the upriver area of the Imjin, before it entered the division sector, they could introduce floatable debris or explosives into the swift running flood waters. Another major concern was the logistical problem that would be faced by forward MLR units in event the bridges became impassable and the enormous strain that would thus be placed on helicopter resupply operations.

The I Corps directive specified that its divisions maintain a transport capability that would enable medium tanks to pass safely over bridges spanning the major rivers in their I Corps sector. The order also called for the removal of debris that could cause damage to bridges. Removal of those bridges vulnerable to flood conditions and the erection of emergency river spans were also to take place on corps order.

To carry out the I Corps operational order, General Selden put the division’s own AMAZON plan into effect on 1 July. On this date Companies A, B, and D of Lieutenant Colonel Harry D. Clarke’s 1st Engineer Battalion began extensive preparations for debris removal from the four bridge sites in the division sector. Even before this, Marine engineers and shore party personnel had been trained at special schools to handle U.S. Army equipment provided for the AMAZON operation.

Beginning 1 June, division engineers began blasting away at objects that flood waters could loosen and
carry into the bridge supports. Bridge approaches were improved and their supports strengthened. Each company had a detail living at the bridge site for which it was responsible. With the advent of heavy rains, these Marines were to operate 24-hour boat patrols to keep the river free of debris. The engineers were also to maintain a round-the-clock debris watch at the four division bridges—Freedom Gate, or the Munsan-ni Railroad Bridge in the left regimental sector; Honker and X-Ray in the center; and finally, Widgeon, very close to the Commonwealth boundary.

Heavy rains began on 27 July and continued until the 30th. On the first day the decking of Widgeon Bridge was completely submerged and Honker was removed to prevent its being carried away. Precipitation increased on 28 July and reached its peak on 29 July when 3.66 inches of rainfall were recorded. By the 30th, the rains had subsided but not before the overflowing Imjin had collapsed the X-Ray bridge. During the height of the four flood days, engineers fought the rains, flooding waters, and floating debris. The major effort took place downstream to save the Freedom Gate Bridge.

Assigned personnel removed debris from the bridge supports, guided large, dangerous pieces away with poles, while upriver the boat teams blasted still larger sections into manageable chunks that would pass between the bridge supports. These engineer efforts, in addition to regular repair and maintenance of the large road net, constituted the major ground activity in the 1st Marine Division sector in late July. August would bring more rains and emergency demands on the engineers, but the critical ground activity at that time would be directed against the Communists in the area around Bunker Hill.
THE TORRENTIAL RAINS that had fallen just before the end of July continued to affect ground operations into early August. Contacts between opposing forces were few and brief, and casualties remained correspondingly low. On 1 August, General Selden assigned the reserve regiment, the 7th Marines, the task of developing the secondary defense line, KANSAS, at the extreme right of the division sector. The 5th Marines, manning this regimental area and originally responsible for the construction, had been unable to reach the second line because bridging across the Imjin to the rear of the sector was washed out. By 3 July the division put a ferry service into operation at the site of the inoperable Honker Bridge for the purpose of feeding ammunition to combat units north of the Imjin. The critical resupply problem began to ease the next day when the waters overflowing the Widgeon Bridge further upstream receded sufficiently to permit restoration of normal vehicular crossings there.

Traffic in the air had, quite naturally, been less affected by the heavy rains and by the flooded, mucky terrain that was slowing ground movement throughout the entire division area. Flight operations during the first week of August produced a daily sortie rate that would approximate the monthly average. In fact, the month of August was to become the record one for 1st MAW attack and fighter pilots during 1952, with a total of 5,869 sorties flown.

While the air people in August were maintaining a good weather pace against the enemy following the July downpours, the Communist ground troops apparently found the going too difficult to mount any sustained attack. The enemy merely continued his active defense, with an average of two contacts daily, while busily engaged in advancing his OPLR by creeping tactics. Even the usually assiduous Chinese artillery was strangely quiet. With respect to the enemy’s excellent artillery capability, the 1st Marine Division in July learned that the Chinese had introduced a 132mm Russian rocket in their combat operations. The presence of this truck-mounted launcher, the *Katusha*, which could fire 16 rockets simultaneously, was indicated by a POW who had been informed by “his platoon leader that there were two *Katusha* regiments in the CCF.”[2] In addition to this new enemy weapon, the Marine division reported the same month that positive sightings had been made of self-propelled guns emplaced well forward, and that there was an “indication that these guns were being used to fire direct fire missions from frontline revetments.”[3]

Communist forward positions were gradually encroaching on JAMESTOWN. Since April 1952 the division had noted every month that the enemy was continuing to extend his trenches in the direction of the Marine MLR. The Chinese technique was to occupy key, high terrain at night, prepare the ground during darkness by digging trenches and constructing bunkers, and then vacate the area before daybreak. After nightly repetitions of this process had produced a tenable position, the enemy moved in and occupied it. By means of these creeping tactics, the Chinese hoped to acquire the dominating terrain necessary for controlling access to Seoul. The ultimate goal of the Communist forces was believed to be the 750-foot-high Paekhak Hill,[4] the Marine high ground position also known as Hill 229, just over a mile east of the road leading to Panmunjom and Kaesong.

During the four months that the 1st Marine Division’s mission had been to conduct an aggressive defense of the EUSAK left flank, Marines had become familiar with a number of Chinese small unit infantry tactics. Shortly after assignment of the division to western Korea, General Twining, the ADC, had observed that the Chinese first made a diversionary frontal assault while the main force maneuvered around UNC defenders to attack from the rear. Almost invariably the Chinese employed this envelopment technique. Occasionally the
enemy also used more passive measures, such as attempting to demoralize Marines in the front lines and subvert their allegiance by English language propaganda broadcasts. These attempts represented wasted effort. Not one Marine was swayed.

In some cases the Chinese were imaginative in changing their tactics or improvising new ones. This tendency had been noted as early as May by a 5th Marines battalion commander, Lieutenant Colonel Nihart, after 1/5 had engaged the enemy in a limited objective attack:

". . . when friendlies marked targets with WP [white phosphorus], the enemy would immediately drop rounds of WP between the target and friendly troops to conceal the target and to confuse friendly FOs [artillery forward observers]; the enemy tried very hard to take prisoners (rather than shoot a friendly, they would often attempt to knock him out with a concussion type grenade); counterattacks were made in waves of four to seven men deployed in a formation somewhat similar to the Marine Corps wedge; snipers were deployed in holes that were mutually supporting; concerted efforts were made to knock out automatic weapons; . . . for close-in fighting, the enemy used PPSH [Soviet-made 7.62mm submachine gun] guns and grenades rather than bayonets; the enemy attacked behind well coordinated mortar fire; some enemy snipers were observed to have bushes tied to their backs. . . ."[5]

On occasion 1st Division Marines found evidence that the enemy had infiltrated their lines. It appeared the most likely spot for line-crossers to make their way into the Marine rear area was from the far bank of the Imjin between the Sachon and Han Rivers where the enemy MLR was only a short distance from the sector held by the 1st Amphibian Tractor Battalion. Two enemy agents “armed with pistols of German manufacture, six hand grenades, and one set of field glasses”[6] had been apprehended here by a Marine reconnaissance company patrol. The prisoners had stated they were “part of a force of one thousand men who were infiltrating to form a guerrilla force somewhere in South Korea.”[7] Six days later, after a brief fire fight between a small group of Chinese and a Marine outpost in the center of the division sector, the defenders discovered that two of the three enemy dead wore under their own clothing various articles of Marine uniforms. Neither of the Chinese had identification or any papers whatsoever. It was believed that both were enemy agents and that the attack on the outpost was a diversion “for the express purpose of detracting attention from infiltrators.”[8]

Even though enemy tactics and attempts to penetrate Marine positions demonstrated a good deal of soldierly skills, his conduct of defensive operations was nothing short of masterful. This was especially true of Chinese construction of underground earthworks. It appeared that the Chinese had no single pattern for this type of field fortification. Like the Japanese in World War II, the Chinese Communists were experts in organizing the ground thoroughly and in utilizing a seemingly inexhaustible supply of manpower to hollow out tunnels, air-raid shelters, living quarters, storage spaces, and mess halls. Americans described the Chinese as industrious diggers, [9] who excavated quickly and deeply for protection against UN bombardments. From numerous reports of ground clashes in the 1st Marine Division sector and from observations made by Marine pilots, it became known that the enemy was quick to seek cover whenever he was exposed to sustained artillery bombardment or air attack.

What was not known, however, was the extent of these subterranean shelters. One Chinese account, allegedly written by a reconnaissance staff officer named Li Yo-Yang, described the protection of a CCF shelter to a recently captured UN prisoner as they were under Allied artillery bombardment. While shells exploded all around the position the enemy boasted: “There’s no danger of being killed on a position fortified by the Chinese People’s Volunteers . . . Don’t you know it’s impossible for your shells to penetrate our air-raid shelters?”[10] An American report on enemy field fortifications estimated that the amount of earth cover in Chinese air-raid shelters was as high as 20 feet, and in frontline defensive positions, up to 33 feet.[11]

Marine defensive installations carved out of the ground were not so extensive as those of the enemy opposing JAMESTOWN. “In spite of orders, instructions, and inspections many bunkers were only half dug in,
then built up above the ground with sandbags,” observed one Marine battalion commander. Back in April, just after the Marine division had settled in the west, its 1st Engineer Battalion, using U.S. Army drawings, had published bunker construction plans. Express instructions to frontline units were to “construct bunkers to provide simultaneously living and fighting space. Overhead cover on all bunkers will be such as to withstand direct hit from 105mm and to allow friendly VT fire over position.”

Some officers felt it was, perhaps, the work-during-light, patrol-at-night routine that resulted in the shallow draft Marine bunkers. Others suggested that the relatively limited defensive training received by the more offensive-minded Marines created a natural apathy to digging elaborate fighting positions.

It took a hole 12 feet square and 7 feet deep to house the Army, Lincoln-logs-type bunker the Marines first used in the spring of 1952. The fortification, using tree trunks up to eight inches in diameter, had a cover of seven to eight feet. This consisted of four feet of logs, and three-to-four more feet of rocks, sandbags, and earth fill. By the summer of 1952, the division developed its own style of bunker, a prefabricated timber structure designed to fit into a hole eight feet square and somewhat less than seven feet deep. This size fortification could accommodate a .50 caliber machine gun, crew members, or several riflemen. Provision was also made for the inclusion of a sleeping shelf in the rear of the bunker. Its construction required no saws, hammers, or nails, only shovels to excavate. The major drawback to erection of the prefab was the difficulty in manhandling the heavy roofing timbers, 11 feet long, 12 inches wide, and 4 inches thick. On top of this was placed a two-foot layer of sandbags, tarpaper covering, and a four feet high layer of earth that completed the structure and partly camouflaged it.

Battlefield construction was carried out by the infantry regiments to the limit of unit capabilities. The division engineers, one company per frontline regiment, augmented at times by shore party units, supplied the technical know-how and engineering materials and equipment. These combat support troops processed the lumber for bunker construction and built fortifications for forward medical treatment and one bunker for observation of battle action by civilian and military dignitaries, irreverently called VIPs (Very Important Persons), who frequently visited the division. Engineers also erected some of the barbed wire barriers in the forward areas and, when necessary, cleared firing lanes for weapons housed in bunkers.

The processing of timbers for easier and faster bunker-construction had begun on 28 July, but this was hardly in time for the most difficult fighting the division had faced thus far in western Korea. Given the name Bunker Hill, this battle would take place in the center sector of the division line manned since 27 July by Colonel Walter F. Layer’s 1st Marines. On that date Lieutenant Colonel Armitage’s battalion, 3/1, took over from the 3d Battalion, 7th Marines on the left, and 2/1 (Lieutenant Colonel Roy J. Batterton, Jr.) relieved the 2d Battalion of the 7th Marines on the right. Across No-Man’s-Land, units of two Chinese divisions faced the 3,603 men of the 1st Marines. From west to east opposite the Marine regiment’s frontline battalions were elements of the 580th Regiment, 194th Division, 65th CCF Army and of both the 352d and 354th Regiments, 118th Division, 40th CCF Army. The 352d Regiment held most of the area on which the battle would be fought. Enemy combat efficiency was rated as excellent and his forward units were well-supplied. The Chinese conducted an active defense, using limited objective attacks, numerous small-size probes, and creeping tactics to extend their OPLR line. Communist soldiers offered well-coordinated and tenacious resistance to Marine patrols, raids, and attacks. Within enemy lines a 775-foot elevation, known as Taedok-san, was situated directly north of the Marine division center and commanded the entire Bunker Hill area.

On JAMESTOWN, the dominating height was Hill 201, 660 feet high and immediately to the rear of the MLR in the left battalion sector. Southwest of this elevation was the Marine stronghold, Hill 229, just 23 feet lower than Taedok, and believed by the Marines to have been the objective of the August battle. Directly north of Hill 201 was Hill 122, adjacent to the enemy OPLR, and called Bunker Hill by the Marines. It was shortly to
become the scene of bitter fighting. The crest of Hill 122 was about 350 yards long. At a distance of about 700 yards, it generally paralleled the northeast-southwest direction of JAMESTOWN in the left of the 2/1 sector and adjoining 3/1 sector.

Southwest of Bunker and a little more than 200 yards from the Marine MLR was Hill 124. This Hill 124–122 axis, for tactical purposes, was known as the Bunker Ridge. The ridgeline, roughly “cashew” in shape almost anchored back into the MLR on the forward slopes of Hill 229. To the northeast of Bunker Hill and separated from it by a wide saddle[19] was another enemy position, Hill 120. (See Map 9, for outposts and key hill positions in the 1st Marines center regimental area in early August.)

Click here to view map

Approximately one mile east of Hill 124 was Hill 56A, or Samoa, the right flank limit of the immediate battlefield. It guarded the best avenue of approach into the Bunker Hill area, the Changdan Road. Another Marine position west of Samoa was Hill 58A, or Siberia, a sentinel overlooking a long draw running down the east sides of Hills 122 and 120. Both Samoa and Siberia were outposted by squads. Another 1st Marines squad occupied Hill 52, on the other side of Changdan Road and not quite a half-mile east of Samoa. The entire battlefield was cut up by numerous gullies and draws, most of which paralleled Bunker Hill.
The first round in the battle of Bunker Hill began as the fight for Siberia, Hill 58A. Just slightly more than a quarter of a mile from JAMESTOWN, this squad-size outpost, the most western in the right battalion sector, had been occupied in June when the division moved its MLR forward. Since Siberia was located halfway between the Marine MLR and the Communist OPLR, the Marine seizure of Siberia prevented the Chinese from holding terrain suitable for employing 60mm mortars against Marine frontline troops. Strong enemy outposts on Hills 120 to the north and 110 to the northeast constantly threatened the squad on 58A. From these two forward positions, Chinese troops early on 9 August 1952 streamed down to Siberia, launching in the process the Bunker Hill battle.

Just before 0100 an estimated four enemy squads fell upon Hill 58A, outposted by Company E Marines. Using assorted infantry weapons, the raiding party forced the outnumbered Siberia occupants to withdraw. By 0145 the outpost Marines returned to the MLR. At this time the JAMESTOWN sector south of the outpost, also held by Captain Jesse F. Thorpe’s Company E, was under attack by approximately 50 Chinese.

After breaking up the enemy assault by well placed friendly mortar fire, the Marines enjoyed a brief respite from Chinese pressure and formulated plans to recapture Siberia. It was decided that a reinforced Company E platoon would counterattack to regain the outpost. At 0355, the 11th Marines fired a five-minute preparation against the objective. On schedule, the platoon crossed JAMESTOWN at 0400 and in the darkness headed towards the outpost. Advancing carefully to avoid detection as long as possible, the Marines reached the area near the base of the hill by 0525. Heavy enemy artillery and mortar fire again forced the Marines to withdraw, and the platoon returned to its company CP at 0545. So far, the 58A action had resulted in the wounding of 32 Marines and the killing of another.

It became evident that more preparation, by Marine air and artillery, would be required for the recapture of Siberia. At 0650, four Marine F9F jet fighters worked the hill over with napalm and 500-pound bombs. Three hours later, a flight of Air Force F-80 “Shooting Star” jets dropped eight 1,000-pound bombs on the same target. With the aerial attack complete, Marine artillery opened fire. Five minutes later another Marine reinforced platoon launched a second ground attack. This was made by a unit from Company A (Captain Robert W. Judson) of the regimental reserve battalion, supported by a Company E platoon. Again the Marines advanced to the open sector south of the hill before the enemy reacted. As before, the Chinese response was a devastating barrage from their supporting weapons. The stubborn Marine assault against Siberia brought down the full weight of Chinese firepower—rifle, machine gun, and hand grenades—but the attack force would not be beaten off. At 1103 the Siberia hill again belonged to the Marines. Quickly the Company A platoon began to organize a defense to repulse the Chinese counterattack, which was certain to come.

In anticipation of a prompt and violent retaliation by the Chinese, and to help the speedily improvised defense efforts, the 2/1 battalion commander, Lieutenant Colonel Batterton, had sent forward the supporting platoon from Company E. This reinforcing unit reached Siberia within seven minutes after the Marine attackers had gained possession of the objective. The new arrivals scarcely had time to dig in before a hail of mortar and artillery shells forced all the Marines to seek cover in a deflated position on the southern side of the slope. From here, the 2/1 force directed counter mortar and artillery fire onto the top and far side of Siberia and unleashed their own assault weapons against the Chinese soldiers pressing for possession of Siberia. By midafternoon, with heavy enemy counterfire on the position and their casualties reaching nearly 75 percent, the Marines were forced to
withdraw and return to their own lines. The hill had changed hands twice and the enemy had employed 5,000 rounds of artillery in the contested ownership.

Badly mauled by two actions against Hill 58A, Company E came off the lines to reorganize, exchanging positions with Company A, of Lieutenant Colonel Louis N. King’s 1st Battalion. About this time Company C, less one platoon, had moved from the 1/1 rear area forward to an assembly point behind 2/1 in preparation for a night counterattack to retake the now battle-scarred outpost. Without the customary artillery preparation, the attacking force at 2245 crossed the MLR at a point directly south of the former outpost Samoa, which had been abandoned earlier when Siberia fell. Working their way northwest towards Siberia, the Company C Marines, commanded by Captain Casimir C. Ksyczewski, cautiously approached the assault line. Reaching it at 0105 on 10 August the force deployed immediately and rushed the objective.

At about this time the Chinese defenders opened fire but could not halt the assaulting Marines. The struggle to regain the Siberia objective was fierce; some of the Chinese refused to yield and fought to their death. Most, however, held their defense positions only briefly before retiring to the refuge offered by the reverse slope of the hill. Gaining the crest of Hill 58A at 0116, the Company C commander ordered a platoon to the other side of the objective to dispatch remaining elements of the enemy force. The resulting fire fight lasted nearly four hours. At daybreak, however, the enemy, in estimated company strength, strenuously renewed his counterfire and, for a third time, forced the 1st Marines to retire from the disputed hill and return to the main line.

Later that day, at the regimental CP, Colonel Layer called a staff conference to decide on the best course of action. Successive Marine withdrawals had been caused by the intense enemy shelling. The key to its effectiveness was the observation provided the Chinese from Hills 122 and 110. Heavy enemy fire had also caused most of the casualties, 17 killed and 243 wounded, in 1st Marine ranks. It was decided to shift the battle area to better restrict this enemy capability not only to observe Marine troop movements but also to call down accurate fire on friendly attacking units. Bunker Hill, an enemy outpost west of Siberia, was selected. In the eyes of 1st Marines tacticians, possession of Hill 122 instead of Hill 58A presented three major advantages:

- Hill 122 offered excellent observation into the rear of enemy outposts;
- Possession of Hill 122 would greatly strengthen the MLR in the regimental sector, effectively neutralize Siberia, provide dominating terrain that was more defensible than 58A; and
- Bunker offered an excellent opportunity for an attack employing the element of surprise against the enemy.

To help preserve this tactical surprise, the plan for the Bunker Hill attack included a diversionary attack against Siberia. Making this secondary effort would be a reinforced rifle platoon and a composite unit of gun and flame tanks. For the main attack, Lieutenant Colonel Batterton’s 2d Battalion would employ a reinforced rifle company with supporting artillery and armor, if needed. The operation was to be conducted at night, to further ensure the opportunity for tactical surprise. For the same reason, the attack was not to be preceded by artillery preparation on either objective. To the right of the 1st Marines, however, Colonel Culhane’s 5th Marines would support the diversion by artillery and tank fire placed on enemy strongpoints in the Ungok area, about 1 1/4 miles northeast of Siberia. During daylight, air, artillery, and tanks attacked targets on both 122 and 58A. Priority of effort in the 1st Marines area went to units preparing for the Siberia-Bunker offensive.
At dusk on 11 August, 1,000 yards behind the MLR in the western sector of the 2/1 line, the eight Company C tanks that were to provide much of the diversionary effort at Hill 58A moved out of their assembly area. Leading the column east of the MSR, Changdan Road, were four M–46 mediums, mounting 90mm guns. They were followed by an equal number of flame vehicles. Each M–46 was specially equipped with an 18-inch fighting light, actually a searchlight with a shutter over the lens, to be used for battlefield illumination. The flame vehicles, World War II M4A3E8 mediums, mounted a 105mm howitzer in addition to the flame tube. As the tanks reached the Changdan Road, they turned north, crossed the MLR, and proceeded to preselected positions. (See Map 10.)

When the M-46 gun tanks were in position to fire on Siberia and its flanks, their powerful 90s opened up on the objective. At this time, 2110, the first section of flames (two tanks) made its way along the stream bed between the MLR and Hill 56A (Samoa). Lighting their way with very short bursts of flame, the two tanks advanced in this manner to the base of Hill 58A. There the vehicles paused momentarily, then began to move up the near slope, using longer spurts of flame to sear the ground and sparse vegetation to the crest of the position. The gun tanks, in the meantime, had shifted their fire from Siberia northeast to neutralize Hill 110. When the flame vehicles reached the top of Siberia, they lumbered down the far slope, firing then in shorter bursts and sweeping the area with machine guns to discourage any enemy infantry interference.

With some fuel reserved to light their way on the return trip, the flame section reversed its course from the far side of the objective, mounted the crest, and clanked back to the Changdan Road. When the first section had returned, the second departed, completing its mission in much the same manner. Tank personnel of both groups observed that the enemy artillery and mortar fire was medium to heavy on Siberia. Some rifle fire was also received. Gun tanks, firing from Changdan Road east of Siberia, experienced less fire from the Chinese.

Although the flame vehicles had completed their mission and were on their way home, the M-46s remained on position in support of the 3d Platoon, Company D which, at 2230, was advancing from the MLR to complete the infantry part of the diversion. Staying out of the low ground that the tanks had used, the platoon swept over Hill 56A at 2255 and immediately struck out for the further objective, Hill 58A. Gun tanks firing their 90s on the Chinese OPLR on Hill 110 and on Siberia illuminated the target area with their fighting lights, the shutter of which the tankers flicked open and closed during each five-second interval that the light remained on.

Less than an hour after crossing JAMESTOWN, the platoon from Captain George W. Campbell’s Company D reported the capture of Siberia. The enemy quickly made his presence felt at the objective; a half hour before midnight, he assaulted the hill in reinforced platoon strength. Ten minutes later the Chinese withdrew and the Company D Marines, in accordance with their battle plan, did likewise. At about the same time the 5th Marines, having completed its part in the diversion, also secured from the operation.

Ten minutes after the diversionary infantry had cleared Samoa while enroute to Siberia, the main attack force, Company B, which had come under operational control of 2/1 at 1800, crossed the MLR, the line of departure. Moving at a fast pace to preserve the element of anticipated surprise, the attack force, commanded by Captain Sereno S. Scranton, Jr., soon deployed two squads of the lead platoon against the near side of the hill. By 2318 on 11 August the squads were moving up Bunker Hill and, 10 minutes later, one platoon had gained the top of the objective and one was at the base of the hill, both moving northward along the forward slope.
advancing units neared the end of their sweep forward, they began to come under small amounts of rifle fire from the front and left flank of the position.[23] The Company B platoons continued to advance, returning well-placed small arms fire.

Soon the intensity of Chinese small arms fire increased; at the same time enemy mortars and artillery opened up on the company. Marines attempting to assault the top of Hill 122 also came under a hail of hand grenades hurled by the staunch Chinese defenders. After a brief but vicious fight at point-blank range, the Chinese gave ground on the eastern side, heading uphill. Several Marines pursued the fleeing enemy to the summit, then joined the rest of the assault units of Company B in organizing a defense. By 0300, 12 August the battle had quieted down and for a short while all firing ceased. Then, as the Marines began to dig in, a bypassed pocket of enemy resistance came to life. Two fire teams in the 1st Platoon took these Chinese Communists under fire.

Even as the fighting continued, Marines and KSC personnel were hauling fortification materials towards Bunker to consolidate the precarious foothold. For a while, enemy mortars unleashed a heavy fire against the newly won position, but by 0230 Company B was able to report that enemy shelling had stopped and that the objective was in friendly hands. A new fire fight broke out at 0345 between a small force of enemy soldiers occupying a draw forward of Bunker Hill and Marines nearby. The exchange of fire continued for nearly two hours, but short of harassing the Marines on Bunker Hill the enemy did not launch a counterattack. Dawn on 12 August revealed that thus far in the Bunker Hill fighting 1 Marine of Company B had been killed and 22 were wounded. The earlier diversionary attack on Siberia had resulted in only one Marine casualty, the wounding of the platoon commander, Second Lieutenant James W. Dion.

Personnel losses were kept to a minimum by the well-organized medical support and the efficient service of medical and evacuation personnel. A forward aid station was established in the vicinity of the Company E CP. Casualties that were not ambulatory arrived at this two-bunker installation usually by hand litter, other wounded men were transported in armored personnel carriers, U.S. Army tracked vehicles similar in appearance to the Marine LVT, that had accompanied the diversionary unit and were part of the Panmunjom rescue force stationed in the area of COP 2 on the 3/1 left flank. Wounded Marines were examined immediately. Minor injury cases were treated and discharged; more seriously injured personnel were given emergency treatment and evacuated. Movement to the rear was accomplished by ambulance jeeps. Helicopters, landing only 30 yards from the station, flew out the critically wounded. A sand-bag-protected squad tent was used to house casualties waiting to be examined. This emergency aid station closed down on 13 August, when action in the right battalion sector diminished.

Even though the remainder of the morning of 12 August was practically free of any retaliatory attempts by the Chinese against Bunker Hill, the Marines occupying the new position were not idle, for they anticipated an immediate and severe reaction for capturing the hill. Quickly, but methodically, the company dug in. At noon, regiment passed to 3/1[24] the responsibility for Bunker Hill and operational control of Company B. Consolidation of Hill 122 continued until about 1500, when the Marines were forced to put down their entrenching tools and grab their rifles instead. The Chinese had suddenly launched an intense mortar and artillery attack against the hill. Defending Marines expected to see enemy soldiers start up the western slopes at any minute.

Actually, more than an hour elapsed before the Communists initiated their first main ground attack to regain Bunker. By that time, heavy casualties from the continued shelling had forced Company B to pull back from the ridge and take up positions on the reverse (eastern) slope of Bunker Hill. At this point, with reduced Company B forces and with no radio communication between Captain Scranton’s unit and 3/1, Lieutenant Colonel Armitage sent 1/3/1,[25] under Captain Howard J. Connolly, forward from the MLR. Shortly before 1600, a force of more than 350 Chinese lunged out of the low ground of Hill 123, west of Bunker, to attack defensive positions along the ridge between Hills 124–122. Striking in rapid succession first the west side and
then the northern end of the Company B position to find a weak spot in the defense, the enemy counterattack finally concentrated on the southwestern part of the hill.

An intense exchange of fire raged here until 1715, when the defending fire of Company B plus the added weight of the Company I reinforcements combined to stall the enemy advance. Having failed to gain their objective, the Communists abruptly broke off their artillery and mortar fire and ordered their infantry to withdraw. They pulled back only to the far side of the hill, however. By 1740 the enemy was occupying his new post on the northern slope, while the Marines continued to hold their positions on the reverse slope of Bunker Ridge. Enemy supporting fires had lifted and a lull ensued in the fighting.
Operations in West Korea  
Pat Meid and James M. Yingling

Chapter 3. The Battle of Bunker Hill  
Consolidating the Defense of Bunker Hill[26]

Even before the Chinese had made their coordinated attack against Hill 122 in the midafternoon of the 12th, the 1st Marines had implemented a plan of action to assure that the critical position would remain in Marine hands. In addition to the movement of Company I/3/1 to reinforce Bunker Hill and of Company I/3/7 as its relief on the MLR, a precautionary displacement was also made of the 3/1 reconnaissance platoon to Hill 124 to tie in that terrain feature with both Bunker and JAMESTOWN and thus consolidate the defense north of the MLR and west of Bunker. (See Map 11.)

Other activities behind the line aimed at making the Marine position on the newly seized hill more tenable. As one step in this direction, General Selden shifted most of his reserve into the zone of action. Before the end of the day remaining units of 3/7 were placed under operational control of 3/1, and 2/7 was attached to Colonel Layer’s reserve. The 7th Marines was directed to place its 4.2-inch mortars on call to the 1st Marines. Priority of artillery support went to the Bunker Hill regiment. Within the 1st Marines, the regimental commander moved two provisional Platoons (118 Marines) of the reserve 1st Battalion to the 3d Battalion sector. All 81mm mortars in 1/1 were sent to the left battalion. The fire plan also called for employment of all the 60mm mortars that could bear on the crest of 124–122, with 81mm and artillery box-me-in barrage fires on the ridge and flanks.

Machine guns from the MLR were assigned missions on the crest of Bunker Ridge and 4.5-inch ripples were planned on the deep enemy approaches. Gun and flame tanks were to protect the right flank of Hill 122 where the steep draw between Bunker and the MLR offered the most dangerous approach into Bunker Hill. Supplies and fortification materials, meanwhile, were being carried forward and casualties taken to the rear by the relief party. Although 3/1 initially reported that the Bunker Hill fighting had resulted in 58 killed or wounded Marines, a later battalion count showed this number to be 34—5 killed and 29 wounded.

Most of the casualties had been caused by hostile shelling. Although the Hill 122 reverse slope afforded some cover from the Chinese artillery and mortars, the positions on the crest did not offer any protection, so Marines continued their trenchworks and other defensive preparations at a rapid pace and supporting fires were registered by 1900. The approach of night was certain to bring renewed Communist attempts to capture Bunker Hill.

At 2000, Lieutenant Colonel Armitage reported to division that his force on Hill 122 occupied the entire reverse slope and that the Marines of I/3/1 and B/1/1 were digging in and consolidating their scant defenses. Enemy shells were still falling on both Bunker and Hill 124. Company commanders forward of the MLR estimated that as many as 400 Chinese occupied the ridge on the other side of the slope from the Marines. Since the crest of the long Hill 124–122 ridgeline was fairly level, the gentle incline of the Bunker rear slope permitted defending Marine units excellent fields of fire to the ridge crest, a major consideration in the 3/1 battalion commander’s decision to adopt a rear slope defense. Moreover, the top of the ridge could be swept with direct fire from the MLR as well as supporting weapons from the two nearest companies on JAMESTOWN. Opposing Marine and Chinese forces were thus lined up for a continuation of the battle for Bunker Hill.

It appeared that the Chinese wished to attempt a diversionary tactic of their own. To draw attention away from Hill 122 they engaged a Marine outpost east of Bunker and a KMC ambush far to the left before attacking Bunker again. In the KMC sector, shortly after 2300, an enemy infantry platoon walked into a trap near the eastern edge of the Sachon and 500 yards south of the Munsan-ni-Kaesong rail line. The brief fire fight lasted
only 10 minutes before the Chinese broke contact.

Perhaps the ambush was incidental to the forthcoming attack against the Bunker complex, but this same reasoning cannot be applied to the Communist-inspired action which broke out shortly at Hill 48A, Stromboli, another friendly outpost far to the east of Hill 122. Near the right limiting point of Colonel Layer’s 1st Marines and the 5th Marines boundary, Stromboli was another Marine fire-team-by-day, squad-by-night position. It occupied a small rise 250 yards forward of the MLR and commanded the immediate sector in all directions. The entire MLR in the regimental right was dominated by the enemy-held Hill 104, a half-mile north of 48A.

Communist infantry opened the attack without benefit of any supporting arms preparation and rushed to seize Hill 48A early on the morning of 13 August, a few minutes after midnight. Defending Marines immediately responded with small arms and automatic weapons fire. By the time the outpost commander had informed battalion of the attack by radio, the far right sector of the 1st Marines line, held by Captain Clarence G. Moody, Jr.’s Company F, had also come under attack. Firing rifles and submachine guns and hurling hand grenades as they assaulted the main position, the Chinese attempted to penetrate the Jamestown defenses. In spite of the enemy’s concerted efforts, the Marine line remained staunch.

At Stromboli, the Communists met with no greater success, although they did cause enough casualties to warrant the dispatch of a Company F reinforcing squad. When this unit left the MLR, at 0106 on 13 August, the Marine line was still under a heavy attack not only from Chinese infantry but from hostile artillery and mortars as well. Out at Hill 48A the outpost remained in comparative quiet until the approach of the reinforcing party. As the Company F squad neared the base of the hill, Chinese infantry that earlier had been assaulting the Marine MLR turned their rifle and machine gun fire from positions on the JAMESTOWN side of the outpost. A heavy rain of devastating mortar fire engulfed the reinforcing Marines. On order, they broke off the approach march and returned to the company rear area.

On the main line, meanwhile, Company F positions were still being bombarded by Chinese artillery and assaulted by their infantry. Casualties along the entire line forced Lieutenant Colonel Batterton to order his 1st Provisional Platoon, Headquarters and Service Company, 2/1, to the Company F command post. After the clutch unit departed the battalion area, at 0210, and approached Captain Moody’s CP, enemy fires immediately intensified. A violent fight erupted to the left of the Company F sector, but the Marines there held. The Chinese then tried to punch holes in other parts of the company line, moving eastward along JAMESTOWN. Each failure to breach the line seemed to signal a decrease in the intensity of Chinese shelling.

This easing of Communist pressure against the main line enabled the Company F commander to put into operation a new attempt at the reinforcement and rescue of Stromboli. After the initial enemy assault in the early hours of 13 August had ended in failure, the Chinese made repeated attempts to capture the outpost. At one time it appeared that a company of Chinese had overrun the hill. Later, however, the Stromboli stronghold radioed that the enemy force, subsequently identified as only a platoon, had encircled the Marine position. To relieve enemy pressure at Hill 48A, Captain Moody employed a rifle platoon which set out for the outpost at 0325.

Simultaneously, as if their intelligence had advance knowledge of the 1st Marines recovery plan, the Chinese stepped up the tempo of their attack at Stromboli. A fresh assault by the enemy was stymied by Marine superiority in hand-to-hand combat. Thereafter, close-in defensive fires continued to ring the outpost and to discourage future assaults. The approach of the second Marine rescue party eliminated much of the pressure that Communist foot soldiers had maintained around the hill position. After a 90-minute exchange of fire with the enemy, the friendly platoon penetrated the encirclement and rushed to the besieged outpost at the hill crest. At this point the Chinese disengaged and withdrew towards the north.

After their diversion against Stromboli had approached the proportions of a full-scale attack, with the enemy having reinforced from platoon to company size, the Chinese then initiated their main thrust, an attempt to retake Bunker. Captain Connolly (1/3/1) had reported that shortly before 0100 Communist mortar fire had begun
falling on his positions on the southern slope of Bunker Hill. Simultaneously, Chinese artillery stepped up the rate of its barrage fires as did the assaulting close-in enemy infantry. Captain Connolly then requested the 11th Marines to place box-me-in fires around the Marine company positions on Hill 122. Artillery furnished these defensive fires almost immediately.

Shortly after 0130, the Marines in the center and right of the I/3/1 position observed a large number of Chinese, deployed into a skirmish line, headed directly for their part of the hill. The attack was accompanied by intense machine gun and rifle fire. It was countered by an equally heavy reply from Marines on Bunker. For nearly four hours the battle raged at Hill 122. Unsuccessful enemy frontal assaults were followed by attempts to dislodge the defenders from the rear. In their continuing thrust against the hill, the Chinese were repulsed by Marine coordinated support fires—tank, rocket, artillery, and mortar.

By firing on known or suspected assembly areas and Chinese infantry units advancing up the draws towards Hill 122, these Marine supporting weapons helped to preserve the status quo at Bunker. Repeated box-me-ins were also fired by the 11th Marines during the early-morning Communist attacks on 13 August. Exploding friendly mortar shells increased the effectiveness of the hill defense; nine rocket ripples[27] fired by the artillery regiment further supported Marines at the critical terrain position. Tanks unleashed their deadly fire on nearby enemy outposts to neutralize them; their 90mm guns, aided by the battlefield illumination from tank fighting lights, helped eliminate Chinese foot soldiers attempting to envelop Marine positions on Bunker.

It was in this direction that an enemy force, estimated at reinforced battalion strength, headed during the early morning fighting on Hill 122. At 0330, the struggle for possession of the height had reached the climax. For an hour the issue remained in doubt. Then, as the Chinese small arms fire decreased, the tempo of the enemy’s artillery shelling increased. This, the division correctly deduced, announced the beginning of a temporary Communist withdrawal from Bunker Hill.

Although the immediate danger of the enemy onslaught had ended for the time being, Marines to the rear of the JAMESTOWN Line stepped up their defensive preparations. Division, regimental, and battalion operational plans were put into effect to prevent a Chinese victory. The seriousness of the situation on the 1st Marines right flank at Stromboli early on 13 August had resulted in the movement of one company of 5th Marines into blocking positions behind the MLR near the left regimental boundary. To the south of Bunker Hill, relief and replacement units from the division reserve, ordered into action late the previous day, maneuvered into position to strengthen the regimental front. One of these relief units, G/3/7, under command of Captain William M. Vanzuyen, had just deployed from its assembly area to pass through the ranks of an MLR company and take over the Bunker Hill positions. The Marines’ situation on Hill 122 had deteriorated so rapidly, however, that the 3/1 commander rushed two reinforced squads forward from I/3/7, the nearest MLR unit.

The Company G reinforcement unit jumped off from JAMESTOWN and arrived at Bunker shortly after sunup, where it reinforced Captain Connolly’s positions during the height of the battle for possession of Hill 122. Not long after, the Chinese initiated their withdrawal under cover of increased artillery and mortar barrages. As they left, the Communists policed the battlefield in their typically thorough manner. A Marine platoon that swept the northern slope of Bunker failed to find any enemy bodies in this area so recently abandoned by the Chinese, but did take under fire and kill seven enemy that had remained on Hill 122.

Before I/3/1 had sent one of its platoons to reconnoiter the far side of Bunker Hill, Lieutenant Colonel Armitage ordered H/3/7, under Captain John G. Demas, forward to relieve friendly forces at the contested height. The exchange of units was completed before noon of the 13th. By late afternoon, except for Company H, all 2d and 3d Battalions, 7th Marines units that had moved up to reinforce the 1st Marines were on their way back to the regimental reserve area. At this time the 1st Marines CO, Colonel Layer, reported to General Selden that the Bunker Hill action during 12–13 August had resulted in 24 Marines killed and 214 wounded. On the right, in the 2d Battalion sector, an additional 40 Marines were listed as casualties, including 7 killed in the Stromboli defense.
Chinese known dead numbered 210, plus an estimated 470 killed and 625 wounded. Artillery and aerial observers reported that between 1500 on the 12th and 0600 the following morning an estimated 5,000 to 10,000 rounds of enemy fire had fallen on 1st Marines positions, the “heaviest incoming fires received by the Division since coming into the present sector.”

The number of casualties from the Bunker Hill action was to increase further that same day with a renewed attack on the outpost. Before the Chinese again engaged Hill 122, however, they made a diversionary attack on the western flank at the extreme left of the 3/1 sector. At dusk on 13 August, the enemy shelled the Company G Marines at COP 2, the critical height overlooking the Panmunjom peace corridor. The shelling caused several casualties and lasted 90 minutes. Towards the end, Communist infantrymen moved forward and fired on the outpost. At about the same time, Company H personnel emplaced on the MLR to the rear of COP 2 began to receive artillery rounds in preassault proportions.

A ground attack in this western end of the 3/1 sector did not materialize, however. Instead, the Chinese resumed their attack on Bunker Hill. Since their temporary withdrawal early on the 13th, the CCF had repeatedly sent mortar and artillery barrages against the bastion to harass its new occupants. On occasion these well-aimed mortar rounds found their mark. Mortars interdicting a trail used for resupply of the Hill 122 defenders did inflict some casualties on two groups rushing emergency supplies forward from the MLR.

At 2100, while continuing his shelling of the left end of the 3/1 sector, the enemy lifted his preparation on Hill 122 to permit a CCF reinforced company to make a new assault there on the Marine defenders. Captain Demas called for box-me-ins to seal off his positions and illumination shells to help locate the enemy force. Utilizing the draw to the east of Hill 58A, the Chinese proceeded west to Bunker where they pitted one platoon against the center of the Company H, 3/7 line and another against the right flank. Defensive fires momentarily held off the intruders, although some were able to break through to the Marines’ fighting positions.

Those enemy troops who penetrated the Marine defenses were quickly eliminated by grenades and small arms fire. Unable to weaken the Marine defenses any further and by now sustaining sizable casualties from unrelenting Marine artillery and mortar concentrations, the Communists withdrew at 2215. Marine defenders estimated they had killed 175 enemy during this latest encounter; a firm count of 20 bodies were found on the shell-torn slopes. Company H casualties, all from enemy mortar and artillery fire, were 7 killed and 21 wounded.

In the 3d Battalion sector, Marine and KSC stretcher bearers brought casualties to the 1/3/1 CP, several hundred yards to the rear of the front line. At the command post, the critically wounded were airlifted by helicopter to the rear. Less seriously wounded casualties were placed in jeep ambulances and carried to the battalion forward aid station, about two miles away. Here a team of doctors and corpsmen examined and treated patients, discharged a few, but prepared most for further evacuation. At the 1st Marines forward aid station, patients were reexamined and their wounds redressed when required; discharge or further evacuation was also accomplished. Most of the Marines brought to this forward facility had become exhausted from vigorous activity in the high temperature and humidity which characterized the South Korean summer. The regimental aid station treated these heat cases and then released them to their units.
Division intelligence subsequently reported that the 2100 attack on 13 August had been made by an enemy battalion with a reinforced company in assault. This same unit again sent a small band of Chinese soldiers against Hill 122 at 0225 the following morning. This clash was to be the briefest of all offensives for control of Bunker Hill during the 11–17 August period. Prior to launching this four-minute fire fight, an enemy machine gun at Siberia had attempted to harass the Marines at Bunker Hill. In retaliation, Marine tanks illuminated this enemy weapon with their searchlights and immediately took it under fire with their 90mm guns, knocking it out of action. At the same time, enemy artillery attempted to shell friendly tanks. During this brief fire exchange, one tanker was wounded slightly and the lens of one fighting light was splintered by fragments from enemy shells bursting around the tanks. The inconsequential probe was made, Marines believed, not so much to seriously challenge Marines holding Hill 122 as it was to retrieve CCF dead and wounded from the major attack a few hours earlier that night.

Anticipating that a much heavier ground attack was close at hand, the 1st Marines ordered a reinforcement of the Bunker Hill position. Even before the heavy action on the 13th, this machinery had been set in motion. To this end, the 3d Battalion was to reinforce the Bunker defense by sending a 1/1 platoon to the hill and the 2d Battalion was instructed to return Company A (minus this platoon) to the reserve battalion. At 0415 on the 14th, Company E/2/1, led since 10 August by Captain Stanley T. Moak, took over from A/1/1 the responsibility for the 2d Battalion’s MLR “Siberia sector,” adjacent to the Bunker Hill area held by the 3d Battalion. The Company A reinforcing platoon arrived at Hill 122 just before dusk, preceding another CCF company attack by only a few hours.

At midnight the 1st Marines front was suspiciously quiet for a few minutes. Forward on Hill 122, there was no apparent enemy activity. Captain Demas sent out a two fire-team patrol from Bunker to reconnoiter northwest of Bunker towards the Chinese lines. Shortly after the eight Marines returned with a negative report of contact with the enemy, the regiment received a report about the outbreak of a small arms clash between defenders on the left flank of Bunker and an enemy unit farther west. At 0118 on 15 August what had initially appeared to be a minor contest suddenly erupted into a heated fire fight all along the 124–122 Bunker Ridge complex. At the request of Captain Dumas, Marine artillery fired protective boxes around the Bunker positions. This defensive maneuver held the attackers in check.

At this moment, Chinese infantrymen in the draw running alongside the 124–122–120 ridge system were massed for an assault on Bunker from the northeast. The plan might have been successful had not a fighting light from a tank on the main line intercepted the Communists in this state of their preparations. In a matter of moments, friendly artillery, mortar, and tank fire struck the Chinese and scattered the formation.

After discovering he could not successfully pull a sneak attack, the enemy reverted to his usual procedure, employing a preassault bombardment prior to his infantry assault. This preparation began at 0206; it reached the rate of approximately 100 rounds of 82 and 122mm mortar shells per minute. While supporting weapons pounded the Marines, the Chinese assault commander reorganized his attack force that the Marine shelling had scattered. Communist infantry then moved forward and fired on the Bunker Marines, who replied with rifles and machine guns and box-me-in fires. Unable to penetrate this protective mask around the positions, the Chinese gradually decreased their small arms and artillery fire until, at 0315, the rate of exploding shells at Hill 122 had dropped to only four or five per minute. Soon thereafter the small arms fire slacked off entirely and
by 0400 even the mortars had stopped. Across the entire 1st Marines front, all was quiet again.

During the Company H defense of the hill, enemy losses, caused mostly by friendly artillery and mortar fire, were placed at 350, including 40 counted dead. Captain Demas’ Marines suffered 35 casualties, of whom 7 were killed. En route to the MLR after relief by B/3/1, the company suffered four more casualties, including two KIAs, all the victims of Chinese mortars.

It was not long before these weapons inflicted casualties on Company B, which had six of its men wounded even before the H/3/7 unit had reached Jamestown. Another Marine at Bunker was wounded by enemy mortars later that morning. At 1640 the Communists again probed Bunker Hill, this time in company strength. Striking in daylight during a thunderstorm and without any preparatory fires, the Chinese attackers failed to achieve any tactical surprise. The defenders fired both infantry and supporting weapons; some threw grenades at the few Communists who did manage to get close to the fighting positions. At 1750, the Chinese withdrew, this time leaving 35 of their dead in the attack area. Four Marines had been wounded; five others suffering from battle fatigue were later evacuated.

Exactly when the enemy would strike next at Bunker Hill was not known by the Marines. Most believed that the Communists would return but only speculated as to when. Although the battalion felt that “the enemy was not expected to attack again for some time,” events were to prove otherwise. In any case, the battalion was prepared, having an adequate force on Bunker and sufficient local reserves to absorb an attack up to the strength of any received so far. Division supporting arms were readily available for commitment at critical points.

The Chinese soon put an end to the conjecture about the next attack. At 0040, 16 August, an enemy force, later estimated as a battalion, came out of positions to the west and north of Hill 122. Supported by mortars at first, and later on by artillery, the battalion sent one company against the Marine outpost. Several attacking elements were able to penetrate the defensive fires. These Chinese reached the crest of the hill and began using their rifles, automatic weapons, and hand grenades against the defenders. Captain Scranton called for reinforcements. A platoon from I/3/7 was dispatched promptly from the 3/1 sector. The reinforcements departed Jamestown just as the fire fight on Bunker began to subside. By 0315, the enemy had begun his withdrawal, and another reinforcing element, 1/3/1, had moved forward, this time from regiment to Lieutenant Colonel Armitage’s CP.

About two hours later a brief fire fight flared up in the Company B sector. No ground assault was made on Marine positions. The enemy force, of undetermined strength, never closed with the Marines and within 10 minutes, the firing stopped. No casualties to the Marines resulted during this exchange. The earlier clash had resulted in the death of 3 Marines and the wounding of 27. Enemy losses were estimated at 40 killed and 30 wounded.

Before it came off the hill, Company B was engaged by enemy fire three more times. At 1945, Chinese mortars (82mm) wounded two Marines. Later, heavier mortars placed 20 rounds on Hill 122, but these caused no casualties. There were some losses, however, early on the morning of the 17th when C/1/1 was relieving the Bunker defenders. Captain Scranton’s Marines sustained five more wounded from automatic weapons, five during the relief.

The second relief of Company B on Bunker brought to a close the battle that had been waged for possession of the vital hill complex. During the Hill 122 tours of Company C and other 1st Marines units that followed in August, seven more ground actions tested the Bunker Hill defenses. Only one of them, during the night of 25–26 August, was of significant size. This attack also failed to dislodge the Marines from the hill.
Operations in West Korea

Chapter 3. The Battle of Bunker Hill
Supporting Arms at Bunker Hill[33]

It was quite natural that the flurry of ground activity during the battle of Bunker Hill created a need for increased participation from Marine supporting arms. The magnitude of infantry action during the contest for Hill 122 resulted in a monthly record to date in 1952 for the amount of air support received as well as the volume of both artillery and tank fires supporting the division. During this critical 9–16 August period, the 11th Marines played a part in every ground action except the feint attack on Siberia and the seizure of Bunker Hill, both of which were purposely executed without an artillery preparation. Medium tanks fired day and night missions during most of the infantry action. Close air support at times amounted to a strike every 20 minutes.

During the ground action around Bunker, Siberia, and Stromboli, the division received close air support in amounts unparalleled for JAMESTOWN Marines to that time. Marine and U.S. Air Force pilots flew a total of 458 missions (including 27 ground controlled MPQ-14 radar bombing attacks) during five of the most critical days, 9–13 August. On two of them, the 1st Marine Division received priority of close air support along the whole EUSAK front. Fifth Air Force assigned 1st MAW aircraft to Marine requests for close air support as long as Marine aircraft were available.

The initial air strike by Marines in the Bunker fighting was on 9 August in support of counterattack plans for Siberia. MAG–33 provided a morning and evening flight of four F9F jet fighters to destroy enemy forces and defensive works on 58A (Siberia). USAF fighter-bombers attacked Siberia and other outposts nearby and enemy artillery positions supporting the Chinese forward line. On the next day, air operations, concentrating on Siberia, were stepped up considerably against enemy outposts. Thirty-five aircraft in nine missions attacked 58A with bombs, rockets, and napalm. These strikes were carried out by MAG–12 and U.S. Air Force pilots at irregular intervals during daylight hours. Air controllers reported good results. Other aircraft hit known mortar locations capable of supporting the Chinese. During the morning, Marine Attack Squadron 121 (Lieutenant Colonel Philip “L” Crawford) bombed and burned Bunker Hill. Just before sunset, F–80 and–84 jets of the U.S. Air Force dropped 15 tons of bombs on mortar positions and troops on and around Hill 120. Four F–80s also participated with eight Marine AD–2 propeller-driven attack aircraft in the morning attack on Bunker.

Air activity in support of the 1st Marines continued unabated on 11 August. Before the diversionary ground attack just after dusk that day, Marine and Fifth Air Force fliers repeated the treatment that Hills 58A and 122 had received the previous day. During daylight, supporting weapons positions were hit by FAF fighter planes. At night, MAG–12 air attacks guided by the MPQ–14 radar bombing system destroyed hostile artillery and mortars. Also during the dark, the medium bombers of the FEAF Bomber Command struck deeper in the rear at heavy weapons locations.

These Air Force bombers conducted four more controlled-bombing attacks against Chinese artillery during the early hours of 12 August, when Company B was consolidating its positions and hastily organizing the defense of Bunker Hill. After daylight and until dusk, MAGs–12 and–33 and USAF squadrons provided four-plane flights to strike troop assembly areas, supporting weapons positions, and observation posts close to Hill 122. In late afternoon, Marine pilots in four F9F Panther jets and three ADs bombed and burned the enemy side of Bunker Hill during the shelling and subsequent ground attack against the Marines on the eastern slope.

Marines flew, on 13 August, all of the daylight close air support missions in support of the actions on both Bunker in the center and Stromboli in the right of the 1st Marines sector. On 13 August, a total of 94 aircraft were committed over the regimental sector to conduct strikes in support of ground operations. Enemy Hill 104,
commanding the 2/1 outpost on 48A (Stromboli), received four attacks. Fighter bombers (F4U propeller-driven Corsairs) carrying napalm, rockets, and 1,000-pound bombs, raided the hill mass at 0535. The other strikes against this key terrain-feature were made by attack and fighter aircraft during the afternoon. Other targets on the regimental right were weapons positions beyond Hill 104 and an enemy outpost one thousand yards west of Stromboli.

Most of the air support received by the 1st Marines on the 13th was directed against targets that were participating—or that were capable of taking part—in the battle on Bunker Hill. Against the enemy on the height itself, the Marines directed only three strikes, and these came late in the morning. A majority of the air attacks were dispatched against observation and command posts and the firing positions of both automatic and large caliber weapons. Chinese artillery and mortar fire had inflicted more casualties and punishment on the Marines than the enemy infantry assaults. As a consequence, the main effort of the close air support strikes was directed against these hostile supporting weapons.

After dark on the 13th, VMF(N)–513 commanded by Colonel Peter D. Lambrecht,[34] took up the air offensive against the heavy firing positions in the rear of the enemy line. The squadron conducted four attacks with its night fighters. Two of its attacks were made just before sunrise.

During the remainder of the battle of Bunker Hill, the ground fighting subsided and the requirement for close air support abated accordingly. On the 14th, only four daylight strikes were flown in the 1st Marines area. These, all by Marine squadrons, were against active artillery and mortars in the defilade of Hill 120 and others to the west on the far slope of Hill 123, and Chinese outpost positions, west of 48A, which had been pestering the Stromboli garrison. There were no flights after dark on the 14th, but on the following night, two MPQ missions were flown by VMF(N)–513. Each was a single plane flight against a reported artillery location. This was the final night air action in the battle for Bunker Hill. Daylight missions in support of Hill 122 defense after the sharp decrease of attacks on the 14th numbered only seven attacks, each by four planes. These, flown by Marines, continued to emphasize the destruction of enemy artillery.

Marine artillery continued its support of ground troops and air strikes. Cannoneers of the 11th Marines fired 21 flak suppression missions during the five days beginning on 11 August. This type of close coordination between Marine supporting arms further reduced combat losses of aircraft providing CAS to the division. The Marine artillerymen had played a vital part in the defense of the besieged outposts. Lieutenant Colonel Armitage credited the box-me-in fires with an important role in thwarting each enemy attack on Bunker.[35]

In the 24-hour period beginning at 1800 on 12 August, Marine artillery directly supporting the 1st Marines fired 10,652 rounds. Most of the ammunition was expended in support of the Bunker Hill defense; some was used in behalf of the Marines outposting Stromboli during the Communists’ early morning diversion that day. On the 9th, the direct support battalion, 3/11 (Lieutenant Colonel Charles O. Rogers), had fired about one-fourth of the 12–13 August total. Many of the shells that first day of the Bunker battle were preparatory to counterattacks for regaining Siberia.

When the retaking of Hill 58A was discarded in favor of the surprise attack on 122, the amount of artillery support was reduced, during the 1st Marines infantry preparations on the 10th and 11th, in keeping with the fire support plan. Upon seizure of Bunker, Lieutenant Colonel Roger’s business immediately picked up and quickly reached a crescendo the following day, when the 10,652 shells fired became a Marine one-day battalion record for western Korea until the last stages of fighting in 1953. Other Marine artillery battalions fired reinforcing missions during the critical period as did the 4.5-inch Rocket Battery which fired a large number of on-call ripples. The regimental commander later recalled that “during some of the crises every gun that could bear on Bunker in the 11th Marines and reinforcing units was shooting there.”[36]

After a sharp drop on the 14th, the artillery support gradually decreased in proportion to the amount and strength of the enemy’s action against Hill 122. By 20 August, 3/11 was firing only 244 rounds a day. Only on the
26th, during a serious Chinese attempt to retake Bunker, did the number of artillery rounds match the intensity of the fire support rendered during the earlier part of the month.

It was not only the quantity of 11th Marines support that the infantry called for during the battle of Bunker Hill; quality was equally important. A majority of the more than 28,000 rounds that 3/11 fired during the eight days of Bunker Hill fell around the besieged outposts. Many rounds were fired in defense of MLR positions. In both of these types of protective fires, extreme accuracy and precision were required due to the proximity of enemy and friendly lines in order to prevent any “short” rounds from falling among Marine positions. Lieutenant Colonel Armitage recalled that during the height of the battle on the night of 12 August, “we did have a bad scare . . . when Captain Connolly reported that friendly mortar fire was falling short.”[37] The battalion immediately ceased fire with its 60mms, 81mms, and 4.2s and each piece was checked; the culprit was quickly located and within 5–10 minutes 3/1 resumed fire.

During the August battle, artillery in general support of the entire division and I Corps artillery reinforcing the fires of Colonel Henderson’s regiment, stepped up their efforts to destroy the distant and more difficult targets, including mortars and artillery. These continued to be the main cause of Marine casualties. Some of the labors of the 11th Marines gun crews did silence enemy heavy weapons, but personnel losses from enemy shellings still mounted, especially in the infantry units. To assist in the location and destruction of the enemy artillery, aerial observers spent considerable time in spotting and fixing Chinese weapons positions.

Besides these counterbattery efforts, the 11th Marines employed other artillery means to provide the additional support the 1st Marine Division requested during Bunker Hill. Two of these were the counter-counterbattery and the countermortar programs, the former being a passive defense-deception program to minimize Chinese counterbattery fires against 11th Marines weapons. Nearly every day C Battery, 17th Field Artillery Battalion, fired special request missions.[38] Another type of fire, flak suppression, aided the cause of close air support pilots delivering ordnance against those Chinese positions taking Bunker Hill and Stromboli under fire. At night, illumination shells helped outpost and frontline Marines in locating groups of enemy massing for assault on Hill 122.

Mortars (4.2-inch) of the 1st Marines contributed heavily to the defense of the outposts. Operations reached a peak on 12–13 August when, in a 24-hour period, Captain Carl H. Benson’s mortar company fired 5,952 rounds—4,084 high explosive and 1,868 illuminating. In addition to their defensive fires, these hard-hitting weapons attacked Chinese mortars, automatic weapons, defensive positions, and troop formations with deadly accuracy.

No less precise and lethal were the fires of Captain Gene M. McCain’s gun tanks (Company C, 1st Tank Battalion), and the battalion flame tanks. Three of the latter had fired their 105s in support of the KMC on the morning of the 9th before the vehicles received orders to move east to join Company C temporarily. On the next day, 90s fired on enemy bunkers, observation posts, and trenches in the vicinity of Siberia and Stromboli. During 11 August, two gun tanks blasted at targets immediately beyond Siberia and others to the west of that outpost.

Towards the end of the 11th, the critical part of Bunker battle began for the tankers also. Those elements of Lieutenant Colonel John I. Williamson’s battalion supporting the diversion and the subsequent main attack pulled into positions south of Hill 122 on the MLR and to the right in the Company F sector. It was not until the next day that the tanks operating with the 1st Marines reached a peak in gun support for the Bunker fight. Beginning with the defense of Hill 122 from 1600 that day, and for the next 26 hours, the tankers placed 817 shells on targets effecting the Chinese capability of capturing Bunker and Stromboli. In addition to the heavy ammunition, the Company C tanks, augmented by the 1st Marines antitank platoon and five tanks from the division tank reserve, fired 32,000 rounds of .30 caliber machine gun ammunition.

Except on the 11th, most of the tank firing in the fight for Bunker Hill through 14 August was accomplished during the hours of darkness. On the latter date, the cannons and machine guns of the mediums
blasted directly at Chinese outposts opposite Colonel Layer’s regiment. The number of rounds that day fell off considerably from the high on the 13th; on the 15th the tanks in the 1st Marines area did not fire at all. Heavy rain that had accompanied the late afternoon thundershower that day made movement forward to firing positions impractical. By the next day, however, the ground was solid enough to permit some maneuvering by the tracked vehicles. They fired 52 rounds of 90mm shells and 14,750 machine gun rounds at automatic weapons positions and bunkers on the western slope of Hill 122. This marked the final tank mission in support of the 1st Marines in the battle for Bunker Hill.

During the early part of the August fighting, tanks of the division were able to get the first real test of a technique of night support,[39] and at the same time experiment with a towing device to permit retrieval of disabled vehicles under fire without getting outside the tank. The use of the lights to support both the diversionary force and the defense of Hill 122 showed the value of these instruments. Lieutenant Colonel Williamson recommended that tanks be employed in pairs, one to spot and adjust fire and the other to fire. With respect to the towing device, he considered the new piece of equipment an improvement over the manual hook-up method, but noted that the device limited tank maneuverability and had a tendency when bouncing up and down over rough terrain to dig into the ground, impeding the forward progress of the vehicle.
Chapter 3. The Battle of Bunker Hill
In Retrospect[40]

Whether the sacrifice of Siberia in favor of the seizure of Bunker justified the outcome can be
determined, in part, by looking back to the division commander’s reasons for this decision. He had cited three
advantages in seizing and occupying Hill 122 instead of 58A. One, tactical surprise achieved by an attack on the
former, was an unqualified success. That Bunker Hill would provide more defensible terrain and at the same time
add strength to the main line were two sound judgments that the test of time would bear out. The third point, that
observation into the enemy’s outpost line would be increased from the higher hill, also proved to be correct.

Only the inability to neutralize Hill 58A effectively from Bunker cast any doubt on the considerations. At
night the enemy could occupy Siberia both for firing positions and flank security to attack friendly forces moving
down the corridor east of Hill 122. Action to counter these two enemy actions came mainly from MLR forces.

One measure of the results of the Bunker Hill fighting is seen in the price paid. Chinese losses were
estimated by the 1st Marine Division at approximately 3,200, including more than 400 known dead. Marine
casualties in the action were 48 killed and 313 seriously wounded. Several hundred additional wounded were
treated at 1st Marines medical facilities and returned to duty shortly thereafter.

To replace combat losses in the infantry regiment, General Selden on 12 August directed that rear area
service and support units fill the vacancies. Two hundred Marines, nearly all of them volunteers, were provided to
Colonel Layer by the 14th. To offset other losses within the division, its commander similarly had requested on
12 August that the Commandant, General Lemuel C. Shepherd, Jr., authorize an air-lifting of 500 enlisted Marine
infantrymen to the 1st Marine Division as soon as possible. Pointing out that mounting battle casualties had
reduced the effective strength of the division, General Selden also urged that each of the next two monthly
replacement drafts scheduled for the division be increased by 500 more enlisted men. After some debate at the
next senior administrative headquarters,[41] the request was granted by General Shepherd, and the emergency
replacements were made available from the 3d Marine Division at Camp Pendleton, California. The initial
replacement of 500 Marines arrived on 21 August.

More men to replace divisional combat losses might have been required had not the medical support been
such an efficient operation. After the battle, the regimental surgeon, Lieutenant Robert E. Murto, called for a
review of the medical facilities in effect during the Bunker, Siberia, and Stromboli fighting. In attendance were
the battalion doctors and the division surgeon, Captain Lawrence E. Bach. Participants discussed both the major
difficulties and routine procedures involved in medical care of the wounded. Problem areas were the high
incidence of heat exhaustion, ground transportation of the wounded, enemy artillery fire that interfered with
helicopter evacuations, and the need for increased medical support under battle conditions.

Regarding the last category, the surgeons noted that medical supplies during the heavy fighting of 9–16
August were never at a dangerously low level. The only shortage that had developed was in stretchers, due to the
normal delay in transfer of stretchers from medical stations along the evacuation route to the company forward
medical facilities. To help combat the Chinese artillery problem, medical officers had placed aid stations on the
reverse slopes of hills. There was no available or known solution to hastening and easing the movement of
battlefield casualties over the ground. The armored personnel carrier offered some protection from ground fire
and a ride less painful than one in a truck, but the wheeled vehicles remained the most widely used.

There was little that could be done about the number of heat exhaustion cases. High temperature and
humidity, vigorous activity, and the wearing of the armored vest (and to some degree, the steel helmet), combined
to produce the casualties. All the surgeons agreed that regardless of the number of heat casualties, the wearing of these two items must continue. Regimental doctors credited the armored vest with saving the lives of 17 Marines. Several other Marines, they noted, had received only slight head wounds from bullets that had spent most of their velocity penetrating the steel helmet.

Helicopter evacuation saved the lives of other Marines. The doctors credited the flying skills and bravery of the evacuation pilots for these rescues. Immediate response to day and night calls was instrumental in the recovery of numerous Marines. Rear Admiral Lamont Pugh, Surgeon General of the U.S. Navy, commented upon the value of the helicopter and on other reasons for success of medical support. After a Far East inspection trip, which included a visit to the 1st Marine Division during the battle of Bunker Hill, Admiral Pugh expressed the following opinion:

“... [I] attributed the new low record ‘2% mortality’ of those men wounded in action to the bullet resistant vest, to skillful frontline surgery with availability of whole blood, the utilization of helicopters for casualty evacuation direct to hospital ships and rear area hospitals, and the efficient manner in which the Hospital Corpsmen of the Navy fulfilled their mission with the Marines.” [42]

In another logistical area, the performance was not quite as satisfactory, for the level of supply of one important item—illuminating shells—fell dangerously low during the Bunker fighting. On 16 August, 3/1 reported early in the morning that “artillery illumination was exhausted and 81mm mortar illumination was fast diminishing.” [43] To replace the shell-produced light, the regiment used a flare plane. [44]

Ammunition supply appeared to be no problem to the Chinese. The rate and frequency of mortar and artillery fire proved that the enemy had a vast store of these shells. During the heavy fighting, the division observed that the enemy expended approximately 17,000 mortar and artillery rounds in the 11–16 August period of the battle. It was noted for the first time that the Chinese used mortars primarily in support of limited attacks.

About the enemy’s reliance on mortars and the technique of their employment, the 1st Marine Division reported:

“This was particularly true of his 60 and 82mm mortars, which are easily displaced forward and shifted to alternate positions. These light mortars were difficult to locate by our observers mainly because of the small size and limited development of their positions, and the fact that they are moved frequently. A large number of enemy mortars were fired from bunkers deep in the ground with only a narrow aperture at the top through which to fire. There were some instances, during the Battle of Bunker Hill, when the enemy brought his 60mm mortars out from cover on the forward slope and set them up in the open near the crest of the ridge. After delivering several rounds, the mortars would then displace quickly back to a covered position. During August, mortar fire averaged between 50 and 60 percent of the total incoming received by the 1st Marine Division.” [45]

Further information about the Chinese was also derived at this time, although not always directly associated with the battle. Deserters picked up in the left sectors of the 1st and 5th Marines on 12 and 13 August and papers taken from enemy dead on the 13th confirmed earlier-reported dispositions of Chinese units. One prisoner, from the artillery regiment of the 118th Division, the unit facing the major part of the 1st Marines line, indicated that another artillery regiment had been assigned to support his division. If true, this extra unit would account for both the increased Chinese fires in the Bunker area and the additional artillery emplacements that photo planes had spotted in the 118th Division sector. Infantry units of this division, the Marines observed, introduced no new techniques or equipment during the battle. Prior intelligence had provided the 1st Marines with typical enemy ground attack tactics. Neither the Chinese envelopment of Siberia, Stromboli, and Bunker nor the diversion against Hill 48A before the main attack on Hill 122 represented a departure from normal CCF practice.

Nor was the earlier Marine diversion new, but unlike the Chinese attempt, the 1st Marines tactic was successful. Just before the maneuver, the division pulled off another stratagem, described by General Selden in a letter to General Shepherd:
“I worked a ruse that morning which proved to be very profitable. Throughout the Eighth Army front, it had been routine to put on a strike, this to be followed by smoke, then a good artillery barrage, with troops following for the assault. This was done with the exception that there were no troops. The enemy, thinking that there were troops, opened up with everything. The only damage inflicted was on their own forces . . . While they were firing on their own troops, we again opened fire with our artillery, just to help the situation along.”[46]

One technique the Marines employed in the Bunker Hill battle was defense of the reverse (protected) side of the hill. Although counter to the usual American military practice, the reverse slope defense was required by the intense artillery and mortar fire massed upon the front slope defenders. As the 3/1 battalion commander later commented:

“It’s true, we suffered from the heavy incoming—but had we had to work replacements, casualties, and supplies all the way up to the (forward) military crest of Bunker—the losses would have been prohibitive. With the weight of the incoming and our inability to get greater infantry mass onto the battlefield at one time, a conventional defense would have been far more costly . . . {after} the damage done to Baker Company in the {12 August} afternoon attack . . . had we not gone into a reverse slope defense, we could not {have held} with the strength at hand.”[47]

On the other hand, a tactical weakness of the reverse slope defense, that “plagued us until the end of the battle,”[48] was the fact that the 1st Marines initial gain was not more fully exploited. As the battalion commander explained:

“To be successful, in a reverse slope defense, the defender must immediately counterattack, retake and reoccupy the forward slope of the position as soon as enemy pressure diminishes. Because of the incoming and primarily because of our overextension in regiment, we . . . {employed} piecemeal commitment . . . and fed units into the battle by company, where we should have employed our entire battalion in counterattacks to punish the withdrawing force and restore the forward slope. To the very end, lack of decisive strength prevented this. We stayed on the reverse slope all the way, except for brief forays to the forward-slope.”[49]

Some officers felt, in retrospect, that a more feasible solution during the August battle might have been to move all three battalions on line—3/1, 1/1, and 2/1, with the reserve battalion (1/1) deployed on a narrow front. This would have provided decisive strength on Bunker and the MLR behind it to give greater depth counterattack capability, and better control at the point where needed.[50] Departure from standard doctrine by employment of the reverse slope defense furthered the existing controversy as to the best method of ground organization in the division sector. But it was to be some months before a change would be effected.[51]

Tank, artillery, air, and ground Marines participating in the battle of Bunker Hill gave up one outpost but took another, one that added strength not only to the outpost defense but also to the main line. A well thought-out plan and its skillful execution permitted Marines to take the critical terrain quickly without crippling casualties. Defense of the position on Hill 122 was complicated not so much by the Chinese infantry action but by the intensive mortar and artillery shelling. The Marines’ capability to defend was enhanced by close coordination among artillery, air, and tank units. Chinese casualties, by estimate, were 500 percent more than the losses actually suffered by the Marines. The battle of Bunker Hill resulted in the first major Marine action and victory in West Korea. It ushered in two straight months of hard fighting, the most difficult ones yet for Marines on the western front.
FOLLOWING THE progressively faltering Chinese attacks against Bunker Hill in mid-August, the 1st Marines in the center MLR sector witnessed a period of decreased enemy activity. By sun-up on the 17th, Captain Ksycewski’s Company C, from Lieutenant Colonel King’s 1st Battalion had relieved B/1/1, marking the second complete tour of duty at Hill 122 for Company B that month. In two days on the shell-torn crest, Company C received only a single enemy probe and only a few rounds of artillery and mortar fire. In the early morning hours of the 19th, D/2/1 assumed responsibility for Bunker and Hill 124. These new occupants of the disputed property almost immediately were subjected to larger and more frequent Chinese probes as well as increased fire from CCF supporting weapons.

Enemy ground action was directed against the Marine flank, especially the right. Four Chinese infantrymen attempted to infiltrate this corner of the Bunker Hill defenses just before sunrise on 23 August. One even made his way to the top of Hill 122 where he fired downhill at several Marine defenders, wounding one. A moment later this lone Chinese’s reconnaissance efforts was rewarded by a fatal hit from a Marine sniper’s rifle.

Captain Moody’s Company F next took over the two-hill complex. That night, the 24th, the Chinese shelled the two hills and probed their defenses but again showed no inclination to press an attack. On the following night, however, the Chinese became more aggressive. At dusk, two squads charged the right flank of Bunker Hill, threw hand grenades, and fired their submachine guns briefly at the Marines. The enemy then retired, but about an hour afterwards, a force estimated at two-company strength assaulted the outpost defenses from the center to the right. At the same time, enemy shells began exploding around these Marine positions. Captain Moody called for artillery and tank fire on the attackers. Pushing forward, the Communist infantrymen forced a small opening in the defense perimeter; by this time, a standby platoon on the MLR was moving forward to strengthen the Bunker garrison. Upon arrival of the Marine reinforcements, at midnight, the Chinese soldiers withdrew. Simultaneously, the incoming artillery and mortar fire diminished, and in less than a half hour all firing had ceased.

After the enemy had pulled back, Company F sent its platoon out to reoccupy a forward listening position temporarily abandoned during the second attack. Chinese soldiers immediately contested this advance and, after a local fire fight, caused the Marines to retire once more. That action ended the significant Bunker Hill action in August. In the spirited infantry fighting and artillery dueling during the night of 25–26 August, Marines suffered 65 casualties, including 8 killed. The Chinese losses were estimated at 100 killed and 170 wounded. Supporting arms fire had contributed largely to the high casualty figures on both sides.

During August, whenever a lull had occurred in Colonel Layer’s 1st Marines embattled sector, it almost invariably signaled a step-up of Chinese action elsewhere along the 1st Marine Division MLR. When frustrated in their attacks against the positions held by the 1st Marines, the enemy invariably turned his attention to the right of the line, manned since June by the 5th Marines. During August the Chinese seized three outposts forward of the right battalion line, which it had been the Marine practice to man during daylight hours only. The trio, forming a diagonal line southwest to northeast, in front of the battalion sector were Elmer, Hilda, and Irene.

After dusk on 6 August the enemy had advanced to COP Elmer, on the far southwest end, and by skillful coordination of their infantry and supporting fires denied the position to the Marines approaching to reoccupy the outpost early the next morning. An hour before midnight on 11 August, another 2/5 patrol had attempted to temporarily occupy Hilda, in the center, during the diversionary fires supporting the Bunker Hill attack. As the
Marines neared the outpost, however, they discovered the Chinese had already occupied it. Enemy mortar and artillery fire drove the patrol back to its own lines.

A similar situation occurred at dawn on 17 August, when the Marine outpost detail moved forward to occupy Irene during daylight hours and found the Chinese already on the position. Enemy troops fired at the Marines, pinning them down.[3] Although two rescue units were dispatched to support the Marines, CCF fire interdicted their route of approach. When it became evident the second reinforcement party could not reach its objective, the outpost detail was ordered to pull back to the MLR. The Chinese continued to occupy Irene, the last outpost lost in August, for the remainder of the 2/5 tour on line.

For the remainder of August the Chinese were apparently content to hold what they had gained without immediately seeking additional positions. As a result, operations along the front were mostly limited to patrol action. Chinese infantry units, usually no larger than a squad, regularly fired on Marine patrols, engaging them for a short period from afar, and then quickly breaking off the contact. Seldom was this small unit action supported by artillery or mortars.

On two occasions late in the month, however, the Chinese showed more spirit. Both encounters took place during the early evening hours of 22 August when Chinese patrols came upon two different Company F ambushes operating forward of the 2/5 sector. Heavy casualties were suffered by both sides.

The next day a brief but heavy period of rainfall began with nine inches recorded between 23–25 August. Although the flooding conditions in the division sector were not so extensive as the July rains, they curtailed ground activity considerably and air action to a lesser degree. Division roads were badly damaged but not trenches and bunkers, strengthened as a result of the experience with the July floods. High waters made the ferry inoperable at the Honker Bridge site and also washed out Widgeon Bridge, where the Imjin crested to 42.5 feet. If the sudden flash floods wreaked havoc with some of the Marine division installations, the Chinese were the recipients of similar disfavors; intelligence indicated that damage to the CCF frontline positions was even more severe than to the JAMESTOWN defenses.[4]

The end of August saw the relief of General Selden as Commanding General, 1st Marine Division. He was succeeded on the 29th by Major General Edwin A. Pollock. A brief ceremony at division headquarters, attended by senior officers of EUSAK and KMC, marked the event. Earlier that month, in recognition of his services to the Korean defense, President of the Republic of Korea, Syngman Rhee, had awarded General Selden the Order of Military Merit, Taiguk, the highest Korean award.

The new division commander, General Pollock[5] had commanded the 2d Marine Division at Camp Lejeune, North Carolina just prior to his Korean tour. He had more than 30 years of military experience. During World War II, he had participated in no fewer than five major campaigns in the Pacific, including the first at Guadalcanal, where he earned a Navy Cross, and one of the war’s most costly battles, Iwo Jima. Following the war, he had served at Marine Corps Schools, Quantico, in command and staff assignments, and later at Headquarters Marine Corps where in July 1949, he had received his first star.
Chapter 4. Outpost Fighting Expanded

Early September Outpost Clashes[6]

The new division commander shortly received a first-hand demonstration of the ferocity and persistence of the Chinese Communists opposite his division. On 4 September, the enemy suddenly stepped up his activities which had recently been limited to sporadic probes and occasional artillery fire against Bunker Hill. At 2030 that date Captain Moak, E/2/1, commanding officer at the Bunker outpost, reported that an artillery preparation was falling on his positions. Ten minutes later he radioed 3/1[7] that an enemy platoon was vigorously probing his right flank. When Company E Marines returned a heavy volume of small arms fire, the enemy retired.

This Chinese withdrawal was only temporary, for the initial probe proved the forerunner of more serious activity. Again at 0100 on 5 September a heavy deluge of Chinese mortar and artillery began raining on Hill 122. The intense preparation had apparently convinced the Chinese attacking force that they had eliminated resistance at the Marine outpost, for their soldiers walked upright toward Marine positions, without bothering to make any attempts at concealment. After discovering that a stout defense was still being maintained at Bunker, the Chinese again withdrew and reorganized.

When they resumed the attack, the Chinese used considerably greater caution. This time, in addition to small arms, automatic weapons fire, and a hail of grenades, their assault was supported by artillery and mortars. The results of this concerted effort were not too rewarding, however. Assaults on the center of Hill 122 were repulsed and attempts to crack the left perimeter of Company E’s defenses were even more speedily beaten back. A number of Chinese attempting to outflank the E/2/1 defenders inadvertently strayed too far to the right of the outpost and found themselves advancing against the MLR south of Hill 122.

When JAMESTOWN forces engaged these wanderers by fire, the latter quickly realized their mistake and wheeled left for a hasty retreat. They immediately came under fire of their own troops, some of whom had meanwhile penetrated 60 yards into the extreme right of the Bunker positions. At this point, Captain Moak’s Company E launched a counterattack and restored its positions on the right. This action forced a general withdrawal of the Chinese force, which the Marines estimated at battalion strength. Lieutenant Colonel Sidney J. Altman[8] subsequently advised division headquarters that his men had killed 30 enemy soldiers and estimated that as many as 305 were probably wounded. This high rate of casualties was attributed, in part, to the enemy’s mistaken sense of direction, their direct walking approach which had made them easy standing targets, and to the box-me-in artillery fires supporting the defenders. Marine losses were 12 killed and 40 wounded, caused mostly by Chinese mortars and artillery.

Although the left battalion area was the center of attention in the 1st Marines line early on 5 September, the far right sector was not entirely neglected either. Five minutes after their initial attack on Bunker, other Chinese units also lunged at the Hill 48A outpost, Stromboli. An estimated reinforced platoon, supported by three active machine guns on Hill 104, 850 yards to the north, employed submachine guns, rifles, and grenades in their attack. This battle lasted for nearly two hours, until the Chinese soldiers withdrew at 0240. There were no Marine losses. No tally or estimate was made on the number of enemy KIA or WIA. It was presumed that some of the Communists did become casualties since the three machine guns that had been chattering away to support the attacker’s ground action suddenly went silent after Marines called down mortar and artillery fire on the Hill 104 positions.

The probes of 1st Marines positions at Bunker Hill and, to a lesser degree, at Stromboli were repeated in the 5th Marines right regimental sector. At almost exactly the same time Colonel Eustace R. Smoak’s regiment[9]
was struck at five of its forward outposts. In the case of OP Gary, on the right, the enemy merely shelled the
position for 40 minutes. Against the four other outposts, known as Allen, Bruce, Clarence, and Felix, the Chinese
employed both fire and assault troops. (See Map 12.) At Felix the action had begun at 0130, a half hour later than
at the adjacent outposts. The difference was probably due to a C/1/5 ambush[10] which had engaged an enemy
force operating between Donald and Felix. After a brief five minute fire fight the Marines broke off the action,
pulling back to Felix. The other three outposts, clustered to the left of the 3/5 sector, received the brunt of the
enemy thrust which lasted for an hour and 20 minutes before the Communists withdrew.

Employing a squad against both Allen and Clarence, and sending a reinforced company against Bruce,
the enemy alternately assaulted and shelled the positions until 0420, after which the Communist units policed the
battlefield for casualties and withdrew to the north.

Although there was no official estimate of enemy losses, one Marine at outpost Bruce was credited with
inflicting approximately 200 casualties by fire from two machine guns, a carbine, and grenades. He was Private
First Class Alford L. McLaughlin, of I/3/5, who was later to receive the Medal of Honor for “conspicuous
gallantry and intrepidity.” Another Marine from the same company was posthumously awarded the medal. Private
First Class Fernando L. Garcia, although gravely wounded, had thrown himself on a hostile grenade to save the
life of his platoon sergeant during the Chinese rush to take OP Bruce.

At daybreak the I/3/5 defenders at Bruce, commanded by Captain Edward Y. Holt, Jr., were confronted
by an almost unbelievable scene of destruction. All of the bunkers on the forward side of the hill had been
destroyed by Chinese mortar and artillery; on the reverse slope, only two had escaped ruination. Marine losses
were 32 dead and wounded.[11] To restore the position the 3/5 commander, Lieutenant Colonel Oscar T. Jensen,
Jr., directed replacements forward immediately. Carrying emergency supplies, including building materials, the
relief element reached Bruce about 1000. Evacuation of casualties was the first task and at 1045 the relieved detail
was on its way back to the MLR. Later that day a supply party reached the outpost, having been temporarily
delayed by Chinese interdicting fire.

Reinforcement of Bruce and the repair of its defenses were considerably slowed by the continuous rain of
enemy projectiles during daylight. Marine and USAF pilots bombed and napalmed enemy bunkers and troops
north of JAMESTOWN in the 5th Marines sector. Ten air strikes were executed in support of the 5th Marines that
day.

Early on 6 September, 10 minutes after midnight, long-range machine gun fire, buttressed by artillery
and mortars, hit outpost Bruce. After 35 minutes the firing subsided, but again at 0305 the outpost experienced a
heavy rate of incoming. At about this time, the Communist soldiers massed for an assault on the battered position.
Marine defenders called down the artillery box, and the Chinese dispersed.

That evening, at 1915, the outpost commander reported that the Chinese had again resumed a steady
shelling of the position. The bombardment continued for an hour. After these heavy preparatory fires, a wave of
enemy infantry began scrambling up the sides of Bruce. At the same time, outpost Allen to the left came under
long-range fire from enemy strongholds to the west and north. After the Chinese made their initial rush against
Bruce, a second and third attack fared no better. Each was met and repulsed by the 5th Marines.

After the third abortive attack, a period of deathly stillness descended upon the contested hill.
Occasionally, an enemy mortar round found its mark among the scattered, splintered bunker timbers and the
caved-in trenches, which connected the sandbag and lumber positions. At 0145 on the 7th, the Chinese interrupted
the uneasy peace that had settled upon Bruce with a brief, heavy preparatory fire.

Exactly an hour later, an estimated two Chinese companies advanced up the forward slopes, using
demolitions to destroy any friendly bunkers their artillery and mortar had not earlier completely wrecked. By the
time this newest assault had raged for 30 minutes, nearly every 3/5 defender had become a casualty. Still the
Marines refused to give ground, dealing first with the forward slope assault by the Chinese and later with those who attempted to envelop the Marines on the reverse side. On the MLR Marines first observed enemy flares falling between outpost Bruce and Line JAMESTOWN. Soon thereafter the Chinese policed the battlefield. By 0400 the Communists retired, and the fight for this key outpost had ended in failure.

During the 51-hour siege of Outpost Bruce, 19 Marines had been killed and 38 wounded. At the adjacent 5th Marines outposts, additional losses were 5 killed and 32 wounded. More than 200 enemy dead were counted. During the last eight hours of the vicious, close-in fighting at Bruce, it was estimated that another 200 Chinese had been wounded.

The Korean Marines, holding down the western flank of the three mainland regimental sectors in the 1st Marine Division line, also received a share of the enemy’s attention. At dusk on 5 September, Chinese barrages began to smash Outpost 37, the first of a trio of positions that would merit hostile attention for the next 22 hours. Throughout the following day the Chinese continued their mortar and artillery fire against Outposts 37 and 36, and the regimental observation post located on Hill 155 (also called Hill 167) to the rear of the MLR. (See Map 13.) The heaviest enemy fire was directed against OP 36, a small rise in the low land terrain midway between the Sachon River, on the west and the Munsan-ni-Kaesong rail line, 600 yards to the east.

At 1605 a 50-round barrage struck OP 36. After this harassing fire there was a lull until 1810 when Chinese artillery and mortars again resumed a steady pounding of the three positions. One hour later enemy soldiers hit both outposts. Twice the attacking company assaulted OP 37 but neither effort represented, in the view of the defenders, a serious attempt at capture. Less than a mile south at OP 36, however, the enemy motive appeared to be quite different.

Crossing the Sachon just north of the Freedom Gate Bridge (also known as the highway bridge), the Communist infantry moved to assault positions on the west, north, and northeast sides of the outpost. At 1910, the Chinese began their first rush. It was repulsed, as was a second one. Another artillery barrage, joined this time by tank fire, preceded the third attempt. At this point communications went out at the besieged outpost. At 2150, a squad leader from OP 36 reached the 10th Company CP to report that his position had fallen. In 30 minutes a communications link was re-established with the outpost. The defending Koreans reported that although enemy troops had overrun much of the hill, they had subsequently withdrawn, apparently because their losses had been so heavy.

Casualties and damage were severe. The Korean regiment estimated that 110 enemy had been killed or wounded. An early morning KMC reconnaissance patrol counted 33 dead Chinese in the vicinity of OP 36. The attacking force had also left behind much equipment, including more than 100 grenades and several automatic weapons. No papers were found on the dead Communist soldiers, but many propaganda leaflets had been dropped around the outpost. Korean Marine losses at OP 36 were nine killed and seven wounded. At OP 37 there were four casualties; at the regimental CP, one Korean and two U.S. Marines had been killed by enemy artillery. Chinese incoming, estimated at 2,500 rounds during the two actions, had also caused major damage to part of the OP 36 defenses, but inflicted less harm to the other two positions. Repairs were begun before daylight.
After the stepped-up enemy ground activity in early September, both Chinese and Marine frontline units resumed their earlier pattern of combat patrols, probes, and ambushes. Possession of Bunker Hill remained the immediate objective of the enemy and his activities in the middle of the Marine line were directed to this goal. Once again on 9 September a marauding Chinese platoon, employing grenades and submachine guns, sounded out the Bunker defenses, now manned by G/3/1 (Captain William F. Whitbeck, Jr.). After a tentative investigation, the enemy withdrew. That same day, expanded patrol and raiding activities were undertaken by Marine line battalions.

These sharply increased offensive measures resulted, in part, from the Communist interest, as evinced during the summer truce negotiations, in certain forward positions held by UNC units. On 7 September, the CG, I Corps had alerted his division commanders to the fact that the enemy “may attempt to seize and hold certain key terrain features . . . over which there was extensive disagreement during [the 1952 summer truce] negotiations for the present line of demarcation.” Since much of the critical land was in his sector, Major General Kendall further warned his division commanders “to take the necessary action within your means to hold all terrain now occupied by your divisions.” Critical terrain features in the 1st Marine Division area of responsibility were Bunker Hill and the height on which COP Bruce had been established (Hill 148), in the center and right regimental sectors respectively.

Two days later, General Pollock amplified this directive by underscoring the necessity for holding these two positions, plus eight more he considered vital for sound tactical defense. These additional positions, from west to east, were Hills 86 and 37 in the KMC sector; Hills 56 and 48A in the center sector; and the outposts then known as Allen, Clarence, Felix, and Jill, all the responsibility of the right regiment.

Although the eastern part of the division main line thus contained at this time more key hills than any other Marine sector, much of the increase in Marine patrol and ambush activity took place in No-Man’s-Land forward of the middle frontline regiment. Of the two JAMESTOWN sectors manned by U.S. Marines, the one in the center of the division area offered better ground for infantry operations.

On the divisional western flank, the Korean Marines conducted frequent infantry-tank patrols during the second and third weeks of September, but the enemy opposite the KMCs initiated little ground activity. Instead, the Chinese relied upon their supporting weapons to provide the contact. For a seven-day period ending 19 September, a total of 2,375 enemy rounds had fallen in that regimental sector, an average of 339 per day. Nearly a third had been in the vicinity of Hill 36.

Before sunrise on the 19th, a Chinese infantry company had crossed the Sachon in the vicinity of the railroad bridge. Once on the east side, the enemy soldiers concealed themselves in caves and holes, remaining there until dusk. Then, when they came out of hiding, the Communists held a briefing and organized themselves into three attack groups. As these advance infantry elements approached their objective, OP 36, other reinforcing units were prepared to seize OP 37, to the east, and OPs 33 and 31, to the south. Artillery and mortar preparation supported these diversionary attacks.

The main assault was accompanied by even heavier shelling. As the three assault units reached the bottom of the hill at OP 36, artillery, mortars, and tanks had fired more than 400 rounds. Approaching from the north, east, and west, the Chinese scrambled up the hill, gaining control of the wrecked defenses by 2000. Sporadic exchanges of fire lasted until nearly midnight. At 0115 the Korean Marines attempted to retake the hill.
The counterattack was cut short, however, upon discovery of another enemy unit moving towards the outpost and then only one-half mile away. Three hours later the enemy came back in strength when a CCF platoon successfully overthrew the outpost at 0520. This new assault occurred without any warning and was so swiftly executed that a number of the KMC defenders found themselves encircled and trapped at their posts. Most managed to escape, but several were captured and later evacuated when the Chinese removed their own battle casualties.

Another attempt to regain the outpost was made by the Koreans at 1400, following artillery preparation and two air strikes. Three Marine attack squadrons, VMAs–323,–121, and–212 blasted the Chinese on the front slope of OP 36. The contour of the far side of the hill had provided the enemy a defiladed position and safety from 1st Marine Division organic weapons. But the MAG–12 air sorties, destroying many CCF automatic weapons and mortars and breaking up a company strongpoint, helped the Koreans counterattack and overrun the dazed defenders. Two KMC platoons, supported by artillery, mortar, and tank fire, then carried the OP after overcoming token Chinese resistance. After the enemy vacated OP 36, he still continued to remain in the low area to the northwest, close to the east side of the Sachon River. No serious attempt was made by the enemy to occupy the position for the rest of the month.

The 20-hour clash for control of OP 36 was believed to have developed from the Chinese ambition to occupy the position and thereby eliminate the harassing fires from Hill 36 that had struck CCF mainline troops. The 19–20 September attempts to wrest the outpost from Korean control resulted in an estimated 150 Chinese casualties, including 20 counted dead. KMC losses were placed at 16 killed, 47 wounded, and 6 missing.

On the day that the second September battle for OP 36 had ended, the Commandant of the Marine Corps had also just concluded his three-day visit and inspection of General Pollock’s troops. Visiting every battalion in the division, General Shepherd was impressed by the morale and proficiency of the Marines, including the attached 1st KMC Regiment. During his visit to Korea, the Marine Corps Commandant was also presented the Order of Military Merit, Taiguk, by President Rhee. General Shepherd ended his Korean battlefront visit after a two-day inspection of 1st Marine Aircraft Wing units commanded by Major General Jerome (he had received his second star on 6 August).
Even though the enemy had concentrated his strongest infantry attack in late September against the Korean Marines, his most frequent probes were launched against center regimental positions held by Colonel Layer’s 1st Marines. Here the enemy was more consistent in conducting his defense. Chinese troops doggedly held on to the northern slopes of several Marine outposts, notably Hills 124 and 122. In this center regimental sector, the enemy initiated several attacks, the most significant of these occurring on the 20th.

This action against the left sector manned by 2/1 centered about Hill 124, where Lieutenant Colonel Batterton’s battalion had established a 24-hour, squad-size outpost three days earlier. At 0345, Marines on Hill 124 observed two green flares fired from a hill about 1,100 yards to their front. At the same time the men of 2/1 observed numerous figures moving about downhill from their own position. It soon became evident that four enemy groups were converging on Hill 124 and preparing to assault the Marine defenses which shortly came under fire from enemy submachine guns and rifles. The main probe was a frontal assault against Batterton’s men; it was made by about 20 Chinese and lasted only five minutes. Afterwards, all four assault groups withdrew but continued firing intermittently at the Marine squad. Nearly every Marine on the hill suffered wounds, most of these minor. Enemy losses for the action were placed at 22.

In this same sector Marines in late September attacked the northern slope of Hill 122, where the enemy still maintained a foothold. The proximity of Marine defenses at Bunker Hill to enemy positions, separated in some places by as little as 30 yards, was the cause of frequent contact and clashes. Marines raided the enemy side of Bunker, using demolitions and portable flamethrowers to destroy trenches and bunkers, and their occupants. Tanks and artillery assisted in these brief offensive actions, usually undertaken at night. Flares were used frequently to aid in identifying and striking targets and in assessing the results.

It became routine during the last days of September for the Chinese to probe the Marine defenses at the Hills 124–122 axis. There did not appear to be a serious or determined assault to take either outpost, however. The Marines considered the infantry probes as just another form of harassment, although perhaps more personal and direct than the Chinese shelling, which inflicted daily losses. On the division right, Colonel Moore’s 7th Marines, which had moved into this sector on 7 September, found enemy activities about the same. Artillery rounds caused the greatest number of casualties, although these attacks were not particularly spirited. Many enemy contacts occurred during the Marine combat patrols that largely characterized frontline operations at the end of September.
Operations in West Korea

Chapter 4. Outpost Fighting Expanded
Chinese Intensify Their Outpost Attacks[18]

With the beginning of October, the 1st Marine Division became aware of certain changes that were occurring to its front. In the center sector, for the first time in two weeks there was no significant enemy ground activity, yet across the entire Marine front there was a build-up of enemy shelling. Part of the increased bombardment was directed at Hill 86 in the KMC sector, one of the positions recently cited as integral to the defense line in this area. Beginning at 2000 on 1 October, the Chinese broadcast a warning that they would knock down the outpost bunkers there unless the Korean Marines surrendered. When the KMCs manning the position did not, of course, surrender in reaction to this blatant propaganda tactic, the Chinese began showering Hill 86 with artillery rounds. During the next 20 hours, 145 rounds fell on and around the outpost. This incident marked the first time that the Chinese mainline forces had carried out an announced threat.

This type of operational tactic—first to warn, then to carry out the threat—was not, however, the reason for the increased Chinese shelling. Rather, as it turned out, the enemy was about to embark on a series of limited objective attacks against the division flanks, starting first with major outposts guarding the most critical terrain on the MLR. The artillery and mortar fire of the 1st had been but an initial step. At 1830 on 2 October, Communist direct fire weapons opened up from an area 2,800 yards northwest of OP 36, lashing all the KMC outposts within range. A tank platoon, dispatched to counter the fire, returned at 1915 without having located the hostile emplacements. Shortly after the tanks returned, an extremely heavy artillery barrage again fell upon all of the KMC regimental outposts. Ten minutes later, seemingly on the signal of one red and one green flare, the enemy guns lifted their preparatory fires to permit an infantry attack. The ground action simultaneously struck OPs 37, 36, and 86, the forward positions closest to the Sachon River.

At OP 37, the defending Korean Marine platoon fought valiantly for more than an hour against the assault of two enemy platoons, each of which required a company-size reinforcement before the Korean Marines were finally ousted. Although temporarily dislodged, they reorganized at the base of the position for a counterattack. Two counterattacks were made the next day, the second one carrying the Koreans to the top of the hill. Fierce enemy mortar and artillery shelling forced them to seek the shelter of the reverse slope before again renewing their assault. On 4–5 October, the outpost changed hands four times. At 1340 on the latter date, a heavy enemy artillery and ground attack compelled the KMCs to abandon their ravaged outpost; this withdrawal ended friendly control of OP 37 for the rest of the month.

Nearby OP 36 was also lost. In the course of the night the Korean Marines on OP 36 turned back two Communist assaults, but fell under the weight of the third. By sunup on 3 October, the exhausted Korean Marines were forced to give ground; the Chinese immediately occupied OP 36 and held it.

One more KMC outpost was to fall during the first week. OP 86 guarded the southwestern two-thirds of the regimental sector and frequently was the target of artillery shelling and ground attacks. This position was also the most distant from the main line and the closest to the Sachon River.

The heaviest Communist attack on 2 October was against the KMC platoons defending Hill 86. Nearly a battalion of Chinese took part in this action, finally overpowering the outpost just before midnight. The defenders withdrew south to the bottom of the hill, where they were comparatively safe from enemy fire. Resting, receiving reinforcements, and regrouping during the early morning hours of the 3d, the Korean Marine force observed friendly artillery and air pound the outpost preparatory to their counterattack. It was made at 1015 and succeeded, after two hours fighting, in routing the Chinese from the outpost.
While the enemy was counteracting the ground loss with artillery and mortars, Marine air flushed out the Chinese, who had retreated only a short distance from the outpost. From atop the hill, Korean Marines witnessed many of the enemy hurriedly leaving the area under attack. This scattering of the enemy force prevented the Chinese from launching an immediate counterattack for control of OP 86 and gave the Korean Marines additional time in which to prepare their defenses. At 2200 on 6 October, an enemy force of undetermined size assaulted the position and wrested it from the Koreans before the end of the day. Early the next morning a KMC counterattack was successful, but at 0640 the Koreans were again compelled to withdraw, due to devastating blows from Chinese artillery. Loss of the third key outpost during the first week of October, ended for a time the flare-up of outpost fighting in the left regimental sector of the division front.

The middle part of the MLR, held in early October by the 1st Marines, received the least enemy attention in this period. Although frequent contacts were made with the enemy during the first part of the month, no outposts were lost. Most of the action was minor, i.e., patrol engagements and Communist probes centered around Bunker Hill and Hill 124. Late on 5 October, a combat patrol from H/3/1 became involved in the most important ground action in Colonel Layer’s area during early October. These Marines were surprised by a larger Chinese force lying in wait. The ambushers held their fire until the Marine combat patrol had cleared a small hilltop. At 2230, after a 20-minute fire fight, the patrol withdrew to the reverse slope of the rise, called in 81mm mortar fire, then broke contact, and returned to the MLR. There were 4 Marine casualties, and by count, 13 dead Chinese.

By far the greatest number of personal losses at this time occurred in the right area held by the 7th Marines, where the Chinese began a series of limited objective attacks against outposts guarding the division right flank. These offensives to obtain critical terrain in this sector, and others manned by the 1st Marine Division, would continue intermittently right up to the brink of the cease-fire, in July 1953.

In early October, Colonel Moore’s troops manned nine permanent combat outposts. (See Map 14.) Seven of these had been taken over when the regiment relieved the 5th Marines in September. Two additional ones—Frisco and Verdun—had been established by the 7th Marines on the 14th and 26th, respectively. Of these nine forward positions, the Communists chose to concentrate on four, which formed a diagonal line roughly paralleling the center sector of the MLR at an average distance of about 450 yards. This quartet—Detroit, Frisco, Seattle, and Warsaw—together with Verdun,[19] at the 1st Commonwealth boundary, comprised the easternmost permanent outposts of the division. The first four positions were, on the average, slightly lower in elevation than the COPs in the regimental area to the west.

The frontline contest began with little forewarning other than a slight increase in enemy artillery and machine gun fire against Frisco and a light probe against Detroit. At 1836 on 2 October, the Communists launched a heavy artillery and mortar barrage against Seattle and Warsaw, and that part of the MLR nearest Seattle. Exactly one hour later, the preparation on the outposts lifted, permitting the enemy attack force to strike. Not less than a company assaulted the reinforced platoon on Warsaw, while a squad moved against the Seattle defenders. Warsaw fell in about 45 minutes,[20] Seattle held out five minutes longer.

Immediately, plans for the recapture of both were made. At 2047, Captain John H. Thomas dispatched a platoon from his company, 1/3/7, from the MLR to counterattack Warsaw. The platoon quickly took the position, for the enemy had withdrawn. At Seattle, the result was different. On 3 October, two squads from Company I departed JAMESTOWN at 0340, but came under enemy artillery fire en route to the objective. The squads worked their way forward nevertheless, but were unable to take the outpost. Captain Thomas then recalled the force, which reached JAMESTOWN at dawn. Later that day, just before dusk, air and artillery placed a smoke screen on Seattle while two squads advanced toward the outpost. When the counterattack met stiff resistance, a squad-size reinforcement[21] was sent from the MLR. Together the three units attempted to retake the position, but were forced to pull back because of heavy casualties. As the infantry again regrouped, Lieutenant Colonel
Bert Davis, Jr.’s 2/11 fired preparatory barrages on the Chinese occupying Seattle. At 2225 the Marines assaulted the outpost again; as before, overpowering Chinese artillery and grenades inflicted such high casualties that the counterattackers were compelled to withdraw.

By this time, action at the two outposts had resulted in 101 Marine casualties, including 13 killed. By sundown on 3 October, the regiment had been forced off the two COPs and had been able to retake only one of them. Against Warsaw, the one that the Marines had recaptured, the Chinese immediately launched a counterattack. At 0145 on 4 October a platoon struck the position. This time the Warsaw garrison held, inflicting losses on the CCF and receiving none. The Chinese made an unsuccessful attempt against Frisco at 2300 on 5 October, when a squad attempted to drive the Marines from the outpost.

The enemy’s repeated attacks and apparent determination to seize commanding terrain, plus the heavy casualties suffered by 3/7, led the 7th Marines to reinforce its MLR at 1200 on 5 October. At this time the right battalion sector then held by 3/7, was split into two sectors and the regimental reserve, 1/7 (Lieutenant Colonel Leo J. Dulacki) took over the far right of the 3/7 line, assuming responsibility for Warsaw and Verdun.[22] The 7th Marines thus had all three of its battalions on line with the regimental front manned, from the left, by 2/7, 3/7, and 1/7.

During the next 30 hours, the Communists launched a series of strong probing actions against the regimental outposts of the 7th Marines. Although the numerical strength used in these widespread limited objective attacks did not exceed that employed in previous large-scale outpost offensives, the scope of the operation on 6 and 7 October and the well-coordinated attacks indicated careful and detailed planning. Each move against the five outposts and two MLR positions attacked was preceded by unusually close attention to artillery and mortar preparation. This was to a degree unprecedented even when measured against those massive concentrations that had characterized Communist operations since the Chinese intervention in the war late in 1950.

Prior to the Communist general attack, the Marines made another attempt to retake Seattle. Leaving JAMESTOWN at 0600 on 6 October, a C/1/7 reinforced platoon was halted by solid resistance in the form of exploding artillery and mortar rounds. The forces returned to the MLR, reorganized, and jumped off again. At 0815, a two-squad reinforcement was dispatched from the main line. Meanwhile, the enemy, estimated at platoon reinforced strength, doubled his garrison, using troops from his outpost line. By 0900, a heavy fire fight was in progress, supported by artillery and mortars on both sides. Marines called on air in support of the attack, but the combined air and infantry action was unable to penetrate enemy defenses. Finally, at 1100, after five hours of close heavy fighting, the Marines broke contact and retired, bringing with them 12 dead and 44 wounded. Estimates of enemy losses totaled 71.

That evening, at dusk, artillery and mortar fire began falling on outpost positions across the entire regimental front and at two locations on the MLR. At the same time an estimated Chinese reinforced battalion in a coordinated effort advanced toward the Marine line and at 1930 assaulted the seven positions that had just been under artillery preparation. By midnight an estimated 4,300 rounds of artillery fire and 104 rounds of counterbattery fire had fallen on Marine positions. In the regimental left manned by 2/7 (Lieutenant Colonel Caputo) the attacks appeared to be more of a diversion—merely probes by small units, which showed little inclination to press the attack. Carson, the most western COP held by the regiment, reported that the enemy soldiers withdrew at 2050. Two hours later Reno, the next outpost to the east, radioed to the MLR that the Chinese had just ceased their attacks at that forward post. A total of 12 Marines were wounded in these two actions.

On the far right, in Lieutenant Colonel Dulacki’s sector, a reinforced CCF platoon poured over the Warsaw defenses at 1930. Immediately the outpost Marines called for the friendly artillery box. As these protective fires were being delivered all communication at the outpost was severed by hostile fire. Enemy artillery
continued at a heavy rate. By 2000, however, communication was reestablished between the COP and MLR. The first message from the besieged outpost was a request for more artillery. With additional fire support and continued stiff outpost resistance, the Chinese at 2055 relinquished their quest to regain Warsaw.

The enemy’s most determined assaults on the night of 6–7 October were made upon a pair of outposts, Detroit and Frisco, manned by the middle battalion, 3/7 (Lieutenant Colonel Gerald F. Russell). Two JAMESTOWN areas in this sector were also attacked, but only briefly. The assault against the outposts was executed by a Chinese battalion which sent one company against Detroit and another against Frisco, east of Detroit. Both outposts were manned by two squads of Marines.

At Detroit, the Company G Marines reported that the initial attack made at 1940 on 6 October by a Chinese company had been rebuffed. The enemy did succeed, however, in advancing to the outpost trenchline. Strong defensive fires prevented him from exploiting this initial gain by occupying any of the bunkers, and the attackers were forced to pull back. After regrouping, the Chinese returned at 2100 and again were able to secure a foothold at the main trench.

Marine artillery assisted the outpost defenders in repulsing this new attack, but not before Chinese interdictory fires had disrupted all communications between the COP and its MLR support company. Some Chinese had also moved south in the vicinity of the MLR, but these attacks were neither persistent nor heavily supported. At 2115 the last of the enemy intruders had withdrawn from the MLR. At about this same time, 3/7 heard Detroit request overhead VT fires, but shortly after this the battalion again lost contact with the outpost.

Two squads were then sent out to reinforce the position. They were stopped, however, by heavy Chinese artillery barrages. At the outpost, Marine artillery fires had forced the Chinese to retreat, but at 0015 the enemy reappeared at the trenchline. The artillery regiment once again applied the overhead fire remedy, but with less success—the Chinese, neither retreating nor advancing, took cover in the trenches. During the long night, attempts to re-establish communications with Detroit had proved fruitless, although battalion radio operators reported that they had heard Chinese language coming over one of the Marine radio nets used by the COP. A six-man reconnaissance detail was sent forward to investigate. It returned at 0355 with the information that Detroit was now held by the enemy. Two wounded Marines had escaped; the rest of the Detroit garrison had fallen to the enemy. At 0630 the Marines withdrew after heavy fighting that had lasted more than 10 hours.

During the earlier part of the night, while the battle for outpost control raged at Detroit, reinforcements had also been dispatched to Frisco to help stabilize the situation at this adjacent Company H/3/7 outpost. Like Detroit, it had been attacked by a Chinese company, beginning about 2000. An hour and a half later some of the enemy had made their way into the trenchline, but were repulsed with the help of friendly artillery VT. Shortly after midnight the enemy again probed Frisco and reached the trenchline. At 0115, two squads jumped off from JAMESTOWN, but a rain of Chinese artillery interrupted their progress. Throughout the early morning hours of 7 October, Company H and I units were sent out from the MLR to buttress the Frisco defense and stem the enemy attack. At 0510, a reinforced platoon from the reserve company was sent to renew the counterattack. It was this Company I unit that finally restored control of the COP to the Marines. Another reinforcing platoon arrived at the outpost just as the Marines there had evicted the remaining Chinese assault forces. At 0715, 7 October, Frisco was declared secure.

Its precarious position, however, demanded either an investment of more outpost troops to retain possession of it or else its abandonment, in conjunction with other measures to neutralize loss of the position. At 1804 that day the latter course was instituted. The 7th Marines reported that the enemy had suffered an estimated 200 KIA and unknown WIA as a result of the bitterly contested outpost attacks on 6–7 October. Marine casualties were listed as 10 killed, 22 missing, 105 wounded and evacuated, and 23 not-seriously wounded.

In all, during the first week in October, the 1st Marine Division gave up six outposts, or forward positions, that had been sited on some of the commanding ground in the Marine area. On the division left, COPs
37, 36, and 86 were the ones most removed from the Korean MLR and thus easily susceptible to being overrun by the enemy at will and to his early reinforcement.[24] The division theorized that near winter and the subsequent freezing of the Sachon would facilitate the movement of Chinese troops and supplies across the river to new positions. The enemy was now able to operate patrols east of the river without interference. At the opposite side of the division MLR, on its right flank, Detroit, Frisco, and Seattle had been lost. By gaining this string of outposts, the enemy was better able to exert pressure against other Marine positions forward of the line and the critical ground on JAMESTOWN.

To counter this threat, General Pollock strengthened the outposts close to the MLR and increased his patrolling requirements. It was decided that in some cases the mission of the COP—that of providing early warning of impending attack and slowing it down—could be accomplished as effectively by using patrols and listening posts at night.

By these activities, the Marines hoped to minimize the Chinese gains and prevent the launching of new attacks against either division COPs or JAMESTOWN. The serious situation on the outposts was compounded by existing political considerations, which prevented the Marines from initiating any real offensive campaigns. Moreover, any hill taken was invariably backed up by a still higher one, controlled by the enemy. The key factor was not so much holding an individual outpost as it was to insure that the enemy was unable to penetrate the JAMESTOWN line.
Operations in West Korea
Pat Meid and James M. Yingling

Chapter 4. Outpost Fighting Expanded
More PRESSURE, More CAS, More Accomplishments[25]

Some of the enemy ground pressure against the outposts in September and October had been relieved by the increase in the number of air strikes received by the 1st Marine Division. De-emphasis of the Air Force interdiction strategy in favor of striking the enemy wherever (and whenever) it hurt him most had made available more aircraft for close support of ground operations.[26] The UN commander, General Clark, who had given the green light to the shift in USAF policy and targets, followed the giant hydroelectric strike in June with a mass attack the next month on 30 military targets located near the North Korean Capital. During a year’s freedom from air attack (July 1951–July 1952) Pyongyang had become not only the major logistics center for combat equipment and personnel but also the focal point for command and control of Communist ground and air defense efforts.

Designated Operation PRESSURE PUMP, the 11 July strike against Pyongyang called for three separate attacks during daylight and a fourth at night. This extended time over the target would give enemy fighters more than ample time to take to the skies in defense of the Capital. Because Pyongyang “was defended by 48 guns and more than 100 automatic weapons, making it one of the worst ‘flak traps’ in Korea,”[27] there was considerable hazard in the operation. Added danger to the pilots resulted from the decision to forewarn the North Korean civilian population of the air assault. General Clark explained the reason for dropping warning leaflets prior to the attack on Pyongyang:

“The objective was in part humanitarian and in part practical. We had to hit Pyongyang because the Communists had made it a major military headquarters and stockpile area. We wanted to warn the people away from danger areas. By warning them away we disrupted their daily lives and made it difficult for the Communists to maintain any kind of schedules in their work in the city.”[28]

Results indicated that both the destructive and the psychological aspects of the mission were successful. American, British, and ROK planes completely destroyed 3 of the 30 military targets attacked. Of the rest, only two escaped major damage:

“According to . . . reports, the North Korean Ministry of Industry’s underground offices were destroyed and a direct hit on another shelter was said to have killed 400 to 500 Communist officials. Off the air for two days, Radio Pyongyang finally announced that the ‘brutal’ strikes had destroyed 1,500 buildings and had inflicted 7,000 casualties.”[29]

Of the far-reaching effect of the leaflets, the UN commander later wrote:

“The warning leaflets, coupled with the bombing, hurt North Korean civilian morale badly. The very audacity of the United Nations in warning the Communists where bombers would strike hurt morale because it emphasized to the North Koreans just how complete was UN mastery of the air. Contrarily, it made them see even more clearly that the Communists were ineffectual in their efforts to ward off our air blows. . . .

“As a result of the warnings, the bombings, the failure of the Communists to provide protection, and the refusal of the Communists to permit evacuation of the clearly defined target areas, civilian resentment was channeled away from the UNC bombers and towards the Communist rulers.”[30]

The record set by the 1,254 sorties flown in this 11 July operation was to last only seven weeks. On 29 August, 1,403 sorties were employed in a new strike against the Capital. The massed raids against military targets in Pyongyang, known as the “All United Nations Air Effort” turned out to be the largest one-day air assault during the entire three years of the Korean War. Again attacking at four-hour intervals three times during daylight, Allied aircraft blasted a list of targets that “read like a guide to public offices in Pyongyang and included
such points of interest as the Ministry of Rail Transportation, the Munitions Bureau, Radio Pyongyang, plus many factories, warehouses, and troop billets.”\[31\] Of the 45 military targets in the city, 31 received moderate-to-severe damage according to post-strike photographs.

Substitution of the previous interdiction strategy by PRESSURE attacks brought increased close air support to frontline troops. As a result of this expanded number of CAS sorties, wing pilots and ground forward air controllers greatly increased their operational proficiency.\[32\] The Marines were still not satisfied with the close support picture, however, and neither were a number of U.S. Army commanders. Some of the latter regarded General Clark as the champion of more extensive close air support missions for frontline units, but he quickly dispelled this view. Instead, he cautioned these supporters of Marine-type close air support to accept the existing procedures, which were derived from the “vast reservoir of experience . . . [representing] the composite view of senior members of the Armed Forces [with] the longest and most responsible experience in close support during World War II.”\[33\] At the same time the UN commander, on 11 August 1952, had advised his force commanders to study the factors affecting the close air support situation in Korea and comment on certain UNC proposals for improving the CAS system.

In the close air support picture for the Marines, October was a bright month. In the outpost battles of early October, the 1st MAW put 319 sorties in the air during both day and night to strike, strafe, bomb, and burn enemy positions and troops facing General Pollock’s division. A new level of achievement had been reached during the Bunker Hill battle in August. That month nearly 1,000 aircraft, predominantly Marine, loosed ordnance at targets on and near the Chinese MLR and OPLR.

During the first six months of Marine ground operations in defense of JAMESTOWN, wing squadrons and pilots had made major contributions to the U.S. air effort in Korea. On 7 June 1952, First Lieutenant John W. Andre, VMF(N)–513, piloting a World War II model Corsair on a night armed reconnaissance mission over the west coast of North Korea, shot down an enemy piston-driven Yak fighter. It was the first time that a Russian-built plane of that model had been knocked out of the skies at night by another plane. This aircraft was also the fifth kill for the lieutenant, making him the first Marine nightfighter ace in Korea.\[34\]

Nearly three months after that record, another one emerged: the first Marine to down an enemy jet with a propeller-driven aircraft. Late on the afternoon of 10 September, Captain Jesse G. Folmar and First Lieutenant Willie L. Daniels, both of VMA–312, had taken off from the Sicily to attack an enemy troop concentration reported to be south of Chinnampo, on the west coast just below the 39th Parallel. Shortly after reaching the vicinity of the target, the Marine Corsairs were jumped by a pair of MIG–15s. Two more Russian-made jets tore into the fight. During a fast exchange of cannon and machine gun fire, the Marine captain was able to score lethal hits on one of the MIGs. When four more of them picked up the chase, the vastly outnumbered Marines broke for home, heading westward in a diving turn.

Captain Folmar’s return to the Sicily was delayed almost immediately:

“I had just started picking up good diving speed when I saw balls of tracer ammo passing on my left and at the same instant felt a severe explosion in my left wing . . . I saw that the left aileron and four feet of my left wing were gone.”\[35\]

This damage caused the plane to rapidly go out of control. While still able to maneuver, the Marine aviator headed for the sea and as he neared it, bailed out of his Corsair and parachuted into the ocean. A rescue plane out of Cho-do picked him up and returned the captain, who had sustained a slight shoulder injury, to the carrier. Lieutenant Daniels, who had alerted the rescue force, circled his descending flight leader until he hit the water. After ascertaining that the waterborne flier’s condition was satisfactory, the lieutenant turned his plane towards the Sicily. In a short while he was safely home.

In late September, Major Alexander J. Gillis, VMF–311, assigned earlier that summer to the Air Force’s 335th Fighter-Interceptor Squadron, 4th Fighter Group, as an exchange pilot,\[36\] distinguished himself by
becoming not only the first naval aviator to destroy three enemy aircraft in Korea but also the second one to get a multiple killing in a single day.[37] Flying in a four-plane Sabrejet formation near the vicinity of the mouth of the Yalu on 28 September, Major Gillis led another plane after two MIG–15s. By superior pilot technique and aggressive tactics, he forced one of the enemy to crash during a low altitude chase. Later on during the sortie, the Marine initiated an attack on a solo MIG, closing on it and scoring hits that caused the plane to become uncontrollable and the pilot to eject. Major Gillis also had to eject from his F-86 after it became disabled by the MIG. The incident had occurred on the Marine aviator’s 50th combat mission with the Air Force. He spent nearly four hours in the Yellow Sea before a rescue helicopter picked him up.

Another feat, this one a study in determination and perseverance, had occurred early in the summer. On 22 July, the VMJ–1 commander, Lieutenant Colonel Vernon O. Ullman, had taken to the air for a photo mission over North Korea in the vicinity of Sinanju, located near the Yellow Sea 40 miles above Pyongyang. During the first of seven scheduled flights, he encountered heavy flak but nevertheless completed his first mapping run in the area. Further, the Marine flier decided that the antiaircraft menace was not going to force him to abandon the remaining part of his task. He continued. On the second of his seven runs, some 40 enemy jets (MIG–15s) appeared on the scene. These were dissuaded from close-in interference, however, by the photo escort of 24 USAF single-engine Sabrejet fighters. Thereafter, the Russian-made aircraft disappeared; Lieutenant Colonel Ullman continued, despite the intense, accurate enemy antiaircraft fire, until he concluded his mission.

The type of determination displayed by Lieutenant Colonel Ullman helped Marine tactical squadrons achieve some kind of distinction nearly every month from late spring to the fall of 1952. In May, VMF–323 (“the Death Rattlers”), then commanded by Major William A. Weir, established a squadron one-month record for number of combat sorties, 1,160, and total combat hours, 2,362.7. A high percentage of aircraft availability, 95.6, helped make this mark possible. On 1 June, VMA–312 received the congratulations of CTF 95 for its “outstanding performance under difficult conditions” during the spring months. During this period the squadron, based on board the USS Bataan, had been particularly hampered by excessive turn-over of key squadron officers and flight leaders. This continual squadron rotation resulted in considerable variation in pilot indoctrination and need for field carrier landing qualification, due to the “close tolerances in pilot skill required by carrier operations.”[38] Despite these difficulties, VMA–312 had scored an impressive 80-sortie mission, flown by 24 aircraft, on 18 April.

Additional recognition of professional excellence was conferred upon Marine squadrons in July. On the 17th, the senior advisor to the ROK I Corps expressed the gratitude of the corps commander for the magnificent support the 1st MAW pilots had provided during the second week of the month. All four attack squadrons in MAG–12 and both fighter units in MAG–33 had taken part in these CAS missions. A week later, eight planes from Lieutenant Colonel Henry S. Miller’s VMA–323, (which, along with Lieutenant Colonel Graham H. Benson’s VMA–212, had been redesignated from fighter to attack squadrons the previous month), completed an unusually successful interdiction mission at Hago.

Located 25 miles northwest of Kaesong, the village reportedly was the site of heavy troop concentrations, active mortar positions, and antitank weapons. Leaving K–6 at 1725, the eight Marine VMA–323 pilots were soon over the target. Comprising the Death Rattler’s flight were Majors John M. Dufford, Raymond C. Holben, William H. Irvin, Jr., and Curtis E. Knudson; Captain John Church, Jr.; First Lieutenant William A. Poe, Jr.; and Second Lieutenants Stuart L. Spurlock and James S. Thompson. At 1810 their attacks were launched, using 1,000-pound bombs, napalm, rockets, and 20mm ammunition. The strike was over almost as soon as it had started, and when the Marines departed, not one building remained in useful condition. But it was not until several days later that the final results of the strike were known. Intelligence sources reported that the raid had caught the enemy troops at the evening meal; more than 500 had been killed by the Corsairs, aptly called “Whistling Death” by the Japanese in World War II.
For the remainder of the summer and into the fall Marine groups and squadrons continued their record-breaking and efficient support of ground troops and naval forces. With four squadrons (two day, one night-fighter, and one photo), MAG–33 sent 141 sorties against the enemy on 6 August. This one-day group record occurred just before the departure of Colonel Condon, who turned over the reins of the organization to Colonel Herbert H. Williamson on the 11th, and then took command of MAG–12.

Shortly before Colonel Condon relinquished command, he was particularly pleased by the success of a four-plane strike by VMF–311 (Major William J. Sims) in support of the U.S. 25th Infantry Division commanded by Brigadier General Samuel T. Williams. Major Johnnie C. Vance, Jr., strike leader, was accompanied in this flight by Captain George R. Brier and Second Lieutenants Charles E. Pangburn and Whitlock N. Sharpe. Up until this time the infantry had been particularly harassed by several enemy frontline fortifications and supporting artillery. The four pilots destroyed three bunkers and two heavy guns and also caved in approximately 50 feet of trenchline on the 7 August strike. Upon learning of the success of the Marine pilots and the conditions under which the attacks were carried out—dangerous terrain and constant ground fire directed towards the planes—the general dispatched a letter, commending the “skill, courage, and determination displayed by these pilots. . . .”[39]

Another congratulatory message was received in September, this one from General Pollock for the excellent support given by MAG–12 on the 20th. With three attack squadrons participating, Colonel Condon’s group had neutralized Chinese weapons and troops at OP 36 to help prevent a takeover of the Korean position. The pilots reported well over 100 Chinese casualties. Lieutenant Colonel Kenneth R. Chamberlain’s VMA–323 contributed most of the 23 Marine sorties. The other attacking squadrons were VMA–121 (Lieutenant Colonel Wayne M. Cargill, who 10 days earlier had relieved Lieutenant Colonel Crawford), and VMA–212, commanded by Lieutenant Colonel Maurice W. Fletcher.

September was a month of mixed fortunes in the air war over Korea. The successful CAS strikes of the 20th followed only a few days after another high point set on 14 September, when Lieutenant Colonel Cargill’s attack squadron flew its 5,000th combat sortie since arrival in the Korean theater in October 1951. Then on 15 September, General Jerome commissioned a new kind of unit in the wing, Marine Composite Squadron 1 (VMC–1), whose mission was to provide electronic counter-measures (ECM) for UN aircraft. Lieutenant Colonel Lawrence F. Fox headed the squadron, the only one in the naval service with an ECM primary mission in Korea.

Three days after the commissioning, a strange incident transpired. North of the UN line and at an altitude of 9,500 feet, a F–84 Thunderjet fighter, with U.S. Air Force markings and insignia, attacked a propeller-driven Air Force trainer. The slower plane immediately began defensive maneuvering, flying in tight circles. After making five turns, the trainer pilot saw the supposedly friendly jet fly off.

It was believed that such a paradoxical occurrence was due to the substantial number of F–84 losses and the enemy’s ability to piece together and fly an aircraft of that model. A few similar episodes—attacks by apparently friendly aircraft on UN planes—had previously taken place. In each case, the impostor was a model of U.S. aircraft that had suffered particularly heavy losses.

Another incident in September had dire consequences. On the 10th, MAG–33 dispatched 22 fighter aircraft from VMF–115 (Lieutenant Colonel Royce W. Coln) to attack reported troop concentrations near Sariwon, 35 miles directly south of Pyongyang. The F9F Panther jets had completed the strike and were returning to their K–3 base when they were diverted to land at K–2, Taegu, where the weather was better. Fog had suddenly swept over the field at K–3, reducing visibility to zero. Sixteen Panthers landed safely at K–2, 45 miles southwest of the Marine field at Pohang. The remaining six, piloted by Majors Raymond E. Demers and Donald F. Givens, First Lieutenant Alvin R. Bourgeois, and by Second Lieutenants John W. Hill, Jr., Carl R. Lafleur, and Richard L. Roth, flying in formation in poor weather, crashed into the side of a 3,000-foot mountain while descending.[40] They would have required only an additional 600 feet of altitude to clear the summit.

Losses of Marine pilots and aircraft had been of growing concern to the wing command. The initial
success of the flak suppression fires had eliminated the one successful Communist source of air defense, accurate antiaircraft firing. One result was that noncombat accidents for a while during the summer became the principal cause of pilot and plane attrition. To help reduce these operational accidents as well as the combat losses, the two Marine air groups instituted squadron training programs and also directed the adoption of several new corrective procedures. In MAG–12, for example, a study of results from the FAF policy that limited bombing runs to one for interdiction and two for CAS targets revealed a sharp reduction in hits from flak. Tactical squadron commanders in MAG–12 drew up a syllabus during September to test proposed defensive tactics for their propeller aircraft to employ against enemy jets. The carrier squadron, VMA–312, began that same month the additional practice of field carrier landing qualification at K–6 for new pilots before permitting them to operate from the carriers.

In spite of these efforts, pilot losses spiralled alarmingly in October. For the rest of 1952, the monthly totals remained near that month’s level. On the other hand, aircraft losses during October dropped sharply to 10 from the September total of 22. This lower figure was not to be exceeded until May 1953. These remedial procedures were considered at least partially responsible for the substantial decrease in aircraft losses.

In another area, a mid-October landing at Kojo, on the east coast immediately south of the 39th Parallel, did not work out as planned. The amphibious operation was in reality a feint intended to draw troops away from frontline positions and expose them to naval air and gunfire as they rushed in reinforcements. The enemy failed to rise to the bait, and actually only a few Communist troops were sighted. VMA–312 provided armed reconnaissance, tactical air operation, and naval gunfire spotting during the feint. Although they made little enemy contact, the Marine “Checkerboard” pilots operating off the Sicily gained much experience in landings and take-offs under the adverse conditions of rough seas and high winds.
Through October 1952, operational control of Korean based Marine fighter and attack squadrons was still vested in commanders other than General Jerome. Tactical squadrons continued to be directed by the FAF or Navy in their missions; the observation and helicopter squadrons were under operational control of the 1st Marine Division and utilized, as before, at its discretion.

HMR–161, commanded since 8 August by Lieutenant Colonel John F. Carey, continued its primary mission of evaluating rotary wing aircraft and their methods of employment. One tactical innovation, movement of elements of the 4.5-inch Rocket Battery, was undertaken during August soon after the Bunker Hill battle. With ground-fired rockets, the problem of a tell-tale cloud of dust and brilliant flash of the rockets after each salvo had always plagued the artillerymen. This seldom went unnoticed by the enemy, who often showered the marked area with counterbattery fire. On 19 and 20 August, in Operation RIPPLE, HMR-161 and the rocket battery proved that these two units could successfully shoot and scoot to a new location and fire effectively again without drawing an enemy reprisal. This Marine Corps innovation in air mobility—the first displacement of field artillery under combat conditions—offered a major time-saving advantage. Whereas previously it took approximately a half-hour for rocket launchers to move from their bivouac area to firing position,[42] deployment by helicopter could be made in a matter of minutes, a time factor that could be critical in event of an enemy attempted breakthrough.

The operation demonstrated that helicopters not only could transport rocket crews with weapons and ammunition to firing areas far more rapidly than conventional wheeled vehicles, but that the rotary craft could airlift these weapons into places inaccessible by road. The nature of the mountainous terrain proved advantageous in that hills and valleys provided defiladed areas for loading and firing the weapons as well as protected routes for helicopter movements. An observation made by pilots for operations in other types of environment, not offering as much cover and concealment, was that the shiny blue paint on their birds would make detection easy in most surroundings and that camouflage paint would lessen the risk from enemy AA.

Transport helicopters of HMR–161 continued to augment those of VMO–6 in casualty evacuation and ferrying Marines and other frontline troops. The observation squadron maintained its policy and outstanding record of emergency flights of the wounded under any weather conditions except dense fog (electronic navigational aids still were not available). In August, various mechanical failures developed among the newly received HO5S–1 Sikorsky helicopters. These three-place observation aircraft were underpowered but superior in many flight characteristics to the HTL–4 helicopters then in the squadron. Mechanical difficulties with the newer aircraft increased until it became necessary to ground them late in October until replacement parts became available in the supply system.

Employment of transport helicopters for logistical support continued to be a principal use of such rotary wing aircraft as the end of 1952 approached. Tests earlier in the year had proved the theory that this versatile aircraft could resupply a battalion manning the MLR. The next step was to determine if the logistical support for an entire combat regiment could be accomplished by helicopter. Operation HAYLIFT, conducted during 22–26 September, the last of five operations that month for HMR–161, was to test and evaluate helicopter resupply of Colonel Moore’s 7th Marines. Plans called for delivering all Class I, III, and V items and such Class II and IV items as could be accommodated. Two loading and four unloading sites were prescribed. All but extremely valuable cargo, such as mail was to be carried externally in slings or wire baskets.
HAYLIFT did show that at least for a short period of time—five days—a helicopter squadron, utilizing 40 percent of its aircraft, could sustain a MLR regiment. Following the general procedures employed previously with the battalion, HMR–161 found that no great changes were necessary for resupply of the regiment. Two recommendations emerged from an evaluation of HAYLIFT. One stressed the need for establishment of an operations center manned by representatives of each unit participating in the exercise. The second called for development of a more flexible loading system, one that would permit rapid weight increases or decreases of 50 pound increments, as the situation demanded. Such a method would make possible a more efficient payload for each lift.[43]

Transport on a larger scale in the 1st MAW was accomplished by General Jerome’s few transport aircraft reinforced by the eight R5Ds from the VMR–152 detachment. In June, the passenger-carrying operations reached the peak for the entire Korean War; that month, 17,490 troops and military-associated civilians utilized the reinforced wing transport aircraft. June 1952 was also the second busiest month in freight transportation (7,397,824 pounds, nearly double the figure for June 1951).

Squadrons that were unable to better their performance records in some cases could trace their trouble to the inability to get all of their planes off the ground. Several models were subject to spare parts shortages.[44] New aircraft, the F3D–2s and the AU–1s received in June by VMF(N)–513 and VMA–212, respectively, had preceded an adequate stocking of normal replacements for worn out or defective parts. The night fighter squadron was handicapped also by introduction into the supply system of inadequate radio tubes, which burned out rapidly. The most critical shortage, however, was parts for starter units of jet engines. This deficiency was not corrected until summer. One problem never quite eliminated was the confusion of supply orders intended for the helicopters in HMR–161 and VMO–6. It was believed that the close resemblance of Sikorsky HRS and HO5S part numbers and nomenclatures had caused the improperly-marked requisitions and mix-up.

The 1st Marine Division logistical situation during the summer and fall of 1952 was generally excellent. General Pollock’s units did not suffer from the shortage of spare parts experienced by the 1st MAW whose aircraft sometimes had to be grounded because of a missing spare part. U.S. Army support in the replacement of worn-out Marine vehicles for new Army ones proved satisfactory. No major problems arose in engineer support. Medical evacuation and treatment and the level of supplies in the five companies of the 1st Medical Battalion remained excellent.

There were two significant changes in the logistical support provided the Marine division early in the fall. One dealt with employment of the division’s 1st and 7th Motor Transport Battalions, located in the rear support areas. Beginning in September, the companies were placed in direct support of the four infantry regiments, with liaison by Lieutenant Colonel Kenneth E. Martin, division motor transport officer. It was believed this decentralization would have the following advantages:

1. Decreased vehicle mileage and therefore less driver fatigue and prolonged vehicle life.
2. Increased dispersal as a safeguard against loss of wheeled vehicle support in event of an unexpected and successful enemy attack.

The other change was a shift in the emphasis of support rendered by the Korean Service Corps. During October, each of the three frontline regiments received 300 more laborers, raising the total to 800. Rear area units paid for the increase, since the KSCs were detached from support units and sent forward to the MLR.

Logistical support from the 1st Signal Battalion left little to be desired. Commanded by Lieutenant Colonel John E. Morris[45] when the Marines moved to western Korea, the signalmen helped establish and maintain an extensive communications net, with 5,200 miles of wire within the division and several vital links to adjacent and higher commands.[46] Wiremen worked around the clock to lay and maintain the telephone lines, which suffered considerable damage from the artillery and mortar barrages. When possible, the signalmen raised the wires off the ground. The battalion set in more than 1,400 telephone poles. After the system had been installed
and was working efficiently, the July floods washed away part of the major communications. By improvising and by setting up emergency equipment, the battalion was able to maintain the flow of communications traffic at a satisfactory level. Replacement items were provided by the U.S. Army on a reimbursable basis in accordance with existing directives.

In September it became apparent that the signal equipment used to maintain division communications was no longer equal to the demands placed upon it. The extensive ground area plus the number and size of reinforcing units had not only put a heavy burden on radio, telephone, and teletype equipment but also caused the depletion of reserve stocks. With the spare equipment in use, there was no pool to draw upon when units turned in defective equipment for repair. Neither were there available replacements for materiel destroyed by enemy action. Items most urgently needed were flown in from the States. Other critical parts came from Army sources in Japan and Korea. By the end of October, the communication resupply had returned to a more normal condition.

Before the month ended a different type of critical situation was to confront the division. It appeared that the enemy’s success in seizing a half-dozen outposts earlier in October had only whetted his appetite for more. Chinese eyes were turned towards positions that held still more potential value than the stepping-stones just acquired. The extreme right battalion in the division front held by the 7th Marines was the focal point of the new effort.
Chapter 5. The Hook
Before the Battle[1]

After The Heavy Fighting in early October, there was a change in the 1st Marine Division dispositions. On the 12th, the 5th Marines relieved the 1st in the center sector and the latter regiment went into reserve. For the next two weeks the lull that prevailed across the regimental front was in sharp contrast to the intense fighting there earlier in the month. On the division left, the Korean Marines, not engaged in any sizable Communist action, conducted frequent tank-infantry reconnaissance patrols and ambushes forward of their MLR. In the center of the division line the 5th Marines, too, found their Chinese opponent seemingly reluctant to pursue any combat offensives, though his harassment of the Bunker Hill area represented the strongest action against the Marine division at this time. The 7th Marines, holding down the right sector, similarly encountered the enemy for only brief periods, these contacts during patrol actions lasting no more than 15 to 30 minutes.

Upon its relief from the MLR, the 1st Marines took over the division rear area. There the regiment continued the improvement of the secondary defensive lines, conducted extensive training, and dispatched numerous security patrols throughout the regimental area. These routine reserve roles were in addition to the primary mission of augmenting units on the Marine MLR in order to counterattack and defeat any attempted penetration of JAMESTOWN in the division area. As part of its counterattack mission, the divisional reserve regiment was to be prepared for employment anywhere in the I Corps sector to block an enemy advance.

On the division right, the 7th Marines remained on position in defense of JAMESTOWN. Following the bitter outpost contests on 6 October, Colonel Moore continued to retain all three battalions on line: 2/7 on the left, 3/7 in the center, and 1/7 on the right. The regimental commander had found it necessary to commit his three battalions on line due to the vastly overextended six-mile front, the rugged terrain, and the very real possibility of a major Communist attack anywhere along the MLR. With all battalions forward, Colonel Moore was left with a very small reserve, one company from 3/7. This battalion had to use as its reserve what had become known as “clutch platoons”—units composed of cooks, bakers, clerks, motor transport, and other Marine headquarters personnel. These local reserves, and even the reserve company from 3/7, could be employed only with the regimental commander’s approval.

Line JAMESTOWN, in the 7th Marines area, meandered from the vicinity of the burned-out village of Toryom, on the left, to the Hook salient in the right battalion sector and from there southeast to the Samichon River, the boundary with the 1st Commonwealth Division. From the left battalion sector to the right, the terrain gradually grew more rugged until the hills finally spilled over into the Samichon Valley. To the rear of the MLR, the ground was less jagged; forward of the line, the hills were more precipitous in character. The steepest heights were in the right battalion sector. The highest terrain feature along Colonel Moore’s MLR was Hill 146, located not far from the Hook. Throughout the 7th Marines sector rice paddies covered the narrow valley floors between the hills. Vegetation was sparse. A series of dirt roads and trails served the regimental area.

Combat outposts varied greatly as to their distance forth JAMESTOWN. Farthest from the line were the three in the left battalion sector, manned by Lieutenant Colonel Caputo’s 2/7. This trio, Carson, Reno, and Vegas, were approximately 1,000 yards forward of the MLR. Berlin and East Berlin (a new outpost established on 13 October) were the forward positions in the center line outpost by Lieutenant Colonel Charles D. Barrett’s[2] Marines. To the right Lieutenant Colonel Dulacki’s 1/7 sector held three COPs—Ronson, Warsaw, and Verdun, the latter near the Commonwealth border.

Ronson was the outpost nearest to the Hook, a major defensive position of the regiment. The importance
of this part of the MLR, in the extreme eastern sector, lay not in its strength but rather in its weakness. Jutting as it did towards the Communist lines, the salient formed a J-shaped bulge in the main line, which not only gave the Hook its nickname but also established the vulnerability of the position. Its susceptibility to capture derived both from violation of a defensive axiom that the “MLR should not have sharp angles and salients”[3] and to the fact that the ridgeline on which the Hook was located continued northwest into Communist-held territory. Seattle, which the Chinese had seized on 2 October, lay only about 500 yards northwest of the Hook.

In spite of its vulnerability, the Hook could not be abandoned. There was no other terrain feature held by the Marines that could command the critical Samichon Valley, a major avenue of approach from the northeast directly to Seoul. The salient also dominated the entire nearby area of the Imjin River to the south. Possession of the Hook and adjoining ridge would give the Communists observation of a substantial portion of the Marine rear areas beyond the Imjin, as well as the vital river crossings. In the opinion of Major General M. M. Austin-Roberts-West, whose 1st Commonwealth Division was soon to take over the Hook sector, had the salient been lost, “a withdrawal of 4,000 yards would have been necessary.”[4]

At the beginning of October, this vital area had been protected by COPs Seattle and Warsaw. When the former was overrun, it became necessary to establish a new position. This was directed by Lieutenant Colonel Dulacki, and on 16 October Ronson was established 200 yards southeast of Seattle and 275 yards west of the Hook. About 600 yards northeast of the salient the remaining position, COP Warsaw, commanded the lowlands to the east and the narrow, east-west oriented valley of a Samichon tributary immediately to the front.

Opposite the three MLR battalions of the 7th Marines were the 356th and 357th Regiments of the 119th Division, 40th CCF Army. In addition to these infantry units, numbering close to 7,000, an estimated 10 battalions (120 guns) of Chinese artillery[5] were facing Colonel Moore’s regiment. Personnel strength of the American unit consisted of 3,844 Marines, 11 medical officers and 133 corpsmen, 3 U.S. Army communicators, and 764 Koreans (746 KSCs and 18 interpreters).

During the summer and early fall, the 7th Marines had amassed considerable information about the enemy, including Chinese strength and composition of forces and many of their combat characteristics. Encroachment on Marine ground positions by steadily creeping the CCF trenchline forward continued to be the enemy’s major ground-gaining tactic. In fact, the Chinese units facing the Marine division concentrated their digging during the fall of 1952 in the sector north of the 7th Marines MLR. (See Map 15.) Other intelligence, however, seemed open to question. For example, there was the reported frontline presence of women among the 90 Chinese who had engaged a 2/1 patrol on 5 October as well as the sighting in the KMC sector on the 17th of enemy “super soldiers” far taller than the ordinary Chinese. Many in the division found it difficult to believe the statements of enemy prisoners. During interrogation they invariably maintained that the mission of Chinese Communist Forces in Korea was a “defensive” one.

The static battle situation encouraged the use of psychological warfare. In attempting to influence the minds of their opponents and weaken morale, the Chinese depended upon loudspeakers to carry their propaganda barrage across No-Man’s-Land. Enemy employment of this technique was especially heavy during October. To Marines, for example, Chinese directed pleas of “Go home and have peace,” “Surrender, we treat POWs well,” “Leave Korea,” “Marines, come and get your buddies bodies,” and the like, often to the accompaniment of music. On occasion, Chinese patrols left propaganda pamphlets behind them in the KMC sector. Infrequently, the enemy displayed signs along patrol routes urging Marines to surrender. Most of the Chinese psychological efforts were directed against the Korean Marines.

In enemy employment of artillery, Marine frontline units and division intelligence had become well aware of the vast improvements the Communists had made in recent months. Aided by a plentiful supply of ammunition, enemy guns and howitzers, including the heavy 152mm weapon, frequently delivered concentrated
fires on critical positions in the division area. Marines felt the effects of how well the Chinese had learned to mass their fires against a single target for maximum destructive power. From the Marines, moreover, the enemy had picked up the artillery box tactic, employing it for the first time in their sector opposite Colonel Moore’s regiment during the early October outpost battles.

During those same clashes, the 11th Marines had observed how the Chinese displaced some of their batteries well forward for more effective artillery support of their attacking infantry. One enemy artillery innovation had been noted the previous month by a Marine AO; on 19 September a Chinese artillery piece was detected firing in the open. Previous observations had indicated that the Chinese generally used wooded areas or extensive bunker-type positions to conceal their supporting weapons.

By the middle of October, 62.5 percent of the Chinese artillery opposing General Pollock’s division was located in positions north of the 7th Marines. The importance the enemy put on the principle of massed artillery fire and the improvement of their ammunition supply can be seen in a remark attributed to a Chinese division commander:

“The enemy had organized an attack of two-battalion strength on our first-line platoon. As the enemy were getting into their assembly area I directed several volleys of rapid fire against them with a total expenditure of about 120 rounds. That very evening the army commander rang me up and said disapprovingly, ‘You’ve expended a bit too much ammunition today!’ It seemed as though the army commander had detected precisely what was in my mind. There was an instant change in his voice as he said: ‘Oh, comrade, it really could not be accounted as waste, but you must know we are short of supplies.’

“Scarcely two years had passed but the situation was completely altered. In the present we had emplaced 120 guns to each kilometre of front line so that in a rapid-fire bombardment of 25 minutes more than 20,000 rounds of ammunition could be hurled against the enemy positions. If the fire used in supporting attacks and in repulsing enemy counter-attacks were taken into account the total would reach 70,000 rounds.”[6]

Exaggerated as the numbers of guns and rounds may be, the basic massing technique was in line with U.S. intelligence estimates at the time. The remark also pointed to the importance the Chinese had learned to place on employment of artillery, a shift in emphasis that Colonel Moore’s regiment was soon to experience in unprecedented volume.
Before the Hook battle erupted, the defensive fires that the 7th Marines could draw upon were not overpowering in terms of numbers of units available. Only one battalion, Lieutenant Colonel Bert Davis’ 2/11, was in direct support of Colonel Moore’s regiment. In this mission, the 2/11 fires were reinforced by those of 1/11 (Lieutenant Colonel David S. Randall). In addition to these organic units, the batteries of the 623d Field Artillery Battalion (155mm howitzers) and one platoon of C Battery, 17th Field Artillery Battalion (8-inch self-propelled howitzers) were readily available to the 7th Marines. In all, 38 light, medium, and heavy pieces constituted the artillery support of the right sector.[8] General support was available from Lieutenant Colonel Raymond D. Wright’s 4/11 and from the 4.2-inch Rocket Battery (Captain Donald G. Frier). The 159th Field Artillery Battalion (155mm howitzers) and B Battery, 204th Field Artillery Battalion (155mm guns), like the other Army units positioned in the Marine Division sector, reinforced the fires of division artillery. Fire support from 1st Commonwealth Division weapons within range of the Hook area could also be depended upon.

Although the Army artillery units satisfied the heavy punch requirement of the 11th Marines, commanded since 21 September by Colonel Harry N. Shea, there was one basic element the regiment lacked. This missing ingredient was a sufficient amount of ammunition for the howitzers. Defense of outposts and mainline positions along the EUSAK front in early and mid-October 1952 consumed a great deal of this type of ammunition. This heavy expenditure was brought to the attention of the corps commanders by Eighth Army. General Van Fleet pointed out that ammunition consumption rates for both the 105mm and 155mm howitzers during these two critical weeks in October not only exceeded the expenditures of the massive Communist spring offensive in 1951 but also the UN counterstroke that followed.[9]

To help remedy the situation, the EUSAK commander urged “continuous command supervision to insure the maximum return for all ammunition expended.”[10] The general made it plain that he was not changing his policy of exacting a heavy toll whenever the enemy began an attack. This course had been followed by the 1st Marine Division, but the Marines’ ability to both restrict the enemy’s creeping tactics and simultaneously fight a siege-type war was noticeably impeded.[11]

As the end of October approached, the shortage of ammunition was becoming a subject of increased concern to the frontline Marine units. Daily allowances established for the last 11 days of the month were 20 rounds of 105mm high explosive (HE) and 4.3 rounds of 155mm high explosive for each tube.[12] With such small quantities to fire and further restricted by an equally critical shortage of both hand grenades and 81mm mortar rounds, Colonel Moore was almost powerless to spike the Chinese preparations for assault of the Hook. Artillery fires were reserved for only the most urgent situations or for large bodies of troops. It was one observer’s opinion that the “enemy could show himself almost at will without receiving fire, and that it was impossible either to harass or neutralize his continual fortification activity, let alone embark upon systematic destructive fires of the kind he was carrying out.”[14]

As a means of compensating for the shortage of 81mm mortar and 105mm howitzer ammunition, the Marines reverted to a former method of using machine guns. This technique, employed during the trench warfare days of World War I but seldom thereafter, was considered a useful expedient to discourage enemy defensive creeping tactics as well as to deter his preparations for objective attacks. The system required emplacing heavy machine guns both on and to the rear of the MLR to fire into areas that troops used for assembly or as check points. If the target was visible to the machine gunner, he could take it under direct fire. At night, when the enemy
operated under cover of darkness, the machine guns fired into zones which had already been registered in the daytime. Colonel Moore directed his units on 23 October to resort to this expedient.

A 1st Marine Division daily intelligence report covering the 24-hour period beginning at 1800 on 24 October noted that there was “a marked increase in enemy artillery and mortar fire with an estimated twelve hundred rounds falling in the CT 1010 area of the 7th Marines sector.”[15] According to the division PIR there was also an increased number of enemy troops observed that same day in locations west and northwest of the Hook. Most of the fire was directed against the Hook area of the MLR and on the two sentinels, Ronson and Warsaw. Efforts by Marines and some 250 KSCs to repair the damaged or destroyed bunkers, trenches, communications lines, and tactical wire, during brief periods of relief from the artillery deluges, were wiped out again by subsequent shellings.

It would not be correct to say that 1/7 remained entirely passive at this time. Battalion weapons replied, though in faint voices barely audible in the din created by Chinese firing. Regimental mortars chimed in and so did 2/11, which fired 416 rounds in the 24 hours ending at 1800 on the 24th. For that same period, tanks expended 137 rounds at active weapon positions firing on the Hook. One air strike was directed against the enemy opposing the Hook battalion. This attack by a quartet of Marine F9Fs from VMF–311 (Lieutenant Colonel Arthur H. Adams) bombed and napalmed a troublesome group of Chinese entrenched on the enemy MLR 750 yards east of the Hook.

During the next 48 hours, the enemy continued his preparations for an attack, concentrating his artillery fire on the Hook area. Colonel Moore’s battalions received approximately 2,850 artillery and mortar rounds, most of which rained down on 1/7 to the right. There, the heavy and continuous fire slowed Marine efforts to restore their wrecked bunkers and trenches. Late on the 25th there was some relief from the artillery bombardment, but by that time many of the prophets on the line and in the rear area were uncertain only as to the precise time of the unexpected Chinese attack.

Colonel Clarence A. Barninger, the division intelligence officer, had himself alerted General Pollock to the implications of “the intensification and character of enemy fires”[16] being received in the 1/7 sector. The intelligence evaluation was not based only on recent events. A detailed study of Chinese capabilities and possible courses of action had just been completed by the G–2 and his staff. In its discussion of the early October outpost attacks in the division right, the report concluded that Chinese interests lay in gaining the “terrain dominating the Samichon Valley. . . .”[17]

Since 5 October when 1/7 had been moved into the line as the regiment’s third MLR battalion, the enemy had begun a regular shelling of 1/7 positions adjacent to the Hook. Incoming rounds had increased almost daily. “Troops, vehicles, and tanks moving in daylight even behind the MLR almost invariably brought down enemy artillery or mortars upon them. It was apparent that the enemy was making preparation for a large scale assault in this portion of the MLR,”[18] the battalion commander, Lieutenant Colonel Dulacki, later recalled. Matters took an even more ominous turn about 23 October when the Chinese “began a deliberate, deadly accurate precision fire aimed at destruction of the major fortifications in the Hook’s system of dug-in defense.”[19] As the tempo of this fire stepped up daily, the destruction of the battalion’s carefully prepared defenses exceeded the Marines’ ability to repair the damage. The artillery build-up was believed preparatory to an attempt to either seize or breach the MLR.

In late October, Lieutenant Colonel Dulacki had two companies on the MLR to protect this important area. On the 23d, Captain Frederick C. McLaughlin’s Company A was assigned the left part of the battalion sector, which included the Hook. A squad outposted Ronson and a reinforced platoon was stationed at Warsaw. At 0200 on the 26th, Company C (Captain Paul B. Byrum) departed the battalion reserve area to take over responsibility as the left MLR company. Relief of Company A was completed at 0410.[20] Holding down the right flank of the main line during this time was Company B (Captain Dexter E. Evans). This area was larger but
somewhat less rugged than the western part of the 1/7 sector.

In the two days immediately preceding the Chinese attack of 26 October, 1/7 received a limited amount of support intended to harass the enemy and throw him off balance, if possible. Tanks fired their 90s at bunkers, caves, trenches, and direct fire weapons in the enemy sector. On the 25th, Company A of the 1st Tank Battalion blasted away 54 times at these targets; on the next day, Captain Clyde W. Hunter’s gunners more than tripled their previous day’s output, firing 173 high explosive shells. Artillery, in the meantime, stepped up its rate of fire on the 25th, when Lieutenant Colonel Davis’ 2/11 fired 575 rounds, followed by 506 more the next day. The division general support battalion, 4/11, fired a total of 195 rounds on these two days.[21] Nearly half were to assist the 7th Marines. On both days the regiment received the benefit of 4.5-inch rocket ripples.

Air support just prior to the attack was increased slightly, but only two strikes were flown for the Hook battalion. At 1535 on the 25th, two Corsair fighters and a pair of AUs, the attack version of the Corsair, dive-bombed a section of Chinese trench that housed a number of weapons bothersome to the Marines nearby.[22] The four VMA–323 aircraft claimed destruction of 40 yards of trench and damage to 35 yards more. The target was 1,000 yards southwest of the Hook. Next morning the squadron sent three of its famed fighters against bunker positions on a hill 900 yards west of the 1/7 salient. This mission had been prebriefed to attack enemy artillery positions opposite the KMC line. Instead, the flight was diverted to take on the bunkers, which represented, at that time, more of a menace to the division. The attack destroyed one bunker, damaged another, and produced an estimated seven casualties.

Hidden nearby the area of this air strike in the early morning hours of 26 October was the Chinese infantry unit which later that same day would attack the Hook. Before daybreak the 3d Battalion, 357th Regiment, had moved from an area nearly two miles west of the Hook. The forward elements, two companies, with two day’s rations for each man, halted about a mile from their objective. There the Chinese remained throughout most of the 26th, carefully concealing themselves from observation by friendly forces.[23] While the enemy troops were lying low, their mortars and artillery began the final preparatory fires.
On the morning of 26 October, Chinese artillery and mortar fire striking the MLR slackened a bit but was still sufficiently heavy in the vicinity of the Hook to prevent visitors in the area any direct observation from the salient. During his inspection of Hook defenses that morning, Lieutenant Colonel Dulacki was knocked to the ground by the concussion of an enemy artillery round exploding nearby.[25] In the afternoon, enemy shelling continued at a steady pace, but towards the end of the day intense mixed artillery and mortar fire increased to preattack proportions. Dusk brought no relief from the enemy’s supporting weapons.

Out at the flanking positions, Ronson and Warsaw, there was little change in the intensity of the enemy shelling for the remainder of the afternoon. Bunkers and trenches were caved in, just as they were on the Hook [26] from the preparatory fires that had been building up over a period of days. (For a sketch of the Hook battle area on 26 October, see Map 16.) Enemy shelling had also produced a number of casualties. Marines at Ronson were the first to experience the enemy’s ground assault. At 1810 the outpost reported an increased rate of mortar and artillery rounds exploding on the position. Two groups of enemy soldiers were seen moving towards the outpost, one from the east and the other from the west. Ronson Marines took these advancing soldiers under fire immediately.

Initially, the radio messages from Ronson reported that the attacking force was a company, but a later estimate of approximately 50 Chinese appeared to be more nearly correct. Communist infantry made their way through the defensive artillery barrages requested by the COP garrison and into the rifle and machine gun fire of the Marines. By 1838 the enemy had overrun the squad of Marines and was in possession of Ronson. No one had escaped from the outpost.

At this time, 800 yards northeast, the 9th Company, 357th Battalion was working its way towards Warsaw. Striking at the COP from both east and west, the enemy company was momentarily halted by extremely heavy Marine mortar and artillery fire. By 1820, the platoon at Warsaw had requested the protective box around its position; this fire the 11th Marines delivered promptly. Still the Chinese continued to besiege the position and Company A defending Marines, under outpost commander Second Lieutenant John Babson, Jr., were locked in a hand-to-hand struggle. As a platoon was being readied to reinforce Warsaw the outpost reported, at 1907, that enemy soldiers had reached the Marine bunkers and that the defenders were using bayonets, pistols, hand grenades, and both ends of their rifles to repel the Communist invaders.

Three minutes later came the word, “We’re being overrun.” With this message all communication from the outpost temporarily ceased, but at 1944, Lieutenant Colonel Dulacki’s CP heard Warsaw report heavy fighting still in progress there. The outpost first stated that enemy soldiers were on top of the bunkers; then called for “VT on own position” which the 11th Marines furnished.

The seriousness of the situation was immediately apparent at higher commands. One outpost had been lost; a second was in jeopardy. At about this time, a veritable avalanche of enemy artillery and mortar fire began to blanket the Hook. Colonel Moore released Captain McLaughlin’s company to 1/7. The 7th Marines commander also ordered regimental ammunition supplies be allotted to Lieutenant Colonel Dulacki’s area. Shortly after that, division lifted ammunition restrictions on 1/7.

To counter the impending ground attack, at 1859 Lieutenant Colonel Dulacki ordered Captain McLaughlin’s Company A forward to reinforce the Hook sector and to assist Company C in containing the enemy
attack. One platoon, the 1st, departed immediately for the MLR. As the remainder of the company prepared to move out, the enemy struck in estimated battalion strength. By 1938 some of the CCF infantry had advanced to the main trenches immediately south of the Hook. Within a few minutes, a second wave of Communist soldiers, following closely the preparatory barrages, hit JAMESTOWN just east of the 1/7 salient and frontally at the Hook itself. It appeared that the Communists had come to stay, for many cargo carriers—Chinese with construction materials for bunkers and trenches—accompanied the attacking infantry.

Fire fights raged during the early phase of the struggle, with continuous support furnished the assault troops by Chinese artillery and mortars. The momentum of the enemy’s three-pronged attack, aided by heavy rear area fire support, enabled the Chinese to overrun the trenches and push on along the crest of the ridge, its slope near the spine, and across the segments formed by the spurs that jutted south from the crest. Marine defenders pulled back while a small rear guard covered their movement with fire. Along the MLR, about 400 yards south of the Hook, the Chinese had slipped around the flanks of the COP and at 2030 forced a penetration in the C/1/7 line. Second Lieutenant John W. Meikle (1st Platoon, Company C) organized the Marines into a perimeter defense adjacent to the MLR. At 2130, remaining elements of the company formed another defense blocking area 550 yards east of the Hook near the crest of the ridge.

Between these two positions small groups of Marines continued the heavy close fight to repulse the enemy while inching their way forward to tie-in with the rest of the unit. (See Map 17 for penetration limits during the Hook battle.) To the northeast, the platoon at Warsaw had not been heard from since 1945, and at 2330, Colonel Moore reluctantly declared the outpost to be in enemy hands.

At the time the loss of Warsaw was announced, counter-measures designed to halt the enemy assault were in various stages of preparation or completion. The initial reinforcing element sent forward to strengthen the main line had linked up with Lieutenant Meikle’s 1st Platoon, Company C, in the perimeter near the 3d Battalion boundary. The remainder of Company A was en route to the crest of the east-west ridge to thwart what appeared to be the main enemy drive. Colonel Moore had released his meager reserve, H/3/7, at 0300 on the 27th, and General Pollock had ordered one of the division reserve battalions, 3/1, to the 7th Marines area, although still retaining operational control of the unit.

As the forward battalion of the division reserve, 3/1 (Lieutenant Colonel Altman) had prepared counterattack plans for critical locations in the division sector and had previously made a reconnaissance of the Hook area. The battalion immediately displaced from its bivouac site north of the Imjin (Camp Rose) to an assembly area behind the 7th Marines on the MLR.

All possible support for 1/7 was made available, since the critical situation resulting from the major enemy assault automatically suspended previous restrictions on use of artillery and mortar allowances. At Warsaw, 2/11 blanketed the position with a continuous barrage in order to limit the enemy’s ability to effectively hold and consolidate the captured COP. Lieutenant Colonel Davis’ cannoneers also blasted enemy formations in response to fire missions from forward observers. Artillery rounds fell on Chinese outposts supporting the attack, on approach routes to the battleground, on assembly areas, and on known and suspected Chinese artillery locations.

Marine aviation and tanks were employed as part of the plan to first limit the penetration made by the enemy before the counterattack to expel him. A section of tanks had been firing since 1930 against the enemy main line; a second section joined the direct fire assault a half hour later. At 2113, one F7F, with 1,300 pounds of bombs, hit a portion of the enemy’s MSR. At 2306, another twin-engine Grumman Tigercat blasted the same area, about three-quarters of a mile west of the Hook. These initial one-plane strikes in support of the defense of the salient were flown by Captain Leon C. Cheek, Jr. and Major Laurel M. Mickelson, respectively, of VMF(N)–513.
At 0030 on the 27th, Major Mickelson, returning from his MPQ attack, touched his Tigercat down at K–8 (Kunsan). At the very moment that the plane set down on the Kunsan runway, the Chinese launched another assault against the 7th Marines, the second in less than six hours. This later action, in Lieutenant Colonel Caputo’s 2/7 sector, nearly two miles west of the Hook, was not a surprise move either. In fact, an attack against the Carson-Reno-Vegas area had been anticipated for some time, and it was this state of preparedness that throttled the enemy’s attempt to seize an outpost here.

Division intelligence had accumulated considerable evidence that the Chinese buildup in late October was intended to ultimately clear the way to the 2/7 outposts rather than those of 1/7 in the eastern Hook area. A majority of the Marine supporting arms effort immediately prior to 1800 on the 26th had gone to the left battalion of Colonel Moore’s regiment. Aware of the interest the enemy had shown in the outposts earlier in the month, the battalion commander had strengthened the defense of this key area. One measure, increasing the size of the ambush force maintained at night near Reno from a squad to a platoon, was to pay handsome dividends before October was over.

Just after dark on the 26th, a reinforced platoon from Captain James R. Flores’ Company E departed the MLR on a combat patrol and ambush mission. After reaching its assigned area, about 300 yards short of the hill that housed COP Reno, the ambush platoon disappeared into camouflaged dug-in positions and waited. At midnight, the Marines were alerted by faint noises to the front. There, elements of two Chinese companies, which had stealthily maneuvered into the ambush area, were organizing for a sneak assault by an envelopment on Reno from the rear. (See Map 18.) The waiting platoon apprised the outpost of the enemy’s presence in the area; then when it appeared that the Chinese were about to launch their assault, the ambushers opened fire.

As the surprised Chinese turned to take on the hidden ambush platoon, the two defending squads at Reno began firing. It took 10 minutes before the Chinese were sufficiently recovered to organize a withdrawal. At 0040, enemy elements quickly began to pull back towards the north. The outpost had been spared a major action, but its occupants were to be again engaged by the Chinese before daybreak.

At 0400, one platoon from a third CCF company, approaching from an enemy hill to the northeast, hit Reno. The attack was conducted in a fashion not previously experienced by the 1st Marine Division in West Korea—platoons echeloned in depth, assaulting in successive waves. The first unit to reach Reno was composed of grenade throwers and supporting riflemen. This advance element was followed immediately by the rest of the platoon, infantry armed with submachine guns and rifles. Marines on Reno were not troubled by the initial platoon assault, but the second one made some inroads before the defenders’ fires forced the enemy to pull back. A third two-phased attack succeeded, however, in cracking the defenses at the northeast section of the position. The outpost commander then ordered his Marines into the bunkers and called for overhead artillery fire. Caught in the open, the Chinese were forced to withdraw at 0440 and did not return.
Chapter 5. The Hook
Counterattack[28]

After the Marines in Lieutenant Colonel Caputo’s 2/7 sector had dealt with the demonstration force, the action shifted back to the Hook. Early on the morning of the 27th, Captain McLaughlin’s unit, sent to the Hook-Hill 146 crest to block the penetration of the MLR, had established contact with Captain Byrum’s Company C, passed through its lines, and pressed on to the Hook. Suddenly, enemy small arms and machine guns opened up on lead elements of Company A. Artillery and mortar fire then began to hit the company. The Marines continued their advance and made some progress in arresting the Chinese thrust at the ridge. Shortly thereafter the enemy called in heavy supporting fires, forcing Company A to halt its attack temporarily. When the company commander ordered his men to resume the advance, overwhelming enemy fire again slowed the movement. McLaughlin then ordered his men to hold and dig in.

When report of the Company A situation reached the regimental CP, Colonel Moore ordered into action his last reserve unit, Captain Bernard B. Belant’s Company H.[29] He was directed to report to 1/7, then to pass through the depleted ranks of Company A, and take up the attack downridge towards the salient. At 0340 the regiment attached H/3/7 to 1/7 for operational control; at 0505 the company arrived at the 1st Battalion CP. Forty minutes later, Company H reached Captain McLaughlin’s area, where it regrouped and then deployed toward the ridgeline for the counterattack.

When Captain Belant led his Marines towards the Hook to oust the Chinese, the enemy drive had reached the point of its deepest penetration. By this time the Chinese had seized control of slightly more than a mile of the meandering MLR. Most of the captured main defense line extended from the Hook east along the ridge towards Hill 146. (One-third of the Communist advance was from the Hook southwest, in the direction of the 3d Battalion boundary.) Between 0545 and 0800, H/3/7 worked its way towards the Hook-Hill 146 crest. After two hours the company was at the ridgeline, and at 0800 Captain Belant was ready to move forward towards the salient, a straight-line distance of about a half–mile. On the hour, the push downridge started. After having advanced about 200 yards, the H/3/7 Marines were assailed by small arms fire and the rain of heavy caliber rounds supporting the enemy’s thrust. Captain Belant signalled his Marines to attack.

Immediately, Second Lieutenant George H. O’Brien, Jr. leaped up from his position and shouted for his platoon to follow. On the run, he zigzagged across the exposed ridge and continued down the front slope towards the main trench. Before reaching this objective, the platoon commander was knocked to the ground by the impact of a single bullet. Scrambling quickly to his feet he motioned for his men to follow and took off on the run for the enemy-occupied trenchline. Again he stopped, this time to assist an injured Marine.

As he neared the trenchline, Lieutenant O’Brien started to throw a hand grenade into the enemy-occupied bunkers, but was stopped by the Chinese. With his carbine, the officer methodically eliminated this resistance, then hurled the grenades. Overcoming this position, the Texas Marine and his platoon advanced towards the Hook, but the enemy, now partly recovered, was able to slow and ultimately stop the counterattack. A profusion of artillery and mortar fire was primarily responsible for halting the advance, which had carried Company H very close to the Hook bunkers.

Spurred on by the leadership of Lieutenant O’Brien, who later received the Medal of Honor,[30] the company was able to execute a limited advance. Despite the heavy artillery and mortar fire, the company drove a wedge into the Communist position, thereby retaking the initiative from the enemy. Company H also took three prisoners in the southeast end of the Hook before being forced by a deadly enemy mortar and artillery barrage to
withdraw upridge.

The attack by Company H had been well supported from the air. At 0840, a flight of four ADs from Lieutenant Colonel Cargill’s VMA–121 assaulted the former Marine COP Seattle, where enemy reinforcements were being funneled through on the way to the Hook. Bombs and napalm took a heavy toll of the troops, bunkers, and weapons pouring fire on the counterattacking Marines. One hour later, a division (four planes) from VMA–323 struck another trouble spot, a former Marine outpost known as Irene (later, Rome). Aircraft of Lieutenant Colonel Chamberlain’s squadron hit this objective with three tons of bombs and more than 4,000 pounds of burning napalm. Thirty minutes later, another foursome, these from VMA–212, (Lieutenant Colonel Charles E. Dobson, Jr.),[31] delivered bombs, napalm, and 20mm shells on enemy soldiers moving on the MSR towards JAMESTOWN.

While these three squadrons were bombing enemy strongpoints and other targets of opportunity, division artillery and tanks continued their destructive fire missions. Between 0930 and 1300, two tanks from Company A, 1st Tank Battalion, blasted away at Chinese bunkers and trenches, at an enemy 76mm gun on Seattle, and at positions southwest of the Hook. Artillery—2/11, 4/11, and the rocket battery—contributed the weight of its support. The 11th Marines, in an effort to stop the heavy hostile shelling of the Hook sector, fired 60 counterbattery missions on Chinese gun emplacements during the first 24 hours of the attack.

In the early afternoon of the 27th, 1st MAW attack squadrons continued their bombing and strafing of enemy troops engaged in the assault against the Hook. Before sundown, 30 aircraft had taken part in 8 additional strikes in support of Marine counterattacks along the ridge. The number of aircraft involved in close air support sorties for the Hook was approximately half the number received by the division all day. Of the 72 aircraft flying CAS strikes during the first 24 hours of the Hook action, 67 were Marine planes, all from MAG–12.

As in the morning’s close air support flights, Lieutenant Colonel Cargill’s ADs provided the bulk of air support for ground action that afternoon. Striking first a command post southeast of the 1/7 salient, at 1410, VMA–121 came back a half-hour later with four more Skyraiders against CCF troops pressing to envelop the right flank of the counterattack force. At 1635, two squadron aircraft flew in quickly in response to a sighting of troops moving forward in the Samichon tributary 1,000 yards north of the Hook. Twenty minutes after this successful attack, four more Skyraiders attacked bunkers opposite the left flank of Lieutenant Colonel Dulacki’s sector. The final daylight strike for 1/7 was again made by four ADs from –121. These planes took under attack a target that had been bombarded just 25 minutes earlier by Corsairs from VMA–323.

Another Marine attack squadron, VMA–212, participated in the Hook support that afternoon. At 1344, a four-plane flight assaulted troops moving through Frisco to reinforce the Chinese drive on the Hook. Two of the planes dropped three 1,000-pound bombs and two 250-pounders on the enemy soldiers. The other pair of attack Corsairs released six 780-pound napalm tanks over the position. It was estimated that 25 Chinese casualties resulted from this air attack. Wrapping up the VMA–212 CAS for the Hook sector on the 27th was a strike, at 1440, on camouflage positions and another at 1520 against caves and bunkers. Each of these air assaults took place about 950 yards from the Hook. The earlier one was a napalm attack from 50 feet above the ground. One of the six tanks would not release and three did not ignite. Four caves were destroyed and one bunker was damaged in the latter strikes.

Between the morning and afternoon air strikes, the ground commanders put together the final plans for recapture and defense of the Hook. When General Pollock had released 1/3/1 to the regiment during an inspection trip to the 1/7 area that morning, the company was already en route to the ridge to make the counterattack. The ground commanders agreed that after 1/3/1 regained the salient, H/3/1 would take over the right sector of 1/7 and the relieved company, B/1/7, would then occupy both the critical MLR sector and Warsaw. Lieutenant Colonel Dulacki’s scheme to recapture the positions and ground lost on 26 October was a continuation of the attack from atop the ridge directly towards the objective. It was to be a hard-nosed, frontal assault, but the only maneuver
Clearing the Company C command post about noon, the lead elements of Captain Murray V. Harlan, Jr.’s Company I, the 1st Platoon, continued its route to the ridge. After the 40 Marines had gained the crest, they quickly reoriented themselves to the new direction, and at 1350, led the I/3/1 assault. Artillery preparation by the 11th Marines had preceded the crossing of the line of departure, and these supporting fires were partially responsible for the substantial initial advance made by the counterattacking Marines. But Chinese artillery was not idle at this time either, and the volume of enemy fire matched that of the Marines. The I/3/1 movement forward was also slowed by Communist soldiers, estimated at about a company, who fired from protected positions along the perimeter of the Hook.

Inch by inch the company crawled forward. The vicious Chinese supporting barrages were exacting many casualties among Captain Harlan’s troops, yet they crept on, and ultimately reached the artillery forward observer bunker atop the ridge but 150 yards short of the Hook trenches. At this time, 1635, the enemy supporting fires were directed not only on the advancing Marines and the MLR defenses but extended as far back as the regimental CP. Chinese soldiers still clung to some of the Hook positions and trenches of the MLR just below the crest on the northern sides. Marines closest to the Hook could see the virtual ruination caused by enemy artillery and mortar shells to the trench system within the salient.

Nearing their objective, elements of Company I pressed on with even more determination. By 1700 a few had made it to the shell-torn ditches, where they sought momentary refuge to reorganize. Several more joined, and together they reconnoitered the trenches and bunkers for enemy soldiers. Just then the Communists reacted with an even heavier supporting assaults, which forced these few Marines to pull back with their platoon to the reverse slope of the ridge. To the right, about 250 yards away, the main body of Company I Marines occupied the reverse side of the hill, riding out the onslaught of artillery and mortar rounds while they waited for a lull before making the final dash to recapture the lost area of JAMESTOWN.

While Captain Harlan’s company was exposed to this extremely heavy enemy artillery fire, another unit, B/1/7, was on the move from Lieutenant Colonel Dulacki’s command post to the ridge to strike what was intended as a lethal blow to the Communist invaders. At 1932, Company B began its march forward. By midnight, the 1st Platoon was nearing its assault position close to the left flank of Company I of 3/1. Simultaneously, the 3d Platoon closed in on its jump-off point. The going was extremely difficult, complicated by a moonless night and the many shell craters that pockmarked the terrain. But at 0019, 28 October, the platoons mounted their assault, firing their rifles and machine guns, and hurling grenades to silence enemy automatic weapons and to reach dug-in Communist soldiers occupying the trenchline.

The Marine charge was met by a burst of small arms fire and a shower of grenades. Weapons supporting the Chinese defense were still very active. After a standoff of 90 minutes the Marines pulled back, calling on their mortars and artillery to lay precise fire concentrations on the trouble spots. The weapons also fired on enemy approach routes through Ronson and Warsaw. After this preparation, Company B again made an assault against the enemy, at 0340. This advance was contested vigorously by the Chinese, but their resistance this time was not lasting. Quickly B/1/7 Marines deployed throughout the entire area, and by 0600 the Hook was again in Marine hands.

Before the victors could permit themselves the luxury of a breathing spell, there were a number of critical tasks that demanded immediate attention. Defense of the MLR had to be quickly and securely shored up for a possible enemy counterattack. The newly rewon area had to be searched for Marines, both casualties and holdouts, and for Chinese diehards or wounded. The company had to be reorganized. In addition to these missions, there were two others, regaining Ronson and Warsaw. As it turned out, the duties were discharged nearly at the same time. COPs Ronson and Warsaw were reoccupied by the 7th Marines at 0630 and 0845, respectively, on 28 October.
In organizing the recaptured position, the Marines were hampered to some extent by a dense ground fog. Nevertheless, work still went ahead on these necessary tasks. Most of the Hook area was held by Company B; the western part of the 1/7 line, south of the Hook, was still manned by the platoon from Company A and one from Company C. The 1st Platoon of Company B quickly searched the retaken area of the MLR (except the caved in parts of the trenchline and bunkers, which were investigated later), but found no enemy soldiers. During the day, as Company B expanded its responsibility along the Marine main line, the platoons from A/1/7 and C/1/7 were relieved to rejoin their companies.[34] Supplies began to move in, once the permanency of the defense had been established.
In evaluating the battle for the Hook, it would appear that the Chinese assault against Reno was merely a demonstration or feint. By making a sizable effort near the primary objective after the attack there was well under way, the Communists expected not to obscure the real target but rather to cause the Marines to hesitate in moving higher echelon reserves to influence the action at the Hook. It was to the credit of the ambush force that the Chinese ruse was unsuccessful.

Including losses from the Reno ambush, Marines estimated that the Chinese actions against that outpost cost the enemy 38 killed and 51 wounded. The COP defenders and the platoon that had surprised the enemy counted 22 dead Communist soldiers during and after the Reno action. Together with the Hook casualties, confirmed at 274 killed and 73 wounded and estimated at 494 killed and 370 wounded, the figure represented more than a third of an enemy battalion permanently lost in addition to about a battalion and a half put out of action temporarily. Distributed among the number of battalions that participated in the two actions, the total number of casualties lost some impact. What remains significant, however, are the cost and results—369 counted and 953 estimated casualties for not one inch of ground.

Marine losses in the Hook battle were 70 killed, 386 wounded (286 evacuated), and 39 missing, of whom 27 were later definitely known to have been captured. This was the second highest number of Marines taken prisoner in any single action during the Korean fighting. Such a large number was attributed to the tactics of the Chinese infantry, which followed the preparatory barrages so closely—at times even advancing into the rolling barrages—that the enemy was able to surprise and capture a considerable number of Marine outpost defenders. Nearly all of the 27 were captured in the enemy’s first rushes against the two outposts and MLR. In the diversion on Reno, an additional 9 Marines were killed and 49 wounded (29 evacuated).

Perhaps as significant as any result of the Hook fighting is the amount of supporting fires the Chinese provided their infantry. Calculations of total incoming ran from 15,500 to 34,000 rounds during the 36-hour engagement. The 1st Marine Division reported conservatively that the enemy expended between 15,500–16,000 artillery and mortar rounds; estimates by supporting arms units put the total at the higher level. In any event, the 12,500 rounds the 7th Marines received during the first 24 hours represented the heaviest bombardment any Marine regiment had been subjected to up to that time. Moreover, it had now become clearly evident that the enemy could stockpile a plentiful supply of ammunition, despite attempts of UN aircraft to interfere with the enemy’s flow of supplies to the frontline.

With regard to combat tactics, the attacks during 26–27 October confirmed earlier reports that extremely heavy use of preparatory barrages by the enemy signalled an imminent infantry attack on the area. Defensive concentrations of apparently unlimited quantity typified Communist artillery support for their attacking forces. Meticulous policing of the battlefield, an established Chinese practice, was also apparent during the Hook battle. In order to prevent identification of his combat units, the enemy also took pains to ensure that assault troops remove all papers and unit insignia before going forward of their own lines.

Two other previously reported tactics were corroborated during the late October battle for the Hook. One was the presence of cargo carriers with the attacking force. These soldiers, estimated by the division to comprise as high as 75 percent of the total number of Chinese troops committed, carried shovels, lumber, extra rations, medical aid equipment, and stocks of ammunition. One Marine evacuated from a bunker reported on a method of bunker searching by the Chinese. “English speaking Chinese were yelling into bunkers for Marines to ‘Come out.
and surrender.’ When there was no evidence of surrender, the Chinese would use bangalore torpedoes and satchel charges to destroy and seal bunkers.” [39]

In one respect the enemy deviated from his usual tactics. During the battle for the Hook Marines who took prisoners made the discovery that the Chinese employed close-up relief forces. Prior to an offensive action, the enemy positioned a reserve just to the rear of the assault unit. After the attack had started, and at the appropriate time, the commander would signal the fresh force forward to take over the mission of the old unit. In this manner, the enemy hoped to sustain his drive or to retain a newly-won position.

Though the foresight appeared appropriate, the result was not always what had been anticipated. In the earlier part of the month, during a fight in another I Corps sector, the Communists had rushed a reserve force forward to consolidate the defense of an outpost immediately after its capture. In the Hook fighting, a fresh unit, which had been placed immediately to the rear of the assault troops, was ordered forward to keep the attack alive. Both attempts failed. Marines attributed this lack of success to the Communists’ apparent inability to organize or reorganize quickly, a difficulty which was believed to have resulted from the scarcity of officers in forward areas. [40]

Discussing the defense of the Hook area, Lieutenant Colonel Dulacki commented shortly after the battle ended:

“The Chinese seemed to gain their greatest tactical advantage during action on ‘The Hook’ by assaulting friendly positions directly under their own artillery and mortar barrages. The effects on defending Marines were two-fold: heavy incoming either physically trapped them in their bunkers, or the Chinese, having overrun our positions through their own barrages, took the defenders by surprise as they left their bunkers to man their fighting holes. It is therefore considered imperative that in future instances of heavy enemy supporting fires, all Marines physically occupy an individual shelter from which their fighting positions are readily accessible.

“Marines gained a false sense of security by taking cover, in groups, inside bunkers. In some cases, groups of three or four Marines were killed when a bunker caved in on top of them. Had they been spread out along the trenchline, but under individual cover, it is believed that far fewer casualties would have resulted, and also the position would have been better prepared for defense. The false sense of security gained by being with comrades inside a bunker must be overcome.” [41]

Another factor bothered the 1/7 commander. He directed unit leaders to exercise closer control over the care and cleaning of weapons under their custody. During the Hook fighting, the malfunctioning of weapons due to improper cleaning and loss of some rifles “in the excitement to gain cover” caused the Marines to take casualties that might otherwise have been prevented.

These same deficiencies were also observed by General Pollock, and he ordered their immediate correction. Lieutenant General Hart, CG FMFPac, whose inspection of the division coincided with the Hook battle and who saw the trenches after they had been leveled, noted that shallow trenches and bunkers built above the ground did not offer sufficient protection from intensive enemy shelling. He directed that more emphasis be placed on the digging of field fortifications and bunkers. [42]

In considering not only how the fight was conducted but why, one has only to go back to the first part of October and recall the situation that existed along the 1st Marine Division line. During the hotly contested outpost battles early in the month, the Chinese had attempted to outflank the division by seizing key terrain in the left and right sectors. Where the enemy had been unsuccessful, he returned later in the month for another major assault. On the night of the 26th the endeavor was in the division right. A new blow against the left was not far off.
IN BOTH THE EARLY and late October outpost battles the Chinese had attempted to seize critical terrain on the flanks of the 1st Marine Division. Although the majority of these attacks failed, the enemy had acquired six outposts early in the month—three in the western Korean Marine Corps sector and three north of the right regimental line. On the last day of October, two hours before midnight, the CCF again struck the Marine left flank. This time their efforts were directed against four outposts that screened Hill 155, the most prominent terrain feature in the entire KMC regimental zone. The fighting that developed was brief but very sharp and would be the most costly of all KMC clashes during this third winter of the war.

The latest enemy attack came as no real surprise to Korean Marines of the 5th Battalion, occupying COPs 39, 33, and 31 in the northern regimental sector, or 2d Battalion personnel at COP 51 in the southern (western) half of the MLR. (Map 19.) The four outposts assisted in defense of the MLR (particularly Hill 155 just inside the MLR), afforded observation of CCF approach routes, and served as a base for friendly raids and offensive operations. Hill 155 overlooked both the wide Sachon Valley and Chinese frontline positions to the west. This critical Korean hill also commanded a view of the Panmunjom peace corridor, Freedom Gate Bridge, and the Marine division area east of Line JAMESTOWN in the KMC sector. Hill 155 had further tactical importance in that it protected the left flank of Paekhak Hill, the key ground in the entire 34-mile expanse of JAMESTOWN within 1st Marine Division territory.

Actually, the probability of a determined enemy attack against the four outposts had been anticipated since early October following CCF seizure of three positions (former COPs 37, 36, and 86) in their strike against the KMC regimental OPLR. The enemy had then proceeded to organize an OPLR of his own with the two northern outposts, COPs 37 and 36, and informally occupied another position to the south and one toward the north in the vicinity of COP 39. “With this OPLR once firmly organized, the enemy will have an excellent jump-off point towards our OPs 39 and 33, his next probable objectives,” KMC officers reasoned.

Sporadic probes throughout the month in the COP 39 and 33 areas indicated continued enemy interest in the positions. COP 51, to the south, was considered another likely target because of its location immediately east of COP 86, previously annexed by the CCF.

Prior to attacking the four outposts on 31 October, the Chinese had signaled their intentions by sharply stepping up artillery and tank fire against the sector. During the 24-hour period ending 1800 on 30 October, a total of 1,881 rounds crashed on KMC positions, most of these against the two northern outposts, COPs 39 and 33. Nearly 1,500 rounds fell the next day. More than 50 sightings of enemy troops and weapons in the forward area were also reported. By contrast, during the previous week less than 15 observations of enemy activity had been made daily and, on the average, only about 200-340 rounds of fire had fallen in the entire sector. Despite this comparatively moderate rate of hostile fire, at least one Korean Marine was killed and three wounded in late October from well-placed Chinese mortar or artillery rounds striking the outposts.

After the two days of heavy shelling, the regiment warned in its daily report issued only two hours before the full-scale attack began:

“The enemy has made a consistent two-day effort to destroy friendly outpost positions. Last night, at 1830, two enemy companies were observed in an apparent attempt to attack OPs 39 and 33. Artillery fire broke up the attempt, but continued enemy artillery today indicates further attack is probable tonight. If enemy artillery
preparation is indicative, a simultaneous attack against outposts 39, 51, 33, and 31 can be considered probable. . . .”[3]

These earlier observations and predictions as to the enemy’s action were shortly confirmed when the CCF launched its new ground attack.

Beginning at 2200,[4] the enemy delivered an intensive eight-minute 76mm and 122mm artillery preparation against the four outposts. Chinese assault forces from four different infantry regiments then launched a simultaneous attack on the positions. Moving in from the north, west, and south, two CCF companies (3d Company, 1st Battalion, 581st Regiment and 2d Company, 1st Battalion, 582d Regiment) virtually enveloped the northern outpost, COP 39. Two more CCF companies (unidentified) lunged against the two central outposts, COPs 33 and 31, a company at each position.[5] The southern and most-heavily defended post, COP 51, where a company of Korean Marines was on duty, was assailed by four Chinese companies (4th Company, 2d Battalion, 584th Regiment; 4th and 6th Companies, 2d Battalion, 585th Regiment; and 1st Company, 1st Battalion, 585th Regiment). Even though the enemy exerted his strongest pressure against COP 51, the position held and the Chinese broke off the attack there earlier than at the other outposts.

At COP 31 a heavy fire fight raged until 0155, when the defending KMC platoon halted the Chinese and forced them to make a partial withdrawal. To the northwest, at COP 33, the enemy encountered less resistance from the two squads manning the outpost. The Chinese achieved some success in penetrating the defenses and occupied several positions. After heavy close fighting and friendly artillery support, the Koreans expelled the invaders at 0515.

The enemy’s efforts appeared to have been most successful, temporarily, at COP 39, the northern post and one nearest to Hill 155. Although the Chinese wrested some ground from the KMC platoon, artillery fires continued to punish the enemy and by 0410 had forced him to pull back. A small hostile force returned at 0600 but after a 15-minute exchange of small arms it left, this time for good. At about this same time the last of the Chinese had also withdrawn from the two central outposts, 33 and 31.

In terms of sheer numbers, the enemy’s strongest effort was made against COP 51. This was the most isolated of the Korean positions and, at 2,625 yards, the one farthest from the MLR. Ironically, in the week preceding the attack COP 51 was least harassed by hostile artillery although it had received 20 rounds of 90mm tank fire, more than any other position. On the 31st, elements of three companies struck the southwestern trenches and defenses, while a fourth attempted to break through from the north. As it turned out the action here was the least intense of the outpost clashes. After initial heavy fighting the Chinese seemed reluctant to press the assault even though they vastly outnumbered the Korean company deployed at the outpost. In the early morning hours the enemy broke contact and by 0330 had withdrawn from COP 51.

During the night approximately 2,500 rounds of CCF artillery and mortar fire lashed the positions. Korean Marines, aided by friendly artillery, repelled the assault and inflicted heavy casualties on the enemy. Supporting fires included more than 1,200 rounds of HE shells from the KMC 4.2-inch Mortar Company. Chinese casualties were listed as 295 known killed, 461 estimated wounded, and 9 POWs. Korean Marine losses were 50 killed, 86 wounded, and 18 missing.[6] By first light the Korean outposts had thrown back the enemy’s latest well-coordinated attack. This ended the last significant action of October in the 1st Marine Division sector.
Operations in West Korea
Pat Meid and James M. Yingling

Chapter 6. Positional Warfare
Six Months on the UNC Line[7]

The KMC Regiment’s battle in late October marked the end of two months of heavy fighting in the division sector. October had witnessed the most intense combat in more than a year. As the third Korean winter approached outpost clashes and small unit actions along the rest of the UNC frontline began to slacken. During November and December, neither side appeared eager to pursue the offensive. Chinese aggressiveness declined noticeably.

Despite other action initiated by the enemy, the I Corps sector remained the chief Communist target. On 19 November, the British 1st Commonwealth Division successfully withstood what was initially a company-size attempt to capture the Hook. In sharp fighting between 1900 and 0430, Black Watch and reinforcing Canadian units repulsed a determined battalion-strength CCF assault, killing more than 100 Chinese.[8] Marine and I Corps artillery units fired almost continuously throughout the night in support of the Hook defenders. Fighting flared again, briefly, in December in the I Corps sector when Chinese soldiers attempted to overrun outposts on the Imjin River line, but were thrown back by the ROK 1st Division. The enemy then tried to seize key terrain forward of the U.S. 2nd Division, but was again halted.

Elsewhere before the end of the year, the CCF captured one outpost in the IX Corps area, to the right of I Corps, but suffered a telling defeat at the hands of the Ethiopian battalion during an attempt to crack this sector of the U.S. 7th Division line. After a brief fire fight the Chinese were forced to withdraw, leaving 131 CCF dead in the Ethiopian positions. North Korean efforts to seize critical ground in the X and ROK I Corps sectors, at the far eastern end of the EUSAK line, was similarly broken up by the U.S. 40th and ROK 5th Divisions.

By the end of 1952 General Van Fleet had not only revitalized his defenses with recent rotation of frontline units but had also strengthened his line by inserting another division in the critical and long-troublesome Chorwon-Kumhwa sector of IX Corps, on the I Corps right flank. With these changes by late December there were 16 EUSAK divisions on line—11 Korean, 3 U.S. Army, 1 Marine, and 1 British Commonwealth—plus 4 divisions in reserve (1 Korean and 3 U.S. Army). Nearly 75 percent of the UNC line had been entrusted to Republic of Korea units. Their performance was a tribute to growing ROK military proficiency and justified the EUSAK decision to assign to ROK troops a greater role in the Allied ground defense.

The slow pace of infantry action during the last two months of 1952 continued into the new year. Raids by small UNC units highlighted the limited combat during January and February. During the following month the battlefront tempo accelerated, due in part to expanded patrol activities. A number of sharp clashes in No-Man’s-Land resulted in several Communist setbacks but led the enemy to make an increased use of ambushes. These traps initially caught the UNC troops by surprise, inflicting heavy casualties on them. But by far the most severe fighting of the new year resulted when the Chinese renewed their fierce outpost and main line of resistance attacks in March.

Again, the western I Corps sector was the major combat area as enemy pressure mounted along the front. This was believed due, in part, to the “growing Chinese sensitivity to the I Corps raids”[9] as well as an attempt by the CCF to regain the initiative as they began to send out larger forces to probe and assault UNC positions. On 17 March, the Chinese launched a battalion-size attack against Hill 355 (Little Gibraltar). This MLR position was defended by elements of the U.S. 2d Infantry Division, on line immediately east of the Marine division, in the sector customarily occupied by the 1st Commonwealth Division. (The Army unit had relieved the British division on 30 January.) A second large-scale assault on the hill that month was also turned back.
On 23 March, a Chinese Communist regiment attempted to capture three outposts manned by the U.S. 7th Division, at the far right of the I Corps line. Hills 225 (Pork Chop Hill) and 191 held. The enemy’s main effort was against Hill 266 (Old Baldy), defended by units of the division’s Colombian battalion. One attack carried the position, despite company strength reinforcements of the original defenders. Two strong UN counterattacks the next day to retake the outpost failed, and the Chinese retained the crest of Old Baldy. Although the CCF had gained their objective in Hill 266, the battles on the three hillocks had cost the enemy 750 casualties, according to 7th Division records.

In one respect, the nature and extent of ground operations affected the type of air activity over North and South Korea during the winter of 1952–1953. Introduction of PRESSURE strategy, which had embodied the policy of the Far East Air Forces since mid-1952, brought more aircraft in close support of Eighth Army ground troops, a change that pleased the corps commanders. When the heavy outpost fighting throughout October diminished to only occasional skirmishes in November, there was temporarily a decreased need for large numbers of CAS sorties. As a result more planes became available for PRESSURE attacks. These strikes at first appeared to be reverting to the previous STRANGLE strategy since railroads were often the targets. But interdiction of the transportation system was only part of the PRESSURE aerial concept which also called for striking enemy production, repair, and storage facilities. The Allied strategy in conducting its air offensive remained the same: to make the bombing hurt the Communists so that they would end their deliberate delaying tactics in the truce sessions and join the UNC in effecting a Korean settlement.

During the winter FEAF maintained a steady air pressure against the Communists. Major raids were made from time to time, but the number of strategic targets was gradually disappearing due to repeated UNC air attacks. Further, much of the enemy logistical net had gone so deeply underground during the prolonged stalemate that UN bombing and rocket attacks were having only a limited destructive effect. The U.S. B–29s, which had carried the fight to the enemy since the first week of the Korean conflict, found their last worthwhile objectives in stockpiles hidden in North Korean towns and villages. For the Fifth Air Force fighters there was little opportunity to increase their skill in air-to-air combat, since the Communist fliers continued to take evasive action and avoid “dogfights.”

Naval aviation contributed importantly to UNC air operations from September 1952 to March 1953. On the first day of this period, three carriers staged the largest all-Navy Korean air strike to date, which simultaneously attacked an oil refinery at Aoji and other targets in the northeastern corner of Korea. Less than two weeks later, two carriers launched another assault in the same part of the country. The significance of these September strikes stemmed from the almost complete lack of enemy response. Apparently the Communists in this area had felt secure and protected, their territory being next to the Chinese border. In fact, their location close to the sanctuary had ruled out bombings proposed earlier. Strikes in this part of Korea were particularly suited to carrier planes of the Seventh Fleet, whose mobile airfields brought the targets within easy striking range along approaches that would not violate the Manchurian haven.

Perhaps the greatest naval contribution to the air war were the Cherokee strikes, so named after the commander of the Seventh Fleet, Vice Admiral Joseph J. Clark, because of his Indian ancestry. This new type of deep air support attack, which came into use in October 1952, employed the maxim of mass delivery of ordnance. Usually, targets were immediately behind the enemy MLR but beyond the range of friendly artillery. In May 1952, when the rail interdiction program was being phased out and Admiral Clark’s pilots were faced with a decreasing number of prime industrial targets, the fleet commander had theorized that he could most effectually damage the enemy by bombing supply dumps, artillery positions, and reserve forces immediately to the rear of the Chinese MLR. As the admiral reasoned, the enemy could not fight the kind of war he was waging “and still have all his forces, supplies, and equipment underground. Some of his stocks of supplies had to be above ground, out of sight and out of range of our artillery.”[10]
Eighth Army welcomed the increased support that would result from the strikes, but FEAF expressed concern about the lack of top-level coordination. Admiral Clark had proposed that a EUSAK corps commander be allowed to authorize the attacks, which employed 24 to 36 aircraft. The Fifth Air Force initially maintained that it should control Cherokee strikes, just as it did the CAS missions. The matter was finally resolved in November.

Following a high-level conference it was decided that attacks inside the bombline would be subjected to FAF coordination and that a minimal amount of tactical control would be exercised by the corps commander. Eighth Army gave a big assist to the Navy by moving the bombline to within 3,000 meters (nearly two miles) of the outpost line. A line was also drawn approximately 25 miles beyond the bombline, separating the area of “general support” from “interdiction.” Thereafter, the Cherokee strikes were effectively conducted against enemy installations outside the 3,000-meter line but within 20,000 meters of the ground front. General Clark, CinCUNC, had high praise for the strikes, which the Seventh Fleet employed until the end of the war.

Surface ships of the fleet were in much the same static warfare situation as the ground and air components of the United Nations Command. Aside from the Kojo demonstration in mid-October, the fleet had little diversification in its daily routine other than to maintain the siege around Wonsan. This operation had started in mid-February 1951 and had grown from the original plan to seize certain strategically-placed islands on both coasts into an attempt to isolate the entire port and city of Wonsan. Each day Allied minesweepers cleared the harbor; at night the enemy sampan fleet resowed the fields. Daily, usually during mine-clearing operations, ships of Task Force 95 fired on batteries in the mountains beyond the city and at other military targets in and around Wonsan. From time to time heavy units of the Seventh Fleet bombarded the area to keep the enemy off-balance and to partially deter the solid buildup of Communist arms and defenses just north of the 39th Parallel.
For many of the UNC military personnel, the stalemated combat situation in Korea had become a depressing, no-win daily routine by the end of 1952. Back in the States, the Korean War was not only unpopular and ill-supported, but the slow progress of the conflict had also dulled public interest. In the course of the Presidential election campaign the question of Korea had become increasingly a matter of widespread national concern. Two weeks before election day the Republican candidate, former General of the Army Dwight D. Eisenhower, had vowed to bring the Korean fighting to an end. As a first step toward accomplishing this he had pledged, if elected, to visit the battlefront.

Some had labeled Eisenhower’s statement, “I will go to Korea” as a mere pre-election gesture. The general intended to act on this pledge and, following his election, began a four-day visit to Korea on 2 December 1952. Part of the President-elect’s brief tour in Korea was spent at General Pollock’s command post. Here, on 3 December, the Marine ground chief briefed his future Commander in Chief on current Marine division operations. Generals Clark, Van Fleet, and Kendall accompanied Eisenhower and his party. This included General of the Army Omar Bradley, Chairman of the Joint Chiefs of Staff, as well as Charles E. Wilson and Herbert Brownell, Jr., the new designates for Secretary of Defense and Attorney General, respectively.

Though General Eisenhower’s promise to visit Korea personally to see the situation first-hand and his subsequent election had renewed American hopes for an early peace in Korea, negotiations there had been deadlocked since 1951 on the exchange of prisoners. Disagreement on this issue thus became the major obstacle which was not overcome until the truce was signed nearly 20 months later. The Communists insisted on repatriation to their native land of all NKPA and CCF prisoners held by the United Nations Command. More than 60,000 of the 132,000 enemy captives held by the UNC in South Korean POW camps did not wish to return to Communism, a fact which had been borne out by a UN survey.

To draw attention from this unpopular position the Communists, through the civil and military links existing in the POW camps, had staged a series of riots in the spring of 1952. The worst, at Koje Island (just off the coast of Pusan) lasted six days, largely because the Communist prisoners planned for, and successfully carried out, the capture of the UN camp commander. His release, on 12 May, was effected only after the new commander signed, under duress, a statement which the Communists immediately exploited in an effort to discredit the validity of the prisoner survey.

The propaganda gains had enabled the Communists to occupy a commanding position at the truce talks. In the meantime, the UN had offered several plans until, on 28 April, Admiral Joy presented “what we called our final package proposal.” By instituting the tactic of calling a recess whenever the Communists had nothing constructive to offer, a recommendation of Admiral Joy’s, the UN regained the advantage of the conference table. The talks continued but with no appreciable progress. On 8 October 1952, after continued Communist intransigence, Brigadier General William K. Harrison, who had become the senior UN delegate in late May, took the initiative in recessing the truce talks. This unexpected action, which caught the enemy off-guard, followed three separate proposals made by Harrison for ending the POW controversy. All had been promptly rejected by the Communist delegation. As General Harrison had informed one of its spokesmen, the North Korean General Nam Il:

“We are not terminating the armistice negotiations, we are merely recessing them. We are willing to meet with you at any time that you are ready to accept one of our proposals or to make a constructive proposal of your
own, in writing, which could lead to an honorable armistice . . . Since you have offered nothing constructive, we stand in recess.”[14]

After October, while the truce negotiations were in a period of indefinite recess, liaison officers at Panmunjom kept the channels of communication open between the Communist and UNC sides. Several developments along other diplomatic lines about this time were to prove more fruitful and lead the way to solution of the POW dispute and, in fact, to the end of the war.

In mid-November, an attempt was made to end the prisoner exchange impasse through a resolution introduced by India at the United Nations session. The compromise measure recognized the United States position, namely, that force should not be used in returning prisoners to their homeland. This principle was to become known as the concept of voluntary repatriation.

To reconcile the widely conflicting Communist and UNC views on handling of prisoners, the Indian proposal suggested that a repatriation commission be established. This body was to be composed of representatives of two Communist and two Allied nations. It would function within a designated demilitarized zone in Korea through which all prisoners would be received and processed. Each prisoner was to be given a choice of being returned to his homeland or not. Both sides would have the opportunity of explaining to reluctant nationals “their rights” of repatriation. If these persuasive efforts failed and a man still chose not to return to his country, he would then be referred to a special political conference established by the armistice agreement.

Should this four-member repatriation commission still not agree on settlement of the nonrepatriates, a final determination was then to be made by an official named by the commission or UN General Assembly. Many UNC nations favored the Indian proposal. U.S. official reaction was frankly skeptical and critical, well aware that the many vague aspects of the proposal could easily be exploited by the Communists to the disadvantage of the individual POW. Despite the promise of a good many headaches in its implementation, the UN adopted the compromise Indian resolution in December 1952 by a vote of 54 to 5.

Later that same month the Executive Committee of the League of Red Cross Societies, meeting in Geneva, adopted another feature of the Indian resolution proposing an exchange of sick and wounded POWs in advance of a truce. As General Clark observed, “It was hardly an auspicious omen for an armistice, yet it was the action which set in motion a chain of events which finally resulted in cease-fire.”[15]

On another front, State Department officials advised the Joint Chiefs of Staff that a resolution similar to that of the Red Cross would probably be introduced when the UN reconvened on 24 February. Following a JCS suggestion that a “feeler” proposition be first made to the Communists, General Clark wrote the NKPA and CCF leaders on 22 February. His letter was addressed to North Korean Premier Kim Il Sung and General Peng Teh-huai, the CCF military commander. Delivered through the Panmunjom liaison officers, it requested the immediate exchange of sick and wounded POWs. As both diplomatic and military leaders doubtfully awaited the results, a totally unexpected and far-reaching event, the death of the Russian leader, Premier Joseph Stalin, jolted the Communist world. Its repercussions soon extended to the truce tent at Panmunjom and decisively affected the progress of negotiations there.
Although renewed negotiations to bring the war to a close were under way with the enemy in late 1952 and early 1953, action on the battlefield continued the tedious routine of the war. An exception to the general lethargy across the front occurred on 22 November in the right regimental sector. A predawn raid was conducted by the 1st Marines, which had advanced to the front upon relief of the 7th Marines after their battle of the Hook. With the left and right battalion sectors manned by 1/1 and 3/1, respectively, Lieutenant Colonel Charles E. Warren’s 2/1, in regimental reserve, had been ordered to provide a company to raid Chinese positions across from COPs Reno and Vegas. Drawing the assignment was Company D (Captain Jay V. Poage).

Code-named WAKEUP, the raid was conducted in a manner typical of many earlier forays against Chinese strongpoints. Its results, too, in most respects were similar to the outcome of previous raids. Artillery preparation of the objective area was accomplished, the infantry assaults were somewhat short of the targets due to heavy CCF defensive fires, and the prisoner-taking part of the mission was unfulfilled. Counterbalancing this, and what made the raid of value to the regiment, was the information gained about enemy defenses and Chinese reaction to the raid. It was one of the rare occasions during which the CCF did not employ artillery fire while their positions were under attack, using instead mortars and automatic weapons against Marine assault forces.

Raids such as WAKEUP, patrols, and ambushes became the pattern of action in late November and in December. Earlier in November some changes in the MLR dispositions had taken place. On 3 November, at 2345, the 1st Battalion of the Black Watch, 29th Infantry Brigade, 1st Commonwealth Division, had relieved 1/7 of the Hook sector responsibility, ending Marine occupation of that part of JAMESTOWN.[17] And, on 16 November, the 7th Marines itself had been replaced in line by the 1st Marines. In between these changes of command on the frontlines, Generals Pollock and Jerome had received many congratulations and well wishes from combat commands and from government officials in the States. The occasion was the 177th birthday of the Marine Corps. Both of these senior commanders passed on to their Marines not only the Commandant’s Anniversary message but also the congratulations of the UNC commander, General Clark.

Throughout December 1952 and January 1953, the lull in ground fighting continued. Mass Cherokee strikes by Admiral Clark’s Navy and Marine fliers had begun for the Marine division on 17 December, when the bombline was moved in nearer to the MLR for expanded operations. In noncombat activities, later that month Francis Cardinal Spellman, Archbishop of New York and Vicar for Catholic Chaplains of the Armed Forces, conducted a Christmas Mass at the division CP. On the 31st, His Eminence visited the 1st MAW at K–3 (Pohang). There he delivered an address to about 1,000 Marines, shook hands with nearly all of them, and later heard confessions for many. Another special guest, not long afterward, was Episcopal Bishop Austin Pardue, of the Pittsburgh Diocese, who held Holy Communion at the division chapel.
The passing of 1952 and the arrival of the new year was not marked by any special observance on the battlefield. For that matter there was, it seemed, no change to note; the Marines, like the rest of the Eighth Army troops, maintained much the same regular, reduced, wintertime schedule. Activity of Marine infantry units consisted of aggressive patrolling and raids, and improvement of the secondary defenses of Lines WYOMING and KANSAS. Units in division reserve, during January, also participated in MARLEX (Marine Landing Exercise) operations.

No major ground action had taken place in December, although Marine patrols, on a half dozen occasions, had engaged as many as 50 enemy for brief clashes and fire fights. January was a different story, however. On 8 January, a 7th Marines raiding party, reinforced by air, artillery, and tank support, skirmished with 85 Chinese in the Hill 134 area not far from COP 2, overlooking Panmunjom. Ten days later, the 1st and 7th Marines, together with the artillery regiment, took part in Operation BIMBO. This was another attempt, by combined infantry-artillery-tank-air action, to create the impression that CCF objective areas were under attack.

BIMBO began with heavy preparatory fires by the 11th Marines, including the 155mm projectiles hurled by 4/11, that inflicted early damage to CCF personnel and materiel. At 0630, on 18 January, frontline battalions of the two participating infantry regiments opened fire; reserve battalions assisted with indirect machine gun fire. Armored vehicles added to the effect of the ruse by shelling Chinese emplacements from prepared MLR positions. Marine attack planes streaked in to unload flaming napalm. In response to the BIMBO mock attack, the Chinese directed mortar fire into suspected Marine avenues of approach and assembly areas. Forward observers on JAMESTOWN could detect some enemy troop movement. (Marine artillery took these formations under intensive fire), but as in similar feint operations in the past, the enemy again failed to pick up the bait. The operation lasted approximately an hour and a half.

During the winter months, a number of command changes had occurred in the Marines' combat organizations in Korea. In the 1st Marine Aircraft Wing, the rotation of commanders began at the very top when, on 8 January, General Jerome handed over the wing colors to Major General Vernon E. Megee. During a ceremony at wing headquarters that day, Air Force Generals Weyland and Barcus paid tribute to General Jerome’s “exceptionally meritorious service” as 1st MAW CG since April 1952 by presenting him with the Distinguished Service Medal.

The incoming wing commander, General Megee, had been a Marine flyer for 20 years, having received his wings in 1932. His Marine Corps career began more than a decade earlier, with enlistment in 1919. Commissioned in 1922, he served in infantry, artillery, and expeditionary billets before undergoing pilot training in 1931. Following school, staff, and command assignments, Major Megee was named advisor to the Peruvian Minister of Aviation from 1940–1943. During World War II, Colonel Megee was sent overseas as 3d MAW Chief of Staff in early 1944. As Commander, Control Unit One, he participated in the Iwo Jima campaign, earning the Legion of Merit. Later, at Okinawa, he commanded all Marine Corps Landing Force Air Support Control Units. After promotion to brigadier general in 1949, General Megee was named Chief of Staff, FMFLant. Receiving his second star in 1951, he served as Commanding General at Cherry Point, El Toro, and Air FMFPac prior to his assignment in Korea.[20]

Within the wing and the division, every one of the top commands experienced changes of commanding officers in late 1952 and early 1953:

1st Marines—Colonel Hewitt D. Adams took over from Colonel Layer on 21 November;
5th Marines—Colonel Lewis W. Walt relieved Colonel Smoak on 10 December;
7th Marines—Colonel Loren E. Haffner took command from Colonel Moore on 5 November;
11th Marines—Colonel James E. Mills vice Colonel Sea on 22 February;
MACG–2—Colonel Kenneth D. Kerby relieved Colonel Jack R. Cram on 16 February;
MAG–12—Colonel George S. Bowman, Jr. vice Colonel Condon on 13 January;
MAG–33—Colonel Louis B. Robertshaw succeeded Colonel Herbert Williamson on 22 October.
The heavy ground fighting across the Eighth Army front in October 1952 had drawn heavily upon units of the 1st MAW. That month Marine pilots logged their greatest number of sorties—3,897—since June 1951. As a result of the intense infantry action in the 1st Marine Division sector another air record was established—365 casualty evacuations by HMR–161 during October. This was a peak number to that time for the helicopter transport squadron for which med evac was a secondary mission. These “mercy missions” were not limited only to wounded Marine infantrymen or downed aviators.

Whenever and wherever immediate air rescue was needed, the choppers were sent. In July 1952, HMR–161 evacuated “650 Army and Air Force troops as well as 150 Koreans” from a flooded river island. On the night of 18 January 1953, a helicopter retrieved five Marines from an uncharted minefield after one of the group had accidentally stepped on a mine. On 13 March, HMR–161 sent three helicopters aloft in an attempt to save five men from the 1st Amphibian Tractor Battalion who had become trapped in mud near the edge of the Imjin, and later that month the squadron dispatched a chopper to rescue a hunter marooned in the middle of the Han River.

Almost obscured in the magnificent record of the mercy missions, especially the hazardous casualty evacuations by the VMO–6 pilots, were the problems encountered by the observation and helicopter squadrons. Under operational control of the division and administrative control of the wing, the squadrons found themselves exposed to overlapping command authority which sometimes resulted in conflicting directives from higher headquarters. Some squadron personnel felt that establishment of a helicopter group under the 1st MAW might have solved many of the organizational problems, but such a unit was never established in Korea, partly because only one helicopter squadron (plus half of the observation squadron) existed.

Another organizational difficulty beset VMO–6. With two types of aircraft and two unrelated missions (med evac for the HTL and HO5S copters; observation and artillery spotting for its little OYs and, later, OE–1s), the squadron found supply and maintenance problems doubled and operational control of its rotary and fixed wing sections extremely complex. Attachment of the VMO–6 choppers (for evacuation, administrative, and liaison missions) to HMR–161 was suggested as a possible solution to these difficulties, but was never done.

Other problem areas became apparent during the winter of 1952–1953. Accompanying the freezing weather were difficulties in starting and, for a brief time, in flying the helicopters. In order to overcome the engine starting problem on emergency evacuation missions, HMR–161 preheated its number one standby aircraft every two hours during the extreme cold. Dilution of engine oil with gasoline and use of warming huts (the latter, a scarcity) were also employed to cut down cold weather starting time.

Not related to freezing Korean temperatures were two additional problems, one navigational and the other mechanical. In January, the helicopter squadron put into use a jeep-mounted homing device for operations in reduced visibility. It proved unsatisfactory due to interference from other radio transmitters in the area, a difficulty never resolved during the rest of the war. The mechanical problem lay with the rotary winged aircraft in HMR–161. On 27 March, all of its HRS–2 choppers with more than 200 hours on the main rotor blades were grounded. Discovery in the States that minute .002-inch cuts on the blade surface had occurred during fabrication resulted in the grounding. New blades were promptly flown to Korea from both Japan and the United States, and the squadron again became fully operational on 2 April.

Evaluation of transport helicopter techniques continued during the period despite ever-present minor difficulties. At least one new HMR–161 tactical maneuver was scheduled each month to evaluate existing
procedures and determine full operational capabilities of the aircraft. During these landing exercises both the infantry and helicopter commanders and their staffs had the opportunity to further develop vertical envelopment techniques that would soon be the new trademark of U.S. Marine Corps operations.

Most of the time HMR–161 operations drew more attention than those of VMO–6, but pilots in the latter unit had a host of division Marines who could attest to the skills and critical role performed by helicopter fliers in the composite observation squadron. VMO–6 had pioneered the night casualty evacuation service, and during the active fighting in Korea, had flown out more than 1,000 Marines from frontline medical facilities to better-equipped ones in the rear areas. These flights were made in all kinds of weather and without the benefit of adequate instrumentation or a homing device. No other Eighth Army helicopter unit made regularly scheduled night front-line evacuations.[24]

The courage of these VMO–6 pilots was recalled nearly 15 years later by a former executive officer of the 1st Marines:

“The flying of the evacuation helicopters from the jury-rigged and inadequate landing sites was nothing short of miraculous. I’ve always contended those pilots of the observation squadron received far less credit than they deserved. They used to fly at night, to frontline landing strips, where I had difficulty walking without barking my shins.”[25]

During the latter part of 1952 and the first months of 1953, 1st Marine Aircraft Wing command relationships underwent a significant change. On 26 January 1953, General Megee forwarded a memorandum request to General Barcus. The paper outlined specific recommendations for restoring 1st MAW tactical elements to wing operational control, even though the Marine wing would continue as a tactical component of Fifth Air Force. In the proposal, CG, 1st MAW pointed out (as had his predecessors) that the existing command structure, in effect, completely bypassed the Marine wing commander. It had prevented him from exercising normal tactical command functions, even though he was fully responsible for the performance of his air groups and squadrons to FEAR/FAF orders. The 1st MAW commander’s proposal was intended to counter previous Air Force objections and demonstrate that more normal command relations would “enhance, rather than reduce [1st MAW] operational efficiency and effectiveness.”[26]

At the same time, having been informally advised in an earlier conversation that CG, FAF would approve at least some of the requests made, General Megee implemented changes in his G–2 and G–3 staff sections. This reorganization was aimed at carrying out the increased functions which would result from approval of the request. Operational control of Marine tactical squadrons by FAF since 1951 had “relegated 1st MAW to the status of an administrative headquarters, forcing its G–2 and G–3 sections partially to atrophy.”[27] To effect the changes in command relationships and establish the wing on an operational basis, the G–2 and G–3 sections were expanded. By the nature of their organization these were not capable of either targeting or tactical planning. In the intelligence section, a Target Information Sub-section was established to compile data on the mission targets (and accompanying photographs) received from FAF and to evaluate the desired objectives.

Upon receipt of this information, the G–3 planning group accomplished the target solution, prepared general tactics for conducting the strike, (number of planes, amount and kind of ordnance, approach routes to be used) and provided post-strike target evaluation. The chiefs of these sections jointly presented the completed information to the wing commander each afternoon. He selected the targets and forwarded via teletype and air courier to the wing G–3 representative at FAF headquarters a report of intended operations, providing a lead time of 36–48 hours.

As soon as the OP INTENT (Operations Intentions Report) was on its way to General Barcus for approval, the 1st MAW intelligence section began to prepare the target dossiers (including photographs, flak analysis, and related identification information) on each of the approved targets. The compiled dossiers were then sent to the appropriate tactical squadron. At this point, still perhaps a half-day before issuance of the FAF orders,
the squadrons received two major advantages over the previous system:

(1) Adequate photo intelligence employed for the first time since FAF had assumed operational control of 1st MAW; and

(2) A substantial lead time advantage for proper briefing of pilots and arming of aircraft.

After the strike, and usually within an hour, Marine planes photographed the targets for damage assessment. These photos were annotated and an assessment report prepared. This information was then presented by the G–2 and G–3 to the wing commander. Immediately thereafter, prints of the photographs were distributed to the appropriate tactical units, thus making post-strike photography more freely available on a regular basis to the participating tactical units.

“In a letter dated 18 February, General Barcus approved most of the 1st MAW commander’s specific requests, but retained full control over General Megee’s squadrons used in close air support. This was due to the fact that EUSAK–FAF joint policy required CAS mission requests to be approved by JOC, in accordance with daily Eighth Army priorities, which allocated the aircraft for each request. Returned to operational control of the Marine wing were planes used on interdiction, armed reconnaissance and general support activities—the planes on strikes beyond the bombline, the photo, and all-weather (night) squadrons. FAF also retained control over assignment of missions to VMC–1, the electronics unit.

Although some of the Marine wing tactical squadrons thus newly enjoyed the advantages of flying under their own commander’s wings, 1st MAW headquarters staff members had to pay for these benefits. An increased work load swamped the G–2 section, where 7 photo interpreters were kept busy 16 hours a day, 7 days a week. Marine personnel processed and reviewed an average of 100,000 prints per month and these were “only those from that portion of the VMJ–1 effort devoted to 1st MAW operations.”

Expansion of 1st MAW headquarters to set up a tactical planning capability pointed to a deficiency in the wing organization T/O, a weakness that existed during the rest of the war.

While General Barcus earlier had General Megee’s recommendations under study, a radio news broadcast back in the States momentarily resulted in poor publicity for the Marine Corps. On 1 February a nationally syndicated columnist reported instances in which friendly troops had been bombed and strafed by U.S. aircraft. Marine Corps planes were the most careless, the broadcaster alleged, basing his statement on incomplete information. The news story had developed from an unfortunate publicity release issued by FEAF dealing with a MAG–33 incident. The phrasing implied that Marine aviators were “guilty of gross carelessness resulting in casualties among their own ground troops.”

Actually, of the 63 incidents in which friendly casualties had resulted from aircraft flown by FAF units between January and October 1952, 1st MAW pilots were responsible for 18, or 28.5 percent of the total number of incidents and majority of casualties. What was left unsaid, however, in the unfavorable publicity was that with approximately 14.5 percent of the aircraft represented in FEAF, Marine fliers had been accomplishing monthly totals of between 30 to 40 percent of all Eighth Army CAS missions. They also performed virtually all of the very close air support jobs (50 to 100 yards out from the MLR) which further reduced the comparative percentage of Marine “carelessness.”

It was true, of course, that on rare occasions freak accidents did kill and injure UN troops, despite the continual training of pilots and controllers in strike procedures and target identification. The position taken by the two senior Marine commanders in Korea was that although any CAS incident involving friendly troops was highly regrettable, it was in the same category as “short” mortar and artillery rounds and just as unavoidable. Target identification, low visibility flying conditions, and ballistic computations made the task of precision close air support an enormous one. If anything, it was almost a wonder that more accidents did not happen. Despite the similarity of Korean geography, an unending panorama of almost identical hilltops, ridges, and streams, the pilot had to release ordnance at the proper altitude and speed, and in a balanced (trim) flight.
While conducting his dive the pilot’s view could be blocked by cloud formations and his attention distracted by antiaircraft fire which required evasive action. Even when the ordnance had been properly released, prevailing wind conditions could affect the flight path of the bombs. This, in addition to human error and mechanical factors, such as the occasional malfunctioning of parts, also affected the accuracy of bombing.

Throughout the November 1952–March 1953 period, 1st MAW squadrons continued to provide the bulk of close air sorties to the 1st Marine Division, in keeping with General Barcus’ policy stated earlier in 1952. Between November and January there had been a lull in the heavy ground fighting that had prevailed in October and little need to request air strikes. When enemy forces opposing the division began to grow more active in February, however, the requirement for air support to 1st MarDiv greatly increased. During this month 1st MAW aviators reached an all-time high in the percentage of their total CAS sorties devoted to the division—two of every three wing close support sorties went to General Pollock’s infantry regiments.

On the critical issue of close air support, the Marine division had become better satisfied by the end of 1952 with the quantity of air support received from FAF. A continuing difficulty, however, was the delayed response to requests for immediate CAS. For the wing, several other conditions existed which bothered General Megee. One was that the VMA–312 carrier-based squadron was not utilized to any great extent in execution of CAS missions. This detrimental condition saddled the wing commander with an “unqualified” squadron. It also prevented pilots from practicing a highly developed skill they were responsible for maintaining, although later in the war this condition was gradually alleviated. Two other difficulties—centralized control of CAS mission assignments by JOC and the prevailing differences between the Marine and Air Force/Army CAS communications systems and request procedures—were never rectified.[30]

One long-standing difficulty, though not a CAS matter, had been solved early in the winter. Following a series of mechanical troubles with the F3D–2 aircraft in VMF(N)–513 and prolonged delay in receipt of blast tube extensions for its 20mm guns, the squadron finally became fully operational on 1 November with its complement of 12 of the new jet Skyknight aircraft. Almost as soon as the F3D–2s were ready for night work, FEAF had put them to escorting B–29s on bombing runs over North Korea. With the F3D escort and changes in B–29 tactics, bomber losses, which had been severe, decreased sharply. Enemy attackers became fewer and fewer so that by February, air-to-air opposition was encountered only infrequently. Instead of sending up groups of night fighters at the escorted B–29s, the enemy would fly a single jet across the bomber formation. If a Skyknight followed, one or two MIG–15s, well to the rear and higher than the decoy, would attempt to gun down the Skyknight in its pursuit. But because of the F3D tail warning radar, the Marine radar operator could detect the enemy plane in its approach for the kill before it got within effective firing range.

Lieutenant Colonel Hutchinson’s VMF(N)–513 pilots soon established an enviable record for Marine aviation, netting by 31 January five enemy jets without loss of a single F3D. In addition to the jets, the squadron downed a piston engine plane and scored a probable destruct on another. During its first three months of operations with the Douglas Skyknights—the first Navy-Marine jet night-fighter to arrive in the Korean combat theater—the squadron earned two night-kill records. It also quickly proved the design theory and proposed tactics for the Skyknights that enemy aircraft could be located, intercepted, and destroyed purely by electronic means.

While on a night combat air patrol in the vicinity of Sinuiju airfield early on 3 November, Master Sergeant H. C. Hoglind picked up a contact on his intercept radar, which a ground radar station had passed on to him, and notified the pilot, Major William T. Stratton, Jr. After losing and re-establishing radar contact, Major Stratton made a visual sighting of a jet exhaust straight ahead. When he had been cleared to proceed, the Flying Nightmare’s pilot sent three bursts of 20mm into the other plane, identified as a YAK–15. Three explosions followed and the aircraft plunged towards the airfield directly below. This marked the first time that an enemy jet had been destroyed at night by use of airborne intercept radar equipment in a jet fighter.

Five days later the team of Captain Oliver R. Davis and Warrant Officer Dramus F. Fessler bagged the
first MIG–15 for the squadron. Captain Davis expended only 20 rounds of 20mm cannon fire in his aerial victory, which took place northwest of Pyongyang near the Yellow Sea.

The next two months brought new distinction to Marines in –513. Shortly after dark on 10 December, First Lieutenant Joseph A. Corvi had departed on a night combat patrol mission. About 35 miles northwest of Chinnampo, his radar operator, Master Sergeant D. R. George, picked up a target on his scope. Since the “bogey” (an unidentified aircraft, believed to be hostile) was three miles distant, the pilot quickly closed on the contact and shot it down. Almost immediately another blip appeared on the radar screen. Lieutenant Corvi turned to the new attack and began approaching it, but because of the slower speed of the enemy plane the Marine pilot was able to fire only one short burst before overtaking it. An instant before passing the enemy aircraft, Lieutenant Corvi saw it disappear from the radar screen, but neither member of the Flying Nightmares crew had made a visual sighting with the plane itself, listed as a probable kill. What these two Marines had accomplished with their earlier encounter was the first attempt to destroy an enemy aircraft without use of a visual sighting by means of lock-on radar gear.

All-weather squadron crews continued to demonstrate the F3D–2 capability for destruction of hostile aircraft by electronic intercept during January. The first MIG–15 downed was by Major Elswin P. (Jack) Dunn and Master Sergeant Lawrence J. Fortin, his radar operator. On 28 January Captain James R. Weaver and Master Sergeant Robert P. Becker destroyed another of the Russian fighter-interceptors in an aerial duel. The final kill came on the 31st when the new squadron commander, Lieutenant Colonel Robert F. Conley (who had taken over VMF(N)–513 on the 20th) accompanied by Master Sergeant James M. Scott bagged the Marine fighter pilots’ 12th MIG of the war.

While VMF(N)–513 wrote several records in the sky, other MAG–33 and –12 squadrons also made their contribution during the winter of 1952–1953. In MAG–12, a highly successful noontime strike was launched on 16 November by 21 attack planes from VMAs–121 and –212 against a hydroelectric plant 25 miles southeast of Wonsan. For this exploit the group received the plaudits of the Fifth Air Force CG, General Barcus. Lieutenant Colonel John B. Maas, Jr.’s VMF–115 (he had succeeded Lieutenant Colonel Coln as CO on 29 September) helped all Marines celebrate their 177th birthday by sending 22 Panthers against enemy troops and supply shelters. On these strikes each MAG–33 aircraft was armed with 760 rounds of 20mm and 4 napalm tanks (500 pounds each), the first time that 4 tanks that large had been dropped from a fighter-bomber. This was part of the 98 sorties flown by 1st MAW against 21 enemy targets on the 10 November anniversary date. During December 1952, the frequency of combat flights by VMF–115 enabled the squadron to surpass its old (August 1951) monthly sortie record. The Panther jet fliers set this new mark of 726 effective sorties in the last 31 days of the year.

More honors came to wing pilots in the new year. On 8 January, three MAG–12 squadrons flew more than 28 combat sorties. Some, in support of the 1st Marine Division near the Panmunjom corridor, by VMAs–121, –212, and –323, produced outstanding results, earning the praise of General Pollock. Among the participating pilots was Lieutenant Colonel Barnett Robinson (VMA–212), who a week earlier had taken command of the squadron from Lieutenant Colonel Dobson.

Between 9–14 January, MAG–33 participated in a USAF–USMC joint operation to strike the rail system at Sinanju, 45 miles north of the enemy capital, and at Yongmi-dong, to the northwest across both the Chongchon and Taedong Rivers. During the six-day Operation PARALYSIS, Marine and Air Force jet squadrons flew flak suppression and interdiction missions, knocking out ground-based air defense weapons and damaging and destroying bridges, rails, and rolling stock. At night FEAF Bomber Command, with Flying Nightmare escorts, worked over the communications net, including repair facilities; during daylight, the fighter-bombers attacked marshalling yards near Sinanju, where railroad cars were stacked up awaiting repair of the river bridges. Bomb assessments and intelligence reports showed that two major rail lines were inoperative for 16 days and that, as
General Barcus had predicted, the Chinese “hurriedly increased their antiaircraft defenses in the Chongchon estuary and shot down seven fighter-bombers.”[31]

Following this operation, Colonel Robertshaw’s jets from VMFs–115 and –311 achieved extremely effective close air support in strikes flown 24 January in the I Corps area. About a month later, with an F9F as an airborne command post and with Lieutenant Colonel Walt Bartosh on his wing, the MAG–33 commander directed the operations of 208 USAF and Marine aircraft on another mass strike. The two-day mission was flown on 18–19 February against the North Korean tank and infantry school southwest of Pyongyang. More than 240 buildings were destroyed in 379 sorties. The attack was one of the largest all-jet fighter-bomber strikes of the war. Colonel Robertshaw thereby became the first Marine to lead such a large joint air-strike force from a CP aloft. And the next month, on 8 March, the Group CO flew the first Marine jet night MPQ mission, dropping six 250-pound bombs from an F9F–2 Panther on an enemy ammunition dump.
The Marine aviation command, like the division, found that its commitment to a large-scale land campaign in Korea considerably increased its requirements for nonorganic support, compared with normal amphibious combat operations. The wing fell heir to more of the permanent problems because its organization was less suited to the heavy support requirements of prolonged combat. Whereas the 1st Marine Division received adequate support through the FMFPac Service Command, the wing did not since the service command had been tailored more for support of ground organizations. Moreover, the command relations established in Korea underscored this situation, with the 1st Combat Service Group placed under CG, 1st Marine Division. The wing received emergency logistical support from VMR (Marine transport squadron) units. This was not an adequate substitute for the various ground support agencies essential for employment of the wing’s full combat potential.

Major problems pertaining to service and support functions of 1st MAW units resulted from the use of amphibious Tables of Organization throughout the period of prolonged land combat without making a T/O adjustment for the actual combat mission being performed. What the wing had recommended to solve its longstanding support and supply problems was either to strengthen its organic logistical structure or to increase it by the attachment of appropriate units. It was emphasized that “prolonged Wing operations under Air Force control with logistical support derived from four different services, each at the end of its supply pipeline, brought clearly into focus the requirement for centralized control and monitoring of Wing requisitions and supplies.”[33]

A step toward expanding the amphibious T/O of the wing was made in 1953 with the request from CG, 1st MAW to CG, FMFPac for a detachment of the 1st Combat Service Group to provide electronics logistical support. It was further recommended that the electronics section be made organic to the wing to meet its need for this type of service unit.

Unlike the division, existing T/Os made it impossible for the wing to consolidate and control resupply requests from subordinate units and then to monitor the requisitions until parts or supplies were received by the users. This lack of a central wing supply agency had, for some time, impaired the effective, sustained performance of 1st MAW ground electronics equipment in Korea. CG, FMFPac concurred with the proposal. He requested an increase in the wing T/O of four additional electronics supply personnel to be attached to the wing for this purpose. The basic problem of establishment of a combat service group tailored to fully meet 1st MAW needs in the field remained unresolved, however.

Supply problems in the division were less complicated. On 11 November 1952, General Pollock submitted a letter to the theater commander requesting approval of a special list of equipment in excess of certain Tables of Organization and Equipment within the division. The requirements of the Marine land war mission in Korea dictated the need for additional equipment, primarily crew-served weapons and automatic rifles. Approval was given on 19 January 1953 by CG, AFFE (Army Forces, Far East). All equipment received through this program was to be returned upon the departure of the Marine division from Korea.

During the cold months that ended in March 1953, the division continued its evaluation of experimental clothing and equipment. Items of winter wear generally proved to be highly satisfactory. The thermal boot, in particular, gave excellent service. On the other hand, the leather combat boot did not fully measure up to expectations. Most of its deficiencies were caused by the rapid wearing of the composition sole. One clothing item, the armored vest, had undergone further testing. In November, delivery of the vests to the division had been completed, including 400 sets of the new lower torso armor. Recent issue of this additional type of body armor
appeared highly effective in reducing combat casualties; its extended coverage also raised morale.

Though their ability to halt successfully a Chinese bullet or exploding shell was being improved on, thanks to armored wear, the Marines’ opportunity to keep the enemy from division outposts or MLR areas was still being hampered by occasional ammunition shortages. From time to time during the winter months there was some relief from the grenade and howitzer firing restrictions that had been in effect before the Hook fighting. The cutback on use of 81mm mortar shells continued, however, as the supply level of these projectiles remained dangerously low.

A new shortage, this one in fuel, developed during the winter. In January 1953 it became necessary to reduce the distribution of gasoline for motor vehicles to .829 gallons per man per day, a drop of 17 percent from the previous month’s allocation. Diesel fuel was cut back to 1.41 gallons, or 7 percent less than the December ration. By February, however, the crisis had passed and vehicles returned to a less restricted operating schedule. No extreme hardship had been experienced by the Marines during the fuel drought. It was considered that “prolonged operation under such restrictions would result in a marked decrease in efficiency since many essential activities may be temporarily postponed, although not entirely eliminated.”

The month of February also witnessed the largest helicopter supply lift in Korea. HAYLIFT I, the previous September, had tested the feasibility of transporting Class I, III, and V supplies to a frontline infantry regiment for five consecutive days. HMR–161 and the 7th Marines had turned out an excellent test performance of the rotary craft in this logistical operation. It then became the task for the infantry and helicopters to run a resupply operation for two frontline regiments for a five-day period. HAYLIFT II, conducted 23–27 February, was the code name for this test.

Both the planning and execution of the February operation followed the general pattern of HAYLIFT I, but on a much larger scale. As in September, division ordnance and service battalions moved the supplies to helicopter loading zones near Lieutenant Colonel Carey’s HMR–161 air strip. It had been estimated that 130 tons each day would have to be lifted to supply the two MLR regiments, the 7th and 5th Marines. On the first day, this figure was exceeded by 30 tons. A request by A/1/5 on 24 February for support during an emergency operation necessitated additional ammunition and helicopters to be diverted from those resupplying the 7th Marines. By the third day, a backlog of supplies had accumulated in the loading areas. In order to eliminate this buildup and to replace ammunition expended that morning by 1/5, HMR–161 on 25 February transported 200 tons in a single day, thereby establishing a new record. This represented 392 lifts made in 138.4 hours flying time. Maximum time for unloading a chopper was 54 seconds; the minimum, 28 seconds.

The last two days of HAYLIFT II, although less eventful, contributed to a resupply tonnage record five times greater than that set by HAYLIFT I. On the last day, when fog grounded their aircraft for a second time during the morning, Marines were again reminded of an operational limitation of the helicopters. In the end, though, the accomplishments far out-weighed this shortcoming. During the five days, a total of 1,612,406 pounds of supplies had been lifted to the two frontline regiments. Not one crewman or helicopter was lost. The operation contributed significantly to the February record for the greatest number of combat hours (765), total hours (1,275.5), combat flights (575), and total flights (1,183) flown by HMR–161 for any one-month period during the Korean fighting. For the rest of the war, the February 1953 gross lift of 2,018,120 pounds would also rank as the largest amount transported by HMR–161 for a single month.
Chapter 6. Positional Warfare
The Quiet Sectors

Two frontline units in the division MLR seldom became involved in setting records or bitter contests with the enemy, even though they carried out important roles in the sector defense. These were the Kimpo Provisional Regiment and 1st Amphibian Tractor Battalion, both located on the left flank of the Marine line. The Kimpo Provisional Regiment had been organized as a component of the 1st Marine Division a week after its arrival in the west, specifically for defending that vital sector at the extreme left of the UNC line. The next month the 1st Amphibian Tractor Battalion had been assigned part of Line KANSAS between the KPR and KMC sectors.

Because it was set apart from the Korean mainland on the north and east by the Han River, Kimpo Peninsula afforded little opportunity for its occupants to engage the enemy directly in infantry clashes. Artillery thus became the normal medium for carrying on the limited hostilities as they existed in this sector between the Communists and UNC opponents. Hostile forces opposing the KPR were deployed in company-sized strongpoints across the river, occupying numerous fortified heights on the north bank of the Han estuary. Enemy strength was estimated to be 7 infantry companies, supported by 7 artillery batteries and 40 mortar positions. Sporadic mortar and artillery rounds fell in the sector, with little harm. Occasionally, enemy counterbattery fire caused minor damage to the LVTs of the command. During 1952, the first year of the existence of the Kimpo regiment, 15 June had stood as the record day for the number of enemy artillery rounds received. Between 1900-2100 a total of 588 shells had fallen in the sector.

As part of its normal defense mission, personnel of the regiment spent a large part of their time controlling civilians and regulating traffic, especially water travel. Certain counterintelligence problems confronted the Kimpo Provisional Regiment. A large civilian population, numbering nearly 80,000 natives, lived within the regimental sector. Local restrictions set by the National Police on Kimpo (who cooperated with the KPR in security matters) included the STAYBACK LINE to the north of the peninsula. As a rule, no civilians other than those with daytime farming permits, were allowed beyond this line. Numerous regulations were also issued to control boat traffic. Surrounded by rivers on three sides, there was ample opportunity for enemy agents or line crossers to infiltrate the defense line, despite continuous screening by friendly outposts and waterborne patrols.

Two months after the “heavy” June shelling came the August floods, which were more destructive than the artillery had been. The rest of the summer and fall followed a fairly regular, uneventful pattern with customary defense duties, rotation of frontline units, and training exercises. Among the latter were four helicopter demonstrations in October and a five-hour communication CPX (Command Post Exercise) the following month. One episode toward the end of the year created a temporary stir in the daily routine. In late November, two Communist espionage agents and their North Korean guides were apprehended on the west bank of the Han, almost directly east of the Kimpo Airfield. They had crossed the Imjin-Han Rivers by boat, using this normal infiltration route to penetrate the Marine defense net. The agents were seized by National Police on 22 November and their North Korean guides two days later. It was unusual for agents and guides to be captured so closely together. Normal defense measures of the peninsula had assigned separate northern, western, and southern sector units for protection against possible amphibious or overland attacks or—far more likely—enemy infiltration.

The following month four more “roving” two-man outposts were established in the western coastal area of the southern sector. Manned from sunset to 30 minutes after sunrise daily by either KPR military personnel or
National Police, the outposts occupied different positions each night. They were responsible for checking for proper identification and enforcing the rigid 2100–0500 curfew hours. Another unusual occurrence took place the last four nights of December when a single-engine light aircraft dropped propaganda leaflets in Colonel Harvey C. Tschirgi’s[39] sector.

Commanded by Lieutenant Colonel Dobervich, the 1st Amphibian Tractor Battalion (minus Company A at KPR, and Company B at Pohang), reinforced by the Division Reconnaissance Company, had manned positions on the KANSAS line since April 1952. By the end of May, the battalion had inserted an additional unit, a provisional company,[40] in the KANSAS secondary defense line. In July, the amtrac company relieved the reconnaissance company on line, the latter then becoming part of Headquarters Battalion, 1st Marine Division. All amphibian tractor battalion units assigned to ground defense missions received special refresher training in infantry operations, including the employment of forward observers.

During the first summer in the west, the mainland-based amphibian organization continued its KANSAS defense mission. The battalion also instituted a training program for patrolling the Han River by tractor. (Company A, attached to the KPR, had conducted water-borne patrols of the Yom since June. The unit also manned outposts along that river.) Headquarters and Service Company assisted the U.S. Army in laying a signal cable across the river during August, the same month Lieutenant Colonel Dobervich relinquished unit command to Lieutenant Colonel Edwin B. Wheeler. In late August the battalion sent 58 of its members to help augment 1st Marines ranks, thinned by the fierce Bunker Hill fighting.

Through the end of 1952, the 1st Amphibian Tractor Battalion continued its KANSAS mission. Although the sector had witnessed relatively little action for some months, several incidents about this time varied the generally quiet daily routine. In October, Company B (Major Charles W. Fitzmaurice) sent out an amphibious patrol to capture prisoners (Operation CAT WHISKER). The plan was to cross the Han in a rubber boat and set up an ambush after reaching the enemy shore, but a storm-angered river, with a strong tide boosted by heavy winds, prevented landing of the boat. Two months later, another snare—this one set by the enemy—was partially successful. Several hours after dark on 1 December, the jeep assigned to the battalion commander, Major George S. Saussy, Jr.,[41] was being driven on the MSR by Private First Class Billy J. Webb, its operator and only occupant.

Suddenly shots rang out from the side of the road. Within a few seconds, 23 bullets from a Russian-made submachine gun had struck the jeep; the driver, astonishingly, received only a knee wound. No trace of the ambushers could be found by the friendly patrol dispatched to investigate the incident. An activity of an entirely different nature that same month was the assignment of battalion LVTs, to break up the heavily encrusted ice that had formed around and endangered supports of three bridges in the I Corps area. A rash of minor incidents involving would-be, but unsuccessful, enemy infiltrators also took place during the winter months in the amtrac sector. In November, three agents attempted to cross the Imjin on their way to the division area, but were engaged by a battalion patrol. After a brief fire fight, friendly artillery was called down on the retreating boat and it was believed destroyed. Enemy agents on foot were engaged by National Police or Marine listening posts again in January and March and deterred from their espionage missions.

Commitment to an infantry role in the KANSAS line, meanwhile, had permitted little time for operation of the battalion tractors. In December, construction began on a storage park for those LVTs not in use. By placing the non-operating tracked vehicles in a single area, the battalion could handle routine maintenance with just a few men. This facility, located at Ascom City, was completed early in 1953. By March, a total of 34 tractors had been placed there in caretaker status. Implicit in this economy measure was the requirement that all stowed tractors could revert to combat status, if necessary, on a 48-hour alert.
Operations in West Korea
Pat Meid and James M. Yingling

Chapter 6. Positional Warfare
Changes in the Concept of Ground Defense

During the winter months of 1952–1953, the 1st Marine Division modified the organization of its tactical defense, although it retained the basic concept of the combat outpost system as the backbone of MLR defense.

Development of much of the KANSAS line and parts of the Marine MLR during this period reflected several new ideas on how the ground defense could be better organized. Recent experience during Communist attacks had shown that defensive emplacements and positions could be dug deeper and below ground to withstand massed enemy fires. Contrary to traditional concepts, it had also been found that centering the defense on the military crest of a hill was not always the best procedure. Emplacement of machine guns downslope or in low firing positions to cover draws or flat ground was not entirely suitable to the Korean terrain, enemy, or nature of positional warfare.

Altered defense concepts, beginning in October, took the following form:

1. The trace of defensive positions followed the topographical crest (A) rather than military crest (B) of key terrain features. (Map diagrams 20 and 21 illustrate these changes.)
2. Fighting positions and emplacements were dug a short distance downslope (C) from the topographical crest.
3. Trenches on the topographical crest permitted easier, faster, and more protected access to fighting positions from the reverse slope and support area (D).
4. Positions on the topographical crest were less vulnerable to enemy artillery because it was more difficult for the enemy to adjust his fire on these positions than on trenches dug along the military crest. Many shells simply passed over the top (E) of the hill.
5. Certain hills and noses were selected and organized so that trenches and gun emplacements, encircling the crest, would form mutually supporting positions (X).
6. Machine guns were moved from the draws (Y) to hilltops and noses (Z) where better long-range observation and fields of fire existed.

Another change in the improvement of field fortifications came into use during the winter months. A different type of barbed wire obstacle, called “Canadian,” “random,” or “double-apron” wire, began to find favor with Marine infantrymen. Canadian wire consisted of two parallel rows of three-strand barbed wire fencing, erected about three feet apart. The void was filled in with additional barbed wire, placed at random, but connected to the parallel fences. The new type barbed wire appeared more effective for several reasons. Besides being simple and fast to emplace, Canadian wire merely became more entangled by artillery shelling, which quickly ripped apart the standard double-apron barbed wire previously used in COP slope defenses.
As the Marine division continued to revamp and strengthen its primary defenses, a change of pace on the battlefront was gradually being felt. Only a few major raids had taken place during November, December, and January, and these involved no transfer of real estate. Casualties had been light. Artillery rounds, both incoming and outgoing, had dropped substantially. By February, however, it became apparent that the period of winter inactivity was nearing an end.

Taking the initiative in the renewed action was the 5th Marines, occupants of the right regimental sector since 25 January. The next month the regiment conducted three successful daytime raids against fortified enemy positions. Targets for the initial action, on 3 February, were two consistently troublesome hills, 31 and 31A in the Ungok Hill mass, north of the left battalion sector.

Since all battalions of the 5th Marines were to be involved either directly or indirectly in Operation CLAMBAKE, the initial planning and actual execution of the raid was to be carried out by the regimental commander, Colonel Walt. CLAMBAKE required especially thorough coordination of the heavy fire support since it was to be launched with a tank-artillery feint against several CCF positions (Hill 104, Kumgok, and Red Hill) generally west of the Ungok objective area. The two target hills were to be assaulted by reinforced platoons from Company A (Captain Don H. Blanchard) of the reserve battalion, 1/5, commanded by Lieutenant Colonel Jonas M. Platt, who was responsible for the later planning stages of the raid. It was anticipated that intensive air and artillery preparation on the feint objectives and movement of gun and flame tanks during the diversion would gain the element of surprise for the assault platoons. Thus the Marines hoped to take prisoners, the main purpose of the raid, and to kill enemy troops and destroy their defenses.

During the five weeks of preparation, every aspect of the maneuver was thoroughly reviewed and rehearsed. All participating units took part in the planning conferences. Routes were reconnoitered, mines cleared, and fire concentrations plotted and registered. MAG–12 pilots studied the target areas from the nearby Marine MLR. Six rehearsals, including practice in casualty evacuation, uncovered potential problem areas. Final rehearsal was held 1 February, with artillery and air preparation made against the feint objectives. Four close air support strikes were conducted that day and the next as part of the plan to divert enemy attention from the CLAMBAKE destruction mission.

Shortly after first light on 3 February, three platoons of tanks rumbled across the MLR to assault the feint area. A heavy “false” artillery preparation by 1/11 was also placed on the three western enemy hills as well as direct fire from gun and flame tanks. The two Marine assault forces, one against each hill, moved out armed with flamethrowers, 3.5-inch rockets, machine guns, grenades, satchel charges, bangalore torpedoes, and automatic weapons. Enemy forces occupying the positions made three separate counterattack attempts, which were blunted by Marine supporting arms. During the infantry attack, friendly air hovered on station and artillery fired continuous counterbattery and countermortar fire.

With the exception of the change of withdrawal route of one of the assault teams, the 5th Marines reported that the operation was carried out according to plan. Company A tanks had swung left across the frozen rice paddies to provide left flank security for the infantry and to interdict trenches that connected with the Ungok objective. Intense enemy fire lashed the armored vehicles as they approached Kumgok and Red Hill as well as those supporting tanks that remained on the MLR.[47] Air, artillery, infantry, and tanks produced an estimated 390 Chinese casualties (including 90 known KIA) in addition to damaged or destroyed trenchlines,
tunnels, caves, bunkers, and weapons of the enemy. Marine losses were 14 killed and 91 wounded. One flame tank was lost.

As in the case of the 1st Marines WAKEUP raid in November 1952, CLAMBAKE was important not so much in accomplishing its primary mission (actually, no POWs were taken) as in lessons learned. One of these was to reemphasize the fact that thorough preparation helped to ensure smooth coordination of infantry and supporting arms. In his report of the operation, Lieutenant Colonel Platt wrote, “minute planning to the last detail along with carefully executed rehearsals are basic to success in actions of this type.”[48] He further noted that “confidence and enthusiasm stimulated by the rehearsals are assets which cannot be overlooked.”[49] The battalion commander also commented on the importance of planning for both troop withdrawal and maintaining a flexible schedule of fires by supporting arms. Air,[50] artillery, and tanks all employed fire plans that could be readily adjusted to meet the changing tactical situation.

On the ground, flame was found to be the best weapon for neutralizing the well-fortified CCF caves. From Company A, 1st Tank Battalion (Captain Hunter) came information about Chinese 3.5-inch rocket launcher teams used in antitank defense. Several of these tank-killer teams had run down the trenchline holding small bushes in front of them. The enemy then boldly advanced through a hail of bullets to within 15–20 yards of the Marine tank before opening fire with their rockets. Short bursts of flame from headquarters tanks soon caused even the most intrepid to beat a hurried retreat.

Concluding his after-action report of CLAMBAKE, the regimental commander, Colonel Walt, observed:

“In addition to inflicting large numbers of casualties and destruction upon the enemy, the operation served a secondary purpose, none the less important. It provided excellent training and experience for the various infantry and supporting arms staffs involved, helping to develop them into a smoothly functioning infantry-artillery-tank team.”[51]

Shortly before the end of the month, the 5th Marines made another major assault. As in the earlier CLAMBAKE, this raid was again in two-reinforced-platoon size and made during the early daylight hours of 25 February. This time the objective was a single height, Hill 15 (Detroit), two miles east of the CLAMBAKE objective. Lieutenant Colonel Oscar F. Peatross’[52] 2/5, manning the extreme right sector of the division, gave the assignment to Company F, then under Captain Harold D. Kurth, Jr. Planning for Operation CHARLIE, a standard-type kill, capture, and destroy raid, was carried out in much the same detailed manner as the earlier 1/5 raid.

CHARLIE differed somewhat in concept in that the 2/5 operational plan attempted to gain surprise by launching the attack during the BMNT[53] period as well as in use of smoke to screen enemy observation. Supporting arms preparatory fires had been carefully planned, including the precision destruction aerial bombing that had proved so effective in the CLAMBAKE assault. In actual execution of CHARLIE, however, bad weather prevented the use of almost all the planned pre-D–Day and D–Day air strikes. Upon reaching the Detroit objective area assault Marines “found the majority of enemy installations were relatively undamaged, even though subjected to heavy bombardment by other supporting arms.”[54] Artillery preparatory fires had been employed successfully to isolate the battle area and howitzer and tank missions supported the raid.[55]

Between the time of CLAMBAKE and CHARLIE a series of Marine and enemy small units actions erupted which were soon to become a way of life for the MLR combatants. By sporadic outpost attacks and increasing their use of artillery, the Chinese were beginning to demonstrate a more aggressive attitude than in recent months. On the night of 12–13 February, a CCF platoon supported by mortars and artillery probed COP Hedy (Hill 124), in the right battalion of the center regimental sector, held by Lieutenant Colonel Barrett’s 3/7. On the next night, it was the Korean Marines who turned aggressor. Two of their platoons raided Hill 240, on the west bank of the Sachon, nearly three miles north of the mouth of the river. The following night, a 7th Marines patrol moving into ambush positions was itself stalked by a large CCF patrol. When reinforcements, including
armored vehicles, moved out from the MLR to support the Marines, the Chinese hastily withdrew.

Three more contacts were made before the end of the month along the division front. On 19 February CCF soldiers, in two-platoon strength, engaged KMC sentries forward of COP 33, located about a mile east of the action the previous week. After the initial exchange of small arms fire, the Koreans moved back to the outpost and called down supporting fires on the Chinese. Artillery and mortars tore into the attackers causing numerous casualties and forcing the enemy to withdraw. On the morning of 22 February, a raiding party from the 5th Marines assaulted a smaller enemy force at Hill 35A, approximately 1,300 yards southwest of the Ungok hills. In this second raid staged by the 5th Marines that month, assault troops (H/3/5) used flamethrowers in the early stages of the action to help clear enemy trenches of hostile grenade throwers.

Late the next night a 7th Marines unit, consisting of a reinforced platoon and four M-46 tanks, set out to raid Yoke, located near the peace corridor five miles north of Freedom Bridge. The assault against that position never came off. At 2137 as the B/1/7 platoon moved into preliminary positions on Hill 90, north of the ultimate objective, a Chinese company ambushed the patrol from three sides. When the Marines closed with the enemy in hand-to-hand fighting, a support platoon was sent from the MLR. After an intense 30 minute fire fight, the CCF began withdrawing at 0138. Enemy losses were listed as 45 counted KIA, 33 estimated KIA, and 35 estimated WIA. As a result of the assault, orders for the 7th Marines raid on Yoke were cancelled. Marine casualties numbered 5 killed, 22 wounded.

Whereas February was characterized by a marked increase in ground contacts between Marines and their CCF adversaries, during the first part of March the Chinese again assumed an inactive posture. Marine patrols reported few contacts. Except for a KMC raid on 3 March, little action could be considered a sizable engagement took place until after midmonth. On the 16th there was a brief skirmish involving a 5th Marines combat patrol near Reno and a short fire fight between Carson defenders and an enemy squad. The next night a Chinese platoon, waiting near Vegas for a Marine patrol to pass by, was itself put to flight by the patrol.

Two encounters with the CCF on 19 March marked the heaviest action yet of the month. Early that morning, a predawn raid was staged by B/1/5 (Captain Theodore J. Mildner) at Hill 31A, one of the Ungok twin objectives in CLAMBAKE the previous month. The March ITEM raid employed 111 Marines. One platoon was to make the assault and the second platoon to support the operation and assist in casualty evacuation. Following a series of nearly a dozen air strikes on the objective and artillery preparation, Captain Mildner’s two assault platoons jumped off from the MLR check point at 0518. As usually happened in such operations, the preliminary fire drove the Chinese to reverse slope defenses. No enemy POWs were taken and at 0700 the Marine units disengaged, due to casualties sustained from enemy shelling and machine gun fire.[56]

Earlier that same date, two attacks had been made simultaneously by the enemy on outposts in the center regimental sector, where the 1st Marines had relieved the 7th on 10 March. At 0105 one CCF company struck in the vicinity of Hedy while a second lunged at Esther, about 1 1/2 miles east. When a G/3/1 reconnaissance patrol operating forward of COP Esther observed enemy movement, the Marines pulled back to the outpost, alerting it to the impending attack. After a heavy incoming artillery barrage, the enemy assaulted the outpost, but when a three-hour effort failed to carry the position, the attackers withdrew. By that time the Chinese company which had hit COP Hedy had also broken off the attack.

Actually the fight in Captain Carl R. Gray’s Company H sector, to the rear of Hedy, was mainly at the MLR, for the Chinese indulged in merely a brief fire fight at the latter outpost, bypassing it in favor of a crack at JAMESTOWN. The main line of resistance failed to yield to the enemy thrust, which was supported by 2,400 rounds of mortar and artillery fire along the MLR and outposts.

After being thwarted by Hedy-Esther defenses, the enemy shifted his efforts westward to the 1st KMC area. The Korean regiment received the brunt of the enemy’s minor infantry probes immediately preceding the Nevada Cities battle. Late on 25 March a series of skirmishes broke out in the 1st Marines sector between one-or-
two platoon size Chinese infantry forces and Marine outpost defenders. Following a quiet daylight spell on the 26th, the Chinese resumed the offensive with a probe at COP Dagmar. This coincided with what developed into a massive regimental assault unleashed against Carson, Reno, and Vegas, outposts in the 5th Marines sector, to the right. There Colonel Walt’s regiment would shortly be the target of the bloodiest Chinese attack to date on the 1st Marine Division in West Korea.
Operations in West Korea
Pat Meid and James M. Yingling

Chapter 7. Vegas
The Nevada Cities[1]

AS THE THIRD WINTER OF WAR in Korea began to draw to an inconclusive end in late March 1953, some 28,000 Marines of the 1st Division stationed on the western front suspected that coming weeks would bring a change of pace. Consider just the matter of basic logistics. Rising temperatures, tons of melting snow, and the thawing of the Imjin River, located north of the rear Marine support and reserve areas, would turn vital road nets into quagmires to tax the patience and ingenuity of men and machinery alike.

With the arrival of another spring in Korea there was strong likelihood that the Chinese Communists facing the Marines across a 33-mile front of jagged peaks and steep draws would launch a new offensive. This would enable them to regain the initiative and end the stalemate that had existed since October when they were rebuffed in the battle for the Hook.

Winning new dominating hill or ridge positions adjacent to the Marine MLR, in that uneasy No-Mans-Land buffer zone between the CCF and UN lines, would be both militarily and psychologically advantageous to the Communists. Any new yardage or victory, no matter how small, could be exploited as leverage against the “Wall Street capitalists” when truce talks resumed at the Panmunjom bargaining table. Further, dominant terrain seized by the CCF would remain in Communist hands when the truce went into effect. Although wise to the tactics of the Chinese,[2] UN intelligence had not anticipated the extent or intensity of the surprise CCF attack that opened up at 1900 on 26 March when the Communists sent battalions of 700 to 800 men against Marine outposts of 50 men.

The late March attack centered primarily on a trio of peaks where Marines had dug in three of their key outposts—Carson, Reno, and Vegas. Rechristened from earlier, more prosaic names of Allen, Bruce, and Clarence, respectively, the Nevada Cities hill complex was located approximately 1,500 yards north of the MLR fronting the 5th Marines right sector. The trio was the province of 1/5, which manned the western (left) part of the regimental area. Ultimately, however, reverberations ran through nearly 10,000 yards of division front, from the two Berlin outposts, 1,000 yards east of Vegas, to COP Hedy, midpoint in the 1st Marines center sector. Continuous attacks and counterattacks for possession of the key Vegas outpost raged unabated for five days. The action escalated into the bloodiest fighting to date in western Korea, resulted in loss of a major outpost, and the killing or wounding of nearly 1,000 Marines. It was a partial success for the enemy, but he paid a high price for the real estate: casualties amounting to more than twice the Marine losses, including 800 known killed and a regiment that was decimated by the Marine defenders.

The three Nevada outposts lay just below the 38th Parallel, approximately 10 miles northeast of Panmunjom and the same distance north of the Marine railhead at Munsan-ni. Possession of the area would give the Communists improved observation of I Corps MLR positions to the west. Indeed, the enemy had cast covetous eyes (an ambition translated into action through his well-known creeping tactics) on the semi-circular net of outposts since the preceding summer.

Mindful of this, the I Corps commanding general back in September had stressed the importance of holding key terrain features that could be of major tactical value to the enemy. This included Bunker Hill and COP Reno, both considered likely targets for renewed enemy aggression in the future. Particularly, the enemy had indicated he wanted to annex Reno. The object of increasing hostile attacks since July 1952, Reno was the closest of the three Nevadas to CCF lines and tied in geographically with two of the enemy’s high ground positions—Hill 190, to the northeast, and Hill 101, overlooking the site of the destroyed village of Ungok. (See Map 22.)
Reno’s companion outpost on the right, Vegas, at 175 meters, was the highest of the three while Carson, on the left flank, was nearest JAMESTOWN and also assisted in defense of Reno and Vegas. Each of the three outposts was manned by a rifle platoon (40 Marines plus two Navy hospital corpsmen), heavily reinforced with weapons company personnel. A small hill between Reno and Vegas, known as the Reno Block, further supported the Nevada Cities complex and at night was defended by a reinforced squad.

Since they commanded the historic Korean invasion route to Seoul, 30 air miles south, the strategic importance of the Nevada outposts had been one of the reasons for transfer of the Marines from East Korea to the West, in 1952. Both Reno and Vegas, moreover, overlooked Chinese rear area supply routes. This was a matter of special concern to the enemy at this time since he had recently doubled his stockpiling efforts and wanted to prevent UNC intelligence from learning about the build-up. Possession of the Nevada hills would enable the Chinese to harass the Marines at even closer range and—hopefully—to conduct new thrusts at the MLR which would ultimately weaken the UNC position.

In mid- and late March, the units forward in the 1st Marine Division sector of the main defense line, JAMESTOWN, remained much as they had been in recent months. Left to right, the defending components were the Kimpo Provisional Regiment, 1st Amphibian Tractor Battalion, 1st Korean Marine Corps Regimental Combat Team (1st KMC/RCT), 1st Marines, and 5th Marines. One change had occurred when the 1st Marines relieved the 7th in the center sector earlier in the month. The latter was now in division reserve in the Camp Rose rear area. Before long, this regiment was to see more offensive action in a hotly contested, five-day period than it had during its entire recent tour on line. Overall, the 1st Marine Division continued as one of the four infantry divisions in the I Corps sector of EUSAK and, in fact, the month itself marked exactly one year since the Marines had arrived on the western front.

Occupying the far eastern end of the division sector, the 5th Marines, under command of Colonel Walt, had been assigned to the MLR since late January. The regiment manned six miles of the JAMESTOWN front. It was flanked on the left by the 1st Marines while to the right its neighbor was the 38th Regiment, 2d Infantry Division, U.S. Army.

Since 20 February, the western part of the 5th regimental sector had been held by Lieutenant Colonel Platt’s 1/5, with Companies A, B, and C on line, from left to right. The battalion area held four outposts. COP Ava was tucked down near the boundary between the 1st and 5th Regiments, while the Nevada, or Three Cities, triangle screened the central part of the latter regimental sector. A Company A squad outposted Ava, some 325 yards forward of the main line. Personnel of Company C were stationed on Carson and Reno. Vegas had a unique command situation. Due to its proximity to the boundary between 1/5 and 3/5, Vegas came under operational control of the former battalion while personnel charged with its defense belonged to Company H of 3/5.

The right flank of the regimental sector was the responsibility of 3/5, which had moved to the front on 23 March, under Lieutenant Colonel Robert J. Oddy. Companies H, G, and I were forward, in that order from the west, with George personnel on duty at the two reinforced squad size outposts, Berlin and East Berlin. In regimental reserve was Lieutenant Colonel James H. Finch’s 2/5.

Westward along JAMESTOWN from Colonel Walt’s 5th Marines was the center regimental sector, held by the 1st Marines commanded by Colonel Adams. (See Map 23.) The extreme western part of the regimental line came to a juncture with KMC territory just as it looped around the critical Panmunjom peace corridor. This left battalion sector was manned by Lieutenant Colonel George A. Gililland’s 2/1. Companies E, D, B from 1/1, and F were forward, outposting COPs 1, 2, Marilyn, Kate, and Ingrid. To the right 3/1, commanded by Lieutenant Colonel Ernest G. Atkin, defended Hedy, Bunker, Ginger, Esther, Dagmar, and Corinne, with Companies H, G, and I on line. Occupying the area adjacent to the secondary defense installations, WYOMING and the western
part of the KANSAS line, was Lieutenant Colonel Frederick R. Findtner’s reserve 1/1. And located to the rear of the 1st and 5th Regiments was the 7th Marines (Colonel Haffner), in reserve,[8] and the division rear support units, also south of the Imjin.
In support of the three infantry regiments were the artillerymen, guns, and howitzers of Colonel Mills’ 11th Marines. Two of its three light battalions, 1/11 and 3/11, provided 105mm direct fires to the 5th and 1st Marines, respectively. The general support battalion was 2/11, prepared to reinforce the fires of 1/11. The regimental medium battalion, 4/11, was in general support of the division, as was the 1st 4.5-inch Rocket Battery. To the southwest of the division sector, the 75mm guns of the 1st KMC Artillery Battalion, also attached to the 11th Marines, were in direct support of the 1st KMC/RCT. Newly formed the preceding month, the 1st Provisional Antiaircraft Artillery-Automatic Weapons Platoon had the mission of defending two of the Imjin River Bridges—Freedom and Spoonbill—in the division sector.

In addition to organic and attached units of the 11th, four I Corps artillery components, located within division territory, further reinforced 11th Marines capabilities. The 623d Field Artillery Battalion, with batteries in the 5th and 7th Marines sectors, like 4/11 consisted of 155mm howitzers. Three heavy artillery units were also available for counterbattery missions. These 8-inch howitzers belonged to Battery C of the 17th Field Artillery, Battery B of the 204th Field Artillery, and the 158th Field Artillery Battalion. These Army units were assigned to general support of I Corps, reinforcing Marine fires on call, and were under operational control of the 159th Field Artillery Battalion Group.

Active armored support for the division’s ground troops during March was provided by three of the four companies from the 1st Tank Battalion. Company A’s M–46s, flame tanks, and retrievers, well forward in the right sector, were in direct support of the 5th Marines; Company D tanks were assigned to the 1st Marines. Company B functioned as the forward reserve unit, ready to move into firing positions on the MLR if the tactical situation called for it. The rear reserve unit, Company C, conducted refresher training and performed equipment checks on the rest of the battalion tanks. The battalion commander, since May 1952, was Lieutenant Colonel John I. Williamson.

The 1st Marine Aircraft Wing, with a personnel strength of 6,400, was located throughout Korea. Wing headquarters, Marine Air Control Group 2, and Marine Air Group 33, with its F9F day jet fighters and the VMJ–1 photo reconnaissance squadron operated from K–3, Pohang. VMF(N)–513, with all weather jet fighters, flew out of K–8, Kunsan, on the west coast, 105 miles below Seoul. MAG–12 and its squadrons of attack ADs and Corsairs was relatively near the 1st Marine Division sector, at K–6, Pyongtaek, 30 miles southeast of Inchon. Marine Wing Service Squadron 1, with its heavy maintenance capability, remained at Itami, Japan.

Tactical control had been altered radically the previous month when the Fifth Air Force had relinquished its command of Marine pilots and planes and they returned to operational control of the 1st Marine Aircraft Wing for the first time since the early days of the war. Direction of the helicopters in HMR–161 and VMO–6 used in transport and reconnaissance missions had for some time been closer to home; both squadrons were under 1st Marine Division operational control. HMR–161 was based at A–17, in the vicinity of the 1st Marine Division command post. VMO–6, a composite unit consisting of single-engine OE–1 observation planes and a copter section of the HTL–4 and the new larger HO5S–1 craft, was located at A–9, three miles south of division headquarters. The squadron provided regularly scheduled helicopter evacuation of night frontline combat-casualties, artillery spotting flights, and airborne control of air strikes. Both squadrons performed routine liaison and reconnaissance, administrative, and resupply flights.
Carson (Hill 27), furthest west of the three Nevada Cities was, at 820 yards, also nearest the Marine main line of resistance. It overlooked enemy terrain to the northwest and dominated an important approach from that same direction—the Seoul road. Organized as a perimeter defense position, Carson security was oriented toward two major Chinese strongpoints. These were the twin-peaked Ungok Hill mass (31–31A), approximately 650 yards west of the Seoul road which lay between Ungok and Carson, and Hill 67 (Arrowhead), an equal distance due northwest. Other critical features in the immediate Carson vicinity included, on the right, the west finger of Reno; the ridgeline south from Reno to a point known as “Ambush Alley,” in the vicinity of enemy Hill 47; and the ridgeline approaches by the two listening posts—Fox finger and George finger. (See Map 24.)

Little cover or concealment existed, other than that offered by the trenchline and a cave used as living quarters. Four weapons positions—light machine guns and Browning automatic rifles—covered main enemy avenues of approach. These and two listening posts were each manned by two men after 1800 and throughout the night. Of Carson’s customary strength of 38 (1 officer and 37 enlisted), 28 stood watch and worked on fortifications at night. A six-man security team was on duty during the day. All posts connected by land line to battalion headquarters, where a 24-hour phone watch was maintained. Sound power phones and radios also provided communication with the company CP.

Nearly 350 yards of trenchline encircled the outpost. Most was in good condition, five or more feet deep and two feet wide. The main trench on the reverse slope was in spots shallow, only three to five feet, and a new trench was being dug. Fields of fire for small arms protection were considered good, although some of the 28 fighting holes were overly close to culvert and sandbag overheading, which prevented complete fire coverage of forward slopes. Adequate fire support could be given along the southern slope of the west finger extending from COP Reno, which was also mutually supporting with that of the Reno Block. Forward observer teams for the 60mm and 81mm mortars provided observation for supporting arms. The arsenal of weapons at Carson included 4 A–4 light machine guns, 2 flamethrowers, 2 3.5-inch rocket launchers, 9 Browning automatic rifles, 36 M–1 rifles, 2 carbines, 2 pistols, and 4 grenade launchers.

Some 450 yards northeast, COP Reno (Hill 25) was dug in on a ridgeline that fronted enemy Hill 25A (also known as Hill 150), immediately north. Approximately 1,600 yards away from the MLR, Reno was the central of the three outposts and also the one most distant from Marine lines. West to east, critical terrain consisted of five enemy positions—Hills 31, 67, 25A, 190, and 153—and friendly companion outpost Vegas, on the right flank. (See Map 25.)

Two main trenches led into the outpost, a reverse slope fortification. The forward trench, perpendicular to the ridgeline fronting the position, was approximately 20 yards long and 8 feet deep. The second, to the rear and about the same length, traversed the outpost in an east-west direction. Approaching from the entrance, or “Gate” of the MLR, the two trenches joined on the left, forming a 90 degree angle. A cave, located in the arc between the trenches, provided overcrowded living quarters where personnel slept either on the dirt floor or atop sandbags, since there were no bunkers at Reno. Ammunition supplies, as well as the corpsman’s first aid facilities, were cached in the cave.

A major blocking position, some 100 yards south, and to the rear of Reno itself was covered by troops
posted in the trenchline. Left of the forward trench, protective wire was placed across the topographical crest. This left finger had good observation to Ungok and Arrowhead but also served as an approach to Carson. Most likely enemy approach, however, was considered to be the ridgeline from Hill 150, on the north. The Seoul road, rear trenchline, and valley to the right were alternate approaches. Twenty-four hour security at Reno included an automatic rifleman at the Gate, at Post 1, on the forward trench, and Post 2, which was at the extreme right of the rear trench. Ten machine gunners were also detailed as night watch on the guns. During the daytime they were responsible for maintenance of ammunition and weapons which consisted of 18 M–1 rifles, 6 BARs, 5 A–4 LMGs, 2 flamethrowers, 1 carbine, and 7 pistols.

The biggest defense problem at Reno stemmed from restricted fields of fire. Able gun, for instance, covered the rear of the topographical crest and Hills 31 and 67, on the left. But dead space masked its effectiveness practically from the base of Hill 67 to the gun itself. The Baker gun, protecting the reverse slope, had a lateral firing range of from 10 to 30 feet. Charlie gun maintained an unlimited sector of fire, approximately 180 degrees, and Dog gun covered the rear. As there were no prepared machine gun positions, they were fired from the parapet protecting both the fighting holes and firing positions in the trenchline. Two fighting holes were manned by BARs and two were used as machine gun posts.

Customarily 40 to 43 men were on duty at COP Reno. In fact this number had been viewed dubiously as being “far too many to man defensive positions at any one time,” by the commanding officer of the 1/5 Weapons Company during a survey earlier in the month, noting that “about 20 could adequately defend the position.”[11] A six-man force was detailed as a permanent working party for the improvement of fortifications. Sound power phones linked all positions and field phones connected the forward observer with gun positions. Overall, for proper defense, Reno depended heavily upon support fires from Carson and Vegas, on its right flank. Morale was considered “very good to excellent” with Reno personnel being relieved every 8 to 10 days.

Vegas (Hill 21), the highest of the three outposts, was located approximately 1,310 yards in front of the MLR. Observation of the surrounding terrain from the east slope of enemy Hill 190 on the north, clockwise to the ridge south of Reno had been pronounced “excellent” on an inspection trip made earlier the day the outposts were attacked. From north to south this observation included in its 180-degree sweep, enemy hill mass 57 to the right, friendly outpost Berlin, the MLR, key Marine defense highpoints, Hills 229 and 181 in the 1st Marines rear sector, and intervening terrain. (See Map 26.)

The north-south ridge leading to COP Reno masked the view from Vegas on the west. To the north full observation was partially limited by outpost Reno itself and enemy Hills 150, 153, and 190. The latter was particularly strategic for two reasons. First, it shielded a major assembly area. And, although the Chinese had observation of the entire right battalion MLR from Hill 190 on the north, Vegas prevented enemy close-in view of Marine rear areas. It also dominated the approach to a major Marine observation point, Hill 126, to the rear of the front lines in the western part of the 3/5 sector.

Organized as a perimeter defense, Vegas was surrounded by 250 yards of trenchline. The forward, or north trench, averaged four feet in depth but deepened to about eight feet as it progressed to the rear. The most solidly constructed part was the western portion. A center communication trench was in good condition between the rear and topographical crest. From this point to the forward trench its depth decreased to about four feet. The trench leading back to the MLR, about five feet deep and two wide, was in good condition. A total of 13 fighting holes had been constructed.

Outpost troops, numbering approximately 40, consisted of six fire teams, heavy weapons and machine gunners, two 81mm mortar crews and two artillery observers, one corpsman, and a wireman at night. Strength was reduced during the day, with replacements to make up the normal complement arriving on position early each evening.
Major approaches to Vegas included the large draws to the west and north of the outpost, the ridgeline to the COP from Hill 153 to the northwest, and the rear trenchline. Several ancillary trenchlines to the east tended to reinforce this latter approach. A hindrance to the enemy, however, was the slope leading into the draw west of the outpost. For security purposes, the perimeter was divided into three sectors, each manned by two fire teams augmented by heavy weapons personnel. The outpost detachment stood nighttime posts on a 50 percent basis and remained within the several living bunkers or other shelters during daylight hours because of heavy shelling and sniper fire. Incessant enemy pressure at the exposed outpost made it expedient to rotate infantry Marines at Vegas every three days and observers, at the end of four or five days.

Weapons on position included two flamethrowers, one 3.5-inch bazooka, four machine guns, three pistols, and other small arms. Fields of fire at Vegas, rated fair to good, were generally restricted due to the proximity of overheading. Most of the light machine guns had plunging fields of fire except for the approach along the ridge-line from Hill 153, covered by grazing fire. A fighting hole to the left of Able Gate, which overlooked the trenchline leading to the MLR, was manned during the day. No other sentries or listening posts were in effect. Nine sound power phones were operative. Three were located in the CP bunker (connecting to C/1/5, G/3/5, and the CP net); one, each, at the four main posts, the rear Able Gate, and the cave.

Other than periodic work being done by 10 Korean Service Corps personnel in clearing out the trenches, no construction was in process at Vegas. KSCs, lugging their traditional A-frames and guided by Marines, also ran a nightly “supply train” to Vegas as they did to Carson and Reno. Sufficient personnel manned the outpost for adequate defense, although an inspecting officer opined that the “one 3.5 rocket launcher on position did not appear to be necessary for defense of this type position.”[12]
Operations in West Korea
Pat Meid and James M. Yingling

Chapter 7. Vegas
The Chinese Assault of 26 March[13]

Until the final days of March, the CCF units opposite the 5th Marines had shown little aggressiveness. Regimental reports had officially cited Chinese actions as having been” “extremely limited” other than their expected resistance to patrols and the Marine ITEM raid staged earlier in the month by the 1/5 two-platoon unit on Hill 31A, part of the Ungok complex. The enemy posture had, in fact, been described as one “reluctant to meet our patrols except in their positions.”[14]

A regimental patrol policy early in March established as SOP a minimum of four reconnaissance and two combat patrols in each MLR battalion sector daily. Nevertheless, 3/5 had reported no contact with the enemy for the three-day period prior to the attack which was launched at 1900 on 26 March. Since the middle of the month, 1/5 had conducted nearly a dozen night combat patrols and ambushes in one- and two-squad strength to test the enemy in the Carson-Reno-Vegas area. Terminology of the operation orders read that the Marines were to make contact, capture prisoners, and deny the ground to the enemy, an injunction that—in view of events shortly to transpire—was to turn out more prophetic than anticipated.

That last Thursday in March 1953 was clear, almost unseasonably warm. Just after darkness had settled down over the Korean ridges, gullies, MLR, outposts, and rice paddies, the enemy suddenly made his presence known. Up until that time it had been an average day of activity, and there had been no especially ominous overtones to the start of the night.

Suddenly, at 1900, small arms and machine gun fire cracked from enemy strongholds on Hills 44, 40, 35, and 33, and tore into the left and center part of the 1/5 sector. Almost immediately, a heavy mortar and artillery preparation of 15 minutes duration exploded all along the 5th Marines MLR. A Chinese rifle platoon and half a dozen machine guns on Hill 140, about 500 yards west of Kumgok, directed additional fire on the sector. At the same time 5th Marines outposts Carson and Reno, each manned by a reinforced rifle platoon from C/1/5, came under attack from Chinese mortars and 76mm artillery. Approximately 1,200 mortar rounds struck COP Carson by 1920. As men of D/2/5, some of whom had been detailed to Carson earlier that night for an ambush, reported, “one round per second from Chinese 60mm and 82mm landed in or around [our] position during the first 20 minutes of the engagement. Thereafter, one round was received every 40 seconds until about 2200.”[15] Interdiction fires also raked Marine rear areas and supply routes. Counterbattery fire struck Marine direct support artillery positions in the 5th’s regimental sector while heavy shelling of the MLR and its battalion CPs shattered wire communication between those installations and their advance outposts.

Within ten minutes, Vegas, furthest east of the four OPs in 1/5 territory, became the object of serious enemy attention. Outposts Berlin and East Berlin, meanwhile, still further east in the 3/5 sector proper were also engaged by fire from hostile small arms and mortars from Chinese occupying Hills 15 (Detroit), 13 (Frisco), and 98 to the northeast. As the coordinated fire attack raged throughout the 5th Marines regimental front, preparatory fire and diversionary probes hit the 1st Marines sector. Outposts Hedy, Bunker, Esther, and Dagmar, in the center regimental area, were struck by small arms, mortars, and artillery shells a few minutes before 1900. Platoon and squad strength limited attacks were conducted against Dagmar, Hedy, and Esther, and enemy units were sighted moving in front of the KMC, further west along the MLR.

At precisely 1910, a force of 3,500 Chinese from the 358th Regiment, 120th Division, 46th CCF Army began to swarm down from Ungok, Arrowhead, Hill 25A, and Hill 190 and launched a massive assault in regimental strength against the 5th Marines sector. (Map 27.) Elements of six companies from three battalions
converged on the area from three directions. Two enemy platoons of the 1st Company, 1st Battalion from Ungok struck Carson while one infantry company each, initially, began a direct assault on Reno and Vegas. Units from the 3d Company, 1st Battalion, from Arrowhead and Hill 29, crossed the Seoul road to hit Reno in a direct frontal assault. Elements of the 7th Company, 3d Battalion moved down from Hill 190, a mile north, to encircle the left flank of Reno and thus strike from the rear of the Marine position. Other Chinese soldiers of the 8th Company, 3d Battalion, supported by the 9th Company, moved some 500 yards south of their ridgeline positions on Hill 25A and 155 immediately north of Vegas to attack the outpost head-on.

Another enemy unit, the 2d Company, 1st Battalion, swept south from Hill 57A and made diversionary probes of the two most remote outposts of the entire 1st Marine Division line, Berlin and East Berlin in the 3d Battalion sector. These two smaller positions, each manned by a reinforced squad-size detachment from G/3/5, were to be successful in driving off the enemy’s less determined efforts there with a rain of small arms, mortar, and artillery fires.

As the enemy regiment advanced toward its objectives in a coordinated three-pronged attack, Marine artillery fired protective boxes and VT on the outposts and routes of approach from the west, north, and east. Defending infantry also called down organic 60mm and 81mm mortar barrages. Actually, prior to the Chinese onslaught at 1900, 1/11, the direct support battalion (Lieutenant Colonel Olin W. Jones, Jr.) for the 5th Marines, began a registration and had laid its howitzer fires on the active area. The artillery regiment had also set up conference calls linking its four organic battalions and supporting Army units. The fire plan for the 11th Marines provided for its three light battalions (1/11, 2/11, and 3/11) to cover enemy approaches and assembly areas, deliver protective boxing and VT fires requested by the outposts, and furnish countermortar missions called in by forward observers. Medium battalions (4/11 and the 623d Field Artillery) were to reinforce defensive fires and destroy hostile mortars and artillery emplacements. Heavy 8-inch howitzer support (Battery C, 17th FA Battalion and Battery A, of the 204th) would silence enemy counterbattery weapons.

As it happened on the night of the 26th, Marine tanks, in addition to artillery, were also registered before the time of the actual attack. Eleven of Captain Hunter’s Company A tanks had earlier rumbled into firing position on the MLR to provide mechanized support for an infantry raid scheduled at dawn the next morning.

Despite this immediate response of Marine fire support, the Chinese invaders outnumbered the platoons holding the outposts by a 20 to 1 ratio. The sheer weight of numbers was the decisive factor. By 1935 the enemy had penetrated the lower trenches of both Carson and Reno. An hour after the onset of the attack, at 2000, the Marines were throwing back Chinese forces with bayonets, knives, rifles, and bare fists in the close, heavy fighting at Carson. There, where 54 men had been on duty at the time of initial attack, the outpost was successfully holding off the Communists. Four reinforcing squads quickly dispatched by battalion were designed to further strengthen the position. At 2000, just when D/1/5 and C/1/5 relief squads were leaving for the outpost, the Chinese unexpectedly began to release their grip on Carson as they concentrated on the two more isolated COPs, Reno and Vegas, that were further from the MLR.

No other attempt was made by the enemy to occupy Carson that night or the next day. Barrage fires gradually ceased as the enemy began to withdraw about 2135. Sporadic bursts of his 60mm and 82mm mortars and 76mm guns, however, continued to rock the position until midnight.

Developments at Reno and Vegas, by 2000, were vastly more ominous. At Reno, two companies of CCF soldiers thrust into the position from a frontal and flank attack. Within a half hour they made their way into the trench defenses. Although VT fires placed on the outposts and WP flare shells outlined the enemy for the gunners, Chinese in overpowering numbers continued to batter the Marine post. Due to the lack of fighting trenches, bunkers, and to limited fields of fire, Reno defenders fell back on a cave defense within a half hour of the assault.
A message received at 2030, requesting more VT rounds and reinforcements, indicated that the enemy had sealed all entrances to the cave and that the men were suffering from lack of air. Of the 40 Company C Marines on the outpost at the time of attack an hour and a half earlier only 7 were then reported still able to fight. More illumination to enable friendly machine guns and rockets to chop up the enemy was furnished by artillery and a flare plane that arrived on station at 2205. Two Marine tanks, in position behind Reno, were alerted and put their 90mm fires to good use on the enemy and his weapons emplacements.

Meanwhile, at Vegas, the situation was also deteriorating. More than a hundred Chinese had moved up under the perimeter of exploding shells and Marine defensive fires into the lower trenches by 1950, less than an hour after the enemy’s first volley. Ten minutes later, the Marines were forced to give way to the overwhelming number of enemy soldiers which began to swarm over the outpost.

In addition to the sudden force and onslaught of the enemy, communication difficulties also plagued Marine detachments on the outposts, particularly at Vegas. Enemy mortar and artillery, aimed at the mainline CPs, had wrecked the ground lines. As early as 1940, communications between the 1st Battalion CP and Vegas went dead and continued to be broken despite repeated attempts to reestablish contact. Carson and Reno also had wire troubles about this time, but radio contact was shortly established. For the most part, operational reports and orders during the night and early morning hours were sent over company and battalion tactical nets. The intensity of the Chinese fire was not restricted just to forward positions; the 1/5 CP, a mile south of the MLR, at one point received up to 100 rounds per minute.
While the Marines on the outposts were trying to drive off the enemy, reinforcements back at the MLR and in the reserve ranks quickly saddled up. A F/2/5 advance platoon dispatched to Reno at 2015 by way of the Reno Block was ambushed near Hill 47 an hour later by two enemy squads which had moved south to cut off Marine reinforcements. After a fire exchange, the platoon made its way to the blocking position. Another relief unit, from Company C, 1st Battalion, that jumped off for Reno 15 minutes later had poorer luck. The men had scarcely gone a half mile before being shelled. After briefly taking cover the Marines moved out again, only to draw fire from the enemy at Hill 47. Advancing for a third time, the Company C two-squad unit was again halted by fire from two hostile platoons. By this time 10 Marines had been wounded and evacuated.

A D/2/5 reinforcement platoon ordered to Vegas, at 2129, encountered strong opposition in the Block vicinity, but it threw back the enemy in hand-to-hand fighting and prevented him from gaining fire supremacy at the position. Leading units of F/2/5, meanwhile, had been ordered to operational control of 1/5 to augment the earlier Company C platoon at the Block and then move north with them to Reno. After being issued ammunition and hand grenades at the Company C supply point, the “F” 1st Platoon left the MLR at 2227, with the 2d Platoon filing out in column 400 yards behind them. Under a constant rain of 76mm artillery and 82mm and 122mm mortar shells—and with casualties for one platoon reaching as high as 70 percent within minutes—the F/2/5 men fought their way into the trenches at the Block. Here they joined the depleted ranks of Company C which had established a base of fire. Despite the incessant barrage of Chinese incoming that continued to inflict heavy casualties, the Marines maintained their precarious grip on the Block and cleared out large numbers of Chinese attempting to infiltrate the trenches and approaches from the north and south to the Marine position.

While the Reno and Vegas relief units were pinned down at the Block, the situation at the outposts remained critical. Throughout the night new waves of Communist soldiers poured out from their positions behind Chogum-ni, Hills 31 and 31D. When a company of enemy troops were observed at 2100 massing near Chogum-ni for a new assault, it was quickly disposed of by Marine artillery and Company A tankers. At Reno where the immediate situation was the most grim, a message at 2145 reported the enemy still in the trenches, trying to dig down into the cave while the Marines were attempting to work their way out by hand. The final report from Reno received late that night, about 2300, was weak and could not be understood.

At Vegas, meanwhile, communications failure continued to complicate defensive measures at the outpost. Because of this, on the order of regimental commander, Colonel Walt, operational control had been transferred, at 2119, from 1/5 to 3/5. Three minutes before midnight all contact with Vegas was lost. As with Reno, reinforcements sent out with the mission of buttressing the Vegas detachment had been delayed. When it became evident that the Company D platoon had been pinned down at the Block, a platoon from E/2/5 jumped off at 2323 for the Vegas position.

Shored up to reinforced company strength, the composite unit at the Block had prepared to move on for the ultimate relief of C/1/5 forces at Reno. Chinese firepower and troops continued to lash the position, however. There seemed to be no limit to the number of reserve troops the enemy could throw into the attack. At 2157, two Chinese platoons had hit the Block. Twenty minutes later, another two platoons struck. By 2300, the Marines had repulsed three attacks, numbering more than 200 troops, amid a continuing withering avalanche of bullets and shells. Shortly before midnight, a full enemy company had deployed south from Reno to the Block, but had been largely cut down by friendly 90mm tank fire and VT rounds from 1/11. Reinforced and reorganized, the Marines
again prepared for a counterpunch on Reno.

By midnight on the 26th, after five blistering hours of battle—to develop into five days of intense conflict and continuing counter-attacks—the early efforts of the enemy were partly successful. Two of the Nevada Hill outposts had fallen, and Marine attempts to strengthen them were initially being thwarted by Chinese troops that had overflowed the Block and southward toward the MLR. COP Carson was holding. But the enemy was in control of Reno and Vegas and was using the Reno position to mass troops and firepower to further brace his continuing assault on Vegas.

Initially, the 5th Marines had expected to launch an immediate counterattack to regain Reno. In the early hours of the 27th, however, it became apparent this plan would have to be revised. Reinforcing elements from the 5th Marines, composed largely of F/2/5, had been unable to mount out effectively from the Block for Reno. At 0144, the commanding officer of Company F, Captain Ralph L. Walz, reported he had one platoon left. Between then and 0220 his diminishing unit had rallied for attack three times. It had successively engaged the enemy in fire fights, one of 30 minutes’ duration, evacuated its wounded, regrouped, and then had come under heavy incoming again. Countermortar fire had been requested and delivered on active enemy positions at Arrowhead, Hills 29, 45, and 21B, some 500 yards northwest of Vegas.

But as the Marines girded their defending platoon at the Block to company-plus size, the Chinese had done likewise, throwing in continuous rounds of new mortar attacks and additional troops. When, at 0246, another hostile company was seen spreading south from Reno toward the Block, the 1st Battalion directed artillery fires on the enemy and ordered its troops to disengage and return to the MLR. By 0300, early efforts to retake Reno were suspended. Relief forces from Companies F and C were on their way back to the battalion area. Ground action had ceased.

During these early attempts to rescue Reno and its defenders on the night of 26–27 March, Marine elements had struggled for more than four hours trying to get to Reno, but the enemy had completely surrounded it. At Reno itself, the Marine in command of the outpost when the Chinese struck, Second Lieutenant Rufus A. Seymour, machine gun platoon commander of C/1/5, had been taken prisoner along with several of his men. Of the Marines originally on duty there, all but five had been killed. Casualties of the Reno reinforcing units were later estimated by the regimental commander as being “as high as 35 percent, with many dead.”[18]

A 21-year-old Navy hospital corpsman from Alexandria, Virginia,[19] attached to a Company C relief platoon from 1/5, helped save many Marine lives that night in the Reno Block area. He was Hospitalman Francis C. Hammond, who lost his own life but was awarded posthumously the nation’s highest honor for bravery under fire. For more than four exhausting hours the young hospitalman helped others to safety, even though he had been struck early in the fighting and was hobbling around with a leg injury. When his unit was ordered to withdraw from its attack against a strongly fortified CCF position, Hammond skillfully directed the evacuation of wounded Marines and remained behind to assist other corpsmen. Shell fragments from a mortar blast struck him, this time, fatally.

The Vegas reinforcing units, in those dark early hours of the 27th, had come closer to their objective. Shortly after midnight two platoons, composed of elements from D/2/5 and C/1/5, had reached a point 400 yards from the outpost, in the vicinity of the entrance to the communication trench. When the enemy threw in powerful new assault forces at Vegas, F/2/7, a company from the regimental reserve, came under operational control of 3/5 and moved out from the MLR to reinforce the position. By 0300 the first relief platoon, despite heavy and continuing Chinese barrages, got to within 200 yards of the outpost. At this time, however, it was found that the enemy was in control of Vegas as well as Reno. Marines from D/2/5, C/1/5, E/2/5, and F/2/7 relief forces, on order, began to pull back to the MLR at 0417. Initial attempts to regain control of the two outposts were temporarily halted, and instead it was decided to launch a coordinated daylight attack.

At about the same time, 0430, the boundary between 1/5 and 3/5 was moved 250 yards westward to give
3/5 total responsibility for Vegas, although operational control had been transferred seven hours earlier the previous night.

Enemy casualties for the eight hours of action were heavy. An estimated 600 Chinese had been wounded and killed. Marine losses were also heavy. In the action First Lieutenant Kenneth E. Taft, Jr., Officer-in-Charge at Vegas, was killed and, as it was later learned, some of his H/3/5 defenders had been captured by the Chinese. By midnight the two line battalions, 3/5 and 1/5, had reported a total of nearly 150 casualties[20] and this figure did not include those wounded or killed from the relief platoons and companies being shuttled into action from the 2/5 reserve battalion. One platoon from E/2/5 had arrived at the Company C supply point about 0210 and, together with a provisional unit from Headquarters and Service Company, 1/5, began to evacuate casualties in front of the MLR. By 0325, a total of 56 wounded had passed through the C/1/5 aid station and a cryptic entry in the G-3 journal noted that “more who are able are going back to assist in evacuation of casualties.”

Similar recovery efforts were being made at the same time in the 3d Battalion. Two alternate routes for evacuation were in effect. From a checkpoint located just south of the MLR in the H/3/5 sector, casualties were taken to the Company H supply point and thence to the battalion aid station, or else to the KSC camp from which they were evacuated to the 1st Battalion aid station. VMO–6 and HMR–161 helicopters flew out the critically-injured to USS Haven and Consolation hospital ships at Inchon Harbor and transported blood from supply points to Medical Companies A, E, and C forward stations. Excepting the original personnel killed or missing at Reno and Vegas, 1st Battalion forces from Companies C and F dispatched to Reno had returned to the MLR by 0445. Vegas units, ordered to disengage later than the Reno reinforcements, were back by 0530.

Diversionary probes by the Chinese during the night of the 26th at the 3/5 right flank outposts Berlin and East Berlin, as well as in the 1st Marines sector, had been beaten back by the Marines. Following the preassault fire at 1900, a CCF company had sent two platoons against Berlin and one against satellite East Berlin, both manned by Company G. These reinforced squad outposts, both only about 325 yards forward of the MLR, had stymied the enemy’s attempts. Boxing fires and VT on approach routes had forced the Chinese to retreat at 2115. Ten minutes later Company G reported that communication, which had temporarily gone out, had been restored. One squad dispatched by the 3d Battalion to Berlin and a second, to East Berlin an hour later, further buttressed the companion positions.

Action in the 1st Marines center regimental sector had also been relatively brief. Immediately after the 1900 mortar and artillery preparation, the Chinese in company strength attempted to penetrate outposts Hedy, Bunker, Esther, and Dagmar. Shelling had been heaviest at Dagmar and, shortly after 1900, two squads of Chinese began to assault the outpost with automatic weapons and satchel charges. Machine guns positioned on enemy Hills 44, 114, and 116 and small arms fire from Hill 108 supported the attack. The enemy was hurled back at all places except Dagmar where approximately 25 Chinese breached the wire entanglement.

Two hours of intense, close fighting in the trenches followed as the 27 defending Marines, directed by outpost commander Second Lieutenant Benjamin H. Murray of I/3/1, strongly resisted the invaders. More than 300 rounds of mortar and artillery fire supported the action. A counterattack from the MLR led by the I/3/1 executive officer, Second Lieutenant John J. Peeler, restored the position, and at 2120 the CCF finally withdrew. Less determined efforts had been made by the enemy at Esther and Bunker. By 2200 the Chinese had departed from the scene there, too. Altogether, the 1st Marines sector skirmishes had cost the CCF 10 killed, 20 estimated killed, and 17 estimated wounded to Marine casualties of 4 killed and 16 wounded.
While the 5th Marines reorganized during the morning hours of the 27th for a new attack to recapture the lost outposts, General Pollock ordered mortars, tanks, and artillery, including rockets, to neutralize the Reno and Vegas areas and enemy approaches.

From the time of the 1900 attack the preceding evening until the temporary break in fighting eight hours later, at 0300, early estimates indicated 5,000 rounds of enemy mixed fire had been received in the “Wild” sector (code name for the 5th Marines, and appropriate it was for this late-March period). And this did not include the vast number of shells that had fallen on the three Nevada COPs. During the same period 1/11, in direct support of the 5th, reported it had delivered some 4,209 rounds on the enemy. Throughout the early hours, two battalions from the 11th Marines continued to pound away at Reno and Vegas with neutralizing fires to soften enemy positions, deter his resupply efforts, and silence those mortars and batteries that were troubling the Marines.

By 0330 observation planes from VMO–6 had made 28 flights behind enemy lines which enabled artillery spotters to direct nearly 60 fire missions on CCF active artillery, mortars, and self-propelled guns. From nightfall on the 26th through 0600 the following morning a total of 10,222 rounds of all calibers had been fired by Marine cannoneers supporting the 1st Division in its ground battles from Berlin to Hedy.

Revised intelligence reports from the 5th Marines S–2, Major Murray O. Roe, meanwhile, indicated that between 1900 on the 26th and 0400 the next day the Chinese had sent 14,000 rounds of mixed mortar and artillery crashing into Marine positions. It was also determined that a reinforced regiment had initially hit the Carson, Reno, and Vegas posts.

Early on the 27th, at 0345 as the 5th Marines prepared for the counterattack, the division reserve, 2/7 (Lieutenant Colonel Alexander D. Cereghino), was placed under operational control of the 5th Marines. (Previously put on alert the battalion had moved into an assembly area behind 1/5 shortly after midnight, and its F/2/7 had taken part in the predawn relief attempt.) During the early morning hours a section of Skyknights, from Lieutenant Colonel Conley’s night fighter squadron, VMF (N)–513, had made radar controlled bombing runs to strike CCF artillery positions in the Hill 190 area and enemy troops at Hill 98. Precisely at 0650, friendly Panthers from VMF–115 began arriving on station to help the neutralizing artillery fire on Reno and Vegas. Originally, a dawn ground attack had been envisioned for Reno, but that was delayed to wait for air support.

A tentative H–Hour was set for 0900 with a dual jump-off for both Reno and Vegas. At 0930 the attacks still had not begun due to communication difficulties. While division Marines were waiting to get off the ground, 1st MAW pilots were enjoying a busy morning. By 0930, six four-plane air strikes had been completed by VMF–115 (Lieutenant Colonel Stoddard G. Cortelyou) and –311 (Lieutenant Colonel Francis K. Coss) plus sorties by Air Force Thunderjets. Tankers from Company A had also gotten in a few licks when two groups of Chinese were seen carrying logs for bunker support into Reno; one group was wiped out, the other got by.

Shortly after 1100, friendly artillery batteries began delivering smoke on Hills 57A and 190, two enemy high points of observation. The fire plan was modified to eliminate an early 10-minute preparation on objective areas. (Basically, the artillery plan for counterattack was that employed in the 19 March Operation ITEM raid on Ungok, because of the proximity of Ungok to the Vegas hills. This plan consisted of massed fires on the objective, with countermortar and counterbattery fires on known artillery positions. To this prearranged plan were added those new mortar and counterbattery targets located by air observers during the night of 26–27 March.) This time, the preparatory fires were to be on call, as was the 90mm fire support from the tankers. A further
change was made when it was decided to limit the assault to Vegas and not retake Reno but rather neutralize it by fire.

While artillery, air, mortars, and tanks pounded the objective, assault elements of D/2/5 from the regimental reserve, under Captain John B. Melvin, prepared for jump-off. At 1120 the company crossed the line of departure in the 3/5 sector of the MLR and immediately came under heavy fires from enemy infantry and artillery units. Within a half hour after leaving the battalion front for Vegas, Dog Company had been pinned down by Chinese 76mm artillery, had picked itself up, and been stopped again by a plastering of 60mm and 82mm shells falling everywhere in its advance. By 1210 only nine men were left in Captain Melvin’s 1st Platoon to carry on the fight. The Marine unit continued to claw its way through the rain-swollen rice paddies and up the muddy slopes leading from the MLR to within 200 yards of the outpost. In 10 minutes, heavy incoming began to take its inevitable toll and enemy reinforcements were flowing towards Vegas from the CCF assembly point on Hill 153.

Between noon and 1300, four enemy groups of varying size had pushed south from Hill 153 to Vegas. At this time still another group, of company size, moved in with its automatic weapons and mortars. Within the next 15 minutes, a reinforced CCF platoon made its way from the Reno trench to Vegas while still another large unit attempted to reinforce from Hill 21B. As enemy incoming swept the slopes and approaches to Vegas, Marine artillery and tank guns fired counterbattery missions to silence the Chinese weapons. In the skies, VMA–121 ADs and the sleek jet fighters from MAG–33 squadrons VMF–115 and –311 continued to pinpoint their target coordinates for destruction of enemy mortars, trenches, personnel bunkers, and troops.

Back at the battalion CP two more companies were being readied to continue the Vegas assault. The Provisional Company of 2/5, commanded by Captain Floyd G. Hudson, moved out at 1215. Close on its heels, E/2/5 left the Company H checkpoint in the 3/5 sector for the zone of action. At 1305 the counterattack for Vegas was raging in earnest, with Company D riflemen on the lower slopes, chewing into the enemy with their grenades, BARs, M–1s, and carbines. Two hours after the original jump off time, four Marines crawled out of the trenches at Vegas and by 1322 were going over the top, despite incoming that “literally rained on the troops.” Assault commander Melvin recalled:

“[22]

Meanwhile, Company E, 5th Marines, under Captain Herbert M. Lorence, had moved up from the rear and, at 1440, was ordered to pass through Company D ranks, evacuate casualties, continue the attack, and secure the crest of Vegas. Although Captain Lorence’s men succeeded in moving into Company D positions, the deluge of Chinese mortar and artillery was so heavy that Company E was unable to advance beyond this point. At 1530, a new Marine company, F/2/7 (Captain Ralph F. Estey), was dispatched from the MLR to buttress the assault. By this time elements of D/2/5 had reached the right finger of Vegas but were again pinned down by intensive enemy artillery and mortars.

Within the first hour after leaving the battalion line, the Company F Marines nearly reached the advanced positions of 2/5, and Company D, which had been in the vanguard since 1100, returned to the regimental CP. During the next hour, however, heavy shelling slowed the Marine advance. At 1730, as Company F prepared to make its first major assault, a deluge of 60mm and 82mm mortar shells, 76mm and 122mm bursts, and machine gun bullets rained on the troops. As the men crawled forward slowly, planes from VMA–323 which had arrived on scene two hours earlier, continued to smoke the enemy’s posts on Hills 190 and 139. Captain Hunter’s tanks also moved into their MLR positions to zero in their 90mm rifles on the CCF stronghold at the Vegas northern crest.

By 1800, Company F was continuing the Marine counterattack to regain Vegas and was approximately
400 yards from the outpost summit. Combining with Company E Marines, for a total strength of three platoons in position, Captain Estey was able to retake part of the objective. After an intense 90-minute fire fight and hand-to-hand fighting in the lower trenches, E/2/7 advanced to the right of the outpost where at 1930 it began to consolidate. In the next half hour, two platoons of Company F moved out from the right finger of Vegas to within 50 yards of the peak, before being forced back by Chinese machine gun fire and mortars lobbed from the Able (left) gate on Vegas. The enemy company occupying the outpost resisted the attacking Marines with mortars, grenades, and small arms fire. In addition, the CCF employed firing positions at Reno for their machine guns, heavy mortars, and artillery supporting the Vegas defense and periodically reinforced their troops from the newly captured Reno outpost.

It was a busy night for Marines and corpsmen alike. One, whose split-second improvisations in the blazing zone of action were in the best Hippocratic tradition, was Hospital Corpsman Third Class William R. Charette. Attached to F/2/7, he was assisting a Marine when an enemy grenade landed but a few feet away. Charette immediately threw himself on the injured man, taking the full shock of the missile with his own body. Since the force of the blast had ripped away his helmet and medical aid kit, he tore off his clothing to make bandages. Another time, while attending a seriously wounded Marine whose armored vest had been blown off, the hospitalman removed his own to place around the injured man. Without armored vest or helmet, Charette continued to accompany his platoon in the assault. As a Marine observer, Staff Sergeant Robert S. Steigerwald, commented, “HM3 Charette was everywhere seemingly at the same time, performing inexhaustibly.”

Throughout the night the enemy counterattacked but was unsuccessful in driving the Marines off the outpost. Between 1830 and midnight, F/2/7 repulsed three enemy onslaughts and engaged in sporadic fire fights. Although pushed back from the summit, Company F Marines set up a perimeter defense at the base of Vegas where the troops dug in for the rest of the night. Their opposite numbers, from 1st MAW, were also on the scene. As follow-up to the day’s unremitting air bombardment of enemy installations, night fighters of VMF(N)–513 and MAG–12 Corsairs from VMAs–212 and–323 made nine MPQ strikes between 1830 and 0115 unleashing 24 1/2 tons of explosives on CCF hill defenses and supply strong points.

Gradually, heavy incoming on Vegas began to lift, and from midnight through the early hours of the following morning most of the enemy’s artillery and mortar fires switched from Vegas to the Marine companies on the MLR. Intermittent small arms fire still cracked and punctuated the night from enemy positions on Hills 57A, Detroit, and Frisco, to the northeast of Vegas.
Although the composite two-platoon unit of Marines from F/2/7 and E/2/5 had partially won Vegas back in 10 hours of savage fighting on 27 March, after earlier groundwork by D/2/5, it was a precarious hold. Marines had attained the lower slopes but the Chinese still clung to the northern crest. As it turned out, three separate company-sized assaults were going to be needed to dislodge the enemy.

The initial Marine action on the 28th began at 0335 when 105mm and 155mm howitzers of the 1st, 2d, and 4th Battalions, 11th Marines, belched forth their streams of fire at the pocket of enemy troops on the northern slopes preparatory to the forthcoming Marine infantry assault. This 2,326-round pounding was aimed at Chinese assembly areas and weapon emplacements, with much of the preparation zeroed in on active mortars.

Within a half hour the weary men of F/2/7, who had spent a wakeful night in the lower Vegas trenches, moved to within hand grenade range of the objective in their first attempt to gain the summit. An intense shower of small arms and mortar fire, however, forced them to pull back to the south slopes. While Captain Estey’s troops reorganized for the next assault, air strikes joined the big guns, mortars, and tanks in battering the enemy’s position on the outpost and supply routes thereto. Shortly after sunup, a lone AU from VMA–213, followed a half hour later by a VMA–323 Corsair, arrived on station. They laid a smoke screen three miles across the front between Arrowhead and the far eastern Marine–U.S. Army boundary to assist four early-morning air strikes. Soon afterwards, eight ADs from Lieutenant Colonel John E. Hughes’ VMA–121 were in the skies to support the Vegas attack in the opening round of aerial activity that would see day-long bombing and strafing runs by five 1st MAW squadrons.

A new Marine assault at 0600 was repulsed and Company F pulled back to a defilade position 375 yards south of Vegas and regrouped. Again friendly planes from VMA–121 and–323, tanks, artillery, and mortars plastered the enemy in a new series of preparatory fires, beginning at 0920; and again Captain Estey’s F/2/7 men jumped off in attack. By 1015 the Marines had made their way across the height to within 15 yards of the trench line on the left finger of Vegas. There they came under continuous small arms and grenade bursts from the crest and battled the Chinese in an intense 22-minute fire fight.

It was during this onslaught by Company F for the crest of Vegas that Sergeant Daniel P. Matthews so defiantly routed the enemy to save the life of a wounded comrade that his action gave renewed spirit to those witnessing it. A squad leader of F/2/7, Matthews was in the thick of a counterpunch against solidly dug-in hill defenses that had repelled six previous assaults by Marine forces. The 21-year-old California Marine was coolly leading his men in the attack when the squad suddenly was pinned down by a hostile machine gun located on the Vegas crest. When he saw that its grazing fire prevented a corpsman from removing to safety a wounded Marine who had fallen in full range of the weapon, Matthews acted instinctively.

Quickly working his way around to the base of the enemy machine gun position, he leaped onto the rock fortification that surrounded it. Taking the enemy by surprise, he charged the emplacement with his own rifle. Severely wounded within moments, the Marine continued his assault, killed two of the enemy, dispatched a third, and silenced the weapon. By this action, Sergeant Matthews enabled his comrades on the ground to evacuate the injured Marine, although Matthews died before aid could reach him.[25]

Back at battalion, E/2/5, with D/2/7 in column behind it, had moved out to relieve Captain Estey’s redoubtable F/2/7 forces. By noon, Captain Lorence’s Company E had completed passage of lines through Company F. The latter unit, now numbering 43 effectives after its six assaults on 27–28 March to regain the
Vegas high ground, returned to base camp.

Heavy air attacks, meanwhile, were assisting the artillery in blasting out Communist defenses of the Vegas area. Between 0950 and 1300, seven four-plane strikes by pilots of Colonel Bowman’s MAG–12 had swept the outpost area and hill lairs of the enemy at 57A, the east slope of Reno, Tumae-ri (40D), 190, and resupply points. Within one 23-minute period alone, 28 tons of bombs were laid squarely on the Vegas position. Supported by air, mortars, and artillery, Company E was 400 yards from the objective, and, by 1245, forward elements had moved up to within 150 yards of the crest. As Marine supporting fires lifted from Vegas to enemy assembly areas on Hills 150, 153, and 190, E/2/5 launched its final assault at 1301. Although small arms, bursts of mortar and enemy artillery fire traced their every move, the Marines’ hard-hitting attack brought them to the top of Vegas where they literally dug the Chinese out of their defenses.

At 1307, the Marines had secured their position and recaptured the Vegas outpost. At approximately the same time the Marine reinforcing unit, D/2/7, was ordered to return to MLR, since the objective had been gained. The Marine in charge of the E/2/5 platoon that retook Vegas was Staff Sergeant John J. Williams, who had taken over the 1st Platoon after its leader, Second Lieutenant Edgar R. Franz, had been wounded and evacuated. Almost immediately after securing Vegas at 1320, the Chinese launched a counterattack and Company E came under a renewed barrage of incessant artillery and mortar shells, exploding at the rate of one round per second in the Marines’ newly gained trenches.

Marine firepower from the tankers’ 90mm rifles and the protective fire curtain placed around the outpost by the artillery batteries, however, deterred this heavy enemy effort. For the next hour Captain Lorence’s men continued with mopping up chores. Gradually and fitfully the Chinese resistance began to slacken. By 1401 definite control of Vegas was established, except for the topographical crest at the northernmost point. Resupply and consolidation of the outpost began at once, with Vegas under 3/5 administration and Major Benjamin G. Lee, operations officer of 2/5, in command.

Two prisoners had been taken during the day’s action, one by E/2/5 during its afternoon assault and the other by F/2/7 early in the day. The soldier seized by a fire team from Company E was a 21-year-old wounded litter bearer attached to the attacking force, 3rd Battalion, 358th Regiment. He told 5th Marines interrogators that for the preceding three months the mission of the 358th Regiment (a component of the 40th CCF Army, under operational control of the 46th CCF Army) had been to prepare to occupy the Vegas and Reno outposts before the expected UN spring offensive could be launched. The two key installations overlooked CCF supply routes. Furthermore, occupation of these two hills, the Chinese believed, would serve as a valuable tactical example to the 46th Army, whose ranks at this time were composed of nearly 65 percent recruits. The POW also reported that prior to the CCF attack on Reno and Vegas, men of his regiment had practiced throwing hand grenades every day for the past two weeks. No political classes had been held during this period as practical proficiency, apparently, took priority over theoretical indoctrination.

The other Chinese prisoner, captured by Company F at 0610, was a grenadier with the 9th Company, 3d Battalion, 358th Regiment. Prior to the attack, his unit had occupied reverse slope positions on Hills 25A and 155 as reinforcements for the 8th Company. Each CCF battalion, he revealed, “held a front of approximately 1,000 meters, utilizing one company on line with two in support.”[26] This remark interested interrogators since it contradicted the normal pattern of enemy employment. According to the grenadier, the mission of the 3d Battalion had been to attack Vegas, while the 1st Battalion (to the west of the 3d on the Chinese MLR) was to secure Reno, Hill 190.5, an enemy strongpoint, had several antiaircraft machine guns on its reverse slope, he declared, and was the location as well of the forward CP of the 3d Battalion, 358th Regiment.

For the next five hours, from 1440 to 1930, the Marines dug in on the crest and slopes of Vegas, buttressing their positions for the new Chinese attack sure to come. A muster of the rag-tag group left from the day’s 10 hours of fighting revealed a total strength of only five squads—58 effectives from E/2/5 and 8 from
F/2/7. Uppermost in the minds of all the men, regardless of their diminished numbers, was the ironclad conviction that “we intend to stay.” [27]

Their leader, Major Lee, was no less determined. At 42, he was a Marine veteran of 19 years, a former sergeant major from World War II and holder of the Silver Star and Purple Heart for service at Guadalcanal. Now he had volunteered for this hazardous duty of holding together segments of the Vegas enclave until the Marines could once again possess the entire hilltop outpost. Under his direction the troops promptly began to prepare individual fighting holes in the best possible tactical positions and to emplace their weapons. Personnel from Captain Lorence’s E/2/5 held the hard-won Vegas crest, while 150 men from F/2/5 committed later in the afternoon strengthened the rear trenches.

Air bombardment, prior to the 28th, had not been employed extensively against Vegas itself. The goal had been to recapture the outpost and drive the Communists out without unnecessarily destroying its defenses. Chinese tenacity in exploiting the Marine weapons positions at COP 21, while augmenting them, had made it apparent that the Vegas defense network would have to be reduced to retake the position. Altogether, during the day 33 missions (more than 100 CAS sorties) were flown by AU’s, ADs, F4Us, and F9Fs of the 1st Marine Air Wing to support division ground action in regaining the advance outpost. All morning long, powerful attack planes from three MAG–12 squadrons had winged in from nearby K–6. Pilots from VMA–121, VMA–212 (Lieutenant Colonel Louis R. Smunk), and VMA–323 (Lieutenant Colonel William M. Frash) had flown the bombing runs.

In the early afternoon they were joined by the speedy, stable Panther jets from VMF–115 and VMF–311, of MAG–33 (Colonel Robertshaw), based further away at K–3. Between 1300 and 1800, a series of three four-plane F9F assaults were launched north of the Marine MLR by VMF–311, while another strike was made further east in support of the Army 2d Infantry Division’s Old Baldy operations. These planes, together with two divisions from VMF–115, dumped a total of 23 tons of bombs and 3,100 rounds of 20mm shells on CCF trenches, bunkers, mortars, and caves at Vegas, Reno, and Hill 25A. Additionally, VMF–115 Panthers flew four single-sortie daytime MPQ missions north of the bombline to damage and destroy enemy resupply points.
Although the Chinese made it plain that their main interest was in the Vegas outpost area, spotty probes also took place in Colonel Adams’ 1st Marines sector. On the 27th, at about 2310, two enemy squads milled around the wire defense at outpost Kate, but Marine small arms, BARs, and mortars routed them after a 15-minute fire fight. At midnight, a CCF reinforced platoon reconnoitered Dagmar and Esther, for the second successive night, supported by small arms and automatic weapons fire from Chinese Hills 114 and 44. The enemy platoon started to rush the forward slope at Dagmar, but Company I defenders pulled back to the reverse side and directed VT-fuzed shells on the enemy.

Following this barrage the Marines reoccupied their position, with the help of MLR machine guns, mortars, and artillery from the 3/11 direct support battalion. (Now commanded by Lieutenant Colonel Alfred L. Owens, who had succeeded Lieutenant Colonel Pregnall on 25 March.) The enemy reinforced with a second platoon, as did the Marines. After intense close-in fighting in the Dagmar trenches for two hours, the Chinese withdrew. An enemy squad also engaged Bunker and Hedy; but again, 3/11 VT-fuzed concentrations and the organic outpost defenses sent him off handily. Enemy casualties for the evening’s activity were 15 dead, 25 more estimated killed, and 23 estimated wounded.

The following night the Chinese briefly harassed outpost Hedy, using as cover an abandoned Marine tank just east of the outpost, as well as the MLR to the rear of COP Bunker. Marine bullets and mortar shells dictated a quick retreat, however. Several minor contacts with the enemy had also been made during the two-day period in the 1st KMC sector. The most menacing were heavy enemy sightings on the 27th of some 200 Chinese in the area west of the old outposts 36 and 37, but no major action developed.
As darkness blanketed No-Man’s-Land on the night of the 28th, ground fighting flared up anew at 1955. The Chinese had begun another one of their nightly rituals, the first of three counterattacks to win back the disputed territory from the Marines. Vegas reported heavy incoming, including not only the usual assortment of mortar and artillery fires but direct 3.5-inch rocket hits. Enemy troops, estimated at nearly a battalion, began approaching from Reno. By way of answer two Marine light artillery battalions, 1/11 and 2/11, together with the medium 155mm howitzers of 4/11 and the Army 623d Field Artillery, lashed a 4,670-round barrage to interdict the approaching enemy. Ripples from the 1st 4.5-inch Rocket Battery reinforced the howitzers in thwarting this initial enemy assault. On the right flank of the outpost an intense 20-minute fire fight broke out at 2023, but the Vegas defenders beat back the intruders. For an hour the enemy, supported by heavy mortar and artillery fires from Reno and his own positions at Vegas, tried unsuccessfully to force the Marines to withdraw.

Carson, which had been relatively undisturbed for the past two days, also came under attack at this time from automatic weapons and mortars directed on its north slope by the enemy holed up behind Hills 67 and 31. For the rest of the night an enemy company prowled around the area, but the defense at Carson, plus artillery and mortar fire support from JAMESTOWN, sent the Chinese off in the early morning hours with their ambitions thwarted.

At Vegas, meanwhile, outpost commander Major Lee at 2130 radioed battalion headquarters that he was preparing for a new enemy counterattack. It was not long in coming. Less than an hour later, the Chinese were again storming from Hill 153, and Marine boxing fires picked off the advancing enemy. At 2230 Major Lee’s riflemen, deployed about 25 yards from the peak, were holding Vegas, surrounded by Chinese on the southern face of the position. For a brief period the enemy took the high ground but then gave it up under pressure from the defending Marines. Close by, another sharp fire fight erupted; then subsided for about an hour. At 2300 a new onslaught of Chinese reinforcements made the third major attempt of the evening to recapture the Vegas position. Two enemy companies descended. Within a half hour another massive fire fight had broken out, and the battle was raging across the shell-scarred hilltop. Major Lee reported to G-3 heavy enemy sightings of at least 200 Chinese on the top slopes challenging Marine possession of the Vegas crest and attempting to smoke their positions. At 0045, hostile forces had surrounded the outpost and seized part of the Vegas height, but 11th Marines fires walled off the enemy and prevented penetration. Flare planes circling overhead lighted the target and cannoneers of both sides concentrated on the crest. The heaviest Marine shoot of the night-long artillery duel, a 6,108-round barrage, rained down on enemy troops and trenches shortly before midnight.

Altogether, during the night of 28–29 March, two battalions of Chinese troops had made three separate, unsuccessful ventures to retake the Vegas crest, but were thrown back by Marine mortar, artillery, and tank fires. At 0130, following a heavy 37-minute artillery and mortar concentration, the enemy began to withdraw, but not before venting his displeasure with a resounding blast of small arms and bazooka fire from the Reno hill. In their departure, the Chinese were given an assist by Company E, 7th Marines, which had broken through the enemy encirclement of Vegas in the early morning hours to join E/2/5 and F/2/5 defending forces and help drive the invaders off all but the northern tip of the hill. Now under Captain Thomas P. Connolly, E/2/7 ascended the high ground, passing through F/2/5 ranks in preparation for the ultimate relief of E/2/5.

For the next two hours the 11th Marines battalions, together with the 1st 4.5-inch Rocket Battery, sealed off the outpost and blistered enemy fortifications at Reno with a total of 4,225 rounds. Air observers on station
fired 10 missions between midnight and 0430. Twenty minutes later, the artillerymen unleashed still another preparation to dislodge the unyielding CCF dug in at the Vegas topographical crest. Heavier fires from the 155mm howitzers of 4/11 and the 623d Field Artillery Battalions followed on more than two dozen active mortar and artillery targets.

A new assault by Marine infantrymen (E/2/7, E/2/5, and F/2/5) at 0450 recaptured the critical northern segment of the outpost. Elation over this encouraging turn of events was dampened, however, by loss of several Marine leaders in the early morning foray. Shortly before 0500, Major Lee and Captain Walz were killed instantly by a 120mm mortar round during an intensive enemy shelling. Another Marine casualty early on the 29th was First Lieutenant John S. Gray. A forward observer from C/1/11, he was mortally wounded by an enemy mortar blast when he left his foxhole to crawl closer to the Vegas peak and thus better direct artillery fires on the enemy. At the time of his death, Lieutenant Gray was reported to have been at Vegas longer than any other officer.
Chapter 7. Vegas

Vegas Consolidation Begins

Only a few surviving enemy were seen when Marines of F/2/5 and E/2/7 moved out to consolidate the position after daybreak. This task was completed without contact by 0830. In the meantime, the Vegas defense was reorganized with two reinforced Platoons on the main portion and a third occupying the high ground. A smoke haze placed around the outpost screened the work of the Marines. Individual foxholes were dug and automatic weapons emplaced. Major Joseph S. Buntin, executive officer of 3/5, had taken over as the new outpost commander. Corpsmen and replacement weapons—machine guns, mortars, BARs, rockets—had arrived. The morning supply train brought KSC personnel and Marines with engineering tools to begin work on trenches, fighting holes, weapons dugouts, and bunker fortifications.

By noon, excavation work on the shell-pocked trench system was well under way, with all of it dug waist deep and the majority as deep as a man’s shoulder. Daylight hours between 1000 and 1600 on the 29th were relatively quiet with only light ground activity. Rainy weather that turned road nets and fighting trenches into boot-high muck and giant mud holes further slowed the action. Artillerymen completed countermortar and smoke missions, and in the skies air observers directed fire throughout the day on 19 enemy resupply and target points until dusk when rain and light snow forced them to return to base.

At 1850, the Chinese launched what in some respects was a carbon copy action of the night of the 26th. Once again there was sudden heavy incoming and then shortly after dusk the CCF struck in a new three-pronged attack to overrun Vegas. This time three companies of Chinese approached both flanks of the outpost from their positions on Reno and Hill 153. In addition to his infantry weapons, the enemy was supported by heavy mortars and artillery. But the Marines’ mortars, illuminating shells, and big guns replied immediately. Ten minutes after the enemy’s latest incursion, a massed counterfire from five artillery battalions joined in the heaviest single barrage of the entire Vegas defense action. This massed fire of 6,404 rounds blasted the Chinese assault battalion and sent it reeling back with heavy losses. Two rocket ripples also tore into the Chinese troops.

In addition to the medium and heavy firing batteries, two heavy mortar units, Companies A and C of the 461st Infantry Battalion, had that day gone into position in the 5th Marines sector in general support of 1/11. Other fires came from the 8-inch howitzer unit, Battery C, 424th Field Artillery Battalion, also newly assigned to the 17th Field Artillery Battalion that day in general support of the 1st Marine Division.

Although another enemy attack was quickly repulsed at 2045 in a brisk, savage fight, shortly before midnight the Chinese reappeared, moving up from behind the right finger of Hill 153. This was believed to be an attempt to recover their casualties, but Marine artillery, mortars, and rocket bursts sent them fleeing within ten minutes. Still the enemy obstinately refused to give up his goal of retaking the high ground at COP 21. In the early morning hours of the 30th, he again returned to hit the outpost in his second battalion-strength attack within six hours. Again he struck from Reno and Hill 153, and again he attempted to cut off the outpost Marines by encircling the position. Heavy pounding by artillery, mortar, and boxing fires snuffed out the enemy’s attack and by 0215 the Chinese had left the Vegas domain—this time, it was to prove, for good. Their casualties for this latest attempt had been 78 counted killed, 123 more estimated killed, and 174 estimated wounded.

With sunup, the Marines at the battered outpost again repaired the damage of the night’s visits from the Chinese and continued work to improve their trenches and gun emplacements. Clearing weather enabled air observers and pilots to follow a full flight schedule. VMA–212 and VMA–323 were again over the Vegas skies during the morning hours and shortly before noon a joint mission by eight AU’s, a division from each squadron,
dumped nearly 10 tons of bombs on enemy trenches, mortars, bunkers, and troops at Hill 25A across from Reno to discourage Chinese rebuilding efforts. Both flew afternoon sorties to destroy strongholds at Hill 21B, at Reno, now in possession of the enemy, and to make smoke screen runs. Early in the day, Company F of 2/5 came up from the 2/5 CP to fill in on the MLR and Berlin outposts for Company G from 3/5. Later in the afternoon, G/3/5 relieved E/2/7 on Vegas and Major George E. Kelly, S–3 of 2d Battalion, 7th Marines, succeeded Major Buntin as the new outpost commander.

Two comments, casually made at the time, perhaps typify the grim staying power of the Marines who defended Vegas. As Corporal George C. Demars, Company F platoon guide, 5th Marines, observed, “The guys were like rabbits digging in. The fill-ins [reinforcements] gotten by the Company during the reorganization, jumped right in. We didn’t know half the people on the fire teams, but everybody worked together.”[31] Second Lieutenant Irvin B. Maizlish, assigned as a rifle platoon commander of F/2/5 on the 25th, the day before the fighting broke out, and who had the dubious distinction of being one of the few officers of those originally attached to the company not wounded or killed, recalled: “I checked the men digging in at Vegas . . . I’ve never seen men work so hard . . . I even heard some of them singing the Marine Corps Hymn as they were digging . . . ”[32]

The last direct confrontation with the enemy at Vegas had occurred that morning, about 1100, when five Chinese unconcernedly walked up to the outpost, apparently to surrender. Then, suddenly, they began throwing grenades and firing their automatic weapons. The little delegation was promptly dispatched by two Marine fire teams. Three CCF soldiers were killed and two taken prisoners, one of whom later died.

As darkness fell on the 30th, Marine artillery fired heavy harassing and interdiction missions and regimental TOTs on enemy supply routes and assembly areas. Although the shoot was dual-purposed, both to prevent another Chinese attempt at retaking Vegas and to foil a possible diversionary probe elsewhere in the division sector, neither situation developed. For the fourth consecutive night, giant searchlights from the Army’s 2d Platoon, 61st Field Artillery Battery illuminated the battlefield to spotlight the enemy withdrawal routes. Two of the quadruple .50 caliber machine gun mounts from the 1st Provisional AAA-AW Battery were also displaced to MLR positions in anticipation of trouble, but the CCF had apparently had enough of a thoroughly bloodied nose from the Marine fighters and decided to call it quits.

By daybreak, the Vegas sentry forces could report that things had been relatively quiet—the first time in five interminably long nights—and Companies D and E, 5th Marines, which had been watchdogging it at the outpost moved back to the MLR. At 0800, the 2d Battalion, 7th Marines, reverted to parent control, and by noon, reliefs were under way not only for Vegas but for Corinne, Dagmar, Hedy, and Bunker in the 1st Marines sector. A 5th Marines body recovery detail, meanwhile, had moved out to search the draws.

If ground action was light on the 31st, supporting arms activity was a different story, starting with seven MPQ drops on enemy artillery positions and ammunition caves in the early hours of darkness. Between 0650 and 1900, 23 air strikes were flown in the Vegas-Reno area by VMA–121 ADs and AUs of–212 and–323, MAG–12 squadrons, as well as three quartets of Air Force Thunderjets dispatched by Fifth Air Force. Artillery fired a total of 800 rounds on 156 enemy concentrations, again with 4.2-inch mortars from the 461st Infantry Battalion reinforcing 1/11 fires on hostile mortars, ammunition dumps, and supply points. If the outgoing was aimed at discouraging Communist plans for new acquisitions, their incoming had dropped to a new low in comparison with the heightened activity of the past five days. A total of 699 rounds was reported in the division sector, most of it falling in 5th Marines territory.
Recapture and defense of the Vegas outpost was one of the intense, contained struggles which came to characterize the latter part of the Korean War. The action developed into a five-day siege involving over 4,000 ground and air Marines and was the most bloody action that Marines on the western front had yet engaged in. Its cost can be seen, in part, by the casualties sustained by the 1st Marine Division. The infantry strength of two battalions was required to retake Outpost Vegas and defend it against successive Chinese counterattacks. A total of 520 Marine replacements were received during the operation. Marine casualties totaled 1,015, or 116 killed, 441 wounded/evacuated, 360 wounded/not evacuated, and 98 missing, of which 19 were known to be prisoners. Losses for the critical five-day period represented 70 percent of division casualties for the entire month—1,488 killed, wounded, and missing (not including 128 in the KMC sector).

Enemy casualties were listed conservatively as 2,221. This represented 536 counted killed, 654 estimated killed, 174 counted wounded, 853 estimated wounded, and 4 prisoners. The Marines, moreover, in the five days of furious fighting had knocked out the 358th CCF Regiment, numbering between 3,000 and 3,500 men, and destroyed its effectiveness as a unit.

Throughout the Vegas operation, the 1st Marine Air Wing had flown 218 combat missions against the Nevada Cities hills (63 percent of the entire month’s total 346 CAS missions), bombing and strafing enemy weapons positions, bunkers, ammunition dumps, trenches, and troops. On the 27th and 28th, while heavy fighting raged in both the Marine and 7th Army Division sectors, Marine Air Group 33 pilots flew 75 sorties—resulting in their highest daily sortie rate and air hours since December 1952. The March 28th date was a noteworthy one for MAG–12, too. It established a new record for combat sorties and bomb tonnage unloaded on the enemy in a single day; the group executed 129 sorties and dropped 207.64 tons of bombs and napalm.

Although restricted on two days by weather conditions, close air support was effectively used throughout the Vegas operation. A total of 81 four-aircraft flights dropped approximately 426 tons of explosives in CAS missions. Smoke and flare planes—despite a shortage of both flare planes and flares—were employed throughout the period as were the rotary aircraft of the two helicopter squadrons, the latter for casualty evacuation operations.

Tanks, provided by the Company A direct support tank company, were used day and night, firing from nine positions along the MLR. Their effective use to mark air targets was of particular importance in connection with their support role, while the tank light also helped to provide illumination of the objective area in hours of darkness. Approximately 7,000 rounds of 90mm tank ammunition were fired.

During these five tense days the enemy deluged Marine positions with 45,000 rounds of artillery, mortar, and mixed fire. Indicative of the savage pounding the Vegas area took is the fact that incoming Chinese artillery for the full two-week period from 1-15 March totaled only 3,289 rounds. Marine efforts to defend, counterattack, secure, and hold the Vegas outpost against repeated Chinese assaults were “marked by maximum use of and coordination with various supporting arms and organic weapons.” Three light artillery battalions, two medium battalions, two 8-inch batteries, one 4.5-inch rocket battery, and two companies of 4.2-inch mortars fired a combined total of 104,864 rounds between 27–31 March; the 11th Marines and its heavy Army reinforcing elements, in support of 5th and 7th Marines units, executed 332 counterbattery and 666 countermortar missions. Of the total number fired, 132 were air observed.

The artillery shelling was the hottest during a 24-hour period ending at 1600 on 28–29 March. During
this time 35,809 rounds were fired (33,041 from the four Marine battalions). This even surpassed the previous record of 34,881 rounds fired during a one-day period in the Bunker Hill defense of August 1952. A new one-day battalion total for West Korean fighting was also set on the 28th; 1/11 fired 11,079 rounds, exceeding the record of 10,652 set by 3/11 during the Bunker Hill fighting.

Marines at a rear area supply point achieved another record. In a 24-hour period, during the heavy fighting on 28–29 March, 130 men handled 2,841 tons of ammunition. Second Lieutenant Donald E. Spangler, an ammunition platoon commander with the 1st Ordnance Battalion, who had but 13 hours’ sleep in the entire five days of fighting, proudly noted that his unit had “more than doubled the tonnage that the U.S. Army says a man can handle in 14 hours.”[36]

As for the men on the front line, besides the Medal of Honor winners, 10 Marines were awarded the Navy Cross, the nation’s second highest combat award. Nine citations were for the Vegas action and one for the 1st Marines defense of Dagmar, in staving off an enemy penetration on the night of the 26th.

Battlefront tactics employed by the CCF in its assault of the Vegas Cities outposts were largely consistent with their previous strategy. As in the past, the enemy launched simultaneous attacks against several Marine positions in attempt to fragment defensive artillery firepower. Characteristically, the enemy preceded his thrust with heavy preassault concentrations of artillery and mortar fire. He also took advantage of the twin ploys of surprise and overwhelming strength, with wave after wave of Chinese rolling over the objective. Innovative techniques consisted of scaling ladders, fashioned from lightweight but sturdy bamboo, which were used to traverse Marine wire defenses, and of having an artillery liaison officer attached to infantry squads to better direct supporting fires during the attack. Analysis of Chinese firepower tactics indicated deliberate counterbattery efforts by the CCF, although this employment of artillery was secondary to its support of ground troops.

Actually, the Chinese attack on the forward Marine outposts the night of the 26th appeared to have been part of an overall reinvigorated spring assault. Opening gun of this offense had been fired three nights earlier, on the 23d, when they swept over an Army hill defense at Old Baldy, 25 miles northeast of the Marine Vegas Hills. Despite heavy Allied gunfire and bombing by Air Force and Marine planes under Fifth Air Force flight orders, the Chinese had clung to the hill, burrowed deeply, and resisted all efforts to be dislodged. After three days of fighting, U.S. 7th Division troops had abandoned the Old Baldy hill at dawn on the 26th. The CCF, apparently emboldened by this success, that same night had launched a series of probes at nine UN outposts on the Korean far western front in an attempt to further extend their frontline acquisitions.

Following the loss of Reno, a new outpost, Elko, was established on Hill 47, southeast of Carson and 765 yards from the MLR, to prevent the enemy from using the Hill 47 position as an attack and patrol route to the MLR. In addition to this new platoon-strength outpost, the Marines substantially shored up Vegas from its former platoon garrison to a detachment consisting of 2 officers and 133 enlisted men.

Headlines had told Americans at home and the free peoples around the world the story of the “Nevada Cities” in Korea and the Marines’ five day stand there to prevent loss of critical UNC territory. The event that marked an official “well done” to the Marines themselves was a message from the Commandant, General Shepherd, who on 30 March sent the following dispatch to General Pollock, CG, 1st Marine Division:

“Have followed the reports of intensive combat in the First Marine Division sector during the past week with greatest sense of pride and confidence. The stubborn and heroic defense of Vegas, Reno, and Carson Hills coupled with the superb offensive spirit which characterized the several counterattacks are a source of reassurance and satisfaction to your fellow Marines everywhere. On their behalf please accept for yourself and pass on to every officer and man of your command my sincere congratulations on a task accomplished in true Marine Corps fashion.”[37]

In turn, General Pollock congratulated the 1st Marine Aircraft Wing of General Megee and its six participating squadrons (VMAs–121, –212, –323, VMFs–115, –311, and VMF(N)–513). Citing the close air
support missions of the Marine flyers during the operation, General Pollock noted that the air strikes of the 28th were “particularly well executed and contributed materially to the success of the 1st Marine Division in retaking and holding the objective.”[38]

Plaudits had also come to the 1st Marine Division from the Korean Minister of Defense, Pai Yung Shin, [39] the day immediately preceding the Vegas attack. On 25 March, the Korean Presidential Unit Citation streamer,[40] for action from 26 October 1950 to 15 February 1953, had been placed on the division colors in ceremonies at the division command post, attended by the Korean Defense Minister; Vice Admiral Woon Il Sohn, Chief of Korean Naval Operations; Major General Hyan Zoon Shin, Commandant of the Korean Marine Corps; General Pollock, division commander, and his troops. The event marked the fourth Korean PUC awarded to Marine units since the beginning of the war.

A directive at the end of the month put the 7th Marines on the alert to move into 5th Marines positions in the right regimental sector. This was to be accomplished on 4–5 April when, after 68 days on line, the 5th Marines moved south to Camp Rose to become the division reserve regiment. The prospect of a new stage in the off-and-on truce negotiations had also come late in the month. On 28 March, the Communists informed the UN of their willingness to discuss the Allied proposal for return of sick and wounded prisoners. This exchange had originally been suggested by the UN more than a year earlier, in December 1951. Notification of the new Chinese intentions came, ironically, on a day when the Vegas outpost fighting was at its height.

As the month closed on the Vegas chapter, Marines on line and in the reserve companies who had just sweated through the bloodiest exchange of the war on the I Corps front to date added their own epitaph. With a touch of ungallantry that can be understood, they called the disputed crest of Vegas “the highest damn beachhead in Korea.”
IT WAS APRIL 1953, but it wasn’t an April Fool’s mirage. On 6 April, representatives of the United Nations Command and the Communist delegation sat down at the Panmunjom truce tents to resume the peace talks that had been stalemated six months—since October 1952. If there was a word that could be said to reflect the attitude of American officials and private citizens alike—for that matter, the atmosphere at Panmunjom itself—it was one of caution—not real optimism, not an unbridled hopefulness, but a wearied caution born of the mountains of words, gulfs of free-flowing dialogue and diatribe, and then ultimate plateaus of intransigence that had marked negotiations with Communist leaders since the original truce discussions had begun in July 1951.

Diplomatic maneuverings had been underway since the end of 1952 for the exchange of sick and wounded prisoners of both sides. This was considered a first step towards ending the prisoner of war dispute and achieving an ultimate truce. A resolution introduced in mid-November by India at the United Nations session dealing with settlement of nonrepatriate prisoners had been adopted in early December. Later that month the Red Cross international conference had officially gone on record favoring the exchange of sick and wounded prisoners in advance of a truce. A letter written on 22 February by the UNC commander, General Clark, calling for the immediate exchange of ailing prisoners had been delivered to the NKPA and CCF leaders.

Initially, the Communist answer was an oppressive silence that lasted for more than a month. During this time the Communist hierarchy had been stunned by the death, on 5 March, of Premier Stalin. Then, on 28 March, in a letter that reached General Clark at Tokyo in the middle of the night, came an unexpected response from the two Communist spokesmen. They not only agreed unconditionally to an exchange of the sick and injured prisoners but further proposed that “the delegates for armistice negotiations of both sides immediately resume the negotiations at Panmunjom.”

This favorable development astonished not only the United Nations Commander but the rest of the Free World as well. Several steps were quickly put in motion. The UN Commander’s reply to the Kim-Peng offer was expressed in such a way that resumption of full negotiations was not tied in as a condition for the preliminary exchange of ailing POWs. President Eisenhower, commenting on the new Communist proposals at his 2 April press conference, stated he thought the country should “now take at face value every offer made to us until it is proved unworthy of our confidence.” He also further enjoined major military commanders and subordinates to avoid anything that might be contrary to this view when they made public remarks or issued press releases.

In Korea, the Munsan-ni Provisional Command was established on 5 April under the Commanding General, Eighth Army, in the vicinity of the 1st Marine Division railhead at Munsan-ni. The command was to prepare for the many housekeeping details involved in the receiving and orderly processing of all UNC prisoners. The anticipated exchange itself was dubbed Operation LITTLE SWITCH. Two Army officers, one Marine Corps, and one ROKA representative were designed to direct the administrative machinery of the provisional command. Heading the organization was Colonel Raymond W. Beggs, USA.

The Marine representative, Colonel Wallace M. Nelson, was named commanding officer of the United Nations Personnel and Medical Processing Unit. His responsibility was not limited to the obvious medical aspects of the exchange, but extended to other details involving clothing issue, personnel, security, chaplains, food, communication, motor transport, engineering, and the operation of unit headquarters. Among those matters to which the Munsan-ni command directed its immediate attention was the setting up of a temporary facility for Communist prisoners currently held in UNC camps at Koje, Cheju, and Yongcho Islands and a hospital near
Pusan. Arrangements were also made for an interpreter pool, debriefing teams, and press center facilities.

As the new week began on Monday, 6 April, and the world looked to Panmunjom for the next set of signals in the war, a new stage developed in the truce negotiations. Within five days after the talks had begun, both sides agreed to return the disabled prisoners in their custody. Final papers for the preliminary exchange were signed at noon on 11 April by Rear Admiral John C. Daniel, USN, for the United Nations Command, and Major General Lee Sang Cho, of the Communist delegation. The week-long transfer of sick and wounded POWs was scheduled to begin 20 April, at Panmunjom.

The Communists announced they intended to release 600 sick and wounded UNC prisoners (450 Korean, 150 non-Korean), a figure which Admiral Daniel called “incredibly small.”[4] For its part, the UNC indicated that it planned to free nearly ten times that number of North Korean and Chinese POWs. Communist and Allied representatives also agreed that truce talks would be resumed at Panmunjom, once the prisoner exchange was completed.

Security precautions went into effect at both Panmunjom[5] and the entire Munsan-ni area, 10 miles southeast, on the first day of the prisoner talks. All facilities at both Panmunjom and Munsan-ni were placed off limits to Eighth Army personnel not directly involved in the operations. Regulations were strictly enforced. Even before the negotiations opened at Panmunjom, actual construction work for LITTLE SWITCH was well underway by Marine engineers. “Operation RAINBOW,” as the building of the facilities for the POW exchange was called, began 5 April.

In a little over a day—actually 31 working hours—a task force of less than 100 Marine construction personnel had erected the entire Freedom Village POW recovery station at Munsan-ni. The special work detachment was composed of men from Company A, 1st Shore Party Battalion, under Major Charles E. Gocke, and attached to the engineer battalion; utility personnel from Headquarters and Service Companies; and a Company D platoon, 1st Engineer Battalion.[6]

Early Sunday morning the Marines moved their giant bulldozers, earth movers, pans, and other heavy duty equipment into Munsan-ni. Ground leveling started at 0800 and work continued around the clock until 0100 Monday. After a five-hour break the men dug in again at 0600 and worked uninterruptedly until 2000 that night. Furniture, tentage, and strongbacking stored at the 1st Engineer Battalion command post, meanwhile, had been transported and emplaced. When it was all done the Freedom Village complex, like ancient Gaul, had been divided into three parts. The command area comprised receiving lines, processing and press tents, and related facilities for United Nations troops. Adjacent to this was the 45th Mobile Army Surgical Hospital tent, completely wood-decked, equipped for mass examinations and emergency treatment. Across the road from the UN site proper was the area reserved for returning South Korean prisoners, who would form the bulk of the repatriates.

Altogether the three camp areas represented some 35,100 square feet of hospital tentage, 84 squad tents, and 5 wall tents. Gravel to surface three miles of standard combat road, plus two miles of electrical wiring, was hauled and installed. More than 100 signs, painted in Korean and English, were erected, as well as the large one that stretched clear across the road at the Freedom Village entrance. Six welcome signs were raised above the UN and ROK processing tents, while another mammoth Korean-English sign was installed at the Panmunjom exchange site.

Special areas for ambulance parking; helicopter landing strips; five 50-foot flagpoles; graded access roads and foot paths; sanitation facilities; and storage areas for food, blankets, and medical supplies were also constructed. And timing was important. It had been anticipated that the prisoner exchange might take place on short notice. For this reason 1st Marine Division work and processing teams had conducted their rehearsals so that they could complete all duties within 36 hours after first receiving the “go ahead” signal for the switch.
Nine days after the truce talks were temporarily suspended, 11 April, Operation LITTLE SWITCH (code-named Little Swap) began the morning of Monday, 20 April. By the time it ended on 26 April, a total of 6,670 North Korean and Chinese Communist prisoners had been returned by the UNC. The enemy released 684 captives, of whom 149 were Americans. Among them were 15 Marines, 3 Navy corpsmen who had been attached to the 1st Marine Division, and a Navy aviator. The first day Allied prisoners—walking, some hobbling along on crutches, and others carried on litters—were delivered in two groups. The initial 50 men reached Panmunjom at 0825, and the second group, two hours later. The first Marine freed was Private Alberto Pizarro-Baez, H/3/7, a Puerto Rican, who had been captured at Frisco in the early October 1952 outpost clashes. Later that day, another POW taken in the same action, Private Louis A. Pumphrey, was also released.

Early moments of the exchange were tense as UNC sick and wounded captives were shipped in a long line of CCF ambulances from Kaesong, five miles northwest of Panmunjom, down the neutral corridor past enemy lines to the exchange point. Despite the fact that all official papers and agreements had been concluded more than a week earlier, no one was absolutely sure until the last moment that the prisoner exchange would actually take place. The mechanics of the transfer operation itself, as it turned out, went off practically without hitch. One minor unsavory incident had occurred when 50 North Korean prisoners in UNC custody en route from Pusan to Panmunjom, had dumped their mess kits into garbage cans, noisily complaining about breakfast.

There was also a long taut moment of uneasy silence when the first Communist ambulance pulled up in front of the Panmunjom receiving center. An American MP, who in the excitement had gotten his orders confused, forgot to tell the enemy driver where to turn. The ambulance almost went past the center. A UN officer raced out to the road and motioned to the driver, who backed around and pulled into the parking lot.

One of the first things the liberated POWs saw was the big sign “Welcome Gate to Freedom” raised the preceding night over the Panmunjom receiving tents. Here they could get a cup of coffee and momentarily relax before starting the long one-and-a-half hour ambulance trip south to Freedom Village. The returnees were outfitted in blue Communist greatcoats, utilities, caps, and tennis shoes. Some of the men were bearded; some wore thin smiles; some had half-hidden tears in their eyes. Primarily, there was a subdued and businesslike air to the day’s proceedings, however, with a marked absence of levity. Admiral Daniel, whose UNC liaison group had negotiated the exchange, in commenting on the smoothness of the first day’s operation observed: “It’s been a tremendous emotional experience for us all. Not much was said between us here, but we are all very happy.”

From Panmunjom all Allied prisoners were taken to Freedom Village at Munsan where they received a medical check, and the more seriously wounded were flown to a field hospital near Seoul. The first American prisoner to reach Freedom Village was an Army litter patient, Private First Class Robert C. Stell, a Negro. Helicoptered in from Panmunjom at 1007, he was treated “like a 5-star general by all hands, including General Clark, UN commander.” By noon the routine, agreed upon in the earlier exchange talks, was moving along evenly and would be in effect throughout the week-long exchange. The Communist quota was 100 prisoners freed daily, in two groups of 50 each, while the Allies returned 500. Thirty Americans were among the 100 UNC men released that first day.

Upon their arrival at Freedom Village the Marine POWs, all of whom had been wounded prior to being captured, were greeted by representatives of the 1st Marine Division. In addition to General Clark, other ranking officials on hand included Lieutenant General Maxwell D. Taylor, new EUSAK commander, Major General
Pollock, 1st Marine Division CG, Brigadier General Joseph C. Burger, in one of his first public duties since assuming the post of assistant division commander on 1 April, and Dr. Otto Lehner, head of the International Red Cross inspection teams.

Each Marine prisoner was met by a 1st Division escort who gave him physical assistance, if necessary, as well as a much-prized possession—a new utility cap with its Marine Corps emblem. Recovered personnel received a medical examination. Waiting helicopters stood by to transport seriously sick or wounded Marines to the hospital ships _Haven_ and _Consolation_ riding at anchor in the Inchon harbor. Chaplains chatted as informally or seriously as a returnee desired. Newspapers and magazines gave the ex-prisoners their first opportunity in months to read unslanted news. And a full set of utility uniforms, tailored on the spot for proper fit, were quickly donned by Marines happy to discard their prison blues.

Although returnees received their initial medical processing at Freedom Village, no intelligence processing was attempted in Korea. Within 24 hours after their exchange, returned personnel were flown to K–16 (Seoul) and from there to Haneda Air Force Base at Tokyo. Upon arrival at the Tokyo Army Hospital Annex, a more detailed medical exam was conducted, including a psychiatric interview by officials from the newly formed Special Liaison Group of Commander, Naval Forces, Far East. Lieutenant Colonel Regan Fuller, USMC, was designated by ComNavFE as OIC of the detailed briefing of all returned personnel at Tokyo. Other Marine officers participating in the debriefings included Lieutenant Colonel Thell H. Fisher and Major James D. Swinson, of FMFPac headquarters; Major Jack M. Daly, representing the 1st Marine Division; and Captain Richard V. Rich, of the 1st Marine Air Wing.

Each Marine returnee was interviewed by a two-man debriefing team that consisted of a Marine and a Navy officer, the latter usually a counterintelligence expert. The three-phase interrogation averaged 9–12 hours and covered personal data, counterintelligence, and a detailed military questionnaire. The latter, particularly, sought information about UN personnel still held captive by the enemy. Since all of the 15 Marine POWs had been captured relatively recently (either in the October outpost contests or the Vegas battle the previous month), the information they had about the enemy was of limited intelligence value. From debriefing reports of Marine returnees, many of whom brought address books with them, it was learned that at least 115 more USMC and Navy prisoners were alive and still held in POW camps.

Upon completion of counterintelligence processing, returned personnel were available for press interviews. Long-distance telephone calls to parents or other family members were arranged by the Red Cross. Summer service uniforms and campaign ribbons were issued, pay provided, and administrative records updated by representatives dispatched by Colonel John F. Dunlap, Commanding Officer, Marine Barracks, Yokosuka.

All of the 19 Marine and Navy POWs had been released by 25 April. After final processing and clearance for return to the U.S. the men were flown home, via Hawaii, in three groups that departed 28 April, 30 April, and 4 May. Each was accompanied by a Marine Corps officer. Members of the first contingent of POWs arrived at Travis Air Force Base, California, on 29 April, thereby completing their 7,000-mile journey from Communist prison camps. Another small group of POWs considered possible security risks were airlifted directly from Japan to Valley Forge Hospital, near Philadelphia, for further interviewing. No Marines were among them. With the initial prisoner exchange completed, staffs of the major Far East commands began to prepare for the final return of all POWs. Operation BIG SWITCH would take place after the cease-fire that, hopefully, was not too far away.

On the day that Operation LITTLE SWITCH ended, 26 April, plenary truce talks resumed at Panmunjom. The stormy issue of repatriation of prisoners, which had already prolonged the war by more than a year, was still the one major problem preventing final agreement. There was indication, however, that the Communists appeared to be softening on their rigid insistence of forced repatriation. And, on 7 May, the Communists accepted the UN proposal that nonrepatriate prisoners be kept in neutral custody within Korea.
(rather than being removed to a foreign neutral nation) and offered an eight-point armistice plan. With modifications, this ultimately became the basis for the armistice. While discussions and disagreements continued on this proposal, another real problem developed from a totally different source.

Since early in April rumblings had been heard, through the polite ambassadorial circuits, that Syngman Rhee, the aging South Korean president, was dissatisfied with major truce issues. In particular, he was disturbed over the possibility that Korea would not become reunited politically. Further, Rhee gave indication that he might take some kind of action on his own. The Korean leader had advised President Eisenhower that if any armistice was signed that permitted Chinese Communist troops to remain south of the Yalu, with his country divided, he would withdraw ROK military forces from the UN command. Since South Korean troops, backed by American specialized units, presently manned the bulk of the UNC front line, Rhee’s threat to remove them from General Clark’s command presented harrowing possibilities.

Meanwhile, on 13 May, General Harrison, senior UN representative at Panmunjom, made a counterproposal to the Communist plan. This incorporated three measures aimed at reconciling differences in the long-controversial repatriation issue.[11] Arguments flew back and forth at Panmunjom, with a temporary recess called in the talks; but on 4 June the Communists accepted this UN final offer. The dispute of 18 months’ duration had ended and the Allied principle of voluntary repatriation had won out in the end. About the only homework left for the negotiating teams was to map out final details of the Demilitarized Zone.

President Rhee now even more violently denounced the projected armistice plan. He declared that he and the Koreans would fight on alone, if necessary. South Korean delegates boycotted the Panmunjom truce meetings, and Rhee began a campaign to block the cease-fire. Final agreement on the POW issue was reached 8 June. It provided that the NNRC offer a “civilian status” to former POWs who did not exercise their right of repatriation within four months after being taken into custody by the commission. Those POWs who desired asylum would be set free. The South Korean National Assembly unanimously rejected the truce terms the following day.

Revision of the truce line, to correspond to current battle positions, and other concluding details of the truce were being settled by 17 June. On 18 June, chaos suddenly replaced progress. Acting on orders from Rhee, during early morning hours ROK guards at the South Korean prisons released approximately 27,000 North Korean anti-Communist POW inmates (the majority of the large group of NKPA who did not wish to be repatriated). They quickly escaped and became absorbed into the civilian populace of South Korea. Immediately the Communists charged the Americans with complicity and demanded to know whether the United Nations Command was able to control its South Korean ally or not.

For the next two weeks the American ambassadorial and military team tried to restore some measure of international good grace and hope to the crisis. Daily talks (and pressure) took place with Rhee, as well as with the Communist negotiators, to set the course back on track again in the direction of a final truce agreement. At the end of June, UNC Commander Clark was authorized by Washington to work out a way in which it would be possible to sign the tenuous armistice—without the Koreans, if necessary.
Shortly after the heavy Vegas fighting in late March, Colonel Funk’s 7th Marines, which had been in reserve, exchanged positions with the 5th Marines. The new line regiment assumed responsibility for the critical, action-prone right sector of the MLR on 4-5 April. In the center part of JAMESTOWN, the 1st Marines of Colonel Adams continued to man the MLR and its 12 outposts, including the strategic COP–2 tucked down by the Panmunjom peace corridor. With the resumption of truce talks on 6 April, this position had again taken on renewed importance with its tank-infantry covering force of 5 armored vehicles and 245 Marines on call at all times.

After its relief from the MLR in early April the 5th Marines, as theo new division reserve unit, assumed the regular missions of serving as a counterforce for Marines in the I Corps sector, if required; maintenance of the secondary KANSAS line; and a rigorous training program. On 10 April, the 3d Battalion moved out to the KANSAS position for a two-day field exercise. By midmonth, spring thaws and heavy rains had so weakened the trench and bunker fortifications of KANSAS that an all-out effort was temporarily diverted from refresher training to reconstruction. The 2d Battalion, meanwhile, under Operation Plan 24–53, pursued an intensive five-day shore-based training program, 7-11 April, in preparation for its coming amphibious exercise, MARLEX XX. On the 13th, BLT 2/5 under Lieutenant Colonel Finch, with armored amphibian, tank, amtrac, and 1/11 detachments, proceeded to the landing area, Tokchok-to, one of the WCIDE command offshore islands southwest of Inchon. Battalion assault companies hit the southern Tokchok-to beaches on D-Day, 15 April, according to schedule, although high winds and rough seas subsequently modified the exercise.

Not long afterward a training exercise involving UNC personnel got underway when the 5th and 1st Marines, together with the artillerymen, combined with the Army, ROK, and Commonwealth Division on 20 April for a four-day I Corps command post exercise (CPX) EVEREADY GEORGE, not far from Seoul.

Along the division front the war was still a daily survival contest, despite the promising outlook at Panmunjom. The most ambitious attempt by the Chinese during the month took place over a three-day period in the right regimental sector, not long after the 7th Marines had moved to the MLR. On 9 April, following a heavy two-hour ballistic downpour of 2,000 rounds of enemy mortar and artillery, a reinforced company of about 300 Chinese soldiers launched a strong probe against Carson at 0345. Attacking in two echelons, the enemy approached from the direction of Arrowhead on the north and the Reno ridgeline. In an hour’s time, the enemy had reached the Marine trenches and protective wire, at some places, and was being unceremoniously repulsed by the 1/7 detachment at Carson. For an hour and a half a heavy fire fight raged at the outpost while intruders and defenders battled at pointblank range to settle the dispute.

A reinforcement platoon, from 4/2/7, dispatched from the MLR at 0530, made it as far as the newly established Marine outpost at Elko, about 400 yards southeast of Carson, before being held up by a heavy shower of mortar rounds, and small arms fire. Tankers from the Company A direct element plus a section (two tanks) from the regiment’s armored platoon leveled their lethal 90mm fires to discourage the enemy, as did the defender’s barrage of 60mm, 81mm, and 4.2-inch mortars.

Two rocket ripples and 22 defensive fire concentrations unleashed by 2/11, also in direct support of Lieutenant Colonel Henry C. Lawrence Jr.’s 1st Battalion, plus additional reinforcing fires by batteries of 1/11 and 4/11 drove off the enemy at 0700. As a security measure, a company from the regimental reserve (E/2/7) was assigned to Carson to buttress the position and assist in reorganizing the outpost defense. The enemy’s activity
had cost him 60 known dead. Additional casualties were estimated to be 90 killed and 70 wounded. Marine losses numbered 14 killed, 4 missing, 44 wounded/evacuated, and 22 non-seriously wounded. Meanwhile, beginning at 0715, Marine prop-driven attack AUs from VMAs–212 and–323 and ADs from VMA–121 were aloft over prime Chinese targets to perform CAS missions and MPQ drops.

Between the morning’s first strike and midafternoon the three MAG–12 squadrons completed 43 sorties and blasted enemy hills and weapons positions north of Carson with a total of 67 1/2 tons of bombs. Later that night three Chinese platoons, operating in small units, reappeared in the Carson–Elko–Vegas vicinity to recover casualties. Although they reached an unoccupied caved-in bunker 50 feet from Carson, the enemy’s nocturnal activity only cost him more casualties from the COP’s defense fires: 15 known dead, 15 estimated killed, 7 known wounded, and 27 estimated wounded.

The following day, Panther jets from Marine Fighter Squadrons 311 and 115 contributed to the further destruction of hostile emplacements, but the enemy himself was nowhere to be seen. Again that night, ground-controlled radar bombing runs were made by VMA–121 and VMF(N)–513 to help keep the enemy off balance. In the early-morning hours of the 11th, however, a band of 30 grenade-slinging Chinese renewed the assault on 7th Marines positions by attacking the reverse slope of Elko. This ambition was deterred by outpost organic weapons and box-me-in fires. After a brief fire fight the CCF withdrew, and the two MAG–33 squadrons later that morning returned to station for CAS strikes against CCF trouble spots. Another raid on Carson began at 2115 that night when 70 Chinese moved out from Ungok to the west ridge of the Marine position. Ten minutes later, Marine 81mm and 4.2-inch mortars, artillery, machine guns, and tanks forced them back with approximately 20 CCF killed and wounded to show for their efforts.

A brief repeat action occurred the following night when two squads of Chinese reappeared at Elko, but they were dispatched by Marine infantry, artillery, and armor direct fires following a 15-minute spirited exchange. During the night of the 12th[16] Chinese probes and harassing efforts diminished. Other than a few spotty, abortive skirmishes in the KMC sector, this pattern of reduced enemy effort would continue for the next several weeks, until after the change of the Marine line in early May. As the peace talks at Panmunjom were beginning to show some progress, enemy psychological warfare efforts in the KMC, 1st, and 7th regimental sectors became more zealous, an indication of the Chinese attempt to increase their propaganda offensive. This included not only loudspeaker broadcasts and propaganda leaflet fired in mortar shells but a more unusual tactic, on 6 April, of enemy messages dropped over the COP Delta area by airplane.

Little ground action took place in the division sector throughout the rest of the month. During the last three days of April, as the operational period for the Marines drew to an end, both infantry and artillery units noticed an unusual lull across the front. Marine patrols made few contacts, and there was a sharp decrease in the heavy enemy sightings of midmonth. Chinese incoming, in fact, during the latter part of the month decreased markedly, with a total of 873 rounds compared to the 4,149 tallied during the 1–15 April period. An average of 58.2 rounds daily made it, in fact, the quietest period in the Marine division sector since the holiday calm of late December when only 84.2 rounds had fallen the last 10 days of the month.
By late April, plans had moved into high gear for relief of the 1st Marine Division by the 25th U.S. Infantry Division and transfer of the Marines to U.S. I Corps reserve at Camp Casey. Although the Marine division had been in active defense positions for 20 months (first in the eastern X Corps and, for the past year, on the western front), some observers noted that there was a reluctance to turn over their presently occupied positions and that the Marines were coming out “under protest from commanders who wanted the Division to remain on the line.”

For its part, the 25th Division, commanded by Major General Samuel T. Williams, was to shift over to the I Corps far west coastal area from its own neighboring IX Corps sector on the right. Marine association with the Army division went back to the early days of the war. In August 1950, when the Korean Conflict was then only a few weeks old, the 25th Division, with the 1st Provisional Marine Brigade and the Army’s RCT–5, had spearheaded the first UN counteroffensive on the far southern front, in the Sachon-Chinju area. Now fresh from its own recent period in reserve the 25th Division, including its attached Turkish Brigade, was to take over the 33-mile 1st Marine Division line, effective 5 May. Marine armor and artillery, however, would remain in support of the 25th Division and transfer to I Corps control.

Another change at this time affected the designation of the United Nations MLR. Called Line JAMESTOWN in the I Corps sector (and variously in other parts of the EUSAK front as MISSOURI, DULUTH, MINNESOTA, and CAT), the Allied front was redesignated simply as “main line of resistance,” beginning 28 April, and was to be so known in all future orders and communications throughout the entire Eighth Army. A further modification dropped the reference “in Korea” from the acronym EUSAK, the title becoming “Eighth U.S. Army.”

In the Marine sector, the last few days of April were a study in contrasts. While Marine frontline infantrymen and cannoneers were having a comparatively peaceful interlude during this period of minimal CCF activity, division engineers were the proverbial colony of beavers. Following up their rigorous schedule in early April of building Freedom Village from scratch within 36 hours, engineer personnel moved out from the division sector late that month to begin construction of the rear area camps that would shortly be occupied by the Marines while in I Corps reserve.

Located approximately 15 miles east of the Marine MLR, the Camp Casey reserve complex consisted of three major areas. They were: the central one, Casey, which gave its name to the entire installation and would house the new division CP and 5th Marines; Indianhead, to the north, where the 7th Marines, 1st KMC Regiment, Division Reconnaissance Company, machine gun and NCO schools were to be established; and Britannia, to the south, assigned to the 1st Marines. Motor transport, engineer, and medical units in support of the respective regiments were to locate nearby.

On 27 April, the day after resumption of truce talks at Panmunjom, Company A engineers began the work of clearing the camp site, erecting prefabricated buildings, and pioneering roads in the 7th Marines northern area. Two days later the 1st KMC Engineer Company was also detailed to Indianhead for work on the 1st KMC Regimental camp. Company C engineers and Company A, 1st Shore Party Battalion, attached to the Engineer Battalion, meanwhile moved into the Casey sector to ready the relocated Division CP and the 5th Marines camp.

Tactical relief of the 1st Marine Division officially began 1 May. By the time it was over, four days later, more than 2,370 truckloads of Marine personnel and equipment had been used in the transfer to Camp Casey.
Described another way: if placed bumper to bumper in a continuous convoy, this would have extended more than six miles, the length of the MLR held by a Marine regiment in any major defense sector. As a preliminary step in the relief, on 29 April the division assumed operational control of several incoming Army artillery units (the 8th, 64th, 69th, and 90th Field Artillery Battalions, and the 21st Antiaircraft Automatic Weapons Battalion) plus elements of the Turkish command, including the TAFC Field Artillery Battalion. By midafternoon, the first of the Army infantry relief personnel had also arrived in the division sector, when elements of the three battalions of the 35th Infantry Regiment had reported in to respective 1st Marines host units, preparatory to assuming responsibility for the center sector of the Marine line.

On 1 May the 5th Marines, then in reserve at Camp Rose, took over responsibility for the 14th Infantry Regiment, designated as the Army maneuver unit. Later that day, when Colonel Tschirgi’s regiment closed its headquarters and moved out by motor march to Casey, control of the Army unit transferred to the division. The same day, the 1st KMC/RCT artillery battalion—which, like the 11th Marines units, was to remain on line although KMC infantry personnel were to move to I Corps reserve—came under control of I Corps; two days later an Army armored unit, the 89th Tank Battalion, rolled into position in the KMC rear support area and came under division command.

The 7th Marines right regimental sector, with its critical Nevada Cities and two Berlin positions, became the new home for the Turkish battalions of Brigadier General Sirri Acar in a four-day phased operation, beginning 0115 on 3 May. Actual bulk displacement of the first Marine MLR units and their respective outposts got underway on this date, when responsibility for the 7th Marines left battalion sector transferred from 2/7 to the 1st Battalion, TAFC, and the 7th Marines battalion began displacing to Indianhead. On the same day the division opened its advance command post at Camp Casey.

The first Marine sector to complete the relief was the 1st Amphibian Tractor Battalion, to the south of the Munsan-ni railhead; at midnight on 4 May, with the assumption of sector responsibility by the Army Task Force Track, it moved to the logistical complex at Ascom City where it opened its new CP. Throughout the BMNT hours of 4 and 5 May, Marine positions were transferred to the incoming organic and/or attached units of the U.S. Army 25th Division. Relief of three of the major sectors in the Marine division line was thus well under way by the early hours of the 5th. Final relief and its elaborate phasing operations were completed that morning. On the left flank, the 1st KMC was relieved at 1030 by the incoming U.S. Army 27th Infantry; 30 minutes later, the 1st Marines was replaced in the line by the Army 35th Infantry; and on the right, the 7th Marines sector was taken over by the TAFC. (See Map 28.)

Sharply at 1120 on 5 May, the U.S. Army 25th Division assumed responsibility for defense of the MLR in what had been the 1st Marine Division sector for more than 13 months. At the same time all 25th Infantry Division units under operational direction of the division also reverted to parent control. In addition to the Kimpo Regiment, several small Korean Service Corps and medical units retained in the sector also came under Army command.

I Corps Operation Orders No. 31 and 32 had directed that the 11th Marines remain on line in the sector attached to I Corps Artillery, with a general support mission of reinforcing the fires of the 25th Division artillery, and a secondary task of coordinating counter-battery support. The medium battalion, 4/11, and the 1st 4.5-inch Rocket Battery, furnished general support for I Corps. Regimental and battalion CPs, as well as the rocket battery, continued to occupy their same locations. A change affected the KMC artillery battalion, however; when transferred to I Corps artillery control it displaced from the Marine sector, with a new general support role of reinforcing the I Corps line.

Also on 5 May, at 1130, the 1st Tank Battalion passed to 25th Division control. Two companies, C and B, were assigned to the TAFC (which had no armored units) in the left and right battalion areas, respectively.
Company D vehicles came under command of the 35th Infantry Regiment, in the center sector; while A, the remaining company, was designated as the single reserve unit. This was a modification of the Marine system of maintaining two tank companies in reserve, one a short distance behind the MLR and the other, at the armored battalion CP near Munsan-ni. A change in tactics also took place when the Marine tanks came under Army operational control. It had been the Marine practice to retain the tanks at the company CP from where they moved to prepared firing slots at the request of the supported infantry unit.

When the 1st Tank Battalion was attached to the 25th Division, the armored vehicles were shifted to firing slots near the MLR where they occupied semifixed positions.[26] Armored personnel carriers (APCs) were assigned by the Army to Company B and used by both B and C as resupply vehicles to haul food, water, fuel, and ammunition to the tanks on line. Also as part of the relief, control of the KMC tank company was transferred from the Marine 1st Tank Battalion to I Corps, although the company still continued in its same location in the old KMC sector.

Also remaining in their same positions were MASRT–1 (Marine Air Support Radar Team One), in support of the 25th Infantry Division, MTACS–2 (Marine Tactical Air Control Squadron Two), and VMO–6. The mobile air support section of the observation squadron, however, had moved with the 1st Marine Division to the new Casey area for participation in the coming MARLEX operations scheduled during the reserve training period.

Thus with the relief completed, components of the old Marine division front, from left to right, were: the Kimpo Provisional Regiment; Task Force Track; the 27th Infantry Regiment; 35th Infantry Regiment in the center sector, including its armor and heavy mortar company and 2d and 3d Battalions forward, replacing the 1st Marines 3d and 1st Battalions; and in the right sector, the Turkish Brigade 4.2-inch mortar company and its 1st and 3d Battalions initially located[27] in the MLR positions vacated by the 2d and 3d Battalions, 7th Marines.

In addition to the 1st Marine Division railhead and truckhead at Munsan-ni and Ascom City, a subsidiary railhead/truckhead was opened at Tongduchon-ni, two miles southwest of the new division CP at Casey. No change was made in the airhead at K–16. Effective with the 5 May change, remaining elements of the division CP staff at Yongji-ri joined the advance elements at Casey. As the Marines moved off the front lines they received “well-done” messages from the Commandant, General Shepherd, and the U.S. Pacific Fleet Commander in Chief, Admiral Arthur W. Radford, as well as the new I Corps Commander, Lieutenant General Bruce C. Clarke[28] who cited the “excellence of the planning, coordination and cooperation which enabled the operation of the past few days to be successfully accomplished.”[29]
While the division was in reserve, its tactical mission consisted of preparation for commitment on I Corps order as a counterattack force in any of the four division sectors of I Corps. Division Operation Plan 7-53 implemented this I Corps Plan “RESTORE” and set forth the designated blocking positions in the 25th Army, Commonwealth, 1st ROK, and 7th Army Division sectors in event of threatened or actual enemy penetration of the MLR.

The 1st Marine Division’s Training Order 8–53, issued on 6 May, the day after the relief was officially effected, outlined the training to be accomplished during the eight-week reserve period, 10 May–5 July. Following a few days’ interval devoted to camp construction and improvement of facilities, an active training program commenced. Its objective was the continued improvement of amphibious and ground offensive combat potential of all personnel. Three major regimental combat team MARLEXES were scheduled. The training syllabus called for a four-phased progressive schooling from individual to battalion and regimental level conducted in all phases of offensive, defensive, and amphibious warfare. Weaponry familiarization, small unit tactics, and combined unit training, with tank-infantry deployment and integration of helicopters at company-level exercises, were emphasized, culminating in a week-long field maneuver.

Lectures were to be kept to a minimum, with at least 50 percent of the tactical training conducted at night. Specialty training in intelligence, signal communications, antitank and mortar, machine gun, mine warfare, and staff NCO schools was also prescribed. Numerous command post exercises were programmed to obtain a high standard of efficiency in both battalion and regimental-level staff functioning. It was the first time the division had been in reserve since a brief two-week period in late July–August of 1951. A brisk 40-44 hour week, plus organized athletics, insured that the training period was to be fully utilized.

No time was lost getting under way. At a staff conference with battalion commanders on 11 May, General Pollock, division CG, stressed the importance of using the time they were in reserve for enhancing division combat-readiness. Even as he spoke, his 5th Marines had the day before boarded ships at Inchon and were en route to the Yongjong-ni landing area for MARLEX I. Since the 5th Marines, in division reserve, had been the first of the regiments to displace and on 1 May had turned its sector over to the incoming 14th Infantry Regiment, it got the jump on training during the reserve period. Regimental Operation Plan 12-53, of 28 April, had outlined requirements for the 5th Marines RCT LEX 1; from 2–9 May the regiment had participated in a week of intensive amphibious training, including reduced and normal distance CPX dry runs for the coming MARLEX.

With ships from CTE 90.85, and air defense by VMFs–311 and–115, Colonel Tschirgi’s RCT-5 made the D-Day landing on 13 May with its two assault BLTs securing the objective. An unexpectedly shallow beach gradient and difficulties encountered in unloading vehicles from the causeway resulted in less than a 100 percent performance rating. These were deficiencies that might have been prevented had not the customary rehearsal been cancelled the previous day when a heavy fog obscured the landing beaches. Besides regimental antitank and 4.2-inch mortar units, participating support elements included Company D, 1st Tank Battalion; Company A, 1st Armored Amphibian Battalion; Company C, 1st Engineer Battalion; 1/11; and helicopters from HMR–161 and VMO–6.

Meanwhile, on 15 May, command post and subordinate units from the 1st, 5th (less RCT-5 currently deployed in MARLEX I), and 7th Marines and support elements took part in a one-day division CPX at Camp
Casey stressing mobility, security and operational procedures. Another CPX on 22–23 May by 11th Marines and engineer personnel emphasized dispersion, camouflage, and message handling under simulated combat conditions. Units of the three infantry regiments plus the KMCs training with the 7th Marines at Indianhead combined in a CPX–FEX (command post-firing exercise) on 26-27 May. Realism bowed to current ordnance supply economics in that ammunition was carried for individual weapons, but it would “not be loaded except on specific orders from an officer.”[33]

The CPX–FEX was held as a trial exercise for an Eighth Army CPX scheduled later in the month, which was postponed indefinitely on 29 May because of the critical battlefront situation and continuing enemy attacks across the EUSAK front. Extensive preparations were also underway for MARLEX II, with RCT–7, from 2–10 June; and concluding MARLEX III, scheduled 14–23 June, with RCT–1.

Armor and advance regimental elements had left for the Ascom City-Inchon staging area by 1 June, preparatory for departure to the Yongjong-ni beaches on the Korean west coast in the vicinity of Kunsan. The troop list included approximately 250 officers and 4,450 enlisted from Colonel Funk’s 7th Marines and support units, including USN and KMC. Infantry personnel from the regiment’s three battalions formed the three assault teams plus a reserve battalion composed of 475 Korean Marines designated as BLT 5/KMC. Regimental support units included Company C, 1st Engineer Battalion; Company D, 1st Medical Battalion; Company C, 1st Shore Party Battalion; Company B, 1st Armored Amphibian Battalion, and various motor transport, amphibian truck, military police, and helicopter detachments.

R-Day on 5 June went off per schedule. Despite intelligence estimates which cheerily predicted that only “nine days of rain can be expected during the month of June”,[34] RCT–7 drew one out of the barrel with its D-Day landing, 6 June. This took place during heavy rains and decreased visibility which threw the boat waves off phase by minutes and required more than the allotted time for HMR–161 troop and cargo lifts.

Use of a 144-foot-long M–2 steel treadway pontoon bridge loaned by the Army, emplaced from the end of the causeway to the beach high water mark, was considered highly successful. It solved unloading problems encountered in the earlier MARLEX, in that all heavy equipment and vehicles were landed on the designated beaches. Further experimentation with this novel employment of the M–2 was recommended to test the coupling system of bridge and causeway during periods of heavy surf. On the minus side, shore party officers noted that night transfer operations had been hindered because of the lack of running lights on the amtracs.

On 9 June, as RCT–7 was on the way back from its amphibious exercise, a directive from ComNavFE (Vice Admiral Robert P. Briscoe) notified the division of cancellation of the forthcoming RCT MARLEX III. All available shipping was being held on 24-hour readiness for the expected final repatriation of POWs (Operation BIG SWITCH). All afloat training exercises by Marine, Army, and Navy units between 6 June and 15 October were to be cancelled.

The division was host to ranking I Corps, Eighth Army, Korean, and 1st Commonwealth officials when a special helicopter assault demonstration was staged 11–12 June at Camp Casey. Two rocket launcher sections, 14 HMR–161 copters, and 2/5 infantrymen were deployed to show the diverse combat capabilities of the aerial workhorse. While in I Corps reserve, the division was also host—and winner—of the I Corps Pistol Matches. And 3/11, which the previous month had taken the Army Training Test 6–2 (a) Modified, was notified the battalion had scored 92.91 percent and received congratulations from the CGs, I Corps Artillery and Eighth Army.

A change of command within the 1st Marine Division took place on 15 June with the arrival of Major General Randolph McC. Pate. The retiring CG, General Pollock, was presented the Distinguished Service Medal by the I Corps commander, General Clarke, for his “outstanding success in the defense of Carson, Vegas, and Elko.” The previous month, General Pollock had received the Korean Order of Military Merit, Taiguk for his active part in the formation, development, and training of the Korean Marine Corps. Attending the change of command ceremonies were General Megee, CG 1st MAW, General Schilt, CG AirFMFPac, and other Marine, I
Corps, Commonwealth, and Korean senior officers.

The new 1st Marine Division CG was coming to his Korean post from Camp Lejeune, N. C. where (like General Pollock before him) he had most recently commanded the 2d Marine Division. Commissioned originally in the Marine Corps Reserve in 1921, General Pate was to later rise to four-star rank. Prior to World War II, he had seen expeditionary service in Santo Domingo, in 1923–1924, and in China from 1927–1929, and also served in Hawaii. For his outstanding service and skill in complicated staff duties, first at Guadalcanal, and later during amphibious operations at Peleliu, Iwo Jima, and Okinawa, General Pate had been awarded the Legion of Merit and a Gold Star in lieu of a second Legion of Merit.

After the war, he had served two tours as head of the Division Reserve, in 1946 and 1951. Other assignments included Director of the Marine Corps Educational Center at Quantico and Deputy Director of Logistic Plans in the Office of the Joint Chiefs of Staff.[35]
Chapter 8. Marking Time (April-June 1953)

Heavy May-June Fighting[36]

After the early May change of lines, the Chinese lost little time in testing the new UNC defenses. Shortly after 0200 on 15 May, the CCF directed a two-battalion probe on the Carson-Elko-Vegas trio and the Berlin-East Berlin outposts newly held by the Turkish brigade. Supported by heavy concentrations of mortar and artillery, one battalion of enemy soldiers moved against each of the two major defense complexes. Marine Company C tanks, occupying the firing slots that night, accounted for heavy enemy losses in the action, estimated at 200 CCF killed and 100 wounded. Assisting the TAFC Field Artillery Battalion in throwing back the attack were 1/11, 2/11, and 4/11 which sent 3,640 rounds into the sharp four-hour engagement.

The TAFC defense was further reinforced later that day with 21 air strikes against hostile personnel and weapons positions north of the Turkish sector. Adding their weight to the clash, 3/11 and the rocket battery also brought their guns into action, for a combined 5,526 Marine rounds[37] dispatched against the enemy.

It was not until 25 May, after the UNC had made its final offer at the truce talks, however, that CCF artillery really began to open up on the Nevada complex. The increased activity by hostile pieces, during the 25–27 May period, was duly noted by the artillery Marines who laconically reported, “Operations followed the recent pattern: enemy shelling of the Turkish Brigade increased during the afternoon; no contacts were reported.”[38]

This latter situation changed abruptly on 28 May. Beginning at 1800, major elements of the Chinese 120th Division launched simultaneous attacks over 17,500 yards of I Corps front that stretched from COP–2 eastward to that consistent trouble-spot, the Nevada Cities, on to the Berlins, and finally the Hook area in the adjacent Commonwealth Division sector. Supported by heavy artillery fires, one CCF battalion moved in towards Carson and Elko. Another battalion,[39] under cover of smoke, attacked central COP Vegas, while a third struck Berlin and East Berlin on the right flank. Three hours after the initial attack, defenders at Carson and Elko were engaged in hand-to-hand combat with the Chinese.

By midnight the men of the 35th Infantry had beaten back the attack at COP–2. The Turks, likewise, were still in possession of the two Berlin (platoon-strength) outposts, but Commonwealth forces were involved in a pitched battle at Ronson and Warsaw. The situation was even grimmer at this time in the Nevada Cities area outposted by the TAFC. Although the Turkish troops continued to hold Vegas, where 140 men were dug in, Carson (two-platoon size) had fallen and Elko (platoon-strength) was heavily besieged. Shortly thereafter, the 25th Division ordered that the TAFC withdraw from the latter position to its own MLR. The diversionary attack against Berlin-East Berlin had been broken off and the twin positions were secured.

During the first six hours of the attack, the night of 28–29 May, Colonel Mills’ 11th Marines, now under I Corps command, had sent 9,500 rounds crashing into Chinese strongpoints, while Marine air observers directed eight missions against active enemy artillery positions. Ripples from the 1st 4.5-inch Rocket Battery, transferred to the Commonwealth sector to support the Hook defense, were fired on CCF troop activity there. Another curtain of flame engulfed the Carson intruders. When the fighting started, 15 Marine tanks were positioned in the Turkish sector. Company B and C vehicles, under Captains James M. Sherwood and Robert J. Post, relentlessly pounded the approaching CCF columns, while Company D was put on a 30-minute standby. As the action developed, additional tanks were committed until 33 were on line at one time or another.[40]

When savage Chinese pummeling of the 25th Division outposts continued the following day, Colonel Nelson’s 1st Marines was transferred at 1315 to operational control of I Corps. The regiment’s three infantry battalions, antitank, and heavy mortar companies promptly moved out from their Britannia headquarters and
within two hours had relocated at 25th Division bivouac areas south of the KANSAS line in readiness for counterattack orders. The 1st Marine Division Reconnaissance Company was similarly ordered to 25th Division control to relieve a 14th Infantry Regiment reserve company in position along the east bank Imjin River defenses.

Overhead, close air support runs were being conducted by pilots of Marine Attack Squadrons 212, 121, and 323. A series of seven 4-plane strikes hit repeatedly from noon on those Chinese troops, hardware, and resupply areas north of the 25th Division line. The aerial assault continued late into the night with MPQ missions executed by VMA–121 and WMF–311.

During the 29th, control of the Vegas outposts—where 1st Division Marines had fought and died exactly two months earlier—changed hands several times between the indomitable Turkish defenders and the persistent Chinese. By dark, the CCF had wrested the northern crest from the TAFC which still held the southeastern face of the position. In the 24-hour period from 1800 on the 28th through the 29th, the 11th Marines had expended 41,523 rounds in 531 missions. At one point in the action Chinese counterbattery fire scored a direct hit on Turkish gun emplacements, knocking six howitzers out of action from the explosions of charges already loaded. As a result 2/11, under its new battalion commander, Major Max Berueffy, Jr., took over the direct support mission of the TAFC Brigade. Marine artillery spotters on station from 0450 to midnight directed 42 fire missions on CCF guns, while the rocket battery unleashed 20 ripples against troop activity, one of which caused 50 WIsAs. Although an Allied counterattack early in the day had restored Elko to friendly control, the enemy refused to be dislodged from Carson.

I Corps had previously regarded the defensive positions of the Nevada complex as “critical,” with the TAFC having been “instructed to hold them against all enemy attacks.”[41] By midday on the 29th, however, the I Corps commander, General Clarke, and 25th Division CG, General Williams, had apparently had a change of mind. The Vegas strength was down to some 40 Turks. Altogether more than 150 men under the 25th command had been killed and another 245 wounded in defense of Nevada positions. It appeared that the Chinese, constantly reinforcing with fresh battalions despite estimated losses of 3,000, intended to retain the offensive until the outposts were taken.

With Carson and Vegas both occupied by the enemy, the Elko position became untenable without the support of its sister outposts. Six times the CCF had crossed over from Carson to Elko to try to retake the latter position, but had been thus far deterred by Allied firepower. Accordingly, at 2300, the 25th Division ordered its reserve 14th Regiment, earlier committed to the Elko-Carson counterattack, to withdraw from Elko and the Turks to pull back from Vegas to the MLR. By daybreak the withdrawal was completed and 25th Division and Turkish troops had regrouped on the MLR.

The Army reported that more than 117,000 rounds of artillery and 67 close air support missions had buttressed the UNC ground effort. Official estimates indicated that in the three-day action the Chinese had fired 65,000 rounds of artillery and mortar, “up to this point an unprecedented volume in the Korean War.”[42] The Marine artillery contribution from its four active battalions during this 28–30 May period totaled 56,280 rounds in 835 missions.

During the three-day siege, 15 to 33 Marine tanks poured their lethal 90mm projectiles on the enemy from MLR firing slots. At times the action was so heavy that the tanks were refueled on line. As they ran out of ammunition and fuel, “armored utility vehicles of the battalion, with a basic load of ammunition aboard, maneuvered beside the tanks in position and rearmed them on the spot,”[43] to permit virtually uninterrupted tank firing. One Marine was killed in the action the first night. Although 4,162 rounds of Chinese fire fell near the tank positions, no damage to materiel was reported. For their part the M–46s and flames were responsible for 721 enemy deaths, an estimated 137 more killed, 141 wounded, and an estimated 1,200 injured.

During the second day of action, nearly 20 missions were flown by Corsairs and Skyraiders of the three Marine attack squadrons and the jet fighters of VMF–311 and–115. Altogether throughout 28–30 May, Marine
aircraft had flown no less than 119 sorties for the inflamed sectors of the U.S. Army 25th Division and adjacent British 1st Commonwealth Division. Of these, 99 were in support of the sagging Carson-Elko-Vegas-Berlins line.

Ground action ceased the following day as rain drenched the battlefield, although the 11th Marines reported sightings of more than 200 Chinese soldiers, most of them on the three recently lost outposts. Benched while the fierce battle was going on, the 1st Marines remained under operational control of I Corps as a possible contingency force from 29 May to 5 June. On the latter date, following the Eighth Army decision not to retake the Carson-Elko-Vegas outposts, the regiment reverted to Marine control and returned to Camp Britannia. The previous day the Communists had agreed on all major points of the UNC final offer and it appeared that a ceasefire was close at hand.

Diplomats and military leaders both felt this latest Chinese assault was to show a strong military hand and win dominating terrain features along the MLR. Thus the enemy would be able to improve his defensive posture when final battlelines were adjusted at the truce. It was not believed that the CCF effort was an attempt to expand their operations into a general offensive. In any event, the Nevada positions were downgraded from their previous designation as major outposts. I Corps also decreed no further effort would be made to retake them and that a “revaluation of the terrain in view of the destruction of the defensive work indicates these hills are not presently essential to defense of the sector.”[44]

If things were now relatively quiet along the battlefront of the I Corps coastal sector, the situation had begun to heat up in the central part of the UNC defense line. On 10 June, following a CCF realignment of troops and supply buildup that had not gone unnoticed by Eighth Army intelligence officials, elements of the CCF 60th and 68th Armies struck the ROK II Corps area, on the east-central front. (See Map 29.) Advancing south along both sides of the Pukhan River with two divisions, the Chinese struck at the ROK II defense line which originally had bulged out to form a salient in the Kumsong vicinity. Within six days the ROK line had been forced back 4,000 yards. In subsequent assaults the enemy made new penetrations further west in the ROK II MLR. Although the main Communist thrust was directed against the ROK II Corps, secondary attacks were also made in the X Corps sector east of ROK II, in the Punchbowl area manned by the ROK 20th Division. It was the heaviest, all-out drive since the CCF spring offensive of April–May 1951, when the UNC had been pushed south approximately 30 miles across the entire Korean front.

By 18 June, the CCF assaults started to settle down. During the nine days of flaming action, ROK units had suffered some 7,300 casualties to enemy losses of 6,600. Boundaries had been redrawn and three ROK divisions had been redeployed in counterattacks to plug holes in the line that the Chinese had punched open. Nearly 15,000 yards of ROK front had been pushed 4,000 yards south and several hill positions east of the Pukhan had been lost.

The brief respite ended 24 June when the CCF again directed heavy blows against the ROK troops, ignoring other UN forces in the Eighth Army line. It was generally considered a retaliatory move for the 18 June mass release of anti-Communist prisoners by South Korean President Rhee. This time the major target of the renewed Chinese offensive was the ROK 9th Division, in the IX Corps sector immediately west of the ROK II Corps. On 25 June the 1st ROK Division on the eastern flank of I Corps, to the right of the 1st Commonwealth Division, was pounded by another Chinese division. Significantly, the date was the third anniversary of the invasion of South Korea.[45] The 7th Marines, training in I Corps reserve, was put on standby status. The regiment was removed the following day when the 1st KMC/RCT (minus its 3d Battalion) was instead placed in readiness,[46] and subsequently moved out from its Indianhead area to be committed as a relief force in the left sector of the 1st ROK line.

By the 26th, the persistent Chinese probes of the 1st ROK sector had resulted in several forward outposts being overrun. To help stem the action the Marine 1st 4.5-inch Rocket Battery was displaced on I Corps Artillery
order from its regular position (in the right regimental sector) 20 miles east to support the hard-pressed ROK division. On at least two occasions the battery placed ripples between ROK positions only 600 yards apart and it was felt that these “continued requests for fire close to friendly troops attested to the gunnery of the unit.”[47] Between that date and the 30th, the rocket battery remained in the ROK sector, firing a total of 25 ripples. For the 25th Infantry Division sector, however, the front continued undisturbed throughout the entire month of June.
While the division was in I Corps reserve during the greater part of the April–June period, the 6,800-man 1st Marine Aircraft Wing continued its missions as an operational component of Fifth Air Force. For the Marine air arm it was a time of a major tactical innovation, a number of new air records set, and rapid personnel changes in the squadrons.

Shortly before the Marine division went off the line, a new method of close air support at night was introduced. This employed the use of two or more ground controlled 24-inch searchlights located on prominent terrain features along the MLR in the 7th Marines left battalion sector where the missions were to be flown. Enemy-held reverse slopes—in some cases less than 500 yards from Marine positions—were thereby pinpointed by the powerful intersecting searchlight beams. These long pencil-shaped beams created an excellent artificial horizon and enabled pilots to make bombing or strafing runs with a high degree of accuracy even on the blackest of nights. Manned by ANGLICO personnel, the lights were employed either for target location or illumination (both shadow and direct). A tactical airborne observer in an OE light liaison plane of VMO–6 directed the searchlight teams and controlled the missions.

A week of experimentation and trial runs to perfect the night close air support (NCAS) was conducted by several VMF(N)–513 pilots under direction of Colonel Jack R. Cram. Formerly CO of Marine Air Control Group Two at K–3, he had extended his tour in Korea to complete work on the new program. On 12 April, the first night of operations, Major Charles L. Schroeder and Second Lieutenant Thomas F. St. Denis flew two night support missions in F7F Tigercats. Although employed only a few weeks prior to the division going into reserve on 5 May, the new system rated an enthusiastic response from both pilots and ground commanders, all the way up to the division CG. As the latter reported to the Commandant following the first week of night close support missions, “results. . . exceeded all expectations.”

Between 12 April and 5 May, the night fighter squadron conducted 58 NCAS sorties in the division right sector employing this new control system with excellent results. The procedure was a marked success and made it possible to provide continuous 24-hour-a-day close support to Marine infantry units. It was considered a supplement to, not a replacement for the MPQ (radar controlled bombing) missions of MASRT-1. Plans called for F9F aircraft to be integrated into the program, since the F7F Tigercats were being replaced by jets. Allied psychological warfare teams on 17 April introduced a different theme in their broadcasts to the enemy: that of the dangers to the CCF from the new searchlight marking of targets. As a Marine training bulletin noted: “It is believed that this method of attack by aircraft is particularly demoralizing to the enemy because he is unable to anticipate where the strike will hit, and therefore has no means of defending himself against it.”

Another tactical improvement about this same time dealt with artillery flak suppression in support of close support aircraft. Two refinements made in the procedure in the late spring of 1953 involved firing of HE rounds during the actual run of planes over the target. Basically, the plan consisted of releasing a TOT or VT concentration on the most lucrative enemy antiaircraft positions within a 2,500-yard circle around, the strike area. A continuous rain of HE-fuzed projectiles was placed on these targets for a three-minute period, during which Marine planes made their runs.

Favorable results were achieved in that new system tended to keep enemy antiaircraft gunners off-balance for a longer period of time and thus decreased the danger to friendly attacking aircraft. On the other hand, pilots quickly noted that this became an “unimaginative employment of an unvarying flak suppression schedule
which Communist AA gunners soon caught onto and turned to their own advantage.”52

With respect to squadron hardware, Marine combat potential increased substantially during the spring months with the phasing out of F7Fs in Night Fighter Squadron 513 and introduction of the new F3D–2 twin-jet Skyknight intruder. By late May the allocation of 24 of these jet night fighters had been augmented by 4 more jets from the carrier USS Lake Champlain and the squadron “assumed its primary night-fighter mission for the first time in the Korean War.”53 While the sturdy, dependable Tigercats54 made their final contribution to the United Nations air effort early in May with the experimental NCAS program, the new Skyknights continued the squadron’s unique assignment inaugurated in late 1952 as night escort to Air Force B–29 bombers on their strike missions. Not a single B–29 was lost to enemy interceptors after 29 January 1953. The capabilities of the skilled Marine night-fighters were noted in a “well done” message received by the CO, VMF(N)-513 in April from the Air Force.55

Organizational changes within the wing included the arrival, on 29 May, of a new MAG–12 unit to replace the “Checkerboard” squadron. VMA–332 (Lieutenant Colonel John B. Berteling) was slated to operate on board the USS Bairoko (CVE–115) for the F4U carrier-based squadron VMA–31256 due for return to CONUS. Veteran of 33 months of combat while attached to the wing as West Coast (CTE 95.1.1) aerial reconnaissance and blockade squadron, VMA–312 (Lieutenant Colonel Winston E. Jewson) was officially relieved 10 June. The change, moreover, was the first phase of a new personnel policy, carrier unit rotation, that was expected to implement a unit rotation program for land-based squadrons. It was anticipated that the new unit rotation program would eliminate inherent weakness of the individual pilot rotation system and thus increase the combat effectiveness of the wing.57

During the period other organizational changes included transfer of administrative control of VMF(N)–513 on 15 May from MAG–33 to MAG–12.58 The squadron, with its new twin-engined jet fighters, moved from K–8 (Kunsan) further up the coast to the MAG–12 complex at K–6 (Pyongtaek), upon completion of the new 8,000-foot concrete runway there. This phased redeployment of nightfighter personnel and equipment began in late May and was concluded on 6 June without any interim reduction of combat commitments. Replacement of the squadron F7F–3Ns with F3D–2s was also completed in early June.

Late that month, plans were underway for two additional changes: the Marine photographic squadron, VMJ–1, was due to be separated administratively and operationally from MAG–33 on 1 July and revert to 1st MAW; and Marine Wing Service Squadron One (MWSS–1) was to be deactivated, effective 1 July.

The change of command relationships between CG, FAF and CG, 1st MAW earlier in the year59 which had restored operational control of certain designated Marine air units to the wing commander, increased the efficiency of 1st MAW operations. Despite the fact that VMJ–1 at times contributed nearly 40 percent to the total FAF input of all daylight combat photographs,60 aerial intelligence (both pre- and post-strike photos) supplied to wing and group headquarters was considered inadequate. As a MAG–33 intelligence officer commented with some exasperation as late in the war as May 1953:

“The Section continued to experience difficulty in obtaining 1:50,000 scale overlays of friendly MLR and OP positions. These overlays are important for making up target maps for close support missions, but they are continually held up for long periods by higher echelons, and, if received here at all, are then often too old to be considered reliable.”61

Similarly, at the individual squadron level, the carrier unit VMA–312 shortly before its relief, reported: “The one limitation on squadron activities continued to be photo coverage of the strikes. With limited facilities available, the squadron has no clear cut pictures of strike results.”62 Return of VMJ–1 to operational control of General Megee ultimately “gave the Wing adequate photo-intelligence for the first time since commencement of combat operations in Korea.”68

Indoctrination of new replacement personnel within the 1st Marine Aircraft Wing took a swift upturn
during the spring period. Pilots who had completed 100 combat missions were transferred to staff duty elsewhere in the wing in Korea or rotated Stateside. The average squadron personnel strength ran to 88 percent of T/O for enlisted; and officer strength, considerably less, frequently dipped as low as 61 percent. Under the 100-missions policy, it was a time of rapid turnover of unit commanders, too, as witnessed from the following squadron diary entries:

“VMA-212—Lieutenant Colonel James R. Wallace assumed command from Major Edward C. Kicklighter, effective 19 June; the latter had been squadron ExO and acting CO in interim period following 30 April departure of former CO, Lieutenant Colonel Smunk;

“VMA-323—Lieutenant Colonel Clarence H. Moore vice Lieutenant Colonel Frash, on 11 April; and Major Robert C. Woten succeeding Lieutenant Colonel Moore on 27 June;

“VMA-121—Major Richard L. Braun vice Lieutenant Colonel Hughes, on 21 April;

“VMF(N)-513—Lieutenant Colonel Ross S. Mickey vice Lieutenant Colonel Conley, on 6 May; in June, Lieutenant Colonel Robert L. Conrad, acting CO, named CO for Lieutenant Colonel Mickey, hospitalized for injuries received in a May aircraft accident;

“VMJ–1—Lieutenant Colonel Leslie T. Bryan, Jr. vice Lieutenant Colonel William M. Ritchey, on 15 May;

“VMF–311—Lieutenant Colonel Arthur M. Moran vice Lieutenant Colonel Coss, on 21 April; Lieutenant Colonel Bernard McShane vice Lieutenant Colonel Moran, on 1 June;

“VMF–115—Lieutenant Colonel Lynn H. Stewart vice Lieutenant Colonel Warren, 5 June.”

With respect to CAS activities, excellent weather in April—only a single day of restricted flying—brought the 1st MAW air tally that month for its land-based squadrons to 3,850 effective combat sorties (440 more by VMA–312) and 7,052.8 combat hours. This was a substantial increase over the preceding months. Not surprisingly, the average daily sortie rate for the month was correspondingly high: 128.3. Of 1,319 CAS sorties the largest proportion, 579 and 424 (43.9 percent, 32.1 percent), were for Marine and ROK operations, respectively.

The outstanding day of the month was 17 April. During the 24-hour reporting period, 262 sorties were completed by MAGs–33 and–12 pilots,[64] who expended a combined total of 228.3 tons of bombs and 28,385 rounds of 20mm ammunition. For the two MAG-33 fighter bomber squadrons, it represented maximum effort day. Preparation had been made a week earlier to devise the targeting and best all-round flight schedules for ordnance and line sections. Objective areas for the mass attack were picked by the wing G–3 target selection branch and approved by the EUSAK-Fifth Air Force JOC. It was decided that “flights of eight aircraft staggered throughout the day would offer the best efficiency in expediting reloading and refueling with not more than sixteen aircraft inactive on the flight line at one time.”[65] Throughout the day, from 0410 to 2030, VMFs–311 and–115 continuously pounded designated targets in support of the U.S. 7th and 3d Infantry Divisions.[66] Commented MAG–33:

“Hitting an all-time high in the annals of memorable days, this, the seventeenth of April not only further proved MAG–33’s ability to cripple the enemy’s already diminishing strength but it also allowed VMF–115 to set records in total airborne sorties launched in a single day plus a record total ordnance carried and expended in one day by jet type aircraft.”[67]

VMF–115 alone, with 30 pilots and 23 aircraft, had flown 114 sorties and delivered 120 tons of bombs on North Korean targets.

A sample of the intensity of this maximum day was a series of three early-morning interdiction strikes led by three VMF–115 pilots that launched the effort. Led by Lieutenant Colonel Joe L. Warren, Major Samuel J. Mantel, Jr., and Major John F. Bolt, the 23 attacking Panther jets lashed the objective with 22.35 tons of ordnance and 4,630 rounds of 20mm ammunition. The three missions destroyed half of the buildings and inflamed 95
percent of the target area in the enemy supply concentration point T’ongch’ón on the Korean east coast.

By contrast, wing operations in May were considerably hampered by the bad weather peculiar to this time of the year in Korea. Restricted flying conditions were recorded for 18 days of the month. A total of 153 CAS sorties were flown for the Marine division before its 5 May relief from the front lines. Of the wing’s 3,359 sorties[68] during the month, 1,405 were for close support to forward units beating back Communist encroachment efforts. The allocation of CAS sorties was 412 for U.S. infantry divisions (including 211 for the 25th Division occupying the customary Marine sector); 153 for the 1st Commonwealth Division at the Hook which the Communists assaulted on 27–28 May as part of their overall thrust against western I Corps defenses; 412 sorties for ROK units; and 63, miscellaneous. Heaviest action for Marine aviators took place towards the end of the month to thwart enemy blows in the I Corps sector where Army and Turkish units were attempting to repulse the Chinese.

The renewed effort of the Chinese Communists against UNC ground forces in late May continued sporadically the following month. A number of new records were set by Marines flying CAS assignments under the Fifth Air Force. During the intense mid-June attacks on the ROK II Corps area and adjacent X Corps sector, MAGs–12 and–33 pilots chalked up some busy days. Between 10–17 June, Marine, Navy, and Air Force aircraft had flown 8,359 effective sorties, the bulk of this massive FAF effort to buttress the crumbling ROK defense. Of this number, Marine sorties totaled 1,156, or nearly 14 percent. (Combat sorties for the 1st MAW throughout June came to 3,276 despite 23 days of marginal to nonoperational weather.) Marine pilots scored as high as 48 percent of a single day’s interdiction strikes made by FAF. This occurred 15 June when the 1st MAW flew a record-breaking 283 sorties, followed by another peak 227 sorties the next day.

Actually, when the ground situation in the ROK II Corps front began to deteriorate on 12 June, the new Fifth Air Force commander, Lieutenant General Samuel E. Anderson, “waived the {3,000 foot} minimum-altitude restrictions on his fighter-bombers and ordered his wings to give all-out support to the Eighth Army.”[69] The Seventh Fleet commander, Admiral Clark, likewise kept his carriers on line for seven days and ordered its naval pilots to “team with Marine and Fifth Air Force airmen for a close-support effort exceeding anything up to that time.”[70] When the ROK II Corps defenses cracked open on 15 June, temporary clearing weather “allowed General Anderson and Admiral Clark to hit the Reds with everything they had. FEAF planes flew a total of 2,143 sorties of all kinds for the largest single day’s effort of the war.”[71]

Commenting on this heavy action period, 14–17 June, a dispatch to General Megee from the new FAF commander, who had succeeded General Barcus the previous month, noted:

“The figures are now in. From 2000, 14 Jun 53, to 0001, 17 Jun 53, Fifth Air Force units flew a total of 3,941 combat sorties. The cost was 9 pilots lost, 11 aircraft lost, 11 aircraft major damage, 42 aircraft minor damage. The results: 1 enemy offensive stopped cold. I very deeply appreciate the splendid efforts of all members of the 5th AF at all levels. Only a concerted team effort made the foregoing possible.”[72]

This came, incidently, only five days after receipt by the 1st Marine Aircraft Wing of the Korean Presidential Unit Citation.[73] The award cited the wing’s “outstanding and superior performance of duty” between 27 February 1951 and 11 June 1953. During this period Marine fliers executed more than 80,000 combat sorties for UNC divisions.

The fighter-bombers of MAG–33 and the MAG–12 attack planes saw heavy action during 24–30 June when the Chinese again concentrated their attention on ROK divisions in the UNC line. Peak operational day was 30 June. Marine squadrons alone executed 301 sorties, including 28 percent of the CAS and 24 percent of total FAF interdiction missions. It was also an outstanding day for MAG–12 which “outdid itself by flying 217 combat sorties against enemy forces. The 30th of this month saw MAG–12 establish a new ordnance record when an all-time high of 340 tons of bombs and napalm were dropped on North Korea.”[74] Contributing heavily to this accomplishment was Marine Attack Squadron 121. It unleashed 156 tons of ordnance, a squadron record. It was
believed this also established an all-time record for tonnage expended on the enemy by a Marine single-engine propeller squadron.
Operations in West Korea
Pat Meid and James M. Yingling

Chapter 8. Marking Time (April-June 1953)
Other Marine Defense Activities

Like their counterparts on the Korean mainland, the Marines, naval gunfire teams, and ROK security troops comprising the West Coast and East Coast Island Defense Commands felt the alternating pressure build-up and slow-down that typified the closing months of the war. At both installations the defense had been recently strengthened, more or less by way of response to a CINCPacFleet intelligence evaluation in December 1952. This alerted the isolated island forces to the possibility of a renewed Communist attempt to recapture their positions. The Allied east coast defense structure at Wonsan, right at the enemy’s own front door just above the 39th Parallel, was considered particularly vulnerable.

As in the preceding months, the mission of the west coast island group remained unchanged—namely, the occupation, defense, and control of its six island components. These, it will be remembered, were: Sok-to, Cho-do, Paengyong-do (command headquarters), Yongpyong-do, and the two lesser islands at Taechong-do and Tokchok-to.[76] Formal designation of the island commands was modified on 1 January 1953. At this time the West Coast and East Coast Island Defense Elements (TE 95.15 and TE 95.23) were redesignated as Task Units (TU 95.1.3 and TU 95.2.3) respectively. Korean Marines, who represented the bulk of these task units, were provided from the 2d KMC Regiment, the island security force. This unit constituted the main defense for the important U.S. Marine-controlled islands off the Korean west and east coasts.

Approximately 17 Marine officers and 100 enlisted men were assigned to the western coastal complex, with two battalions of Korean Marines fleshing out the garrison defense. The primary mission of this island group was to serve as offshore bases for UNC intelligence activities, including encouragement of friendly guerrilla operations conducted by anti-Communist North Korean personnel. Artillery based on the Marine-controlled islands provided both defensive fires and counterbattery missions against enemy guns sited on the nearby mainland.

The secondary mission of WCIDU, that of training Korean troops in infantry and weapons firing exercises, continued to be hampered somewhat by faulty communication. As one officer observed, the training program to qualify selected KMCs for naval gunfire duties “met with only modest success, due primarily to the language barrier and lack of communications equipment in the Korean Marine Corps. Personnel who had received this training did prove to be extremely helpful in accompanying raiding parties on the mainland in that they were able to call for and adjust fires.”[77]

Enemy pressure against the West Coast Islands, both from Communist shore guns and bombing, had increased during the fall and winter of 1952. Cho-do, shaped roughly like a giant downward-plunging fish, as previously noted had been bombed in October for the first time in the history of the command. This new trend was repeated for the next two months. By way of response, two 90mm guns were transferred to Cho-do from Kanghwa-do (a more peaceful guerrilla-controlled island northwest of Inchon) for use there as counterbattery fire against aggressive mainland batteries. The islands of Sok-to and Paengyong-do had likewise been bombed during this period, although no damage or serious casualties resulted. In December, enemy shore guns fired 752 rounds against Task Force 95 (United Nations Blockading and Escort Force) ships charged with responsibility for the island defense, in contrast to the 156 rounds of the preceding month.

Intelligence in December from “Leopard,” the friendly Korean guerrilla unit at Paengyong-do, also reported the presence of junks, rubber boats, and a nearby enemy artillery battalion off Chinnampo, believed to be in readiness to attack the island. A captured POW, moreover, on 22 December reported that elements of the 23d
NKPA Brigade located on the mainland across from Sok-to would attempt to seize the island group before the end of the year. The next day, shortly after dusk, when a concentration of 200 rounds of 76mm suddenly fell on Sok-to, and another 125 rounds struck neighboring Cho-do, it looked as if it might be the beginning of trouble. Naval gunfire (NGF) spotters on the islands directed the fire from UNC patrol boats cruising the Yellow Sea. This counterbattery fire quickly silenced the enemy guns. Again, at the end of the month, West Coast islands were alerted for an invasion, but it never materialized.

A matter of continuing concern to the command during the fall and winter months was the North Korean refugee problem. So serious was the situation, in fact, that it had warranted a directive from the TF 95 commander (Rear Admiral John E. Gingrich). In the early fall, a large number of refugees had filtered into the West Coast Islands, raising serious doubts as to their feeding and ultimate survival during the Korean winter. Through the United Nations Civil Assistance Command, a tentative date of September had been set for evacuating these North Korean refugees to South Korea. By November the question of their relocation was still not settled, although the feeding problem had been eased somewhat by two LST-resupply loads of emergency rations and grain by CTF 90.

Activities followed a fairly consistent pattern during early 1953, with harassing fire striking the islands from the North Korean shore batteries and sporadic bomb and propaganda drops. Periodically USAF pilots who had strayed off course, planes from the nearby British carriers HMS Glory or Ocean, or Marine fliers from USS Badoeng Strait or Bataan made emergency landings on the beach airstrips at Paengyong-do for engine repairs or refueling. Logistical support continued to be a problem, due to the peculiarities of the joint ordering system through the Army. In January the western islands had unfilled requisitions dated from as early as February 1952. Official unit reports also noted the difficulty of obtaining medical supplies either promptly or in full.

In April, with the hot-cold cease-fire talks again taking one of their spasmodic upswings, WCIDU commander, Colonel Harry N. Shea, conferred with American and British naval officials regarding CTG 95.1’s (Royal Navy Commander, West Coast Blockading and Patrol Group) Operation PANDORA. This called for the evacuation of Sok-to and Cho-do, the two WCIDU islands north of the 38th Parallel, at the time of the armistice.

Increased naval gunfire and artillery missions against active enemy mainland targets, caves, and observation posts gave the two new 90mm guns delivered to the Sok-to garrison the month before and the pair already at Cho-do, as well as their gun crews, some unscheduled practice. Marine garrison personnel at the two islands and nearby patrol ships were busy 25 days of the month knocking out or neutralizing Communist mainside batteries. Late that month, the battleship USS New Jersey stationed off the east coast, sailed around the Korean peninsula to add its 16-inch guns to the bombardment. Enemy shelling of the two western islands increased in June, with 1,815 rounds expended in response by the two Marine gun sections.

During June, as it appeared the end of the war was in sight, the first phase of PANDORA got underway with the evacuation by CTF 95 of approximately 19,425 partisans, their families, and refugees from Sok-to and Cho-do to islands south of the 38th Parallel. A new WCIDU commander, Colonel Alexander B. Swenceski, had also arrived by this time, since the average tour of duty was but a brief four months at both island commands.

Across the Korean peninsula, the east coast Allied off-shore island defense centered on a cluster of islands in Wonsan Harbor. Situated more than 100 miles north of the battleline, these strategically-placed islands comprised the northernmost UN-held territory in Korea. The East Coast Island Defense Command numbered approximately 35 Marines, 1,270 Korean Marines, and 15 Naval personnel. Headquarters for TU 95.2.3 was Yo-do, the largest installation, which was garrisoned by approximately 300 Korean Marines and a limited detachment of USMC and USN personnel. Smaller defense forces were located on the other islands under ECIDU command. In addition, an improvised NGF spotting team was also stationed at the three forward islands (Mo-do, Tae-do, and Hwang-to-do). Mission of the ECIDU was a defensive one: to hold the islands as a base for covert intelligence activities. The island defense system existed for the purpose of “containing and destroying any enemy
forces who escape detection or who press home an attack in the face of Navy attempts at their destruction.”[80]

Individual island commanders were responsible for the defense of their small parcels of seaborne real estate, control of both defensive and offensive NGF missions in the area, and evaluation of intelligence regarding enemy troop locations, the movement of supplies north, or new emplacements of hostile guns. Fire support for the ECIDU islands, exposed to the enemy shore batteries above the 39th Parallel, was available from Task Force 95, which maintained a task group of ships off both the east and west coasts. Aircraft and ships of Task Force 77 (Seventh Fleet Striking Force), operating off the East Korean coastline, were also on call. In December, for instance, the Corsairs of TF 77 had resumed their rail-bridge interdiction. All-out attacks on railroad and highway bridges, as well as bombing runs on the 90-mile stretch of east coast railroad from Hungnam to Songjin, were undertaken to cut off supplies being moved north for Communist industrial use.

February marked the second anniversary of the siege of Wonsan by the UNC, the longest blockade of a port in recent U.S. history. Some naval authorities by this time argued that the venture had become one of doubtful merit which “should never have been undertaken, but its long history made it difficult to abandon without apparent admission of defeat.”[81] In any event, the month also signaled increasing attention paid by hostile shore batteries to the little island enclave. For seven consecutive days, 9–15 February, the harbor islands were targets for enemy mixed artillery and mortar shells. Minor materiel damage and casualties were sustained at Yo-do during a Valentine’s Day bombardment, 14 February.

Altogether, the enemy harassed the harbor islands for 16 days during the month, expending 316 rounds, compared with 11 days in January. Hostile fire, not limited to the Wonsan Harbor islands, was also directed against friendly ships USS DeHaven and USS Moore. These provided counterbattery fire and were, in turn, fired upon, the nearest shells landing only 400 yards from the two vessels. This attack, also on 14 February, was described as an “unusually determined and precise”[82] effort. The enemy, moreover, did not appear to take his usual precautions with respect to disclosing his positions. The fact that a Communist shore battery would cease fire when subjected to friendly counterbattery, with other positions then immediately taking up the delivery, “indicated some sort of central control for the first time.”[83] The I Corps, NKPA artillery units across from the Wonsan Island command revealed the “heavy, effective artillery capability of enemy batteries which encircle Wonsan Harbor.”[84]

Unseasonably good weather the latter part of February improved the transportation and supply situation. With the bitter cold and wind subsiding, maintenance crews could repair the ravages of the past several months. Craft, up to LCVP size, were hoisted in on a large pontoon for repair. For most of December and January, “this small, physically remote Marine Corps command,”[85] as the ECIDU commander, Lieutenant Colonel Robert D. Heinl, Jr. himself described it, had been snowbound. Winds howled in excess of 40 knots, and temperatures dropped to 10° below at night. Personnel at the command island, Yo-do, subsisted on C rations for eight days. With boating operations suspended because of the high winds, it was not possible to send supplies or water to Hwangto-do which for several days relied solely on melted snow.

The prolonged foul weather, moreover, interrupted all classified radio communications between the ECIDU and the outside world. Crypto guard for the Wonsan islands was maintained by elements of the East Coast TG 95. Coded and decoded security radio messages had to be picked up by patrol boat which could not reach the islands during extreme conditions of icy seas and heavy snows.

As with the men on the front line, the Communists stepped up their pressure and gunfire against the island command Marines during March. The record[86] 524 rounds which fell on the ECIDU islands in March doubled the following month when the command received 1,050 rounds from active mainland batteries. In April the persistent NKPA artillerymen kept up a continuing bombardment of the eastern coastal UNC islands, missing only three days of the entire month, that caused nine casualties when a direct hit was made on the Tae-do CP bunker. It was the highest rate of incoming since UN occupation of the islands. Another April record was enemy
mine laying, which increased sharply in both the WCIDU and ECIDU command areas. A total of 37 mines were sighted, the highest number since August 1952. Communist shore gunners, in addition to harassment of the island themselves, fired 2,091 rounds against TF 95 ships, another all-time high.

With respect to personnel, the situation had improved markedly. An increase in ECIDU command strength authorized by CG, FMFPac in March provided for an additional 9 Marine officers, 38 enlisted Marines, and 6 Navy personnel. These were exclusive of the current detachments of 1st ANGLICO shore party and naval maintenance personnel, and represented nearly a 40 percent strength increase.[87] Not long afterward the new ECIDU commander, Lieutenant Colonel Hoyt U. Bookhart, Jr., arrived to succeed Lieutenant Colonel Heinl, who had held the position since the preceding November.

As with the WCIDU force, by late spring it appeared that the days of UNC control and occupation of the east coast islands were numbered. In view of the imminent armistice, a CinCFE directive of 11 June called for the evacuation of all civilians, supplies, and equipment “in excess of immediate needs.”[88] This was a preliminary step towards full evacuation of the islands once the armistice agreement was reached. Accordingly, on 11 June, as evacuation of the friendly west coast partisans got under way, villagers from Yo-do, the largest and ECIDU headquarters site, and the far northern island of Yang-do were similarly moved south. The evacuation was completed by mid-June.
A rash of political activity in June markedly affected the tenor of military operations in Korea. Intensified Communist aggression broke out north of ROK sectors in the Eighth Army line, largely as a reaction to President Rhee’s unprecedented action on 18 June of freeing, with the help of ROK guards, approximately 25,000 North Korean anti-Communist prisoners at POW camps in the south. Other anti-Communist POWs at Camp No. 10, near Ascom City, staged violent break-out attempts at that same time and Company A, 1st Amphibian Tractor Battalion passed to operational control of the camp commanding officer there to help prevent a repetition of any such incidents in the future. Following a recess of truce talks, pending a clarification of the status of the current military-diplomatic agreements, key delegates held crisis meetings at Panmunjom and Tokyo to get the beleaguered talks back on track.

Despite the furor, signing of the armistice agreement was expected shortly. As a result, the Munsan-ni Provisional Command was reorganized with the 1st Marine Division assigned the responsibility of reactivating the United Nations Personnel and Medical Processing Unit for the anticipated post-truce exchange of prisoners of war. This was to be conducted along lines similar to that for Operation LITTLE SWITCH, the initial limited exchange. The Division Inspector was named processing unit commander and functional sections (S-1, S-2, S-3, S-4, interpreters, messing, medical, engineer) were also activated. As the division training tour in I Corps reserve drew to a close, a number of regimental CPXs were held during June. And the 5th Marines drew a new assignment: training in riot control. Following civilian demonstrations that had erupted in various populated areas of Eighth Army, including the I Corps sector, the regiment was ordered “to be prepared to move in battalion size increments, to be employed as army service area reserve in suppression of civil disturbances anywhere in army service area.”

While the Marine infantry regiments concluded their training period, the 1st Tank Battalion, Kimpo Provisional Regiment, and Division Reconnaissance Company remained under operational control of the frontline U.S. 25th Infantry Division. Marine artillerymen likewise continued under orders of CG, I Corps Artillery, in the forward area, reinforcing division artillery fires. Tentative plans were underway for movement of the 1st Marine Division back to its former position on the MLR in early July. After the signing of the cease-fire, the division would comply with provisions of the truce agreement by closing out its former MLR and withdrawing to designated positions two kilometers south of the former defensive positions.
FOR THE FIRST WEEK OF JULY the 1st Marine Division continued its mission as I Corps Reserve and its two-month period of intensive combat training that had begun on 5 May. Planning got under way on 1 July, however, for return of the division to its former sector of the MLR, as the western anchor of I Corps, in relief of the 25th Infantry Division.

Marine infantry components were directed by I Corps to effect the transfer of operational control during the night of 7–8 July. Tank and artillery units—already in the division sector throughout the reserve period—were to make whatever minor relocations were necessary at suitable times thereafter. Division Operation Plan 10–53 ordered the 7th Marines to reassert its responsibility for the right regimental sector of the MLR, eastward to the 1st Commonwealth boundary. The 5th Marines, which had been in reserve at the time of the May relief of lines, was assigned to the center sector of the MLR, while the 1st Marines was designated as divisional reserve.

Relief of the 25th Infantry Division by Marine units got underway on 6 July when the first incoming elements of Colonel Funk’s 7th Marines moved up to the right regimental sector manned jointly by the U.S. 14th Infantry Regiment and the Turkish Armed Forces Command. Advance personnel reported into the left sector, to be taken over by the Marine 1st Battalion, and at 1400 the 3d Battalion relieved the TAFC reserve battalion in the rear area.

Two platoons from the Marine regiment’s 4.2-inch Mortar Company, meanwhile, also began their phased relief of the Turkish Heavy Mortar Company. The incoming mortar crews had some unexpected early target practice. As the men took up their active MLR firing positions in the right battalion sector, they were promptly forced to put their tubes into action to silence a troublesome machine gun, enemy mortars, and hostile troops behind the Jersey Ridge to the north and Reno and Elko on the west. That evening the 2d Battalion opened its new command post in the eastern sector, occupied by two TAFC battalions.

Sharply at 0455 on 7 July, the 7th Marines assumed responsibility for the right regimental sector and came under operational control of the 25th Division. Shortly after noon that day, forward units of 1/7 reached the 25th Division sector after a three hour motor march from Camp Indianhead, through driving rains in their second day without letup. At the battalion sector, 1/7 joined the advance echelon of 40 men who had arrived the previous day and took over its MLR positions from the 14th Infantry. Additional 7th Marines units reporting in throughout the day and assuming new locations were the weapons, mortar, and antitank companies.

The first of Colonel Tschirgi’s 5th Marines returned to their center regimental sector before dawn that same day to begin their relief of the Army 35th Infantry Regiment. At 0300 the 3d Battalion assumed responsibility for the eastern half of the MLR. By late afternoon, antitank personnel and the 2d Battalion were in line, the latter taking over the western battalion sector at 1716. In the rear regimental area, early elements of Colonel Nelson’s 1st Marines, locating just south of the Imjin River, had begun to arrive by 1300. The regiment would assume ground security for the Spoonbill and Libby (formerly X-Ray) bridges in the sector as well as MASRT #1.

No one needed to remind the 1st Marine Division that the territory it was moving back into was not the same—with respect to defense posts in the right regimental sector—that it had left two months earlier. Three of its six outposts there (Carson, Elko, Vegas) had fallen to the enemy in the late-May battle, despite the formidable resistance of the defending Turks. Outpost Ava remained at the far western end of the line, with the Berlin-East Berlin complex in the right battalion area. Some 6,750 yards of intervening MLR—more than four miles—lay in
between, bereft of any protective outposts to screen and alert the defending line companies to sudden enemy assaults. The Marines were thus returning to a main line of resistance considerably weakened in its right regimental sector.

As the 1st Division CG, General Pate, observed:

“Vegas [had] dominated the enemy approaches to Berlin from the north and northwest and therefore made Berlin relatively secure. Berlin, in turn, dominated the enemy approaches from the north and northwest to East Berlin and made East Berlin relatively secure. The loss of Outpost Vegas to the CCF placed Berlin and East Berlin in very precarious positions and negated their being supported by ground fire except from the MLR.”[2]

Ground support fire from the MLR, moreover, tended to be only moderately successful in supporting the outposts because of the nature of the terrain. A major Communist stronghold, Hill 190, lay northeast of the Carson-Elko-Vegas complex. Since Berlin (COP 19) and East Berlin (COP 19-A) were sited on extensions of this same hill mass, the enemy could make sudden “ridgeline” attacks against the Berlins. With buffer outpost Vegas now lost, the likelihood of CCF success in such attacks was “immeasurably increased.”[3]
It did not take the Chinese long to exploit this situation. At about 2100 on 7 July, while the relief of lines was in progress, the two Berlin outposts and newly-located MLR companies of Lieutenant Colonel Cereghino’s 2d Battalion (from the left: D, F, and E), were greeted by a heavy volume of Chinese mortar and artillery fire. The barrage continued unremittingly, followed by waves of a reinforced Chinese battalion that swept over the two platoon-sized outposts, from the direction of Vegas. By 2345 defending Marines at both outposts were engaged in hand-to-hand combat with the enemy, identified as elements of the 407th Regiment, 136th Division, 46th CCF Army.

Berlin, manned at the time by TAFC and Marine personnel, was unexpectedly strengthened by a Company F reinforced squad that had been dispatched on an earlier ambush patrol in the vicinity of the outpost. At East Berlin, however, the overwhelming hordes of Chinese soldiers advanced to the trenchline of the steep forward slope and quickly locked with the Marines at point-blank range. Despite the coordination of MLR machine gun, 60mm, 81mm, and 4.2-inch mortar, and artillery fires from 2/11 and 4/11, the enemy overran the outpost at 2355 after heavy, close fighting. Chinese mortar and artillery barrages, by midnight, had continuously disrupted the Marine communications net at East Berlin, and by 0130 radio relay was also out at Berlin proper.

A provisional platoon from Headquarters and Service Company of 2/7 was quickly ordered to reinforce the main line against any attempted breakthrough by the Chinese. This was a distinct possibility since the Berlins were only 325 yards from the MLR, nearer than most outposts. Men from Companies H and I of the rear reserve 3d Battalion (since 26 May commanded by Lieutenant Colonel Paul M. Jones) were also placed under operational control of 2/7 and ordered to forward assembly areas in readiness for a thrust against the enemy at East Berlin.

At 0355 a Company F squad jumped off for the initial counterattack. This was made at 0415, without artillery preparation, in an attempt to gain surprise for the assault. It was thrown back. A second Company F unit, by 0440, was on its way to reinforce the first but got caught by 25 rounds of incoming, with 15 men wounded. It continued on, however, but an hour later the Marines were ordered to disengage so that the artillerymen could place TOT fire on the area preparatory to a fresh attempt to dislodge the enemy soldiers.

During the early morning hours of 8 July, large numbers of Chinese were seen at their new Vegas and Reno strongholds. Marines of the 1st 4.5-inch Rocket Battery blanketed hostile troops there and at the Berlin outposts with four ripples. On another occasion, a time-on-target mission launched by the 2/11 direct support battalion, landed in the midst of an enemy company assembled on Vegas. Friendly firepower by this time consisted of all four battalions of the 11th Marines, as well as seven Army and Turkish artillery battalions still emplaced in the area during the relief period and thus under tactical control of 25th Division Artillery.

Throughout 7–8 July, 11 Marine tanks from Company B placed 800 shells on enemy installations and troops. In the characteristic pattern, use of Marine armor heightened unfriendly response. The tanks drew in return 2,000 rounds of Chinese mortar and artillery on their own positions, but without any serious damage. Elements of the Army 14th Infantry Regiment Tank Company, still in the area, also opened up with some additional shells and bullets.

Despite the Chinese attack, the relief of lines continued during the night. In the center MLR sector, the 5th Marines had taken over regimental responsibility at 2130, with 3/11 becoming its direct supporting unit. And in the western half of the 7th Marines line—about the only undisturbed part of the regimental sector—1/7 had routinely completed is battalion relief at 0335 on 8 July.
At 0630 it was confirmed that East Berlin, an extension of the ridge on which Berlin was located, was under enemy control. Better news at first light was that Berlin, 500 yards west, had repulsed the enemy, a fact not definitely known earlier due to communication failure. At this time, G–3 reported that 18 effectives were holding Berlin, and 2/7 assigned an 18-man reinforced squad to buttress the defense. It was not considered feasible to send a larger reinforcement “since the Berlin area [could] accommodate only a small garrison.”

Meanwhile, another 7th Marines counterforce was being organized for a massed assault to retake East Berlin. At 1000, under cover of a thundering 1,600-round mortar and artillery preparation by Marine and TAFC gunners, a reinforced two-platoon unit from Companies George and How, launched the attack. The unlucky H/3/7 platoon, in the lead, got caught between well-aimed Chinese shells and the Marines’ own protective wire. In less than 15 minutes the platoon had been reduced to 20 effectives, with Company G passing through its ranks to continue the attack. By 1123 the Marines were in a violent fire fight and grenade duel in the main trenchline at East Berlin.

Tank guns, meanwhile, blasted away at Chinese troops, bunkers, active weapons, and trenches. On call they placed their fire “only a few yards in front of the friendly attacking infantry and moved this fire forward as the foot troops advanced.” Heavy countermortar and artillery rounds were also hitting their mark on forward, top, and reverse slopes of East Berlin to soften the Chinese defenses. A few minutes later the 3d Battalion men had formed for the assault. During the heavy hand-to-hand fighting of the next hour the Marines “literally threw some of the Chinese down the reverse slope.” Gaining the crest of the hill, the Marines by force and fire dispatched the enemy intruders. At 1233 they were again in possession of East Berlin. With just 20 men left in fighting condition at the outpost, a reinforcing platoon from I/3/7 was dispatched to buttress the assault force.

North of the 7th Marines sector four F9F Panthers, led by the commanding officer of VMF–311, Lieutenant Colonel Bernard McShane, found their way through the rainy skies that had restricted aerial support efforts nearly everywhere. In a noon MPQ mission, the quartet delivered five tons of ordnance on Chinese reinforcement troops and bunkers. Promptly at 1300—a half hour after retaking the outpost—the 7th Marines effected the relief of the last Turkish elements at Berlin and occupied the twin defense positions. And by 1500 on 8 July, the 1st Marine Division assumed operational control of the entire division sector from the Army 25th Infantry Division. Relief of individual units would continue, however, through several more days. At the same time, the mission of the 11th Marines, since 5 July under a new regimental commander, Colonel Manly L. Curry, changed from general support of U.S. I Corps, reinforcing the fires of the 25th Division Artillery, to direct support of the Marine Division. The 1st Tank Battalion similarly took over its regular direct support role. Other units under temporary Army jurisdiction, such as the Kimpo Provisional Regiment and Division Reconnaissance Company, reverted to Marine control.

During the rest of the day, gunners of the 11th Marines continued their fire missions despite reduced visibility that hindered surveillance by the OY spotting planes and forward observers. Only 42 Chinese were sighted during the daytime, although shortly before dusk a CCF group reportedly heading toward the Berlins area southwest from Frisco was taken under fire. Estimates of enemy incoming throughout the 7–8 July action from 17-odd battalions of Chinese artillery dug in across the division sector was placed at 19,000 rounds of all types. Marine and Army-controlled battalions, for their part, pounded Chinese strongholds with a total of 20,178 rounds.

That night Colonel Funk authorized a 3d Battalion platoon to bolster the MLR. Five tanks were also ordered to locate in the Hill 126 area, the Marine high-ground terrain feature to the rear of the frontlines. This foresight was well rewarded. During the late evening hours strange motor noises “sounding like a convoy pulling in and then back out again” floated over the Korean hills and the tanks immediately swept suspected hostile installations with their 90mm guns. Later that night of 8–9 July, the Chinese suddenly renewed their probing efforts at the battered Marine outposts. Moving in from Vegas, an estimated reinforced enemy company attacked
Berlin at 0104, then brushed on to East Berlin. An intense fire fight ensued off and on for nearly two hours at the two posts. Marine 81mm and 4.2-inch mortars, plus artillery illumination, boxing fires, and tanks blunted the assaults. At 0315 the enemy broke contact and action quieted down at both locations.

Throughout the rest of the day, eight Company C[12] armored vehicles assisted the infantrymen in consolidation of positions. A total of 25 rounds of shells and 19,140 rounds of .30 and .50 caliber machine gun bullets were expended on CCF strongpoints and troops during a 24-hour firing period that ended at 1700.

Because of the casualties at Berlin, an H/3/7 reinforcement squad was sent to augment the Marine force there. Losses suffered by the 7th Marines for the two successive nights were 9 killed, 12 missing[13] 126 wounded and evacuated, and 14 with minor wounds. The cost to the CCF was 30 known dead, and an estimated 200 killed and 400 wounded.

With the Marines back on line, VMO–6 and HMR–161 which were under division operational control again resumed normal combat routine. Returning on 8 July to their forward airstrip in the center regimental sector, VMO–6 helicopters made eight frontline helicopter evacuations. Observation planes that same day conducted four artillery spotting missions behind enemy lines. HMR–161, assuming normal operations on 10 July, resupplied Marine division outposts with 1,200 pounds of rations, water, and gear as part of its 25.3 hours flight time this first day back in full service.
After the flare-up on the Berlin front, there was relatively little action for the next 10 days. Marines continued the relief of the last of the outgoing 25th Division units. When this was completed on 13 July, 1st Marine Division units, including the 1st KMC/RCT and 1st Amphibian Tractor Battalion, were all back in their accustomed sectors. They thus rejoined the 1st Tank Battalion, 11th Marines, Kimpo Regiment, and Division Reconnaissance Company which had remained on line throughout the period. The July relief was one that could hardly be characterized as routine. Interfering elements had included not only the Chinese but torrential summer rains. These had continued virtually nonstop from 5–8 July causing bridge and road washouts, rerouting of supply trucks, and juggling of manifests at a time when the regiments were using an average of 90 transport vehicles daily.

Forward of the MLR the regular nightly patrols probed enemy territory, often with no contact. On at least three occasions division intelligence reported entire 24-hour periods during which the elusive Chinese could not be sighted anywhere in No-Man’s-Land by friendly patrols operating north of the Marine division front.

More rain, continual haze, and ground fog for 6 of the 10 days between 9–18 July not only reduced the activity of air observers and Marine pilots, but apparently inspired the ground-digging Chinese to pursue—at least across from the division sector of I Corps—a more mole-like existence than ever. Enemy troop sightings during the daytime decreased from as many as 310 CCF to a new low of 14. Incoming, for one 24-hour period, totaled no more than 48 rounds of Chinese artillery and 228 of mortar fire that struck Marine positions, causing only slight damage.

The same could not be said for their mines. One 7th Marines reconnaissance patrol located a new minefield staked out with Soviet antipersonnel mines (POMZ–2) of an unfamiliar type with both pull and tension fuses. It appeared that mines which had lain dormant during the winter months had suddenly come to life with the warm weather, or else been recently re-laid. Nearly a dozen were uncovered by 5th and 7th Marines patrols, soon after their return to the front, and sometimes the discovery came too late. Probably the worst day was 12 July when four Marines were killed and eight wounded as a result of accidentally detonating mines.

At the same time, in the 5th Marines sector near the vicinity of truce corridor COP–2, the persistent voice of the Dragon Lady taunted Marines with such lackluster gambits as “Surrender now! What is your girl doing back home?” in the stepped-up pace of its midnight propaganda broadcasts.

The regular nightly patrols checked in and out, performing their mission routinely. Even during this last month of the war, when word of the final truce agreement was expected daily, fire fights ensued. On 12 July, a 5th Marines 13-man reconnaissance patrol clashed briefly north of COP Esther, while a 7th Marines platoon-size combat patrol brushed with a Chinese squad west of Elko in an 18-minute fire fight. The same night the 11th Marines reported increased enemy sightings of 318 CCF soldiers—the most seen since the Berlin probe of 7–8 July. No follow-up was made. The Chinese were busy with major offensives elsewhere along the UNC front devoting their primary efforts to ROK divisions on the central and eastern sectors of the Eighth Army line. Apparently they fully intended to “demonstrate to the South Koreans that continuation of the war would be a costly business.”

Along the Marine front, three patrol contacts took place on the night of 16–17 July. Two of them were grim reminders that despite the promising look (and sound) of the peace talks, for those men lost the toll of the war was as final and unremitting as it had been at any time during the past three years of combat. The first was a
routine maneuver for a 5th Marines 13–man combat patrol that, at 2252, engaged an enemy squad just north of outpost Hedy. After an eight-minute fire fight the enemy withdrew, with two Chinese soldiers counted dead and one wounded and no friendly casualties.

Not so lucky was a 2/5 reconnaissance patrol. At midnight, its 15 members encountered a band of 30 to 40 Chinese, deployed in a V-shaped ambush in the Hill 90 area, an enemy stronghold two miles east of Panmunjom. The Marines set up a base of fire, beating off the enemy with their rifles, BARs, mortars, and bare fists. Reinforcements and artillery fires were called in. The first relief unit was intercepted by vicious mortar shelling which wounded the entire detail. A second relief squad, also taken under mortar fire, continued the action in an intense fire contest that lasted nearly two hours. In the meantime, the direct support artillery battalion, 3/11, reinforced by 1/11, showered 280 rounds of countermortar on Chinese long-range machine guns and mortars barking from the surrounding hills.

During the engagement the Chinese made several attempts to capture prisoners. When the enemy finally began to withdraw, CCF casualties were 10 known dead, an estimated 9 more dead, and 3 wounded. Seven Marines were found to be missing after the Chinese broke contact. A 5th Marines platoon that extensively screened the battalion front during the hours of darkness on the 17th returned at 2210 with six bodies.

The third encounter took place not long after midnight in the 7th Marines territory. This brief skirmish was also to have an unpleasant aftermath and, inadvertently, fulfill the psywar broadcast of the previous day that had warned Marines “not to go on patrols or be killed.” As it was leaving the Ava Gate (250 yards northwest of the outpost proper) at 0045, a 30-man combat patrol from Company A was challenged on three sides by 40-50 CCF employing small arms, automatic weapons, grenades, and mortars. After a 15-minute fire exchange, during which the patrol lost communications with its MLR company, the enemy withdrew. Six CCF had been counted dead, and 12 more estimated killed or wounded.

Upon returning to the outpost, a muster of the men engaged in the action showed four Marines were missing. A rescue squad recovered three bodies. When, several hours later, daylight hampered movements of the search party, 2/11 laid down a smoke screen to isolate the sector. Between 0050 and 0455, its gunners also directed 529 rounds of close support and countermortar fire on Chinese troops and active weapons in the area. The recovery unit continued to sweep the area for the last missing man until 0545 when it was decided that the search would have to be terminated with negative results. Marine casualties from the encounter were 3 killed, 1 missing, 19 wounded (evacuated), and 2 nonseriously wounded.

The following day patrol activity and enemy contacts quieted down. Action shifted to the 1st KMC/RCT sector. Here, during the late hours of the 18th, four Korean combat patrols brushed quickly and briefly with Chinese squad and platoon units in light skirmishes of but a few minutes duration. The Korean Marines killed 2 of the enemy and estimated they accounted for 16 more.[18]

The only activity in the Marine right regimental sector occurred when a 7th Marines 36-man combat patrol, on prowl the night of 17–18 July, advanced at 0112 as far as hand-grenade range of the Chinese trenchline at Ungok. Undetected by the enemy, a patrol member fired a white phosphorus rifle grenade squarely at the CCF machine gun that was harassing the friendly MLR. The Marines then engaged 15 Chinese defending the position in a brief 20-minute skirmish. Although two men were wounded,[19] the Company C patrol members in a somewhat roguish gesture as they left also planted a Marine Corps recruiting sign at their FPOA (Farthest Point of Advance), facing the enemy.
If the monsoon rains of July hung like a shroud over the infantryman, they were an even more serious impediment to air operations of MAGs–12 and –33. There were 24 days of restricted flying when the weather at home base or target area was recorded as marginal to non-operational. On 12 full days air operations were cancelled entirely. Precipitation for July rose to 7.38 inches, with 22 days of rain recorded throughout the month. The generally unfavorable weather conditions not only limited the normal support missions flown by 1st MAW but delayed the arrival of VMA–251 en route from Japan to relieve VMA–323.

During July the wing’s nearly 300 aircraft (250 operational, 43 assigned to pool status in Korea) flew 2,688 combat sorties and 5,183.1 combat hours. The bulk of the sorties, 1,497, were CAS operations flown for 19 different UNC divisions. Nearly 900 supported the 12 ROK divisions involved in the heavy fighting on the central UNC sector. Approximately 250 of the CAS sorties were for the 1st Marine Division, with more than 200 being day or night MPQ drops and the rest, daytime CAS runs. No night close support missions were conducted.

When nearly a week of inclement weather finally lifted, Colonel Arthur R. Stacy’s MAG–33 pilots based at Pohang welcomed a brisk change in the tempo of operations. In seven MPQ strikes on 11 July, they hurled 13 tons of ordnance on Chinese fortifications north of the 7th Marines sector. It was the wing’s first active day in support missions for the 1st Marine Division, newly back on the line.

During the interim period of 9–18 July, between the two Berlin outpost attacks, F9F jet fighters from MAG–13 again carried out approximately 35 MPQ missions for the division. (MAG–12 attack planes, during this time, were assigned to the flaming central Allied line.) Nearly 20 of these were on a single day, 14 July, when VMFs–311 and –115 Panther jets roared over enemy country from morning to sundown unleashing 25 tons north of the Marine troubled right regimental sector and 9 more tons on hostile emplacements near the western end of the division line.

In middle and late July, however, the majority of missions by Marine fliers bolstered UNC operations in the central part of the Allied front where a major enemy counterthrust erupted. The peak operational day for MAG–33 pilots during this period occurred 17 July when 40 interdiction and MPQ missions (136 combat sorties) were executed for Army and ROK divisions. The corresponding record day for Colonel Carney’s MAG–12 aviators was 19 July when 162 combat sorties were flown on heavy destruction missions to support UNC action.

Marine exchange pilot Major John F. Bolt, of VMF–115, chalked up a record of a different kind on 11 July. Attached to the Fifth Air Force 51st Fighter-Interceptor Group, he shot down his fifth and sixth MIG–15 (the previous four having been bagged since 16 May) to become the first Marine jet ace in history. Major Bolt was leading a four-plane F–86 flight in the attack on four MIGs east of Sinuiju and required only 1,200 rounds of ammunition and five minutes to destroy the two enemy jet fighters. Bolt thereby became the 37th jet ace of the Korean War.

Earlier in the month, Navy Lieutenant Guy P. Bordelon won a Silver Star medal and gold star in lieu of a second Silver Star. Attending the K–6 ceremonies were General Megee and Admiral Clark, 1st Wing and Seventh Fleet commanders. Bordelon, flying with the Marine Corsair night fighters, had downed four of the harassing “Bedcheck Charlie” planes. A member of VC–3 attached to MAG–12, Lieutenant Bordelon on 17 July made his fifth night kill and was subsequently awarded the Navy Cross.

On the minus side, the 1st Marine Air Wing this last month of the war suffered a higher rate of personnel losses on combat flights than in any month since June 1952. Captain Lote Thistlethwaite and Staff Sergeant
W. H. Westbrook, of VMF(N)–513, were killed in an air patrol flight on 4 July. (Two nights earlier, the same squadron had lost a Navy pilot and crewman on temporary duty with the night-fighters when their F3D–2 similarly failed to return to Pyongtaek.) Another MAG–12 casualty was Captain Carl F. Barlow, of VMA–212, killed 13 July on a prebriefed CAS mission when he crashed while flying instruments.

On 17 July, Captain Robert I. Nordell, VMF–311, flying his third mission that day, and wingman First Lieutenant Frank L. Keck, Jr. were hit by intense automatic weapons fire while on an interdiction flight. Their planes reportedly went down, at 2000, over the Sea of Japan. After a four-day air and surface search conducted by JOC, they were declared missing and subsequently reclassified killed in action. Another MAG–33 pilot listed KIA was Major Thomas M. Sellers, VMF–115, on exchange duty with the Air Force, shot down 20 July in a dogfight after he had scored two MIG–15s. Two days earlier a VMO–6 pilot, First Lieutenant Charles Marino, and his artillery spotter, First Lieutenant William A. Frease, flying a flak suppression mission, were struck by enemy fire and crashed with their ship in the 5th Marines center regimental sector.
Despite their preoccupation with other corps sectors on the central front of the Eighth Army line, the Chinese had not forgotten about the Berlin complex held by the Marines. On the night of 19-20 July, the enemy lunged against the two Marine outposts in reinforced battalion strength to renew his attack launched 12 days earlier. Beginning at 2200, heavy Chinese mortar and artillery fire struck the two COPs and supporting MLR positions of the 3d Battalion, which had advanced to the front on 13 July in relief of 2/7. In the center regimental sector, 5th Marines outposts Ingrid and Dagmar, and the line companies were also engaged by small arms, mortar, and artillery fires. An attempted probe at Dagmar was repulsed, aided by 3/11.

Concentrating their main assault efforts on the Berlins, however, the Chinese forces swarmed up the slopes of the outposts at 2230, with more troops moving in from enemy positions on Jersey, Detroit, and Hill 139, some 700 yards north of Berlin. The Chinese struck first at East Berlin, where 37 Marines were on duty, and then at Berlin, held by 44 men. Both positions were manned by First Lieutenant Kenneth E. Turner’s Company I personnel and employed the maximum-size defenses which could be effectively utilized on these terrain features.

By 2300 hostile forces were halfway up Berlin. Continuous volumes of small arms and machine gun fire poured from the defending MLR companies. Defensive boxes were fired by 60mm, 81mm, and 4.2-inch mortars. Eight Company C tanks augmented the close-in fires, with their lethal direct-fire 90mm guns tearing into Chinese troops and weapons. Within two hours after the initial thrust, the 11th Marines had fired 20 counterbattery and 31 countermortar missions. Artillerymen from 2/11 and 1/11 had expended 1,750 rounds. In addition, 4/11 had unleashed 124 of its 155mm medium projectiles. More countermortar fire came from the TAFC Field Artillery Battalion. Despite the heavy fire support, by midnight the situation was in doubt and at 0146 the twin outposts were officially declared under enemy control. Nearly 3,000 rounds of incoming were estimated to have fallen on division positions by that time, most of it in the 7th Marines sector.

During the early morning hours of the 20th, Marine tank guns and continuous shelling by six artillery battalions wreaked havoc on Chinese hardware, reinforcing personnel, supply points, and fortifications. Reserve units from 2/7 were placed on 30-minute standby, with Companies D, E, and F already under 3/7 operational control. Battalion Operation Order 20–53, issued at 0400 by Lieutenant Colonel Jones, called for Easy and Dog to launch a two-company counterattack at 0730 to restore Berlin and East Berlin respectively. Incoming, meanwhile, continued heavy on the MLR; at 0520, Company I, located to the rear of the contested outposts, reported receiving one round per second.

The Marine assault was cancelled by I Corps a half hour before it was scheduled to take place. A decision subsequently rendered from I Corps directed that the positions not be retaken.

Since the outposts were not to be recaptured, efforts that day were devoted to making the two hills as untenable as possible for their new occupants. Heavy destruction missions by air, armor, and artillery blasted CCF defenses throughout the day. Air observers were on station from 0830 until after dark, with nine CAS missions conducted by MAG–12 pilots from VMA–121 and –212. The day’s series of air strikes on the Berlin-East Berlin positions (and Vegas weapons emplacements) began at 1145 when a division of ADs from Lieutenant Colonel Harold B. Penne’s 121 hurled nine and a half tons of ordnance on enemy bunkers and trenches at East Berlin.

The artillery was having an active day, too. Six firing battalions had sent more than 3,600 rounds crashing against the enemy by nightfall. The 1st 4.5-inch rocketeers also contributed four ripples to the melee.
Heavy fire missions were requested and delivered by the Army 159th Field Artillery Battalion (240mm howitzers) and 17th Field Artillery Battalion (8-inch howitzers) using 11th Marines airborne spotters. The precision fire on enemy positions, which the air spotters reported to be “the most effective missions they had conducted in Korea”[32] continued for several hours. By 1945 the big guns had demolished the bunkers and all but 15 yards of trenchline at East Berlin. For their part the Chinese had fired an estimated 4,900 rounds of mortar and artillery against the 3d Battalion right hand sector in the 24-hour period ending at 1800 on the 20th.

Armored vehicles, meanwhile, during 19–20 July had expended 200 rounds of HE and WP shells and 6,170 machine gun rounds.[33] Tank searchlights had also effectively illuminated enemy positions on the East Berlin hill. The tankers’ performance record included: 20 Chinese bunkers and 2 57mm recoilless rifles destroyed; an estimated 30 enemy soldiers killed; a dozen more firing apertures, caves, and trenchworks substantially damaged.

Between noon and the last flight of the day, when a trio of AUs from Lieutenant Colonel Wallace’s VMA-212 attacked a northern enemy mortar and automatic weapons site, 35 aircraft had repeatedly streaked over the Berlin territory and adjacent Chinese strongpoints. Strikes by VMA–121 at 1145, 1320, 1525, 1625, 1700, 1750; and VMA–212 at 1413, 1849, and 1930 had released a combined total of 69 1/2 tons of bombs and 6,500 rounds of 20mm ammunition on hostile locations.

The Chinese casualty toll during this renewed flareup in the fighting on 19–20 July was conservatively placed by 3/7 at 75 killed and 300 wounded. It was further believed that “the enemy battalion was so weakened and disorganized by the attacks that it was necessary for the CCF to commit another battalion to hold the area captured.”[34] Regimental reports indicated that 6 Marines had been killed, 56 listed missing,[35] 86 wounded and evacuated, and 32 not seriously wounded.

As a result of the critical tactical situation and number of casualties suffered during the Berlins operation, the 7th Marines regimental commander requested that units of the division reserve be placed under his control to help check any further aggressive moves of the enemy. For it now appeared that the Chinese might continue their thrust and attempt to seize Hill 119 (directly south of Berlin and East Berlin) in order to be in position to deny part of the Imjin River to UNC forces after signing of the armistice.

While the lost outposts were being neutralized on the morning of the 20th, the CO of the incoming 1st Marines, Colonel Nelson, also ordered an immediate reorganization and strengthening of the MLR. This employed the defense in depth concept, used by the British Commonwealth Division in the sector adjacent to the Marines on the east. The wide front defense concept was fully developed with one company occupying a portion of the MLR to the rear of the Berlin complex, known as Hill 119 or more informally, Boulder City. Three companies organized the high ground to the right rear of the MLR east to Hill 111, the limiting point on the boundary between the Marine and Commonwealth divisions. Three more companies fortified the Hill 126 area to the rear and left of Berlin to its juncture with the western battalion sector held by Lieutenant Colonel Harry A. Hadd’s 1/7. (See Maps 30 and 31.)

The afternoon of the 20th, 2/1 (Lieutenant Colonel Frank A. Long) was transferred to 7th Marines control and positioned in the center of the regimental MLR, as the first step in the scheduled relief of the 7th, due off the line on 26 July. For the next three days the regiment continued to develop the sector defense to the rear of the MLR. Elements of the regimental reserve, 2/7, were employed to reinforce the 3/7 sector. Initially, on 20-21 July, F/2/7, under operational command of 3/7, was assigned the mission of reinforcing Hill 119. Later a 2/1 platoon was also ordered to strengthen the position.

Incoming 1st Marines platoons and companies from the 2d and 3d (Lieutenant Colonel Roy D. Miller) Battalions augmented the forces at the two critical Hill 119 and 111 locations. As it turned out, 1st Marines
personnel returning to the front from division reserve were to see the last of the war’s heavy fighting in the course of their relief of the 7th Marines. Ultimately, the regimental forward defense, instead of being divided into two battalion sectors as before, now consisted of three—a left, center, and right sector. By 23 July the depth reorganization had been completed and these sectors were manned by 1/7, 2/1, and 3/7. (See Map 32.)

Sightings of enemy troops for the next few days were light. A large scale attack expected on the 21st by the 5th Marines at Hedy and Dagmar failed to materialize. Instead, a token force of a dozen Chinese dressed in burlap bags made a limited appearance at Hedy before departing, minus three of its party, due to Marine sharp shooting skills. In the skies, MAG–33 fliers from VMF–115 and –311 had been transferred by Fifth Air Force from exclusive missions for the central and eastern UNC front (the IX, ROK II, and X Corps sectors) to join VMA–121 in MPQ flights supporting the 1st Marine Division. During the 21–23 July period, despite layers of thick stratus clouds and rain that turned off and on periodically like a water spigot, more than 15 radar missions were executed by the three squadrons.[37] They unleashed a gross 33-ton bomb load on CCF mortar and 76mm gun positions, supply areas, CPs, bunkers, and trenches.

The lull in ground fighting lasted until late on the 24th. Then, at 1930, a heavy preparation of 60mm, 82mm, and 120mm mortars combined with 76mm and 122mm artillery shells began to rain down on Boulder City. Men of G/3/1, under command of First Lieutenant Oral R. Swigart, Jr., were deployed at that time in a perimeter defense of the position having that morning completed the relief of G/3/7. Enemy troops were reported massing for an assault. One regiment located by forward observers behind Hill 139, some 700 yards northwest of Berlin, was taken under fire at 1940 by artillery and rocket ripple. At 2030, following their usual pattern of laying down a heavy mortar and artillery barrage, the CCF began to probe the MLR at Hills 119 and 111 in the Marine right battalion sector. They hit first at Hill 111, the far right anchor of the division line, currently held by 7th Marines personnel. Then the CCF moved westward to Hill 119. Their choice of time for the attack once again coincided with the relief of 7th Marines units by the 1st Marines.[38] When the assault began, H/3/1 was moving up to relieve H/3/7 at the easternmost point of the line in the Hill 111 vicinity, and Company I was preparing to relieve 1/3/7, to its left.

Enemy troops were reported massing for an assault. One regiment located by forward observers behind Hill 139, some 700 yards northwest of Berlin, was taken under fire at 1940 by artillery and rocket ripple. At 2030, following their usual pattern of laying down a heavy mortar and artillery barrage, the CCF began to probe the MLR at Hills 119 and 111 in the Marine right battalion sector. They hit first at Hill 111, the far right anchor of the division line, currently held by 7th Marines personnel. Then the CCF moved westward to Hill 119. Their choice of time for the attack once again coincided with the relief of 7th Marines units by the 1st Marines.[38] When the assault began, H/3/1 was moving up to relieve H/3/7 at the easternmost point of the line in the Hill 111 vicinity, and Company I was preparing to relieve 1/3/7, to its left.

The Communist troops temporarily penetrated Hill 111 positions. At Boulder City, where the main force of the CCF two-battalion unit had struck, they occupied a portion of the trenchline. Attempting to exploit this gain, the Chinese repeatedly assaulted the Berlin Gate, on the left flank of Company G’s position and the East Berlin Gate, to its right. Marine units of the two regiments posted at the two citadel hills were heavily supported by MLR mortar, artillery, and tank fires. No artillery spotter or CAS flights were flown through the night, once again due to weather conditions.

By 2120, the bulk of Chinese soldiers had begun to withdraw from Hill 111, this attack apparently being a diversionary effort. But the enemy’s main thrust continued against the central Hill 119 position. Here the close, heavy fighting raged on through the morning hours, with enemy troops steadily reinforcing from the Jersey Ridge and East Berlin, by way of the Berlin Gate, the best avenue of approach to forward positions of Hill 119. At approximately 2100, the Chinese hurled a second attack against Hill 119 in the strength of two companies, supported by intense mortar and artillery fire. An hour later hand-to-hand combat had developed all along the 700 yards of the forward trenches. Company G men of the 1st Marines were down to half their original number, ammunition was running low, and evacuation of casualties was slowed by the fact that two of the eight corpsmen had been killed and most of the rest were themselves casualties.

By midnight, the front, left, and right flanks of the perimeter had been pushed back to the reverse slope of the hill and a 1st Marines participant commented “. . . only a never-say-die resistance was keeping the enemy from seizing the remainder of the position.”[39] At 0015, the thinning ranks of G/3/1 Marines (now down to 25
percent effectives) were cheered by the news that Company I men were about to reinforce their position. This latter unit itself suffered 35 casualties while moving into the rear area, when the Chinese intercepted a coded message and shifted a substantial amount of their mortar and artillery fires to the rear approaches of Hill 119.

In response to the enemy bombardment, Marine artillery fires crashed against the Chinese continuously from 2100 to midnight. Four ripples were launched in support of the Hill 119 defenders. In one of the regiment’s most intense counterbattery shoots on record, the 11th Marines in three hours had fired 157 missions. By 2400, an estimated 6,000 to 8,000 hostile rounds had fallen in the division sector.

Meanwhile, the Chinese were also attempting to punch holes in the 5th regimental sector. In a second-step operation, rather than striking simultaneously as was customary, the enemy at 2115 had jabbed at outposts Esther and Dagmar in the right battalion of the 5th Marines. The reinforced Chinese company from the 408th Regiment quickly began to concentrate its attention on Esther, outposted by Company H Marines. During the heavy fighting both Marines and Chinese reinforced. By early morning, the enemy had seized part of the front trenchline, but the Marines controlled the rear trenches and reorganized the defense under rifle platoon commander, Second Lieutenant William H. Bates. The Chinese unsuccesffully attempted to isolate the position by heavy shelling and patrolled vigorously between Esther and the MLR.

Marines replied with flamethrowers and heavy supporting fires from the MLR, including machine guns, 81mm and 4.2-inch mortar boxes. Three tanks—a section from the regimental antitank platoon and one from Company A—neutralized enemy targets with 153 rounds to assist the 3d and 2d Battalions. The 3/11 gunners supporting the 5th Marines also hurled 3,886 rounds against the Chinese in breaking up the attack. After several hours of strong resistance, the Chinese loosened their grip, and at 0640 on the 25th, Esther was reported secured.

By this time an enemy battalion had been committed piecemeal at the position. The action had developed into the heaviest encounter of the month in the 5th Marines sector. During that night of 24–25 July, more than 4,000 artillery and mortar rounds fell in the outpost vicinity; total incoming for the regimental sector throughout July was recorded at 8,413 rounds. Twelve Marines lost their lives in the battle, with 35 wounded and evacuated, and 63 suffering minor injuries. A total of 85 CCF were counted dead, 110 more estimated killed, and an estimated 250 wounded.

Back at the Berlin Complex area of the 7th Marines where the major action centered, intense shelling, fire fights, and close hand-to-hand combat continued through the early morning of the 25th. Chinese infiltrators had broken through a substantial part of the trench-work on the forward slope of Boulder City. For a while they temporarily occupied the rocky, shrub-grown hill crest as well.

A swift-moving counterattack launched at 0130 by 1st Marines from Companies G and I, led by Captain Louis J. Sartor, of I/3/1, began to restore the proper balance to the situation. At 0330 the MLR had been reestablished and the Marines had the controlling hand. By 0530 the Hill 119 area was secured, with four new platoons from Companies E of the 7th and 1st Marines aiding the defense. Scattered groups of Chinese still clung to the forward slopes, and others vainly tried to reinforce by the Berlin-to-Hill 119 left flank trenchline.

Direct fire from the four M–46s on position at Boulder City[40] had helped disperse hostile troop concentrations. The tanks had also played a major communication role. Although surrounded by enemy forces during the peak of the fighting, two of the armored vehicles were still able to radio timely tactical information to higher echelons. This Company C quartet, plus another vehicle from the 7th Marines antitank unit, between the time of the enemy assault to 0600 when it stabilized, had pumped 109 HE, 8 marking shells, and 20,750 .30 caliber machine gun bullets into opposition forces.[41] Five tanks from the 1st Marines AT company located to the west of the Berlin site meted out further punishment to enemy soldiers, gun pits, and trenches.

Sporadic fighting and heavy incoming (at the rate of 60–70 rounds per minute for 10 minutes duration) also rained down on eastern Hill 111 in the early hours of the 25th. Assault teams with flame-throwers and 3.5-inch rocket launchers completed the job of clearing the enemy out of Marine bunkers.
Altogether the Communists had committed 3,000 troops across the Marine division front during the night of 24–25 July. Between 2200 and 0400, a total of 23,725 rounds had been fired by the 11th Marines and 10 battalions under its operational control in the division sector. This included batteries from the 25th Division Artillery, I Corps Artillery, and 1st Commonwealth Division Artillery. The artillery outgoing represented 7,057 rounds to assist the 5th Marines at outpost Esther and 16,668 in defense of Boulder City.

On the morning of 25 July, the Chinese at 0820 again assaulted Hill 119 in company strength. Marine mortar and artillery fire repulsed the attack, with heavy enemy losses. See-saw action continued for most of the rest of the day on the position. No major infantry attempt was made at Hill 111. Intense hostile shelling was reported here at 1100, however, when the 3d Battalion, 7th Marines, still in operational control of the area, began receiving 125 to 150 rounds per minute. The last of the Chinese marauders were forced off the forward slope at Boulder City at 1335. For some welcomed hours both Marine positions remained quiet. A conservative estimate by 3/7 of the toll for the enemy’s efforts were 75 CCF killed and 425 wounded.

Air support that morning was provided by 32 of the sleek, hard-hitting F9Fs from VMF–115 and –311. Working in tandem over Chinese terrain directly north of the right regimental sector, the two squadrons, between 0616 and 1036, flew nine MPQ missions. In the aerial assault, they bombarded the enemy with more than 32 tons of explosives.

Twelve Marine tanks had a workout, expending 480 HE and 33 WP shells and 21,300 rounds of machine gun ammunition in direct fire missions. The traditional inequity of battlefront luck was plainly demonstrated between a section (two) of armored vehicles near the Hill 111 company CP and a trio located at Boulder City. It was practically a standoff for the former. Together they were able to fire only 71 high explosive shells, drawing a return of 1,000 rounds of CCF 60mm mortar and 122mm cannon shells. Blazing guns of the three tanks in the Hill 119 area, meanwhile, during the 24-hour firing period had sent 158 HE, 10 WP, and 17,295 bullets to destroy hostile weapons and installations and received but 120 mortar and another 120 rounds of artillery fire.

The 11th Marines were also busy as heavy firing continued on Chinese policing parties and those enemy batteries actively shelling MLR positions. By late afternoon, 13,500 rounds of Chinese mortar and artillery had crashed against the 7th Marines right sector—the highest rate of incoming for any 24-hour period during the entire Berlin action. For its part, the regiment and its medium and heavy support units completed 216 counterbattery missions and sent 36,794 rounds of outgoing into Chinese defenses between 2200 on 24 July and 1600 on the 25th.

Meanwhile, during 25 July, Colonel Nelson’s men continued with their relief of the 7th Marines. At 1100 Major Robert D. Thurston, S–3 of 3/1, assumed command of Hill 119 and reorganized the embattled Company G and Company I personnel, 1st Marines. That night, at 1940, E/2/1 and F/2/7 effected the relief of the composite George-Item men. At the eastern Hill 111 Company H, 1st Marines had assisted Company H, 7th Marines during the day in clearing the trenchworks of the enemy; then at 1815, the 1st Marines unit completed its relief of H/3/7 and took over responsibility for the MLR right company sector. Not long after, beginning at 2130, 1st and 7th Marines at the critical Hill 119 complex were attacked by two enemy companies. MLR fire support plus artilllery and tank guns lashed at the enemy and he withdrew. Between 0130 and 0300 the Chinese again probed Hills 111 and 119, gaining small parts of the trenchline before being driven out by superior Marine firepower. Marine casualties were 19 killed and 125 wounded. The CCF had suffered 30 known dead, an estimated 84 killed, and 310 estimated wounded.

With dawn on the 26th came the first real quiet the battlefield had known for two days. Small enemy groups tried to reinforce by way of the Berlin trenchline, only to be stopped by Marine riflemen and machine gunners. Hostile incoming continued spasmodically. At 1330 the 1st Marines assumed operational control of the right regimental sector, as scheduled, and of the remaining 7th Marines units still in the area. By this time Marine casualties since 24 July numbered 43 killed and 316 wounded.
That night the Communists, knowing the armistice was near and that time was running out for seizing the Boulder City Objective, made their final attempts at the strongpoint. Again they attacked at 2130. Defending 1st Marines were now under Captain Esmond E. Harper, CO of E/2/1, who had assumed command when Major Thurston was seriously wounded and evacuated. They fought off the Chinese platoon-size drive when the enemy advanced from Berlin to the wire at Hill 119. Shortly after midnight another Chinese platoon returned to Hill 119 in the last skirmish for the territory, but Marine small arms and artillery handily sent it home. At 0045, a CCF platoon nosed about the Hill 111 area for an hour and twenty minutes. Again the Marines discouraged these last faltering enemy efforts. Action at both hills ceased and what was to become the concluding ground action for the 1st Marine Division in Korea had ended.

Despite impressive tenacity and determination, the Chinese Communist attacks throughout most of July on the two Berlin outposts and Hills 119 and 111 achieved no real gain. Their repetitive assaults on strongly-defended Boulder City up until the last day of the war was an attempt to place the Marines (and the United Nations Command) in as unfavorable a position as possible when the armistice agreement was signed. While talking at Panmunjom, the Communists pressed hungrily on the battlefront for as much critical terrain as they could get under their control before the final cease-fire line was established.

Had the enemy succeeded in his assaults on the two hill defenses after his earlier seizure of the Berlins, under terms of the agreement UNC forces would have been forced to withdraw southward to a point where they no longer had free access to all of the Imjin River. If the Chinese had taken Boulder City this would have also provided the CCF a major high ground position (Hill 126) with direct observation into Marine rear areas and important supply routes.

From the standpoint of casualties, the last month of the Korean War was a costly one, with 181 infantry Marines killed in action and total losses of 1,611 men. This was the highest rate for any month during 1953. It was second only to the October 1952 outpost battles for any month during the year the 1st Marine Division defended the line in West Korea. The closing days of the war produced the last action for which Marines were awarded the Navy Cross. These Marines were Second Lieutenant Bates, H/3/5; First Lieutenant Swigart, G/3/1; Second Lieutenant Thodore J. Lutz, Jr., H/3/1; and Sergeant Robert J. Raymond, F/2/7, who was mortally wounded.

The 7th and 1st Marines, as the two regiments involved during July in the Berlin sector defense, sustained high monthly losses: 804 and 594, respectively. Forty-eight men from the 7th Marines and 70 from the 1st Marines were killed in action. In contrast, the 5th Marines which witnessed little frontline action during the month (except for a sharp one-night clash at Outpost Esther), suffered total monthly casualties of 150 men, of whom 26 lost their lives. Chinese losses were also high: 405 counted killed, 761 estimated killed, 1,988 estimated wounded, 1 prisoner, or 3,155 for the month of July.

In their unsuccessful attempts to dislodge the Marines from their MLR positions the Chinese had pounded the right regimental flank with approximately 22,200 artillery and mortar shells during the last 24-27 July battle. In reply, 11th Marines gunners and supporting units had expended a total of 64,187 rounds against CCF strong-points. The enemy’s increased counterbattery capabilities in July, noted by division intelligence, also received particular attention from the artillerymen. A record number of 345 counterbattery missions were conducted during the period by Marine and Army cannoneers.

More than 46,000 rounds of outgoing had been fired by the Chinese in their repeated attempts of 7-9, 19-20, and 24-27 July to seize the Berlin posts and key MLR terrain. Operations during this final month, as the 2/11 commander was to point out later, on numerous occasions had verified the wisdom of leaving “direct support artillery battalions in place during frequent changes of frontline infantry units.”

Armored support throughout the 24-27 July period consisted of more than 30 tanks (Company C, AT Company elements of the 1st and 7th Marines, a section of flames, and Company D platoon) on line or in reserve.
Marine tankers used a record 1,287 shells and 54,845 bullets against the CCF, while drawing 4,845 rounds of enemy mixed mortar and artillery.

The enemy’s attack on Marine MLR positions, beginning 24 July, constituted the major action in the I Corps sector the final 10 days of the war. During this period the Chinese probed I Corps positions 25 times (8 in the Marine, 5 in the 1st Commonwealth, 6 in the 1st ROK, and 6 in the 7th Infantry Division sectors).

In other parts of the Eighth Army line, the last large-scale action had broken out east of the Marine sector beginning 13 July when major elements of six Chinese Communist divisions penetrated a ROK unit to the right of the IX Corps. As the division’s right and center fell back, units withdrew into the zones of the IX and ROK II Corps on the east. General Taylor directed that a new MLR be established south of the Kumsong River, and a counterattack 17–20 July by three II Corps divisions attained this objective.

Since the armistice agreement was imminent, no attempt was made to restore the original line. The Chinese had achieved temporary success[47] but at heavy cost. Eighth Army officials estimated that CCF casualties in July reached 72,000 men, with more than 25,000 of these dead. The enemy had lost the equivalent of seven divisions of the five Chinese armies committed in attacks upon the II and IX Corps sectors.
Representatives of the Communist Forces and the United Nations Command signed the armistice agreement that marked the end of the Korean War in Panmunjom at 1000 on Monday, 27 July 1953. The cease-fire, ending two years of often fruitless and hostile truce negotiations, became effective at 2200 that night. After three years, one month, and two days the so-called police action in Korea had come to a halt.

Actually, final agreement on the armistice had been expected since late June. By mid-July it was considered imminent, even though the CCF during these waning days of the war had launched several major counteroffensives against ROK troops defending the central part of the Eighth Army line as well as the Marines in the western I Corps sector.

With the final resolution of hostilities at 1000, a flash message went out immediately to the 26,000 Marines of General Pate’s division directing that there be “no celebration firing related in any way to the advent of the armistice.” Fraternization or communication with the enemy was expressly forbidden. Personnel were reminded that firing of all weapons was to be “restricted to the minimum justified by the tactical situation.”

No defensive firing was to take place after 2145 unless the Marines were actually attacked by enemy infantry. Each frontline company was authorized to fire one white star cluster at 2200, signalling the cease fire.

The signing of the armistice agreement on 27 July thus ended 36 months of war for the Marines in Korea. On that date, the 1st Marine Division initiated plans for its withdrawal to defensive positions south of the Imjin River. One regiment, the 5th Marines, was left north of the river to man the general outpost line across the entire division front. A transition was made at this time from the customary wide-front linear defense to a defense in depth, similar to that employed in the July Boulder City battle.

Briefly, the armistice agreement decreed that both UNC and Communist forces:
- Cease fire 12 hours (at 2200, 27 July) after signing of agreement;
- Withdraw all military forces, supplies, and equipment from the demilitarized zone (2,000 yards from line of contact) within 72 hours after effective time of ceasefire;
- Locate and list all fortifications and minefields in the DMZ within 72 hours, to be dismantled during a subsequent salvage period;
- Replace combat personnel and supplies on a one-for-one basis, to prevent any build-up; and
- Begin repatriation of all POWs, with exchange to be completed within two months.

The 1st Marine Division began that afternoon to close out its existing MLR and withdraw to its designated post-armistice main battle position located two kilometers to the south, in the vicinity of the KANSAS Line. This tactical withdrawal was to be completed no later than 2200 on 30 July.

By early afternoon the three infantry regiments had been ordered to furnish mine teams to mark, remove, and clear minefields. For units of the 1st and 7th Marines deployed at the Boulder Hill Outpost—quiet only since 0300 that morning—the cease-fire news understandably carried a “let’s see” reaction as the men “waited cautiously throughout the day in their fortifications for the White Star Cluster which would signify the end . . .” Convincing the men at shell-pocked Boulder City that a cease-fire was to take place within a few hours would have been a difficult task that day, however, even for the Commandant.

The Marine infantrymen who had been the target of the last heavy Communist attacks of the war might well have had a special sense of realism about the end of hostilities. Between the skirmish with Chinese attacking

[48] The signing of the armistice agreement on 27 July thus ended 36 months of war for the Marines in Korea. On that date, the 1st Marine Division initiated plans for its withdrawal to defensive positions south of the Imjin River. One regiment, the 5th Marines, was left north of the river to man the general outpost line across the entire division front. A transition was made at this time from the customary wide-front linear defense to a defense in depth, similar to that employed in the July Boulder City battle.

[49] Fraternization or communication with the enemy was expressly forbidden. Personnel were reminded that firing of all weapons was to be “restricted to the minimum justified by the tactical situation.”

[50] No defensive firing was to take place after 2145 unless the Marines were actually attacked by enemy infantry. Each frontline company was authorized to fire one white star cluster at 2200, signalling the cease fire.

[51] The armistice agreement decreed that both UNC and Communist forces:
- Cease fire 12 hours (at 2200, 27 July) after signing of agreement;
- Withdraw all military forces, supplies, and equipment from the demilitarized zone (2,000 yards from line of contact) within 72 hours after effective time of ceasefire;
- Locate and list all fortifications and minefields in the DMZ within 72 hours, to be dismantled during a subsequent salvage period;
- Replace combat personnel and supplies on a one-for-one basis, to prevent any build-up; and
- Begin repatriation of all POWs, with exchange to be completed within two months.

[52] Convincing the men at shell-pocked Boulder City that a cease-fire was to take place within a few hours would have been a difficult task that day, however, even for the Commandant.

The Marine infantrymen who had been the target of the last heavy Communist attacks of the war might well have had a special sense of realism about the end of hostilities. Between the skirmish with Chinese attacking
units in the early hours of the 27th and mine accidents, a total of 46 Marines had been wounded and removed from duty that last day of the war and 2 others declared missing in action.

For the more free-wheeling artillerymen of the 11th Marines, that final day was one of fairly normal operations. During the day, 40 counterbattery missions had been fired, the majority in reply to Communist batteries that came alive at dusk. A total of 102 countermortar missions were also completed, bringing the total outgoing that last month to 75,910 rounds. Action of the regiment continued until 2135, just ten minutes before the preliminary cease-fire which preceded the official cease-fire at 2200.

For the 7,035 Marine officers and men on duty with General Megee’s 1st Marine Aircraft Wing, the day was also an active one. That final day of the war Corsairs, Skyraiders, and Pantherjets from the wing mounted 222 sorties and blasted the enemy with 354 tons of high explosives along the front. Banshees from VMJ–1 flew 15 reconnaissance sorties during the day for priority photographs of enemy airfields and railroads. Last Marine jet pilot in action was Captain William I. Armagost of VMF–311. He smashed a Communist supply point with four 500-pounders, at 1835, declaring his flight felt “just like the last winning play of a football game.”

The wing closed out its share of the Korean War 35 minutes before the cease-fire. A VMA-251 aviator, Captain William J. Foster, Jr., dropped three 2,000-pound bombs at 2125 in support of UN troops. The distinction of flying this final Marine mission over the bombline had gone, fittingly, to the wing’s newly-arrived “Black Patch” squadron. At sea, U.S. and British warships ended the 17-month naval siege by shelling Wonsan for the last time, and at 2200 the ships in the harbor turned on their lights. In compliance with the terms of the armistice, full evacuation of the WCIDU and ECIDU islands north of the 38th Parallel started at 2200. Island defense forces off both coasts at this time began a systematic destruction of their fortifications as they prepared to move south.

As early as 2100 Marine line units reported seeing Chinese soldiers forward of their own positions, policing their areas. An hour later large groups of enemy were observed along the division sector. Some “waved lighted candles, flashlights, and banners while others removed their dead and wounded, and apparently looked for souvenirs.” A few attempts were made by the Chinese to fraternize. One group approached a Marine listening post and asked for water and wanted to talk. Others hung up gift bags at the base of outpost Ava and shouted, “How are you? Come on over and let’s have a party,” while the Marines stared at them in silence. The last hostile incoming in the 1st Marine Division sector was reported at 2152 when five rounds of 82mm mortar landed on a Korean outpost, COP Camel.

Marines on line that night warily scanned the darkness in front of their trenches. Slowly at first, then with increasing rapidity the white star cluster shells began to burst over positions all along the line. Thousands of flares illuminated the sky and craggy hills along the 155-mile front, from the Yellow Sea to Sea of Japan. The war in Korea was over. Of the men from the one Marine Division and air wing committed in Korea during the three-year conflict, 4,262 had been killed in battle. An additional 26,038 Marines were wounded. No fewer than 42 Marines would receive the Nation’s highest combat decoration, the Medal of Honor, for outstanding valor—26 of them posthumously.
Chapter 10. Return of the Prisoners of War

Operation BIG SWITCH[1]

BETWEEN AUGUST 1950, the month that the first Marine was taken prisoner and July 1953, when 18 Marine infantrymen were captured in final rushes by the CCF, a total of 221 U.S. Marines became POWs.[2] The majority of them—nearly 90 percent—ultimately returned. After the conclusion of hostilities, Marine POWs were among the UNC fighting men returned in Operation BIG SWITCH.

The new mission of the 1st Marine Division, with the cease-fire, called for organization of the Post Armistice Battle Positions and establishment of a No-Pass Line approximately 200 yards south of the Demilitarized Zone boundary. In addition to maintaining a defensive readiness posture for full-scale operations if hostilities resumed, the Marine division was charged with control of the Munsan-ni area and assisting in repatriation of prisoners of war. Obviously, since the Panmunjom release point for receiving the POWs was located in the Marine zone of action, the division—as in the earlier LITTLE SWITCH prisoner exchange—would play a major part in the final repatriation.

With the armistice and ending of the war expected almost daily, the Munsan-ni Provisional Command was activated and reorganized in June. Once again, the 1st Marine Division was responsible for the United Nations Personnel and Medical Processing Unit, organized along lines similar to those used during the preliminary exchange. The division inspector, Colonel Albert F. Metze, was designated Processing Unit Commander. Sections under his direction were staffed by Marine and naval personnel. The normal command structure was reinforced by special engineer, medical, interpreter, food service, chaplain, security, signal, supply, and motor transport teams. Planning for the project, like all military operations, was thorough and continuous.

As in April, the Munsan-ni Provisional Command assumed responsibility for handling the UN repatriation at Panmunjom as well as supervision of the receiving and processing of ROKA personnel. Brigadier General Ralph M. Osborne, USA, was placed in charge of the command, with headquarters at the United Nations Base Camp. The RCT landing exercise for the 1st Marines, scheduled in July, was cancelled because of shipping commitments for Operation BIG SWITCH, as the Navy Amphibious Force readied itself for the repatriation of prisoners. By the end of July, the 1st Marine Division was supporting “approximately 42,400 troops with Class I [rations] and 48,600 with Class III [petroleum products] due to the influx of units and personnel participating in Operation BIG SWITCH.”[3]

Several days before the exchange, however, it became evident that the old site of the Gate to Freedom used in the April exchange would have to be abandoned. It was found inadequate to handle the larger number of returning prisoners—approximately 400 daily—to be processed in the new month-long operation. The new site, Freedom Village, near Munsan-ni contained an old Army warehouse which was renovated by the 1st Division engineers and transformed into the 11th Evacuation Hospital where the UN Medical and Processing Unit was located. Members of the division Military Police Company provided security for the exchange area. Marines from practically every unit of the division were assigned duties at the United Nations Processing Center. As General Clark, UNC Commander later recalled:

“Preparations for Big Switch were necessarily elaborate. At Munsan we had a huge warehouse stocked high with clothing, blankets, medical equipment and other supplies for the returning POWs. At Freedom Village nearby we had a complete hospital unit ready. It was one of the Mobile Army Surgical Hospitals (MASH) which had done such magnificent work close to the front through most of the war.”[4]

On 5 August, the first day of BIG SWITCH, Colonel Metze took a final look around the processing
Readiness of this camp was his responsibility. If anyone had real understanding of a prisoner’s relieved and yet shaken reaction to new freedom it was this Marine Colonel. Chosen by the United Nations Command to build and direct the enlarged Freedom Village, Colonel Metze himself had been a prisoner of war in World War II. He knew from personal experience how men should be treated and what should be done for them early in their new freedom. For many, this was after nearly three long years in Communist prison camps. That morning, as described by an observer:

“Members of his [Colonel Metze’s] command stood by their cubicles, awaiting the first signal. The 129 enlisted Marines, corpsmen, doctors and other UN personnel had held a dress rehearsal only the day before. Everything was ready.”[5]

Fifteen miles northwest another group of Marines assigned to the Provisional Command Receipt and Control section waited almost in the shadow of the famous “peace pagoda” at Panmunjom. UNC receiving teams, each headed by a Marine Corps major, “watched the road to the north for the first sign of a dust cloud which would herald the approach of the Communist convoy.”[6] The United Nations POWs had been assembled at Kaesong and held there in several groups, preparatory to the return. The exchange agreement had specified that the repatriation would begin at 0900. Precisely at 0855 the Communist convoy, led by three Russian-made jeeps, each carrying one CCF and two NKPA officers, moved out from the Communist side of the peace corridor. Trucks and ambulances followed the jeeps.

As they approached the exchange site, “a Marine officer bellowed the familiar naval command, ‘Marines, man your stations!’”[7] Rosters of the UNC prisoners in the trucks and ambulances were then presented to the Marine team captains who checked the lists. As they called the names, “thin, wan, but smiling men shuffled from the trucks to the medical tents.”[8]

Official receipt of the POWs at Panmunjom was by the Munsan-ni Provisional Command Receipt and Control Officer, assisted by 35 officers and enlisted men from the 1st Marine Division. After their screening by medical officers, UN returnees not in need of immediate medical aid were transferred by ambulance to Freedom Village at Munsan-ni for further processing. Helicopter priority went to litter patients too weak to travel by ambulance. POWs requiring prompt treatment were loaded aboard the HMR–161 carriers and flown to the 11th Evacuation Hospital at Freedom Village.

Seriously injured men were transferred directly to the Inchon hospital ships for embarkation to the United States, or were air-evacuated to Japan. South Korean repatriates were processed and went their way to freedom through nearby Liberty Village, the ROK counterpart of Freedom Village. A huge map was used to check progress of the POW convoys en route from Panmunjom to Freedom Village. The departure of ambulances and helicopters from Panmunjom was radioed ahead to Freedom Village, where medical personnel and vehicles lined the landing mat.

At Munsan-ni, the newly-freed men received a more thorough physical exam and the rest of their processing. Here they were again screened by medical officers to determine their physical condition. Able-bodied POWs were escorted to the personnel data section where necessary administrative details were recorded and their military records brought up to date. Those medically cleared were available for press interviews. New clothing issue, individually tailored, probably as much as anything emphasized to a prisoner that his particular Korean War was over. And nearly all of them found news[9] awaiting them in letters from home. When all basic details were completed, returnees went into the recreation and refreshment section. Commonplace iced tea, coffee, ice cream (the favorite), milk, sandwiches, cigarettes, and the latest periodicals were luxuries. In their weakened condition, the POWs could be served only light fare; the big steaks would come later.

The first Marine and fifth man in the processing line on the initial day, 5 August, was Private First Class Alfred P. Graham, Jr., of H/3/5. Although too weak to enter the press room, the 21-year-old repatriate told newsmen later in Tokyo of being fed a diet of cracked corn during his prison camp stay and of being forced to
carry firewood 11 miles each day. The second Marine returned that day, and the 34th man to enter Freedom Village, was Sergeant Robert J. Coffee, of the 1st Signal Battalion. Captured in November 1950, he had been wounded just before being taken prisoner and had received little medical treatment. Like other returnees, Coffee stated that the treatment had been very poor while he was in the hands of the North Koreans but that it had improved somewhat after he was turned over to the Chinese.

Third and last Marine to come through the line was Private First Class Pedron E. Aviles, previously with the Reconnaissance Company of Headquarters Battalion. Knocked unconscious with a rifle butt while battling the enemy on a patrol on 7 December 1952, he regained consciousness to find himself a prisoner of the CCF.

On the second day, three more USMC infantrymen traveled that final road to freedom. They were Private First Class Francis E. Kohus, Jr., of A/1/7; Corporal Gethern Kennedy, Jr., I/3/1; and Private First Class Bernard R. Hollinger, H/3/5. Like the preceding three, their stories bore a similar pattern: usually they had been captured only after having been wounded or clubbed unconscious. As with other UNC prisoners being released daily, they told of the physical cruelty of their North Korean captors and the mental strain under the Chinese. Observers noted that many of the men released this second day were in much poorer physical condition than the initial returnees. In fact, one ROK prisoner was found to have died in an ambulance while en route to Liberty Village.

Mostly the repatriates asked questions about their old outfits: “Do you know if any of the other guys on the outpost got back off the hill?” and “Did we finally take the damn thing?” “Where’s the 24th Division now?”[10]

Technical Sergeant Richard E. Arnold was one of the two Marine combat correspondents at Freedom Village during BIG SWITCH. He described his impressions of the returning men—in some cases, coming home after 30 months’ confinement in North Korean POW camps, and others, as little as 30 days:

“All are relieved and some a little afraid . . . It’s their first hour of freedom, and most tell you that they can still hardly believe it’s true. Some are visibly shaken, some are confused—and all are overwhelmed at the thought of being free men once again.”[11]

As in prison life everywhere, the POWs told of the hated stool pigeons, the so-called “progressives.” These were the captives who accepted (or appeared to accept) the Communist teachings and who, in turn, were treated better than the “reactionary” prisoners who resisted the enemy “forced feeding” indoctrination. Continued the Marine correspondent:

“They don’t talk much. When they do, it’s . . . mainly of progressives and reactionaries—the two social groups of prisoner life under the rule of Communism, the poor chow and medical care, and of the desire to fight Communism again.

“When you ask, they tell you of atrocities committed during the early years of the war with a bitterness of men who have helplessly watched their friends and buddies die. Of forced marches, the bitter cold, and the endless political lectures they were forced to attend.”[12]

One of the last—possibly the last—Marine captured by the Chinese was Private First Class Richard D. Johnson, of G/3/1. The 20-year-old machine gunner had been in the final battle of the war, the Boulder City defense, and was taken 25 July, just two days before the signing of the truce. Private First Class Johnson was returned the 19th day of the exchange. Another Marine seized in that same action was Private First Class Leonard E. Steege, H/3/7. As he entered the gate, he momentarily shook up Corporal James E. Maddell, a military policeman on duty at Freedom Village. Maddell said the last time he saw Steege was during the fighting for the outpost. “He was a dead Marine then,” Maddel said, “but I guess it was just a case of mistaken identity.”[13]

Captain Jesse V. Booker of Headquarters Squadron 1, the first Marine POW of the war, who had been captured on 7 August 1950, was also one of the earliest MAW personnel released. Booker and First Lieutenant Richard Bell, VMF–311, were returned to UNC jurisdiction on 27 August, the first Marine aviators to be sent back.
In addition to the regular issue of Marine utilities, gold naval aviator’s wings, donated by 1st MAW fliers, were pinned on the chests of returning pilots by Wing General Megee and Division General Pate. Also welcoming Marine returnees at Freedom Village were Brigadier General Verne J. McCaul, the new Assistant Wing Commander; General Burger, ADC; and Colonel Metze, who also “found time during the busy days to greet and talk with every Marine and Navy Corpsman who passed through.”\[14\] Among those dignitaries\[15\] present for the occasion were General Taylor, EUSAK CG; General Clarke, I Corps Commander; Secretary of the Army, Robert T. Stevens; and various U.S. senators.

During August enlisted POWs were recovered in large numbers. Officers, generally, did not arrive at Kaesong—the first step to Panmunjom—until about 21 August. After that date they were gradually returned to friendly control.

Even as late as 26 August there was considerable concern over the fate of hundreds of Allied officers not yet repatriated. Some early returning officers told of colonels, majors and captains who had been sentenced up to ten years for forming “reactionary groups” in camp. One field grade officer had been sentenced to a long prison term on the eve of the armistice.\[16\] A similar thing nearly happened to Captain John P. Flynn, VMF(N)–513, long a thorn in the side of his Communist captors. Like a number of UNC airmen falsely charged with waging germ warfare, he vigorously denounced these allegations. “Even as late as the end of August the Marine was threatened with nonrepatriation, and his experience formed the basis for an episode in the novel A Ride to Panmunjom.”\[17\]

Between 5 August–September, 3,597 U.S. servicemen were returned during Operation BIG SWITCH, including 129 ground and 28 air Marines. This 157 figure represents a total of 42 officers and 115 enlisted repatriated during this second and final POW exchange. Of the 27 Naval personnel freed, at least 6 were hospital corpsmen serving with the 1st Marine Division when they were taken. Counting the 157 Marines released in Operation BIG SWITCH and the 15 wounded POWs sent back in April, a total of 172 division and wing Marines were returned in the two POW exchanges.

Although the switch took place over a five-week period, 38 Marines, or 24 percent, were not released until late in the proceedings, in September. As one author noted, “It was Communist policy to hold the ‘reactionaries’ . . . to the last.”\[18\]

Two of the best-known Marine “reactionaries” who had openly defied their Communist jailers during their entire period of captivity, were then-Lieutenant Colonel William G. Thrash, a VMA–121 pilot, and then-Major John N. McLaughlin, taken POW in November 1950. McLaughlin was released on 1 September and Thrash on 5 September in a group of 275 Americans returned, the largest number for any single day’s transfer since the exchange began. The most famous U.S. prisoner held by the Communists was Major General William F. Dean. Formerly commander of the U.S. Army 24th Division, he had been captured in August 1950 after the fall of Taejon.

Ever since Operation BIG SWITCH got under way, every returnee had been asked if he had seen or heard of General Dean. None had. Many UN officers felt—uneasily—that he would probably be the last officer to be sent back. In fact, he emerged from imprisonment on 4 September “to be greeted with cheers at Freedom Village.”\[19\] Major Walter R. Harris and the most senior Marine captured during the war, Colonel Frank H. Schwable, later to be the central figure in a Court of Inquiry, were among the last nine Marines returned on 6 September, the final day of the switch. And so, one by one, the last 160 American POWs passed through Panmunjom. All were men marked by the enemy as “war criminals.”

One Army sergeant, who freely admitted he could “never adequately describe how he felt when he knew he was going home”\[20\] recalled those final moments as a newly-freed prisoner:

“At 1100 his truck pulled up at Panmunjom, the last convoy of American POWs to be exchanged. A huge, moustached Marine master sergeant walked up beside the truck, called out: ‘I will call out your last name.
“‘Schlichter!’

‘Schlichter [Charles B., Sgt.], barked out his response, and stepped down.

‘Sergeant,’ the big Marine said gravely, ‘glad to have you home.’

‘Fella, you don’t know how glad I am,’ Schlichter said.”[21]

In the preliminary prisoner exchange, the week-long “LITTLE SWITCH” in April 1953, all of the returned Marine personnel were men who had been wounded at the time of their capture. They were recently-captured POWs, deliberately segregated by the enemy from early captives. All of these home-coming Marines had been captured since May 1952. Generally speaking, they had all been fairly well-treated.

During Operation BIG SWITCH, by contrast, 41 Marines were repatriated who had spent nearly three years as Communist prisoners of war. The majority of USMC returnees in this second exchange, however—a total of 91—had been captured relatively recently, in 1952 and 1953, and 25 had been held since 1951.

Throughout Operation BIG SWITCH, the Allied Command transferred a total of 75,799 prisoners (70,159 NKPA and 5,640 CCF) seeking repatriation. The Communist returned 12,757 POWs. In addition to the 3,597 Americans, this total represented 1,312 other UNC troops (including 947 Britons, 228 Turks, and small numbers of Filipinos, Australians, and Canadians) and 7,848 South Koreans.

The BIG SWITCH exchange went relatively smoothly, marred for a while only by the unruly behavior of some Communist diehard POWs. In a manner reminiscent of their earlier camp riots, the Communist POWs put on a blatant propaganda show for the benefit of world newsreel cameras. As the train carrying CCF and North Korean prisoners moved into the Panmunjom exchange point, enemy POWs noisily shouted Communist slogans, defiantly waved Communist flags, and hurled insults at UN forces. Some POWs stripped off their [U.S. provided] uniforms, “tossing them contemptuously to the ground.”[22] Others spat in the faces of U.S. supervising officers, threw their shoes at jeep windshields, and sang in Korean and Chinese “We will return in the Fall.”[23]

Marine division and wing elements were designated responsible for the security of nonrepatriated enemy POWs. By terms of the armistice agreement, these were held by UNC custodial forces from India. In commenting on the airlift operations, performed largely by HMR–161, the UNC Commander noted:

“We had to go to great lengths to live up to our pledge to Syngman Rhee that no Indian troops would set foot on South Korean soil. Therefore, we set up an airlift operation which carried more than six thousand Indians from the decks of our carriers off Inchon by helicopter to the Demilitarized Zone. It was a major undertaking which just about wore out our helicopter fleet in Korea.”[24]

One of the recommendations made by military officials after the April LITTLE SWITCH exchange was that all interrogation of returning POWs be done either in America or on board ship en route home, rather than in Tokyo. This system was followed and worked out well. The POWs boarded ships at Inchon, following their clearance at Freedom Village. Interrogation teams, in most cases, completed this major part of their repatriation processing before docking at San Francisco. Two weeks of recuperation, good food and rest aboard ship enabled many POWs to arrive home in far better shape for reunion with their families than they had been in when received initially at Panmunjom.

As in LITTLE SWITCH, Marine and Navy personnel were processed by members of the Intelligence Department of Commander, Naval Forces Far East, augmented by officers from other Marine staffs. Marine officers who conducted the shipboard interrogations again included Lieutenant Colonel Fisher, ComNavFE liaison officer, as well as Lieutenant Colonel William A. Wood, Major Stewart C. Barber, and First Lieutenant Robert A. Whalen. All returning POWs were queried in depth by counterintelligence personnel about enemy treatment and atrocities, questionable acts committed by that small proportion of our own men whose conduct was reprehensible, and routine military matters. A security dossier was prepared on each prisoner, and all data about him went into his file case. The LITTLE SWITCH reports had indicated earlier—and this was subsequently
confirmed—that some U.S. servicemen were definitely marked for further detailed questioning and scrutiny.
As the Commandant, General Shepherd, was to testify later during an investigation, “the prisoner of war question had never been a major problem [in the Marine Corps] due to the extremely limited number of Marines taken prisoner.” As one returnee at BIG SWITCH bluntly put it: “You fought until they reached you with a bullet or a rifle butt—that was the end.”

Of the 221 U.S. Marines captured during the Korean War, more than half—121—were seized after 20 September 1951. For the Marine Corps this date marked the time when “warfare of position replaced a warfare of movement throughout the remaining 22 months of the conflict in Korea.”

Both in the X Corps sector in eastern Korea where the 1st Marine Division was located at that time, as well as later on the Korean western front, the Marine Corps was denied its traditional aggressive fighting role. The Marines (along with the rest of the UNC forces) ceased offensive operations, were reduced to making limited attacks, and were under order from higher echelons to “firm up the existing line and to patrol vigorously forward of it.”

The mission of the Marine division thereby evolved into “an aggressive defense of their sector of responsibility” as records duly phrased it. On a larger scale, the nature of the Korean War, from about November 1951 on, reverted to that of July and August, characterized primarily by minor patrol clashes and small unit struggles for key outpost positions. This became the pattern for the remainder of the war. It changed only when the decreed mission of an “active defense of its sector” by a UNC unit became this in fact. Normal defense then escalated into sharp, vigorous fighting to retain friendly key ground positions being attacked by the enemy. One American writer, in a discussion of the British defense in depth concept (adopted by the Marine Corps late in the war), went so far as to blame heavy Marine casualties in Korea on EUSAK’S outpost system.

Approximately half of the 100 Marines taken prisoner by September 1951—43—had fallen into enemy hands during the last two days of November 1950. They had been part of the ill-fated Task Force Drysdale, a composite Royal Marine-USMC-Army convoy that was ambushed by the Chinese en route to the Chosin Reservoir. These facts are relevant to a better understanding of the Commandant’s statement that, traditionally, few Marines become prisoners of war.

Overall, the survival rate for Marines taken captive during the Korean War was 87.8 percent. Even for the worst year, 1950, when NKPA treatment was more ruthless and brutal than the CCF (and in any event, for those men longest-held), the Marine survival rate was 75 percent. Marine Corps statistics show that of 221 Marines captured, 194 (43 officers, 151 enlisted) returned, and 27 or 12.2 percent died. Only a few Marines were afflicted with “give-up-itis,” the malady that struck countless POWs and took a heavy toll of lives. Included among these 194 returnees were the 172 men from the two POW exchanges, as previously noted; plus a group of 18 Marines captured in 1950 who escaped and rejoined USMC units in May 1951; two enlisted men who escaped less than a week after being taken; and two others released by the enemy after less than a month’s captivity.

In a pure statistical oddity, the survival percentage for both Marine officers and enlisted (as well as the overall return rate) turned out to be the same: 87 percent.

Without going into an analysis here of the possible relevant factors, it is interesting to note that 62 percent of all U.S. captured military personnel returned after the Korean War and that roughly 38 percent died while imprisoned. During World War II, the death rate for U.S. prisoners held by the Axis powers was approximately 11 percent.
occupational hazard. In most cases, prisoners were taken in one of two situations. One occurred when overwhelming numbers of hostile forces suddenly surrounded and overran a small outpost, and either killed or captured a high proportion of its defenders. The second resulted from the well-known increasing accuracy of CCF antiaircraft fire. Halfway through the war it began to take its toll of 1st MAW pilots with similarly predictable results: either death or capture. Simple mischance and the human error of confused directions caused at least two ground Marines to blunder into enemy territory. [35]

A brief review of the Korean War, chronologically, illustrates how some of the men of the 1st Marine Division wound up as prisoners. In the first week of August 1950, leading elements of the 1st Provisional Marine Brigade and the 1st MAW air squadrons arrived in Korea. Soon thereafter the Marine Corps was in the thick of these early-moving offensives: at the Pusan Perimeter; the September Inchon-Seoul amphibious landings; Fox Hill at Toktong Pass, Yudam-ni, the Task Force Drysdale operation, all in November; and the October-December Chosin Reservoir campaign, including the two-day movement from Hagaru to Koto-ri in early December. Marine infantry, military police, tankers, motor transport personnel, and artillerymen were listed MIA in these operations.

Altogether, 79 Marines were captured during the first year. November 1950, when 58 Marines were lost to the enemy, would rank as the most costly month of the entire war in terms of Marines seized in combat. The first air POW, Captain Booker, was shot down 7 August while flying a reconnaissance mission from the USS Valley Forge. (This was the same date that infantrymen of the Marine Provisional Brigade saw their initial heavy fighting in what was then considered only a “police action.”) Captain Booker was to remain the only Marine pilot in enemy hands until April 1951.

One ground Marine captured during the hectic days of August 1950 escaped before ever becoming listed as a casualty. Although Private First Class Richard E. Barnett thus does not technically qualify as a POW statistic, he still holds the distinction of being both one of the first Marine captives and one of the few to escape. [36]

Few Marines were taken during 1951. Of the 31 seized throughout the entire year, 13 were from the division and 18 from the wing. The Marines were engaged in antiguerrilla activities until late February when a general advance was ordered by U.S. IX and X Corps to deny positions to the enemy. The 1st Marine Division was committed near Wonju, as part of the IX Corps. A second offensive, Operation RIPPER, was launched in March, and for the next six weeks small inroads were made against CCF forces. Relieved in the Hongchon area the next month by elements of the U.S. 2d and 7th Divisions, the Marines continued to operate as part of the IX Corps. Their mission was to secure objectives north of the 38th Parallel. On 21 April the 1st Marine Division launched its attack, on IX Corps order, encountering moderate to heavy resistance. Throughout the first half of 1951, only five Marine infantrymen were captured.

Truce negotiations, as earlier noted, began at Kaesong on 10 July 1951 and ground fighting slowed. When the Communists broke off the truce sessions in late August General Van Fleet, then EUSAK commander, ordered an offensive by the X Corps to seize the entire Punchbowl. Along with other X Corps divisions, the Marines attacked on 31 August. They secured initial objectives, and then moved north to the Soyang River to seize additional designated objectives. Following the bitter action in the Punchbowl area, the Marines were involved in consolidating and improving their defenses.

As the battle lines became comparatively stabilized in 1951, the enemy began to develop his AA defenses to peak efficiency. Marine pilots engaged in CAS, observation, interdiction, and armed reconnaissance missions began to encounter accurate and intense ground fire. [37] Aircraft losses increased, and with them, the number of USMC aviators who fell into enemy hands. More than half of the Marine POWs taken during the year—18 of 31—were on 1st MAW station lists. Captive airmen represented VMF–323, VMF(N)–513, Hedron MAG–33 (Headquarters Squadron 33), VMO–6, VMF–312, VMF–311, and VMA–121.

The year 1952, like 1950, saw a large number of Marines taken into hostile custody—a total of 70. As the year began, CCF and UNC ground forces had settled down to a bunker warfare system often compared to the
trench warfare of World War I. Air activity remained much as it had the preceding year. Air losses decreased, however, with only 11 pilots becoming POWs, in contrast to the 59 infantry Marines captured. In March, the 1st Marine Division moved from the X Corps zone of action on the east-central front to the I Corps western coastal flank. Here the Marines encountered “steadily increasing aggressiveness as the enemy launched larger and more frequent attacks against outpost positions.”[38] Probes, patrol actions, and aggressive defense of the MLR and its outposts took their toll.

Enemy pressure reached its height in October, when 41 Marine infantrymen were seized, the second highest number taken in any month during the war. In the COPs Detroit and Frisco defense of 6–7 October, the 7th Marines listed 22 MIA, of whom 13 became POWs, practically all of them being wounded prior to capture. On 26 October, the Communists lunged at 7th Marines COPs Ronson and Warsaw, adjacent to the main battle position, the Hook. In the ensuing action, 27 Marines were “marched, carried, or dragged off the hill and taken into the Chinese lines.”[39] Surprisingly, all 27 were recovered alive in the prisoner exchanges the following year.

Of the 11 Marine airmen who became statistics on a POW list in 1952, 4 were shot down in an ill-fated 10-day period beginning 6 May. Again, all-too-accurate hostile AA fire was the villain. In similar incidents during the year, two Marines engaged in “good Samaritan” aerial activities became POWs for their efforts. In February, First Lieutenant Kenneth W. Henry, an AO assigned to the Marine detachment aboard the light cruiser USS Manchester, and Lieutenant Edwin C. Moore, USN, whirled off in the cruiser’s HO3S to attempt rescue of a downed Navy fighter pilot, Ensign Marvin Broomhead. In the bright early afternoon, as Henry was maneuvering the helicopter sling, their ship suddenly crashed—apparently from enemy machine gun fire intended for a combat air patrol operating in the vicinity. Two of the three men—Broomhead and Henry—were injured, but managed to drag themselves to a hidden position and waited to be rescued. Instead, they were discovered shortly before midnight by a Chinese patrol.

A similar mishap occurred on 16 May to First Lieutenant Duke Williams, Jr., of VMF–212. Searching for a crashed pilot, his plane was struck by AA and he managed to jump. His parachute blossomed down into the midst of 15 waiting Koreans who had gathered to take him prisoner.

During the last seven months of hostilities in Korea, from January–July 1953, 41 Marines were captured. These included a VMO–6 pilot and air observer in the little OE-1 spotting planes shot down in two separate incidents, plus 39 ground Marines trapped in the vicious outpost struggles of March and July. Except for two Marines who died, the rest were freed a few months after their capture during Operation BIG SWITCH.

Summarizing it another way, of the 221 Marines captured during the three-year conflict:

—49 were officers and 172 enlisted;
—190 were ground personnel and 31 aviators;
—of the 190 ground troops, 19 were officers and 171 enlisted;
—of the 31 aviators, 30 were officer pilots and 1 was enlisted.

The 7th Marines, which was the unit on line at the time of several major CCF attacks, had the highest number of POWs in the division. A total of 70 men, or 59.3 percent[40] of the 118 infantry Marines taken, were from the 7th. The record during this 1950–1953 period for the others is as follows: 1st Marines, 15 POWs; 5th Marines, 33; and the division artillery regiment, the 11th Marines, 14. Six pilots from Marine Fighter Squadron 312 found themselves unwilling guests in North Korea. Four other units—VMO–6, VMF–323, VMF–311, and VMF(N)–513—each had five members who served out the rest of the war as POWs.
Chapter 10. Return of the Prisoners of War
The Communist POW Camps[41]

The Communist POW camp system, under Chinese direction, began in late December 1950. Marines captured in November and December, along with U.S. Army troops, British Commandos, and other Allied personnel, were forced-marched north to Kanggye, not far from the Manchurian border.[42] In the bitter cold, while winter howled through North Korea, the column of prisoners limped its way to its final destination, arriving the day after Christmas. Several of the group, including Marines, perished during the four-day march—victims of malnutrition, untreated combat wounds, pneumonia, the stinging, freezing wind, and subzero temperatures. Usually, “the Communists moved them [the prisoners] by night, because they feared the United Nations air power which . . . ranged over the whole of North Korea.”[43]

During the first three months of 1951, a network of POW camps was developed along the southern shores of the Yalu River. Occupants of the forlorn villages were evacuated, and newly captured UNC prisoners moved in. The main camp operation at this time was in the Kanggye area. This was a temporary indoctrination center established in October 1950 before the development of regular POW camps. (For various CCF camp locations, see Map 34.) Ultimately a group of a half dozen or so permanent camps were developed northeast of Sinuiju, along a 75-mile stretch of the Yalu.

By early 1951, Major McLaughlin, a captured Marine staff officer previously attached to X Corps, was senior officer among the Kanggye prisoners which included a heterogeneous collection of U.S. 7th Division soldiers, U.S. Marines, 18 Royal Marine Commandos, and Navy hospitalmen. UN personnel were scattered throughout several farmhouses, with no attempt made to segregate the enlisted and officers. The Chinese designated prisoner squads of 8–12 men, depending on the size of the room to which they were assigned. CCF-appointed squad leaders were those prisoners who appeared more cooperative.

In direct opposition to orders, Major McLaughlin set about establishing communication between the small scattered POW groups, despite ever present surveillance. He tried to achieve effective control of the POWs so that a united front of resistance against the enemy could be maintained. At mass indoctrination meetings, held regularly every few days, the Marine officer issued instructions to enlisted personnel through five Marine noncommissioned officers. As one ex-prisoner recalled, the “cold, smoke-filled barn was the locale for widespread exchange of information between the many little groups.”[44] Daily routine at Kanggye stressed study and political indoctrination. Squad leaders were responsible for lectures and discussions on assigned topics in Marxian dialectical materialism. The curriculum was more intense than most college courses. On the other hand, physical treatment of inmates—except for chronic malnutrition and grossly inadequate medical care—at Kanggye was less brutal than at most of the other prisoner compounds.

Interrogations went hand-in-hand with indoctrination. Prisoners were grilled regularly on order of battle, close air support, naval gunfire methods, UN aircraft, weapons, unit locations, and other tactical information. The Chinese were even more interested in the life histories and biographical data of their captives. POWs were required to answer “economic questionnaires” and at frequent intervals compelled to write elaborate self-criticisms of their political attitudes and class backgrounds. The CCF were satisfied only when prisoners—whose original truthful answers had been rejected—revised their own family status and income statistics downward. POWs, being interrogated, often found the Chinese arguing with them over such far-away matters as the prisoner’s parents or his own family annual income and social level.
In March 1951, after an indoctrination period of about eight weeks, the Kanggye POWs were transferred, and the camp itself was later abandoned. The officers were relocated at Camp 5, Pyoktong, while the majority continued the march westward to the newly opened Camp 1, at Chongsong.

Despite its numerical designation as Camp 5, the Pyoktong compound had been organized two months earlier and was the first of the permanent CCF centers. It became the headquarters of the entire prison-camp system. Approximately 2,000 UNC prisoners were interned here by the early part of the year. They were housed in native huts. New inmates arrived regularly from temporary collection centers in the south, where they had been held for months. Sometimes they were marched to the Yalu during the Korean winter while still wearing their summer fatigues. Pyoktong offered little chance for escape. The compound, situated on a barren peninsula that jutted out into the Yalu Reservoir, was so secure that the Communists did not even surround it with barbed wire or employ searchlights. It was hemmed in on three sides by fast water currents, while the one exit from the peninsula was closely guarded.

Conditions were far more severe here than at Kanggye. A starvation diet and complete lack of medical care quickly had their inevitable effect. Pneumonia, dysentery, and malnutrition were rampant. The basic diet of boiled corn or millet resulted in associated deficiency diseases, such as beriberi and pellagra. Between 20 and 30 prisoners died daily. Many experts, nonetheless, felt that “if the Chinese during the winter of 1950–51 killed their prisoners by deliberate neglect, the North Koreans who had handled the captives before they became primarily a Chinese responsibility killed them by calculated brutality.”[45]

Although now junior to some Army and Air Force officers, Major McLaughlin was elected by his fellow officer-prisoners to represent them. Recognized by the Chinese as a staunch non-cooperative and dedicated trouble-maker, the enemy concentrated their pressure on the Marine officer—and he was subjected to intimidation, maltreatment, and threats of death.

As they had at Kanggye, the CCF attempted to organize progressive groups to write peace appeals, propaganda leaflets, and articles condemning the United States for the war. Typically, progressive POWs (usually weaker, less resilient members) who went along with the Communist propaganda conditioning, received better rations and treatment. Rugged resisters, on the other hand, could dependably expect to stand a considerable amount of solitary confinement, usually in an unspeakably foul, vermin-infested “hole.” Here a POW was forced to remain in a debilitating, crouched position usually 56 hours or more. Throughout the war a good many Marines were to know this particular enemy treatment. One Marine artilleryman, Second Lieutenant Roland L. McDaniel, tied to a Korean POW in the hole for 10 days, emerged with pneumonia and tuberculosis.

In addition to the POW compounds at Pyoktong and Chongsong, other sites where Marines were held were Camp 3, at Changsong (nearby and with a nearly identical name to Camp 1), primarily for enlisted personnel, and at “The Valley.” This was a temporary medical processing center in the Kanggye area. Marine inmates here were often confined to a pig pen. Largely because of the filthy conditions of this camp, the death rate quickly earned the Valley the opprobrious name of Death Valley.

Another cluster of POW camps was located further south. These were primarily run by the North Koreans, and were transit camps where prisoners were collected and interrogated before being moved north by truck or on foot to the permanent establishments. Among them were collection centers at Kung Dong and Chorwon, and Camp 10, south of the North Korean Capital Pyongyang. The latter was also known variously as the Mining Camp, the Gold Mine, or Bean Camp—this due to its prevailing diet. At this southernmost Communist camp, POWs were required to dig coal in the nearby mine shafts. Loads of coal were then hauled in small hand carts over icy roads to the camp, a task made more difficult by the prisoners’ skimpy mealtime fare.

The most notorious of all the camps, however, was Pak’s Palace,[46] the interrogation center near Pyongyang. POWs also called it Pak’s Death Palace for its chief interrogator, a sadistic North Korean officer, Major Pak. Captain Martelli, a F4U fighter pilot from VMF–323 shot down in April 1951, was the first Marine
processed through Pak’s, where POWs were continuously threatened and beaten with little or no provocation. Another Marine aviator, Captain Gerald Fink, VMF–312, upon being asked during interrogation here why he had come to Korea won a sentence of several days solitary confinement in the hole for his forthright answer: “to kill Communists.” Second Lieutenant Carl R. Lindquist, also of VMF–312, was the only one of 18 Marine officers captured in 1951 not processed through Pak’s before being sent north.

Gradually the Chinese developed the policy of segregating officer and enlisted personnel. Commenting on this procedure, one British observer offered the following:

“By this means the lower ranks were deprived of their leaders and for a short time this had a depressing, and generally bad, effect. It was not long, however, before the natural leaders among the rank and file asserted themselves. The standard of leadership naturally varied in different compounds; but in all there was some organization and in some it was highly efficient. It was . . . the policy of the Chinese . . . to discourage the emergence of thrustful leaders.... Consequently, clandestine rather than open leadership was usual.”[47]

By midyear, noncommissioned officers were also separated from the enlisted men, in an attempt to better control prisoners. In October of 1951 another one of the Yalu River Camps was set up. This was Camp 2, at Pi-chong-ni, which thereafter served as the main officers camp. The next month a POW column of nearly 50 men, including 6 Marines, left Kung Dong for these northern camps on a death march that covered 225 miles in two weeks. During the excruciating march, prisoners had been forced to strip naked and wade across the Chongsong River, a procedure which caused several deaths and cases of frostbite. One British participant, however, recalled that the “Marines banded together during the terrible march, and the Royal Marines were drawn close to the U.S. Marines.”[48]

In December 1951 the Communist and UNC forces exchanged lists of captured personnel. The list of 3,198 American POWs (total UNC: 11,559) revealed that 61 Marines were in enemy hands. Nine others, captured late in the year, were still in temporary collection points and thus not listed. Although Marines represented only a small portion of the total POWs, they were present in most of the nearly dozen regular camps or collection points then in existence. In any event the 1951 POW list[49] gave a picture of the growing Communist camp system.

As 1951 was drawing to an end, the Camp 2 commandant, a fanatical Communist named Ding, ordered UNC prisoners to prepare and send a New Year’s greeting to the commander of the CCF, General Peng Teh-huai. Senior UN officer, Lieutenant Colonel Gerald Brown, USAF, was determined that the prisoners would not sign the spurious holiday message. Major McLaughlin voluntarily organized Marine resistance, and senior officers of other nationality groups followed suit. No greetings were sent. As usually happened, an informer reported the organized resistance and furnished names of the reactionary leaders. The following month, the six ranking officers were sentenced to solitary confinement, ranging from three to six months, for their “subversive activities.”

The episode marked the first really organized resistance to the Chinese. “Although the principals were subjected to months of solitary confinement, coercion, torture, and very limited rations during the bitterly cold months of early 1952, their joint effort laid the foundation for comparatively effective resistance within Camp 2 during the remainder of the war.”[50]

In January 1952, Major McLaughlin and the other five officers were removed to begin their long tours of solitary confinement. Although the remaining Marine officers at Pi-chong-ni had “formed a tightly knit group and consulted among themselves on every major issue,”[51] the atmosphere within the camp itself became highly charged and strained. Suspicion of informers and opportunists was rampant. The officers at Camp 2 were generally agreed that Marine Lieutenant Colonel Thrash, who arrived in June, was largely responsible for restoring discipline. He issued an all-inclusive order about camp behavior for all personnel which read, in part:

“Study of Communist propaganda would not be countenanced. If study was forced on them, POWs were to offer passive resistance and no arguments.

“If prisoners were subject to trial or punishment they were to involve no one but themselves.
“There would be no letters written using any titles or return address which might prove beneficial to the Communists for propaganda value.”[52]

Expectedly, it was not long before Lieutenant Colonel Thrash’s efforts to influence and organize his fellow officers outraged CCF officials. In September he was removed from the compound, charged with “Criminal Acts and Hostile Attitude against the Chinese People’s Volunteers.” The Marine airman spent the next eight months in solitary. Here he was subjected to constant interrogation, harassment, and duress. On one occasion he was bound, severely beaten, and thrown outside half naked in sub-zero weather. Shock of the severe temperature rendered him unconscious, and he nearly died. Throughout his eight-month ordeal there were demands that he cooperate with the “lenient” Chinese upon his return to the compound.

During 1952, the Communists developed the system of keeping newly-captured Marines (and other UNC troops) apart from those taken prior to January 1952 who had suffered more brutal treatment. Beginning in August, noncommissioned officers were also segregated. They were removed from Chongsong (Camp 1) and taken further north along the Yalu to the “Sergeants Camp” (Camp 4) at Wiwon. Although a few Marines had been interned at the Camp 2 Annex, at Obul, from late 1951 on, they were not sent there in any sizable number until mid-1952.

Adjacent to a steeply-walled valley, the Obul camp was also known as “No Name Valley.” Although the inmates of the annex were aware of other POWs in the main compound and throughout the valley, they were under heavy guard to prevent contact between the groups. An Air Force officer, the senior member, and Major Harris, the ranking Marine, went about organizing the prisoners in a military manner. In order to exchange information, notes were hidden under rocks at common bathing points or latrines. Messages were baked in bread by POWs on kitchen detail, and songs were loudly sung to convey information. Hospitalized POWs, meanwhile, were held at the Pyoktong (Camp 5) hospital or, in the southern sector, at a second hospital a few miles north of Pyongyang. Other locations where prisoners were confined in 1952 were “Pike’s Peak,” also in the same general southern area, and the Manpo Camp on the Yalu.

For POWs incarcerated behind the bamboo curtain, 1952 marked several other developments. It was the year that American airmen began to receive special grilling and threats from their Communist captors. This was in connection with the germ warfare hoax, to be discussed later. It was also the year that Marine POWs at Pi-chong-ni (Camp 2) observed their own traditional 10 November Marine Corps birthday ceremony. Eggs, sugar, and flour were stolen for a cake surreptitiously baked and suitably decorated with the Marine Corps globe and anchor. Another group accomplished the task of bootlegging rice wine. When the special date arrived, the Marine officers toasted the President, Commandant, and Marine Corps and spiritedly sang the National Anthem and Marine Corps hymn. One of the invited guests, Quartermaster Sergeant James Day of the Royal Marines, later recalled the reaction of other prisoners:

“Firstly some were apprehensive in case of trouble with the Chinese, and its always consequent rash of gaol [jail] victims. Some thought it a little childish, and not worth the trouble of interrupting the daily routine of the place. And I feel that quite a lot were rather envious that the small band of USMC should be able to get together and do this sort of thing quite seriously, quite sincerely, and with no thought of any consequence.”[53]

This same month the Chinese staged a “Prisoner of War Command Olympics” at Pyoktong. Although most Marines opposed the idea of participation in the event, because of its inevitable propaganda exploitation by the CCF, the decision rendered by the senior UN officer was that POW athletes would be represented. Much improved quality food was served for the occasion, Communist photographers were everywhere, and a CCF propaganda brochure

(with articles written by POW turncoats) was later distributed in Geneva purportedly to show the healthy recreational activities available to UNC prisoners. An Air force pilot, in describing the performance of Major McLaughlin, noted that “his skill as an athlete helped restore the prestige of the officers torn down by the enemy’s
More important, he defied the guards by deliberately circulating among the enlisted men (often younger, impressionable, less mature individuals) to point out lies in enemy propaganda tactics designed to slander the U.S. government and its leaders. The Marine officer also collected names of American POWs held in isolated places who it was suspected the enemy might attempt to hold as hostages at the end of the war—possibly as a bargaining tool for the granting of a seat to Red China in the UN.

During the last year of the war although a number of prisoners were still being captured in some of the most savage attacks unleashed by the enemy, the lot of the average POW had improved. More attention was being paid to the former pitiful medical care. The men were more warmly clad, even though still huddled into filthy, crowded huts. And the monotonous poor chow had improved. Most POWs, although carefully kept from learning developments of the outside world, naturally suspected that some reason lay behind the changes. And so there was: the Communists had no desire to repatriate skeletonized prisoners.
As early in the war as July 1951, the CCF was seeking propaganda benefits out of its so-called “lenient” policy toward captured United Nations personnel. Basically, this could be described as “calculated leniency in return for cooperation, harassment in return for neutrality, and brutality in return for resistance.” Others have characterized the CCF psychological techniques of indoctrination as monotonous and single-minded “repetition, harassment and humiliation.” In some respects, it is true that the Chinese treatment of prisoners appeared to be more humane than that of the North Koreans. The latter freely used physical cruelty and torture, to the point of being barbaric. Sometimes it appeared that Allied POWs did not receive any harsher treatment from the CCF than did local civilian prisoners.

Whereas the NKPA regularly resorted to physical brutality, the Chinese “introduced a more insidious form of cruelty.” Although they used physical violence less often, it was usually more purposeful and combined with deliberate mental pressure. CCF officials announced that treatment of captives would be “fair and lenient,” but that wrongdoers would be publicly punished. Usually this CCF punishment took the form of less drastic methods—solitary confinement, prolonged interrogation, and a reduced diet. Even under this decreed lenient policy, however, no relief parcels were delivered to POWs, nor were any neutral observers ever allowed to inspect the prison camps.

In any event, the Chinese were considerably more effective than the NKPA in their intelligence activities. Often their skilled interrogators were officers who spoke excellent English. Occasionally, they had even attended such U.S. schools as the University of Chicago and had considerable insight into American psychology, customs, and values—even slang. Interrogation sessions usually employed recording devices and sometimes were further equipped with one-way mirrors. One Marine, subjected to frequent interrogation, was kept awake by the Chinese who slapped his face and blew smoke in his eyes.

From early 1951 to the end of the war UNC prisoners were subjected to a systematic attempt at mass conversion to Communism. This intensive indoctrination effort—like the riots of Communist prisoners in Allied POW camps and the CCF germ warfare fabrications—was designed to gain a propaganda advantage. From highest-ranking officer to lowly private, no one was immune to this thought-reform process. General Dean, prize Communist captive, who was subject to three years of intense Marxist-Leninist indoctrination, upon his release commented wryly, “I’m an authority now on the history of the Communist Party and much of its doctrine.”

English-speaking POWs, both American and British, particularly became the target for Communist thought-control conditioning. Many experts have discussed glowingly the superb example and iron discipline—both on the battlefield and in POW camp—displayed by the Turkish soldiers. This is true, and their outstanding performance is to their credit as a national group. The fact remains, however, that the Turks were long-term professional soldiers. Usually they were left alone by the Communists who neither spoke their language nor needed them for propaganda purposes. As a rule all non-American troops of the United Nations received better treatment than American and British personnel.

The basic tenet of the Communist party line was that this aggressive war against the peace-loving people of Korea had been caused by American imperialists seeking additional foreign markets. All UNC soldiers were, therefore, by simple definition war criminals who deserved no better treatment than death. But as most UN soldiers were misguided and misled by their capitalist rulers they would “not be shot if they admitted their mistakes and showed themselves to be progressive” by becoming properly indoctrinated.
Often, the thought-reform processing started long before prisoners reached their permanent camps, while they were under initial interrogation in the transit collection center. Captain Samuel J. Davies, Anglican Chaplain of the British Gloucestershire Regiment,[62] noted that lecture subjects presented to his officer group at one North Korean temporary collection center included:

“Corruption of the UN by the American warmongers;
“The Chinese Peoples’ right to Formosa;
“The Stockholm Peace Appeal;
“Progress in Peoples’ China;
“Churchill, tool of the Truman-MacArthur-Dulles Fascist clique;
“The Soviet Union heads the World Peace Camp.”[63]

Systematically the enemy ground away at theory and practice of Communism, with its superiority to American democracy. From emphasis on the Korean War as imperialist aggression, the programmed thinking then dealt with shortcomings of western countries (particularly Southern lynchings, poor treatment of Negroes, and colonialism) to the idyllic socialism in people’s democracies where “everyone is equal.” “Together with the emotional pressures involved, this dramatic presentation of Marxism-Leninism to prisoners who often not only failed to comprehend why they had fought in Korea, but even the rudiments of democracy itself, was bound to have some sort of effect.”[64]

Compulsory lectures and discussions often went on until 2200. Together with the unceasing indoctrination efforts, the CCF attempted to maintain complete control over every aspect of POW life. Each camp was divided into POW companies (ranging from 60 to 300 men), platoons, and squads. Squad leaders, appointed by the Chinese, reported regularly to authorities the opinions of men in their group. “Converted” progressives were responsible for much of the internal policing. Every prisoner with reactionary tendencies was isolated. The varied pressures of hunger, fear, constant threats of torture, coercion, nonrepatriation, anxiety, and guilt[65] were used to break him down.

In an attempt to convert the Marines and other prisoners to their own beliefs, the Communists prohibited the use of the term “prisoner of war.” Instead they used the phrase “newly liberated friends” and insisted the POWs do likewise. They also denounced religion as a superstition and device for controlling people’s minds. Curiously, POWs were often permitted to retain whatever religious articles they had on them when captured, so that Bibles, rosaries, etc., were available for squad groups that sought to hold informal religious discussions and readings. Such religious expression was, of course, strictly forbidden. It might be noted here that Marines, as a group, did not appear to be any more or less interested in religious services than other POWs.

By mid-1952 the compulsory lectures were considered a failure, and the emphasis shifted to “voluntary” study groups led by progressives. More insidious methods of indoctrination were being used—books, papers, and articles written by camp progressives. Personal interrogation and indoctrination had proved it could have a more powerful effect than attempts at mass conversion. Then, too, the Chinese had by this time perfected another propaganda tool that admirably suited their purposes. It was to have even still more effective, far reaching results.
Besides their routine interrogations and indoctrinations, by 1952 the Communists had found a new angle to exploit. This was to have strong repercussions on the treatment of some captured personnel. And, ultimately, it was to affect American public reaction to the entire Korean War and to shake the nation’s confidence in some of its fighting men who became POWs.

The germ warfare issue developed from an incident in January 1952 when the Communists shot down a U.S. Air Force B–26 bomber. Several months later, in May, the enemy propaganda campaign moved into high gear when the navigator and pilot both purportedly confessed that they took part in a raid in which germ bombs were dropped on North Korean towns. After the CCF successfully extracted false confessions from the two USAF officers, the enemy exposed both prisoners to a select group of Oriental medical specialists and newspapermen. The two Americans apparently performed according to plan, and a relentless flood of Communist propaganda was unleashed on the world.

While the allegation of bacteriological warfare was not new in the Korean War, it was not until 1952 that the Chinese successfully exploited it. After suffering their first reverses in Korea in September 1950, the Communists charged that Americans were waging germ warfare. Even after they regained the tactical initiative in late 1950 they continued their campaign of vilification. In early 1951, while the UNC battled epidemics of smallpox, typhus, and amoebic dysentery prevalent among the civil population and within the POW camps, the CCF branded medical efforts to curb the diseases as experiments in germ warfare. A formal complaint was made by the CCF to the United Nations in May 1951; thereafter, the germ warfare charges lay dormant for the rest of the year.

The effect of the two airmen’s “confessions” in 1952 was far-reaching. From that time until the end of hostilities “captured aviators of all services were subjected to a degree of pressure and coercion previously unknown by prisoners of war. Prior to the turn of the year aviation and ground personnel received relatively the same treatment in Communists’ hands. After January 1952, aviators were singled out for a special brand of treatment designed to wring bacteriological warfare confessions from them.”[67] North Korean officials joined the CCF spokesmen in loudly denouncing American bacteriological attacks. As the campaign gained momentum, an elaborate, cleverly-concocted “War Crimes Exhibit” was set up in Peiping in May. Similar displays were later on view at the UNC officers’ camp at Pi-chong-ni, including hand-written and sound-recorded confessions by the two American pilots, as well as a convincing array of photos depicting the lethal “bomb containers.”

All the while air personnel were being put under acute stress to confess alleged war crimes. Captured Marine aviation personnel encountered this new subject in their interrogations. Lieutenant Henry, captured in February, was asked about germ warfare. Major Judson C. Richardson, of VMF(N)–513, during interrogations at Pak’s was told he would never leave Korea when he denied that the U.S. was waging bacteriological warfare. Master Sergeant John T. Cain, VMO–6, a well-known Marine enlisted pilot whose plane was shot down in July 1952, was questioned, confined to the hole, and taken before a firing squad when he refused to acknowledge American participation. Captain Flynn was also subjected to intensive and brutal interrogation by North Korean and Chinese Communist Air Force personnel who sought a confession. Others were to meet similar pressure and be questioned until their nerves shrieked.

On 8 July 1952, the first of a chain of events occurred that was to link the Marine Corps with the spurious bacteriological warfare propaganda. Colonel Frank H. Schwable, 1st MAW Chief of Staff and Major
Roy H. Bley, wing ordnance officer, were struck by Communist ground fire while making a reconnaissance flight. The enemy had little difficulty in compiling Colonel Schwable’s biography. Although he repeatedly maintained he had just arrived in Korea and had not yet received an assignment, he was in uniform with insignia and full personal identification. A Department of Defense press release issued two days later gave considerable data, correctly identifying him as the Marine Wing Chief of Staff. The Chinese knew they had a prize.

Two weeks after his capture, the colonel was taken to an interrogation center where he remained in solitary confinement until December. He quickly became aware of CCF intentions to utilize him for their propaganda mill. He was interrogated relentlessly, badgered, accused of being a war criminal, fed a near-starvation diet, denied proper latrine privileges, refused medical and dental attention, and subjected to extremes of temperature. Ultimately the discomfort, almost constant diarrhea, extreme pain from being forced to sit in unnatural positions, fatigue, and naked threats wore him down. At the same time he was also convinced that had he continued to resist Communist demands for a confession the enemy would have affixed his forged signature to a document to achieve their ends.

He later commented:

“In making my most difficult decision to seek the only way out, my primary consideration was that I would be of greater value to my country in exposing this hideous means of slanderous propaganda than I would be by sacrificing my life through non-submission or remaining a prisoner of the Chinese Communists for life, a matter over which they left me no doubt.”[68]

General Dean, held in solitary confinement for much of his three years’ captivity, stated the greatest problem facing a prisoner of war is “maintaining his judgment—he has no one on whom he can try out his ideas before turning them into decisions.”[69] Possibly this was also Colonel Schwable’s problem. Many drafts of his confession were made before the Chinese were satisfied that specific details reinforced the information earlier obtained in other prisoners’ false statements. The confession that finally evolved in December cleverly combined factual order of battle data and technical terminology to create a most convincing lie. It was more sophisticated than efforts of earlier captives and was, unquestionably, damaging.
Problems faced by Marine and other UNC prisoners ranged from the fundamentals of sheer survival to more abstract questions involving honor and duty that have less sharply defined interpretations. Was it, for instance, a prisoner’s duty to overtly resist the enemy at all costs and on all possible occasions? Or was an attitude of passive resistance that created less hostility and attention better in the long run? Were such passive techniques liable to render a POW unable to continue making fine distinctions in his conduct and behavior so that he unwittingly went over the line to become a collaborator with the enemy? What about a ranking POW’s responsibility of leadership?

In a practical, day-in, day-out way, every prisoner had to decide for himself as to how actively or passively he would resist the enemy. In a number of cases Marine (and other Allied) POWs gave deliberately false or misleading information in response to threats, coercion, or maltreatment. Three Marines at Pak’s regularly held counsel “to determine their courses of action and to coordinate their false stories.”

Not infrequently a POW faced threats of death, reduced rations, still worse medical care, solitary, or physical beatings and torture if he failed to make some response to questions. Major Richardson finally wrote untruthful answers to five questions about the Navy, although his NPKA interrogators told him his lies were detected. Master Sergeant Cain authored a fanciful report about the Fleet Logistic Wing, an organization about which he knew nothing, not too surprisingly since it did not exist. He later admitted, however, that he felt he’d “made a mistake at that time [his first interrogation] by lying about inconsequential things.”

Expressed in simplistic terms, a spirit of cohesion and of group identity seemed to be the key factor in—

to use a bromide that is particularly apt here—separating the men from the boys. Even when avowed reactionary leaders were removed to serve one of their many solitary tours, there seems little doubt that their example served to instill a spirit of resistance (either open or underground) in fellow POWs. This was particularly true when the leadership gap was filled by the next senior man and the chain of command remained unbroken.

Prisoners who were able to rise above their own personal situation (i.e., to adjust, without giving in) and to assist others seemed, unquestionably, to have gained greater resiliency and determination. Whether this is a cause-or-effect reaction, however, might be a grey area difficult to pinpoint precisely. In any event, glimpses of Marines from behind the barbed wire indicated that steadfastness under pressure, ingenuity, and outstanding leadership earned them the respect of fellow prisoners as well as a place in Marine Corps history.

Even in a situation as inhospitable and hazardous as a POW camp, it is not surprising that characteristic behavior and certain distinctive personality traits tend to show through, no matter what. Captain Fink, captured early in the war, endured unspeakable humiliations at the hands of the North Koreans. Although he felt his morale was at its lowest point at this time, and was not sure he could go on, he was later responsible for providing a high degree of civility for POWs confined to Camp 2. His most notable artistic and mechanical achievement was probably the construction of an artificial leg for USAF Major Thomas D. Harrison. This prosthetic was so expertly fashioned that its owner could play volleyball using his new limb! Fink also built stethoscopes for POW doctors, using resonant wood and tubing stolen from Chinese trucks. After a discussion with other POWs on the need for a religious symbol in camp, the resourceful Marine made a 22-inch crucifix, christened “Christ in Barbed Wire.” His efforts on behalf of religion earned him a 10-day sentence in the hole.
Captain Arthur Wagner, VMF(N)-513, spent an unusually long six-month tour at Pak’s during 1951. For new captives headed in that direction, the word via USMC grapevine was that he “could be trusted.”[75] Captain Wagner counselled other prisoners at Pak’s, helped chop wood, draw water, cook, ease the burden of sick POWs, and resisted the Communists at every turn.

Another member of the same squadron, Captain Flynn, had completed 59 combat missions against the enemy in North Korea before being shot down in May 1952.[76] While captive, the veteran Marine fighter pilot withstood intense interrogation, influenced others to suppress CCF-inspired talks made by progressives, and strengthened morale by planning a group escape. He was sentenced to 20 years imprisonment by a mock court. Throughout it all, according to Master Sergeant Cain, the POWs “owed much to Flynn who kept them amused.”[77] First Lieutenant Robert J. Gillette’s “reactionary” attitude resulted in his being placed in the hole on several occasions. Once, at No Name Valley, he managed to scribble a novel on toilet paper which subsequently provided some light moments for fellow prisoners. And First Lieutenant Felix L. Ferranto, 1st Signal Battalion, spent more than two years of his 33 months’ imprisonment in solitary confinement or isolated with small units of “non-cooperative” POWs. The CCF pronounced him a “hopeless capitalist, an organizer with an ‘unsincere attitude.’ ”[78]

The type of amiable accommodation that could sometimes be made, without compromising one’s standards, was once successfully demonstrated by Captain Jack E. Perry, VMF–311 briefing officer. On a bombing run his F9F fuel tank was hit, and he parachuted down. Seized almost immediately by the Chinese, his captors “showed him bomb holes from numerous strikes in the area, and they pointed out several wounded soldiers. Then, as he describes it, ‘They laughed like hell.’ Although Captain Perry failed to see anything funny, he laughed along with them.”[79]

Three Marines captured during the Korean War had suffered a similar fate in World War II. Ironically, Staff Sergeant Charles L. Harrison, of the Military Police Company; Warrant Officer Felix J. McCool, of 1st Service Battalion; and Master Sergeant Frederick J. Stumpges, Headquarters Company, were all captured in the same 29 November 1950 action. Comparisons of treatment by the Communists and Japanese were inevitable. A survivor of the Bataan Death March, Stumpges felt that although the Japanese confinement was more difficult physically, imprisonment in North Korea was a far worse mental ordeal. “They [the Communists] were around all the time and you could never speak your mind.”[80]

The other two Marines similarly thought that the Japanese were more brutal but had more character. Harrison, captured at Wake Island, said he admired them because “they really believed in their cause and were loyal to it.”[81] The Chinese, on the other hand, he characterized as employing “false friendship and deceit.”[82] McCool, who had spent 70 hours in a slimy, lice-infested hole for refusing to confess to a phony charge of rape and pillage, knew that he “hated the Chinese Communists far more than he had hated the Japanese.”[83]

Master Sergeant Cain had distinguished himself by flying little OE reconnaissance planes 184 hours and had 76 combat missions in one month. Just before his capture, Cain had paid for six months’ education for nine Korean youngsters who lived near his air base. Because of his graying hair and lack of rank insignia, Sergeant Cain was mistaken for a senior officer. In fact, the Chinese insisted that he was Lieutenant Colonel Cain, CO of VMF–121. His equal amount of insistence that he was not a Marine officer, plus his refusal to reveal any significant information, made him a particular nuisance to the CCF. He was subjected to intensive interrogation sessions, confined to the hole, and stood at attention for periods of five to eight hours. Describing the occasion on which he thought it was all over, Sergeant Cain related that he:

“... was taken to a hillside, blindfolded, and placed in front of a firing squad. He heard rifle bolts click. The commander of the firing squad asked if he was ready to tell all.”[84]

When the Marine sergeant replied that he was not going to talk, the Chinese returned him to solitary confinement. Eventually, after questioning him for 84 days, the CCF gave up trying to indoctrinate him in the
ways of Communism. Major Harris, senior officer of the Obul complex, freely acknowledged that Sergeant Cain “assumed more than his share of duties and responsibilities and set an example for all to follow.”[85]
As the Korean War came to a close, assessments were being made of America’s role in it. Operation BIG SWITCH swung into high gear and national attention focused on the returning POWs and their experiences in Communist camps. The widely-accepted statement was that no prisoners had escaped. Even more discrediting was the prevailing belief that, “worse, not a single American attempted to escape from captivity.”[87] These reported facts are not borne out by the actual record.

In May 1951, a group of 18 Marines and a U.S. Army interpreter found their way back to American control through a combination of fortuitous events and quick thinking. All of the Marines had been captured several months earlier, in the 28 November 11 December period, the majority on the night of 29-30 November. There were peculiar circumstances connected with their escape. In early April, a group of nearly 60 UNC prisoners had been brought south by the enemy from the Majon-ni area. Presumably they were to perform working details in the rear of Communist front lines.

While a larger number of prisoners, both Army and Marine, were marched westward to Pyoktong, First Lieutenant Frank E. Cold and a group of 17 enlisted were sent further south to the general Chorwon area, not far from the 38th Parallel. In the meantime the Chinese launched their spring counteroffensive on 22 April. It appears that, subsequently, the Marines and Army interpreter, Corporal Saburo “Sam” Shimamura, who had been attached to the 1st Marine Division, were told they would be taken to the area in which the Marine division was operating and released there.

The group was then trucked southeast to Chunchon, just below the Parallel, under guard, and marched toward the vicinity of the front lines. On 24 May, while in proximity to the main battle area, an artillery preparation suddenly registered nearby. The CCF guards fled, while the prisoners ran in the opposite direction, heading for high ground where they successfully eluded the guards. For the rest of that day and night the escapees quietly watched Communist troops retreat past them. The next day, 25 May, the Marines fashioned make-shift air panels from wallpaper they stripped from a ruined Korean house in the area. They spelled out “POWS—19 RESCUE.” Their signal attracted the attention of an Army observation pilot who radioed their position to an Army reconnaissance unit.

Three Army tanks were dispatched and escorted the ex-prisoners to safety. They entered friendly lines in the vicinity of Chunchon, “the first and only group of prisoners to experience Communist indoctrination and to reach freedom after a prolonged period of internment.”[88] Two members of the unit [89] were of special interest. One man was 56-year-old Master Sergeant Gust H. Dunis, who had barely survived the brutal, frozen death march to Kanggye in late December. The other was Staff Sergeant Charles L. Harrison, previously introduced as a unique two-time prisoner of war.

An additional four enlisted Marines returned to military control after a brief period of capture. Corporal William S. Blair, B/1/7, and PFC Bernard W. Insco, D/2/11, were taken prisoner on 24 April 1951 while the 1st Marine Division was operating as a component of IX Corps. Although originally sent north to a POW camp, both were released on 12 May by the enemy after less than a month’s captivity. Another pair of lucky Marines were PFC Richard R. Grindle and Corporal Harold J. Kidd, both of B/1/7. Seized on 11 May in patrol actions, they were the only Marines captured in ground fighting that month, and escaped to return to the division four days later.

At least six escape attempts are known to have been made by Marine POWs, and another elaborate plan
late in the war was foiled before it got under way. The incidents follow:

#1. In the early winter months of 1951, Sergeant Donald M. Griffith, F/2/5, became increasingly upset by the filth, steady attrition of POWs, and semi-starvation diet at The Valley. He vowed to escape. Late one night he pretended to go to the latrine and finding the guard asleep, instead hurried down the path leading out of the valley. He walked until dawn, then found a hut where he hid among a pile of rice bags for some much-needed sleep. Later, he knocked at a hut, asking for food. While he ate, however, his genial host’s son was out contacting a military patrol which even then was on Griffith’s trail.

A group of Communist soldiers closed in to recapture him. As early punishment, Griffith’s shoe packs were taken from him and he was forced to walk back to the Valley in his threadbare ski socks. Returned to the camp, the Marine sergeant was beaten across the face. He was also directed to walk up a nearby hill and for three successive times a rifle bullet tearing by his head barely missed him. Later he learned that plans of his escape were leaked to the CCF by an informer, thus triggering an early search.

#2. In May 1951, Captain Bryon H. Beswick, VMF–323, was a member of a large POW column being marched north. Although still suffering severe burns on his face, hands, and leg incurred while bailing out of his plane that had caught fire, Beswick and four others attempted to outwit their guards while on the march. All the would-be escapees were placed in solitary confinement.

#3. Shortly after his capture in July 1951, PFC Alfred P. Graham, Jr., H/3/5, was interned temporarily at what appeared to be a divisional headquarters. One afternoon when the guards seemed slack, Graham and another Marine sneaked off. Ultimately they approached a farmhouse to get food and there stumbled into a half dozen Koreans who took them into custody. The two Marines were beaten with a submachine gun and their hands were bound behind their back with communications wire. On their forced reappearance at the original site of escape, a Korean officer beat and interrogated them for three days.

#4. A short-lived escape attempt at Pak’s Palace, not long after his capture in October 1951, had earned Lieutenant Gillette a solitary confinement tour. Arriving at Officers’ camp in Pi-chong-ni the following spring, the former VMF (N)–513 squadron member and a South African air force pilot laid plans for a mutual escape. Gillette deliberately set himself on a course of reduced rations to prepare himself for the coming feat. When the two men made their break, they were shot at but managed to safely clear the camp.

The first night out the other pilot so badly injured himself in a fall that Gillette had to leave him and go on alone. Although the apparent escape route lay to the west, nearer the coast, the Marine chose to go east across rugged mountains that offered little in the way of cover, concealment, or food. His unorthodox planning nearly paid off. “Whereas most escapees were recaptured within hours, or at best within days, Lieutenant Gillette was free for several weeks before the Communists found him halfway across Korea.”[90] One Royal Marine described the attempt as “the finest and most determined one he knew of.”[91]

#5. In July 1952, three Marine officers were involved in an abortive escape attempt at Camp 2. They were Lieutenant Colonel Thrash, Major McLaughlin, and Second Lieutenant Richard L. Sill, 1st 90mm AAA Gun Battalion. When detected outside of camp they were able to get back inside the compound, but the Chinese did identify Lieutenant Still. His escape attempt earned him a three-month sentence in the hole from which he later “emerged unbothered and steeled against the Communists.”[92]

#6. Captain Martelli escaped from the Camp 2 compound in September 1952. Retaken 10 days later, he was put in the same hole for two months. On release from the confinement, he was visibly upset by the experience, but quickly recovered. As a matter of interest, Martelli, like the other men whose exploits are recounted here, returned home in Operation BIG SWITCH.

#7. In the spring of 1953 a group of 30 officers, including two British Marines, at Camp 2 organized classes in mathematics, physics, and survival lectures. Conferences on escape and evasion techniques were held and the men formed escape groups. The teams drew straws to pick priorities for escape, and each one presented its
plan to a senior body for approval. On 1 July, with support of the other teams, the first group went over the fence surrounding their house. Their freedom was brief, however, and the camp guard doubled. When rumors of armistice began circulating, further escape plans were cancelled. Clandestine prisoner escape committees—although unsuccessful in terms of actual results achieved—had existed at various camps. Second Lieutenant Rowland M. Murphy had been a member of such an organization at Obul. Major McLaughlin had assumed similar responsibilities at Camp 5, in 1951, and later at Camp 2 served on the secret all-UNC prisoners escape committee and senior officers’ organization within Camp 2. In early 1953 Major Harris became senior officer at the Camp 2 Annex. He organized Spanish classes as a facade for having a regular meeting place to announce policy and issue orders. Maps of North Korea were prepared for use in escape attempts and counter-Chinese political indoctrination was disseminated.

The Camp 2 officers performed another useful service. As rumor leaked out of the impending truce, they drafted a policy guide on POW behavior that was secretly circulated to other camps. UNC prisoners were directed to refrain from any appearance of fraternizing with the enemy, or acts of exuberance or violence. Specifically, they were reminded not to show any great enthusiasm upon their release, to prevent the Communist cameras on the scene from recording this as another propaganda victory.
With but a few exceptions, circumstances indicated that capture of most Marines was unavoidable. Theoretically, it can be argued that several seized in bunkers might have avoided captivity had they been occupying fighting-holes instead. On the other hand, they might just as readily have become statistics on a KIA list, instead, by falling victim to preparatory fire that preceded the enemy’s main assault.

As Marine historian, then-Major, MacDonald has noted:
“A shadow fell over American POWs in the aftermath of the Korean War. Courts-martial and other official inquiries revealed that a small segment of the Americans captured by the Communists had been guilty of behavior ranging from questionable to treasonable.”[94]

Both the Secretary of Defense Advisory Committee on Prisoners of War and the United States Congress, which investigated the entire POW issue, returned favorable verdicts for Marine POW conduct. The U.S. Senate report summarized its findings:
“The United States Marine Corps, the Turkish troops, and the Colombians as groups, did not succumb to the pressures exerted upon them by the Communists and did not co-operate or collaborate with the enemy. For this they deserve greatest admiration and credit.”[95]

In commenting on prisoner attitudes and activities that seemed to account for those men who became “survival types”, an Army psychiatrist, Major William F. Mayer, observed:
“The Marines were a statistically significant group from the standpoint of size, something over two hundred; the only thing I can say about them is that more of them survived than we. I think this is a function of discipline and morale and espirit; and the attitude in the Marine Corps I expressed a little while ago, that if something happens to me, these jokers will take care of me.”[96]

In the nature of self-judgment, Sergeant Griffith referred to “that certain ‘something’ that seems to weld men together prevailed more among the Marine POWs than it did with the other captured UN Troops.”[97] The Marine with probably more experience as a POW than anyone else, Sergeant Harrison, noted that “without USMC training I would never have lived through several tight spots. I am not talking strictly about physical training as I am mental conditioning. It is something that causes you to think . . . about what the other guy will think or how it [your action] might affect or endanger them.”[98]

A senior Air Force officer, Lieutenant Colonel Gerald Brown, who headed POW units at Camp 2 and 5 between his tours of solitary confinement, declared:
“I was extremely proud of the conduct of U.S. Marine Corps personnel with whom I came in contact during my period of confinement. Their esprit de corps was perhaps the highest of any branch of the Armed Forces of the United States during this period.”[99]

And Navy Chief Duane Thorin, a former inmate of the Camp 2 annex, who later inspired the character of the helicopter pilot in James A. Michener’s The Bridges of Toko-ri, pointed out:
“The Navy and Marine Corps POWs were generally excellent. The Marines who left something to be desired were more than compensated for by the majority of them.”[100]

Another view was offered by a prominent neurologist and consultant to the Secretary of Defense Advisory Committee, Dr. Harold G. Wolff. After investigating the performance of American POWs in Korea, Dr. Wolff concluded they had not “behaved much differently from other men in other armies and places” but that Americans had been made to appear much worse “by the enemy’s propaganda devices and our own initial
ineptitude in countering the Communist propaganda.”[101]

As a postscript to the POW story, five Marines received awards, on 11 January 1954, for their exceptionally meritorious conduct while serving as prisoners of the Communists in Korea. They were:

- Lieutenant Colonel Thrash—awarded a Gold Star in lieu of a second Legion of Merit;
- Major McLaughlin—awarded the Legion of Merit;
- Major Harris—also awarded the Legion of Merit;
- Captain Flynn—awarded the Navy and Marine Corps Medal; and
- Master Sergeant Cain—awarded a Letter of Commendation with Ribbon.

On the negative side, one enlisted Marine was disciplined for his cooperation with the enemy in writing a pro-Communist magazine article. A Court of Inquiry, convened in March 1954, did not recommend a court-martial for the 45-year-old pilot, Colonel Schwable. After a month-long review of circumstances involved in the case, the court opined that he had resisted Communist pressure and torture “to the limit of his ability before giving in.”[102] Its final judgment was that Schwable—a Naval Academy graduate, veteran of 20 years’ military service, and distinguished WW II night-fighter pilot and squadron CO—not be subjected to disciplinary action. At the same time the court held that his future usefulness as a Marine officer was “seriously impaired” by his conduct as a war prisoner.

On a larger scale, 192 Americans were found guilty of misconduct against fellow prisoners or various degrees of collaboration with the enemy. None of these was a Marine. In comparison with some 22,000 Communists who refused repatriation, 21 U.S. and 1 British prisoner succumbed to CCF brainwashing tactics. Twelve of the Americans have since returned to the U.S., apparently disenchanted with the Communist version of “people’s democracy” after getting a closer look at it.

Investigations later showed that “only a handful of the POWs in Korea were able to maintain absolute silence under military interrogation. Nearly all of the American prisoners went beyond the [Geneva Convention] ‘absolute’, name, rank, serial number, and date of birth restriction.”[103] Although giving false or misleading information was a common occurrence in POW camps, such testimony was usually quickly detected. American military authorities, drawing up a revised Code of Conduct (1955) subsequently recommended against making untruthful statements. Further, even though several Marines seemed to have suffered none the worse for giving false information, in at least one case a prisoner’s own situation was weakened by enemy detection of his lie and increasing pressure was brought against him.

It was found too, that in every group of prisoners there were always gradations of those more cooperative with the enemy (“progressives”) and those who offered open or passive resistance (“reactionaries”). One Korean War analyst, in seeking the final explanation of what POW tactics succeeded best against a dedicated enemy, cited the Turkish “chain of command that was never broken” and which helped to mold them together. He noted the “permissive” culture and background of Americans where freedom of choice and individual decisions are basic tenets. Despite the effect of military indoctrination and discipline, this concept of individualism and freedom appeared to be so strongly engrained that unless there was a corresponding emphasis on responsibility and strong beliefs it tended to weaken a man when his action and values were put to a prolonged test—as in the POW compound. The analyst concluded:

“Only an extremely cohesive group, with tight leadership and great spiritual strengths, coupled with inner toughness and concern for one another, could have survived the shocks visited upon their minds and bodies. . . They [the Turks] remained united against the enemy, and they survived.”[104]

This judgement, to a large degree, tells the Marine POW story.
TERMS OF THE Armistice Agreement required EUSAK components, including the 1st Marine Division, to carry out a number of major tasks in the months following the end of active hostilities. As stipulated by the cease-fire, UNC troops all along the front withdrew to a new main battle position (MBP) south of the main line of resistance. A military demarcation line (MDL) was established between enemy and friendly positions, corresponding to the end-of-war battle lines. Each side pulled back 2,000 yards from this MDL, with the combined 4,000-yard buffer strip on both sides being known as the demilitarized zone (DMZ).

A continuous double-strand barbed wire fence, known as the No-Pass Fence, or No-Pass Line, was erected 200 yards below the southern boundary of the DMZ by infantry units manning the MLR at the time of the cease-fire. Appropriate marking signs, in Chinese, Korean, and English, were placed at regular intervals along the fence, prohibiting unauthorized entry into the Demilitarized Zone.

Strict requirements by I Corps enjoined that the “fence on the southern boundary of the DMZ must present a continuous unbroken line except for gates and where it crosses large streams.”[2] Beginning late on 27 July 1953, the 1st Marine Division’s modified mission became that of withdrawal to and organization of the post-armistice MBP, establishment of the No-Pass Line, and defense of the new position in readiness for any possible resumption of hostilities by the enemy.

Division officers, from commanding general to platoon leader level, repeatedly emphasized that the armistice agreement was only a cessation of active fighting. As such, it could be violated by the enemy at any time. The armistice was not a peace, but had simply paved the way for a political conference. As the UNC commander, General Mark W. Clark, had stated, the 27 July document was merely “a military agreement between opposing commanders to cease fire and to permit the opposing sides to arrive at a peaceful solution of the conflict.”[3] Since many felt the cease-fire might be only temporary and not necessarily a permanent peace, all hands showed an attitude of skepticism and watchful waiting. There was little disposition or time for celebration. The response of many men to the complete lack of noise across the front was one of simple restlessness and expectancy.

From the 7th Marines just engaged in the vicious Boulder City battle, the reaction

“... was one of disbelief and caution. Extensive movements of the enemy during the night of 27 July only bolstered the feeling of wariness and suspicion. Only after dawn broke on 28 July, without any shots being fired, did the realism [reality] of the truce become apparent, followed by a wide-spread sensation of relief.”[4]

A 5th Marines representative noted:

“The fact that negotiations had been going on for some time with numerous false alarms dulled the edge for most people, and a prior announcement that the agreement would be signed took most of the steam away from the actual culmination of the fighting ... in effect [the cease-fire] meant ‘we’re giving you ten dollars but don’t spend it for we might take it back’.”[5]

The view expressed by a Korean regimental commander was that:

“Many of the officers and men were relieved to see the fighting cease; others, particularly among the officers, would rather have seen the fighting continue until the country could be united. However, the officers and men accepted the cease-fire as a military order and acted accordingly.”[6]

Division MLR units on 27 July had been the 1st KMC, the 5th Marines, and 1st Marines in the left, center, and right regimental sectors, respectively. With the pullback of the division to new defensive positions, the
5th Marines—the infantry regiment that had not been heavily engaged in recent combat—was assigned the mission of defending the forward general outpost (GOP) line across the division front. In addition, the 5th Marines, or Northern Regiment as it came to be called since it was the only one remaining north of the Imjin River, was also charged with police duties and security of the UNC part of the DMZ located in the division sector.

Marine regiments, battalions, and companies began withdrawing from the DMZ to move to their new MBP early on the morning of 28 July, less than 24 hours after the signing of the Korean armistice. To some extent, the relocation of units was facilitated by the fact that the forward part of the division sector had been defended by the three MLR regiments. Since the lateral boundaries, initially, would remain the same, the three 5th Marines battalions were to occupy positions held by the three line regiments. Orders called for 2/5 to occupy the left regimental sector previously held by the 1st Korean Marine Corps Regimental Combat Team; 1/5 to man the 5th Marines center sector; and 3/5 to assume the right regimental sector.

Whereas 5th Marines battalions were directed to occupy their new positions by D+ 84 hours (or 2200, 30 July), other units in some cases were not required to pull out of their respective positions until D+108 hours (2000, 1 August). This was done to insure that no portion of the division front was left unmanned during this very critical period. It did, however, force small units to make two moves and “in one instance, a battalion and a regimental headquarters were occupying the same area.”[7] Because of the need to move almost immediately, only a hasty physical reconnaissance was made. Small unit leaders were not always familiar with the area and this gave rise, in some instances, to confusion about exact unit boundaries. This resulted in a later relocation of several units.

For the first 72 hours after the armistice, Marines were engaged in a maximum effort to tear down installations, salvage fortification materials, and physically move out of the Demilitarized Zone. Infantry units were responsible for this destruction and salvage work within assigned sectors, with 1st Engineer Battalion assistance and supervision, as available. For the nearly 50 Marine infantry companies and attached KMC units, the order of priorities for those first three days generally appears to have been:

1. Recovery of ordnance and removal to company supply dumps;
2. Removal of all combat equipment to supply dumps; and
3. Destruction of field fortifications and salvage of all bunker timbers and other building materials from the old MLR sector.

Specifications of the initial armistice agreement, as originally drawn up in August 1952, had called for a complete withdrawal of all military personnel, supplies, and equipment from the DMZ within 72 hours after the cease-fire. Destruction of all fortifications within the DMZ likewise was to be accomplished within this 72-hour deadline. It subsequently became evident, however, that it would be impossible to complete the entire job of dismantling and salvaging MLR fortifications within a three-day period. In mid-June 1953, CinCUNC had advised major commands that Communist and UNC negotiators had agreed to extend the original 72 hours to an additional 45-day period, or until 13 September.[8]

Division order 1MARD–OP–11–53, issued at 1600 on 27 July, clearly stated that all “removable materials”[9] would be taken out of the DMZ within the immediate 72-hour period following the effective date of the armistice (2200, 27 July). The end-of-war order further directed that division personnel would “locate and list all valuable materials which should be salvaged but cannot be moved during this prescribed time . . . an additional period of 45 days, after the initial 72-hour period, will be used to complete salvage operations within the Demilitarized Zone under the supervision of the Military Armistice Commission. . . .”[10]

From top to lower echelons, however, a breakdown in communications seems to have taken place in the maze of post-truce orders. At the pick and shovel level, initial instructions were sometimes to the effect of:

“Salvage everything possible in the 72 hours we have to get out of here. If unable to salvage; then destroy. . . . No word was passed that there would be a period following the truce in which we could conduct a
thorough salvage operation. Had this information been available, a more systematic process could have been devised. . . .”[11]

One regiment commented that early directives from higher authorities did not clearly establish the relative priority for salvage operations.”[12] More specifically, 1/7 related:

“Periodically, messages would be received stressing certain items of salvage as critical. This required revision of working schedules and shifting of men to other jobs . . . if all salvageable material had been designated as critical at the commencement of salvage operations, the work could have been completed more expeditiously. . . .”[13]

A 5th Marines observer commented on the confusion in these words:

“It is evident, however, that in dissemination to some of the lower echelons, pertinent information was either ignored or improperly passed . . . some Company Commanders were under the impression that the entire job of dismantling and salvaging was to be completed in 72 hours. The result of this misconception was that in some areas bunkers were filled in with earth and then later had to be evacuated [excavated] in order to salvage the materials.”[14]

Initial salvage operations were conducted from 28–30 July. Trenchlines were filled in; tank slots dozed under; bunkers torn down and usable timbers carried to salvage collecting points.

Beginning on 28 July, 1st Marines line units on the division right flank came under operational control of the 5th Marines, with their new mission being to “man an outpost line on the most formidable ground south of the southern boundary of the newly planned Demilitarized Zone in the MLR regimental sector.”[15] Movement to the new outpost positions was under way by 29 July.

As the Marine units moved south to establish their new outpost positions in previously undeveloped areas, the limited engineering equipment available for simultaneously dismantling bunkers and constructing new camps tended to slow the latter job. Personnel of 1/1, which had utilized 124 vehicles for the transfer, were among those housed in widely scattered areas for several days during the moving and setting up of new camps. Torrential rains, of several days’ duration, which had engulfed the division’s transport operations on so many occasions in the past, caused the new campsites to turn into a muddy quagmire. Men of 2/5, during part of the relocation period, lived in shelter tents until regular tentage became available.

A short moratorium on salvage activities took place between 31 July–3 August while the details for entry into the DMZ were being settled. Marine division salvage efforts encompassed an area extending from the MLR to the sector rear, in the vicinity of the Kansas Line, as far as the Imjin River. Work in the areas south of the DMZ did not begin, in most cases, until after 13 September, and fortifications of secondary defense lines were left in place.

All salvage materials removed from the DMZ were placed in battalion and regimental dumps where they would be readily available for use in building the new battle positions. Recovery of ammunition was accomplished in some sectors early on the 28th. At the far right flank of the division line, the scene of the Marines’ final action in the Korean War, salvage efforts took on an additional task. Most of the first day was allotted to recovery of the dead at Hills 119 and 111 and the removal of their bodies to rear areas.

Although the enemy had policed in front of Marine lines on the night of 27–28 July, at first light the CCF indicated the desire to recover their dead from Marine positions. Enemy parties were thus permitted to temporarily enter 3/1 lines to retrieve these bodies. This procedure provoked some consternation and renewed vigilance by Marine personnel upon “seeing the enemy moving around within a stone’s throw of our front lines so soon after his determined attacks.”[16]

As soon as the Marines’ own corresponding unhappy task was completed, ammunition was removed to supply dumps, a laborious task not finished in the 1st Marines sector until noon on 29 July. The fierce fighting that had started after dark on 24 July and lasted until the morning of the ceasefire also accounted for the large
amount of salvageable items found in the area including M–1 rifles, helmets, armored vests, and quantities of blood serum. All ordnance, equipment, and building materials were separated into stockpiles of good or nonrepairable items. Ammunition in excess of a one-half a basic JAMESTOWN fire unit (a unit of fire is the amount of ammunition a weapon will use in a day of combat), was placed in company and battalion dumps for collection by regimental ordnance teams.

On occasion, salvage of friendly ammunition was made more difficult because COP stockpiles struck by enemy mortar fire contained both damaged and live, usable ammunition mixed together. Although 1st Engineer Battalion ordnance disposal teams covered the positions thoroughly, unexploded mortar and artillery rounds were often unearthed by Marines filling in the old trenches, knocking down bunkers, or recovering wire. Anti-personnel mines forward of the protective wire prevented full salvage operations in some cases.

Three Marine combat outposts required special attention. These were Bunker Hill and Esther, in the central part of the MLR, and Ava, in the right sector. Although occupied by Marines at the time of the cease-fire, the COPs fell north of the MDL and thus became inaccessible for salvage after the initial 72-hour period. The positions were reduced and materials salvaged in the allotted time.

During the first night, Marines of 3/5 (originally the right battalion, center sector) removed more than 11 truckloads of ammunition. Outposts Hedy and Bunker offered a particular problem due to the distance from the MLR and nearest road. As described by some veterans of 24-hour work crews, the trail to Bunker was “particularly tortuous and made the packing of first the ammunition and later the fortification materials a physical ordeal.”[17]

At Hedy the extreme proximity of CCF and Marine lines posed an additional difficulty. On the afternoon of the 28th, an interval of 20 yards separated the two; by the following day the enemy had completed his work in the area and was never again that close. Operations here were also somewhat delayed “by an influx of visitors: newspapermen and newsreel cameramen all interested in the great numbers of enemy visible to our front engaged in the same tasks that we were.”[18]

Dismantling bunkers was the single biggest problem of the entire salvage program. This operation began at dawn on the 28th and was not completed until the second week of September. Ultimately, more than 500 bunkers were reclaimed from MLR materials and installed in the new division position. Most of the bunkers were built of 12x12 timbers, buried deep in the ground, fastened together with 10- to 16-inch spikes. Infantry organic tools and equipment were inadequate to dismember bunkers so constructed. Crowbars, picks, shovels, pinch bars, and sledge hammers were all in short supply. Engineer equipment and other tools were not stockpiled in sufficient quantity to buttress a demolition program of such magnitude.

In places where the terrain permitted operation of bulldozers, their use drastically shortened the time spent uncovering bunkers. Where these had been emplaced on reverse slope positions of steep hills, however, the timbers had to be removed by hand. The latter was the generally prevailing situation.

Not surprisingly, throughout the demolition program “basic equipment was usually the Marine himself and his ingenuity.”[19] Effective on-the-spot, problem-solving was seen in the many “jury-rigged” levers or prybars fashioned from timbers and crowbars from scrap steel. The “Korean Sling Method,” with heavy rope and carrying poles, was often used to move heavy timbers. Trucks equipped with winches and wreckers were effective for this purpose. Dozer tanks were also used, but only after having their guns removed as required by the armistice agreement. Division engineers experimented at some length with three different ways to pull apart the larger 12x20 bunkers, in which the cross beams were secured to columns with two-feet spikes. The least technical approach which involved “winching the bunkers out of their positions and bouncing them down a steep slope until they broke apart proved the most successful and the quickest method.”[20]

Besides the lack of engineering tools, limited motor transport facilities and manpower shortages also created difficulties. Heavy commitments across the front, with virtually every division unit displacing to a new
location, resulted in a shortage of trucks that slowed both salvage and logistics operations. Assignment of personnel to around-the-clock shifts during the critical initial 72-hour period and use of lighting trailers produced maximum results from the available equipment. Company G, 3/5 reported that its men were allowed “ten minute breaks every hour and, because of the heat, they were given from 1200 to 1500 hours for sleep and worked all through the darkness.”[21] During this three-day period alone, the 1st Tank Battalion transported 275 tons of ammunition and fortification material, or a total of 111 loads in 2 1/2-ton trucks.

At this time, the restrictive provisions of the truce agreement led to a problem involving the use of heavy engineer vehicles. After 3 August, it was difficult to bring into the DMZ any hauling or motorized gear that could be construed as “combat equipment.” The 2 1/2-ton trucks, however, continued to be employed for much of the motor transport operations.

By 0930 on 1 August, the 1st Marine Division had completed its withdrawal and manned the new MBP south of the DMZ. The 5th Marines continued its mission as the northern outpost regiment. South of the Imjin, the 7th Marines occupied the right regimental sector; the 1st KMC moved into the center of the MBP; and the 1st Marines became the division reserve.

Between 3 August–13 September, each rifle company sent daily working parties into the DMZ to excavate those sectors occupied by Marine units on 27 July. Depending on available transportation, the size of the working parties varied from 25 to 100 men. These shortages were alleviated, to some extent, by KSC (Korean Service Corps) personnel.[22] The heavy-duty, “pure drudgery without glamour,” monotonous tasks performed in tropical weather, 103 degree–plus temperatures and high humidity, caused one Marine infantryman to comment ruefully:

“Close officer supervision proved to be absolutely necessary due to the nature of the work, which made the maintenance of interest and enthusiasm in the average individual, very difficult.”[23]

In another 5th Marines unit the motivation gap was partially solved by “use of a graph posted on the bulletin board showing the money value of materials salvaged each day, with the exhortation to better the previous day’s total.”[24]

Throughout the month of August and until 13 September, destruction of MLR positions and removal of materials took place concurrently with organization of defensive positions in the new sector. After the initial three-day period and its top priority of physical withdrawal of troops from the DMZ, division tactical requirements called for completion of the MBP as rapidly as possible. This now became the first priority. New company perimeter defense sites, battalion blocking positions, coordinated fire plans in event of attack, counterattack orders, and evacuation routes were mapped out. Construction began immediately. By 5 August, the new battalion camps had begun to take form and work on the blocking positions was in progress. Marine units, like other UNC forces, had to be prepared at all times for any act of enemy aggression. Whether the Communists would continue to respect the cease-fire agreement or not remained an open question.

Stockpiling, meanwhile, had been accomplished at company, battalion, and regimental dumps. All materials were stacked by size to facilitate reissue during construction of new positions. As much as 90 percent of the materials salvaged were usable in the new fortification. Although a certain amount of inter-battalion exchange took place, battalion stocks—with the exception of sandbags—were usually adequate to provide sufficient fortification materials for the rebuilding. For 5th Marines units that had the least distance to relocate, timbers moved from the old MLR in the morning were sometimes emplaced in the new defensive positions by late afternoon. Helicopters, as well as trucks, were used extensively to move stockpiles from company and battalion areas to rear regimental supply dumps.

Division MLR supplies salvaged by the 5th Marines represented:

T/E material: 12 tons
Signal equipment (wire): 2,000 miles
Engineer items—
barbed wire: 2,850 rolls
concertina: 340 rolls
pickets, 6-foot: 11,000
pickets, 3-foot: 8,000
sandbags: 339,000
timbers (from 3x8 to 12x12): 150,000 linear feet
TOTAL TONNAGE: 2,000 short tons

The 2nd Battalion, 5th Marines estimated that wire rolls, sandbags, timbers, and other materiel “recovered by this battalion and assisting units was valued at approximately $150,000.”[25]

By early September, the 1st Marine Division work priority once again had reverted from camp construction to salvage operations. It had become apparent that another maximum effort period would be necessary if all salvageable materials were to be removed from the DMZ no later than the 13 September deadline reaffirmed by I Corps on 2 September. During this last phase of salvage work, participating battalions again came under operational control of the 5th Marines. Elements of the 1st and 11th Marines, neither of which at that time had a sector of responsibility for salvage, as well as KMC troops, augmented the organic units. One battalion alone, 1/1, detailed 400 men in work parties. At 2130, on 13 September, the division completed its salvage mission in the Demilitarized Zone, thus meeting the specified time limit. Under terms of the armistice agreement, after 13 September all personnel were prohibited from entering the Korean Demilitarized Zone. The only exceptions were members of the DMZ police companies of the Allied and Communist sides and other persons specifically authorized passage by the Military Armistice Commission (MAC).
Operations in West Korea
Pat Meid and James M. Yingling

Chapter 11. While Guns Cool
Control of the DMZ and the Military Police Company

Since the late July signing of the armistice, one of the missions of the 5th Marines GOP regiment had been the marking, control of entry, and policing of the DMZ. At the time the No-Pass Fence was constructed, roadblocks, called “crossing stations” were located at each route leading into the DMZ. Initially, 21 crossing stations were opened across the regimental front. When it later became apparent that not all of these security points would be needed, some were closed and the roads barricaded. Each crossing station was manned by a minimum of two sentries who insured that no weapons were carried into the DMZ. Along the fence itself, signs printed in three languages prohibited unauthorized entry into the southern boundary of the DMZ. On roads and trails approaching the southern boundary fence, additional signs placed 200 yards from the fence warned of the proximity to this southern end of the military zone. Air panels and engineer tape also marked the DMZ.

After 31 July, entry into the DMZ was limited to those persons holding a valid pass, issued under the auspices of the Military Armistice Commission. Authority was also delegated to CG, U.S. I Corps to issue passes for the I Corps sector. With salvage operations requiring a large number of passes, authority was further delegated to the CO, 5th Marines, to issue permits for the regimental sector, good only for unarmed working parties engaged in salvage operations. The regimental S-2 established a pass control center, and anyone desiring to enter the DMZ made application through that office. Each pass contained the bearer’s name, rank, service number, organization, number of personnel and vehicles in the working party, and reason for entry.

Security procedures also required that a log book of all zone entries and exits be kept by crossing station guards. This information was ultimately telephoned or radioed to higher echelons. At battalion and regimental levels a master log or “status board” indicated the number of people, vehicles, passes, and pass identification numbers present in the DMZ at all times. As the salvage program reached its height in August and early September, just the “issuance and recording of passes and the checking of the working parties into the zone became a major operation.” Between 4 August–13 September, a total of 3,523 vehicle passes and an unknown number of personnel permits were issued. With the ending of salvage operations on 13 September, the Marine regiment no longer issued DMZ passes, although I Corps continued to authorize MAC personnel entry permits.

A stipulation set by the armistice agreement was that both the Communist and UNC sides police their respective sections of the DMZ with “civil police,” not to exceed 1,000 in the zone at any one time across the entire front. With further allocation of police personnel to army and I Corps units, the number of 1st Marine Division police on duty within the DMZ at any one time was originally set at 50. Since no civilian police were available to either side, requirements were modified so that a specially designated military unit, in lieu of civil police, could be employed and the original quota enlarged if this became feasible.

Due to the delicate political aspect of the DMZ as well as the non-repatriated POWs in the custody of Indian forces, security measures were of utmost importance. The Marine division activated a new unit, the 1st Provisional Demilitarized Zone Police Company at 0800 on 4 September. The new unit, charged with maintaining security throughout the 1st Marine Division sector, became operational three days later. Commanding officer was Captain Samuel G. Goich, formerly of F/2/7. Each regiment from the division furnished 25 enlisted men and 1 officer to form the company, including standby personnel. On 21 September, the DMZ Police Company was attached to the 5th Marines. Police Company personnel were required to have had at least three months’ Korean service, a General Classification Test score of at least 95, a minimum height of 5 feet 10 inches, and were “selected for physical stature and mental capacity required in coping with the delicate situation existing within the
The average DMZ company member was said to know “map-reading on an officer level, first aid, radio, and understand the fine print of the cease-fire agreement like a striped-trouser diplomat.”

The mission of the Marine provisional police company as set up by the truce agreement was to furnish military police escort for special personnel visiting the DMZ and to apprehend truce violators or enemy line crossers. Visitors who rated a military escort were members of MAC, Joint Observer Teams, Neutral Nations Supervisory Commission personnel, NNSC inspection teams or agency assistants, or other VIPs authorized to enter the UN half by the Military Armistice Commission. Six Marine DMZ military policemen, each armed with a .45 caliber pistol and M-1 rifle, accompanied UN joint observer teams to the demarcation line, midpoint between enemy and friendly boundaries, but did not cross the DML. I Corps orders directed that military police were to be “responsible for the safety of the United Nations members of the team and, when meetings are held south of the demarcation line, they will be responsible for the safety of the CCF members of the team as well.”

Major tasks performed by the 104-man company operating within the 2,000-yard wide, 28-mile-long zone were:

To maintain surveillance over civilians within the UN half of the DMZ;
To apprehend and deliver to the Division Provost Marshal any line crossers encountered who did not possess an authorized pass, regardless of the direction from which such persons entered the DMZ; and
To provide check points on known routes through the zone and observation posts, especially during the hours of reduced visibility, and telephone all suspicious incidents to Regimental S-2.

DMZ Police Company personnel operated in motorized patrol teams and traveled the entire division sector in radio or cargo jeeps. One platoon was kept on a standby basis at camp to serve as a mobile reserve in the event of an emergency. The roving patrols submitted reports of all incidents, which were then compiled in a company report. A copy was submitted to the S–2, the Northern Regiment, and 1st Marine Division G–2.

UNC security measures at all times were strict and uncompromising in the Korean DMZ buffer zone. This included the salvage period, the BIG SWITCH prisoner exchange that took place within the division sector at Freedom Village from 5 August–6 September, and the lengthy nonrepatriate POW settlement that extended through January 1954. In places where the military demarcation line was not marked on the ground or clearly recognizable, the conservative ruling was to stay at least 500 yards south of its estimated location. This applied both to body recovery and salvage operations. The No-Fly line was scrupulously verified.

Alleged violations charged by the CCF/NKPA were checked out with the Marine ground observation posts set up in August to record all movements of fixed-wing (reconnaissance) and rotary aircraft in the area. Helicopters were allowed to fly in the DMZ but no closer than the 500 yard limit from the MDL. Helicopters operating forward of CPs of 5th Marines units having sector responsibility were required to obtain clearance from the ground unit concerned for each flight. Medical evacuation copters, generally, were exempted from this restriction and authorized a standing clearance.

Commitments for the DMZ Police Company increased substantially with arrival of the nonrepatriated POWs at their camp in the DMZ corridor west of the 2d Battalion, 5th Marines area. The Communist “explainers,” as well as Polish and Czech members of the neutral Nations Commission, had to be escorted while in the UN half of the DMZ. This required that a 24-hour checkpoint and escort cadre be established in the zone. As the number of enemy sightings, a daily occurrence in the DMZ, continued to increase, the size of the police patrols increased correspondingly. A typical example was related by a member of the police company:

“It was common practice of the Communists to have a group of their men, supposedly their DMZ Police, walk up to the Military Demarcation Line and either stand close to it or step across. When one of our patrols approached in superior numbers to attempt to apprehend them, the Communists would immediately reinforce with
more men. This made it necessary to have our patrols at sufficient strength that they could protect themselves from being kidnapped.”[33]

As these requirements for security increased, the original complement of approximately 5 officers and 99 men became inadequate to patrol the DMZ. By late October the T/O strength of the 1st Provisional Demilitarized Zone Police Company had been increased to 6 officers and 314 men. Authorization for the number of police personnel on duty in the DMZ had similarly been augmented from 50 to 175.

During the September salvage operations, five Marines in the DMZ were taken into custody by the Chinese Communists. Charged with being in unauthorized territory and violating terms of the armistice agreement, they were later returned to United Nations jurisdiction.
Upon withdrawal from the demilitarized zone and organization of the MBP, the Eighth Army established its plan for defense on a wide front. This was based on the organization of strongpoints disposed in depth, with planned counterattacks by mobile reserves.

As it had during active hostilities, the 1st Marine Division in the post-armistice period continued as one of the four UNC divisions manning the general outpost and MBP in the U.S. I Corps sector. Immediately east of the division was its long-time neighbor, the 1st Commonwealth Division. Still further east in I Corps were the 1st ROK and U.S. 7th Infantry Divisions.

Since 1 August, the Marine division had continued to outpost the most favorable terrain in its sector below the southern boundary of the DMZ. The division manned the No-Pass Line and prepared its defenses to resume full scale military operations, if necessary. The Munsan-ni Provisional Command, composed of the Marine-Navy-Army personnel responsible for implementing the final prisoner exchange, was also headquartered in the 1st Marine Division sector.

The strongpoint organization of the division’s main battle position was accomplished by the deployment of the 5th Marines at the general outpost line of resistance (or OPLR, a term and concept not in use since April 1952). The outpost defense concept embodied a number of forward positions, lightly held in actual numbers of men but strongly defended in numbers of automatic weapons and firepower. (This capability was possible due to the excess number of automatic weapons on hand, above normal T/E allowances, which previously had been required by MLR defenses.) In the organization of the positions, emphasis was placed on construction of bunkered observation posts, the emplacement of automatic weapons with flanking fires, and clearing of fields of fire for these weapons.

Basically, the general concept of OPLR defense was to establish mutually supporting defensive positions across the front, as well as to develop additional defense in depth positions whose strength increased from front to rear. The positions thus formed successive defense lines, from the southern DMZ boundary—the new Marine division front—south to the KANSAS Line, the Main Battle Position. (These defense lines were the old secondary defensive lines of WYOMING, KANSAS, and KANSAS SWITCH.) The KMC, 1st Marines, 7th Marines, and other units located in the KANSAS vicinity engaged in bunker construction and trench improvement. Battalion fire plans coordinated the organic, attached, and supporting weapons. Construction of the new positions and development of the KANSAS Line would be a continuing process throughout the rest of the year.

The 1st Marines received the assignment of developing the blocking positions, most of these battalion-sized strongpoints. As in the past, division support units continued to be located in the old rear supply areas south of the Imjin. In early August the division had stationed the 7th Marines in the right sector; the 1st KMC in the center; and the 1st Marines, to the south of the KMC sector. The 11th Marines, to the rear of the 7th Marines, had displaced its artillery, relaid, and was prepared to fire in support of the general outpost and MBP. (Map 35.) Additional artillery battalions included I Corps and army units. Essentially these were the positions held until early October when, during a period of political unrest resulting from the prisoner exchange, the 1st Marines relieved the 1st KMC/RCT in the center sector (which held the southern approaches to Freedom Bridge and the nonrepatriate war compound). The Korean unit then relocated to blocking positions and assumed the mission of reserve regiment.
Marine support units—motor transport, tank, service, medical, aerial liaison (VMO/HMR)—were in the same general rear area, as was the headquarters of the U.S. 25th Infantry Division. The Marine Division CP continued to be located at Yongji-ri, although construction of a new site further south at Chormyon was due to be completed by engineer personnel on 1 October. The division railhead and truckhead remained, respectively, at Munsan-ni and Ascom City. To the left of the KMC sector was the 1st Amphibian Tractor Battalion. Still further west, separated from other units by the Han River, was the Kimpo Provisional Regiment, in its former wartime sector.

As the division OPLR regiment, the 5th Marines held a line 36,000 yards in length—about 21 miles—roughly corresponding to the front manned by three regiments during the war. The OPLR sector included the entire area in the divisional zone of responsibility north of the Imjin. Boundaries of the 5th Marines territory were the southern DMZ truce line on the west and north, the Samichon River to the east, and that major water barrier, the curving Imjin River, to the rear.

After establishment of the DMZ, the division occupied unfavorable low ground poorly suited to the defense and inferior to that held by the enemy—continuing the same situation that had existed during the period of stabilized combat operations in West Korea. Almost without exception the southern boundary of the DMZ prohibited the Marines from moving onto the commanding terrain, as the No-Pass Line was behind or along the reverse slopes of the high ground. On the other hand, in most cases the CCF had the advantage of having forward slope positions as well as the crests plus most of the commanding terrain in the area.

Communist territory in the northern DMZ sector included the former strongholds of Yoke, Bunker Hill, Carson, Reno, Vegas, Berlin, East Berlin and Warsaw. Within the Marine division postwar area were the Panmunjom Corridor and outposts Marilyn, Kate, the Boulder City hills, and the Hook. Much of the terrain between the major hill positions along the 5th Marines regimental front and the Imjin River consisted of low-rolling hills rising abruptly out of the rice paddies.

Construction of new positions and the defense system of the 5th Marines was based on several assumptions about enemy capabilities, made by G–2 and the new regimental CO, Colonel Rathvon McC. Tompkins, who had assumed command on 2 August. These were: that in the event of resumption of hostilities by the CCF the enemy would use his jet fighters and bombers in support of operations; that he would continue to have numerical superiority in artillery; and that the northern outpost regiment would have no reinforcement or surface resupply from units south of the Imjin.

The defense plan for the forward part of the 5th Marines sector in event of a resumption of hostilities called for furnishing patrols equipped with radios and FO teams to occupy Hills 155, 229, and 181. (Hill 155 was directly south of the DMZ in the 2/5 left battalion sector; Hills 229 and 181 were, respectively, just inside and just outside the southern boundary of the truce line in the center 1/5 sector.) From these three elevations the patrols would then have the mission of bringing down artillery fire on enemy concentrations and relaying communications about the situation to the friendly main attack force. Other critical hill masses in the OPLR regimental sector were Hill 126 (in the 3/5 eastern battalion sector, just inside the Marine side of the DMZ) and Hill 163, in the Hook area. The latter hill was not as suitable for defense since it was located south of the military demarcation line and was thus less accessible.

These hill masses so completely dominated the major enemy approaches through the division sector to the Imjin, the lower river crossing sites and bridges, that their occupation by Marine personnel was considered essential in the event of any attack. Hill 229, adjacent to the Chan-dang corridor and part of the 229–181 axis, was considered the most critical terrain feature in the entire northern section.

Key areas to the rear of the 5th Marines’ sector were the two operating bridges (Freedom in 2/5 territory and Libby on the 3/5 right) and the two interior crossing sites (Honker and Spoonbill). All provided access to the
Imjin and division support units deployed on the south side of the river. In the event of threatened hostile attack, the Northern Regiment was under orders to destroy the bridges to prevent their use by the enemy on any attempted advance to the rear.

Strong perimeter defenses, called “Bridgehead Positions” were to be built by 5th Marines’ battalions. Two were to protect the two bridges and a third, to include both ferry sites. Between the forward defended localities and the rear bridgehead positions, alternate and secondary sites were organized to create mutually supporting defenses in depth. The bridgeheads were a combination of linear and strongpoint defense, capable of withstanding severe pressure.

Organization of the defensive positions in the 5th Marine sector was complicated both by peculiarities of the terrain and political restrictions due to proximity of the DMZ. In addition to the regiment’s excess frontage, the demilitarized zone immediately to the front precluded use of either aerial or motorized reconnaissance for early warning. Security measures for the OPLR were less than ideal. Neither proper patrols nor a covering force in front of the OPLR was possible; the best that could be done was to maintain patrols along the friendly side of the No-Pass Line.

As the regimental left battalion pointed out: “Location of the DMZ and the No-Pass Line made the trace of the OPLR follow an artificial and arbitrary line rather than that of the best terrain.”[35] The most critical terrain feature in the sector, Hill 155, was located just outside the southern boundary of the DMZ. Although its possession was essential to successful defense of the OPLR and the bridgehead defense positions being developed to the interior and rear of the battalion sector, Hill 155 could not be occupied because of the armistice agreement. The solution to the problem was simply to occupy the best ground adjacent to the No-Pass Line.

Placement of automatic weapons was a factor of great importance in organizing the defensive positions. In order to accomplish the mission of an OPLR, weapons had to be situated to bring the enemy under fire at maximum ranges. Accordingly, machine guns and other weapons were placed on high ground well to the front. Some Marines commented that:

“Many individuals having the MLR concept in mind insisted that weapons should be located forward on low ground to provide grazing fire. A period of education was required. For the same reason, it was necessary to place 81mm mortar and 4.2-inch mortar positions further forward than they would normally be in support of the MLR.”[36]

The problem of establishing depth to the defensive positions was never solved to the satisfaction of everyone. This was due primarily to the extended front which necessitated using more units for support elements than would normally be done. This situation was partly alleviated by establishing some unit defensive sectors further to the rear in the company areas.

Another difficulty was the inadequate allocation of ammunition: one-half JAMESTOWN load on position, and another half-load available at the regimental dump. The JAMESTOWN load unit had been developed for use in a stabilized defense situation where automatic weapons were aimed as the enemy came in close proximity to the MLR. On the other hand, OPLR machine guns and weapons were required to open up at maximum ranges and might well be fired for extended periods of time. It was calculated that A4 machine guns firing at medium rate (75 rpm) would expend the one-half JAMESTOWN load in 22 minutes, while an A1 machine gun at medium rate (125 rpm) would exhaust the same load in 13 minutes. A partial improvement was obtained by moving the ammunition loads from regimental to battalion dumps although the basic problem of limited allocation—shared also by rear infantry regiments—continued to exist.

An unique situation that had confronted the 2d Battalion and at times the adjoining 1st Battalion stemmed from the large numbers of Army engineer personnel building the nonrepatriate POW camp in the DMZ immediately west of the 2/5 sector. During August and the first part of September, the area in front of 2/5 had been used as a base camp for 5,000–7,000 construction personnel. Although their area was crowded with these
additional units, the Marine battalions could not exercise any control over them. The Marines were still responsible for security of the sector, however. Presence of as many as 22,000 nonrepatriate CCF and NKPA prisoners as well as the Indian custodial forces further complicated the matter. It was noted that:

“At the same time the Army engineers were building the camp, the prisoners were situated in the middle of the 2/5 area and the MSR to Panmunjom led completely across the battalion position into the 1/5 sector [and thence] into the DMZ. Upon completion of the camp, the engineers withdrew from the area but as they withdrew the 5,500 troops of the Custodial Forces India were brought in to guard the nonrepatriate prisoners. With the arrival of the prisoners, the number of personnel in the regiment’s sector of responsibility rose to 28,000–30,000. Thus, the problem of having a GOP mission and at the same time having never less than 5,000 and as many as 30,000 friendly, neutral, and/or prisoner personnel in front of our most forward defended localities was always present.”[37]

Camp construction and development of the new positions south of the river continued at a furious pace from August through early October. Since the new camp sites were in civilian populated areas, “it was necessary to secure real estate clearance before they could be occupied or improved.”[38] After clearance was obtained on 29 July, division engineers immediately began work on five separate camps. These camp building activities and reconnaissance of assigned blocking positions continued until 10 August. At this time, construction began on the major blocking positions, so organized and developed as to be self-sustaining for several days. Whether squad, platoon, or company, all positions were organized using a perimeter type defense and were mutually supporting laterally and in depth. Connecting trenches, bunkers, ammunition holes, and tank slots were also built.

By early October, construction of the blocking positions was completed by the 1st Marines despite the fierce summer heat, the numerous rock formations in the area that were difficult to dig out with limited tools and demolitions, and the shortage of personnel due to units participating in the new series of division MARLEX exercises, resumed in October. Within three months, the Marine division had thus largely completed building of a solid defense in its new main battle position. The importance of maintaining combat readiness for any renewed hostility on the part of the enemy demanded continuing vigilance at all times.

Defense specifications throughout the 5th Marines northern general outpost sector called for some 1,560 individual fighting positions, 400 automatic weapons sites, 8 bunkered infantry OPs, 30 bunkered CPs, 15,400 yards of trenchlines, and 70,000 yards of protective and tactical wire. In construction of the MBP, all bunkers were so blended and camouflaged with the natural terrain that they were almost impossible to be seen.

To the division rear, the location of recoilless rifle positions, FDC bunkers, and tank slots in the blocking positions and bridgeheads was the major priority. In the antimechanized defense plan, tanks covered likely avenues of approach into the general outpost area and also overlooked critical river crossing sites. Wherever possible old firing positions which had been previously prepared to support the secondary lines WYOMING and KANSAS were utilized. By the end of the year, 204 tank firing positions had been emplaced throughout the Marine division sector.

Three rehearsals for the occupation of the main battle position were held by the 1st Marine Division in September. All division units, both combat and service, participated in these exercises. Tactical units were required to occupy the MBP and be fully prepared for combat on four hours’ notice; service units were to provide additional local security required for the elimination of enemy infiltrators or guerrilla agents. Divisional and I Corps test exercises indicated that three hours were necessary to man the MBP during daylight and approximately three and one half hours at night.
The 1st Marine Aircraft Wing Post-Armistice Plan, as part of Fifth Air Force operations, was effective at 2200, on 27 July. Its purpose, basically, was to insure that wing elements carried out provisions of the armistice and yet continued to maintain a high level of combat readiness in the uneasy truce period.

Two major operational restrictions had been imposed on the UNC air force by the armistice. The first was establishment of the “No-Fly Line” south of the Allied southern boundary of the DMZ. Any flight beyond that point had to be authorized by JOC and a barrier patrol was maintained by FAF to apprehend any violators of the truce provisions. The 1st MAW contribution to this aerial security team was night patrols performed by F3D–2s from VMF(N)–513 and radar-configured AD aircraft from VMC–1 (later, by the new VMA–251 squadron).

The second post-truce restriction, which affected wing logistic movements, limited the entry and departure of all Korean air traffic to five airfields. These aerial ports were K–2, K–8, K–9, K–14, and K–18. (K–16 was later added.) Neither K–3, the east coast home field of MAG–33 nor K–6, located just inland from the west coast and the site of MAG–12 operations, was included. All Marine traffic landed either at K–9 or K–2 for inventory, a procedure which subsequently developed into a bottleneck, and caused supply delays due to the substantial reduction in payload made to accommodate the necessary extra fuel due to greater overland distances between airfields. When the CG, 1st MAW requested that K–3 be made a port of entry to avoid the difficulties involved in use of the two FAF fields, ComNavFE disapproved the request with the following rationale:

“ComNavFE feels that to ask for designation of K–3 as an additional port of entry would be politically inadvisable. It would provide the Communists with a basis for a propaganda claim that the United Nations were attempting to further delay an armistice agreement. Should the Communists propose an additional port of entry for their side, COMNAVFE states the UN Military Armistice Commission will offer designation of K–3 as a quid pro quo.”[40]

Removal from Korea to Japan of operational combat aircraft for routine maintenance runs and their return thus had to be made through the same port of exit and reentry. Inspections were conducted by the USAF combat aircraft control officer at the port.

The post-truce 1st MAW mission, in part, comprised the following:

“...to maintain assigned forces in a state of combat readiness, provide for security of assigned forces, areas, and installations; observe the conditions of the Armistice Agreement; support other elements of the United Nations Command as required; be prepared to counter any attempt on the part of the enemy to resume active hostilities; continue current missions other than combat; insure that 1st MAW personnel and combat material are not increased beyond the level present at the instant of the effective time of the Armistice Agreement; submit reports on 1st MAW personnel and controlled items of Wing equipment entering or leaving Korea; be prepared to disperse air units within or from Korea as necessary to provide maximum security during an Armistice...”[41]

The strict interpretation of replacing combat aircraft, armored vehicles, weapons, and ammunition that were destroyed, worn out, or used up during the period of armistice was, of course, due to the sensitive political considerations. It was felt that replacement of combat equipment by UNC forces:

“...would result in the Communists adopting the same liberal interpretation which is undesirable since it will lessen the control of combat material in North Korea and could permit them to replace phenomenal unauthorized quantities of material damaged, destroyed, worn out or used up prior to the effective date of the Armistice Agreement.”[42]
In August, postwar procedures were mapped out for 1st MAW personnel, as part of the overall quota limitations prescribed by FECOM (Far East Command) through FEAF and FAF echelons. A 1st MAW headquarters section, designated as 1st MAW, rear echelon, was established at Itami AFB, Japan, two hours’ flight from Korea. All incoming or outgoing aviation personnel on permanent change of station orders were to report to the rear echelon, 1st MAW. Announcement of Marine Corps plans to initiate future postwar rotation on a stretch-out basis (for both air and ground personnel) was also made in August. Preliminary plans called for changing the current 11-month combat tour in Korea to 14 months by March 1954, and possibly 16-month tours by July 1954, if extension of Korean service proved necessary. As with division personnel, monthly cumulative arrivals were not to exceed the number of departing aviation Marines. The quota set by FEAF for 1st MAW rotation for the month of August was 600, compared to the Marine division quota of 3,000 for ground personnel.

With the 1st Marine Division engaged for an unknown length of time in its postwar mission as an occupation force and 1st MAW units continuing to operate under FAF in Korea, new Marine ground and air units were assigned to the Far East theater shortly after the conclusion of Korean hostilities. On 23 July, the 3d Marine Division, together with supporting air units, was readied for deployment from Camp Pendleton to Japan the following month. On 13 August the division CP was opened afloat and units proceeded to Japan between 16–30 August. The mission of this division and the two major air units, MAGs–11 and–16, was to maintain a high state of readiness in the Far East Command and to assist in the air defense of Japan. As explained by the Commandant, their redeployment was accomplished “in order to provide the amphibious capability which is an important element of national strategy in that predominantly maritime theater.”

The new Marine units thus joined in the Pacific, the 1st Provisional Marine Air-Ground Task Force that had been activated in Kaneohe, Hawaii in January of 1953. Commanded by Brigadier General James P. Risely, it was to include a headquarters company, reinforced regiment, and reinforced aircraft group. The special task force was designated as a hard-hitting, air-ground team that could respond immediately as a force-in-readiness to any emergency in the Pacific area.

Commanded by Major General Robert H. Pepper, the 21,100-man 3d Marine Division was called the “Three-Dimensional Division,” in reference to its training in airborne, amphibious, and atomic warfare. Within six months, its components were to stretch from Kobe to Tokyo, with division headquarters and the 9th Marines at Gifu, the 4th Marines at Nara, and other units at Otsu.

New Marine air units, which included Marine Transport Squadron 253 and Marine Observation Squadron 2, as well as MAGs–11 and–16, all came under 1st MAW operational control. Commanded by Colonel John D. Harshberger, the all-jet MAG–11, formerly based at Edenton, N.C., arrived at NAS Atsugi on 10 September. It comprised three F9F squadrons, VMFs–222, –224, and –314. Also at Atsugi, the Marine Corps aerial gateway to Japan, was the new transport squadron, VMR–253, commanded by Lieutenant Colonel Carl J. Fleps, which reported in to CG, 1st MAW, on 16 August. Following numerous FMFPac requests for additional air transport capability, the Commandant had authorized transfer of the squadron from El Toro to assist the veteran wartime carrier VMR–152 in the enormous postwar airlift program.

Flying new R4Q Fairchild Packets, which could carry 42 troops, the squadron from August to May 1954 logged more than 5,000,000 passenger miles in transporting Marine replacements for the 1st and 3d Marine Divisions. Additional air capability was provided by Marine Helicopter Transport Group 16 (at Hanshin AFB) under Colonel Harold J. Mitchener, with its two HRS–2 (HMR–162, HMR–163) and service squadrons (MAMs–16, MABS–16) and VMO–2, commanded by Major William G. MacLean (based at Itami). Both units reported to 1st MAW and FECOM on 13 August.

Major command changes within the 1st MAW that month were: Brigadier General Verne J. McCaul, vice Brigadier General Alexander W. Kreiser, Jr. as ACG, 1st MAW, effective 16 August; and Colonel William F. Hausman, vice Colonel Carney, CO, MAG–12, on 8 August. (The new MAG–33 CO, Colonel Smith, had
succeeded Colonel Stacy in late July.

In the immediate post-armistice period, extensive training programs were instituted by MAGs–12 and –33 to maintain high operational efficiency. Marine aircraft remained on JOC alert as required by the Fifth Air Force and flew training missions scheduled by 1st MAW and FAF. These consisted of practice strikes against heavily-defended targets, practice CAS for Eighth Army units, GCI (ground control intercept) flights under MGCIS–3 control, and bombing practice using the Naktong Bombing Range. Other training sorties were scheduled in reconnaissance navigation, weather penetration, determining fuel bingos, target location and identification, air defense patrolling, and coordination of tactical procedures in the target area. The training schedules provided a well-balanced indoctrination program for new squadron flight leaders, pilots, radar operators, and other crew members arriving in Korea on the postwar personnel drafts.

A new work day schedule of 0700–1500 implemented in August made more time available for athletics, swimming, studying, and R&R (Rest & Recreation). That same month the MAG–12 softball team won the Fifth Air Force “All Korea” softball championship. Following this achievement, the team left for Japan to compete in the FAF “Far East” softball tournament which included teams from all the major Pacific bases. Subsequently, the K–6 players “disguised in Air Force uniforms, went onward and upward to become FEAF champions in September.” MAG–33 pilots, meanwhile, participated in Operation SPYGLASS, a FAF training exercise in August and Operation BACK DOOR, the following month. Both emphasized interception flying and work with GCI squadrons. As “aggressors,” the Pohang-based airmen made simulated attacks on South Korean targets “defended” by Air Force and other land-based Marine units. In October, MAG–33 pilots flew CAS missions for the 1st Marine Division training problem, MARLEX IV, a battalion landing exercise staged by 1/7 on Tokchok-to Island. Beginning that month a new procedure was inaugurated by MAG–33 and the recently-arrived MAG–11. Every week, four MAG–11 pilots came to Korea for a week of orientation flying with a MAG–33 squadron to gain a better picture of typical flying conditions in the Korean theater.

Early in 1955 the 1st Marine Division, which had been in the Korean front lines almost continuously since September 1950, returned to Camp Pendleton. Redeployment by echelons began in February. By June, all units had returned to CONUS. The transfer from Korean occupation duty was effected in order that the division’s “valuable capability as a highly trained amphibious force in readiness may be fully realized.” Now under Major General Merrill B. Twining, the division had been a part of Eighth Army occupying postwar defense positions in Korea until its relief on 17–18 March 1955 by the U.S. 24th Infantry Division.

In addition to its official mission in the Eighth Army line, the 1st Marine Division had conducted an active small-unit amphibious training program during its postwar Korea duty. All but two of its infantry battalions had carried out assault landings on Tokchok-to, off the Korean west coast south of Inchon, prior to its departure for the United States. The 3d Marine Division had also conducted an active training program, with numerous small-unit exercises and regimental landings staged at Iwo Jima and Okinawa as part of its continuous readiness conditioning.

For Marine air personnel, their official departure from Korea following the 1st MAW wartime assignment there, came the next year. Beginning in June 1956, initial units of the Marine aircraft wing were withdrawn from Korea and relocated at NAS Iwakuni, Japan. Plans called for the wing, then under Brigadier General Samuel S. Jack and occupying bases in both Korea and Japan, to be permanently headquartered at Iwakuni and revert to CinCPacFlt control. The wing remained on station in the Far East as a component of postwar United States defense strength in that area.

The prewar Fifth Air Force and Eighth U.S. Army commands, under which Marine Corps air and ground units had functioned during the Korean War, were permanently deployed in the Far East as operative military echelons. EUSAK-FAF transferred from its wartime JOC location at Seoul to Osan-ni in January 1954 and in September of that year relocated to Nagoya, Japan. Eighth Army headquarters remained at Seoul.
Chapter 12. Korean Reflection

Marine Corps Role and Contribution to the Korean War: Ground

GROUND OPERATIONS of the 1st Marine Division during the Korean War can be divided into six periods. These are the Pusan Perimeter defense (August–September 1950), Inchon-Seoul assault (September–October 1950), the Chosin Reservoir campaign (October–December 1950), East-Central Korea (January 1951–March 1952), West Korea (March 1952–July 1953), and the post-armistice period (July 1953–February 1955).

Marine Corps traditional concepts of readiness and fast, effective deployment were never better illustrated than in the hectic weeks following 25 June 1950. The NKPA invasion of South Korea came at a time when U.S. military forces were in the final stages of a cutback to peacetime size. Ships and planes were being “mothballed”; personnel of all the Armed Services were being reduced in number to the lowest possible effective manpower levels.

From the peak of its six-division, five-wing wartime strength of 475,600 in 1944–1945, the Marine Corps at the outbreak of the Korean emergency had only two skeletal divisions and two air wings. There were but 74,279 Marines on active duty, 97 percent of the Marine Corps authorized strength. Although a ceiling of 100,000 had been established for the Corps by law, it was a period of tight purse strings for all defense components. Fiscal austerity in the post-World War II period had whittled Corps numbers from 85,000 in FY 1947 to what was projected at 67,000 by the end of FY 1950.

This critically reduced strength found the normal Marine triangular infantry organization cut back to two companies per battalion, two battalions per regiment, and two regiments per division. The 1st Marine Division, at Camp Pendleton, and 2d Marine Division, at Camp Lejeune, were structured along the regular peacetime T/O of 10,232 USMC/USN vice the wartime minimum T/O of 22,355. No Marine units of any size were located in the Far East.

Despite its lean numbers in late June 1950, the Marine Corps once again would be in the forefront of American military response to the Communist aggression 6,000 miles across the Pacific. As hard-pressed South Korean forces and understrength U.S. occupation troops from Japan attempted to halt the Communist invaders, General of the Army Douglas MacArthur, on 2 July, requested the JCS to send immediately a Marine RCT with supporting air to the Far East. On 7 July, the 1st Provisional Marine Brigade was formed at Camp Pendleton from units of the 1st Division. Major components of the brigade—a balanced force of ground, service, and aviation elements—were the 5th Marines and MAG–33. Five days later, the 6,534-man brigade had mounted out from San Diego to answer the CinCFE plea for Marines to help turn the Communist tide engulfing Korea.

The brigade buttressed the faltering UNC defense in the Pusan Perimeter. Employed as a mobile reserve it helped prevent three enemy breakthroughs—at Chinju and the two Naktong River battles. On 7 August, a month after its activation, the brigade launched an attack toward Chinju. The Marine brigade was the first unit sent from CONUS to see combat in what was then considered a short-term police action. Later, in leading the way to destruction of an enemy bridgehead at the Naktong, the Marine brigade gave the defending Eighth Army its first victory against the NKPA in the Korean conflict.

Even before the brigade had been dispatched to the Far East, as the Korean situation continued to deteriorate, MacArthur had requested the JCS to expand the brigade to a full war-strength division. Between 10–21 July MacArthur, now CinCUNC, had made three separate requests for a Marine division. This persistence was reinforced by his growing determination to conduct a tactical amphibious operation to the rear of the over-extended NKPA lines and thereby seize the initiative from the enemy.
In the States, meanwhile, authorization was received to bring the badly understrength 1st and 2d Marine Divisions up to full 22,000-man war levels. By stripping posts and stations, reassignment and rerouting of units, and callup of additional reserve personnel, major elements of the 1st Marine Division were on their way to Korea by mid-August. Timing was critical in order to meet the projected D-Day target date of 15 September.

Pulled out of the Pusan line on 12 September, the brigade was absorbed by the newly arrived 1st Marine Division in preparation for the coming Inchon invasion. As the brigade commander, Lieutenant General Edward A. Craig, USMC, later reminisced:

“Although the 1st Provisional Brigade and the 1st MarDiv had never actually trained or worked together, they still combined and executed a successful landing. To me, this simply emphasized the fine training and techniques laid down for amphibious landings by the Marines.”[2]

Organized as a unit less than four months, the brigade left behind it a reputation for mobility, effectiveness, and rapid deployment in the face of national emergency. Although Marine air and ground forces had operated together since 1919 in Haiti, formation of the 1st Provisional Marine Brigade “marked the first time that the air and ground elements, task organized under a single commander, had engaged in combat.”[3]

In the brilliant Inchon landing of 15 September 1950, Major General Oliver P. Smith’s 1st Division Marines led the X Corps attack in the first major counterstroke by United Nations forces on Communist-held territory. This maneuver was closely timed against enormous odds of personnel, logistics, and hydrography (tidal fluctuations of 31 feet) which made 15 September the only suitable assault date until mid-October. When outlined in earlier planning sessions by General MacArthur, the mammoth difficulties of the operation had been so unsettling that the designated Attack Force Commander for the landing, Rear Admiral James H. Doyle, expressed the view that “the best I can say is that Inchon is not impossible.”[4]

Despite all the difficulties, the landing at Inchon and recapture of Seoul, the South Korean Capital, and its adjacent Kimpo airfield by the Marines was a stunning tactical blow by the UNC that broke the backbone of the North Korean People’s Army 1950 offensive. The 1st Marine Division, in its successfully executed amphibious landing, had offered UNC forces an opportunity to defeat the enemy decisively before a Siberian-like Korean winter set in. Accomplished under the most adverse weather and geographic conditions, the assault proved anew the decisive power of amphibious forces employed at a critical time and place. This capability and readiness of the Marine Corps had totally reversed the military situation, and a battered enemy was on the run. The subsequent routing of the NKPA divisions in the Inchon-Seoul campaign by X Corps and the Eighth U.S. Army forces would have led to an early UN victory had not the Chinese Communists intervened to support their Korean counterparts. The operation had validated Far East Commander General MacArthur’s early premise that:

“...air and naval action alone could not be decisive, and that nothing short of the intervention of U.S. ground forces could give any assurance of stopping the Communists and of later regaining the lost ground.”[5]

The Inchon operation, moreover, had been planned in record time—approximately 20 days. This was one of the shortest periods ever allotted to a major amphibious assault, involving the planning, assembly of shipping, and mounting out of a combined force of 29,000 Marines and support personnel.

With the Inchon-Seoul operation ended, the 1st Marine Division (including the 7th Marines which had reached Inchon in time for the liberation of Seoul) reembarked on 12 October for deployment to the east coast of Korea. A new military operation was envisioned north of the 38th Parallel against Pyongyang, the North Korean Capital. As part of the drive, X Corps was to make an amphibious envelopment on the east coast, in the area of the enemy-held port of Wonsan. From here X Corps would advance westward toward Pyongyang, to link up with Eighth Army troops and trap NKPA forces withdrawing from the south.

While the Marines were en route to the objective, word was received that ROK troops had overrun Wonsan and were pushing north. The revised X Corps plan of operation called for a three-pronged attack towards the Yalu. The Marine division would advance on the left, the U.S. Army 7th Division in the center, and 1st ROK
Division on the right flank. This drive to the north and subsequent action at the Chosin Reservoir would rank as one of the most rigorous campaigns in the entire history of the Marine Corps.

Fighting as part of EUSAK, by this time fanned out throughout North Korea, the 1st Marine Division did not meet the expected NKPA resistance. Instead, large-scale Chinese Communist Forces had entered the war. As X Corps swept north toward the Yalu River in November 1950, the Marines became the first United States troops to defeat the Chinese Communists in battle. At Sudong, after four days of savage fighting, the Marine RCT–7 so badly crippled major elements of the 124th CCF Division that it was never again committed as an organic unit.

When the Chinese forces struck in full force at the Chosin Reservoir, X Corps units were forced back. Elements of a nine-division assault force, the CCF 9th Army Group, which had been sent into Korea with the specific mission of annihilating the 1st Marine Division, began to attack. On 27 November, the Chinese directed a massive frontal assault against 5th and 7th Marines positions at Yudam-ni, west of the reservoir. Another CCF division, moving up from the south, cut the MSR held by the 1st Marines so that the division at Yudam-ni, west of the reservoir, was completely encircled by Communist forces. Many experts considered the 1st Marine Division as lost. Others thought the only way to save it was to airlift it out, leaving its equipment behind. Instead, the Marines seized the initiative at Yudam-ni and cut a path through CCF units blocking a route to Hagaru. The division battled its way out in 20-degree-below-zero weather 78 miles over icy, winding mountain roads from the reservoir to the Hamhung-Hungnam area where, on 15 December, it redeployed to South Korea.

Integrated ground and air action enabled the 10,000 Marines and attached 4,000 Army-Royal Marine troops to break out of the entrapment and move south. During 13 tortuous days the Marines had withstood hostile strength representing elements of six to eight CCF divisions. The major result, from the military view, was that the Marine division properly evacuated its dead and wounded, brought out all operable equipment, and completed the retrograde movement with tactical integrity.

Not only had the Chinese (with a total of 60,000 men in assault or reserve) failed to accomplish their mission, destruction of the division, but the Marine defenders had dealt a savage blow to the enemy in return. POW debriefings later revealed that assault units of the CCF 9th Army Group had been rendered so militarily ineffective that nearly three months were required for its replacement, re-equipment, and reorganization.

Early in 1951, the 1st Marine Division was reassigned to IX Corps for Operation KILLER, a limited offensive ordered by the EUSAK Commander, General Matthew B. Ridgway. In Operation RIPPER, in March, the division led another IX Corps advance as it drove toward the 38th Parallel on the east-central front. When the Chinese struck back with their spring offensive on 22 April, the Marines were transferred to operational control of X Corps and counterattacked to restore the UNC defensive position in the far eastern sector. During May and June, the 1st Marine Division continued to punish the enemy in the Punchbowl area of eastern Korea, driving the CCF back to Yanggu and the Soyang River corridor.

Activity all along the UNC front came to an uncertain halt in July 1951 when Allied and Communist negotiators met at Kaesong for truce talks initiated by the enemy. In August the MLR flared into action again, and the Marine Division was engaged in new counter-thrusts in the Punchbowl area. Fighting during the next three weeks involved the division in some of its hardest offensive operations in Korea. It also developed that this would be the last offensive for the Marines. In November 1951, as a result of the truce talks and possibility of ending hostilities, General Ridgeway, now UNC Commander, ordered the Eighth Army to cease offensive operations and begin an active defense of the front.

The war of fire and movement had turned into one of positional warfare, a defensive posture by UN forces that would continue for the last 21 months of the three-year conflict. Throughout the winter of 1951–1952, the Marines conducted vigorous patrol activities in their sector of X Corps. Although it was a lackluster period of trench warfare for the average infantryman, major tactical innovations were being pioneered by the division with its use of the transport helicopter for logistical and resupply missions.
In March 1952, the 1st Marine Division was transferred from the eastern X Corps line 140 miles west to strengthen the far end of the Eighth Army MLR in the I Corps sector. The division was relocated in the path of the enemy’s invasion route to Seoul, where weak defenses in the Kimpo coastal area had threatened the security of the UNC front. Here the division’s four infantry regiments (including the 1st Korean Marine Corps RCT) held nearly 35 miles of front line in the critical Panmunjom-Munsan area. The demilitarized route for the United Nations negotiators led through the Marine lines. It was the most active sector of the UN front for the next 16 months. This key position guarded the best routes of advance from North Korea to Seoul and indicated the high regard in which General James A. Van Fleet, EUSAK commander, held the Marines.

West Korean terrain was rugged, hilly, and friendly to the CCF who had the advantage of high ground positions as well as considerably more manpower. Although cast in an unaccustomed defensive warfare role, rather than a true attack mission, the Marines repelled an almost continuous series of enemy probes. While truce talks went on at nearby Panmunjom, fighting as furious as at any time earlier in the war flared up intermittently as the CCF tried to gain additional terrain for bargaining purposes. During 1952–1953, the Marine division beat off determined CCF limited objective attacks on Bunker Hill, the Hook, Vegas, and Boulder City outposts up until—literally—the final day of the war, 27 July 1953.

In reviewing Marine actions during this period, the Secretary of the Navy commented:

“Marines in Korea have established an enviable record of success in carrying out their assigned missions. The First Marine Division began its third year in Korea holding an active sector of the United Nations front guarding the enemy’s invasion route to Seoul. It was frequently subjected to fanatical Chinese attacks supported by intensive artillery fire. Some of the heaviest fighting during the year took place along the front held by this Division. Enemy attacks were well coordinated and numerically strong. Continued patrol activity to keep the enemy off balance frequently resulted in bitter hand-to-hand fighting with numerous casualties on both sides.”[6]

This type of prolonged static warfare gave little real satisfaction to Marines accustomed to waging a war of movement and a more tangible “mission accomplished.” The year of positional warfare in western Korea was costly, too. Total U.S. casualties in the Korean War numbered approximately 137,000 men killed, missing, or wounded. The Marine Corps toll was 30,544. Of this number, 4,262 were KIA, an additional 244 were listed as non-battle deaths, and 26,038 were wounded. During this last part of the war, Marine casualties (both ground and air) totaled 13,087, plus an additional 2,529 for the attached 1st KMC/RCT. Astonishingly, 1,586 Marines or 39.6 percent[7] of the infantry Marines killed in the entire war were victims of the “static,” outpost warfare in the west. Another 11,244 were listed WIA during this period—representing 43.9 percent of the total number of ground Marines wounded during the three years of conflict.

Conditions varied widely during the 1950–1952 and 1952–1953 periods of the war. The enemy’s improved capability in artillery during the latter period of positional warfare largely accounts for the high casualty rate at this time. It has been noted that:

“Prior to February 1952, with a warfare of mobility prevailing, the enemy was inferior in artillery, the causative agent of most personnel losses. Afterwards, during the outpost warfare of western Korea, the front remained more or less static, and the Chinese Reds had as much artillery support as the Marines.”[8]

It might be valid to question the use of Marine Corps specialists in amphibious warfare in an Army-type conventional land war. The protracted land campaign that characterized the latter stages of the Korean conflict actually was waged for the majority of the war period—from September 1951 to July 1953, or nearly two years. In terms of economy of manpower it could be considered an inefficient, though not ineffective use of Marines. On the other hand, the history of warfare down through the ages makes it repeatedly clear that a nation fights the pitched battle against its opponent with the arsenal of weapons and personnel at hand.

As an Eighth U.S. Army component (attached variously to the X, IX, and I Corps), the 1st Marine Division (one of nearly 20 divisions representing U.S. Army, British Commonwealth, and ROK troops)
performed its assigned mission—to repulse and punish the enemy. It contributed heavily to maintaining the integrity of the EUSAK front and was considered one of the two crack EUSAK divisions—the other being the Marines’ neighbor to the right, the British Commonwealth Division. With the attached KMCs, the 1st Marine Division, moreover, was also the biggest and strongest division in EUSAK.

Most importantly, fast deployment of the Marine division had made possible the brilliant tactical maneuver at Inchon. Many military experts, following World War II, had envisioned future conflicts only in terms of atomic warfare and massive strategic air assaults. Even the Chairman of the Joint Chiefs of Staff “had predicted publicly, hardly six months before, that the world would never again see a large-scale amphibious landing.”[9] In contradiction to new atomic-age tactics, however, the United Nations commander in September 1950 had turned the tide of the battle by his use of a conventional maneuver—envelopment by amphibious assault. The performance of the Marine Corps was thus responsible, in part, for changing post-Korean War military doctrine from total reliance on new tactics and weaponry to a more balanced concept that combined both sophisticated innovations and viable, established procedures.

Although unemployed in its primary amphibious role after late 1950, the 1st Marine Division had originally been positioned on the eastern front because of this capability. It was the UN commander’s desire to have EUSAK’s only amphibious trained and equipped division near the coast in the event that an amphibious maneuver was required for offensive or defensive purposes. Again, in the division’s 1952 move to the western coastal front in the Kimpo area, this fighting capability was a major consideration.

To a large extent, U.S. forces in Korea fought the early part of the Korean War with weapons from the preceding war—only five years removed. Three tactical innovations employed by the Marine Corps during the Korean War were highly successful and largely adopted by the other services. These were the thermal boot, individual body armor, and the helicopter. All were first combat tested in 1951.

Frostbite casualties during the first winter in Korea resulting from inadequate footwear made it necessary to provide combat troops with specially insulated footgear. The new thermal boot virtually eliminated frostbite for both Marine infantrymen and aviators. Armored utility jackets had been developed toward the end of World War II but were not actually battle tested. The Marine Corps had renewed the experimentation in 1947. First combat use of the plastic, light-weight body armor was made in July 1951 by Marines while fighting in the Punchbowl and Inje areas of X Corps. Improvements were made to the prototypes and by the following summer the Marine Corps, following a request made by the Army Quartermaster General, furnished some 4,000 vests to frontline Army troops. By 1953 the 1st Marine Division had received its authorized quota of 24,000 vests and new lower torso body armor had also been put into production.

Medical experts reported that the effectiveness of enemy low-velocity missile weapons striking a man wearing body armor was reduced from 30–80 percent. Chest and abdominal wounds decreased from 90–95 percent after issuance of the armored vests. Overall battle casualties were estimated to have been cut by 30 percent. By the time of the cease-fire, the protection offered by the Marine body armor had been extended to some 93,000 Marine and Army wearers. Hardly anywhere could the U.S. taxpayer or fighting man have found a better buy for the money: mass production had reduced the per unit cost of the Marine armored vest to just $37.50.
Chapter 12. Korean Reflection

Air[10]

On 3 August 1950, eight VMF–214 Corsairs led by squadron executive officer, Major Robert P. Keller, catapulted from the deck of the USS Sicily to launch the first Marine air strikes in the Korean action. From then until 27 July 1953, units of the 1st Marine Aircraft Wing flew 127,496 combat sorties in the Korean War, considerably in excess of the 80,000-odd sorties for all Marine aviation during World War II. Of this Korean number nearly a third, more than 39,500, represented the Marine Corps close air support specialty, even though 1st MAW pilots were heavily engaged in other assignments from Fifth Air Force. These included interdiction, general support, air defense patrols, air rescue operations, photo and armed reconnaissance, and related tasks to insure Allied air superiority.

With the outbreak of Korean hostilities, Stateside Marine air units were alerted for combat duty by 5 July. At Major General Field Harris’ 1st MAW headquarters, El Toro, MAG–33 elements were quickly readied for deployment to Japanese bases and thence to Korea. Commanded by Brigadier General Thomas J. Cushman, MAG–33 comprised Headquarters and Service Squadron 33, fighter squadrons VMF–214 and –323, an echelon of nightfighters from VMF(N)–513, two radar units (Marine Ground Control Intercept Squadron 1 and Marine Tactical Air Control Squadron 2), plus the observation squadron, VMO–6. Forward elements were quickly on their way, arriving in Japan on 19 July, while the rear echelon reached the Korean Theater on 31 July. Twenty R5Ds from Marine Transport Squadrons 152 and 352 were already providing logistical support for Pacific lift operations.

After practicing some last minute carrier landing approaches, the fighter pilots got into combat almost at once. Following –214 into the war, VMF–323 started operations on 6 August, flying from USS Badoeng Strait in support of the Pusan ground defenders. When the brigade mounted out on 7 August on its drive to Chinju, the two MAG–33 carrier squadrons were there with their 5-inch HVARs, napalm, 100- to 500-pound bombs, and 20mm cannon. VMF(N)–513 began its regularly-scheduled night tours over the Korean perimeter that same date, lashing at enemy supply and transportation centers in the Sachon-Chinju area of southern Korea. VMO–6 had already started evacuating casualties from the Pusan area three days earlier.

Many Army ground commanders witnessed the Marine system of close air support for the first time during the Pusan fighting. After the second Naktong battle, when air strikes had silenced enemy guns and 300 troops near Obong-ni, the commander of the 23rd Regiment to the right of the brigade wrote General Ridgway in Washington:

“Infantry and artillery is a good team, but only by adding adequate and efficient air support can we succeed without devastating losses . . . The Marines on our left were a sight to behold. Not only was their equipment superior or equal to ours, but they had squadrons of air in direct support. They used it like artillery. It was, ‘Hey, Joe, this is Smitty, knock the left of that ridge in from Item Company.’ They had it day and night.”[11]

And while Marine, Army, and Navy staffs were completing plans for the forthcoming Inchon assault, MAG–33’s little aerial Photo Unit (part of Headquarters Squadron) took a series of reconnaissance photographs of the landing beaches in preparation for the closely coordinated maneuver.

During Inchon-Seoul operations, MAG–33 was joined by three MAG–12 fighter squadrons: VMF–212, VMF–312, and VMF(N)–542. After the capture of Kimpo airfield, 212’s “Devilcats” and 542’s nightfighters transferred from Itami to Kimpo. Flying out of 2d MAW headquarters, Cherry Point, N.C., on 18 August, the Devilcats had climaxed a hurried dash halfway around the world to get into action. The squadron flew its first
combat mission from Kimpo a month after its departure from the East Coast. While the MAG–12 land-based squadrons and the carrier pilots functioned as the division’s flying artillery, MGCIS–1 set up a radar warning system and MTACS–2 established a Tactical Air Direction Center to direct all aircraft in the X Corps zone of action.

With the conclusion of the Inchon operation on 8 October, VMF–312 and VMF(N)–542 remained at Kimpo. Other Marine squadrons (VMF–212, VMF(N)–513, VMO–6, HqSq–12, and carrier-based VMF–323) shifted to the Korean east coast in readiness for the Wonsan landing and subsequent deployment north of the Marine infantry regiments. Wing elements began arriving at the port city’s airfield on 13 October. Division Marines, meanwhile, on board ship in the Wonsan harbor while more than 3,000 expertly laid Communist mines were being removed, did not land until 26 October. For the men who fought the vertical war in Korea, it was “one of the rare times in the air-ground association, the 1st MAW had landed ahead of the 1st Marine Division. The aviators didn’t miss putting up a big sign-board “Welcome, 1st Division!”[12]

As 30 CCF divisions slammed into UNC forces all across the fighting front in late November to change the nature of ground operations (and the future of the war), so did the onset of the first Korean winter test 1st MAW aerial skills and ingenuity. Low hanging ceilings, icing conditions, and three-inch snows on the carrier decks were common operating hazards. For the shore-based pilots, the bad weather often caused changed flight plans as they were forced to land at alternate fields or on Navy carriers. Nonetheless, Marine RD4s flew up to the southern tip of the Chosin Reservoir, at Hagaru, to air-drop ammunition and supplies and evacuate casualties from the entrapment. Logistical support to this tiny frozen makeshift air strip was also provided by Air Force C–47s and C–119s. Later on, during the first step of the grinding movement south, Air Force pilots paradropped a sectionalized steel bridge vitally needed at Koto-ri to replace a destroyed span over a chasm.

Beginning with the load-out for Wonsan in early October, the 1st MAW was placed under operational control of the Seoul-based Fifth Air Force.[13] Echelons of FAF air command and control initially slowed operational orders anywhere from 4 to 36 hours. Simplified interservice communications and command liaison between 1st MAW and FAF helped improve the situation. With a verbal agreement, on 1 December, for CG, 1st MAW to receive full control over X Corps area aircraft, problems eased substantially. To a large degree the close coordination of Marine aviation and ground forces during the Chosin campaign was due to the use of flexible, simplified, and fast battle-tested Marine Corps-Navy CAS techniques and to having increased the number of pilot FACs from one to two per battalion.

The Marine movement south from Hagaru was protected by one of the greatest concentrations of aircraft during the entire war. Twenty-four CAS aircraft covered the breakout column, while attack planes assaulted enemy forces in adjacent ridge approaches. Marine planes on station at Yonpo (south of the Hamhung-Hungnam axis) and carrier-based VMF–323 flew some 130 sorties daily. Another 100 attack sorties were flown daily by Navy carrier-based planes, while FAF flew interdiction missions beyond the bombline. Marine Panther jets of VMF–311, operating with the Air Force from the Pusan area, got into the action at Yonpo. It was also at this time that an airborne TADC (tactical air direction center) was first improvised when the radio jeeps moving south with the column had communication failures. For six days, a VMR–152 R5D transport orbited 2,000 to 4,000 feet above the Marine units to control air support between Hagaru and Chinhung-ni as a flying radio nerve center.

From late November to early December, as the division battled its way from Chosin to Hamhung, Marine, Navy, and Air Force aircraft evacuated more than 5,000 Marine, Army, and ROK casualties. And during the most critical period, the little OY spotter planes and HO3S–1 helicopters from VMO–6 provided the only physical contact between units separated by enemy action. Marine tactical squadrons in these three early major offensives of the war, from 3 August to 14 December, flew 7,822 sorties, 5,305 of them CAS for the battered UNC ground units.

From 1951–1953, 1st MAW pilots and planes came under direct control of FAF. They alternated
between principal missions of interdiction raids to harass and destroy Communist supply lines north of the battlefront, general support sorties outside the bombline, and CAS flights to support infantry forces threatened by enemy penetration. Typical of FAF focus on massive aerial assaults were the following assignments that Marine flyers participated in:

In January 1951 (prior to Operation KILLER), the 1st MAW undertook a series of interdiction raids against the Communist supply net located in the Korean waist between the 38th and 39th Parallels, to disrupt the CCF transport-truck system.

On 9 May 1951, 75 1st MAW Corsairs and Panther jets were part of the 300-plane raid staged by FAF against Communist air-fields at Sinuiju, on the Korean side of the Yalu.

Operation STRANGLE, a major Fifth Air Force all-out interdiction effort to cripple the enemy supply life line, was undertaken 20 May. When the Chinese Communist spring offensive broke shortly thereafter, MAG–12 Corsairs and –33 Panther jets delivered maximum support to the MLR regiments, the 1st and 7th Marines. When the truce talks began in Kaesong, in July 1951, 1st MAW planes and the radar searches of MACG–2 stood guard. Batteries of the Marine 1st 90mm AAA Gun Battalion, attached to the wing, were also alerted to keep under surveillance the approaches to key military ports.

New tactical developments pioneered by 1st MAW during the Korean War advanced the UNC air effort and added to the 1st MAW reputation for versatility. Several major steps forward were taken toward Marine aviation’s primary goal of providing real operational 24-hour CAS, regardless of foul weather conditions. The new MPQ–14 radar-controlled bombing equipment, developed between 1946 and 1950, was employed by MASRT–1, as a device to control night fighter sorties of a general support nature flown by day attack aircraft. By means of height-finding and directional radars, it enabled a pilot to leave his base, drop a bomb load on target, and return to home field without ever having seen the ground. It offered major practical improvement in blind bombing methods. MPQ was limited, however, in its use in sudden, moving battle situations because of some of its sophisticated, hand-built ABC components. A real tactical breakthrough in night CAS came in April 1953 when VMF(N)–513 and the VMO–6 spotter planes evolved the new searchlight beam control system which made possible 24-hour coverage for 1st Marine Division ground units.

In other innovations, it will be remembered that the Air Force in late 1952 had requested escort by VMF(N)–513’s new two-place jet-intruder F3D Skyknights on Air Force B–29 night bombing missions. During a four-month period from 1952–1953, the Marine night fighters downed one enemy plane or more a month while escorting the B–29s. Once the F3Ds began their night escort role, Air Force bomber losses became negligible.

A unique capability of the long-range, jet-intruder night-fighter was that the F3D carried a radar operator who replaced the ground controller, thereby extending air-defense radar range to the aircraft. It could thus operate independently and effectively at great distance from its base. Without GCI (ground control intercept) aid, VMF(N)–513 direct escort to bombers at night was so successful that the squadron’s planes were used as exclusive escort of the Bomber Command B–29s. In November 1952, the Marine squadron’s two night kills were the first ever recorded by airborne intercept radar-equipped jet fighters. At the end of the war, Skyknights and–513 pilots (flying F3Ds as well as the earlier F7Fs) had destroyed more enemy aircraft than any other Marine or Navy day or night fighter plane. Tactics employed by VMF(N)–513 were original in concept and required a high-level of training and individual pilot-AIO (airborne intercept operator) proficiency. It was noted that:

“The enthusiasm with which this Marine aid to the Air Force has been received by FEAF Bomber Command indicates that VMF(N)-513 had successfully adapted its equipment and personnel to a mission usually associated with Air Force operations, making an important contribution to interservice cooperation, but even more important, to tactical progress in the night escort of bomber formations.”[14] An operation somewhat in reverse of the nightfighters was that of VMJ–1, the Marine photographic squadron, which had its own Air Force escort. Formerly the Wing Photo Unit, VMJ–1 was commissioned in
February 1952 and flew a total of 5,025 combat flights. Under FAF operational control until late in the war, the squadron’s 550-mph F2H–2P twin-jet Banshees flew unarmed deep into enemy country—even as far as the MIG-guarded Yalu—photographing positions, airfields, power plants, and other targets. An escort plane flew cover while the photo ship took pictures. Photo missions to the Suiho Reservoir were rated so important that “24 Air Force F–86 jets flew an umbrella.”[15] Introduction of the squadron’s jet Banshee early in 1952 was a major step in improved aerial photography. The Banshee was the superior photographic aircraft in the combat theater, because of its new advanced-design view finder and operating range.

Coverage from VMJ–1’s gross wartime output of 793,012 feet of processed prints was equal to a continuous photographic strip six and half times around the earth at the equator. The Marine photo squadron contributed a third to the entire UN photo reconnaissance effort and at times flew as much as 50 percent of all FAF intelligence missions.

Throughout the war the four attack squadrons of MAG–12 (VMAs–212, –251, –121; and –332 at the end of the war) had dumped seemingly endless bomb loads on CCF installations, while MAG–33’s two jet-fighter squadrons (VMF–115 and –311) had provided the Marine exchange pilots who scoured the lower side of the Yalu with the Air Force F–86s on fighter sweeps.

During Korea the Marine CVE/CVL squadrons (VMAs–214, –233, –312, and –251) flew more than 25,000 sorties, experimenting with improved techniques for carrier landings. The carrier qualification program of Marine air units, a regular part of their training, also proved its value in combat. In the earliest days of the war, VMF–214 and –323[16] had operated from two CVEs based off the south coast of Korea, thereby providing close support to the brigade and other Eighth Army elements at a time when all shore-based aircraft were forced to operate from Japan.

In other tactical refinements, the 1st MAW had employed an airborne tactical air control center in combat for the first time. In July 1952, when the static ground situation led to a build-up of enemy flak along the front lines that interfered with effective CAS delivery, the 11th Marines had instituted a flak suppression program in front of the division sector. Later that year, CG Eighth Army had ordered a similar program used by all other Eighth Army commands. By December, apparently because of lack of success with their own methods, EUSAK had adopted the system developed by the Marine artillery regiment. The antiaircraft program, together with a reduction in the number of runs per aircraft per mission,[17] had measurably decreased casualties for CAS missions conducted within artillery range. During 1952–1953 this loss rate for pilots and planes had dropped by a third, with no corresponding reduction in the sortie rate.

Stabilized warfare and enemy AA build-up had also led to an increasing use of enemy radars. Passive electronics countermeasures (ECM) were instituted by FAF. This program was enhanced in September 1952 by the commissioning of VMC–1 (Marine Composite Squadron 1), administratively assigned to MACG–2. The squadron possessed the only Fifth Air Force ECM capability to locate enemy radars and was the primary source of ECM intercept equipment in FAF squadrons for early warning and radar control monitoring. Throughout the duration of hostilities, VMC–1 remained the only Navy-Marine unit in the Korean theater with ECM as its prime function.

For its combat action, the 1st Marine Aircraft Wing was awarded two Korean Presidential Unit Citations and the Army Distinguished Unit Citation for the Wonsan operation. Wing pilots were responsible for downing 35 enemy planes, including the first night kill made by a United Nations aircraft. Participation of the 1st MAW in the war could also be measured in a different way. On the inevitable red side of the ledger: 258 air Marines had been killed (including 65 MIA and presumed dead) and 174 WIA. A total of 436 aircraft were also lost in combat or operational accidents.

From the command level, Korean operations marked the first time the 1st Marine Aircraft Wing had functioned for an extended period as a component in a broad, unified command structure such as FAF. Despite
the weak links initially inherent in such a situation, the command structure did work. Marine-Navy and Air Force-Army differing aerial doctrines and tactics of close tactical air support, however, were never fully reconciled. The Marine wing made a notable contribution in providing really effective close, speedy tactical support during the sudden fluid battle situation that erupted in mid-July 1953. Simplified Marine TACP control, request procedures, and fast radio net system enabled 1st MAW pilots to reach the target area quickly. During this final month of the war—and indicative of the enormous amount of coordination involved in the FAF administrative apparatus—1st MAW planes flew 1,500 CAS sorties for the 19 different EUSAk frontline divisions.

CG, 1st MAW noted in General Order No. 153 issued the last day of the war, that “the Wing’s association with the Eighth Army, the Fifth Air Force and the Seventh U.S. Fleet in combined operations had been a professionally broadening experience—teaching tolerance, teamwork, and flexibility of operations.”[18]

Besides the FAF interdiction work and support missions for frontline units, new 1st MAW tactics and equipment had diversified the wing’s skills and capabilities in its primary role of providing CAS for Marine ground units. Of new tactical air support developments in the Korean action none had a more revolutionary effect than those created by the helicopter—which dramatically reshaped battlefield logistics and pointed the way to a new era in Marine Corps air-ground teamwork.
A promising newcomer on the Marine aviation scene was the helicopter, whose tactical employment in Korea was to far exceed all expectations. A few helicopters had been used experimentally in the European and Pacific theaters toward the end of World War II, too late to evaluate their performance. But it was the Marine Corps, beginning in 1947, that had pioneered the development of combat techniques utilizing the rotor-driven aircraft as a means of enhancing its capability for the amphibious assault. When the Korean incident erupted in June 1950, the Marine Corps was in a position to assign four HO3S–1 Sikorsky two-place helicopters and flight personnel from its Quantico test unit, HMX–1, together with fixed-wing planes and pilots to form the brigade observation squadron, VMO–6. These Marines had the distinction of being the first helicopter pilots of any U.S. service to be formed into a unit for overseas duty.

Further, the Marine Corps also had 31 months’ experience with the strange looking, pot-bellied, ungainly aircraft in diverse battlefield tasks. These included casualty evacuation, reconnaissance, wire-laying, liaison, and administrative missions. But promising test exercises at Quantico and Camp Lejeune were hardly enough. The real test would come at the front. There, the helicopter’s military value would reflect and “depend to a large extent on how well the Marine Corps had worked out combat doctrines and techniques where none had existed before.”

Landing with the brigade in August 1950, the choppers performed invaluable service from the earliest days of Pusan, Inchon, Seoul, and the Reservoir. During the most critical phase of the Chosin operation, the helicopters provided the only liaison between isolated commands. Wire-laying by air was first employed by VMO–6 during the second battle of the Naktong River, in September 1950. The ground had changed hands several times and control was uncertain. Using makeshift communication rigs, VMO–6 pilots unreeled telephone wire at a mile a minute. This method of putting telephone lines across Korean mountains became routine through the rest of the war, and Marine choppers strung miles of lines in rain and wind with the enemy blasting away at them. Wire was laid over terrain in a matter of hours where it would have taken men on foot weeks—if it could have been done.

Perhaps the greatest innovation of VMO-6, however, was its night casualty evacuation techniques first employed at Pusan. Darting in and out at treetop level around the Korean mountains, the light, easily maneuverable craft could land on a tiny patch of earth to evacuate injured men or bring in supplies. Once, during the early part of the war, when the aeronautical pioneer Igor Sikorsky was asked how his revolutionary vehicles were performing in combat, Mr. Sikorsky, bowing from the waist in his Old World manner, replied:

“Thank you. Our things go very well in Korea. The helicopter has already saved the lives of several thousands of our boys in Korea and the score is still mounting.”

With the advent of the helicopter, as little as 43 minutes elapsed between the time a Marine was hit and the time he was on board the USS Repose or other hospital ships. Later on when the Marine transport copters arrived in Korea, HMR–161 pilots felt a new record had been set when only 30 minutes intervened between the time a frontline Marine was hit and delivered to a hospital facility 17 miles from the zone of action. The Consolation had been outfitted with a helicopter loading platform in July 1951, and eventually all hospital ships had such landing platforms. In Korea the flying ambulances could make the trip from rear area aid station to ship in five minutes and unload the wounded and clear the deck in 45 seconds flat.

Throughout the war nearly 10,000 wounded Marines were evacuated by helicopter; more than 1,000 such
missions were carried out at night. Records indicate that VMO–6 flew out 7,067 casualties and that another 2,748 medical evacuations were made by HMR–161, for which the task ranked as a secondary mission. Although these humanitarian gains were important, major tactical innovations made by the helicopter were even more significant.

In the fall of 1951, HMR–161 successfully executed the first combat troop resupply mission in history. At this time while the division was deployed in the jagged razorback-ridge Punchbowl area, “a glimpse of future warfare was provided when Marine helicopter lifts on a company scale led to the lift of an entire battalion and its organic equipment.”[23] Arriving in Korea on 31 August, the squadron had a complement of 15 new 10-place HRS–1 transport vehicles, with cruising speed of 60–85 knots. Developed specifically to meet Marine Corps combat requirements, the HRS marked a new era in Marine airborne support to ground troops. Both VMO–6 and HMR–161 came under operational control of the division. (With 1st Division and Wing headquarters separated geographically by more than 200 miles, it was particularly expedient to have the two squadrons under division control.)

The first step toward using the rotor-blade aircraft in the mission most closely related to the USMC basic helicopter concept—that of transporting troops and supplies by vertical envelopment—was accomplished 13 September 1951. In Operation WINDMILL I, HRS choppers carried out the first Marine mass helicopter combat resupply operation in history. A lift of one day’s supplies was made to 2/1 in the Soyang River vicinity. A total of 28 flights were executed in overall time of 2 1/2 hours (a total flight time of 14.1 hours) to transport 18,848 pounds of gear and 74 Marines a distance of seven miles.

HMR–161 first applied the Corps’ new concept of vertical envelopment on 21 September when, despite heavy fog, it transported 224 fully equipped Marines and 17,772 pounds of cargo from the reserve area to the MLR. This was the first helicopter lift of a combat unit in history. Company-size troop lifts inevitably led to more complicated battalion-size transfers. In the 11 November Operation SWITCH, HMR-161 effected the relief of a frontline battalion, involving the lift of nearly 2,000 troops. Twelve of the 3 1/2-ton aircraft made 262 flights in overall time of 10 hours (95.6 hours flight time).

The tactical and logistical possibilities of the multi-purpose rotor craft attracted considerable attention. So impressed, in fact, were Eighth Army officers by the mobility and utility displayed by Marine helicopters that in November 1951 General Ridgway had asked the Army to provide four Army helicopter transport battalions, each with 280 helicopters. Korea, Ridgway said, had “conclusively demonstrated that the Army vitally needed helicopters,”[24] and he recommended that the typical field army of the future have 10 helicopter transportation battalions.

Ridgway was thereby renewing requests for helicopters made in the early days of the war by both the Army (through General MacArthur) and the Air Force (by General Barcus). But the UNC Commander’s enthusiasm, although understandable, turned out to be the undoing for substantial Army use of the rotary-blade aircraft in Korea. The scale of operations[25] envisioned by Ridgway unwittingly led to a “jurisdictional controversy”[26] about possible duplication of aerial functions not reconciled by the two services until a year later. Although both services had helicopters in limited use, “hostilities were in their last stages before either the Army or the Air Force began to receive the cargo helicopters which they had put on order in 1950 and 1951.”[27]

A successful three-day Army regimental supply exercise in May 1953 and a combat maneuver the following month in which the choppers formed an air bridge to a heavily attacked, isolated ROK unit caused General Taylor, then CG, EUSAK, to observe: “The cargo helicopter, employed in mass, can extend the tactical mobility of the Army far beyond its normal capability.” He strongly recommended that the Army make “ample provisions for the full exploitation of the helicopter in the future.”[28]

Pioneering developments by the Marine Corps had, of course, continued meanwhile. Logistical operations had grown increasingly complex and diversified. In Operation HAYLIFT II, 23–27 February 1953, Marine helicopters set an all time cargo-carrying record when they lifted 1,612,306 pounds of cargo to completely
supply two JAMESTOWN regiments with daily requirements for the five-day period. This represented a total of 1,633 lifts and 583.4 flying hours for the operation. The record day’s lift was 200 tons, whereas plans had called for lifting a maximum 130 tons per day. Experience gained during the operation indicated that similar tactical maneuvers in warmer weather would be even more successful when troop fuel oil requirements were reduced.

Other Marine innovations by HMR–161 included supplying ammunition from the rear area ASP to the MLR and redeployment of 1st 4.5-inch Rocket Battery personnel and guns from one firing area to another. And although VMO–6 executed most of the mercy missions, the transport squadron performed an unusual assignment in July 1952. Flood conditions throughout Korea brought an urgent request from the Army for use of HMR–61. On 30 July, the Marine squadron evacuated 1,172 Army troops from their positions in the Chunchon area where they had been trapped by the heavy rains.

With a new tactical exercise held nearly every month, HMR–161 operations that once had rated worldwide headlines were now practically routine. VTOL-style battalion troop lifts were no longer novel and regimental resupply operations were becoming almost standard practice. In both relocation of units and logistical support, combat helicopters had provided high mobility and reasonable speed. They had introduced a new infantry technique of “hit and run” tactics. The transport helicopter squadron had proved most effective when employed in major tactical movements and not when used piecemeal on minor missions. Marine Corps wartime use of the new aerial vehicle had clearly proven that helicopters had become a necessary and integral component of the modern-day balanced military force.
The flexibility and readiness capability inherent in the Marine Corps FMF structure was a strong undergirding factor in its swift response to the Korean crisis. As noted, in June 1950 the Marine Corps had 74,279 officers and men on active duty. Its Fleet Marine Force, consisting of FMFPac and FMFLant, numbered 27,656. The 11,853 personnel of FMFPac included 7,779 men in General Smith’s 1st Marine Division at Camp Pendleton and 3,733 in General Harris’ 1st Marine Aircraft Wing at El Toro. On the East Coast, FMFLant numbered 15,803 with approximately 8,973 Marines in the 2d Division at Camp Lejeune and 5,297 air personnel attached to the 2d Wing at Cherry Point.

Outbreak of Korean hostilities thus presented the Marine Corps with the tasks of organizing and deploying for combat first a brigade and then a full war-strength reinforced division, each with supporting aviation elements. Despite the low strength to which FMFPac had shrunk due to stringent national defense economy measures, the heavy demands placed upon it were met. Both missions were accomplished quickly and effectively. In fact, “few achievements in the long history of the Marine Corps can equal what was achieved in the 11 weeks which elapsed between the outbreak of the Korean War and the amphibious assault of the 1st Marine Division at Inchon.”

As early as 2 July, CinCFE MacArthur had requested that a Marine RCT-air unit be dispatched to the Far East. On 7 July the 1st Provisional Marine Brigade was activated; on 12–14 July it embarked. With departure of the brigade, personnel shortages within the 1st Division and 1st Wing became acute. The division was reduced to 3,459, less than a RCT; and the wing to 2,300. Meanwhile, as the increasing demand had continued for a Marine Division deployed to Korea, it became equally apparent that if the Marine Corps were to fulfill this requirement of deploying a full-strength division to Korea, its reservists would have to be called up to alleviate these shortages.

Manpower potential of the Marine Corps Reserve was 128,959, nearly twice that of the regular establishment. In June 1950, the Organized Marine Corps Reserve (Ground) numbered 1,879 officers and 31,648 enlisted personnel being trained in 138 OMCR units of battalion size or less. Membership of the ground reserve was approximately 76 percent of its authorized strength. At the same time the Organized Reserve (Aviation) consisted of 30 fighter and 12 ground control intercept squadrons attached to the Marine Air Reserve Training Command organized at Glenview, Ill. in 1946. These MARTCOM squadrons numbered 1,588 officers and 4,753 enlisted, or approximately 95 percent of authorized strength. In addition to nearly 40,000 members of the OMCR, the Marine Volunteer (non-drill, nonpay status) Reserve carried approximately 90,000 on its rolls.

A warning notice went out on 19 July from the Commandant, General Cates, to District Directors that the OMCR would shortly be ordered to active duty; later that same day mobilization of the Reserve was authorized by President Truman, with Congressional sanction. On 20 July, the first 22 ground units, with nearly 5,000 men, were ordered to active duty on a schedule that took into account the unit’s state of readiness, proximity to its initial duty station, and facilities there for handling the personnel overload.

Less than a month after hostilities began in Korea, key infantry, artillery, and engineer units of the OMCR had been ordered to extended active duty. On 31 July, West Coast ground reserve units from Los Angeles, San Francisco, Oakland, and Phoenix were the first to report in to Camp Pendleton for augmentation into the 1st Marine Division. The following day their opposite numbers from the East Coast units arrived at Camp Lejeune. By 11 September, all of the organized ground units had reported for duty and the OMCR (Ground) had ceased to
While the organized ground reserve was being mobilized, the first of the 42 MARTCOM fighter and intercept squadrons began arriving at El Toro. Personnel of six reserve VMF and three MGCI squadrons were ordered to duty on 23 July as replacements in the 1st MAW which had furnished units and men for the MAG-33 component of the brigade.

Commenting on the success with which the Marine Corps achieved this expansion, the Secretary of Defense was to note later:

“The speed with which this mobilization was effected was an important factor in the rapid buildup of the First Marine Division, the first units of which sailed for the Far East in July 1950.”[32]

As late as 20 July, the Joint Chiefs of Staff had informed MacArthur that a Marine division could not be sent before November or even December. Finally, on 25 July, the CINCUNC’s third request for the division was approved. It would, however, be a division minus one RCT, and the Joint Chiefs were “adamant in their decision that MacArthur must wait until autumn or even winter for his third RCT.”[33]

The JCS also directed on 25 July that the Marine Corps build its division (less one RCT) to full war strength. The date of 10–15 August was set for its departure to the Far East. Among the many steps taken in the mobilization schedule, the JCS directed that the Camp Lejeune-based 2d Marine Division be expanded immediately to war strength.

Fleshing out personnel—against short-fuzed manpower and time factors—for the 1st Marine Division and Wing, due to embark in mid-August, a month after the brigade had left, was a round-the-clock operation for all hands. Between 25 July-5 August, the Marine Corps provided personnel for the expanded Division/Wing by:

- transfer of FMFLant-selected, 2d Division/Wing air and ground units, of 6,800 men, to FMFPac;
- transfer of 3,600 regular Marines from 105 posts and stations throughout the U.S.;
- mobilization of 2,900 from early OMCR ground and air units; and utilization of two replacement drafts, number 900, intended for the 1st Provisional Marine Brigade.

Expansion of the 1st Marine Division was in two phases, bringing the division (less one RCT) up to war strength and then organizing its third reinforced infantry regiment, the 7th Marines. With the cadre of 3,459 men in the division after the brigade left and the influx of regulars and reservists, the 1st Division embarked for Korea between 10 and 24 August. It had reached wartime strength (less one RCT) on 15 August, just 27 days after beginning its buildup from a peacetime T/O. As it had approached war strength, the Division CG, General Smith, was directed by CMC Ltr of 4 August to activate a third RCT and prepare it for departure to Korea no later than 1 September.

While mounting out, the division transferred approximately 1,000 of its rear echelon to be used in the buildup of the 7th Marines. The 6th Marines of the 2d Division provided the base for building this new regiment. (Approximately 800 Marines of 3/6 were reassigned from Mediterranean duty and ordered to the Far East, via the Suez Canal, to join the 7th Marines upon its arrival there.) By drawing men from widely scattered sources, it was possible to activate the 7th Marines on 17 August. Departure of this regiment on 1 September was thus far in advance of the late fall or winter target date originally set by the JCS.

With all OMCR ground units called up and absorbed into the 1st and 2d Divisions, and air squadrons being mobilized on a slower schedule (due to less-urgent combat needs for air personnel in the early war stage), the Marine Corps dealt with its remaining body of reserve strength. Bulk orders went out beginning 15 August to the Volunteer Reserve, and by the end of the year 58,480 men and women in this category were on active duty. More than 80 percent of the volunteer reservists on Marine Corps rolls served during the Korean War.

Attesting to the impact of events in Korea is the fact that “following the epic withdrawal of the 1st Division from the Chosin Reservoir, the number of new enlistments into the active Volunteer Reserve jumped from 877 in December to 3,477 in January.”[34]
Complete mobilization of the organized ground reserve had been accomplished in just 53 days, from 20 July to 11 September. A previous estimate had shown an expected 80 percent availability of ground reserve on M-Day; the actual mobilization figure was 90 percent. Of 33,528 OMCR ordered to active duty, a total of 30,183 (1,550 officers/28,633 enlisted) reported. Marine aviation also expanded rapidly. By January 1951, 32 organized reserve air units (20 of the 30 existing VMFs and all 12 MGCIs) had been activated and by October of that year all of the reserve squadrons had been called to active duty. Of the 6,341 organized air reservists, 5,240 received orders; 4,893, or 93.4 percent, reported in. In contrast to the ground reserve, air units had been recalled on a staggered or partial mobilization schedule, a matter which was later to receive Congressional attention (and ultimately to set a new trend) when the Nation’s entire Korean War mobilization procedures were reviewed and subsequently revised.

Of the Marines participating in the Inchon invasion, 17 percent were reservists. By June 1951 the proportion of reservists in Marine Corps units in Korea had increased to nearly 50 percent. Between July 1950 and June 1953, approximately 122,000 reservists, both recruits and veterans, saw active duty with the Marine Corps.

Throughout the war the Marine Corps effected approximately 34 replacement drafts and another 31 rotation drafts. Ground Marines served an average tour of 13 months overseas (although actual time attached to the division was about 10 1/2 months). The collapse of North Korean forces after the Inchon-Seoul operation and the unopposed landing at Wonsan had pointed to an early end of the Korean conflict. Massive Chinese intervention in November 1950, however, changed the prospect of a short war to a long one and made it necessary to implement a rotation and release policy. By March 1951, HQMC had worked out a preliminary phaseout program for reserve personnel (based on the various categories and length of service prior to recall) which was put into effect in June 1951.

During 1952 and up until July 1953, approximately 500 officers and 15,500 enlisted men joined the 1st Marine Division in Korea every six months. Individual monthly replacement drafts generally ranged from 1,900 to 2,500, depending on the combat situation and other personnel needs within the Marine Corps. Monthly rotation drafts of Marines assigned to the States or other duty stations from Korea were usually somewhat smaller than their corresponding incoming numbers. Ranks and MOS of replacement personnel to the end of the war, however, did not always meet the needs of the division. Specialty training conducted by the 1st Marine Division in Korea helped remedy most of the worst deficiencies.

During the latter half of 1952 and throughout 1953, tours for Marine pilots/combat air crews averaged 9 months, and for aviation ground officer/enlisted personnel, 12 months. Following a detailed HQMC study of the advantages of tactical unit as opposed to individual pilot rotation, a new squadron replacement policy was instituted. This procedure assured standard precombat training of all pilots and development of a team spirit prior to the squadron’s arrival in the combat theater. Previously this had not been possible with the continuing turnover of 1st MAW personnel under the individual release system. Despite plans during 1952–1953 for replacement and rotation of squadrons as an entity, this did not come about until late in the war when carrier squadron VMA-312 was replaced by VMA–332 in June 1953. With the end of hostilities, tours were extended to approximately 14 months for both aviation and ground Marines.

Buildup of Marine Corps personnel during the Korean War from the June 1950 base of 74,279 is seen in the following strength figures:

June 1951: 192,620 Marines on active duty
June 1952: 231,967
June 1953: 249,219

Altogether, an estimated 424,000 Marines served during the period of hostilities. The war also witnessed a sizable increase in the number of Negro Marines on active duty. This figure grew from 2 officers/1,965 enlisted
in 1950 to 19 officers/14,468 enlisted by 1953. Marine officials commented on their fine combat performance, including that of many outstanding NCOs. In line with the changing climate of events and legislation, the Korean War marked the first time that Negro personnel were fully integrated into the military services, in contrast to the segregated units before and during World War II.

Peak strength of the Marine Corps during the Korean emergency occurred on 30 September 1953, when 261,343 were on duty. At the end of the war, 33,107 Marines (26,072 division, 7,035 wing) were stationed in Korea. The time of peak deployed strength in Korea during 1950–1953 appears to have been April 1953, when Marines of the 1st Division/Wing numbered 35,306.

While the Korean War was still in progress, Congress passed new legislation to remedy certain shortcomings that had become apparent during the emergency, particularly the Nation’s recent experience with partial mobilization. These new laws affected the size of the FMF structure of the Marine Corps, its active-duty strength, and its reserve component.

Public Law 416, enacted 28 June 1952, represented several major advances for the Marine Corps. It authorized an increase of Marine Corps strength to a minimum of three combat divisions and three wings; raised the ceiling of regular active-duty personnel to 400,000 (except for normal expansion in a national emergency or war); and provided for the Commandant to sit as co-equal member of the Joint Chiefs of Staff on matters of direct concern to the Marine Corps. In reaffirming the role of Marine Corps in the seizure and defense of advanced naval bases, as well as land operations incident to naval campaigns, the law also cited the corollary Marine Corps mission of “performing such other duties as the President may direct.” Commenting on Public Law 416, the Commandant observed: “Our views are considered. Our interests are protected. The entire Marine Corps has benefited greatly by these gains.” General Shepherd further noted that the new legislation “expresses clearly the intent that the Marine Corps shall be maintained as a ready fighting force prepared to move promptly in time of peace or war to areas of trouble. It recognizes that in the future there may be a series of continuing international crises—each short of all-out war, but each requiring our nation . . . to move shock forces into action on the shortest of notice.”

The two new laws affecting the future training and composition of the Marine Corps and other services were: (1) the Universal Military Training and Service Act (UMT&S), as amended, approved 19 June 1951; and (2) the Armed Forces Reserve Act of 1952 (Public Law 476), approved 9 July 1952. Basically, the two laws sought to establish a sounder mobilization base and were complementary in nature. The Armed Forces Reserve Act of 1952 implemented a new mobilization concept: either a partial or total callup of the Nation’s reserve forces. In the past, the M-Day target had been geared to a total war only. A limited war, resulting in a partial, Korean-type mobilization, had not been envisioned. The 1952 act thereby provided greater flexibility for dealing with both contingencies and also consolidated much of the existing legislation affecting reserve forces.

Members of the reserve were newly designated by different categories of M-Day priority: ready, standby, and retired reserve. These varying degrees of availability for callup reflected training status (OMCR/volunteer), length of prior service, and related factors (i.e., men with the least service were designated for first callup, or the “Ready” category.) Previously, they were all equally subject for recall in an emergency, regardless of prior service.

The 1952 act and its new provisions thereby distinguished between a future national emergency and an all-out war. Theoretically, at least, a national emergency could be proclaimed by the President, calling for a partial mobilization, as in Korea. A declaration of war by Congress, as in World War II, would call for total mobilization. Thus the Marine Corps Reserve was newly earmarked for either a partial or total mobilization.

Under UMT&S, a military service obligation of eight years was established for all young men under age 26 entering the armed forces (whether by enlistment, draft, appointment, or reserve) after 19 June 1951. The act also authorized drafting of male citizens for two-year active duty periods. This new system of eight-year obligors
provided the post-Korean MCR with a stable body of personnel who had received their basic training but still had a reserve obligation.

Also as a result of the Korean mobilization, the Organized Marine Corps Reserve troop list was modified in order to provide a manpower pool for additional elements of the regular establishment. Supply, service, and security units were added to provide more of an FMF type of augmentation than that furnished by reserve units in the past. Reestablishment of the OMCR began in October 1951, when the first group of recalled reservists were released from Korean duty. Plans called for a larger reserve and more comprehensive training. Ground units were to be increased from 138 to approximately 255, with the air squadrons to number 42. The Volunteer Reserve was similarly to be strengthened by stricter requirements for participation.

Traditionally the mission of the Marine Corps Reserve, since 1916, had been defined as “providing trained personnel for integration into the Marine Corps in time of national emergency.” The strengthened MCR program as a result of Korea and the new laws led to a more serious reappraisal of its role. In looking to its post-Korea future, the Marine Corps planned a revitalized training program that would now “assist in extending the ‘force-in-readiness’ concept to the Marine Corps Reserve.”[41] More than ever before, the Marine Corps sought to make its reserve a mirror-image of the regular establishment.
Operations in West Korea
Pat Meid and James M. Yingling

Chapter 12. Korean Reflection
Problems Peculiar to the Korean War[42]

The undeclared war of Communist China against United Nations forces resulted in major changes in high-level policy and strategy that affected military tactics for the rest of the war. In an attempt to prevent escalation of Korean hostilities into an all-out nuclear war, the decision was made that U.N. forces, both ground and air, would not strike enemy bases in Chinese territory. After the beginning of truce negotiations in July 1951, the mission of Allied ground forces was changed from initiating offensive operations to one of maintaining an active defense of the MLR across Korea. The basic strategy became one of containment and prevention of any further enemy gains south of the 38th Parallel. It involved attempting to inflict maximum losses on the enemy while attempting to minimize those of the UNC. Militarily, these restrictions removed the possibility of winning a decisive victory. For the next two years, fighting seesawed back and forth across the parallel.

Static and defensive warfare thus characterized the greater part of the Korean War. During this period, the Marine division performed a land war mission similar to other Eighth Army components while Marine aviation squadrons flew under control of Fifth Air Force. Both the 1st Marine Division and 1st Marine Aircraft Wing faced tactical restrictions that resulted from the strategic policies governing the overall role of EUSAK and FAF. Problem areas arose from the limited nature of this particular war. These involved not only the shift in the UNC strategy from an offensive posture to a defensive (“active defense”) concept, but also from the paralyzing effect of the protracted truce negotiations on battlefield tactics.

For nearly two years (16 months in West Korea and 5 months earlier while in IX Corps on the East-Central front), the Marine division assumed an unaccustomed defensive role. Such a sustained, basically non-win position was hardly morale-building to the average Marine unable to see personally any yardage gained, any progress made in his particular war. Not surprisingly, such a passive battle assignment did result in a temporary loss of amphibious skills on the part of both individual Marines and the division. End-of-war evaluations noted that “long and indecisive defensive situations such as existed in Korea do little to foster the offensive spirit so long traditional with the Marine Corps and certainly tend to detract from the immediate amphibious readiness required of a Marine Division.”[43]

Prior to its tour of duty as I Corps reserve in mid-1953, the 1st Marine Division had noted that it would “require intensive training and reequipping for a period of at least 60 days” upon release from active combat in order to “reach a desirable standard of amphibious readiness.”[44] Rigorous MARLEX and RCT exercises initiated in June 1952 after the division had moved to the western coastal sector off the Yellow Sea and expanded during its I Corps reserve period, were important steps in rectifying this skill attrition. This was, of course, in addition to the continuous training schedule in offensive and defensive warfare maintained by the division for the battalions and regiment periodically in regular reserve status.

Outpost warfare in West Korea was characterized by overextended MLR frontage. The more than 60,000 yards held by the division while in the I Corps sector resulted in a thinly-held line which invited penetration and encirclement. “Normal” frontage for an infantry division in defense with two regiments on line was considered by U.S. Army doctrine to be 8–9,000 yards. Even with four MLR regiments (two Marine, 1st KMC/RCT, and KPR) and the 1st Amphibian Tractor Battalion on line (the third Marine regiment in reserve with a counterattack mission), this was a very lengthy sector. It was further complicated by the Han River obstacle on the left flank and the Imjin River to the rear of the sector that separated Marine frontline troops from rear support and reserve units.

Infantry battalions thus occupied “extremely wide fronts, as a rule 3,500 to 5,000 yards,” while
individual rifle companies were assigned anywhere from “1,200 to 1,700 yards of the MLR to occupy and defend.”[45] Prior to the battle of the Hook in October 1952, one of the major engagements on the western front, the 7th Marines at the far right end of the division sector had emplaced all three battalions on line, rather than the customary procedure of two on line and the third in reserve. There was little other choice, for the regimental sector exceeded 10,000 yards, “more properly the frontage for a division rather than a regiment.”[46]

During a 100 percent watch, at least theoretically, a Marine could be spaced at intervals about every 10 to 15 yards along the MLR. A night 50 percent watch—with personnel of rifle platoons assigned to COPs, listening posts, combat patrols, repair of fortifications, and the KSC nightly supply trains—not infrequently spread personnel to a point where the MLR was dangerously thin, often with 50 yards between men.[47] Such an over-wide lineal deployment dissipated defensive strength and made mutually supporting fires difficult.

Division artillery, too, was thinly positioned across the wide sector, making it difficult to execute counterbattery missions. This led to development of the innovative counter-counterbattery program (or “roving guns”) devised by the 11th Marines in May 1952 to deliberately mislead the CCF as to the strength and location of divisional artillery; the situation resulted as well in the reinforcement of the four Marine artillery battalions by heavier I Corps 155mm and 8-inch howitzers. The static situation in the prolonged land campaign also led to the growth of large, semi-permanent type camps which somewhat hampered traditional Marine mobility. Organizations had additional personnel and equipment above T/O and T/E because of the peculiar defense requirements of the sustained battle situation.

The lack of depth in the defense did not provide for receiving the shock of a determined enemy attack, particularly since the normal OPLR had been withdrawn to strengthen the overextended MLR in April 1952, shortly after the division’s arrival in West Korea. Ultimately, as we have seen, this main line of resistance concept was modified and rather than a long thin trenchline the Marine division employed a defense-in-depth concept using a series of strongpoints, as in Boulder City and the organization of the postwar main battle position. In contrast to the Marine situation (and that of most other divisions in the EUSAK line), the CCF confronting the 1st Marine Division beyond No-Man’s-Land deployed their forces in great depth, boasted unlimited manpower, and employed an elastic type of defense on mutually supporting key terrain features. The enemy had also developed an artillery capability that was numerically superior to ours. And they held high ground positions that overlooked virtually the entire Marine front.

As in World War II, Korean operations provided another instance in which various military services and components were coordinated by joint commands: EUSAK for the ground defense and FAF for air. These massive operational command structures accomplished the desired goals. On lower level echelons, however, some policies tended to be so restrictive that they precluded normal combat initiative and aggressiveness. The net result was thus to allow the enemy to maintain the tactical initiative while, in effect, hampering UNC counter-defense measures.

New directives issued by I Corps in late 1952, for example, changed the corps policy of large-scale raids for prisoners, previously encouraged in the spring of 1952, which affected infantry raids and patrol activities for the rest of the war. Plans for all raids, company size or larger, required both I Corps and EUSAK approval, and were to be submitted 10 days prior to planned execution. Complete patrol plans for even platoon-size operations had to be submitted at least 24 hours in advance. Although the reason for the new policy stemmed from a desire to minimize casualties during the prolonged stalemate, negative effects of such a lead-time factor were quickly apparent. Battalion or regimental commanders frequently were unable to capitalize on targets of opportunity that developed or changes in local conditions, such as weather or troop deployment, to gain maximum effectiveness from the operation.

Directives covering offensive maneuvers that could be taken on local initiative were so restrictive that “any independent action below the level of the Division Commander became practically nonexistent.”[48]
Similarly, counterattack plans to retake previously considered major COPs were countermanded, on several occasions, by corps or army higher echelons shortly before jump-off time with the reason given that the action was not worth the cost of further UNC casualties or possible jeopardy to the fragile peace negotiations.

Allied offensive capability was further restricted by various EUSAK and I Corps orders issued during the protracted period of truce talks. Many directives had as their well-intentioned rationale the desire not to upset the precarious balance in UNC-Communist negotiations by providing the enemy further opportunities for exploitative propaganda victories. The actual record shows, however, that the Communists were never at a loss to conjure up and capitalize on fabricated “events” that suited their purpose—whether charging UNC aircraft had violated the Kaesong neutrality strip, that American fliers were engaging in germ warfare, or deliberately instigating POW camp disruptions and breakouts.

Neutrality restrictions on supporting arms within the entire Kaesong-Panmunjom-Munsan-ni area further complicated the UNC tactical situation and hampered both offensive and defensive operations of the 1st Marine Division. This was particularly true of the center Marine regimental sector which was bisected by the Panmunjom corridor and the no-fire lines. The truce talk neutral zone restrictions prevented the Marines in this area from massing their artillery fires on a desirable scale and also, at times, interfered with proper CAS delivery forward of the MLR. The numerous and sometimes conflicting “no-fly, no-fire” restricting lines stemmed from original agreements made between UNC and Communist representatives in 1951. Subsequently, however, the prohibitions against firing any type of weapon in the area were modified from time to time and added to by FAF, EUSAK, and I Corps, “each time adding to the frustration of the local commanders.”

The double-standard effect of the neutrality restrictions became readily apparent, however. The CCF artfully used this area, by means of his tactics of “creeping” toward the Allied MLR, as a supply and reserve buildup location. The enemy emplaced artillery, assembled troops, and even used the neutral territory for equipment buildups, including tanks, in the Kaesong vicinity. Thus the restrictive lines gave the enemy an opportunity to maneuver within an approximate 12 square-mile area, all within effective artillery range and outside of the Kaesong-Panmunjom restricted territory, but UNC units were powerless to take any action.

Intelligence operations, during the latter stages of the war, were not considered optimum—for either the division or wing. While dug in on the western end of I Corps, the Marine information effort had been “seriously hampered by the lack of prisoners of war.” Only 94 CCF had been captured by the division during the period, compared with more than 2,000 prisoners taken earlier on the East-Central front. This deficiency was attributed to the “static defensive situation, the reluctance of the Chinese to surrender and the heavy volume of fire placed on our reconnaissance patrols.”

In the air, photo reconnaissance results were not rated entirely satisfactory as a source of current information by either air or ground Marines. The command channels in effect designated the Air Force as responsible agent for control and coordination of all photo missions in Korea. Requests for photographic missions thus were relayed on to FAF and flown by its Reconnaissance Wing or the Marines’ own VMJ–1 squadron. The system produced relatively good vertical coverage with photos available in about 10 days. Special requests for immediate coverage on areas of local importance, however, customarily were either not flown or “delayed to the point where they were of no value” because the tactical situation had been changed.

Delays were due to the shortage of photographic aircraft throughout FAF and the limited provision in T/0s for photo interpretation. Intelligence of air-strike targets (particularly post-strike) was consistently mediocre. Oblique photos of frontline positions took an average of three-four days to be processed and sometimes longer. As an expedient, aerial observers began to shoot their own vertical and oblique photos with hand-held cameras slung over the side of a VMO–6 plane.

Probably the most serious problem of all, from the Marine Corps point of view, was that during much of the Korean War Marine air-ground components, trained to work as a team, were to a large extent precluded from
operating together. The separate missions of the wing and division reflected, on a smaller scale, the divergent UNC air and ground doctrine and tactics. After the early moving battles, Korean hostilities had settled down to a protracted land war in which ground and air tactical commands did not operate jointly and were never coordinated to deal a truly devastating blow to the enemy. Since the Korean War was a limited one most of the fighting was confined to the stabilized front across Korea. Both air and naval forces were viewed largely as supporting arms for the ground operation.

Due to political-military considerations, UNC tactical air power had been, in effect, handcuffed so that its use would not appear “overly aggressive” and threaten an enlargement of the Korean hostilities into a nuclear armageddon of World War III.[56] Since the earliest days of the war, a strict embargo had been placed on any bombing of Chinese rear supply areas or industrial complexes although it was obvious that much of the enemy’s logistical strength lay beyond the Manchurian border.

Air efforts were concentrated largely on nuisance or harassing raids within North Korea and close air support efforts of various types, rather than a systematic destruction of the enemy’s primary supply installations. Some ranking officers had informally interpreted official Washington policy as “Don’t employ airpower so that the enemy will get mad and won’t sign the armistice.”[57] Indeed, it was not until after the Communists had rejected what the UNC called its “final truce package,” in April 1952, that it was decided to exert greater pressure against the Communists. The list of approved aerial targets was then enlarged to include North Korean hydroelectric power facilities, previously exempted from air attack.

From late 1950 until early 1953, Marine air squadrons were assigned directly by FAF, with CG, 1st MAW, having virtually no tactical control over his own units. Marine Corps aerial doctrine traditionally employed close air support of ground operations as the primary role of its air arm. FEAF and FAF, however, in their interpretation of employment of tactical air power directed FAF maximum efforts toward interdiction missions, sometimes even to the expense of immediate CAS needs.[58] As Far East Air Forces stated late in 1951, “when required, close air support of United Nations Army forces may take precedence over other FEAF programs.”[59] Interdiction, general support, and close support missions were the normal order of priorities flown by FEAF-FAF.

Operation STRANGLE, the 10-month, all-out, air interdiction campaign during 1951–1952 originally had as its objective the destruction of the North Korean road-rail network. The interdiction program had been defined at first as a move to “paralyze enemy transportation in the zone between the railheads at the 39th Parallel and the front lines,”[60] and later somewhat more conservatively as a measure to so “disrupt the enemy’s lines of communication . . . that he will be unable to contain a determined offensive by friendly forces . . . or to mount a sustained offensive himself.”[61]

Despite more than 87,552 interdiction sorties flown during the period, CinCFE daily intelligence summaries showed that aerial harassment of the CCF had not hindered their defensive efforts. Instead, by the summer of 1952 the enemy had “actually doubled in troop strength, reinforced their artillery strength to equal that of the UN forces, developed a tremendous AA capability, and established the capability for launching a general offensive.”[62] With UNC air and sea superiority, the Chinese Communists had still succeeded in keeping their main supply route open. Rail track cuts were being repaired in as little as 36 hours. And the CCF was employing more fire power than ever: in May 1952, some 102,000 rounds fell against UNC positions compared to only 8,000 the previous July.

Even the retiring UNC Supreme Commander, General Ridgway, admitted before Congressional representatives in 1952 that the enemy had greater offensive potential than ever before, and the Commander, Seventh Fleet, Vice Admiral Joseph J. Clark, declared flatly: “The interdiction program was a failure . . . It did not interdict.”[63] USAF spokesmen felt it had attained its limited purpose but opined: “Seen abstractly, the United Nations railway-interdiction campaign was defensive and preventive rather than offensive and
positive.”[64] In early 1952, CG, FAF, General Everest, recognizing that his pilots “had been so long engaged in interdiction attacks that they were losing their skills in close support”[65] inaugurated a new system. Beginning in March all fighter-bomber squadrons were to be rotated on weekly close-support missions.

Actually, the skies had begun to clear for Marine aviation operational difficulties by the latter half of 1952. A better understanding had developed between both high-level officials and the working day-to-day liaison operations at JOC. CG, 1st MAW had “established his position so firmly he was able to guide establishment of the policies which governed his operations merely by expressing his desires to CG 5th AF.”[66] The battle for Bunker Hill in August 1952 had marked excellent cooperation between Eighth Army and FAF, with the 1st Marine Division receiving air priority for two days. In any event, matters were substantially improved from late 1951-early 1952 when, during a 12-month period, 1st MAW CAS sorties for 1st MarDiv had plummeted to the incredibly low figure of 1,956[67] or 15.8 percent of the wing’s total 12,372 CAS sorties during FY 1952 (1Jul51–30Jun52).

Commenting on this unhappy period for both air and infantry Marines, Lieutenant General Richard C. Mangrum, USMC (Retired), who was CO, MAG–12 during part of the STRANGLE operations, said “for the rest of 1951 and well into 1952 the major effort of my Group and of MAG–33 was devoted to cutting the rail lines in North Korea. Without success, of course. Little by little we were able to increase the percentages of effort devoted to close support of the troops.”[68] And by the last six months of the war the bulk of all CAS missions received by the division were flown by 1st MAW aircraft, in contrast to earlier periods when a third or half of the division’s sorties were Marine-flown. As the last Korean War Wing CG noted, despite basic differences between Army-Air Force and Marine Corps-Navy concept and tactics, ultimately “the commanders of the Fifth Air Force in actual daily practice decentralized control to a marked degree.”[69]

Throughout the war, however, a lack of standardized terms and differences in request procedures continued to exist. (This was resolved by using Marine control procedures when flying for the division, and Army-Air Force procedures when scrambled on flights for other divisions.) Whereas EUSAK-FAF considered strikes inside the bombline[70] as “close air support” and those outside it as “general support,” the Marine CAS concept was one of support in close proximity to frontlines (ranging from 50 to 500 yards out) that affects the fire and maneuver of those ground units. In the hands of Marine FACs, Marine planes employed on close support strikes had a definite influence on the MLR tactical situation.

Then, too, the Marine system of maintaining aircraft “on air alert” resulted in CAS requests being filled in 5 to 15 minutes. Air support requests screened in the regular manner by Eighth Army and FAF at the JOC level resulted in a delivery of ordnance to the target in a minimum of 30 minutes and delays sometimes of nearly four hours.[71] During fluid situations, when the division required more than 40 sorties per day, the “on station” system proved more tactically effective than the FAF preplanned “on call” procedure.

Operational differences between the Marine-Navy and Army-Air Force type of CAS in a critical ground situation were never more apparent than in a major CCF last-ditch effort when the enemy slammed against ROK defenses in the Kumsong area. An end-of-war report noted:

“CCF penetration of the II ROK Corps sector, in July, 1953, brought clearly into focus the ineffectiveness of the Air Force-Army close air support (CAS) system during periods of fluid operations. CCF eruption through the II ROK Corps MLR and deep into friendly territory eliminated, as effective or practical, the complete reliance by 5th AF on pre-planned CAS strikes (using aircraft from the ground-alert pool), against fleeting targets or targets of an immediate nature. These types of targets are considered normal during a fluid situation.

“The inadequacy of communications for rapid transmission of air support requests in the CAS system employed in Korea, the impossibility of only four TACP’s per division (U.S. and ROK Army) to keep up with frontline battalion battle actions in order to control CAS strikes, and the over-centralization of control of CAS
request approvals and CAS aircraft allocation were all clearly demonstrated during that period of fluid ground operations in July.”[72]

Despite the accommodation reached during the Korean War, many of these fundamental differences in doctrine and employment of air support to ground troops in combat persisted until recent years.[73]

As military history has shown countless times in the past, wars are fought under the prevailing difficulties of the time. There never was a war waged under ideal conditions. A reflection on operational problems of the Korean period is predicated on the thought that a review of them—and the solutions effected where possible—may help avoid their repetition in a conflict of the future.
In the early phase of the Korean War, the 1st Marine Division deployment was in a moving battle situation similar to numerous engagements it had fought in the past 175 years. Most of the “lessons” learned from the enemy, the tactical situation itself, and the terrain in Korea are derived largely from the later outpost warfare stage when the Marines were employed in a stabilized and sustained defensive situation similar to that facing other Allied units across the entire Eighth Army front. Tactics of defense on a wide front, construction of permanent type field fortifications, and organization of the battle position in difficult terrain was a new experience to Marines. This period of limited objective attacks and battles of attrition highlighted the importance of small unit tactics and demonstrated some modified concepts regarding employment of supporting arms.

During the period of outpost warfare, the 1st Marine Division was never confronted by a general enemy offensive or combined infantry-armor-artillery-air assault. The nature of the conflict was one of limited objective attacks, with strong and sometimes sustained probes. Typically, these were two-battalion assaults against a platoon-size outpost.

Time after time, as UNC defending troops learned, the CCF characteristic pattern of attack was repetitive and almost predictable. After dark, heavy preparatory fires deluged an isolated advance outpost. Crude, but effective, improvised demolitions often reduced COP fortifications so that the enemy could assail the position. Waves of attacking Chinese then overwhelmed the greatly outnumbered defenders. Almost invariably the initial attack made on the front of the position was a feint; the real attack would be made by troops that had enveloped the position and moved to the rear. Enemy ambush forces were also located to the rear of the outpost, between the COP and MLR, at normal reinforcement routes to prevent both a pullback by the defenders to the MLR and to stop reinforcements from reaching the outpost.

Effective defensive fire plans for the COPs covered all likely enemy approaches and assembly areas, as well as close-in boxing fires of the COP on all sides. Marine defense positions were sited for all-round defense, with special attention paid to covering the rear approaches at night. This tactic of rear envelopment also applied on a smaller scale to patrols. Invariably the CCF maneuvered to the flanks and rear of a friendly patrol in an attempt to encircle it. The CCF skillfully employed both the terrain and troops and regularly attacked from more than one direction.

Experience with Communist combat techniques forced UNC leaders to reevaluate their own night-fighting tactics. The Chinese had a marked superiority in night operations. Every major attack on Marine outposts during the last year of the war was made at night. When they were not directly assaulting a friendly site, the CCF advanced their own ground positions by digging and their well-known creeping tactics. This enabled them to establish an OP line within small arms and mortar range of Marine COPs and the MLR. The battle for Bunker Hill came about as a result of this enemy tactic. Organization in early 1952 of COP-2A, adjacent to the Panmunjom corridor, was in direct rebuttal to this same tactic. By such indirect methods, the Chinese were further able to extend their already favorable high ground positions which gave them observation over practically all of the Marine front line. Defensively the enemy used the cover of darkness equally well: mountain roads were aswarm with trucks and supply movements, which UNC night-fighters and bombers slowed with only moderate success.

Skilled, rapid construction of field fortifications and excellent camouflage discipline by the enemy were also object lessons. Entrances to tunnels and caves, as well as the bunkers themselves were so carefully disguised by fresh branches, weeds, logs, and other natural foliage that they were rarely visible either by air observer or
aerial photographs. Active weapons positions were also effectively camouflaged. Often 60mm and 82mm mortars were housed in bunkers and fired through a narrow opening at the top. If moved out temporarily to an open slope, they were quickly returned to the bunker to avoid detection. The Chinese elaborate underground system of trenchworks and radial tunnels between forward and rear bunkers was sometimes as much as 35 yards long. Underground bunkers and tunnels often had 20 feet or more of protective dirt cover and offered security from anything except a direct aerial hit.

Destruction of the enemy’s trenches, bunkers, and cave network by medium and heavy artillery was only partially successful. Napalm was generally ineffective due to the lack of combustible materials in CCF ground defenses. The well-prepared, deeply dug fortifications were virtually impervious to anything less than air assaults with heavy ordnance (1,000-pound bombs and over) which were required to destroy CCF reverse slope positions.

A well dug-in secondary line was located four to eight miles to the rear of the Chinese MLR. Intelligence indicated that an attack to infiltrate CCF defenses would “require the penetration of a fortified area to a minimum depth of 10 miles.”[76] Some Korean War analysts maintained that behind their front line the Chinese had entrenched the ridges to an average depth of 14 miles and that the enemy “could have fallen back upon successive prepared positions for all that distance.”[77] Although the trench warfare period of the Korean War was often likened to World War I, the Chinese defensive works were estimated to have “ten times the depth of any belt of entrenchments in World War I.”[78] Some areas had even been engineered for defense against nuclear attack. Caves, tunnels, and particularly reverse slope positions also showed CCF skill in the selection and organization of terrain features.

Both the nature of the ground fighting and weather in Korea quickly indicated that our bunker construction needed to be improved. Siting them lower into the ground, so that the outline of the bunkers would not make them such ready targets, and reinforcing them to withstand a 105mm direct hit were steps in this direction. Use of sandbags (of which there was a continuing shortage) for both bunkers and trenches proved to be almost as much a problem as a solution. Bunkers above ground shored up with sandbags frequently collapsed in times of heavy rains or Korean spring thawing conditions.

Outpost warfare also proved that the average bunker often became a deathtrap when used defensively. This was due to the enemy proclivity for sealing entrances with their satchel charges, as occurred in the Vegas Cities battle. It became evident that large living-fighting bunkers could easily turn into traps in which many men could become casualties simultaneously, and from which few could fight. Despite their exposed nature, fighting holes were often safer. Some Korean combat officers were of the opinion that rather than our six-to eight-man bunkers, smaller two-man fighting units would be obviously faster to build, more effective, and safer since they would present a smaller target.

A 1st Marine Division training bulletin issued near the end of the war stated categorically:

“As a rule no bunker or cave should be large enough to accommodate more than four men. If the cave is bombardment proof, there is another greater danger that the men will fail to man their fighting positions quickly enough after the enemy fire lifts or ceases.”[79]

UNC reconnaissance and security activities also showed need for improvement. Night raids, patrol operations, and ambushes were conducted continuously to maintain contact with the enemy, keep him off balance, and obtain intelligence. This type of mobile, small-unit action repeatedly indicated an urgent need for more basic training in night combat operations at the squad and platoon level. The frequent breakdown of communications in night fighting, whether it involved a small patrol or besieged outpost, was particularly critical. Some regimental commanders noted the failure to employ properly organic small arms in combat action during darkness before requesting heavier supporting fires. It was felt that the practice of calling for mortar or artillery fire to the exclusion of using small arms was a dangerous practice which was being overused and that “even in the defense the spirit of the offensive must be maintained.”[80] Meticulous planning was vital for effective fire plans, alternate
avenues of approach, and evacuation. Detailed rehearsals of raids were essential.

Night operations proved it was necessary to have a combat patrol sufficiently large to allow for both the accomplishment of the mission and evacuation of casualties. In evaluating the Korean experience, Marine officers pointed to the difficulties of operating effectively on “pitch black nights when a man could barely see his own hand in front of him or when the most prominent terrain feature could not be silhouetted.”[81] Some commanders declared that such circumstances often lead to patrols accidentally walking into minefields—their own, as well as the enemy’s.

In their security measures, CCF strict policing of the battlefield after either a small raid or major assault was well known to every Marine infantryman as part of the Chinese elaborate precautions to preserve order of battle identity. CCF counterintelligence efforts were equally scrupulous. Despite extensive precautions to keep the relief of the Marines by the 25th Infantry Division secret in May 1953, enemy psychological warfare loudspeakers predicted the relief date one week in advance. Later they broadcast a change in date that was equally accurate. Two heavy enemy probes made in July while individual battalion reliefs were in process also demonstrated the Chinese acuity in intelligence activities.

The necessity for UNC commanders to avoid a fixed pattern in operations was insufficiently recognized. A battle diary found on a CCF soldier killed in early 1953, had observed about the Americans:

“Two days before an enemy relief they clamor in their trenches, and at the same time heavily bombard our positions.

“For small scale attacks, the enemy sends out a small group of men crawling on their hands and knees; however, in large scale attacks, they intensely bombard our positions.

“An enemy artillery bombardment following air reconnaissance indicates that the enemy will probably launch a ground attack within a short period.”[82]

As the CG, 1st Marine Division further commented about overuse of established procedures:

“The same tactics and techniques should not be followed in every raid. The pattern should be altered to the extent that the tactics and techniques employed will not indicate the objective to the enemy. The time selected for raids should vary to permit the conduct of both daylight and night raids. Employment of supporting arms including the delivery of smoke must be varied to prevent indication of the objective.”[83]

Enemy ability to locate listening posts and take them under direct fire or mortar attack also dictated the need for frequent change in location.

Regarding the use of supporting arms, the Korean terrain itself dictated a need for modification of traditional practices of employing both direct and indirect fire weapons in order to achieve maximum effectiveness. Standard Marine Corps use of both crew-served infantry weapons and artillery centered around the concept of interlocking and mutually reinforcing bands of fire. Neither the frontage nor terrain in Korea was what could be termed “normal.” Battalion frontages were often more than twice the accepted maximum. The terrain consisted of steep main ridge lines with many steep finger ridges leading off both sides. Such contours require twice as many machine guns for adequate defense against enemy attacks if employed in positions affording the usual interlocking grazing fire.

For both infantry weapons on the forward COPs and MLR, and supporting artillery batteries, the combination of “stretching unit fronts and unstretchable ranges”[84] of the weapons caused them to lose a considerable amount of their mutual support capability, as one artillery regimental commander commented about the experience of the 1st Marine Division in Korea. As a result, a compromise was often effected whereby machine guns were emplaced on the high ground of the ridge line, with their individual sectors of fire extended to 180 degrees. Although the guns were no longer mutually supporting, the numerous finger ridges could be better covered by fire to prevent the enemy from gaining a foothold on them prior to assault on the main ridge line.

As previously noted, the Marine division also modified its concept about occupying the military crest,
rather than the topographical crest, of forward slopes. In view of CCF tactics, forward slope positions offered the advantage of observation and superior fields of fire and assisted in bringing fire on the enemy in those areas and approaches masked from the view of reverse slope positions.

Under conditions of stabilized defensive lines in Korea, the great offensive power of Marine tanks was somewhat limited. They were used extensively as direct fire weapons and supplemented the artillery regiment by firing deep H&I (harassing and interdiction) missions. In West Korea, it proved expedient to have friendly tanks positioned in defiladed assembly areas where they were on call and ready to move into MLR firing slots on short notice. They often provided close fire support to Marine patrols and outpost defense actions, sometimes being called in for fire missions before the direct support artillery.

Since tanks under enemy observation invariably drew retaliatory fire, they usually remained in firing positions on the MLR only long enough to complete their fire mission. Deployment of several M–6s in mutually supporting MLR positions, however, tended to reduce the volume of hostile fire. When operating forward of the MLR, it was important that the armored vehicles be protected by infantry from enemy tank-killer teams. Often the Marine artillery observer’s knowledge of the terrain and familiarity with objective targets upon which the tank could be effectively used was thus relayed to the tanker, particularly when such targets were themselves obscured to the tank gunner. In registering the target, however, the adjustment system used by the gunner differed from that of the artillery FOs. It was recommended that use of tank guns and lights be made part of the regular COP fire plan.

The Korean experience demonstrated in particular the need for better rehearsed tank-infantry patrols. It also showed the need for a reliable tank-mounted searchlight with a range up to 2,000 yards. Smoke and muzzle blast of the 90mm gun often reduced the effectiveness of the tank searchlight. When two tanks were employed as a team (one spotting targets and adjusting fire with the light, while the other zeroed in on the illuminated targets), the searchlight was markedly more effective.

Outpost warfare, which was predominantly night fighting, was thus characterized by patrolling and ambushes, artillery dueling, and sharp battles for contested terrain that would offer improved observation. In this stand-off period of positional warfare, ground defenses were developed to the point where “both sides were incomparably stronger than they had been in actual [moving] battle.”

Lessons from Korea dealt not only with modified battle tactics, but involved an evaluation of enemy performance and capabilities, as well as certain strategic considerations which had so markedly affected the course of the war. UNC forces in Korea faced an adversary who had vast resources of manpower and, accordingly, was wholly indifferent to the cost of victory in terms of personnel and time. In fact, the enemy believed that mass was the key to victory. In many instances Chinese commanders did not launch an offensive unless their attack force had a three-to-one superiority over the defending friendly unit.

Combat effectiveness of the CCF was evaluated as good to excellent. Chinese officers demonstrated good combat leadership. They were well schooled in both offensive and defensive military tactics. Some units had been trained for amphibious operations. During the long period of positional warfare, the CCF had built up their military capability (troops, artillery, AA guns) and resupplied their forward units. Maintaining a steady flow of supplies had been an earlier weakness of the CCF logistics system. During the last six months of the war Chinese stockpiles were adequate for 35 days of offensive operations; the enemy was capable of supporting a major offensive for a 17–24 day period.

By contrast, the North Korean soldier was considerably less effective. The larger number of NKPA prisoners taken and their greater desertion rate indicated poorer discipline and lower morale. NKPA, units were rated from poor to good. After 1951, NKPA forces decreased in importance while the CCF assumed a greater role in the combat effort as well as in the truce negotiations.

Chinese weapons and equipment were characterized by a lack of standardization due to the absence of a
central system of production or ordnance supply. Their weapons included a wide assortment of foreign manufacture—Japanese, U.S., German, Czechoslovakian, Soviet, and Chinese design. Because of a shortage of small arms, usually not more than a third of the personnel in their combat units were individually armed. Despite this fact the CCF soldier was convinced he was good and had “proved himself to be a formidable opponent in combat.”[87]

Individually and as units, the CCF exhibited the traditional Oriental characteristics of extreme patience, passivity, and determination. Some authorities went so far as to declare that the Chinese ability to:

“... remain quiet for a long period and to patrol stealthily are the main reasons for the success of his engagements. The enemy’s successes which have resulted from his patience and stealth show that our troops need more training in the same technique.”[88]

The enemy’s tenacious determination to hold key terrain, regardless of the costs of lives, was well known. Another evaluation concluded:

“The Chinese [is] well and courageously led at the small unit level. He is thoroughly disciplined. He is an industrious digger. His conduct of the defense is accomplished in spite of UN superiority in the air, his inferior communications equipment and his hodgepodge of weapons and equipment.”[89]

Battlefront lightweightness and mobility, particularly in Korean winter operations, was another important object lesson from the enemy. Marine cold weather clothing, including thermal boot and body armor which had saved so many lives, was of excellent design and quality. Despite this, some authorities felt that during the Korean War the Marine was “placed at a disadvantage when he met the CCF soldier,”[90] because of bulky cold-weather clothing that hindered freedom of movement. The weight of some of the Marine infantryman’s weapons, such as the 16 1/2 lb. BAR (plus magazines) and the 9 1/2 lb. M-1 rifle, was felt to contribute further to this lack of mobility. In contrast, “the CCF soldier dressed in his quilted uniform and armed with a ‘burp’ [submachine] gun, moved freely and quietly over the roughest of terrain, thereby gaining a not inconsiderable advantage over his heavily burdened adversary.”[91]

This superior mobility led to the related advantage of tactical surprise. Since CCF units were unencumbered by heavy weapons they could readily use primitive routes of approach in the darkness. Their movements through disputed terrain were typically so furtive that often there was no preliminary warning until the CCF were virtually within grenade-throwing distance of friendly patrols or installations. The enemy practice of hiding by day and moving by night also concealed their presence from UN air reconnaissance.

One observer of the Korean scene, both in the early battles of 1950 and again in 1953, has compared the CCF development of military skills during this period, as follows:

“In 1950, the Red Chinese were a crude lot, given more to pell-mell attacks and diehard stands than to deception and protection. But they stayed and they learned as they went along. When they entered the war, apart from their exceptional skill and persistence with the machine gun, they were not accurate users of hand weapons. . . by 1953, few of the old signs remained. They had become as tenacious and as earth-seeking as ants, and in that lay a great part of their success. Two and one-half years of war in Korea were a bonanza for Communist China. On that training ground her armies became as skilled as any in the world in the techniques of hitting, evading and surviving.”[92]

The most telling characteristic of the Chinese Communist soldier, who essentially was a guerrilla fighter, may thus be his ready capacity to learn from experience, particularly the fine art of deception.

As important as any of the lessons from the battlefield was the experience of dealing with the Communists at the truce table. Ceasefire talks dragged on interminably over a period of 2 years and 17 days. Some 158 meetings were held, with more than 18 million words recorded, most of these dealing with the prisoner exchange that had been the major stumbling block since early 1952. During the two years of the truce talks, from July 1951–July 1953, an additional 56,000 Americans had been killed or wounded, bringing total U.S. combat
losses to more than 136,000. [93] (U.S. forces suffered some 80,000 casualties in the first year of the war.) And in
the end, the final solution to the POW problem was substantially that first proposed by the UNC in April 1952.
Commenting on the Communist stratagem that opened the truce talks in July 1951, U.S. government
officials observed at the time the negotiations began:

“The suggestion was received with caution since the free people of the world have learned that
Communist words and Communist intent seldom coincide. Regardless, our leaders initiated action for preliminary
ceasefire talks with the hope that the Communists were acting in good faith.”[94]

Despite this early realistic appraisal of the enemy, the degree to which the Communists were to employ
truce negotiations as simply an extension of the battlefield was not immediately evident.

A key factor is involved here. The proverbial Chinese quality of passivity and seemingly endless
patience, both on the individual and national level, was fully utilized to their advantage. In contrast, the Western
people, particularly Americans, are characteristically impatient to complete a task once it is started. As Admiral
C. Turner Joy, USN, who initially headed the UNC delegation to the Korean Armistice Conference, commented,
“We are a people who like to get things done . . . The Communist negotiating method recognizes and seeks to
gain advantage by aggravating our American tendency to impatience through the imposition of endless
delays.”[95] The American attitude is to feel that a deadlocked issue should be resolved by mutual concessions,
which puts the enemy on favorable ground in employing his delaying tactics. The Communist view is that by
deliberately slowing the progress toward completion of the armistice the position of their opponent will gradually
be undermined. Thus, Communists regard any concession made by their opponents as a sign of weakness.
Whereas Westerners often feel that to accept part of a negotiating proposal will encourage the Communists to
respond in kind, such an action is apt to lead to an even more unyielding position on their part.

The armistice effort in Korea also taught the following lessons:
“Never weaken your pressure when the enemy sues for [an] armistice. Increase it.
“Armistice conferences should be brief . . . to allow . . . talks to become protracted is to indicate
weakness on your part. This encourages your Communist opponents.
“The site at which armistice talks are held should be outside the area of conflict.
“Never concede anything to the Communists for nothing, merely to make progress.”[96]

Possibly no one had more first-hand experience in negotiating with the enemy in the Korean War than
Colonel James C. Murray, the Marine Corps staff officer who was involved in the truce talks from 8 July 1951 to
27 July 1953. In these two years he served as liaison officer between the delegations of the two sides and
participated actively in meetings. On three different occasions he negotiated the truce line which was to separate
UNC and Communist forces. In July 1953, as Senior Liaison Officer, he was in charge of the UNC staff group
that determined the final line of demarcation. He has noted that Communist rationalizations readily disregard
whatever facts or logic which do not fit their purpose, no matter how inconsistent.

While customarily ignoring all restrictions of the Geneva Convention in dealing with prisoners, for
example, when it was expedient to their interests the Communists would then argue for an incredibly narrow
interpretation of the Convention’s provisions. Declared Colonel Murray: “Having come to the conference table
only because they were near defeat, the Communists were prepared from the very first to make the most of the
negotiations to create . . . a ‘climate of victory’.”[97] This accounts for their concern with even the smallest detail
of “stage setting,” for maintaining “face,” and for practical advantages from negotiating conditions, such as the
physical setting of the truce talk site.

As the Marine officer further observed:
“A fundamental objective of the Communists in respect to the truce was the appearance of the
Communist victory in Korea . . . An armistice, no less than war, could be looked upon only as a means to an end .
. . to this end they negotiate patiently and skillfully . . . temporary inconveniences must be borne for . . . the
attainment of long-range political objectives.”[98]

Certainly, the close interaction between Communist military operations and truce negotiations, a key factor since 1951, was particularly apparent during April–July 1953 as the war drew to an end.

In addition to Communist China which had emerged stronger and with considerably more prestige from the war, the other Asian nation to have undergone marked military growth was the Republic of Korea. In June 1950, the ROK army had numbered approximately 98,000 inadequately trained troops, armed chiefly with hand-carried weapons such as rifles and carbines, ill-prepared to hold back a determined enemy attack. The ROK army was little more than a constabulary force organized by KMAG (Korean Military Advisory Group) for internal police duty. Only 65,000 men had actually received unit combat training. ROK armed forces during the three years of the war had increased six–fold and by July 1953 totaled nearly 600,000 men.

Training and equipment had steadily improved the ROK battle efficiency which, in the 1950–1951 period, had been handicapped by lack of heavy tanks, mortars, artillery, antitank mines and shells, and other heavy weapons. By the spring of 1951 the ROK army was being transformed into an effective fighting force, due largely to the determination of General Van Fleet, then EUSAK commander. In 1952 the ROK army had been enlarged to 12 divisions and the ROK Marine forces had been similarly expanded. Gradual augmentation resulted in a total of 16 ROK divisions, most of these with organic artillery; by July 1953 ROK troops had assumed responsibility for the majority of the UN line.

Marine Corps experience with its ROK counterpart had been instructive and generally encouraging. [99] Organized in 1949 by the Republic of Korea with assistance from KMAG, the 1st Korean Marine Corps Regiment had taken part in antiguerrilla operations until the NKPA invasion. With the outbreak of hostilities, the KMCs engaged in UN delaying actions in southwest Korea until September 1950 when the Korean regiment of nearly 3,000 men was attached to the 5th Marines as part of the Inchon assault force. Later the KMCs were involved in defense of Wonsan and the Hamhung-Hungnam beachhead as well as the Pohang patrol. After serving as a maneuver element with the ROK forces in early 1951, the 1st KMC Regiment was attached permanently to the 1st Marine Division in March of that year, participating in the Hwachon Reservoir fighting and performing valuable service in the interrogation of POWs.

The KMCs modeled themselves after U.S. Marines, particularly emulating the traditional offensive Marine esprit de corps and overriding goal to “close with the enemy and seize the objective” regardless of strong resistance. The combat courage and determination of the KMCs was cited by CG, 1st Marine Division, on several occasions.

During the 1952–1953 period, the KMC/RCT provided the Marine division with nearly a quarter of its combat strength and became the fourth regiment of the division. The ROK Marine Corps also consisted of the 2d KMC Regiment, which furnished personnel for the WCIDU/ECIDU island security forces, and the 5th KMC Battalion, attached to the Marine division in 1952. Classes in infantry tactics for KMC officer and enlisted personnel were conducted at the Korean Marine Corps Training Center at Chinhae. This was patterned after U.S. Marine Corps recruit and officers’ basic schools, under supervision of USMC staff personnel. Coupled with an offensive spirit and desire to attain U.S. Marine Corps standards and combat performance, the Korean Marines largely overcame early major problems resulting from the language barrier, translation of U.S. basic training materials, and the insufficient number of qualified and experienced Korean military instructors. One early recruit class possibly established a record for brevity in training when its members, after only a few weeks, were ordered to participate in the Inchon assault which was the Korean Marines’ first specialized amphibious operation.

Many of the hard lessons of Korea—as well as some of its unique problems—resulted from the fact that this was America’s first major experience in a modern, undeclared, and limited war. Accustomed to the tradition of hard-hitting, all-out war and decisive victory, both the fighting man at the front and Nation tended to view the conflict as well as its ultimate accomplishments as inconclusive.[100]
Most importantly, immediate collective security action by the UNC had prevented another small country from being subdued by direct, armed aggression. And the Communists had failed to attain their objective: the forced unification of Korea, not as a free nation but as a Russian satellite, as was North Korea. The balance sheet for UNC military intervention showed that 22 nations (including the ROK) had provided assistance, either personnel or materiel in defense of South Korea. Many of these countries had supplied token units of battalion-size or less and several had furnished noncombat medical facilities. Despite the fact these detachments from other Allied countries totalled “only 44,000 men they were disproportionately valuable in emphasizing the collective, coalition nature of the Korean war effort.”[101] Major losses, however, had been borne by ROK and American troops.

UNC casualties numbered 996,937 killed, wounded, and missing. U.S. losses were 136,937, of which 33,629 represented battle deaths and 103,308 wounded in action. A measure of the role that ground forces played in Korea “may be judged from the fact that, of the total United States battle casualties for the entire conflict, the Army and Marines accounted for 97 percent.”[102] Casualties of other UNC countries, exclusive of the U.S. and ROK, totaled approximately 17,000 although no other Allied nation lost as many as 1,000 dead. ROK casualties were listed at 850,000. Communist losses were estimated at 1,420,000 (CCF: 900,000 killed and wounded; NKPA: 520,000 killed and wounded).

For the Republic of South Korea, the end of the war in some respects represented a status quo ante bellum. Korea still remained politically partitioned and geographically divided. Whereas the 38th Parallel had been the territorial boundary prior to the Communist attack of 25 June 1950, the cease-fire line dividing North and South Korea in 1953 was the point of contact between ground forces at the time the armistice was signed. This demarcation line, however, “represented a stronger defense than the 38th Parallel as it possessed a geographical basis all along its approximately 155-mile length.”[103] The new boundary ran above the KANSAS Line, the commanding ground north of the 38th Parallel.

Possibly the single, most important lesson to be drawn from the Korean War is that many of our nation’s military assumptions—and resulting tactical decisions—tended to be based on a lack of appreciation of enemy capabilities. In many instances intelligence evaluations focused on “probable intentions of the enemy rather than on his capabilities.”[104]

While America put great military value and reliance on its massive destructive air power, for example, we were confronted by an enemy who practically never employed his own air capability, but instead moved freely at night and hid by day and was thus little deterred by our aerial harassment. And while our own battle summaries regularly cited kill ratios of 1 USMC to 3.75 CCF and substantial Communist losses,[105] we seemed to ignore an enemy mind that thought in terms of numerical superiority and was little concerned about the high human cost of holding key terrain or annexing a desired position. In the last month of the war alone, Eighth Army estimated that CCF casualties numbered 72,000, with more than 25,000 killed.

In both battlefield tactics and high-level strategy, the Korean War revealed a strong tendency on the part of the UNC to predict enemy action by values and ideology largely reflecting our own. Whether because of wishful thinking, basic mistakes in judgment, or international naïveté, the 1950–1953 experience repeatedly indicated a need on the part of Allied nations for considerably more hard-headed realism in dealing with a Communist adversary. The original UNC military objective of halting Communist aggression in Korea had been successfully accomplished, without enlarging the conflict into a nuclear war. At the same time, Korea had also provided a sobering lesson. It demonstrated how, in a limited war, overriding political considerations may permit the enemy to operate from a privileged sanctuary and allow him to seize and, in many respects, retain the initiative.

The Korean War had made America more aware of the threat of world Communism and had resulted in the strengthening of our national defense commitments in the Far East as well as in Europe. It had also validated
the concept of a balanced defense force. In contrast to the emphasis on air capability and atomic power that had dominated the strategic thinking in the post-World War II era, the Korean hostilities pointed to the requirement for a balanced, diversified military force of sufficient strength and readiness to cope effectively and on short notice with any emergency. Korea had underscored how severe peacetime budgetary cut-backs had led to unpreparedness. The Korean experience had also shown the need for flexibility in mobilization planning. Previously, this had been projected for an all-out, general war, based on America’s role in World War II. The Nation’s post-Korean policy thus sought, for the first time, a military strategy that would effectively deter either a major war or local aggression.

Korean hostilities illustrated another important lesson. South Korea had been attacked by an act of direct aggression, in flagrant violation of the Cairo Declaration and U.N. Charter. It was apparent that, despite the defense treaties and mutual aid pacts which the United States had signed during and after World War II, “any number of alliances, if not supported by strong military preparedness, would never restrain aggression.”[106] It had taken the Korean War to drive home the harsh reality that military preparedness, possession of superior power, and the willingness to use that power were the only deterrent to enemy aggression throughout the world.

The Korean War also caused the Communists to modify their strategy from one of overt aggression to more insidious means of gaining their political and economic objectives. As the Marine Corps Commandant, General Shepherd, warned: “Their tactic is to use war by proxy, war by satellite, war by threat and subversion.”[107] And, although it was not fully apparent at the time, the Korean attack “was to prove to be one of the first in a series of ‘wars of liberation’”[108] that the world would be witness to.

In the final analysis, the Korean War evolved into a prolonged battle of position and attrition in which the Communists, operating close to their base of supply, were fought to a standstill by United Nations forces under unfavorable conditions of climate and logistics. In countering the enemy threat in Korea, the American units committed there initially suffered from the effects of peacetime apathy that had followed the rapid demobilization following World War II. As the Korean War, originally visualized as a “police action” of brief duration, ground on into a major effort spanning a period of three years and one month, loud voices were raised on the home front to protest the expenditure of lives and materiel in a venture that was not always clearly understood by all Americans.

Among the U.S. forces committed on this far flung battlefront, it was once again the Marine Corps component that stood out in its sacrifice, military skills, and devotion to duty. When rushed into the battle during the first desperate weeks and months of the war, the quickly-augmented Marine units helped to restore stability to the shattered EUSAK front line. During the daringly conceived and executed operation at Inchon, Marines accomplished this incredibly complex amphibious operation with their customary spirit and precision. Never was their courage and tenacity more conspicuous than during those bitter days of the Chosin Reservoir campaign following the Chinese Communist intervention.

In the static, or positional, warfare that marked the final operations in Korea, the 1st Marine Division and 1st Marine Aircraft Wing executed their respective missions with professional skill and dispatch, regardless of tactical problems and the dreary monotony that characterized a large part of the Korean War. U.S. Marines had seen combat throughout much of the Korean peninsula. The fighting had taken them from Pusan to Inchon and Seoul, to the Chosin, to Inje and the Hwachon Reservoir in the Punchbowl area, and finally, in 1952–1953, to the critical 35-mile front in West Korea near Panmunjom. In Korea, as in past wars, Marines demonstrated the versatility, aggressiveness, and readiness which has always been a tradition of the Corps.

Marine courage and combat performance went far toward removing the image of Western softness and decadence which the Communists had so mistakenly construed in their own minds. It is a record of which all Americans and the Free World can be proud.
Appendix A. Glossary of Technical Terms and Abbreviations

AAA—Antiaircraft Artillery
AA—Antiaircraft
AD—Douglas “Skyraider” Single-Engine Attack Aircraft
ADC—Assistant Division Commander
ANGLICO—Air and Naval Gunfire Liaison Company
AO—Aerial Observer
ASP—Ammunition Supply Point
AT—Antitank
AU—Attack model of Vought F4U “Corsair”
BAR—Browning Automatic Rifle
BLT—Battalion Landing Team
Bn—Battalion
Brig—Brigade
Btry—Battery
CAS—Close Air Support
CCF—Chinese Communist Forces
CG—Commanding General
CinCFE—Commander in Chief, Far East
CinCUNC—Commander in Chief, United Nations Command
CinCPacFlt—Commander in Chief, Pacific Fleet
CMC—Commandant of the Marine Corps
CNO—Chief of Naval Operations
Co—Company
CO—Commanding Officer
ComdD—Command Diary (also called Historical Diary, or War Diary)
ComNavFE—Commander, Naval Forces, Far East
ComServPac—Commander, Service Force, Pacific
CONUS—Continental United States
COP—Combat Outpost
CP—Command Post
CPX—Command Post Exercise
CSG—Combat Service Group
CTE—Commander Task Element
CTF—Commander Task Force
CTG—Commander Task Group
CVE—Escort Aircraft Carrier
CVL—Light Aircraft Carrier
Div—Division
DMZ—Demilitarized Zone
DOW—Died of Wounds
Dtd—Dated
DUKW—Marine Amphibious Truck
ECIDE(U)—East Coast Island Defense Element (Unit)
ECM—Electronic Countermeasures
Engr—Engineer
EUSAK—Eighth United States Army in Korea
F2H-2P—McDonnell “ Banshee” Two-Engine Jet Fighter (photo model)
F3D-2—Douglas “ Skyknight” Two-Engine Jet Fighter
F4U—Vought “ Corsair” Single-Engine Fighter
F7F-3N—Grumman “Tigercat” Twin-Engine Night Fighter
F9F-2,4,5—Grumman “Panther” Single-Engine Jet Fighter
F-80—Air Force “Shooting Star” Fighter Aircraft
F-84—Air Force “Thunderjet” Fighter Aircraft
FAC—Forward Air Controller
FAF—Fifth Air Force
FASRon—Fleet Air Service Squadron
FDC—Fire Direction Center
FEAF—Far East Air Forces
FECOM—Far East Command
FMFLant—Fleet Marine Force, Atlantic
FMFPac—Fleet Marine Force, Pacific
FO—Forward Observer (artillery)
FY—Fiscal Year
HE—High Explosive
Hedron—Headquarters Squadron
H&I—Harassing & Interdiction
HMR—Marine Helicopter Transport Squadron
HO3S-1—Sikorsky Three-Place Observation Helicopter
Hq—Headquarters
HQMC—Headquarters, U.S. Marine Corps
HRS-1—Sikorsky Single-Engine Helicopter

Appendix B. Korean War Chronology

1950

25 Jun  North Korean People’s Army, with 60,000 troops and 100 Russian tanks, crosses 38th Parallel to invade South Korea.

27 Jun  UN, adopting a U.S. resolution, proclaims NKPA attack a breach of world peace. Asks member nations to assist ROK in repelling invasion

27 Jun  Pres Truman orders U.S. air-sea units to support ROK and for U.S. Seventh Fleet to neutralize Formosan Strait.

28 Jun  NKPA captures Seoul, South Korean capital.

29 Jun  Pres Truman orders naval blockade of Korean coast; authorizes Far East Commander, Gen MacArthur, to send U.S. ground troops into Korea.

30 Jun  Pres Truman receives Congressional authorization to order into active service any or all reserve components of Armed Forces, for a period of 21 months.

2 Jul  CNO directs that Marine reinforced regiment with supporting air be prepared for assignment to Far East.

2 Jul  CinCFE requests Marine RCT-air unit for Far East. This was inception of 1st Provisional Marine Brigade, formed less than a week later.

3 Jul  Inchon captured by North Koreans.

5 Jul–4 Aug  UNC fights series of delaying actions in Korea.

7 Jul  1st ProvMarBrig activated at Camp Pendleton, under Bgen Edward A. Craig. Basic elements of 6,534-man Brigade are 5th Marines and MAG-33.

8 Jul  Gen MacArthur named Commander, UNC.

10 Jul  CinCUNC asks Joint Chiefs of Staff to authorize expansion of Marine Brigade to full war-strength division.

12–14 Jul  1st ProvMarBrig embarks for Korean theater.

12 Jul  LtGen Walton H. Walker named CG, Eighth U.S. Army in Korea.

19 Jul  CinCUNC makes 2d request for Marine division.

19 Jul  Pres Truman authorizes Defense Dept to call up reserve units and individuals.

19 Jul  CMC alerts Marine Corps organized reserve units for call to active duty following Presidential announcement.

</tbody>
</table>
16 Oct  
First Chinese Communist troops secretly enter Korea from Manchuria.

19 Oct  
Pyongyang, North Korean Capital at 39th Parallel, captured by EUSAK.

26 Oct  
Chinese troops attack ROK units at Yalu River and points south of Sino-Korean border.

26 Oct  
1stMarDiv lands at Wonsan, establishes security for port, and drives north.

1 Nov  
UNC forward elements reach positions along Yalu. First Russian-built MIG appears along Yalu to attack U.S. aircraft.

2 Nov  
Strong Chinese and NKPA forces attack EUSAK at Unsan, causing withdrawal across Chongchon River. First identification of Chinese Communist Forces (CCF) in Korea.

3–7 Nov  
Initial Marine encounter with CCF. 7th Marines units defeat major elements of 124th CCF Division.

6 Nov  
MacArthur warns JCS that movement of CCF across Yalu threatens UNC position.

15 Nov  
Marine units reach Chosin Reservoir area in X Corps drive north.

24 Nov  
MacArthur announced “win the war” offensive. EUSAK begins advance toward Yalu.

26–27 Nov  
CCF, 200,000-strong, attack EUSAK troops forcing withdrawal. 1stMarDiv isolated at Yudam-ni, west of Chosin. MSR cut.

28 Nov–3 Dec  

4 Dec  
Pyongyang recaptured by enemy.

5–7 Dec  
1stMarDiv evacuates wounded by air and fights through to Koto-ri.

6 Dec  
Innovation of using airborne TADC as tactical CP to control air support.

10 Dec  
First Marine jet squadron to fly in combat, VMF-311, begins operations.

11 Dec  
1stMarDiv completes fighting breakout from Chosin entrapment. Begins march to join rest of X Corps at Hungnam.

15 Dec  
1stMarDiv deployed from Hungnam to Pusan.

15 Dec  
UNC establishes new defensive line at 38th Parallel. Marine division routes enemy guerrilla forces in Masan-Pohang-

18 Dec–27 Jan  
Marine division routes enemy guerrilla forces in Masan-Pohang- Sondong-Andong area.

23 Dec  
EUSAK CG Walker killed in jeep accident. Gen Matthew B. Ridgway named to succeed him.

24 Dec  
Hungnam evacuation completed by X Corps.

29 Dec  
Large enemy buildup reported north of 38th Parallel, preparing for new attack.

1951

31 Dec 50–1 Jan  
Enemy launches all-out offensive against UNC across 38th Parallel, pushing EUSAK back 10-12 miles.

4 Jan  
Seoul recaptured by Communists.

7–15 Jan  
Enemy offensive halted, UNC sets up new defense line along Pyongtaek-Wonju axis, at 37th Parallel.
25 Jan  UNC reassumes offensive. Operation THUNDERBOLT launched by I and IX Corps to regain territory south of Han River.

Jan–Feb  1stMarDiv continues antiguerrilla operations in Masan area.

7 Feb  Communists forced north of Han River. UNC retakes Inchon peninsula.

mid-Feb  1stMarDiv reassigned from X to IX Corps.

21 Feb  Operation KILLER, a general limited objective advance by U.S. IX and X Corps, ordered by Gen Ridgway. 1stMarDiv reenters frontlines for operation.

7 Mar  Operation RIPPER begins in central and eastern zones, with advance across Han by IX and X Corps.

14 Mar  Seoul retaken by U.S. Eighth Army for second time.

1–21 Apr  1stMarDiv in general advance north to the Hwachon Reservoir.

8 Apr  Operation RIPPER clears enemy troops from South Korea east of Imjin River.

11 Apr  Pres Truman relieves Gen MacArthur as CinCUNC, replacing him by Gen Ridgway, CG, EUSAK. LtGen James A. Van Fleet named Commander, EUSAK.

15 Apr  UNC establishes defensive line along 38th Parallel, or KANSAS Line. Enemy heavily emplaced in Chorwon-Kumhwa-Pyonggang ("The Iron Triangle") assembly area.

22 Apr–8 Jul  CCF launches all-out “Spring Offensive.”

23–27 Apr  1stMarDiv halts CCF left flank breakthrough of IX Corps, establishes defense line in Chunchon vicinity.

30 Apr  UNC completes withdrawal to new defense line north of Seoul. Intelligence reports indicate CCF plans renewed attack.

1 May  1stMarDiv reassigned to X Corps.

9 May  1st MAW squadrons participate in FAF 300-plane strike on Sinuiju, near Yalu. Biggest raid of war to date.

16 May  Second phase of enemy offensive begins. CCF drives south from Iron Triangle area, making penetrations 15–20 miles deep along the front.

20 May  FAF launches Operation STRANGLE, massive all-out interdiction effort.

21 May  UNC launches counter offensive, pushes enemy north of 38th Parallel again. 1stMarDiv drives toward Yanggu at eastern end of Hwachon Reservoir.

30 May  Eighth Army back on KANSAS Line again.

1–16 Jun  1stMarDiv advances northeast from Hwachon Reservoir to Punchbowl. Claws out daily gains of 1,000–2,000 meters, reaching objective despite heavy NKPA fire.

mid-Jun  UNC forces consolidate positions at 38th Parallel. UNC front approximately the same line as when Communist spring offensive began.

23 Jun  UN Soviet delegate, Jacob Malik, proposes cease-fire discussions.

30 Jun  UN notifies enemy of its readiness to discuss an armistice.
10 Jul  Truce talks begin at Kaesong and fighting dies down along front. UN delegation led by U.S. Vice Admiral C. Turner Joy. Communists represented by LtGen Nam Il, NKPA.

26 Jul  Negotiators at Kaesong agree on preliminary agenda.

5 Aug  UNC suspends truce talks because of armed enemy troops in neutral area. Cease-fire talks resumed 10 Aug.

22 Aug  Communists halt cease-fire talks, charge UN aircraft has violated neutrality zone.

31 Aug  In final UNC offensive action of war, 1stMarDiv opens assault at Punchbowl. UN launches limited attacks to straighten line.

5 Sep  1stMarDiv gains initial objectives in Punchbowl area, new ridgeline to become part of Line MINNESOTA, EUSAK defensive line. Heavy attacks by IX Corps at Heartbreak and Bloody Ridge.

13 Sep  HMR-161 effects first Marine mass helicopter combat resupply maneuver, Operation WINDMILL I.

18 Sep  Marines advance to Soyang River, north of Punchbowl.

21 Sep  Operation SUMMIT, first helicopter deployment of a combat unit, lands 224 fully-equipped troops and 17,772 lbs of cargo in Punchbowl area.

25 Oct  Following two weeks of discussion between liaison officers, truce talks resumed at new site, Panmunjom.

28 Oct  Cease-fire line agreed upon as present line of contact.

11 Nov  HMR-161 conducts first frontline relief of a Marine battalion, in Operation SWITCH.

12 Nov  Gen Ridgway, CinCUNC, orders EUSAK Commander, Gen Van Fleet to cease offensive operations and begin active defense of UN front.

Nov–Dec  General stalemate along Korean battlefront during truce discussions.

1952

2 Jan  UNC proposes principle of “voluntary repatriation” in POW exchange.

3 Jan  UNC proposal violently rejected by Communists.

Jan–Apr  Disorders in UNC prison camps as screening of prisoners begins

22 Feb  Communist Korean Foreign Affairs Minister charges America with renewed bacteriological warfare attacks in North Korea. Chinese Communist Foreign Minister Chou En-Lai, issues similar statement on 8 Mar, alleging U.S. flyers participate in “germ warfare.”

17 Mar  1stMarDiv reassigned from X Corps eastern-Korea position to I Corps far western end of EUSAK line. Takes over approximately 35 miles of Line JAMESTOWN on 24 Mar.

28 Apr  Adm Joy presents UN “final offer,” insists on voluntary repatriation principle.

7–11 May  Rioting prisoners at Koje-do camp seize Gen Dodd and hold him hostage, until order restored.
12 May  Gen Mark W. Clark succeeds Ridgway as CinCUNC, upon latter’s departure to assume NATO command from Gen Eisenhower.

22 May  MajGen William K. Harrison succeeds Adm Joy as chief of UN delegation at Panmunjom.

Jun–Oct  General stalemate along battlefront while truce talks deadlocked on POW repatriation question. Sharp limited objective attacks made by enemy against UNC defensive line.

9–16 Aug  First major Marine ground action in western Korea, Battle of Bunker Hill (1st Marines).

19–20 Aug  HMR-161 Operation RIPPLE introduces tactical innovation of transporting 4.5-inch rocket battery weapons and personnel to new firing position.

29 Aug  Largest one-day FAF air assault of entire war, “All United Nations Air Effort” sends 1,403 sorties against North Korean Capital, Pyongyang.

22–26 Sep  First resupply of MLR regiment by helicopter in Operation HAYLIGHT.

8 Oct  UNC adjourns armistice talks “indefinitely”; complete deadlock on POW question.

26–28 Oct  Battle of the Hook (7th Marines).

4 Nov  Dwight D. Eisenhower elected President.

17 Nov  India introduces compromise truce plan at United Nations.

2 Dec  President-elect Eisenhower begins three-day tour of Korea.

3 Dec  UN General Assembly adopts compromise Indian resolution by 54 to 5 vote.

1953

Jan–Feb  Winter lull in fighting. Cease-fire talks remain suspended.

2 Feb  President Eisenhower, in State of Union message, ends “neutralization” of Formosa Strait.

11 Feb  Gen Maxwell D. Taylor assumes EUSAK command from Gen Van Fleet.

22 Feb  UNC proposes exchange of sick and wounded POWs, as preliminary step in full exchange of prisoners.

5 Mar  Premier Joseph Stalin of Russia dies. Georgi Malenkov named to succeed him.

26–30 Mar  1stMarDiv combat outposts Vegas-Reno-Carson (5th Marines) under heavy attack.

28 Mar  Communists accept UN proposal to discuss exchange of sick and wounded POWs.

30 Mar  Chou En-lai indicates Communists will accept Indian UN compromise proposal. Truce talks to be resumed.

12 Apr  1st MAW flies first night CAS missions, using intersecting searchlight beams to mark enemy targets.

20–26 Apr  Exchange of sick and wounded POWs, “Operation LITTLE SWITCH,” takes place at Panmunjom, under direction of Munsan-ni Provisional Command.

26 Apr  Truce talks resumed at Panmunjom.

5 May  1stMarDiv relieved by U.S. 25thInfDiv; 1st Division assigned mission of I Corps Reserve.
7 May                   Communists accept UN proposal that prisoners unwilling to be repatriated be kept in neutral custody within Korea, rather than be removed elsewhere to a neutral nation.

28–30 May               Savage fighting while truce details worked out by negotiators. CCF launches regimental-strength attack against I Corps sector. Heavy action in Nevada Cities and Hook area outposts. Marine tanks and artillery in support of defending 25thInfDiv line units.

6 Jun                    ROK national Assembly demands freedom for anti-Communist North Koreans held in South Korean POW camps. Civilian demonstrations break out in various EUSAK and I Corps localities.

8 Jun                    Agreement reached on POW question. POW nonrepatriates to be turned over to five-member neutral commission to decide disposition of POW cases. Pres Rhee declares armistice terms unacceptable to South Korea.

9 Jun                    ROK National Assembly unanimously rejects truce terms.

10–17 Jun                Communists launch heaviest offensive in two years against ROK II Corps sector in Kumsong area. Heavy penetrations, with ROK II Corps pushed 4000 yards south to new MLR.

18 Jun                   Breakout of 25,000 North Korean anti-Communist prisoners from South Korean POW camps, assisted by ROK guards. Release ordered by Pres Rhee as protest against proposed armistice.

18–20 Jun                Communists accuse UNC of complicity in freeing prisoners; truce talks suspended.

7–8 Jul                  COPs Berlin-East Berlin (7th Marines right regimental sector) under attack during Marine relief of 25thInfDiv.

8 Jul                    1stMarDiv assumes operational control of its former MLR sector, relieving 25thInfDiv.

8 Jul                    Communists agree to resume armistice negotiations; talks reconvened 10 July.

11 Jul                   Robertson announces that Pres Rhee will no longer oppose truce terms.

11 Jul                   Maj John F. Bolt, VMF-115, becomes first Marine jet ace with kill of his fifth and sixth MIGs.

13–20 Jul                CCF launches even larger offensive than June attack along central Korean front. IX and ROK II Corps MLR reestablished south of Kumsong River.

19 Jul                   Negotiators at Panmunjom reach agreement on truce.

19 Jul                   Marine outposts Berlin-East Berlin overrun; I Corps decrees positions should not be retaken.

24–27 Jul                Heavy enemy attack in Berlin Complex (“Boulder City”) area held by 7th and 1st Marines.

27 Jul                   Cease-fire agreement signed at Panmunjom at 1000. Fighting ends. Armistice effective at 2200.

5 Aug–6 Sep              Final exchange of prisoners in Operation BIG SWITCH, at Panmunjom.

Appendix C. Command and Staff List, March 1952-July 1953

1st Marine Division
Commanding General
  MajGen John T. Selden (to 28 Aug 1952)
  MajGen Edwin A. Pollock (from 29 Aug)
  MajGen Randolph McC. Pate (from 16 Jun 1953)
Asst Division Commander
  BGen William J. Whaling (to 23 Mar 1952)
  BGen Merrill B. Twining (from 24 Mar)
  BGen Robert O. Bare (from 13 Jun)
  BGen Joseph C. Burger (from 31 Mar 1953)
Chief of Staff
  Col Austin R. Brunelli (to 10 Oct 1952)
  Col Henry W. Buse, Jr. (from 11 Oct)
  Col Lewis W. Walt (from 15 Jun 1953)
G-1
  Col Walter N. Flournoy (to 31 Mar 1952)
  Col John F. Dunlap (from 1 Apr)
  Col Sidney M. Kelly (from 11 Sep)
  Col Albert F. Metze (from 1 Jun 1953)
  Col Wendell H. Duplantis (from 20 Jul)
G-2
  LtCol James H. Tinsley (to 9 Apr 1952)
  Col Sidney S. Wade (from 10 Apr)
  LtCol William R. Watson, Jr. (from 24 Apr)
  Col Clarence A. Barninger, Jr. (from 11 Oct)
  Col William F. Prickett (from 20 Dec)
  Col Loren E. Haffner (from 1 Apr 1953)
  Col James E. Mills (from 10 Jul)
G-3
  LtCol Gordon D. Gayle (to 22 Apr 1952)
  LtCol James H. Tinsley (from 24 Apr)
  Col Russell E. Honosowetz (from 15 Jun)
  Col Eustace R. Smoak (from 16 Dec)
Col Lewis W. Walt (from 18 Apr 1953)
LtCol Jess P. Ferrill, Jr. (from 15 Jun)

G-4

Col Robert A. McGill (to 27 Aug 1952)
Col Thomas A. Culhane (from 28 Aug)
Col Kenneth A. King (from 12 Nov)
Col Richard H. Crockett (from 15 Dec)
Col Thomas S. Ivey (from 15 May 1953)

Special Staff
Adjutant

Maj James K. Young (to 5 May 1952)
Maj Charles T. Lamb (from 6 May)
Maj Clyde W. Shealy (from 24 Feb 1953)
Maj George K. Acker (from 1 Jun)

Air Officer

LtCol Edward V. Finn (to 14 Mar 1952)
LtCol Walter F. Cornnell (from 15 Mar)
LtCol William E. Abblitt (from 12 Feb 1953)

Anti-Tank Officer

Maj Harold C. Howard (to 4 Aug 1952)
Maj Herbert E. L. Zastrow (from 5 Aug)
LtCol Earl W. Gardner (from 18 Nov)
Maj Marshall Salvaggio (from 10 Jan 1953)
Capt William F. Doehler (from 6 Apr)

Amphibian Tractor Officer

LtCol Michiel Dobervich (to 1 Aug 1952)
LtCol Edwin B. Wheeler (from 2 Aug)
LtCol George S. Saussy, Jr. (from 7 Nov)
LtCol Frank R. Wilkinson, Jr. (from 16 Mar 1953)
Maj John McN. Rosebush (from 16 Jun)

Armored Amphibian Officer

LtCol John T. O’Neill (to 5 Aug 1952)
Maj James L. Jones (from 6 Aug)
LtCol Henry G. Lawrence, Jr. (from 12 Aug)
LtCol Fenlon A. Durand (from 4 Dec)
Maj Ralph J. Parker, Jr. (from 16 May 1953)
LtCol Maurice C. Goodpasture (from 15 Jul)
Artillery Officer
  Col Frederick P. Henderson (to 20 Sep 1952)
  Col Harry N. Shea (from 21 Sep)
  Col James E. Mills (from 22 Feb 1953)
  Col Manley L. Curry (from 5 Jul)

Chaplain
  Cdr Walter S. Peck, Jr., USN (to 16 Apr 1952)
  Cdr Edward A. Slattery, USN (from 17 Apr)
  Cdr Lonnie W. Meachum, USN (from 28 Dec)

Chemical Warfare and Radiological Defense Officer
  Maj Harold C. Howard (to 4 Aug 1952)
  Maj Herbert E. L. Zastrow (from 5 Aug)
  LtCol Earl W. Gardner (from 18 Nov)
  Maj Marshall Salvaggio (from 10 Jan 1953)
  Capt Gerald W. Gibson (from 30 Jan)

Dental Officer
  Capt Francis C. Snyder, USN (to 26 Apr 1952)
  Cdr Clifford H. Rice, USN (from 27 Apr)
  Capt William M. Fowler, USN (from 26 May)
  Capt James R. Justice, USN (from 12 Mar 1953)

Embarkation Officer
  LtCol John H. Papurca (to 1 Mar 1952)
  LtCol James F. Coady (from 2 Mar)
  LtCol Richard S. Johnson (from 5 Sep)
  Maj Edwin J. St. Peter (from 6 Nov)
  LtCol John N. Rentz (from 24 Nov)
  LtCol Sidney F. Jenkins (from 12 May 1953)

Engineer Officer
  Col August L. Vogt (to 5 Jul 1952)
  (None listed for 6-16 July)
  Col Robert E. Fojt (from 17 Jul)
  LtCol Harry D. Clarke (from 1 Feb 1953)
  Col Walter R. Lytz (from 1 Apr)

Exchange Officer
  Capt Benjamin Reed (to 28 Nov 1952)
  Capt John H. Thomas (from 29 Nov)

Food Director
  1stLt Herbert E. McNabb (to 15 Jun 1952)
Maj Louis P. Penny (from 16 Jun)
Maj Francis K. Bernardini (from 23 Apr 1953)

Historical Officer
2dLt Francis X. Goss (to 22 Mar 1952)
Capt Robert F. Seward (from 23 Mar)
Capt William R. Smith (from 16 Jul)
1stLt Virgil S. Price (from 8 Nov)
2dLt John J. Creamer, Jr. (from 7 Dec)
Capt Verle E. Ludwig (from 6 Apr 1953)
2dLt Thomas A. MacCalla (from 22 Jul)

Inspector
Col William K. Davenport, Jr. (to 17 Mar 1952)
Col Thomas C. Moore (from 18 Mar)
Col Eustace R. Smoak (from 18 Jul)
Col Clayton O. Totman (from 9 Aug)
Col Wallace M. Nelson (from 5 Dec)
Col Albert F. Metze (from 29 Apr 1953)
Col Manley L. Curry (from 1 Jun)
Col Edwin C. Ferguson (from 13 Jul)

Legal Officer
LCdr Arnold W. Eggen, USN (to 12 Jan 1953)
Cdr Earl C. Collins, USN (from 13 Jan)
LtCol Raymond G. Coyne (from 8 Jul)

Motor Transport Officer
Maj Walter R. O Quinn (to 14 May 1952)
LtCol Kenneth E. Martin (from 15 May)
LtCol Hugh J. Chapman (from 12 Mar 1953)
LtCol Jack F. McCollum (from 29 Jun)

Naval Gunfire Officer
Maj John V. Downs (to 5 Aug 1952)
LtCol William P. Pala (from 6 Aug)
LtCol Robert D. Shaffer (from 16 Sep)
LtCol Henry H. Reichner, Jr. (from 20 Dec)
LtCol Robert D. Shaffer (from 26 Apr 1953)
Capt Robert J. Daeschler (from 15 Jul)

Ordnance Officer
Maj Harold C. Borth (to 5 May 1952)
LtCol William F. Pulver (from 6 May)
Maj Joseph O. Weist (from 4 Jun)
Maj Stanley Tesko (from 21 Oct)
LtCol Marshall R. Pilcher (from 1 Apr 1953)
LtCol Samuel L. Grigsby (from 1 Jun)

Postal Officer
CWO George C. Hunter (to 25 Jun 1952)

Maj Charles W. Boggs, Jr. (from 1 Mar 1953)
Maj Fred J. Gilhuly (from 1 Jul)

Marine Wing Service Squadron 1 (MWSS-1; decommissioned 1 Jul 1953) and
Marine Wing Service Group 17 (MWSG-17; commissioned 1 Jul 1953)

Commanding Officer
  Col John Wehle (to 8 Apr 1952)
  LtCol Birney B. Truitt (from 9 Apr)
  LtCol Donald D. Blue (from 17 Jul)
  Col Lyle H. Meyer (from 21 Sep)
  LtCol Francis K. Coss (from 11 May 1953)
  Col Robert J. Johnson (from 30 Jun)

Executive Officer
  LtCol Birney B. Truitt (to 8 Apr 1952)
  Maj William L. Woodruff (from 9 Apr)
  Maj Edward L. Schnettler (from 4 Jun)
  Maj Franklin L. Kemper (from 26 Aug)
  LtCol William G. Voss (from 20 Dec)
  LtCol Francis K. Coss (from 21 Apr 1953)
  Maj Elswin P. Dunn (from 11 May)
  LtCol Charles J. Prall (from 6 Jul)

Headquarters Squadron, MWSG-17 (commissioned 1 Jul 1953)

Commanding Officer
  Capt James D. Ireland (from 1 Jul 1953)

Marine Air Base Squadron 17 (MABS-17; activated 1 Jul 1953)

Commanding Officer
  Maj Bryce Howerton (from 1 Jul 1953)

Marine Aircraft Repair Squadron 17 (MARS-17; activated 1 Jul 1953)

Commanding Officer
  Maj Vincent Franano (from 1 Jul 1953)
  Maj James G. Fox (from 29 Jul)

Marine Air Control Group 2 (MACG-2)
Commanding Officer

Col Frederick R. Payne (to 18 May 1952)
Col John W. Stage (from 19 May)
Col Jack R. Cram (from 11 Jul)
Col Kenneth D. Kerby (from 16 Feb 1953)

Executive Officer

LtCol Russell D. Rupp (to 1 May 1952)
LtCol Philip “L” Crawford (from 2 May)
LtCol William A. Houston, Jr. (from 20 Jun)
LtCol Harold L. Lantz (from 11 Aug)
LtCol Lawrence F. Fox (from 24 Feb 1953)
LtCol Randolph C. Berkeley, Jr. (from 23 May)
LtCol John S. Flickinger (from 10 Jun)
LtCol Morris E. Flater (from 21 Jun)

Marine Tactical Air Control Squadron 2 (MTACS-2)

Commanding Officer

LtCol Hensley Williams (to 2 Jun 1952)
Maj Clinton E. Jones (from 3 Jun)
LtCol William H. Whitaker, Jr. (from 1 Aug)
LtCol Frederick M. Rauschenbach (from 21 Aug)
LtCol Arthur C. Lowell (from 28 Jan 1953)
Col Joseph A. Gerath, Jr. (from 20 Feb)
LtCol Randolph C. Berkeley, Jr. (from 11 Jun)

Executive Officer

Maj Clinton E. Jones (to 2 Jun 1952)
Capt John F. Driftmier (from 3 Jun)
Maj George C. Henshaw (from 28 Aug)
Maj Thomas H. Hughes, Jr. (from 25 Sep)
LtCol Arthur C. Lowell (from 20 Feb 1953)
(none listed from 15 Mar to 9 Jul)
Capt Robert L. Dietrichson (from 10 Jul)

Marine Ground Control Intercept Squadron 1 (MGCIS-1)

Commanding Officer

Maj Fred A. Steele (to 15 Aug 1952)
Maj Henry W. Hise (from 16 Aug)
Maj Wallace G. Wethe (from 16 Oct)
Lt Col Joseph F. Wagner, Jr. (from 3 Feb 1953)
Maj Randal A. Yarberry (from 1 Jun)
LtCol Harold F. Brown (from 23 Jun)

Executive Officer
Maj Marvin R. Bridges, Jr (to 11 Apr 1952)
Capt William J. Wachsler (from 12 Apr)
Capt Francis K. McManus (from 22 May)
Maj William Sloane (from 1 Aug)
Maj Romeo F. Bordigon (from 4 Oct)
Maj Tolbert T. Gentry (from 2 Nov)
Maj Francis F. Rotter (from 8 Jan 1953)
Capt John E. Dixon (from 31 May)
Maj Randal A. Yarberry (from 23 Jun)

Marine Ground Control Intercept Squadron 3 (MGCIS-3)

Commanding Officer
LtCol Owen M. Hines (to 20 May 1952)
Maj James H. Foster (from 21 May)
LtCol Robert J. Hoey (from 14 Jun)
LtCol Kenneth D. Frazier (from 16 Aug)
Lt Col John B. Maas, Jr. (from 3 Feb 1953)
Maj Nathan B. Peevey, Jr. (from 19 May)
Maj James E. Lovin, Jr. (from 1 Jul)
LtCol Lowell D. Grow (from 27 Jul)

Executive Officer
Maj James H. Foster (to 1 Jun 1952)
Capt Lee B. Swindall (from 2 Jun)
Maj Roy A. Thorson (from 21 Jun)
Maj Raleigh E. Fletcher (from 5 Sep)
Maj Francis E. Lee, Jr. (from 29 Oct)
Maj Nathan B. Peevey, Jr. (from 4 Feb 1953)
Capt William K. Lebo (from 19 May)
Maj Thomas E. Archer (from 20 Jun)
Maj James E. Lovin, Jr. (from 27 Jul)

Marine Composite Squadron 1 (VMC-1; activated 15 Sep 1952)

Commanding Officer
LtCol Lawrence F. Fox (to 24 Jan 1953)
LtCol Ernest C. Fusan (from 25 Jan)
LtCol Thomas “H” Mann, Jr. (from 16 Mar)
Maj George H. Linnemeier (from 6 Apr)
LtCol Wilbur A. Free (from 1 Jun)

Marine Aircraft Group 12 (MAG-12)
Commanding Officer
Col Elmer T. Dorsey (to 24 May 1952)
Col Robert E. Galer (from 25 May)
Col John P. Condon (from 10 Aug)
Col George S. Bowman, Jr. (from 13 Jan 1953)
Col Edward B. Carney (from 1 Apr)

Executive Officer
Lt Col Robert J. Hoey (to 5 Jun 1952)
Lt Col Joseph A. Gray (from 6 Jun)
Col George S. Bowman, Jr. (from 17 Aug)
Lt Col Barnette Robinson (from 20 Feb 1953)
Col Robert J. Johnson (from 19 Mar)
Col William F. Hausman (from 30 Jun)

Headquarters Squadron, MAG-12
Commanding Officer
Capt George Byers, Jr. (to 22 Apr 1952)
1stLt Daniel F. McConnell (from 24 Apr)
Maj Godfrey Muller (from 1 Jul)
Capt William M. Crooks (from 18 Sep)
Capt Edgar F. Remington (from 21 Dec)
Capt Bradford N. Slenning (from 15 May 1953)

Marine Air Base Squadron 12 (MABS-12)
Commanding Officer
LtCol Carl M. Longley (to 31 Mar 1952)
Maj Sumner H. Whitten (from 1 Apr)
LtCol Graham H. Benson (from 25 Aug)
LtCol Barnette Robinson (from 11 Oct)
LtCol Eystein J. Nelson (from 1 Jan 1953)
LtCol Richard M. Huizenga (from 1 Mar)
LtCol Rufus D. Sams (from 1 Jul)
Executive Officer

Maj Robert A. Collett (to 31 Mar 1952)
Maj LeRoy T. Frey (from 1 Apr)
Maj Oscar C. Hauge, Jr. (from 26 May)
Maj Sumner H. Whitten (from 18 Aug)
LtCol Barnette Robinson (from 18 Sep)
Maj Frank Hick (from 11 Oct)
Maj Harry J. Anderson (from 20 Jan 1953)
LtCol Rufus D. Sams (from 14 Apr)
Maj Donald A. McMillan (from 11 Jul)

Marine Aircraft Maintenance Squadron 12 (MAMS-12)

Commanding Officer

LtCol Joseph A. Gray (to 31 May 1952)
Maj James G. G. Taylor (from 1 Jun)
Maj William M. Johnston, Jr. (from 19 Aug)
Maj Leonard I. Beatty (from 29 Dec)
LtCol Walter E. Gregory (from 20 Feb 1953)
LtCol Clarence H. Moore (from 27 Jun)
Maj Mervin L. Taylor (from 18 Jul)

Executive Officer

Maj Robert E. Will (to 26 Apr 1952)
Maj James G. G. Taylor (from 27 Apr)
Capt Robert T. Kinsey (from 1 Jun)
Maj James G. G. Taylor (from 19 Aug)
Maj Warren L. MacQuarrie (from 1 Sep)
Maj John R. Hyneman (from 15 Dec)
Maj Leonard I. Beatty (from 20 Feb 1953)
Maj Alexander Gagyi (from 15 Apr)
Maj Mervin L. Taylor (from 12 Jul)

Marine Attack Squadron 121 (VMA-121)

Commanding Officer

LtCol William Q. Houston, Jr. (to 19 Jun 1952)
LtCol Philip “L” Crawford (from 20 Jun)
LtCol Wayne M. Cargill (from 11 Sep)
LtCol Richard M. Huizenga (from 7 Dec)
LtCol John E. Hughes (from 1 Mar 1953)
Maj Richard L. Braun (from 21 Apr)
LtCol Harold B. Penne (from 16 Jul)

Executive Officer
Maj Henry W. Horst (to 31 May 1952)
Maj Robert H. Brumley (from 1 Jun)
Maj Julius B. Griffin (from 30 Jul)
LtCol Donald D. Blue (from 2 Nov)
LtCol Roy R. Hewitt (from 11 Dec)
LtCol John E. Hughes (from 17 Jan 1953)
Maj Mervin L. Taylor (from 1 Mar)
Maj Robert C. Woten (from 16 Jul)

Marine Fighter Squadron 212 (VMF-212; redesignated Marine Attack Squadron 212 [VMA-212] on 10 Jun 1952)
Commanding Officer
LtCol Robert L. Bryson (to 9 Jun 1952)
LtCol Graham H. Benson (from 10 Jun)
LtCol Maurice W. Fletcher (from 5 Sep)
LtCol Charles E. Dobson, Jr. (from 25 Oct)
LtCol Barnette Robinson (from 1 Jan 1953)
LtCol Louis R. Smunk (from 29 Feb)
Maj Edward C. Kicklighter (from 1 Jun)
LtCol James R. Wallace (from 19 Jun)

Executive Officer
Maj Richard B. Elliott (to 29 Feb 1952)
Maj Roy A. Thorson (from 8 Mar)
Maj Leslie C. Reed (from 10 Jun)
LtCol Walter E. Gregory (from 25 Oct)
Maj Norman O’Bryan (from 20 Feb 1953)
Maj Edward C. Kicklighter (from 7 Mar)
Maj Donald A. McMillan (from 1 Jun)
Maj Edward C. Kicklighter (from 19 Jun)
Maj Boris J. Frankovic (from 20 Jul)

START

Marine Fighter Squadron 323 (VMF-323; redesignated Marine Attack Squadron 323 [VMA-323] on 30 Jun 1952; transferred from operational control of the 1st Marine Aircraft Wing on 7 Jul 1953)
Commanding Officer
LtCol Richard L. Blume (to 25 Apr 1952)
Maj William A. Weir (from 26 Apr)
LtCol Henry S. Miller (from 1 Jun)
LtCol Kenneth R. Chamberlain (from 1 Sep)
LtCol Williard C. Lemke (from 20 Nov)
LtCol William M. Frash (from 13 Jan 1953)
LtCol Clarence H. Moore (from 11 Apr to 26 Jun)

Executive Officer
Maj William A. Weir (to 8 Jun 1952)
Maj Richard E. Pryor (from 9 Jun)
Maj Eystein J. Nelson (from 1 Sep)
Maj Thomas M. Forsyth, Jr. (from 20 Nov)
LtCol Clarence H. Moore (from 2 Jan 1953)
Lt Col Frederick M. Rauschenbach (from 29 Jan)
Maj Robert C. Woten (from 3 May to 26 Jun)

Marine Attack Squadron 332 (VMA-332; came under the operational control of the 1st Marine Aircraft Wing on 29 May 1953)

Commanding Officer
LtCol John B. Berteling (from 29 May 1953)

Executive Officer
Maj Gordon L. Allen (from 29 May 1953)

Marine Attack Squadron (VMA-251; attached to 1st Marine Aircraft Wing on 9 Jun 1953)

Commanding Officer
LtCol Harold A. Harwood (from 9 Jun 1953)

Executive Officer
Maj James W. Merritt (from 9 Jun 1953)

Marine Night-Fighter Squadron 513 (VMF(N)-513)

Commanding Officer
LtCol John R. Burnett (to 11 Jun 1952)
Col Peter D. Lambrecht (from 12 Jun)
LtCol Jack C. Scott (from 19 Jun)
LtCol Homer G. Hutchinson, Jr. (from 9 Sep)
LtCol Robert F. Conley (from 20 Jan 1953)
LtCol Ross S. Mickey (from 6 May)
LtCol Robert L. Conrad (from 10 Jul)

Executive Officer
Maj Frank H. Simonds (to 19 Apr 1952)
Maj William D. Patterson, Jr. (from 23 Apr)
Lt Col Jack C. Scott (from 15 Aug)
Maj Gorden E. Gray (from 20 Aug)
LtCol Jack C. Scott (from 8 Sep)
LtCol Jack B. Winters (from 14 Sep)
Maj Dave E. Severance (from 20 Jan 1953)
Maj Richard M. Hunt (from 9 Jun)
LtCol Robert L. Conrad (from 24 Jun)
Maj Richard M. Hunt (from 10 Jul)

Marine Aircraft Group 33 (MAG-33)
Commanding Officer
Col Martin A. Severson (to 23 May 1952)
Col John P. Condon (from 24 May)
Col Herbert H. Williamson (from 11 Aug)
Col Louis B. Robertshaw (from 22 Oct)
Col Arthur R. Stacy (from 10 May 1953)
Col John L. Smith (from 24 Jul)
Executive Officer
LtCol Vernon O. Ullman (to 13 May 1952)
LtCol Graham H. Benson (from 14 May)
Col Herbert H. Williamson (from 26 Jul)
LtCol Darrell D. Irwin (from 11 Aug)
Col John P. Coursey (from 17 Aug)
Col Arthur R. Stacy (from 25 Mar 1953)
LtCol James K. Dill (from 11 May)
LtCol Thomas V. Murto, Jr. (from 26 Jul)

Headquarters Squadron, MAG-33
Commanding Officer
Capt Allen R. Schutter (to 30 May 1952)
Maj Guy M. Cloud (from 1 Jun)
Maj Richard J. Collins (from 21 Jul)
Maj Reuel H. Pietz (from 1 Nov)
Maj Thomas J. Cushman, Jr. (from 14 Apr 1953)
Capt Jerry N. Hendershot (from 26 May)

Marine Air Base Squadron 33 (MABS-33)
Commanding Officer

Maj Frank P. Barker, Jr. (to 9 Jun 1952)
Maj John W. Zuber (from 10 Jun)
Maj William D. Patterson, Jr. (from 6 Aug)
Maj Kenneth B. Nelson (from 9 Dec)
Lt Col Bernard McShane (from 21 Apr 1953)
LtCol Arthur M. Moran (from 1 Jun)
LtCol Jack Cosley (from 26 Jul)

Executive Officer

Maj George K. Harshberger (to 1 May 1952)
Maj Summerfield M. Taylor, Jr. (from 2 May)
Capt Frederic T. Watts, Jr. (from 11 Aug)
Maj Harold N. McLaffey (from 2 Oct)
Maj Darwin P. Glaese (from 23 Dec)
Capt George J. Collins (from 22 May 1953)

Marine Aircraft Maintenance Squadron 33 (MAMS-33)

Commanding Officer

Maj Zadik Collier (to 1 Sep 1952)
Maj William N. Case (from 2 Sep)
Maj Patrick Harrison (from 5 Feb 1953)
Maj Julian P. Craigmiles (from 29 Jun)

Executive Officer

Maj Alton C. Bennett (from 1 Aug 1952)
Maj John L. Herndon (from 12 Aug)
Maj James Aldworth (from 2 Dec)
Capt Marshall S. Austin (from 22 April 1953)

Marine Fighter Squadron 115 (VMF-115)

Commanding Officer

LtCol Thomas M. Coles (to 20 May 1952)
Maj John W. Zuber (from 21 May)
LtCol Robert C. Armstead (from 5 Jun)
Maj Wallace G. Wethe (from 17 Jul)
LtCol Royce W. Coln (from 18 Aug)
LtCol John B. Maas, Jr. (from 29 Sep)
LtCol Stoddard G. Cortelyou (from 1 Feb 1953)
LtCol Joe L. Warren (from 31 Mar)
LtCol Lynn H. Stewart (from 5 Jun)

Executive Officer

Maj Conrad G. Winter (to 26 Apr 1952)
Maj John W. Zuber (from 27 Apr)
Maj Griffith B. Doyle (from 21 May)
Maj Wallace G. Wethe (from 10 Jun)
Maj Arthur N. Nehf, Jr. (from 5 Aug)
LtCol Joseph F. Wagner, Jr. (from 19 Nov)
LtCol Joe L. Warren (from 2 Feb 1953)
Maj Carol Bernard (from 31 Mar)
Maj James H. Phillips (from 25 Jun)

Marine Fighter Squadron 311 (WMF-311)

Commanding Officer

LtCol Darrell D. Irwin (to 2 Jun 1952)
Maj Henry W. Hise (from 3 Jun)
Maj Kenneth D. Frazier (from 10 Jun)
Maj William J. Sims (from 26 Jun)
LtCol Arthur H. Adams (from 1 Oct)
LtCol Francis K. Coss (from 1 Feb 1953)
LtCol Arthur M. Moran (from 21 Apr)
LtCol Bernard McShane (from 1 Jun)

Executive Officer

Maj Jay E. McDonald (to 27 Mar 1952)
Maj Henry W. Hise (from 28 Mar)
Maj Kenneth D. Frazier (from 26 Jun)
Maj Harold A. Langstaff, Jr. (from 22 Aug)
Maj Williams J. Sims (from 1 Oct)
LtCol Walter R. Bartosh (from 12 Oct)
LtCol Arthur M. Moran (from 20 Jan 1953)
Maj John Skinner, Jr. (from 21 Apr)
Maj William D. Heier (from 3 Jul)

Marine Attack Squadron (VMA-312; on 16 Jun 1953, this squadron was reassigned to the 3d Marine Aircraft Wing)

Commanding Officer

LtCol Joe H. McGlothlin, Jr. (to 8 Apr 1952)
LtCol Robert E. Smith, Jr. (from 9 Apr)

LtCol Robert E. Cameron (from 4 Oct)
LtCol Winston E. Jewson (from 25 Jan to 15 Jun 1953)

Executive Officer
Maj Alexander S. Walker, Jr. (to 7 Apr 1952)
Maj Edmond P. Hartsock (from 9 Apr)
Maj Walter D. Persons (from 11 Jul)
Maj Marshall C. Gregory (from 1 Sep)
Maj James W. Baker (from 13 Jan 1953)
Maj Grover R. Betzer (from 2 Feb)
Maj James L. Cooper (from 4 May to 10 Jun)

Marine Photographic Squadron 1 (VMJ-1)

Commanding Officer
Maj Robert R. Read (to 13 May 1952)
LtCol Vernon O. Ullman (from 14 May)
LtCol William H. Whitaker (from 11 Sep)
LtCol Howard L. Walter (from 1 Nov)
LtCol William M. Ritchey (from 16 Feb 1953)
LtCol Leslie T. Bryan, Jr. (from 15 May)

Executive Officer
Maj Albert E. James (to 3 Jun 1952)
Maj Marion B. Bowers (from 4 Jun)
Maj Grant W. McCombs (from 18 Jul)
LtCol William H. Whitaker (from 28 Aug)
Maj Grant W. McCombs (from 11 Sep)
Maj Howard L. Walter (from 2 Oct)
Maj Louis Conti (from 6 Nov)
LtCol Grant W. McCombs (from 14 Dec)
Maj Louis Conti (from 5 Feb 1953)
Maj John E. Worlund (from 1 Apr)

Marine Helicopter Transport Squadron 161 (HMR-161)

Commanding Officer
Col Keith B. McCutcheon (to 7 Aug 1952)
LtCol John F. Carey (from 8 Aug)
Col Owen A. Chambers (from 15 Mar 1953)

Executive Officer
Maj James R. Dyer (to 10 May 1952)
Maj Zigmund J. Radolinski (from 11 May)
LtCol David M. Danser (from 28 May)
LtCol Russel R. Riley (from 1 Sep)
Maj Gilbert Percy (from 3 Jun 1953)
Lt Col John H. King, Jr. (from 1 Jul)

Marine Observation Squadron 6 (VMO-6)

Commanding Officer
LtCol William H. Herring (to 10 May 1952)
Maj Wallace J. Slappey, Jr. (from 11 May)
LtCol Elkin S. Dew (from 11 Sep)
LtCol William A. Cloman, Jr. (from 2 Feb 1953)
LtCol Earl E. Anderson (from 1 Jul)

Executive Officer
Maj William G. MacLean, Jr. (to 25 Jun 1952)
Maj Lynn E. Midkiff (from 26 Jun)
Maj Alton W. McCully (from 5 Feb 1953)
Maj John A. Hood (from 15 May)

1st 90mm AAA Gun Battalion

Battalion Commander
Col Max C. Chapman (to 22 Nov 1952)
Col Edgar O. Price (from 23 Nov)
LtCol Henry S. Massie (from 7 Apr 1953)

Executive Officer
LtCol Kenneth P. Dunkle (to 30 Apr 1952)

PRESIDENTIAL UNIT CITATION

The President of the Republic of Korea takes profound pleasure in citing for outstanding and superior performance of duty during the period 26 October 1950 to 27 July 1953

THE FIRST UNITED STATES MARINE DIVISION (REINFORCED)

for the award of

PRESIDENTIAL UNIT CITATION

Landing at Wonsan on 26 October 1950 the First United States Marine Division (Reinforced) advanced to Yudam-ni where they engaged the Chinese Communist Forces. The heroic and courageous fighting of the First United States Marine Division (Reinforced), which was outnumbered but never outfought by the Chinese Communist Forces; coupled with its fight against the terrible winter weather in this return to Hungnam, has added another glorious page to the brilliant history of the United States Marines. After regrouping and retraining, the First United States Marine Division (Reinforced) rejoined the United Nations Forces and began the attack to the north which drove the aggressors relentlessly before them. The enemy spring offensive during April 1951 which threatened to nullify the recent United Nations gains was successfully repulsed by the First Marine Division (Reinforced) and when other Republic of Korea Forces were heavily pressed and fighting for survival the timely offensive by this Division gave heart to the peoples of Korea. In March 1952 the First Marine Division (Reinforced) assumed responsibility of defending the western flank of the Eighth Army. In carrying out the responsibilities of this assignment the Marines won everlasting glory at Bunker Hill. Continuing active operations against the Communist enemy until the Armistice, the First Marine Division (Reinforced) inflicted heavy losses upon the aggressors and successfully repulsed their assaults upon strong point Vegas and Reno during March 1953, and during July 1953, just prior to the signing of the Armistice, again threw back the enemy in several days of severe fighting at strong points Berlin and East Berlin. Although suffering heavy losses during these engagements the First Marine Division (Reinforced) was at all times successful in maintaining the integrity of the United Nations’ positions within their assigned sector. The First United States Marine Division (Reinforced), by its unparalleled fighting courage and steadfast devotion to duty, has won the undying affection and gratitude of the Korean people. During its entire campaign the First United States Marine Division (Reinforced) remained true to its motto of “Semper Fidelis”. In keeping faith with the highest traditions of its own country the First United States Marine Division (Reinforced) kindled new hope in the breasts of all free men and women in the Republic of Korea. This Citation carries with it the right to wear the Presidential Unit Citation Ribbon by each individual member of the First United States Marine Division (Reinforced) who served in Korea during the stated period.

/S/SYNGMAN RHEE

President

[Note: The Korean PUC, for the period 26 Oct 50 to 15 Feb 53, was presented to the 1stMarDiv in March 1953.]
Later, President Syngman Rhee furnished a second citation extending the period to include 16 Feb-27 Jul 53. The division was thus cited for the overall period 26 Oct 50 to 27 Jul 53, and the entire period is considered one award. Decorations & Medals Br., HQMC.

PRESIDENTIAL UNIT CITATION

The President of the Republic of Korea takes profound pleasure in citing for outstanding and superior performance of duty

THE FIRST MARINE AIRCRAFT WING UNITED STATES MARINE CORPS

The First Marine Aircraft Wing has distinguished itself in support of United Nations Forces in Korea from 27 February 1951 to 11 June 1953. During this period, Marine Aircraft flew over 80,000 combat sorties braving intense opposition to strike enemy fortifications, weapons and logistical installations throughout North Korea. These extensive combat operations, often conducted in hazardous weather, have provided United Nations’ ground forces with unparallelled close air support and have inflicted heavy casualties and tremendous damage on enemy forces. Flying from forward Korean bases and from naval aircraft carriers, Marine aircraft have continually harassed communication and transportation systems, successfully curtail the resupply of hostile front line troops. The exceptional achievements of the officers and men of the First Marine Aircraft Wing have materially assisted the Republic of Korea in its fight for freedom. Their outstanding performance often reflects great credit upon themselves and is in accord with the highest traditions of military service.

The citation carries with it the right to wear the Presidential Unit Citation Ribbon by each individual member of the First Marine Aircraft Wing who served in Korea during the stated period.

/S/ SYNGMAN RHEE
President

PRESIDENTIAL UNIT CITATION

The President of the Republic of Korea takes pleasure in citing

THE UNITED STATES MARINE CORPS ADVISORY COMPONENT

UNITED STATES NAVAL ADVISORY GROUP

for outstanding service to the people of Korea and for aid in the development of the Korean Marine Corps during the period February 1953 to 27 July 1954.

While attached to the Republic of Korea Marine Corps the United States Marine Advisory Component performed commendable service by giving valuable advice and guidance thus enabling the Korean Marine Corps to attain a ready status for any emergency.

By their initiative and constant attention the officers and men have contributed materially to the effective operation of all offices and departments of the Korean Marine Corps. Their thorough knowledge of techniques and military matters has helped in the practical routine training and in the fitting of the Korean Marine Corps for effective combat duty.

By exemplary conduct and indomitable spirit the United States Marine Corps Advisory Component has
left a permanent imprint on the Korean Marine Corps which will assist in the accomplishment of the missions assigned to it in the future.

The outstanding service of the officers and men of the United States Marine Corps Advisory Component is in the best tradition of the United States Naval Service and this Presidential Unit Citation is given in recognition of their significant contribution to the welfare of the Republic of Korea.

/S/ SYNGMAN RHEE
President

THE SECRETARY OF THE NAVY
WASHINGTON

The Secretary of the Navy takes pleasure in commending the
FIRST MARINE DIVISION, REINFORCED
for service as set forth in the following CITATION:

“For exceptionally meritorious service during operations against enemy aggressor forces in Korea from 11 August 1952 to 5 May 1953 and from 7 to 27 July 1953. During these periods the First Marine Division, Reinforced, maintained the integrity of over thirty-five miles of defense line in Panmunjom Truce Area against the constant aggressions of the enemy. During the time the Division was in the lines, it was under fire and attack by a resolute, well-equipped and fanatical hostile force. The Division maintained an aggressive defense and constantly kept the enemy off balance by continuously patrolling, probing and raiding enemy positions, accompanied by the full weight of artillery and air support. Commencing in August 1952, and frequently thereafter, during the months of October 1952, March 1953, and July 1953, the enemy launched a series of large scale attacks to capture certain terrain features critical to the defense of friendly lines. The outposts and main defensive positions called Bunker Hill, The Hook, Reno, Carson, Vegas, Berlin and East Berlin, along with certain smaller outposts, gave title to battles of unsurpassed ferocity in which the full effort of the Marine Division was required to hurl back the attackers at heavy cost to both the Division and the enemy. That the lines in the Division sector remained firm and unbreached at the cessation of hostilities on 27 July 1953 gave eloquent tribute to the resourcefulness, courage, professional acumen and stamina of the members of the First Marine Division, Reinforced. Their inspiring and unyielding devotion to the fulfillment of their vital mission reflects the highest credit upon themselves and the United States Naval Service.”

All personnel attached to and serving with the First Marine Division, Reinforced, during the periods 11 August 1952 to 5 May 1953 and 7 to 27 July 1953, or any part thereof, are hereby authorized to wear the NAVY UNIT COMMENDATION RIBBON. This included all organic units of the Division and the following reinforcing units:
FLEET MARINE FORCE UNITS AND DETACHMENTS: 1st 4.5 Rocket Battery; 1st Combat Service Group; 1st Amphibian Tractor Battalion; 7th Motor Transport Battalion; 1st Armored Amphibian Battalion; 1st Amphibian Truck Company; Team #1, 1st Provisional Historical Platoon; 1st Fumigation and Bath Platoon; 1st Air Delivery Platoon; Radio Relay Team, 1st Signal Operations Company; Detachment, 1st Explosive Ordnance
Disposal Company; 2nd Platoon, Auto Field Maintenance Company; 1st Provisional Truck Company; Detachment, 1st Air Naval Gunfire Liaison Company.

UNITED STATES ARMY UNITS: (For such periods not included in Army Unit Awards) 1st Bn, 32nd Regt, 7th Inf Div; 7th Inf Div; 74th Truck Co; 513th Truck Co; 3rd Plt, 86th Engr Searchlight Co (passed to operational control of 11th Marines); 558th Trans Truck Co (Amphibious, was attached to 7th MT Bn, FMF); 196th Field Arty Bn; 92nd Army Engr Searchlight Plt; 181st CIC Det USA; 163rd MIS Det USA (Unit redesignated 1 Sep 1952 to MIS Plt); TLO Det USA; UNMACK Civil Affairs Team USA; 61st Engr Co; 159th Field Arty Bn (155 Howitzer); 623rd Field Arty Bn; 17th Field Arty Bn “C” Btry; 204th Field Arty Bn “B” Btry; 84th Engr Construction Bn; 1st Bn, 15th US Inf Regt; 1st Bn, 65th US Inf Regt; 1st Bn, 9th Regt, 2nd US Div (attached to KPR); Recon Co, 7th US Inf Div; 461st Inf Bn; Heavy Mortars, 7th Inf Div; 204th Field Arty Bn “A” Btry; 69th Field Arty Bn; 64th Field Arty Bn; 8th Field Arty Bn; 90th Field Arty Bn; 21st AAA-AW Bn; 89th Tank Bn; 441st CIC Det, USA; Prov Bn, USA (Dets 31st and 32nd RCTS); Co D, 10th Engr (C) Bn, USA; Tank Co, 31st Inf, USA; Hqr Co, 31st Inf, USA; 2nd Bn, 31st Inf, USA (less Co E); 185th Engr (C) Bn, USA (less Co A); Co B, 1st Bn, 31st Inf, USA.

CHARLES S. THOMAS
Secretary of the Navy

THE SECRETARY OF THE NAVY
WASHINGTON

The Secretary of the Navy takes pleasure in commending the FIRST MARINE AIRCRAFT WING, REINFORCED for service as set forth in the following CITATION:

“For exceptionally meritorious service during operations against enemy aggressor forces in Korea from 1 August 1952 to 27 July 1953. Flying more than 45,000 combat sorties against determined opposition during this period, the First Marine Aircraft Wing, Reinforced, struck repeatedly and effectively at enemy troops, fortifications, logistical installations and lines of communication throughout North Korea. These extensive combat operations provided friendly ground forces with decisive close air support during such battles as Bunker Hill, The Hook, Reno, Carson, Vegas, Berlin and East Berlin, and inflicted heavy casualties and tremendous damage upon the enemy. Operating from naval aircraft carriers and from forward Korean bases, Marine aircraft continually harassed enemy communication and transportation systems, curtailing the movement of hostile troops to the front lines, and provided the air defense of South Korea. The notable record achieved by the First Marine Aircraft Wing, Reinforced, is an eloquent tribute to the resourcefulness, courage and stamina of all her gallant officers and men. Their inspiring and unyielding devotion to duty in the fulfillment of these vital tasks reflect the highest credit upon themselves and the United States Naval Service.”

All personnel attached to and serving with the First Marine Aircraft Wing, Reinforced, during the above period, or any part thereof, are hereby authorized to wear the NAVY UNIT COMMENDATION RIBBON. This includes all organic units and the following reinforcing units: Construction Battalion Maintenance Unit 1; 1st
DISTINGUISHED UNIT CITATION—Citation of Unit—Section 1

1—DISTINGUISHED UNIT CITATION.—As authorized by Executive Order 9396 (sec. I, WD Bul, 22, 1943), superseding Executive Order 9075 (sec. III, WD Bul 11, 1942), the following unit is cited under AR 220-315 in the name of the President of the United States as public evidence of deserved honor and distinction. The citation reads as follows:

1. The Third Turkish Brigade, Turkish Armed Forces Command, and the following attached units: The Turkish Liaison Detachment, 8215th Army Unit; Company B, 1st Marine Tank Battalion, 1st Marine Division; and Company C, 1st Marine Tank Battalion, 1st Marine Division, are cited for outstanding performance of duty and extraordinary heroism in action against the enemy near Munsan-ni, Korea, during the period 28 to 29 May 1953. On the night of 28 May, an assault, supported by a heavy barrage, was launched by a powerful enemy force, determined to wrest outposts “Elko,” “Carson,” and “Vegas” from friendly hands. The valiant troops occupying these positions were soon surrounded and hand-to-hand combat ensued. With great tenacity and courage, the friendly troops fought on until, with only three of them still standing on outpost “Carson,” the first position fell. Despite the tremendous number of casualties they had suffered, the foe intensified the attack on the two remaining terrain features, rushing repeatedly up the slopes only to be hurled back by the gallant defenders. Friendly reinforcements arrived together with concentrated artillery support. All fire power was brought to bear on the charging enemy, as the defending troops fought desperately to hold. The foe came on in seemingly endless numbers and friendly tanks moved into highly vulnerable positions to fire at close range. Friendly casualties were heavy, but the toll of enemy dead was enormous. The determined foe paid apparently no attention to their thousands of casualties and appeared prepared to sacrifice thousands more to gain their objectives. Realizing that these friendly outposts could not hope to stand in the face of the endless waves of hostile troops, the friendly command ordered the outpost defenders to withdraw to the main line of resistance. The extraordinary heroism, singleness of purpose, and magnificent fighting spirit exhibited by the members of the Third Turkish Brigade, Turkish Armed Forces Command, and attached units throughout this crucial battle, resulted in the frustration of enemy plans to breach the main line of resistance, thus reflecting the greatest credit on themselves and the military profession.

By order of the Secretary of the Army:  
OFFICIAL:
The President of the United States takes pleasure in presenting the PRESIDENTIAL UNIT CITATION to
MARINE OBSERVATION SQUADRON SIX
for service as set forth in the following CITATION:

“For extraordinary heroism in action against enemy aggressor forces in Korea from August 1950 to 27
July 1953. Pioneering in the development of front-line helicopter evacuation of casualties, Marine Observation
Squadron Six skillfully carried out unprecedented low-altitude evacuation flights during all hours of the day and
night over rugged mountainous terrain in the face of enemy fire and extremely adverse weather, thereby saving
untold lives and lessening the suffering of wounded marines. In addition, this valiant squadron completed
thousands of day and night artillery spotting, reconnaissance and tactical air control missions, contributing
materially to the extensive damage inflicted upon enemy positions, supply lines and troop concentrations. The
splendid record achieved by Marine Observation Squadron Six attests to the courage, determination and esprit de
corps of the officers and men of this unit and was in keeping with the highest traditions of the United States Naval
Service.”

For the President,
CHARLES S. THOMAS
_Secretary of the Navy_
PREAMBLE

The undersigned, the Commander-in-Chief, United Nations Command, on the one hand, and the Supreme Commander of the Korean People’s Army and the Commander of the Chinese People’s Volunteers, on the other hand, in the interest of stopping the Korean conflict, with its great toll of suffering and bloodshed on both sides, and with the objective of establishing an armistice which will insure a complete cessation of hostilities and of all acts of armed force in Korea until a final peaceful settlement is achieved, do individually, collectively, and mutually agree to accept and to be bound and governed by the conditions and terms of armistice set forth in the following Articles and Paragraphs, which said conditions and terms are intended to be purely military in character and to pertain solely to the belligerents in Korea.

Article I. MILITARY DEMARCATION LINE AND DEMILITARIZED ZONE

1. A Military Demarcation Line shall be fixed and both sides shall withdraw two (2) kilometers from this line so as to establish a Demilitarized Zone between the opposing forces. A Demilitarized Zone shall be established as a buffer zone to prevent the occurrence of incidents which might lead to a resumption of hostilities.

2. The Military Demarcation Line is located as indicated on the attached map.

3. The Demilitarized Zone is defined by a northern and a southern boundary as indicated on the attached map.

4. The Military Demarcation Line shall be plainly marked as directed by the Military Armistice Commission hereinafter established. The Commanders of the opposing sides shall have suitable markers erected along the boundary between the Demilitarized Zone and their respective areas. The Military Armistice Commission shall supervise the erection of all markers placed along the Military Demarcation Line and along the boundaries of the Demilitarized Zone.

5. The waters of the Han River Estuary shall be open to civil shipping of both sides wherever one bank is controlled by one side and the other bank is controlled by the other side. The Military Armistice Commission shall prescribe rules for the shipping in that part of the Han River Estuary indicated on the attached map. Civil shipping of each side shall have unrestricted access to the land under the military control of that side.

6. Neither side shall execute any hostile act within, from, or against the Demilitarized Zone.

7. No person, military or civilian, shall be permitted to cross the Military Demarcation Line unless specifically authorized to do so by the Military Armistice Commission.

8. No person, military or civilian, in the Demilitarized Zone shall be permitted to enter the territory under
the military control of either side unless specifically authorized to do so by the Commander into whose territory
entry is sought.

9. No person, military or civilian, shall be permitted to enter the Demilitarized Zone except persons
concerned with the conduct of civil administration and relief and persons specifically authorized to enter by the
Military Armistice Commission.

10. Civil administration and relief in that part of the Demilitarized Zone which is south of the Military
Demarcation Line shall be the responsibility of the Commander-in-Chief, United Nations Command; and civil
administration and relief in that part of the Demilitarized Zone which is north of the Military Demarcation Line
shall be the joint responsibility of the Supreme Commander of the Korean People’s Army and the Commander of
the Chinese People’s Volunteers. The number of persons, military or civilian, from each side who are permitted to
enter the Demilitarized Zone for the conduct of civil administration and relief shall be as determined by the
respective Commanders, but in no case shall the total number authorized by either side exceed one thousand
(1,000) persons at any one time. The number of civil police and the arms to be carried by them shall be as
prescribed by the Military Armistice Commission. Other personnel shall not carry arms unless specifically
authorized to do so by the Military Armistice Commission.

11. Nothing contained in this Article shall be construed to prevent the complete freedom of movement to,
from, and within the Demilitarized Zone by the Military Armistice Commission, its assistants, its Joint Observer
Teams with their assistants, the Neutral Nations Supervisory Commission hereinafter established, its assistants, its
Neutral Nations Inspection Teams with their assistants, and of any other persons, materials, and equipment
specifically authorized to enter the Demilitarized Zone by the Military Armistice Commission. Convenience of
movement shall be permitted through the territory under the military control of either side over any route
necessary to move between points within the Demilitarized Zone where such points are not connected by roads
lying completely within the Demilitarized Zone.

Article II. CONCRETE ARRANGEMENTS FOR CEASE-FIRE AND ARMISTICE

A. General

12. The Commanders of the opposing sides shall order and enforce a complete cessation of all hostilities
in Korea by all armed forces under their control, including all units and personnel of the ground, naval, and air
forces, effective twelve (12) hours after this Armistice Agreement is signed. (See Paragraph 63 hereof for
effective date and hour of the remaining provisions of this Armistice Agreement.)

13. In order to insure the stability of the Military Armistice so as to facilitate the attainment of a peaceful
settlement through the holding by both sides of a political conference of a higher level, the Commanders of the
opposing sides shall:

a. Within seventy-two (72) hours after this Armistice becomes effective, withdraw all of their military
forces, supplies, and equipment from the Demilitarized Zone except as otherwise provided herein. All
demolitions, minefields, wire entanglements, and other hazards to the safe movement of personnel of the Military
Armistice Commission or its Joint Observer Teams, known to exist within the Demilitarized Zone after the
withdrawal of military forces therefrom, together with lanes known to be free of all hazards, shall be reported to
the Military Armistice Commission by the Commander of the side whose forces emplaced such hazards.
Subsequently, additional safe lanes shall be cleared; and eventually, within forty-five (45) days after the
termination of the seventy-two (72) hour period, all such hazards shall be removed from the Demilitarized Zone
as directed by and under the supervision of the Military Armistice Commission. At the termination of the seventy-
two (72) hour period, except for unarmed troops authorized a forty-five (45) day period to complete salvage
operations under Military Armistice Commission supervision, such units of a police nature as may be specifically
requested by the Military Armistice Commission and agreed to by the Commanders of the opposing sides, and
personnel authorized under Paragraphs 10 and 11 hereof, no personnel of either side shall be permitted to enter
the Demilitarized Zone.

b. Within ten (10) days after this Armistice Agreement becomes effective, withdraw all of their military
forces, supplies and equipment from the rear and the coastal islands and waters of Korea of the other side. If such
military forces are not withdrawn within the stated time limit, and there is no mutually agreed and valid reason for
the delay, the other side shall have the right to take any action which it deems necessary for the maintenance of
security and order. The term “coastal islands,” as used above, refers to those islands which, though occupied by
one side at the time when this Armistice Agreement becomes effective, were controlled by the other side on 24
June 1950; provided, however, that all the islands lying to the north and west of the provincial boundary line
between HWANGHAE-DO and KYONGGI-DO shall be under the military control of the Supreme Commander
of the Korean People’s Army and the Commander of the Chinese People’s Volunteers except the island groups of
PAENGYONG-DO (37°58’N, 124°40’E), TAECHONG-DO (37°50’N, 124°42’E), SOCHONG-DO (37°46’N,
124°46’E), YONPYONG-DO (37°38’N, 125°40’E), and U-DO (37°36’N, 125°58’E), which shall remain under the
military control of the Commander-in-Chief, United Nations Command. All the islands on the west coast of
Korea lying south of the above-mentioned boundary line shall remain under the military control of the
Commander-in-Chief, United Nations Command.

c. Cease the introduction into Korea of reinforcing military personnel; provided, however, that the
rotation of units and personnel, the arrival in Korea of personnel on a temporary duty basis, and the return to
Korea of personnel after short periods of leave or temporary duty outside of Korea shall be permitted within the
scope prescribed below. “Rotation” is defined as the replacement of units or personnel by other units or personnel
who are commencing a tour of duty in Korea. Rotation personnel shall be introduced into and evacuated from
Korea only through the ports of entry enumerated in Paragraph 43 hereof. Rotation shall be conducted on a man-
for-man basis; provided, however, that no more than thirty-five thousand (35,000) persons in the military service
shall be admitted into Korea by either side in any calendar month under the rotation policy. No military personnel
of either side shall be introduced into Korea if the introduction of such personnel will cause the aggregate of the
military personnel of that side admitted into Korea since the effective date of this Armistice Agreement to exceed
the cumulative total of the military personnel of that side who have departed from Korea since that date. Reports
concerning arrivals in and departures from Korea of military personnel shall be made daily to the Military
Armistice Commission and the Neutral Nations Supervisory Commission, such reports shall include places of
arrival and departure and the number of persons arriving at or departing from each such place. The Neutral
Nations Supervisory Commission, through its Neutral Nations Inspection Teams, shall conduct supervision and
inspection of the rotation of units and personnel authorized above, at the ports of entry enumerated in Paragraph
d. Cease the introduction into Korea of reinforcing combat aircraft, armored vehicles, weapons, and ammunition; provided, however, that combat aircraft, armored vehicles, weapons, and ammunition which are destroyed, damaged, worn out, or used up during the period of the armistice may be replaced on the basis of piece-for-piece of the same effectiveness and the same type. Such combat aircraft, armored vehicles, weapons, and ammunition shall be introduced into Korea only through the ports of entry enumerated in Paragraph 43 hereof. In order to justify the requirement for combat aircraft, armored vehicles, weapons, and ammunition to be introduced into Korea for replacement purposes, reports concerning every incoming shipment of these items shall be made to the Military Armistice Commission and the Neutral Nations Supervisory Commission; such reports shall include statements regarding the disposition of the items being replaced. Items to be replaced which are removed from Korea shall be removed only through the ports of entry enumerated in Paragraph 43 hereof. The Neutral Nations Supervisory Commission, through its Neutral Nations Inspection Teams shall conduct supervision and inspection of the replacement of combat aircraft, armored vehicles, weapons, and ammunition authorized above, at the ports of entry enumerated in Paragraph 43 hereof.

e. Insure that personnel of their respective commands who violate any of the provisions of this Armistice Agreement are adequately punished.

f. In those cases where places of burial are a matter of record and graves are actually found to exist, permit graves registration personnel of the other side to enter, within a definite time limit after this Armistice Agreement becomes effective, the territory of Korea under their Military control, for the purpose of proceeding to such graves to recover and evacuate the bodies of the deceased military personnel of that side, including deceased prisoners of war. The specific procedures and the time limit for the performance of the above task shall be determined by the Military Armistice Commission. The Commanders of the opposing sides shall furnish to the other side all available information pertaining to the places of burial of the deceased military personnel of the other side.

g. Afford full protection and all possible assistance and cooperation to the Military Armistice Commission, its Joint Observer Teams, the Neutral Nations Supervisory Commission, and its Neutral Nations Inspection Teams, in the carrying out of their functions and responsibilities hereinafter assigned; and accord to the Neutral Nations Supervisory Commission, and to its Neutral Nations Inspection Teams, full convenience of movement between the headquarters of the Neutral Nations Supervisory Commission and the ports of entry enumerated in Paragraph 43 hereof over main lines of communication agreed upon by both sides, and between the headquarters of the Neutral Nations Supervisory Commission and the places where violations of this Armistice Agreement have been reported to have occurred. In order to prevent unnecessary delays, the use of alternate routes and means of transportation will be permitted whenever the main lines of communication are closed or impassable.

h. Provide such logistic support, including communications and transportation facilities, as may be required by the Military Armistice Commission and the Neutral Nations Supervisory Commission and their Teams.

i. Each construct, operate, and maintain a suitable airfield in their respective ports of the Demilitarized
Zone in the vicinity of the headquarters of the Military Armistice Commission, for such uses as the Commission may determine.

j. Insure that all members and other personnel of the Neutral Nations Supervisory Commission and of the Neutral Nations Repatriation Commission hereinafter established shall enjoy the freedom and facilities necessary for the proper exercise of their function, including privileges, treatment, and immunities equivalent to those ordinarily enjoyed by accredited diplomatic personnel under international usage.

14. This Armistice Agreement shall apply to all opposing ground forces under the military control of either side, which ground forces shall respect the Demilitarized Zone and the area of Korea under the military control of the opposing side.

15. This Armistice Agreement shall apply to all opposing naval forces, which naval forces shall respect the waters contiguous to the Demilitarized Zone and to the land area of Korea under the military control of the opposing side, and shall not engage in blockade of any kind of Korea.

16. This Armistice Agreement shall apply to all opposing air forces, which air forces shall respect the air space over the Demilitarized Zone and over the area of Korea under the military control of the opposing side, and over the waters contiguous to both.

17. Responsibility for compliance with and enforcement of the terms and provisions of this Armistice Agreement is that of the signatories hereto and their successors in command. The Commanders of the opposing sides shall establish within their respective commands all measures and procedures necessary to insure complete compliance with all of the provisions hereof by all elements of their commands. They shall actively cooperate with one another and with the Military Armistice Commission and the Neutral Nations Supervisory Commission in requiring observance of both the letter and the spirit of all of the provisions of this Armistice Agreement.

18. The costs of the operations of the Military Armistice Commission and of the Neutral Nations Supervisory Commission and of their Teams shall be shared equally by the two opposing sides.

B. Military Armistice Commission

1. Composition

19. A Military Armistice Commission is hereby established.

20. The Military Armistice Commission shall be composed of ten (10) senior officers, five (5) of whom shall be appointed by the Commander-in-Chief, United Nations Command, and five (5) of whom shall be appointed jointly by the Supreme Commander of the Korean People’s Army and the Commander of the Chinese People’s Volunteers. Of the ten members, three (3) from each side shall be of general or flag rank. The two (2) remaining members on each side may be major generals, brigadier generals, colonels, or their equivalents.

21. Members of the Military Armistice Commission shall be permitted to use staff assistants as required.

22. The Military Armistice Commission shall be provided with the necessary administrative personnel to establish a Secretariat charged with assisting the Commission by performing record-keeping, secretarial, interpreting, and such other functions as the Commission may assign to it. Each side shall appoint to the Secretariat a Secretary and an Assistant Secretary and such clerical and specialized personnel as required by the Secretariat. Records shall be kept in English, Korean, and Chinese, all of which shall be equally authentic.

23. a. The Military Armistice Commission shall be initially provided with and assisted by ten (10) Joint
Observer Teams, which number may be reduced by agreement of the senior members of both sides on the Military Armistice Commission.

b. Each Joint Observer Team shall be composed of not less than four (4) nor more than six (6) officers of field grade, half of whom shall be appointed by the Commander-in-Chief, United Nations Command, and half of whom shall be appointed jointly by the Supreme Commander of the Korean People’s Army and the Commander of the Chinese People’s Volunteers. Additional personnel such as drivers, clerks, and interpreters shall be furnished by each side as required for the functioning of the Joint Observer Teams.

2. Functions and Authority

24. The general mission of the Military Armistice Commission shall be to supervise the implementation of this Armistice Agreement and to settle through negotiations any violations of this Armistice Agreement.

25. The Military Armistice Commission shall:

a. Locate its headquarters in the vicinity of PANMUNJOM (37°57’29” N, 126°40’00” E). The Military Armistice Commission may relocate its headquarters at another point within the Demilitarized Zone by agreement of the senior members of both sides on the Commission.

b. Operate as a joint organization without a chairman.

c. Adopt such rules of procedure as it may, from time to time, deem necessary.

d. Supervise the carrying out of the provisions of this Armistice Agreement pertaining to the Demilitarized Zone and to the Han River Estuary.

e. Direct the operations of the Joint Observer Teams.

f. Settle through negotiations any violations of this Armistice Agreement.

g. Transmit immediately to the Commanders of the opposing sides all reports of investigations of violations of this Armistice Agreement and all other reports and records of proceedings received from the Neutral Nations Supervisory Commission.

h. Give general supervision and direction to the Committee for Repatriation of Prisoners of War and the Committee for Assisting the Return of Displaced Civilians, hereinafter established.

i. Act as an intermediary in transmitting communications between the Commanders of the opposing sides; provided however, that the foregoing shall not be construed to preclude the Commanders of both sides from communicating with each other by any other means which they may desire to employ.

j. Provide credentials and distinctive insignia for its staff and its Joint Observer Teams, and a distinctive marking for all vehicles, aircraft, and vessels, used in the performance of its mission.

26. The mission of the Joint Observer Teams shall be to assist the Military Armistice Commission in supervising the carrying out of the provisions of this Armistice Agreement to the Demilitarized Zone and to the Han River Estuary.

27. The Military Armistice Commission, or the senior member of either side thereof, is authorized to dispatch Joint Observer Teams to investigate violations of this Armistice Agreement reported to have occurred in the Demilitarized Zone or in the Han River Estuary; provided, however, that not more than one half of the Joint Observer Teams which have not been dispatched by the Military Armistice Commission may be dispatched at any one time by the senior member of either side on the Commission.
28. The Military Armistice Commission, or the senior member of either side thereof, is authorized to request the Neutral Nations Supervisory Commission to conduct special observations and inspections at places outside the Demilitarized Zone where violations of this Armistice Agreement have been reported to have occurred.

29. When the Military Armistice Commission determines that a violation of this Armistice Agreement has occurred, it shall immediately report such violation to the Commanders of the opposing sides.

30. When the Military Armistice Commission determines that a violation of this Armistice Agreement has been corrected to its satisfaction, it shall so report to the Commanders of the opposing sides.

3. General

31. The Military Armistice Commission shall meet daily. Recesses of not to exceed seven (7) days may be agreed upon by the senior members of both sides; provided, that such recesses may be terminated on twenty-four (24) hour notice by the senior member of either side.

32. Copies of the record of the proceedings of all meetings of the Military Armistice Commission shall be forwarded to the Commanders of the opposing sides as soon as possible after each meeting.

33. The Joint Observer Teams shall make periodic reports to the Military Armistice Commission as required by the Commission and, in addition, shall make such special reports as may be deemed necessary by them, or as may be required by the Commission.

34. The Military Armistice Commission shall maintain duplicate files of the reports and records of proceedings required by this Armistice Agreement. The Commission is authorized to maintain duplicate files of such other reports, records, etc., as may be necessary in the conduct of its business. Upon eventual dissolution of the Commission, one set of the above files shall be turned over to each side.

35. The Military Armistice Commission may make recommendations to the Commanders of the opposing sides with respect to amendments or additions to this Armistice Agreement. Such recommended changes should generally be those designed to insure a more effective armistice.

C. Neutral Nations Supervisory Commission

1. Composition

36. A Neutral Nations Supervisory Commission is hereby established.

37. The Neutral Nations Supervisory Commission shall be composed of four (4) senior officers, two (2) of whom shall be appointed by neutral nations nominated by the Commander-in-Chief, United Nations Command, namely, SWEDEN and SWITZERLAND, and two (2) of whom shall be appointed by neutral nations nominated jointly by the Supreme Commander of the Korean People’s Army and the Commander of the Chinese People’s Volunteers, namely, POLAND and CZECHOSLOVAKIA. The term “neutral nations” as herein used is defined as those nations whose combatant forces have not participated in the hostilities in Korea. Members appointed to the Commission may be from the armed forces of the appointing nations. Each member shall designate an alternate member to attend those meetings which for any reason the principal member is unable to attend. Such alternate members shall be of the same nationality as their principals. The Neutral Nations Supervisory Commission may take action whenever the number of members present from the neutral nations nominated by one side is equal to the number of members present from the neutral nations nominated by the other
38. Members of the Neutral Nations Supervisory Commission shall be permitted to use staff assistants furnished by the neutral nations as required. These staff assistants may be appointed as alternate members of the Commission.

39. The neutral nations shall be requested to furnish the Neutral Nations Supervisory Commission with the necessary administrative personnel to establish a Secretariat charged with assisting the Commission by performing necessary record-keeping, secretarial, interpreting, and such other functions as the Commission may assign to it.

40. a. The Neutral Nations Supervisory Commission shall be initially provided with, and assisted by, twenty (20) Neutral Nations Inspection Teams, which number may be reduced by agreement of the senior members of both sides on the Military Armistice Commission. The Neutral Nations Inspection Teams shall be responsible to, shall report to, and shall be subject to the direction of, the Neutral Nations Supervisory Commission only.

b. Each Neutral Nations Inspection Team shall be composed of not less than four (4) officers, preferably of field grade, half of whom shall be from the neutral nations nominated by the Commander-in-Chief, United Nations Command, and half of whom shall be from the neutral nations nominated jointly by the Supreme Commander of the Korean People’s Army and the Commander of the Chinese People’s Volunteers. Members appointed to the Neutral Nations Inspection Teams may be from the armed forces of the appointing nations. In order to facilitate the functioning of the Teams, sub-teams composed of not less than two (2) members, one of whom shall be from a neutral nation nominated by the Commander-in-Chief, United Nations Command, and one of whom shall be from a neutral nation nominated by the Supreme Commander of the Korean People’s Army and the Commander of the Chinese People’s Volunteers, may be formed as circumstances require. Additional personnel such as drivers, clerks, interpreters, and communications personnel, and such equipment as may be required by the Teams to perform their missions, shall be furnished by the Commander of each side, as required, in the Demilitarized Zone and in the territory under his military control. The Neutral Nations Supervisory Commission may provide itself and the Neutral Nations Inspection Teams with such of the above personnel and equipment of its own as it may desire; provided, however, that such personnel shall be personnel of the same neutral nations of which the Neutral Nations Supervisory Commission is composed.

2. Functions and Authority

41. The mission of the Neutral Nations Supervisory Commission shall be to carry out the functions of supervision, observation, inspection, and investigation, as stipulated in Subparagraphs 13c and 13d and Paragraph 28 hereof, and to report the results of such supervision, observation, inspection, and investigation to the Military Armistice Commission.

42. The Neutral Nations Supervisory Commission shall:

a. Locate its headquarters in proximity to the headquarters of the Military Armistice Commission.

b. Adopt such rules of procedure as it may, from time to time, deem necessary.

c. Conduct, through its members and its Neutral Nations Inspection Teams, the supervision and inspection provided for in Sub-paragraphs 13c and 13d of this Armistice Agreement at the ports of entry
enumerated in Paragraph 43 hereof, and the special observations and inspections provided for in Paragraph 28 hereof at those places where violations of this Armistice Agreement have been reported to have occurred. The inspection of combat aircraft, armored vehicles, weapons, and ammunition by the Neutral Nations Inspection Teams shall be such as to enable them to properly insure that reinforcing combat aircraft, armored vehicles, weapons, and ammunition are not being introduced into Korea; but this shall not be construed as authorizing inspections or examinations of any secret designs or characteristics of any combat aircraft, armored vehicle, weapon, or ammunition.

d. Direct and supervise the operations of the Neutral Nations Inspection Teams.

e. Station five (5) Neutral Nations Inspection Teams at the ports of entry enumerated in Paragraph 43 hereof located in the territory under the military control of the Commander-in-Chief, United Nations Command; and five (5) Neutral Nations Inspection Teams at the ports of entry enumerated in Paragraph 43 hereof located in the territory under the military control of the Supreme Commander of the Korean People’s Army and the Commander of the Chinese Peoples Volunteers; and establish initially ten (10) mobile neutral Nations Inspection Teams in reserve, stationed in the general vicinity of the headquarters of the Neutral Nations Supervisory Commission, which number may be reduced by agreement of the senior members of both sides on the Military Armistice Commission. Not more than half of the mobile Neutral Nations Inspection Teams shall be dispatched at any one time in accordance with requests of the senior member of either side on the Military Armistice Commission.

f. Subject to the provisions of the preceding Sub-paragraph, conduct without delay investigations of reported violations of this Armistice Agreement, including such investigations of reported violations of this Armistice Agreement as may be requested by the Military Armistice Commission or by the senior member of either side on the Commission.

g. Provide credentials and distinctive insignia for its staff and its Neutral Nations Inspection Teams, and a distinctive marking for all vehicles, aircraft, and vessels, used in the performance of its mission.

43. Neutral Nations Inspection Teams shall be stationed at the following ports of entry:

Territory under the military control of the United Nations command

INCHON (37°28'N, 126°38'E)
TAEGU (35°52'N, 128°36'E)
PUSAN (35°06'N, 129°02'E)
KANGNUNG (37°45'N, 128°54'E)
KUNSAN (35° 59'N, 126°43'E)

Territory under the military control of the Korean People’s Army and the Chinese People’s Volunteers

SINUIJU (40°N, 124°24'E)
CHONGJIN (41°46'N, 129°49'E)
HUNGNAM (39°50'N, 127°37'E)
MANPO (41°09'N, 126°18'E)
SINANJU (39°36'N, 125°36'E)

These Neutral Nations Inspection Teams shall be accorded full convenience of movement within the
areas and over the routes of communication set forth on the attached map.

3. General

44. The Neutral Nations Supervisory Commission shall meet daily. Recesses of not to exceed seven (7) days may be agreed upon by the members of the Neutral Nations Supervisory Commission; provided, that such recesses may be terminated on twenty-four (24) hour notice by any member.

45. Copies of the record of the proceedings of all meetings of the Neutral Nations Supervisory Commission shall be forwarded to the Military Armistice Commission as soon as possible after each meeting. Records shall be kept in English, Korean, and Chinese.

46. The Neutral Nations Inspection Teams shall make periodic reports concerning the results of their supervision, observations, inspections, and investigations to the Neutral Nations Supervisory Commission as required by the Commission and, in addition, shall make such special reports as may be deemed necessary by them, or may be required by the Commission. Reports shall be submitted by a Team as a whole, but may also be submitted by one or more individual members thereof; provided, that the reports submitted by one or more individual members thereof shall be considered as informational only.

47. Copies of the reports made by the Neutral Nations Inspection Teams shall be forwarded to the Military Armistice Commission by the Neutral Nations Supervisory Commission without delay and in the language in which received. They shall not be delayed by the process of translation or evaluation. The Neutral Nations Supervisory Commission shall evaluate such reports at the earliest practicable time and shall forward their findings to the Military Armistice Commission as a matter of priority. The Military Armistice Commission shall not take final action with regard to any such report until the evaluation thereof has been received from the Neutral Nations Supervisory Commission. Members of the Neutral Nations Supervisory Commission and of its Teams shall be subject to appearance before the Military Armistice Commission, at the request of the senior member of either side on the Military Armistice Commission, for clarification of any report submitted.

48. The Neutral Nations Supervisory Commission shall maintain duplicate files of the reports and records of proceedings required by this Armistice Agreement. The Commission is authorized to maintain duplicate files of such other reports, records, etc., as may be necessary in the conduct of its business. Upon eventual dissolution of the Commission, one set of the above files shall be turned over to each side.

49. The Neutral Supervisory Commission may make recommendations to the Military Armistice Commission with respect to amendments or additions to this Armistice Agreement. Such recommended changes should generally be those designed to insure a more effective armistice.

50. The Neutral Nations Supervisory Commission, or any member thereof, shall be authorized to communicate with any member of the Military Armistice Commission.

Article III. ARRANGEMENTS RELATING TO PRISONERS OF WAR

51. The release and repatriation of all prisoners of war held in the custody of each side at the time this Armistice Agreement becomes effective shall be effected in conformity with the following provisions agreed upon by both sides prior to the signing of this Armistice Agreement.

a. Within sixty (60) days after this Armistice Agreement becomes effective, each side shall, without offering any hindrance, directly repatriate and hand over in groups all those prisoners of war in its custody who
insist on repatriation to the side to which they belonged at the time of capture. Repatriation shall be accomplished in accordance with the related provisions of this Article. In order to expedite the repatriation process of such personnel, each side shall, prior to the signing of the Armistice Agreement, exchange the total numbers, by nationalities, of personnel to be directly repatriated. Each group of prisoners of war delivered to the other side shall be accompanied by rosters, prepared by nationality, to include name, rank (if any) and internment or military serial number.

b. Each side shall release all those remaining prisoners of war, who are not directly repatriated, from its military control and from its custody and hand them over to the Neutral Nations Repatriation Commission for disposition in accordance with the provisions in the Annex hereto: “Terms of Reference for Neutral Nations Repatriation Commission.”

c. So that there may be no misunderstanding owing to the equal use of three languages, the act of delivery of a prisoner of war by one side to the other side shall, for the purposes of this Armistice Agreement, be called “repatriation” in English, “song hwan” in Korean, and “ch’ien fan” in Chinese, notwithstanding the nationality or place of residence of such prisoner of war.

52. Each side insures that it will not employ in acts of war in the Korean conflict any prisoner of war released and repatriated incident to the coming into effect of this Armistice Agreement.

53. All the sick and injured prisoners of war who insist upon repatriation shall be repatriated with priority. Insofar as possible, there shall be captured medical personnel repatriated concurrently with the sick and injured prisoners of war, so as to provide medical care and attendance en route.

54. The repatriation of all the prisoners of war required by Sub-paragraph 51a hereof shall be completed within a time limit of sixty (60) days after this Armistice Agreement becomes effective. Within this time limit each side undertakes to complete the repatriation of the above-mentioned prisoners of war in its custody at the earliest practicable time.

55. PANMUNJOM is designated as the place where prisoners of war will be delivered and received by both sides. Additional place(s) of delivery and reception of prisoners of war in the Demilitarized Zone may be designated, if necessary, by the Committee for Repatriation of Prisoners of War.

56. a. A Committee for Repatriation of Prisoners of War is hereby established. It shall be composed of six (6) officers of field grade, three (3) of whom shall be appointed by the Commander-in-Chief, United Nations Command, and three (3) of whom shall be appointed jointly by the Supreme Commander of the Korean People’s Army and the Commander of the Chinese People’s Volunteers. This Committee shall, under the general supervision and direction of the Military Armistice Commission, be responsible for coordinating the specific plans of both sides for the repatriation of prisoners of war and for supervising the execution by both sides of all of the provisions of this Armistice Agreement relating to the repatriation of prisoners of war. It shall be the duty of this Committee to coordinate the timing of the arrival of prisoners of war at the place(s) of delivery and reception of prisoners of war from the prisoner of war camps of both sides; to make, when necessary, such special arrangements as may be required with regard to the transportation and welfare of sick and injured prisoners of war; to coordinate the work of the joint Red Cross teams, established in Paragraph 57 hereof, in assisting in the repatriation of prisoners of war; to supervise the implementation of the arrangements for the actual repatriation of
prisoners of war stipulated in Paragraphs 53 and 54 hereof; to select, when necessary, additional place(s) of delivery and reception of prisoners of war, and to carry out such other related functions as are required for the repatriation of prisoners of war.

b. When unable to reach agreement on any matter relating to its responsibilities, the Committee for Repatriation of Prisoners of War shall immediately refer such matter to the Military Armistice Commission for decision. The Commission for Repatriation of Prisoners of War shall maintain its headquarters in proximity to the headquarters of the Military Armistice Commission.

c. The Committee for Repatriation of Prisoners of War shall be dissolved by the Military Armistice Commission upon completion of the program of repatriation of prisoners of war.

57. a. Immediately after this Armistice Agreement becomes effective, joint Red Cross teams composed of representatives of the national Red Cross Societies of the countries contributing forces to the United Nations Command on the one hand, and representatives of the Red Cross Society of the Democratic People’s Republic of Korea and representatives of the Red Cross Society of the People’s Republic of China on the other hand, shall be established. The joint Red Cross teams shall assist in the execution by both sides of those provisions of this Armistice Agreement relating to the repatriation of all the prisoners of war specified in Sub-paragraph 51a hereof, who insist upon repatriation, by the performance of such humanitarian services as are necessary and desirable for the welfare of the prisoners of war. To accomplish this task, the joint Red Cross teams shall provide assistance in the delivering and receiving of prisoners of war by both sides at the place(s) of delivery and reception of prisoners of war, and shall visit the prisoner of war camps of both sides to comfort the prisoners of war and to bring in and distribute gift articles for the comfort and welfare of the prisoners of war. The joint Red Cross teams may provide services to prisoners of war while en route from prisoner of war camps to the place(s) of delivery and reception of prisoners of war.

b. The Joint Red Cross teams shall be organized as set forth below:

(1) One team shall be composed of twenty (20) members, namely, ten (10) representatives from the national Red Cross Societies of each side, to assist in the delivering and receiving of prisoners of war by both sides at the place(s) of delivery and reception of prisoners of war. The chairmanship of this team shall alternate daily between representatives from the Red Cross Societies of the two sides. The work and services of this team shall be coordinated by the Committee for Repatriation of Prisoners of War.

(2) One team shall be composed of sixty (60) members, namely, thirty (30) representatives from the national Red Cross Societies of each side, to visit the prisoners of war camps under the administration of the Korean People’s Army and the Chinese People’s Volunteers. This team may provide services to prisoners of war while en route from the prisoner of war camps to the place(s) of delivery and reception of prisoners of war. A representative of the Red Cross Society of the Democratic People’s Republic of Korea or of the Red Cross Society of the People’s Republic of China shall serve as chairman of this team.

(3) One team shall be composed of sixty (60) members, namely, thirty (30) representatives from the national Red Cross Societies of each side, to visit the prisoner of war camps under the administration of the United Nations Command. This team may provide services to prisoners of war while en route from the prisoner of war camps to the place(s) of delivery and reception of prisoners of war. A representative of a Red Cross Society
of a nation contributing forces to the United Nations Command shall serve as chairman of this team.

(4) In order to facilitate the functioning of each joint Red Cross team, sub-teams composed of not less than two (2) members from the team, with an equal number of representatives from each side, may be formed as circumstances require.

(5) Additional personnel such as drivers, clerks, and interpreters, and such equipment as may be required by the joint Red Cross teams to perform their missions, shall be furnished by the Commander of each side to the team operating in the territory under his military control.

(6) Whenever jointly agreed upon by the representatives of both sides or any joint Red Cross team, the size of such team may be increased or decreased, subject to confirmation by the Committee for Repatriation of Prisoners of War.

c. The Commander of each side shall cooperate fully with the joint Red Cross teams in the performance of their functions, and undertakes to insure the security of the personnel of the joint Red Cross team in the area under his military control. The Commander of each side shall provide such logistic, administrative, and communications facilities as may be required by the team operating in the territory under his military control.

d. The joint Red Cross teams shall be dissolved upon completion of the program of repatriation of all the prisoners of war specified in Sub-paragraph 51a hereof, who insist upon repatriation.

58. a. The Commander of each side shall furnish to the Commander of the other side as soon as practicable, but not later than ten (10) days after this Armistice Agreement becomes effective, the following information concerning prisoners of war:

(1) Complete data pertaining to the prisoners of war who escaped since the effective date of the data last exchanged.

(2) Insofar as practicable, information regarding name, nationality, rank, and other identification data, date and cause of death, and place of burial, of those prisoners of war who died while in his custody.

b. If any prisoners of war escape or die after the effective date of the supplementary information specified above, the detaining side shall furnish to the other side, through the Committee for Repatriation of Prisoners of War, the data pertaining thereto in accordance with the provisions of Sub-paragraph 58a hereof. Such data shall be furnished at ten-day intervals until the completion of the program of delivery and reception of prisoners of war.

c. Any escaped prisoner of war who returns to the custody of the detaining side after the completion of the program of delivery and reception of prisoners of war shall be delivered to the Military Armistice Commission for disposition.

59. a. All civilians who, at the time this Armistice Agreement becomes effective, are in territory under the military control of the Commander-in-Chief, United Nations Command, and who, on 24 June 1950, resided north of the Military Demarcation Line established in this Armistice Agreement shall, if they desire to return home, be permitted and assisted by the Commander-in-Chief, United Nations Command, to return to the area north of the Military Demarcation Line; and all civilians, who, at the time this Armistice Agreement becomes effective, are in territory under the military control of the Supreme Commander of the Korean People’s Army and the Commander of the Chinese People’s Volunteers, and who, on 24 June 1950, resided south of the Military
Demarcation Line established in this Armistice Agreement shall, if they desire to return home, be permitted and assisted by the Supreme Commander of the Korean People’s Army and the Commander of the Chinese People’s Volunteers to return to the area south of the Military Demarcation Line. The Commander of each side shall be responsible for publicizing widely throughout territory under his military control the contents of the provisions of this Sub-paragraph, and for calling upon the appropriate civil authorities to give necessary guidance and assistance to all such civilians who desire to return home.

b. All civilians of foreign nationality who, at the time this Armistice Agreement becomes effective, are in territory under the military control of the Supreme Commander of the Korean People’s Army and the Commander of the Chinese People’s Volunteers shall, if they desire to proceed to territory under the military control of the Commander-in-Chief, United Nations Command, be permitted and assisted to do so; all civilians of foreign nationality who, at the time this Armistice Agreement becomes effective, are in territory under the military control of the Commander-in-Chief, United Nations Command, shall, if they desire to proceed to territory under the military control of the Supreme Commander of the Korean People’s Army and the Commander of the Chinese People’s Volunteers, be permitted and assisted to do so. The Commander of each side shall be responsible for publicizing widely throughout the territory under his military control the contents of the provisions of this Sub-paragraph, and for calling upon the appropriate civil authorities to give necessary guidance and assistance to all such civilians of foreign nationality who desire to proceed to territory under the military control of the Commander of the other side.

c. Measures to assist in the return of civilians provided for in Subparagraph 59a hereof and the movement of civilians provided for in Subparagraph 59b hereof shall be commenced by both sides as soon as possible after this Armistice Agreement becomes effective.

d. (1) A Committee for Assisting the Return of Displaced Civilians is hereby established. It shall be composed of four (4) officers of field grade, two (2) of whom shall be appointed by the Commander-in-Chief, United Nations Command, and two (2) of whom shall be appointed jointly by the Supreme Commander of the Korean People’s Army and the Commander of the Chinese People’s Volunteers. This Committee shall, under the general supervision and direction of the Military Armistice Commission, be responsible for coordinating the specific plans of both sides for assistance to the return of the above-mentioned civilians, and for supervising the execution of both sides of all of the provisions of this Armistice Agreement relating to the return of the above-mentioned civilians. It shall be the duty of this Committee to make necessary arrangements, including those of transportation, for expediting and coordinating the movement of the above-mentioned civilians; to select the crossing point(s) through which the above-mentioned civilians will cross the Military Demarcation Line; to arrange for security at the crossing points; and to carry out such other functions as are required to accomplish the return of the above-mentioned civilians.

(2) When unable to reach agreement on any matter relating to its responsibilities, the Committee for Assisting the Return of Displaced Civilians shall immediately refer such matter to the Military Armistice Commission for decision. The Committee for Assisting the Return of Displaced Civilians shall maintain its headquarters in proximity to the headquarters of the Military Armistice Commission.

(3) The Committee for Assisting the Return of Displaced Civilians shall be dissolved by the Military
Armistice Commission upon fulfillment of its mission.

Article IV. RECOMMENDATION TO THE GOVERNMENTS CONCERNED ON BOTH SIDES

60. In order to insure the peaceful settlement of the Korean question, the military Commanders of both sides hereby recommend to the governments of the countries concerned on both sides that, within three (3) months after the Armistice Agreement is signed and becomes effective, a political conference of a higher level of both sides be held by representatives appointed respectively to settle through negotiation the questions of the withdrawal of all foreign forces from Korea, the peaceful settlement of the Korean question, etc.

Article V. MISCELLANEOUS

61. Amendments and additions to this Armistice Agreement must be mutually agreed to by the Commanders of the opposing sides.

62. The Articles and Paragraphs of this Armistice Agreement shall remain in effect until expressly superseded either by mutually acceptable amendments and additions or by provision in an appropriate agreement for a peaceful settlement at a political level between both sides.

63. All of the provisions of this Armistice Agreement, other than Paragraph 12, shall become effective at 2200 hours on 27 July 1953.

Done at Panmunjom, Korea, at 1000 hours on the 27th day of July 1953, in English, Korean, and Chinese, all texts being equally authentic.

ANNEX

TERMS OF REFERENCE FOR NEUTRAL NATIONS REPATRIATION COMMISSION

(See Sub-paragraph 51b)

1. In order to ensure that all prisoners of war have the opportunity to exercise their right to be repatriated following an armistice, Sweden, Switzerland, Poland, Czechoslovakia and India shall each be requested by both
sides to appoint a member to a Neutral Nations Repatriation Commission which shall be established to take custody in Korea of those prisoners of war who, while in the custody of the detaining powers, have not exercised their right to be repatriated. The Neutral Nations Repatriation Commission shall establish its headquarters within the Demilitarized Zone in the vicinity of Panmunjom, and shall station subordinate bodies of the same composition as the Neutral Nations Repatriation Commission at those locations at which the Repatriation Commission assumes custody of prisoners of war. Representatives of both sides shall be permitted to observe the operations of the Repatriation Commission and its subordinate bodies to include explanations and interviews.

2. Sufficient armed forces and any other operating personnel required to assist the Neutral Nations Repatriation Commission in carrying out its functions and responsibilities shall be provided exclusively by India, whose representative shall be the umpire in accordance with the provisions of Article 132 of the Geneva Convention and shall also be chairman and executive agent of the Neutral Nations Repatriation Commission. Representatives from each of the other four powers shall be allowed staff assistants in equal number not to exceed fifty (50) each. When any of the representatives of the neutral nations is absent for some reason, that representative shall designate an alternate representative of his own nationality to exercise his functions and authority. The arms of all personnel provided for in this Paragraph shall be limited to military police type small arms.

3. No force or threat of force shall be used against the prisoners of war specified in Paragraph 1 above to prevent or effect their repatriation, and no violence to their persons or affront to their dignity or self-respect shall be permitted in any manner for any purpose whatsoever (but see Paragraph 7 below). This duty is enjoined on and entrusted to the Neutral Nations Repatriation Commission. This Commission shall ensure that prisoners of war shall at all times be treated humanely in accordance with the specific provisions of the Geneva Convention, and with the general spirit of that Convention.

II. CUSTODY OF PRISONERS OF WAR

4. All prisoners of war who have not exercised their right of repatriation following the effective date of the Armistice Agreement shall be released from the military control and from the custody of the detaining side as soon as practicable, and, in all cases, within sixty (60) days subsequent to the effective date of the Armistice Agreement to the Neutral Nations Repatriation Commission at locations in Korea to be designated by the detaining side.

5. At the time the Neutral Nations Repatriation Commission assumes control of the prisoner of war installations, the military forces of the detaining side shall be withdrawn therefrom, so that the locations specified in the preceding Paragraph shall be taken over completely by the armed forces of India.

6. Notwithstanding the provisions of Paragraph 5 above, the detaining side shall have the responsibility for maintaining and ensuring security and order in the areas around the locations where the prisoners of war are in custody and for preventing and restraining any armed forces (including irregular armed forces) in the area under its control from any acts of disturbance and intrusion against the locations where the prisoners of war are in custody.

7. Notwithstanding the provisions of Paragraph 3 above, nothing in this agreement shall be construed as derogating from the authority of the Neutral Nations Repatriation Commission to exercise its legitimate functions
and responsibilities for the control of the prisoners of war under its temporary jurisdiction.

III. EXPLANATION

8. The Neutral Nations Repatriation Commission, after having received and taken into custody all those prisoners of war who have not exercised their right to be repatriated, shall immediately make arrangements so that within ninety (90) days after the Neutral Nations Repatriation Commission takes over the custody, the nations to which the prisoners of war belong shall have freedom and facilities to send representatives to locations where such prisoners of war are in custody to explain to all the prisoners of war depending upon these nations their rights and to inform them of any matters relating to their return to their homelands, particularly of their full freedom to return home to lead a peaceful life, under the following provisions:

a. The number of such explaining representatives shall not exceed seven (7) per thousand prisoners of war held in custody by the Neutral Nations Repatriation Commission; and the minimum authorized shall not be less than a total of five (5);

b. The hours during which the explaining representatives shall have access to the prisoners shall be as determined by the Neutral Repatriation Commission, and generally in accord with Article 53 of the Geneva Convention Relative to the Treatment of Prisoners of War;

c. All explanations and interviews shall be conducted in the presence of a representative of each member nation of the Neutral Nations Repatriation Commission and a representative from the detaining side;

d. Additional provisions governing the explanation work shall be prescribed by the Neutral Repatriation Commission, and will be designed to employ the principles enumerated in Paragraph 3 above and in this Paragraph;

e. The explaining representatives, while engaging in their work, shall be allowed to bring with them necessary facilities and personnel for wireless communications. The number of communications personnel shall be limited to one team per location at which explaining representatives are in residence, except in the event all prisoners of war are concentrated in one location, in which case, two (2) teams shall be permitted. Each team shall consist of not more than six (6) communications personnel.

9. Prisoners of war in its custody shall have freedom and facilities to make representations and communications to the Neutral Nations Repatriation Commission and to representatives and subordinate bodies of the Neutral Nations Repatriation Commission and to inform them of their desires on any matter concerning the prisoners of war themselves, in accordance with arrangements made for the purpose by the Neutral Nations Repatriation Commission.

IV. DISPOSITION OF PRISONERS OF WAR

10. Any prisoner of war who, while in the custody of the Neutral Nations Repatriation Commission, decides to exercise the right of repatriation, shall make an application requesting repatriation to a body consisting of a representative of each member nation of the Neutral Nations Repatriation Commission. Once such an application is made, it shall be considered immediately by majority vote the validity of such application. Once such an application is made to and validated by the Commission or one of its subordinate bodies, the prisoner of war concerned shall immediately be transferred to and accommodated in the tents set up for those who are ready to be repatriated. Thereafter, he shall, while still in the custody of the Neutral Nations Repatriation Commission,
be delivered forthwith to the prisoner of war exchange point at Panmunjom for repatriation under the procedure prescribed in the Armistice Agreement.

11. At the expiration of ninety (90) days after the transfer of custody of the prisoners of war to the Neutral Nations Repatriation Commission, access of representatives to captured personnel as provided for in Paragraph 8 above, shall terminate, and the question of disposition of the prisoners of war who have not exercised their right to be repatriated shall be submitted to the Political Conference recommended to be convened in Paragraph 60, Draft Armistic Agreement, which shall endeavor to settle this question within thirty (30) days, during which period the Neutral Nations Repatriation Commission shall continue to retain custody of those prisoners of war. The Neutral Nations Repatriation Commission shall declare the relief from the prisoners of war status to civilian status of any prisoners of war who have not exercised their right to be repatriated and for whom no other disposition has been agreed to by the Political Conference within one hundred and twenty (120) days after the Neutral Nations Repatriation Commission has assumed their custody. Thereafter, according to the application of each individual, and those who choose to go to neutral nations shall be assisted by the Neutral Nations Repatriation Commission and the Red Cross Society of India. This operation shall be completed within thirty (30) days, and upon its completion, the Neutral Nations Repatriation Commission shall immediately cease its functions and declare its dissolution. After the dissolution of the Neutral Nations Repatriation Commission, whenever and wherever any of those above-mentioned civilians who have been relieved from the prisoner of war status desire to return to their fatherlands, the authorities of the localities where they are shall be responsible for assisting them in returning to their fatherlands.

V. RED CROSS VISITATION

12. Essential Red Cross service for prisoners of war in custody of the Neutral Nations Repatriation Commission shall be provided by India in accordance with regulations issued by the Neutral Nations Repatriation Commission.

VI. PRESS COVERAGE

13. The Neutral Nations Repatriation Commission shall insure freedom of the press and other news media in observing the entire operation as enumerated herein, in accordance with procedures to be established by the Neutral Nations Repatriation Commission.

VII. LOGISTICAL SUPPORT FOR PRISONERS OF WAR

14. Each side shall provide logistical support for the prisoners of war in the area under its military control, delivering required support to the Neutral Nations Repatriation Commission at an agreed delivery point in the vicinity of each prisoner of war installation.

15. The cost of repatriating prisoners to the exchange point at Panmunjom shall be borne by the detaining side and the cost from the exchange point by the side on which said prisoners depend in accordance with Article 118 of the Geneva Convention.

16. The Red Cross Society of India shall be responsible for providing such general service personnel in the prisoner of war installations as required by the Neutral Nations Repatriation Commission.

17. The Neutral Nations Repatriation Commission shall provide medical support for the prisoners of war as may be practicable. The detaining side shall provide medical support as practicable upon the request of the
Neutral Nations Repatriation Commission and specifically for those cases requiring extensive treatment or hospitalization. The Neutral Nations Repatriation Commission shall maintain custody of prisoners of war during such hospitalization. The detaining side shall facilitate such custody. Upon completion of treatment, prisoners of war shall be returned to a prisoners of war installation as specified in Paragraph 4 above.

18. The Neutral Nations Repatriation Commission is entitled to obtain from both sides such legitimate assistance as it may require in carrying out its duties and tasks, but both sides shall not under any name and in any form interfere or exert influence.

VIII. LOGISTICAL SUPPORT FOR THE NEUTRAL NATIONS REPATRIATION COMMISSION

19. Each side shall be responsible for providing logistical support for the personnel of the Neutral Nations Repatriation Commission stationed in the area under its military control, and both sides shall contribute on an equal basis to such support within the Demilitarized Zone. The precise arrangements shall be subject to determination between the Neutral Nations Repatriation Commission and the detaining side in each case.

20. Each of the detaining sides shall be responsible for protecting the explaining representatives from the other side while in transit over lines of communication within its area, as set forth in Paragraph 23 for the Neutral Nations Repatriation Commission, to a place of residence and while in residence in the vicinity of but not within each of the locations where the prisoners of war are in custody. The Neutral Nations Repatriation Commission shall be responsible for the security of such representatives within the actual limits of the locations where the prisoners of war are in custody.

21. Each of the detaining sides shall provide transportation, housing, communication, and other agreed logistical support to the explaining representatives of the other side while they are in the area under its military control. Such services shall be provided on a reimbursable basis.

IX. PUBLICATION

22. After the Armistice Agreement becomes effective, the terms of this agreement shall be made known to all prisoners of war who, while in the custody of the detaining side, have not exercised their right to be repatriated.

X. MOVEMENT

23. The movement of the personnel of the Neutral Nations Repatriation Commission and repatriated prisoners of war shall be over lines of communication, as determined by the command(s) of the opposing side and the Neutral Nations Repatriation Commission. A map showing these lines of communication shall be furnished the command of the opposing side and the Neutral Nations Repatriation Commission. Movement of such personnel, except within locations as designated in Paragraph 4 above, shall be under the control of and escorted by, personnel of the side in whose area the travel is being undertaken; however, such movement shall not be subject to any obstruction and coercion.

XI. PROCEDURAL MATTERS

24. The interpretation of this agreement shall rest with the Neutral Nations Repatriation Commission. The Neutral Repatriation Commission, and/or any subordinate bodies to which functions are designed or assigned by the Neutral Nations Repatriation Commission, shall operate on the basis of majority vote.

25. The Neutral Nations Repatriation Commission shall submit a weekly report to the opposing
Commanders on the status of prisoners of war in its custody, indicating the numbers repatriated and remaining at the end of each week.

26. When this agreement has been acceded to by both sides and by the five powers named herein, it shall become effective upon the date the Armistice becomes effective.

Done at Panmunjom, Korea, at 1400 hours on the 8th day of June 1953, in English, Korean, and Chinese, all texts being equally authentic.

(12/28/50) Hungnam is destroyed by a Navy demolition team as UN forces evacuate the port city.

(9/23/51) USS Toledo (CA-133) fires 5 inch salvo at enemy installations in Wonsan, Korea.

(9/14/50) USS Rowan (DD-782) escorts USS Mt. McKinley (AGC-7) off the Korean coast en route to Inchon.

(3/18/52) The heavy cruiser USS St. Paul, (right) goes alongside the battleship Wisconsin, (center) to transfer wounded South Korean Marines while destroyer Buck, (left) gets her mail.
(8/7/51) The destroyer *Mason* is dwarfed by the towering, mist covered mountains of North Korea. *Mason* was teamed with the battlewagon *New Jersey* on a special mission of bombarding Communist troops lodged in the ridges pictured in the foreground when this photo was taken.

(7/1/51) On 29 June 1950, cruiser *Juneau* (CLAA-119) is the first Navy ship to fire her guns at the North Korean invaders.

USS *Juneau* (CLAA-119) at anchor in Kagoshima Wan on 25 June 1950, first day of the war.

Destroyer *Lyman K. Swenson* (DD-729) at sea in 1953.
(1/10/53) Providing anti-aircraft and anti-submarine protection for ships of Task Force 77, destroyer *Collet* cuts through the Sea of Japan off the coast of Korea.

Destroyer *Collet* (DD-730) in the 1950s.

Destroyer *Mansfield* (DD-728) in 1953.

(12/14/50) A temporary wooden bow is attached to USS *Mansfield* after losing her bow to a mine in Korean waters.
The destroyer *Dehaven* (DD-727), decks awash in a rough sea, refuels from an aircraft carrier off the coast of North Korea, typifying Navy “on the spot” replenishment.

(10/12/51) The veteran heavy cruiser *Toledo* takes its battle station off the East coast of Korea as part of Task Force 77.

(12/10/52) USS *Rochester* (CA-124) in a Japanese port preparing for her third cruise in Korean Waters. The heavy cruiser compiled an impressive record in two previous tours in the Far East, having aided in the amphibious landing at Inchon and the evacuation of Hungnam.

(1/24/51) Officers and enlisted men of the cruiser *Rochester* line the decks of the ship on arrival at Pearl Harbor to watch hula dancers performing on the dock.
Heavy cruiser *Rochester* (CA-124) in 1952.

(10/21/50) USS *Helena* (CA-75) fires a broadside salvo at Chong Jin, Korea, 39 miles from the Soviet border.

Heavy cruiser *Helena* (CA-75) in the 1950s.

A cruiser and destroyer take a break from combat operations to refuel from a U.S. Navy oiler in 1951.

(12/23/50) The heavy cruiser *Saint Paul* fires a salvo turning night into day.

In this photograph, six vessels moored alongside the repair ship *Jason* represent four nations in the UN naval forces operating off Korea. The vessels are: USS *Hamner*, USS *Gloucester*, Colombian ship ARCC *Aimirante Padilla*, Australian HMAS *Murchison*, South Korean ROK *Taedong*, and USS *Dextrous*.

(6/18/52) The battleship *Iowa* (center) takes fueling lines from a Navy tanker (top) during refueling operations off the coast of Korea. A destroyer (bottom) takes fuel from the *Iowa*.

(12/13/52) USS *Waxbill* (AMS-39) under fire by enemy shore batteries while laying a smoke screen in Wonsan Harbor, Korea.
(12/28/50) USS Begor (APD-127) lies at anchor ready to load the last UN landing craft as a huge explosion rips harbor installations at Hungnam.

(5/19/51) British cruiser Kenya replenishes its depleted fuel and ammunition stores in a Far East port after completing an extended cruise in Korean waters. The cruiser is a unit of the United Nations Blockading and Escort Force commanded by RADM Allan E. Smith, USN.

(1/23/53) The gun captain of this ice-covered mount inspects the de-icing job before him aboard the carrier Oriskany (CVA-34) in Korean waters.

(4/2/52) The battleship Wisconsin’s 40-mm guns open fire on a Communist railroad train as the Seventh Fleet flagship presses her attack on Red transportation facilities close to the coastline.
Battleship *New Jersey* sailors watch F4U Corsair fighters landing aboard the aircraft carrier *Boxer* (CV-21).

(5/14/52) Row after row of 16-inch powder charges on the deck of USS *Iowa* at a port in southern Japan.

(7/1/50) Crewmen stand alert at the gun turrets of the cruiser *Rochester* (CA-124).
Destroyer *Ernest G. Small* (DD-838) in 1952.

Damage control efficiency saved the destroyer *Small* when she struck a mine off the coast of Korea. The destroyer backs slowly toward Japan where temporary repairs will make the ship seaworthy for a trip to the United States.

The destroyer *Ernest G. Small* (DD-838), with its temporary bow, at dock in 1951.

(10/24/50) Two Seventh Fleet minesweepers work in a North Korean minefield at Wonsan, prior to invasion.
The crew of a disposal boat brings in a mine at Wonsan Harbor, Korea.

(8/22/50) The 8-inch guns of No. 3 turret on a U.S. Navy cruiser take a North Korean military target under fire off the east coast of Korea.

(10/16/50) An unscathed church amid the rubble of Pohang verifies the pin point accuracy of U.S. naval bombardment.

The American cruiser Toledo on the Korean East Coast during a shore bombardment.
An LSMR (Landing Ship Medium, Rocket) sends up flaming rockets.

USS Comstock (LSD-19), flagship for UN forces during landings at Chinnampo and Wonsan, Korea.

Attack cargo ship Achernar (AKA-53) at sea in 1952.

Attack Cargo ship Thuban (AKA-19) at sea in 1951.

USS *George Clymer* (PA-27) and USS *Pickaway* (PA-45) loading out at night.

Transport *George Clymer* (PA-27) at sea in 1951 as part of the vital Korean War logistics effort.

(3/26/52) USS *Fort Marion* (LSD-22).

Attack cargo ship *Union* (AKA-106) at sea in 1953.
(3/26/51) Under the Seabees’ know-how an LST does more than carry cargo. Here an LST is married to a causeway to provide a flow of needed supplies to shore.

(6/11/52) LST 799 conducts vital helicopter rescue operations in Wonsan Harbor. In one 24-hour period the ship’s helicopter picked up three Navy pilots who had been forced to ditch at Wonsan because of damage to their aircraft.

Korea-bound troops debark from an U.S. Army transport at the San Francisco Port of Embarkation, California in 1950.

(10/2/50) Transports unload supplies for U.S. troops in Korea at Pusan.
(7/2/50) Troops board ships at a Japanese port for movement to the South Korean war zone.

A ground crewman at an advanced air base assembles deadly napalm bombs for use in Korea.

(11/1/51) A tired South Korean laborer hitches a ride to the airstrip on a train load of bombs at an American airfield in Korea.

Supplies aboard USS Achernar accompany Marines as they prepare to make an invasion somewhere along the Korean coast.
(10/13/52) Between sweeping assignments, minesweeper boats and their crews rest aboard the LSD USS *Fort Marion* in Wonsan Harbor.

(4/10/51) A U.S. Navy helicopter drops supplies to the deck of USS *Fort Marion* (LSD-22) off the North Korean coast.

(9/15/50) Sunrise in Inchon Harbor, as seen from the amphibious force flagship *Mt. McKinley*.

(9/15/50) A volley of rockets supports the first wave of Marines heading for the beach.
U.S. Army DUKWs bring supplies and equipment to shore from ships at Pusan Harbor, Korea.

(10/26/50) U.S. Marines dash ashore from LCVP’s (Landing Craft, Vehicle and Personnel) during the invasion of Wonsan.

First Division Leathernecks pass destroyed and abandoned equipment during their breakout from Chosin to the sea.
(12/22/50) U.S. Marines and tanks near Kodari, Korea.

(7/19/50) Two Marines report by field telephone from a platoon command post somewhere in Korea.

U.S. Marines drive forward to battle Chinese Communist units during recent fighting in Korea as Leatherneck aviators piloting F4U-5 Corsairs provide close air support for the troops.

(1/5/51) Elements of the First Marine Division rest on a snow-covered Korean roadside after successfully overcoming an enemy ambush.
Marines advance up a steep road past knocked-out tanks of Russian design. In the foreground, South Korean civilians remove a litter carrying a dead soldier to the rear area.

As tanks are unloaded in the background, Marines relax at a railway station before moving on to the front.

(4/8/52) Marines move out on an early morning patrol.

(4/4/52) With enemy troops in the area, crawling through a barbed wire entanglement is precarious. Two Marine sniper hunters keep a watchful lookout while their buddies start into the wire.
(2/21/52) A U.S. Marine infantry mortar crew goes into action against the enemy, somewhere on the Korean central front.

(10/28/52) Armor clad Marines hug the dirt in hastily erected trenches as incoming enemy artillery and mortar shells blanket the area. Hook Ridge, since dubbed “The Hook”, is near Magae-Dong, Korea, and on the Marines’ main line of resistance northwest of Koranpo-ri on the western front. The previous day, the 1st Marines had driven 800 Chinese Communists from this strategic position through bitter fighting.

(9/20/50) Marines of the Republic of Korea arrive across the Han River on the way to Seoul.

A Weapons Company section sets up its mortar to take Communist positions under fire near the Chosin Reservoir.
Through icy mountain passes, Chinese Communist attacks, and roadblocks, the First Marine Division and fleeing natives come down from Koto-ri. The Marines brought out their wounded and nearly all of their equipment.

(9/50) Marines pushing to the summit of the Korean heights near the Naktong River are taken under fire by enemy mortars.

(4/5/52) Marines firing a mortar at enemy positions.

(10/28/52) Slung over his shoulders and neck like a vest, a Marine Ammo carrier waits impatiently as other Marines rip open ammunition boxes for front line troops.
Marines march south from Koto-ri, fighting their way through Chinese Communist hordes in the sub-zero weather of the mountains.

U.S. ground forces in Korea receive close air support in an attempt to flush enemy troops from their hillside entrenchment.

(6/13/50) Helicopters carry fully equipped Marines to a predetermined landing area, bypassing strong beach fortifications.

(9/16/50) North Korean defenders of Wolmi-do and Inchon, captured by elements of the 1st Marine Division and South Korean Marines. During the U.S.-led invasion of Inchon, repeated attacks by sea and air led to many of the garrison troops losing the will to fight and surrendering at the first opportunity.
A North Korean prisoner of war captured by U.S. Marines near Naktong River.

(4/24/52) Chinese prisoners-of-war on the island of Kojedo in Korea, site of the United Nations Prisoner-of-War Camps. They are a part of a working detail assigned the job of unloading cargo from ships.

(9/25/52) Smoke and debris from a 1000 pound bomb fills the sky near Taodoksan, North Korea, just behind enemy lines, as Corsair fighter-bombers support ground elements of the 1st Marine Division fighting in Korea.

A very important role for the helicopter, first tried in the Korean War, is evacuation of the wounded.
(2/26/52) His fellow GIs take a wounded infantryman to a waiting helicopter for transport to a Navy hospital ship offshore.

(5/16/52) Marines hurriedly load the last patient aboard an HTL-4 helicopter for evacuation to a rear area aid station.

Marines carry a wounded comrade from the front lines to a forward aid station.

(8/12/52) At Yokosuka, Japan, crew members carefully carry their shipmates who were injured during a fire aboard the carrier Boxer.
A group of women volunteers help several Korean battle casualties clean up during their short rest stop at Guam.

(10/14/52) A Navy chaplain administers communion to personnel at the UN Base Camp, Munsan-ni, Korea.

A Navy chaplain serving with the Fifth Marines, First Marine Division, conducting a service for Marine infantrymen atop “Vegas Hill.”

(12/13/50) Marines of the First Division pay their respects to fallen comrades during memorial services at the division’s cemetery at Hamhung, Korea, following the break-out from Chosin Reservoir.

(05/30/52) Marines bow their heads during Memorial ceremonies at Munsan-ni, Korea.

Korean refugees aboard the Meredith Victory as the ship lifts more than 14,000 refugees from Hungnam, Korea to freedom (part of the nearly 98,000 Koreans evacuated from the city).

(7/19/52) One of five drifting Korean fishermen rescued by the escort destroyer Taylor.
(2/18/54) In Pusan, a Korean sailor unloads one of 57 barrels of relief supplies at the Mary Knoll Clinic.

(8/22/51) Having just destroyed a vital bridge while supporting front line UN troops, a group of Skyraider dive bombers and Corsair fighter-bombers rendezvous off the Korean coast on their return flight to USS *Boxer* (CV-21).

(5/8/51) On the 40th anniversary of naval aviation, a carrier-based F4U Corsair fires an anti-tank rocket at a target in Korea.

(12/24/52) AD Skyraiders attack targets near Wonsan, Korea. Smoke and debris can be seen erupting skyward from the first plane’s bombs.
(7/15/51) A Navy F4U Corsair from USS *Boxer* levels out to observe the destruction he has wrought to a highway bridge near Wonsan.

(9/10/51) A Navy Skyraider (inverted) and a Panther in an unusual configuration.

(8/52) A Grumman F9F attached to USS *Bon Homme Richard* (CVA-31) flies over Task Force 77 engaged in three-carrier operations against North Korean targets. The carriers are USS *Bon Homme Richard*, USS *Essex* (CVA-9), and USS *Princeton* (CVA-37).

(9/18/51) An F9F Panther jet returns to the aircraft carrier *Essex* after a successful air strike against Communist bridges, troops, and supplies. Flaps and hook are lowered for the recovery.
Click here to view photo

(8/52) A Grumman F9F attached to USS *Bon Homme Richard* (CVA-31) flies over Task Force 77 engaged in operations against North Korean targets.

Click here to view photo

(5/1/51) F9F Panther jet aircraft from the carrier *Princeton* (center) wing homeward after an air strike against Communist forces attacking in Korea. Another carrier, USS *Philippine Sea* (upper right), cruises in readiness to receive planes on a similar mission.

(10/52) An F9F jet jettisons fuel over Task Force 77 in the Sea of Japan prior to landing on USS *Bon Homme Richard* (CVA-31).

Click here to view photo

(8/27/51) The destroyer *Tingley* in the Sea of Japan as Panther jet fighters from the fast carrier *Boxer* pass over
the elements of Task Force 77 on their way to attack supply lines and military installations in North Korea.

Panther jets, returning at dusk from a strike over North Korea, circle Task Force 77. Planes such as these helped demolish four North Korean hydroelectric power complexes, one of them the Yalu River’s Suiho Dam, largest in the Orient, on 23-24 June 1952.

(8/6/51) Two Navy F9F “Panther” jets move in on the devastated port of Wonsan, Korea (just beneath number 106 on the nose of the leftmost plane) as buildings hit by a previous strike continue to burn (right).

(5/19/52) Four F9F Panthers of Squadron VF-781 in mid-flight, with the lead plane starting a turning maneuver. Assigned to Air Group 102, this squadron of fighter jets served twice in the Korean conflict: 30 May-30 Nov 1951 aboard USS Bon Homme Richard; and 28 Oct 1952-2 May 1953 with USS Oriskany (CVA-34).

(5/23/52) A F9F “Panther” jet from the aircraft carrier Boxer, on an armed reconnaissance flight, takes a look at the damage done to a Communist airfield at Sandok in North Korea.
(5/23/52) A Navy Panther jet fighter makes a high speed run on Communist installations near Kowon, North Korea, a familiar scene as the carrier-based jets carry out their daily rail interdiction missions.

(6/9/51) A Navy Panther jet looks for targets near the North Korean city of Hungnam. Bomb craters left by planes of Carrier Task Force 77 can be seen in the background.

(7/15/51) Two “Panther” jets from the aircraft carrier Boxer join a concentrated attack on the North Korean port of Wonsan.

(7/15/51) A Navy Panther jet attacks supply dumps and warehouses near the North Korean village of Kowon, 20 miles northwest of Wonsan.
(7/15/51) Navy aircraft over Korea.

(12/14/52) A Navy F9F Panther jet of Fighter Squadron 72 from USS *Bon Homme Richard* passes over a Korean mountain range covered with the first snow of the winter.

(12/7/51) A twin-jet Banshee wings its way over the port of Wonsan, Korea. The Navy’s newest high powered jet fighter in the Korean War, the Banshee first flew into action from the carrier *Essex* in August, 1950.

(6/7/51) A Royal Navy “Firefly” aircraft is launched from HMS Glory, a British light fleet carrier.
(12/21/52) An F2H-2F and an F2H attached to USS *Kearsarge* (CVA-33) flying over Korea.

(3/28/52) Taken from a Navy helicopter, this photograph shows conference tents and surrounding area of the Military Armistice Conference site at Panmunjom, Korea. Entrance to the immediate conference site is identifiable by the shrubs and sentry boxes on either side of the walkway.

(10/13/51) UN and Communist Liaison officers and their staffs enter the new site of the Military Armistice conference at Panmunjom, Korea.

(3/5/52) Guards at the entrance to the Panmunjom Military Armistice Conference site.

(7/27/53) General Mark W. Clark, Commander-in-Chief, UN Command, signs the armistice agreement as Vice Admiral Robert P. Briscoe, COMNAVFE (center); and Vice Admiral Joseph J. Clark, Commander, Seventh U.S. Fleet, look on.
(12/3/51) Maj. General Henry I. Hodes, USA, and Rear Admiral Arleigh A. Burke, USN, delegates to the Panmunjom Sub-Delegation Conference, inspect a 200 year old stone located by the roadside 100 yards from the conference tent. The stone was placed to commemorate the irrigation of the Pan Mun Valley for the benefit of local farmers.

(5/1/52) Vice Admiral C. Turner Joy, USN, Commander Naval Forces, Far East and senior delegate to the Korean Military Armistice Conference arrives by sedan at Panmunjom for an Executive Session of the full delegation.

(10/13/51) Vice Admiral C. Turner Joy, USN, returns to the UNC Advance Camp in Korea October 10 in anticipation of resumption of the Military Armistice talks. Rear Admiral Arleigh A. Burke, USN, (back to camera), is on hand to greet him.

(9/25/52) General Mark Clark (kneeling center) studies the target data board on the fire control platform of the
battleship *Iowa* as she fires at targets in Wonsan Harbor. Looking on (center) is Vice Admiral J. J. Clark, Commander Seventh Fleet, and Vice Admiral Robert P. Briscoe, Commander Naval Forces, Far East.

(11/2/50) U.S officers confer at Iwon.

A Marine helicopter comes in for a landing aboard the carrier *Sicily*.

(6/30/51) A helicopter from USS *Boxer* (CV-21) lands on the flight deck after completing an air rescue mission.

(3/15/53) F9F Panther jets taxi down a runway to position for take-off against Red targets in North Korea.
(10/8/51) On the flight deck of the fast carrier *Bon Homme Richard*, three Navy photo planes get an inspection by plane captains before taking off.

(11/16/50) Ordnance crewmen perform a final check of the F4U Corsair’s armament aboard USS *Sicily* (CVE-18) prior to an air strike on Korea.

(11/5/51) Belgian officials and a Belgian journalist inspect a Navy Panther jet on the flight deck of the aircraft carrier *Antietam* operating off the coast of Korea.
(7/30/51) Plane handlers push a F9F Panther jet fighter off the port elevator for storage on the hangar deck of USS *Boxer*(CV-21).

(3/15/52) A crew of plane handlers spots a Panther in its assigned position on the flight deck of USS *Antietam*.

Lt. (j.g.) William H. “Wild Bill” Elliott, USNR of Mill Valley, CA, is congratulated by Capt. Cameron Briggs, USN, skipper of USS *Boxer*, after making the 49,000th landing aboard the big Essex-class carrier.

(6/25/51) Crewmen fuel Panther jet fighters on the flight deck of USS *Boxer* (CV-21) between strikes against enemy targets in Korea.
(1/7/52) Crewmen use snow shovels to clean away the snow and ice covering the deck of USS Essex (CV-9).

(12/28/50) Flight deck crews of USS Badoeng Strait (CVE-116) “turn to” on the ice and snow covered flight deck after an icy storm swept out of Manchuria to plague this ship operating off the Korean coast.

(7/21/50) “Panther” jets aboard the U.S. Navy carrier Valley Forge (CVA-45) line up for takeoff on a strike against military targets in North Korea.

A Panther taxis along the flight deck of the carrier Boxer.
Atypical flight deck scene before an air strike on Korea.

(1/18/52) A blinding snow storm slows TF-77 off the coast of Korea. Loaded for action, these *Essex* (CV-9) aircraft wait for a lull in the storm to launch strikes against the enemy.

(3/4/52) Having been released from the arresting gear, a Corsair fighter plane of squadron VF-713 folds its wings in preparation to park on the flight deck of the flattop *Antietam* in Korean waters.

(7/12/53) A flak-damaged Panther jet lands aboard the carrier *Philippine Sea* (CVA-47).

(11/22/51) While attempting a landing with the use of only one landing gear, this Panther jet is stopped short of a crackup as his tail hook catches and holds an arresting wire stretching across the flight deck of the USS *Bon Homme Richard*. 
(8/26/51) An F9F jet gets the “cut” signal from a LSO as it returns to USS Bon Homme Richard from a strike on North Korea.

(3/24/52) Somewhere off the Korean east coast, an F9F Panther jet touches down on the flight deck of the aircraft carrier Valley Forge (CV-45) to chalk up the 37,000th landing aboard the veteran Korean flattop.

(11/15/50) An F9F Panther returns to USS Leyte (CV-32) after participating in a fighter sweep against a North Korean Communist force around Wonsan.

(11/3/52) The first Navy all-night jet fighter was a Douglas F3D with intercept radar. Major William T. Stratton, Jr., USMC, piloted an F3D when he and his radar operator successfully intercepted and shot down a Russian built YAK 15 of the North Korean Air Force.

An oil painting of the attack on Hwachon Dam, 1 May 1951.

(8/10/50) A bomb strike on an oil refinery at Wonsan.

(6/16/52) The destruction noted in this photograph was once an enemy train. A couple of well-placed bombs by pilots from ships of Task Force 77 left it as pictured.
(8/7/52) A copper ore processing plant at Kilchu, Korea, takes a beating from Corsair fighter-bombers and Skyraiders flying from the fast carrier *Princeton*.

An F4U Corsair fires air-to-ground rockets in the mountains of Korea.

(7/15/51) After pulling up out of his dive, a Navy Corsair levels off to look back at the destruction done to the target – an enemy highway bridge a few miles outside the beleaguered city of Wonsan on the east Korean coast.

(5/8/52) The Navy and Air Force combined their assets in the air over Korea. Here, an Air Force F-80 Shooting Star releases a tank of napalm (below its left wing) destined for a supply building and courtyard filled with loaded supply vehicles at the Communist supply center at Suan, 35 miles southeast of Pyongyang.
(8/4/50) A Navy F4U Corsair fighter leaves the deck of a U.S. Navy carrier operating off the coast of Korea to sortie against Communist-led North Korean Forces.

(8/25/52) A Navy jet fighter is flung from the catapult of USS *Antietam* as the catapult officer (right) and an enlisted “talker” crouch to the flight deck to escape the following blast from the jet’s exhaust.

(12/5/50) An F9F Panther jet is spotted on the catapult in preparation for takeoff from USS *Princeton* (CV-37).

The Forgotten Service in the Forgotten War:
The U.S. Coast Guard’s Role in the Korean Conflict
Scott T. Price

On June 25, 1950 six North Korean infantry divisions, supported by large armor and artillery forces, brutally attacked its neighbor, South Korea. The onslaught caught the South, as well as much of the world, completely by surprise. As the Soviet-equipped divisions advanced towards the capital, Seoul, Coast Guard officers stationed on the peninsula received word that they would have to evacuate.

The officers were based at the former Imperial Japanese naval facility of Chinhae, South Korea where they had been training the nucleus of what would become the South Korean navy. This little known operation was a typical example of the Coast Guard’s role during the coming conflict; based in obscurity but nevertheless important to the United Nations’ efforts to halt and reverse the Communist onslaught.

The Coast Guard’s missions for any post-World War II conflicts were largely spelled out by the Navy. In 1947 the Chief of Naval Operations suggested that in future conflicts the Coast Guard should limit its contribution to those peacetime tasks in which it specialized. His suggestion stated that the Coast Guard’s “war time functions and duties assigned should be those which are an extension of normal peacetime tasks.” Additionally, “Coast Guard personnel, ships, aircraft and facilities should be utilized as organized Coast Guard units rather than by indiscriminately integrating them into the naval establishment.”[1] These duties included port security, maritime inspection and safety, search and rescue, and patrolling ocean stations. These, therefore, were the Coast Guard’s primary missions during the Korean War.[2]

Chinhae

In 1946 the U.S. Army, which commanded the military forces in South Korea, asked for a contingent of active-duty Coast Guard officers to organize, supervise, and train a small Korean coast guard. Captain George McCabe, a Coast Guard hero of World War II, was the first to command the Coast Guard contingent, which arrived in South Korea on 23 August 1946. Indeed, he actually commanded the nascent Korean Coast Guard until the Korean government appointed Lieutenant Commander Sohn Won Yil as its first native commanding officer. From then on, McCabe and Sohn commanded the service jointly.

Their task was extremely complicated. First, they had to establish an enlisted training facility and begin recruiting operations. Then they needed to establish an officer candidate program to train officers to command the service. They also agreed to develop an academy, complete with a four-year degree program much like the U.S. Coast Guard Academy in New London. Due to a pressing need for personnel, however, the degree program was cut to two years. Despite the language difficulties, a lack of equipment, and a high initial desertion rate, McCabe and his staff successfully nurtured the beginnings of a new coast guard.

They acquired former Japanese navy warships to serve as training vessels and refurbished equipment left behind by the Japanese occupation forces. In general the Coast Guard did what it has always done, successfully fulfilled an assigned task with little or no resources.[3] The whole structure of this effort, however, was soon to undergo a significant change.

In May 1948 Commander William C. Achurch arrived in Korea and became the “Head Advisor to Commander, Service Forces, Korean Coast Guard” and commanding officer of the U.S. Coast Guard Detachment at Chinhae.[4] When the South Korean government decided that it would change its coast guard to a navy in 1948, the active duty U.S. Coast Guard officers returned home. As one officer put it, “The U.S. Coast Guard didn’t feel obligated to train a foreign navy and the U.S. Coast Guard Detachment was withdrawn.”[5] The U.S. Army then hired a number of retired or reserve officers and men to assist the new Korean Navy, including
Commander Achurch.

Training continued unabated for the next few years. The training teams continued to struggle with a number of difficulties including cultural differences and as always, funding. The base gained some notoriety when Achurch hosted a conference between the Nationalist Chinese leader, Chiang Kai-shek and the president of South Korea, Syngman Rhee for a three-day meeting in August of 1949. Later, President Rhee became a frequent visitor to the base as his interest in his new navy grew.

On the 19th of August, 1949 a World War II Coast Guard veteran, Commander Clarence M. Speight, retired from the service for a physical disability, took over Achurch’s duties as “Advisor Chief, Korean Navy.”[6] Achurch remained as the commanding officer of the Coast Guard contingent. Both men wore their uniforms proudly and carried on the operation as a Coast Guard commanded team.

Invasion

Commander Speight found himself in Taiwan preparing a new vessel for the Korean Navy when the North Koreans attacked. His wife and two children in Seoul fled to Inchon. Speight arranged for their transport on board a freighter bound for Tokyo and he then returned to Seoul. Six hundred fifty other refugees swarmed on board the freighter designed to carry only twelve passengers. Mrs. Speight and her two children stayed on the main deck for the three-day trip despite the cold weather and rain. Speight barely managed to leave Seoul and watched as the large bridge over the Han River was blown up. After crossing the river on a small boat, he eventually made it to Pusan where he met up with Commander Achurch.[7] Both were ordered back to the United States in July.

Pacific Ocean Stations

The ocean station program, established before World War II, proved to be a vital war-time Coast Guard task and was perhaps the most direct contribution made by the Coast Guard to the United Nations’ effort. Cutters assigned to the stations carried teams of meteorologists from the U.S. Weather Bureau. These men carried out weather observations, assisted by specialists in the Coast Guard crew. The cutters also served as aids to navigation by providing checkpoints for military and commercial maritime and air traffic and communication “relay” stations for aircraft on transoceanic flights. They provided needed medical services to merchant ship crews as well as any others in need and served as search and rescue platforms. Some aircraft actually ditched near the cutters and were quickly rescued, such as the famous rescue of the *Bermuda Sky Queen* by the crew of the *Bibb* in 1947.

Coast Guard cutters were stationed at two ocean stations in the Pacific prior to the outbreak of the Korean conflict. In concert with the Navy, the service decided to add three additional stations in the North Pacific.[8] The new stations provided complete weather data and greater search and rescue coverage for the growing trans-Pacific merchant and military traffic brought on by the Korean conflict. Indeed, 95 percent of the war material bound for Korea went by ship but nearly half of the personnel went by air, making the ocean station vessels a vital link in the United Nations’ logistic effort. Furthermore, the Coast Guard established a chain of air search and rescue detachments on islands throughout the Pacific to supplement the search and rescue capabilities of the Ocean Station cutters. Cutters were also assigned to these search and rescue stations to augment their search and rescue capabilities.

With the addition of the new stations, the Coast Guard needed to find vessels to augment the already extended cutter fleet. Fortunately a ready source existed within the mothball fleets of the Navy. The Navy turned over a number of destroyer escorts, which the Coast Guard commissioned as cutters. The old war-horses had served as convoy escorts in World War II, 33 of which had been manned by Coast Guard crews during the war. These vessels were refitted with a shelter on the stern for weather balloon storage and armed with depth charges.
and a variety of anti-aircraft weapons. The first two to join the Coast Guard fleet were the *Koiner* and the *Falgout*. Once commissioned, the new cutters underwent shakedown training under the supervision of the Navy and then sailed to their new homeports.[9]

Ocean station duty could be monotonous at one moment and terrifying the next, as the vessels rode out storms that made the saltiest sailors green. One crewman noted: “After twenty-one days of being slammed around by rough cold sea swells 20 to 50 feet high, and wild winds hitting gale force at times, within an ocean grid the size of a postage stamp, you can stand any kind of duty.”[10]

The *Koiner’s* operations provide a good example of the duty. After she arrived in Seattle, where she joined the cutters *Bering Strait*, *Klamath*, *Winona*, and the *Wachusett*, a hodge podge fleet of ex-Navy seaplane tenders and 255-foot Coast Guard cutters, she was first sent to Ocean Station Nan in the North Pacific. There she steamed in endless circles around the ocean station for three weeks before being relieved by the cutter *Lowe*.

While on the ocean station the crew quickly fell into a routine. They assisted the five weather observers from the San Francisco office of the U.S. Weather Bureau who accompanied each patrol. Radar and radio were manned around the clock. Twice daily the crew launched 6-foot diameter helium filled balloons that measured air temperature, pressure, and humidity to an altitude of 10 miles. They launched another smaller balloon to measure wind speed and direction.

The crew also checked water temperature every four hours down to a depth of 450 feet with a bathythermograph instrument. Serving as a floating aid to navigation, they contacted passing aircraft and ships by radio and provided radar and navigation fixes. The contact with anyone from the outside world, even if only for a brief moment, at least broke up the monotony for the crew. Then there were the daily drills such as fire, collision, and boat drills. For recreation they had movies, pistol matches, skeet shooting, volleyball games, and fishing. Though this was often enough to keep from going stir crazy, the crew invariably counted the days until their next liberty.[11]

After returning to Seattle the crew of the destroyer escort received welcome liberty. Then she set sail for Ocean Station Victor, midway between Japan and the Aleutian Islands, via the Midway Islands. While at Midway she stood search and rescue standby duty, then set sail for Victor for another three-week tour of duty. When relieved there, she sailed on to Yokosuka, Japan for a twelve-day layover, which included liberty for all hands. Afterward she steamed once again out to the North Pacific to Ocean Station Sugar. Another three weeks later her relief arrived and the *Koiner* returned to Seattle.[12] And so it went, month by month, year by year.

These cutters assisted a number of merchant ships and aircraft that were transiting the North Pacific during the war. The *Forster* assisted the largest number of vessels while on patrol. Her crew searched for and found the MV *Katori Maru* drifting and burning on 16-17 August 1952. Thereafter they assisted five more merchant and fishing vessels. The Pacific ocean station cutters in all assisted over 20 merchant and Navy vessels, including one transoceanic airliner, during the war.[13]

During 1950 Station Nan was the busiest of all the ocean stations, reporting that the cutters gave 357 radar fixes per patrol. Each patrol averaged over 700 hours on station. The cutters steamed an average of 4,000 miles per patrol.[14] These numbers increased considerably after the patrols were lengthened and expanded after the start of the Korean conflict. Twenty-four cutters served on the stations that fell within the perimeters of the Korean conflict and thus, they and their crews earned the Korean Service Medal (see Appendix B). Unsung but always ready, the cutters insured the timely and safe arrival of United Nations’ troops and supplies throughout the Korean conflict.

**Pacific Search and Rescue Airstations**

The Coast Guard established a number of Pacific air search and rescue detachments throughout the
Pacific in support of the Korean operation. The Coast Guard commissioned air detachments on Wake and Midway islands and increased the strengths of the existing detachments at Guam, Hawaii, and the Philippine Islands.[15]

One of the most dangerous search and rescue cases undertaken by the Coast Guard took place off the coast of mainland China in early 1953. Communist Chinese forces shot down a Navy P2V Neptune in the Formosa Strait while the aircraft was on a covert patrol along the Chinese coast. The crew ditched their burning plane and escaped into a life raft to await rescue. The Coast Guard search and rescue station at Sangleys Point responded to the call for assistance by immediately scrambling one of its two Martin PBM-5G Mariner seaplanes. In command was Lieutenant “Big John” Vukic, one of the most experienced seaplane pilots in the Coast Guard. Vukic and his crew of seven took off and flew their large aircraft towards Communist China and imminent danger. They were followed by the other PBM shortly thereafter, piloted by then-Lieutenant Mitchell A. Perry.

After arriving on scene Vukic noticed that the seas were running 15-feet. Even though the survivors managed to climb into a raft he thought they must have been suffering from hypothermia. He decided to attempt an open water landing, always a dangerous affair but something he had done many times successfully. With darkness setting in he landed near the survivors. His crewman managed to pull these men on board while other crewman prepared a jet assisted packs for each side of the aircraft. These devices, known as JATO [Jet Assisted Take-Off] packs, permitted aircraft to lift off in an extremely short take-off run. While the Coast Guard crew rescued all eleven in the raft, two other Navy crew, in a separate raft, were swept ashore and captured by the communist Chinese. Not knowing their fate, Vukic taxied his big PBM near the crash site searching for them. After fifteen minutes, with the seas rising he gave up the search and attempted to take off. The JATO rockets fired as the PBM lifted into the air. Vukic remembered: “There was a 15-foot sea and a 25-mile wind.” He feared that the heavy seas would swamp the amphibian if he waited for the seas to abate or a surface ship to come to their aid. Weighing each of the consequences, he decided to fly. Vukic remembered “Everything was rolling very well and I thought it was in the bag. And so I fired my JATO bottles to help my plane get airborne.” Suddenly the plane lurched to the left. He saw the left wing float rise above the sea but the port engine seemed to be losing power. He quickly decided to ditch and made for the crest of a wave with the plane’s hull. “My seat suddenly broke and that was the last thing I knew.”[16] The PBM slammed back into the sea and broke up.

Once again the Navy survivors were back in the water, at least, the seven that survived this crash. Vukic managed to escape as well and inflated a raft. He pulled two surviving Navy crew in with him. He said “We were so cold we didn’t care who got us, just so they had a fire to keep us warm.”[17] Two others of his Coast Guard crew, Aviation Machinists Mate Joseph Miller and Aviation Mechanic Robert Hewitt, also managed to escape before the PBM sank. These men were eventually rescued by the Navy destroyer U.S.S. Halsey Powell later that night. But the other five Coast Guard and four Navy crewmen never made it out of the sinking PBM and they perished. All five of these Coast Guardsmen received the Gold Lifesaving Medal posthumously (see Appendix A).

Port Security

Anticommunist sentiment in the country, already at a fever pitch after the communist victory in China the year before, was only aggravated by the North Korean attack. As a result, the government reacted against domestic communist activity. President Harry Truman signed Presidential Executive Order 10173, thereby implementing the Magnuson Act, which authorized the Coast Guard to conduct duties it had carried out during both World Wars to insure the security of U.S. ports “from subversive or clandestine attacks.”[18]

The Coast Guard established port security units to take charge of and secure the major ports of the United States. Their function was to prevent sabotage and insure the timely loading and sailing of merchant ships,
especially those sailing to Japan and Korea to deliver ammunition needed by the United Nation forces. The most controversial power extended to the Coast Guard was the authority to check the backgrounds of merchant sailors, longshoremen, warehouse employees and harbor pilots, in order to determine their loyalty, or lack thereof, to the United States.[19]

The immediate problem with implementing these duties was the lack of personnel. There was no organized reserve program of any great scale as the World War II program had been emasculated with the demobilization of the United State’s military at the end of the war. Indeed, in June 1949 there were only 252 enlisted reserve personnel, and a few women SPARS[the nickname of the Coast Guard’s Women’s Reserve] working at headquarters.[20] The President, through a supplemental appropriation, approved the immediate increase in financing necessary to implement an organized reserve. The budget for the following year did show a substantial funding increase that permitted the Coast Guard to expand and develop an adequate reserve to meet the service’s new demands.

Fears of a Eastern-bloc freighter sailing into a port, armed with a nuclear bomb, gave the service a unique Cold War task. Since the Soviet Union and its communist allies had no long-range bomber force and ballistic missiles were ten years in the future, delivery of a bomb by a vessel sailing into an unsuspecting port and then being detonated was the most likely form of nuclear attack on the United States.[21] From August 1951 every vessel entering into a U.S. anchorage had to notify Customs of its intended destination and cargo 24 hours before it was to arrive. The names of these vessels were passed to the appropriate Captain of the Port and Coast Guard patrol boats identified and checked each, boarding and examining those that appeared suspicious.

The boats patrolling harbor entrances in the major ports were occupied 24 hours a day and in New York, for example, there were two stations on continuous duty. For the next two years off the coast of New York, near the Ambrose lightship station, the Coast Guard inspected over 1,500 ships. Each of the two patrols inspected an average of 40 vessels per month with each inspection lasting four hours. Armed with Geiger counters, they searched for atomic weapons, general explosives, and bacteriological weapons, but never found anything worth reporting.[22]

Special explosive loading detachment teams conducted the incredibly dangerous job of supervising the loading of ammunition. It was sometimes conducted under the most primitive conditions. On the coast of Oregon, for example, ammunition was transported from the Umatilla Ordnance Depot to a loading site on the Columbia River about 10 miles downstream from the Depot. A privately owned tow and barge company held the contract for transporting government goods down the river. Coast Guard officers and men supervised the loading of the ammunition onto barges that each held 500 tons. Typically one powered vessel would push two barges at a time down the 200 miles to the Beaver Ammunition Storage Point, accompanied by an armed Coast Guardsman.[23] The ammunition was then loaded onto cargo vessels for transportation to Korea.

Loran Station at Pusan

The LORAN[LOng Range Aid to Navigation] station at Pusan is one of the truly unsung Coast Guard stories of the war. Established to assist the growing air and sea traffic brought on by the Korean conflict, the station’s crew has the distinction of being the only Coast Guard personnel serving under a Coast Guard command on the peninsula during the fighting. It was code named ELMO-4.[24]

The prospective commanding officer of the station, Lieutenant John D. McCann, USCG, reconnoitered the area around the city of Pusan, which gave the LORAN station its official Coast Guard designation, and picked a hill some twenty miles from the city. His crew consisted of twelve men who served on a one-year tour. On June 6 1952 the U.S. Air Force generously agreed to support the station logistically, relieving the 14th Coast Guard District of such responsibilities. The support included providing for the security of the station.
Despite attacks by local vandals and some guerrilla units, as well as a typhoon in August of 1952, construction progressed with the assistance of units of the U.S. Army and logistically supported by the U.S. Air Force. By the time ELMO-4 was ready to begin operation the station boasted modern plumbing, electric clothes washing machines, and a hot water heater. McCann noted “We are probably living on one of the most comfortable bases in Korea. But don’t forget that we built it ourselves. Last August all we had were tents.”[25] The only Coast Guard outfit in Korea began transmitting its signal on 5 January 1953. In concert with the other eight Coast Guard-manned LORAN stations in the Far East, including stations O’Shima Island in Tokyo Bay, Iwo Jima, and Okinawa, these lonely Coast Guard outposts provided around-the-clock navigation assistance to United Nations’ maritime and air forces.

**Conclusions**

With the signing of the cease-fire on 26 July 1953, the Coast Guard demobilized quickly. The Coast Guard abandoned the ocean stations added for wartime purposes and decommissioned the destroyer escorts. All of the overseas air detachments and search and rescue stations were decommissioned as well and the service returned to its normal peacetime operations.

The Korean War left a few legacies for the Coast Guard. Port security was now a preeminent mission of the service in large part due to fears generated by the Cold War. Force levels had increased to well over what they were before North Korea invaded its neighbor. Indeed, the service almost doubled in size from its 1947 low of just over 18,000 men and women until June, 1952 when 35,082 officers and enlisted men served on active duty, including 1,600 reservists.[26] Women also continued to serve in the Coast Guard, albeit in far fewer numbers than served during World War II. In November 1952, 215 SPAR officers and 108 enlisted SPARs served in the reserve and 15 officers and 19 enlisted served on active duty.[27]

The final and, perhaps, most important legacy was that the future leaders of the service would look for a more active role for the Coast Guard in any conflict. Worried that its vital duties during the Korean War still left the Coast Guard in obscurity, future commandants would offer Coast Guard forces for use in combat areas. This is exactly what happened some ten years later during another Communist onslaught in Asia, Vietnam.
Appendix A. Coast Guardsmen Who Received the Gold Lifesaving Medal in Korea

Aviation Ordnanceman First Class Joseph R. Bridge, USCG
Chief Aviation Electronicsman Winfield J. Hammond, USCG
Aviation Machinist's Mate Third Class Tracey W. Miller, USCG
Aviation Electronicsman First Class Carl R. Tornell, USCG
Lieutenant (junior grade) Gerald W. Stuart, USCG

These men perished in a rescue attempt off the coast of China on 18 January 1953. All were awarded the Gold Lifesaving Medal posthumously.
Appendix B. Coast Guard Units Eligible for the Korean Service Medal

USCGC Bering Strait (WAVP 382)
USCGC Chautauqua (WPG 41)
USCGC Durant (WDE 489)
USCGC Escanaba (WPG 64)
USCGC Falgout (WDE 424)
USCGC Finch (WDE 428)
USCGC Forster (WDE 434)
USCGC Gresham (WAVP 387)
USCGC Ironwood (WAGL 297)
USCGC Iroquois (WPG 43)
USCGC Klamath (WPG 66)
USCGC Koiner (WDE 431)
USCGC Kukui (WAK 186)
USCGC Lowe (WDE 425)
USCGC Minnetonka (WPG 67)
USCGC Newell (WDE 442)
USCGC Planetree (WAGL 307)
USCGC Pontchartrain (WPG 70)
USCGC Ramsden (WDE 482)
USCGC Richey (WDE 485)
USCGC Taney (WPG 37)
USCGC Wachusett (WPG 44)
USCGC Winnebago (WPG 40)
USCGC Winona (WPG 64)
Commander, Coast Guard Far East Section, Tokyo
Coast Guard Merchant Marine Detachment, Japan
LORAN Station Bataan
LORAN Station Pusan
LORAN Station Ichi Banare, Okinawa
LORAN Station Iwo Jima
LORAN Station Matsumae, Hokkaido
LORAN Station Niigata, Honshu
LORAN Station Oshima, Honshu
LORAN Station Riyako Jima
LORAN Station Tokyo, Honshu
The Forgotten Service in the Forgotten War:  
The U.S. Coast Guard's Role in the Korean Conflict  
Notes

[2] The Coast Guard stayed under the control of the Treasury Department for the duration of the Korean conflict.

A Coast Guard Martin PBM-5G Mariner. A seaplane such as this crashed while attempting to rescue the crew of a Navy P5M Neptune in 1953 off the coast of China. These large, twin-engine seaplanes were in wide use in the Coast Guard from 1943 through 1956. Note the detachable landing gear.
A Coast Guard Martin PBM-5G Mariner. A seaplane such as this crashed while attempting to rescue the crew of a Navy P5M Neptune in 1953 off the coast of China. These large, twin-engine seaplanes were in wide use in the Coast Guard from 1943 through 1956. The "R-22" painted on the side of the seaplane's nose indicates its radio call sign "Rescue 22."

A Coast Guard Martin PBM-5G Mariner taking off with the assistance of a JATO pack. A seaplane such as this crashed while attempting to rescue the crew of a Navy P5M Neptune in 1953 off the coast of China. These large, twin-engine seaplanes were in wide use in the Coast Guard from 1943 through 1956.

John Vukic (as an Ensign in this photo) was the pilot of the Coast Guard PBM-5G that attempted to rescue the crew of a Navy P5M Neptune off the coast of China. He was one of the most experienced seaplane pilots in the Coast Guard.

One of the Coast Guard's primary state-side tasks was to supervise the loading of ammunition and other
dangerous cargoes throughout U.S. ports. Here was a primitive loading site at Umatilla, Oregon. The barge is being loaded with bombs needed used by the U.N. air forces in Korea. Each barge carried 500 tons of explosives to the Beaver Ammunition Storage Point where it was offloaded onto ships for shipment to Japan and Korea.

One of the Coast Guard's primary state-side tasks was to supervise the loading of ammunition and other dangerous cargoes throughout U.S. ports. Here was a primitive loading site at Umatilla, Oregon. The barge is being loaded with bombs needed by the U.N. air forces bombing North Korea. Each barge carried 500 tons of explosives to the Beaver Ammunition Storage Point where it was offloaded onto ships for shipment to Japan and Korea.

The Coast Guard contingent that assisted in developing a South Korean Coast Guard and Navy. The contingent first arrived soon after the end of World War II and members, including LCDR William Achurch, left, evacuated the peninsula on the heels of the North Korean attack in 1950.

The USCGC Durant, a Navy destroyer escort commissioned into Coast Guard service. The Coast Guard acquired a number of Navy destroyer escorts to fill the gap in available cutters due to the increase in the number of ocean stations the service was tasked with operating. The DE's were outfitted essentially as they had been during World War II with the exception of the addition of a weather balloon shack and launching platform.
The USCGC Bering Strait departing Honolulu Harbor on her way to her ocean station.

The USCGC Bering Strait departing Honolulu Harbor on her way to her ocean station.

The Coast Guard commissions the USCGC Finch, 24 August 1951. CPT Chauncey Moore, USN, the commander of Florida Group, supervises the transfer of the Finch to Coast Guard control. The Finch's commanding officer, CDR George R. Boyce, USCG, stands to the rear on the right.

The USCGC Ramsden returns to Honolulu after a five month patrol in the Pacific. She served on the ocean station in the Northwest Pacific, 1953. Interestingly a Coast Guard crew manned the destroyer escort during World War II but remained a commissioned Navy warship. During her second career with a Coast Guard crew, she became a commissioned Coast Guard cutter.
The cutter Lowe sails out for a trial run prior to sailing for the Pacific.

The USCGC Vance in December, 1952. Note the PBM flying beyond her stern.

The crew of the Coast Guard cutter Chincoteague rearm the hedgehog anti-submarine mortar. During the Korean conflict every cutter was heavily armed, including anti-aircraft and anti-submarine weapons.

Senior Weather Bureau observer Edward J. Fencl seated at a RADIOSONDE receiver-recorder aboard the cutter Abescon computes from a continuously moving graphic tape tracings transmitted from a balloon-borne RADIOSONDE transmitter high up in the atmosphere. His computations tell him the pressure, humidity, temperature, and wind velocity at various altitudes the balloon has reached.
Duty on a weather station could be rough! Here, during a heavy storm, the cutter Matagorda's bow is thrust out of the water while on ocean station duty in 1951. The cutters maintained their stations through the worst weather.

40mm gun drill on board a cutter while on ocean station duty.

A Coast Guard crewman readies a bathythermograph. The device recorded sea water temperature to a depth of 450 feet.

Crewmen prepare to release a weather balloon while on ocean station duty.
A crewman determines the velocity of surface winds by the use of an anemometer, one of the many instruments utilized by the ocean station cutters.

"In quest of 'PIBALS': That is to say: PIBALS are measurements of the direction and intensity of winds aloft obtained by tracking the movement of a small free balloon which has an assumed ascensional rate. The tracking is done visually with a special type of transit known as a theodolite. As these men, on board a cutter, prepare to gather this type of weather information, the man at the theodolite gets the instrument set while his partner awaits the word to let the balloon go."

"RADIOSONDE WEATHER BALLOON IN FLIGHT: A weather balloon is seen here at the instant of release from the deck of the cutter Absecon, just before the weight of the radiosonde transmitter is felt. Note the flattening of the upper side of the balloon."
The Korean naval base at Chinae, first established by a Coast Guard advisory team after the end of World War II. Chinae was a former base of the occupying Imperial Japanese.

7 February 1950. Discussing the value of and use of training aids with LCDR Chai, the liaison officer to the American advisors of the Korean Naval Academy. CDR William Achurch, the senior advisor to the Korean Navy, is on the left.

CDR Achurch and his wife entertain Chiang Kai-shek at the base at Chinae, during his visit to the base in August, 1949. He was establishing his Nationalist Chinese forces on the island of Formosa during this time after his defeat by the Communist Chinese.

John Toland and Clay Blair, two of America's most popular (in both senses of the term) military historians, have few reservations about the legitimacy of intervention or the Republic of Korea's right of self-defense. They are more interested in assessing U.S. military performance, however, individual as well as collective. Although Toland integrates South Korean and Chinese interviews to good effect, his focus is on the American effort. Blair's strengths are his knowledge of the Eighth Army and a keen eye for operational matters and sharp characterization of U.S. Army leaders. The two books in question are John Toland, *In Mortal Combat: Korea, 1950-1953* (New York: Morrow, 1991), and Clay Blair, *The Forgotten War. America in Korea, 1950-1953* (New York: Times Books, 1987).

## Causes of the War

A civil war—as Korea surely was—has internal and international dynamics and its own shifting set of political actors, all of whom have agendas of their own. The Korean War is no exception. It was one of many such wars in this century in which the "great powers" chose to make a smaller nation a battleground. Of course, small nations (often plagued with politicians with large ambitions and imaginations) are perfectly capable of enticing larger nations to help sway the local political balance against domestic rivals or other great powers. The Chosin dynasty in Korea, for example, struggled to maintain its isolation and independence by playing the Chinese off against the Japanese, then appealed to Czarist Russia and the United States to protect it from its patrons. This too-clever but desperate bit of diplomacy resulted in two wars, the annexation of Korea by Japan in 1910, and thirty-five years of misery.

Literature on Korean-American relations before 1950 stands as a monument to the power of after-the-fact wisdom. Nevertheless, the idea of a communist plot, orchestrated by Moscow, that fell on an innocent South Korea basking in peace and prosperity, belongs in the dustbin of history. Ravaged by forced participation in World War II, with an elite compromised by two generations which survived under Japanese rule, Korea was divided by more than occupying armies and the 38th Parallel. It was caught between two modernizing movements, tainted legitimacy, authoritarian instincts, romantic economic dreams, and a dedication to political victory and control over a unified Korea. Kim II Sung or Syngman Rhee would have felt comfortable on the throne of the kings of Unified Silla at Kyingju. For perspective on the conflicts before 1950, see Kwak Tae-Han, John Chay, Cho Soon-Sung, and Shannon McCune, eds., *U.S.-Korean Relations, 1882-1982* (Seoul: Institute for Far Eastern Studies, Kyungnam University, 1982).

Whether regarded with awe or dismay (or both), an inquiry that stands alone for its ability to define the causes of the conflict is Bruce Cumings, *The Origins of the Korean War*, vol. 1, *Liberation and the Emergence of Separate Regimes, 1945-1947* (Princeton, N.J.: Princeton University Press, 1981), and vol. 2, *The Roaring of the Cataract, 1947-1950* (Princeton, N.J.: Princeton University Press, 1990). While Cumings may see wheels within wheels where none exist and be a master of inference, he knows Korean politics and recoils from the cant of American politicians, generals, and diplomats. He is no admirer of the communists and especially Kim Il Sung, but his political bias prevents him from seeing any legitimacy in the noncommunist leadership in South Korea, and he ignores the power of organized Christianity in the struggle for the soul of Korea. Also, Cumings has a limited understanding of the armed forces, so he often finds a malevolent purpose in simple bungling. While he writes too much, most of it is required reading.

**U.S. Political Direction**

After presiding over the end of World War II as an accidental President, Harry S. Truman certainly did not need another war but got one. His version of events is found in his two-volume *Memoirs* (Garden City, N.Y.:

The basic study on American intervention is Glenn D. Paige, *The Korean Decision, June 24-30* (New York: Free Press, 1968). Distressed by postwar Korean politics, Paige later denounced the book as too sympathetic to Truman and Acheson, but it remains a good work.

**Koreans on the War**

Treatments of the war written by Koreans and translated into English reflect a wide range of perspectives--except, of course, in official (there is no other) accounts by North Korea. Among the South Korean sources, however, one can find various degrees of outrage over intervention, remorse over the role of the Koreans themselves in encouraging foreign intervention, deep sadness over the consequences of the war, pride and contempt over the military performance of Koreans, a tendency to see conspiracy everywhere, and a yearning for eventual unification, peace, economic well-being, and social justice. There is no consensus on how to accomplish these goals, only the certainty that the war ruined the hope of a better Korea for the balance of the century. The literature also reflects a search for innate order and the rule of law, against a pessimistic conclusion that politics knows no moral order. Among the more scholarly and insightful works by Korean scholars are Kim Myung-Ki, *The Korean War and International Law* (Clairmont, Calif.: Paige Press, 1991); Pak Chi-Young, *Political Opposition in Korea, 1945-1960* (Seoul: Seoul National University Press, 1980); Cheong Sung-Hwa, "Japanese-South Korean Relations under the American Occupation, 1945-1950" (doctoral dissertation, University of Iowa, 1988); Kim Chum-Kon, *The Korean War, 1950-1953* (Seoul: Kwangmyong, 1980); Kim Joung-Won, *Divided Korea: The Politics of Development, 1945-1972* (Cambridge, Mass.: Harvard University Press, 1975); Kim Gye-Dong, *Foreign Intervention in Korea* (Aldershot, U.K.: Dartmouth Publishing, 1993); Cho Soon-Sung, *Korea in World Politics, 1940-1950* (Berkeley: University of California Press, 1967); and, in Korean, Kim Yang-Myong,
The History of the Korean War (Seoul: Ilshin-sa, 1976).

Military Allies, Political Doubters

The study of political and military relations between the United States and the Republic of Korea is not exactly a "black hole" in Korean War historiography, but it is certainly a gray crevice. Activities of the Military Advisory Group Korea (K MAG) are described in very measured terms by Robert K. Sawyer, K MAG in War and Peace (Washington: Office of the Chief of Military History, 1962), which is largely silent on atrocities, corruption, nepotism, and incompetence in the ROK officer corps. Little of the work deals with the 1950-53 period, and it ignores the impressive fighting ability of some ROKA units and the professionalism of some of its officers. Sawyer is also less than frank in discussing U.S. Army policies that crippled the ability of the ROKA to resist the Korean People's Army invasion from the North. How, for example, could a ROKA division manage with no tanks and only one battalion of limited-range 105-mm howitzers? Some of these problems receive attention in Paek Sin-Yip, From Pusan to Panmunjom (Washington: Brassey's, 1992), the memoirs of an outstanding corps and division commander. Paik, however, and his brother General Paek In-Yip, are quiet on their past in the Japanese army and their dogged pursuit of the communist guerrillas in the South, 1948-50. The late Ching Il-Kwin, another ROK officer, left extensive but untranslated memoirs. Frustrations over nation-building are more directly addressed in Gene M. Lyons, Military Policy and Economic Aid: The Korean Case, 1950-1953 (Columbus: Ohio State University Press, 1961).

The American military of 1950-53, absorbed with its own problems of survival, showed little understanding of the greater agony of Korea, including a much-maligned South Korean army. But there is no longer any excuse for such insensitivity. A novel by Richard Kim, The Martyred (New York: George Braziller, 1964) and Donald K. Chung, The Three Day Promise (Tallahassee, Fla.: Father and Son Publishing, 1989), an autobiography, both relate heart-rending stories of family separation and ravaged dreams. The war is summarized in a work published by the Korean Ministry of National Defense, The Brief History of ROK Armed Forces (Seoul: Troop Information and Education Bureau, 1986). Soldiers of the Eighth Army could not avoid dealing with

The Armed Forces

The body of literature on the strategic and operational performance of the armed forces in the Korean War is substantial and dependable, at least for operational concerns. Building on its commitment to a critical history in World War II, the military establishment worked with the same stubborn conviction that both the public and future generations deserved to know what happened in Korea and why. The products are generally admirable. For a big picture, start with Doris Condit, *The Test of War, 1950-1953* (Washington: Historical Office, Office of the Secretary of Defense, 1988), the second volume in the "History of the Office of the Secretary of Defense" series. For the perspective on the Joint Chiefs, see James F. Schnabel and Robert J. Watson, *The Joint Chiefs of Staff and National Policy*, vol. 3, *The Korean War* (Wilmington, Del.: Michael Glazier, 1979), reissued in 1998 by the JCS Joint History Office in a more polished format.

The Navy published a one-volume official history: James A. Field, Jr., *History of United States Naval Operations Korea* (Washington: Director of Naval History, 1962); but two officers with line experience in World

The Air Force published one large monograph on the Korean War, the literary equivalent of a one-megaton blast with endless fallout: Robert F. Futrell, *The United States Air Force in Korea, 1950-1953*, rev. ed. (Washington: Office of the Chief of Air Force History, 1983), which is encyclopedic on the Air Force's effort to win the war alone and too coy about the actual results. Recent anthologies from the Office of Air Force History on the uses of combat aviation include essays on air superiority, strategic bombing, and close air support in Korea. Their modification of Futrell will be slow, but will start with Conrad C. Crane's *The Korean Air War* (University Press of Kansas, 1999).

Convinced of the value of their historical programs during and after World War II, the American armed forces mounted programs of field history and interviewing that served as documentary and internal-use histories as well as the grist for the official history publications series and unsponsored histories by private authors. Scholarly Resources has published on microfilm four sets of documents: (1) U.S. Army historical studies and supporting documents done during the war over virtually every aspect of the conflict; (2) the interim evaluation reports done as periodic operational reports done for the Commander Pacific Fleet (1950-1953) as periodic operational reports prepared by the Seventh Fleet and the Marine division and aircraft wing; (3) documents and reports preserved by the Department of State on Korea, 1950-1954; and (4) the documents created and stored by the United Nations armistice commission, 1951-1953. University Publications of America has produced a similar collection on microfiche of unpublished histories and after-action reports collected during and shortly after the war by the Far East Command's military history detachment. The sources of these studies are largely the participants themselves, the interviews then supplemented with Army records. The studies not only reconstruct operations from the division to the platoon level, but they also deal with a wide range of topical subjects. Books by or about senior American leaders are generally well done and show how wedded these officers were to World War II norms. Two Army officers of high repute wrote histories of the war: J. Lawton Collins, *War in Peacetime* (Boston: Houghton Mifflin, 1969), and Matthew B. Ridgway, *The Korean War* (Garden City, N.Y.: Doubleday, 1967). But larger shadows blur the Collins-Ridgway war: Forrest C. Pogue, *George C. Marshall, Statesman, 1945-1959* (New York: Viking, 1987); D. Clayton James, *The Years of MacArthur: Triumph and Disaster, 1945-1964* (Boston: Houghton Mifflin, 1985); and Omar N. Bradley and Clay Blair, *A General's Life* (New York: Simon and Schuster, 1983). D. Clayton James with Anne Sharp Wells, *Refighting the Last War: Command and Crises in Korea, 1950-1953* (New York: Free Press, 1993), argues that World War II spoiled generals and distorted understanding of such concepts as proportionality and the relationship between ends and means. Limited war did not suit the high commanders of the 1950s, but only MacArthur challenged Truman's policy. This cautionary tale remains best told in John W. Spanier, *The Truman-MacArthur Controversy and the Korean War* (Cambridge, Mass.: Belknap Press, 1959). For naval leaders, see Robert W. Love, Jr., ed., *The Chiefs of Naval Operations* (Annapolis, Md.: Naval Institute Press, 1980). The view from the top of the Air Force is found in Phillip S. Meilinger, *Hoyt S. Vandenberg* (Bloomington: Indiana University Press, 1989). For the use of Army reserve forces, see William Berebitsky, *A Very Long Weekend: The Army National Guard in Korea* (Shippensburg, Pa.: White Mane Press, 1996).

**Logistics and Coalition Warfare**

Korea provided an early test of whether the U.S. armed forces could support a limited war, coalition

**The Allies**

At the height of the war, the U.N. Command included ground forces from fourteen countries, excluding the United States. Nineteen nations offered to send ground combat units as part of the U.S. Eighth Army, but four proposed contributions were too little, too late. Three infantry divisions offered by the Chinese Nationalist government fell into another category: too large, too controversial. The largest non-U.S. contribution was the 1st Commonwealth Division, organized in 1951 from British army battalions and similar units from Canada, Australia, and New Zealand. The smallest was a platoon from Luxembourg. The ground forces included a Canadian brigade, Turkish brigade, New Zealand field artillery regiment, and battalions from France, Thailand, Ethiopia, Greece, the Philippines, Belgium, Australia, Colombia, and the Netherlands. The force reveals a careful political and geographical balance: contingents from Europe, Latin America, Africa, and Asia. Air and naval forces were similarly reinforced. Eight navies and four air arms deployed combat elements while eight nations sent air and sea transport. Five nations sent only medical units: Denmark, India, Italy, Norway, and Sweden.

Since the limited size of non-U.S. and non-ROKA contingents precluded them from having a great impact on the operational course of the war, their participation has been largely ignored in the United States. The exception is the dramatic participation of one or other units in a specific battle, for example, 1st Battalion, Gloucestershire Regiment, which fought to the last bullet and trumpet call on the Imjin River in April 1951. This approach overlooks the potential lessons about coalition warfare represented in U.N. Command. It also ignores the useful exercise of seeing one's military practices through the eyes of allies, in this case nations that sent their best and toughest soldiers to Korea for experience. To honor them, Korea published short accounts in English of these national military contingents: Republic of Korea, Ministry of National Defense, *The History of the United Nations Forces in the Korean War*, 6 vols. (Seoul: War History Compilation Commission, 1975). The battlefields of Korea also have excellent monuments (most erected by Korea) to U.N. forces. The United States has made no comparable effort to recognize these forces, many of which were more effective than comparable American units. (For example, the most vulnerable corridor into the Han River Valley was defended in 1952 and 1953 by the 1st Marine Division and 1st Commonwealth Division.) Most American treatments of foreign contributions, however modest, are incorporated in U.S. organizational histories.

The 1st Commonwealth Division experience provides the most accessible account of service with the

### Special Operations

### Russia and the War

From the beginning there were the Soviets—until they were written out of the history of the Korean War by their own hand and by those Western historians who could not identify a bear even if he was eating out of one's garbage can. The Soviet Union may not have started the war, but it certainly gave it a big bear hug and embraced it past Stalin's death and a period of détente in the mid-1950s. The collapse of the Soviet Union has reopened the issue of Russian connivance and collaboration, bolstered by tantalizing glimpses of Communist internally oriented histories and supporting documents. Retired Russian generals and diplomats have become regular participants in Korean War conferences, but Russian official histories are not translated or widely available to Western scholars with the requisite language skills. Nevertheless, the Russian role as sponsor
continues to receive clarification and is not diminished. Early plans emerge in Eric Van Ree, *Socialism in One Zone: Stalin's Policy in Korea, 1945-1947* (Oxford: Oxford University Press, 1988). Most recent admissions and revelations come from Soviet veterans who have talked to the media or participated in international conferences, including pilots and air defense specialists. Documentary evidence has come primarily from Communist Party and foreign ministry archives. Material from the armed forces and KGB has been limited. Few documents have been translated and published, although Kathryn Weathersby—a Russian historian at the Woodrow Wilson Center for Scholars in Washington, D.C.—has taken up the grail of translation and interpretation through the *Bulletin* of the Cold War International History Project and the working papers issued by the Wilson Center. The British scholar Jon Halliday has also been active in interviewing Russian veterans.

**China and the War**

**Aftermath**

Finally, the impact of the war is discussed with care in the anthologies by Heller and Williams cited earlier. Also see the work edited by Lee Chae-Jin, *The Korean War: A 40-Year Perspective* (Claremont, Calif.: Keck Center for International and Strategic Studies, 1991). One beneficiary of the war was Japan---or at least those Japanese political groups allied to America, capitalism, and the social status quo. War-fueled prosperity and the diminished ardor for social reform is captured in Howard B. Schonberger, *Aftermath of War. Americans and the Remaking of Japan, 1945-1952* (Kent, Ohio: Kent State University Press, 1989), and Michael Schaller, *The American Occupation of Japan: The Origins of the Cold War* (New York: Oxford University Press, 1985). *The Journal of American-East Asian Relations* 2 (Spring 1993), is dedicated to "The Impact of the Korean War" with essays on Korea, China, Japan, and the United States. An especially interesting and stimulating effort at comparative, cross-cultural analysis of the effects of the Korean and Vietnam Wars is Philip West, Steven I. Levine, and Jackie Hiltz, eds., *America's Wars in Asia: A Cultural Approach to History and Memory* (Armonk, N.Y.: M. E. Sharpe, 1998), which is an anthology of essays produced by a conference held in 1995 at the University of Montana's Mansfield Center. Although the authors, especially the Asians, offer stimulating interpretations of the war's effects, they are ill-informed about the military events upon which some of their analysis rests.

The publishing event of the fiftieth anniversary will be the appearance of an English-language translation of the War History Compilation Committee, Ministry of National Defense, Republic of Korea, *Han'guk Chinjaeng-sa* (1966-1977) in six volumes. *The Korean War*, of which one (1977) volume of three has appeared, is much more than abridged version of the original series. Organized by professional historians of the new Korea Institute of Military History, physically located at the War Memorial, Yongsan, Seoul, the *Korean War* is a major revision that incorporates the most recent Soviet documents and Chinese writing on the war, enhanced by extensive interviews with ROK Army veterans. The direction of the project is Colonel (Doctor) Chae Han Kook, chief of the Institute's new history department.

The Sea War in Korea

Chapter 1. Gathering War Clouds

[2] The Brussels Treaty was signed 17 March 1948 by the Benelux countries, plus England and France. It was another regional collective defense arrangement within the framework of the United Nations and modeled to a considerable extent after the Rio Treaty. (A Decade of American Foreign Policy 1941–49, Department of State, p. 1333.)
[2A] The treaty was originally signed by Belgium, Canada, Denmark, France, Iceland, The Netherlands, Norway, Luxembourg, Italy, Portugal, the United Kingdom, and the United States. Later, in February 1952, Greece and Turkey signed, and Western Germany entered in May of 1955, to make a total of 15 nations.
[2B] The 38th parallel of North Latitude measures 19,648 miles around the globe. The part that crosses Korea—196 miles—is exactly one percent of the whole. Few latitude lines span more land than 38º North; it crosses 12 countries, including the United States, China, and Russia.
[10] During the “National Defense Program—Unification and Strategy” hearings which followed, Chairman Vinson stated as follows: “. . . The rumors became so prevalent and it was floating around to such an extent in Congress that it was necessary for me, speaking on behalf of the Committee, to see the Secretary of Defense and get a statement to the effect that he wasn’t going to transfer the Marines to the Army and he wasn’t going to transfer Marine aviation to the Air Force.” p. 386.
[14] Ibid, p. 64; also 402–3.
[15A] General Vandenberg is referring to the CVA-58, the USS United States, whose construction had been cancelled by the Secretary of Defense, Louis Johnson.
[16A] General Carl Spaatz, USAF, former Chief of Staff of the Air Force, had written in Newsweek, 17 October, 1949, that “The Navy now spends more than half its total appropriations in support of naval aviation. The result is that the nation is dissipating its wealth and wasting aviation talent in supporting two air forces.

“This is dangerous. Nothing less than United States air supremacy is at stake. This leadership can not be
maintained unless the country’s military air resources are pooled and placed under the control of one organization.

[17] Ibid, p. 52; also p. 525.
[22] Ibid, Testimony of Admiral (then Captain) Arleigh A. Burke, who was to become Chief of Naval Operations on 17 August 1955, p. 255.
[23] Ibid, Testimony of Admiral Louis E. Denfeld, Chief of Naval Operations, p. 349, et al. Admiral Denfeld was to be subsequently relieved as CNO on the recommendation of the Secretary of the Navy, Francis P. Matthews.
[27] Hearings before the Committee on Armed Services, House of Representatives, 81st Congress, October 6–21, 1949, p. 536.
[28] Ibid, p. 466.
[29A] On 10 June 1956, the Italian Catholic Action newspaper, Il Quotidiano, published what is said were missing portions of Nikita Khrushchev’s now famous speech attacking Stalin which were not included in the version released by the U.S. State Department. Herein, the newspaper stated that Khrushchev recognized Soviet responsibility for the Korean War. The theory advanced is that Stalin’s jealousy of Red China’s dictator, Mao Tzetung, caused him to embroil Red China and the U.S. in Korea so that he might emerge the undisputed dictator. According to the Roman newspaper, these were Khrushchev’s words:

“His (Stalin’s) anti-realistic consideration of the attitude of the Western Nations in the face of developments in Asia has contributed to the risky situation for the entire socialist cause such as developed around the war in Korea.”

[30] On page 1740, Hearings before the House Armed Services Committee and the Senate Foreign Relations Committee on “Military Situation in the Far East,” Secretary Acheson explained how Korea came to be excluded from the U.S.’s defensive perimeter: “... The United States had certain points which were a defensive perimeter. At those points (Okinawa, Philippines) United States troops were stationed; there they would stay and there they would fight.

“In regard to other areas, I said nobody can guarantee that; but what we can say is that if people will stand up and fight for their own independence, their own country, the guaranties under the United Nations have never proved a weak reed before, and they won’t in the future. I think that is a fairly accurate statement of what has happened. . . . . .

“What I said here (in the Press Club Speech of 12 Jan. 1950) is almost exactly what Mr. Dulles was saying in Korea in June 1950.”

[31] See pages 1990–2, Hearings before House Armed Services Committee. Regarding these intelligence reports, Secretary of State Dean Acheson said: “I do not believe there was a failure of intelligence. . . . . . Intelligence was available to the Department prior to the 25th of June, made available by the Far East Command, the CIA, the Department of the Army, and by the State Department representatives here and overseas, and shows that all agencies were in agreement that the possibility for an attack on the Korean Republic existed at that time, but they were all in agreement that its launching in the summer of 1950 did not appear imminent.
“The view was generally held that since the Communists had far from exhausted the potentialities for obtaining their objectives through guerilla and psychological warfare, political pressure and intimidation, such means would continue to be used rather than overt military aggression.”

[31A] To this particular dispatch, the G-2 section of the Commander in Chief, Far East (CINCFE) headquarters attached the following comment:

“Comment: The People’s Army will be prepared to invade South Korea by fall and possibly by spring of this year indicated in the current report of armed force expansion and major troop movements at critical 38th parallel areas. Even if future reports bear out the present indication, it is believed civil war will not necessarily be precipitated. . . .” Secretary Acheson also called attention to a G-2 CINCFE comment made 25 March 1950 on their estimate of the probability of civil war in Korea:

“It is believed there will be no civil war in Korea this spring or summer. The most probable course of North Korean action this spring or summer is furtherance of its attempt to overthrow the South Korean government by the creation of chaotic conditions in the Republic through guerilla activities and psychological warfare.”

[32A] An observation team of the UN commission on Korea forwarded a report of an inspection trip dated 24 June 1950 which said that they “had, in the course of a two-weeks inspection trip, been left with the impression that the Republican Army was organized entirely for defense and (was) in no condition to carry out a large scale attack against the forces in the north.” The observers found that the ROK forces were disposed in depth all along the 38th parallel with no concentration of troops at any point, that a large number of ROK forces were actively engaged in rounding up guerrillas, and were, in any case, entirely lacking in the armor, heavy artillery, and air support necessary to carry off an invasion of North Korea.

[32B] Blair House, in Washington, was being used as the temporary Executive Mansion pending repairs to the White House itself.

[33] All paraphrased excerpts.

[34] Background Information on Korea, House Committee on Foreign Affairs, Report No. 2495, 11 July 1950, p. 48.

Chapter 2. Retreat to Pusan

[1] Interview, October 1950.

[1A] A time difference of fourteen hours exists between Korea and Washington. For example, Sunday noon in Washington is two o’clock Monday morning in Korea. Crossing the international dateline westward in mid-Pacific at the 180th degree of longitude, the calendar is moved forward one day. The time used hereafter in this book will be that of the place in which the event occurred.

[2A] Destroyers were HMS Cossack (CAPT R. T. White, DSO) and HMS Consort (CDR J. R. Carr); frigates were HMS Black Swan (CAPT A. D. H. Jay, DSO, DSC), Alacrity (CDR H. S. Barber) and HMS Hart (CDR N. H. H. Mulleneux, DSC).

[2B] Thus, for the first time, General MacArthur received operational (but not tactical) control over large carriers. This operational control was exercised through COMNAVF and ComSeventhFleet:

“Never once throughout the course of the Pacific war did that Headquarters (MacArthur’s) exercise direct tactical command of a single fast carrier. . . . Both King and Nimitz feared the consequences of placing fast carriers under the supervision of a headquarters (MacArthur’s) which so evidently looked upon them as expendable. Marines and escort carriers were later assigned to the Southwest Pacific area.” (The U.S. Marines and Amphibious War, Isley and Crowl, p. 92.)

[3A] The term “Striking Force” was retained until 25 August 1950 when, by Commander Seventh Fleet Operation Order #14-50, the term “Fast Carrier Force” was used.

[4A] The North Korean Air Force before the war had been estimated at 54 aircraft—33 YAK-type fighters and 21 IL-type attack bombers. Their primary operating fields were Pyongyang, Wonsan, Sinanju, and Sinuiju.

[5] The forces which carried the 24th Division to Korea as designated by COMNAVFE OpOrder 7–50 were the following:

TF 90
Mount McKinley (Captain Carter A. Printup)
Cavalier (Captain Daniel J. Sweeney)
Union (Captain G. D. Zurmuehlen)
LST 611
14 SCAJAP LSTs
TG 96.6
Juneau
HMS Jamaica
Mansfield
De Haven
Swenson
Collett
HMS Black Swan
HMS Alacrity
HMS Shoalhaven
HMS Hart
Arikara

[7] Commander Pollock was killed in an air accident in the United States on 6 November 1952.
[7A] High velocity aircraft rocket.
[8A] The Key West Agreement resulted from a conference in Key West, Florida, 11-14 March 1948, between the Secretary of Defense and the Joint Chiefs of Staff. Following this conference, the Secretary of Defense issued a statement which, in seven parts, laid down the common functions of the Armed Forces and the specific functions of the JCS, the Army, Navy, Air Force, and Marines. The second listed primary function of the Air Force was “To be responsible for strategic air warfare.” This is defined as: “Air combat and supporting operations designed to effect, through the systematic application of force to a selected series of vital targets, the progressive destruction and disintegration of the enemy’s warmaking capacity to a point where he no longer retains the ability or the will to wage war. Vital targets may include key manufacturing systems, sources of raw material, critical material, stockpiles, power systems, transportation systems, communication facilities, concentrations of uncommitted elements of enemy armed forces, key agricultural areas, and other such target systems.”
[12] Thus, in 1943, the Army Air Force in the War Department publication FM 100-20, (Command and Employment of Air Power, July 1943, p. 12, para 16) stated its opinion of close air support: “In the zone of contact, missions against hostile units are most difficult to control, are most expensive, and are, in general, least effective. Targets are small, well-dispersed, and difficult to locate. In addition, there is always a considerable chance of striking friendly forces. . . . .”
[13] During the Hearings before the House Armed Services Committee in October 1949, Brigadier General Vernon E. Megee, USMC, made a statement about close air support that read like prophesy in July 1950: “. . . If war should come tomorrow, the Tactical Air Squadrons of the Navy and Marine Corps would have to provide the major part of the troop air support, even as they did in the beginning of the last war. What we have is able to move on short notice—would that it were more.” (Page 197, National Defense Program—Unification & Strategy).
[14A] This suggestion was vetoed in Tokyo because of TacRonOne’s participation in the preliminary planning for Inchon landing, already then underway.
[15A] JOC, Taegu was a joint Army-Air Force center located at Taegu, although it temporarily retreated to Pusan when the perimeter shrank. Still later, the JOC moved to Seoul where it remained for the duration.
[15B] With the arrival in Korea on 3 July of the one under-strength battalion of the 21st Infantry, 24th Division, were two TACPs (Tactical Air Patrol Parties) and one L-5 VHF-equipped flivver airplane known as “Mosquito.” One of the two TACPs was assigned to the 24th Division, one to the ROK forces. The L-5 airplane was put to use as an independent observation and spotting plane. As additional units of the 24th Division arrived, other TACPs and “Mosquito” aircraft arrived. But it was with these first TACPs and airplanes that the Task Force 77 airplanes were trying to perform close air support.
[15C] In addition to the communication trouble, there was the practical difficulty of Korean names. They were difficult to pronounce and understand over the radio, and many names were similar.
ANGLICO is an abbreviation for “Air Naval Gunfire Liaison Company.”

COMNAVFE dispatch 270732Z July (paraphrased excerpt). Between 26 August and 4 September, Captain Charles E. Crew, USMC, of the ANGLICO trained a total of nine TACPs, all Air Force personnel. These TACPs were trained at Camp McGill, near Tokyo, and later served with the Army’s 7th Division. Of the nine officers in charge of these parties, four were pilots who had done close support in Korea. Eight of the nine thought the Navy system of close air support superior.

Use of the WAC charts meant that pin-pointing a target was impossible. Only a general area, such as a village or stream, could be indicated.

At this conference, FEAF was represented by four generals and one colonel; the Navy, by one captain from COMNAVFE, two commanders and two lieutenant commanders representing ComCarDiv-3.

For the Philippine Sea, her appearance in the Korean theater culminated two months of intense effort. An Atlantic Fleet carrier, the **Philippine Sea** had arrived in San Diego on 10 June 1950. She was originally scheduled to relieve **Valley Forge** on 1 October 1950. Upon outbreak of the Korean war, **Philippine Sea** was ordered forward. CAG-11 (CDR R. C. Vogel, USN) received emergency orders to embark prior to sailing 5 July. This air group had not finished its training cycle, and its jet squadrons had only recently received new aircraft. An intensive ten days’ training was accomplished in the Hawaiian area en-route to the Far East.

It is a high compliment to both ship and air group that despite these handicaps, their performance in Korea was outstanding.

Typical load for close air support: (a) F4U: 800 rounds ammunition; one 1,000-pound bomb; eight 5-inch rockets; four hours’ endurance; (b) AD: 400 rounds ammunition; three 500-pound bombs; twelve 5-inch rockets; four hours’ endurance.

During this period, the two carriers operated for two days, replenishing each third day.

COMCARDIVONE dispatch 901003Z Aug (paraphrased excerpt).

COMNAVFE 190046Z Aug 50 (excerpt paraphrased).

COMNAVFE 220945Z Aug 50 (excerpt paraphrased).

A few days before this major attack, a novel effort was made to use B-29s in a “close air support” role. On the 16th of August, 98 Superfortress B-29s made a “carpet bombing” attack on the enemy build-up northwest of Waegwan. Some 40,000 troops were reported in this area. Eight hundred fifty tons of bombs were dropped in an area 7,000 yards wide by 13,000 yards long, one bomb to each five acres. The next day, the Communists launched one of the heaviest attacks of the war through this area.

**Philippine Sea** ltr 080, 1 September 1950.

The First Provisional Marine Brigade was basically a reinforced Marine regiment. The infantry element thereof was three battalions, but each with only two instead of the regular three companies. This meant approximately 1,500 men were available for front-line engagement. Subtracting a reserve, company clerks, etc., the First Provisional Marine Brigade did its job with less than 1,000 riflemen in the frontline.

Army Task Forces take the name of the senior commander.

For a complete account of these Marine battles, see *U.S. Marine Operations in Korea: the Pusan Perimeter*, by CAPT Nicholas A. Canzona, USMC, and Lynn Montross.

Incidentally, this same definition remains in Naval Warfare
[29] In a Far East Air Force Mission Summary dated 16 Nov 1950, missions as far distant as twenty miles in advance of friendly forces were listed as “close air support.”

[30] In the period between 26 July and 3 Sept 1950, almost half of the Navy’s close air support sorties were delivered outside the bombl ine.

[30A] In comparison, the 12th Army in Europe during World War II had only 35 close support aircraft per division.

[30B] Records indicate that 80 percent of the Marine strikes were directed by Tactical Air Control Parties.

[31] Army Air Support Center letter ATASC-D 373.21 of 1 December 1950, Encl 1, Sect 2, para 12.

RAPIDITY OF THE NORTH KOREAN DRIVE SOUTHWARD
THE LONG LOGISTICS LINES LINKING KOREA WITH JAPAN AND THE UNITED STATES
Chapter 3. The Magnificent Gamble

[1] “Perhaps there never has been so much opposition to any MacArthur operational plans as there was to his proposal that Inchon should be the location for the undertaking. Members of his staff in whom he had the greatest confidence doubted that Inchon was the right place. Opinion in military circles in Washington, where decisions were made, also was divided. But Louis Johnson, then Secretary of Defense, left MacArthur free to choose Inchon, or any other place. . . .” “MacArthur’s Greatest Battle” by Bascom N. Timmons, Collier’s, Dec. 16, 1950, p. 14.

“General Collins had initially opposed him in the Inchon venture, and only the backing of Louis A. Johnson, the then Secretary of Defense, had given him the chance to put it over. . . .” The Untold Story of General MacArthur, by Frazier Hunt (page 466).

[2] Testimony of General J. Lawton Collins, Hearings before House Armed Services and Senate Relations Committee on Military Situation in Far East, page 1295: Collins said he went over to Tokyo “to find out exactly what the plans were. Frankly, we were somewhat in the dark, and as it was a matter of great concern, we went out to discuss it with General MacArthur. We suggested certain alternative possibilities and places. . . .”

[9A] KIA—“Killed in Action”; DOW—“Died of Wounds”; MIA—“Missing in Action”; WIA—“Wounded in Action.”

[9B] Nine months after Inchon, on 15 May 1951 in Tokyo, the U.S. Army opened the prosecution of the cases of 18 spy suspects. According to the prosecutor, Major Robert M. Murray, USA, the ringleader of a North Korean-Japanese spy ring was one Yoshimatsu Iwamura, aged 38, who had been captured with the top secret plans of the Inchon operation in his possession only one week before the landing. (United Press 15 May 1951, reported in the Washington Post.)

[10A] In actual fact, less than 23 days were available, as a large number of vessels had to be moving by 10 September.

[11A] The diversionary landing at Kunsan was carried out by the British frigate Whitesand Bay supporting American U.S. Army commandoes and the Royal Marine commandoes.

[13] For details of this bombardment, see Chapter 10, “The PatRons”.

[14] Task Element 90.62 (USS Mansfield (DD-728); USS De Haven (DD-727); USS Henderson (DD-785); USS Garke (DD-783); USS Lyman K. Swenson (DD-729); and USS Collett DD-730)) received the Navy Unit Citation for the Wolmi attack.

[17A] Supreme Commander Allies, Japan.

[18] The eight LSTs (Task Element 90.32) who made this landing were 799 (LT T. E. Houston), 857 (LT D. Weidemeyer), 859 (LT L. Tinsley), 883 (LT C. M. Miller), 914 (LT R. L. Holzhaus), 973 (LT R. I. Trapp), 898 (LT Robert M. Beckley) and 975 (LT A. W. Harer). All of them were awarded the Navy Unit Commendation for their excellent performance at Inchon.

INCHON: OBJECTIVES AND HAZARDS
The Sea War in Korea
Notes
Chapter 4. The Battle of the Mines (Part I—Wonsan)

[1] Report by the Joint Strategic Survey Committee to the Joint Chiefs of Staff on Record of the Actions taken by the JCS relative to the United Nations Operations in Korea, Number 43. Hereafter referred to as “JSSC”.

[3] Chief of Staff, FECOM memo to JSPOG, 26 September 1950.

[4A] At no time, however, did General MacArthur advance D-day.

[13A] This Russian predilection for mines is very evident in the Soviet Navy today. Nearly every Soviet combatant ship—cruiser, destroyer, escort vessel, and submarine—is fitted for minelaying. Russian aircraft can lay mines as well.

[14] Notes to authors from Captain N. B. Atkins dated 24 April 1956.

[14A] AMS is hereafter used to designate the small 136-foot wooden-hulled minesweeper to help distinguish it from the steel-hulled AM.

[14B] Throughout the Korean War, the minesweepers were designated as follows: The destroyer minesweeper was designated DMS; the steel-hulled fleet minesweeper was designated AM; the wooden-hulled sweeper, AMS and the converted small boat (LCVP) designated MSB. Throughout this book, these designations will be used. Subsequently, the designations have been changed.

[15A] Admiral Struble had been Commander Mine Force Pacific at the end of World War II. He had participated in 22 amphibious operations and had commanded several. Many of these involved minesweeping.

[16A] At the Hague Convention of 1907, it was agreed that all contact mines should be moored and so constructed as to destroy themselves if they should break loose. This law was written to protect neutrals and non-combatants, but it was never signed by the USSR or North Korea. Article I of The Hague Convention specifically provided that it was forbidden “to lay anchored automatic contact mines which do not become harmless as soon as they have broken loose from their moorings.”

[17] Dispatch from CTG 95.7 to CTF 95 on 1 Oct stated that ROK PC-703 went alongside YMS-504 to assist with controlling the damage and the flooding.

[17A] COMNAVFE despatched CINCFE on 28 Sep 1950 that this mine, which was sighted and sunk by the destroyers Maddox and Thomas, was either of Soviet manufacture or a type that had been built by the Japanese during World War II and kept in good stowage by the North Koreans.

[17B] CDR H. W. McElwain, TF 90's Intelligence Officer, stated in an interview 3 May 1956 that he had personally inspected the Soviet-built mines found at Wolmi-do before they were flown to Tokyo and to
[18A] Name given to the 1,200-ton, 180-foot steel-hulled minesweepers by men serving aboard the much smaller wooden YMSs.
[18B] Dan buoys are used to mark the edge of a swept channel.
[19] Others with mine warfare experience flown to the Far Eastern theatre included CDR George C. Ellerton, Mr. James M. Martin, and CDR D. N. Clay from Admiral Radford’s staff at Pearl Harbor.
[19A] Underwater Demolition Team—nicknamed “Utes.”
[19C] Countermining by aerial strike had been attempted at the end of World War II when Admiral Struble’s Mine Force Pacific Fleet was engaged in clearing the various harbors of Japan. Despite the use of heavy planes and large bombs, the attempts were unsuccessful.
[19D] A thumb rule in minesweeping is to avoid turns once atop the mine lines, but, if required, to turn toward swept waters.
[19E] Pledge’s Fire Controlman Third Class, Carleton A. Pollock, saw one 3-inch shell score a direct hit on an enemy gun emplacement on Sin-do.
[19F] “Chick” was an affectionate label given to the wooden-hulled bird-class fleet, which also were referred to as the “Splinter Fleet” or the “Mighty Mites.”
[21] Interview with authors, October 1950.
[22] Dispatch from CTE 95.67 to CNO, 17 October 1950.
[23] Interview with CDR H. W. McElwain, Intelligence Officer, TF90, 3 May 1956.
[24A] The tractor group included the landing ship-type vessels: LSTs, LSMs, LSDs, LSUs, etc. The transport group included cargo- and transport-type ships.
Chapter 5. The Battle of the Mines (Part II—Chinnampo)

[1A] An AMS carries a normal complement of 3 officers and 29 men.
[1B] When finally constituted, CDR Archer’s Chinnampo Task Element 95.69 included, in addition to his flagship Forrest Royal (CDR O. O. Liebschner), the following:

Task Unit 95.69.1 (CDR Oscar B. Lundgren)
Minesweeping Unit 1: 2DMS

Thompson
Carmick

Task Unit 95.69.2 (LTJG Henry V. Cronk)
Minesweeping Unit 2

Gull
Pelican

Swallow: 3 AMS
YMS-502, 306, 513, 503: 4 ROK YMS

Task Unit 95.69.3
Helicopter Unit: 1 Helicopter (LT Robert D. Romer)

Task Unit 95.69.4 (LCDR Alan Ray)
Minesweeping Unit 3

Horace A. Bass: 1 APD
TU 95.69.41 UDT One: 1 UDT

Task Unit 95.69.5
Minesweeping Unit 4

Catamount: 1 LSD
MSBs: 12 LCVP

Work Boats: 2 46-foot ML

LST-Q007: 1 LST

Task Unit 95.69.7
Buoy Ship Unit

Bolster: 1 ARS

Intelligence Unit (CDR Donald N. Clay)

[2] Lecture to the Naval War College on the subject “Mine Countermeasures Based on Experiences in Korea, 1950,” by Captain S. M. Archer, USN.

[4A] Of 80 mines destroyed, PBM got the largest share, 36; Frogmen, 27; Gull, 2; Pelican, 1; Bass, 1; and Japanese minesweepers, 1. Storms accounted for twelve.

[5A] The USS Bolster laid all of the 3,000 pound channel marker buoys in addition to planting three moorings off Pyongyang in the Daida-Ko estuary. At least one hundred channel buoys were required to mark Chinnampo approaches.
THE SEA APPROACHES TO CHINAMPO
The Sea War in Korea

Notes

Chapter 6. The Hungnam Redeployment

[2] Interview with authors, 1951.
[4] Interview with authors, 1951.
[5] By Lynn Montross and Captain Nicholas A. Canzona, USMC.
[6A] Bagwell survived and was repatriated 5 September 1953 after the end of the Korean hostilities.
[8] Letter from Commanding General Seventh Division dated 10 January 1951.
[9] Interview with authors, April 1956.
[9A] HMAS *Bataan* operated for 12 days (13-25 March 1951) with the USS *Bataan*.
[16A] Following the Hungnam redeployment, Joy messaged Doyle to come to Tokyo for a press conference. “While in Joy’s office,” said Doyle, “two civilian representatives from the Republic of Korea Government came to thank Admiral Joy and me with tears in their eyes for our compassion toward their fellow countrymen during the Hungnam withdrawal.”

[8] Letter from CTE 95.24 to Intelligence Officer CTG 95.2, dated 6 May 1952.
[9] Interview with authors, 19 March 1956.
[12] Interview with authors, 12 March 1956.
[12A] The Kojo amphibious demonstration is fully described in Chapter 11, “The Amphibious Threat.”
[12B] Thompson’s damage is reported in Chapter 9, “The Seaborne Artillery.”
[13A] The moored sweep must be of sufficient depth to permit passage.
[15A] Ships assigned to catch ships fishing in blockaded waters.
[16] Notes supplied authors by LCDR C. W. Coe, Commanding Officer of the USS Redstart.
MOORED MINE SWEEPING

MAGNETIC MINE SWEEPING

ACOUSTIC MINE SWEEPING

TECHNIQUES OF MINESWEEPING
[1] “Armed Reconnaissance” is defined as an air reconnaissance mission which has the additional mission of searching for and attacking targets of opportunity within a specified area.
[1A] In the JCS Dictionary of Military Terms, the word “interdict” means “to prevent or hinder, by any means, enemy use of an area or route.”
[1B] Horses were not the only four-footed animals used by the Communists in Korea. During the Hungnam redeployment, naval airmen reported double-humped, long-haired Bactrian camels. Also sighted were shaggy, sure-footed Mongolian ponies.
[1C] JCS dispatch to CINCFE 7 November 1950: “In view of alarming situation which CINCFE has reported, CINCFE is authorized to undertake the planned bombing in Korea near the fronts, including . . . the Korean end of the Yalu bridges . . . .” (Paraphrased excerpt).
[1D] “Props”-propeller-driven aircraft.
[3B] It was later estimated that the Chinese in North Korea by late October numbered 275,000 troops in organized units. The 66th, 42nd, 40th, 39th, and 38th Chinese Armies had been identified.
[5A] A rough breakdown of this amount was as follows: 48 per cent food; 22 per cent clothing, weapons, equipage; 10 per cent petroleum products; 20 per cent ammunition.
[5B] A-frame—a wooden frame used by coolies in the Orient to facilitate the carrying of heavy back loads.
[6A] From 24 February 1951 to 13 June 1951, the naval airmen, in 1,223 sorties, had made 150 initial breaks and re-breaks in the rail line, and 109 initial breaks and re-breaks in the highways.
[6C] Boxer had returned to the fighting on 30 March (having relieved “Old Faithful” Valley Forge on 27 March) with the first reserve carrier air group (CVG-101) aboard. This group, and CVG-102, were composed of the organized Naval Air Reserve Squadrons which had been recalled to active duty.
[6D] This was the first bombing attack of the Korean War by naval jets.
[6F] On pages 1063, 1064 and 2591, Hearings before House Armed Services Committee and Senate Foreign Relations Committee on “Military Situation in Far East,” General Bradley testified that General MacArthur previously had been denied permission to attack Rashin because of the risk involved in an operation so close to the Soviet frontier. “Rashin” is Japanese; “Wojin” is the Korean name of the city.
[6H] It should be pointed out, however, that no rail line ran south of Rashin. Shipments further southward had to go by road.
[6I] The public hearings by the Joint Congressional Committee regarding the dismissal of General MacArthur dwelt at great length on Rashin. Pages 1068, 1331, 1640, 2260, 2276, 2591, 3067, Hearings before the House Armed Services Committee and Senate Foreign Relations Comuthitee regarding “Military Situations in Far
East. " These discussions in May and June 1951 undoubtedly played a part in the approval given to bomb Rashin in August 1951.

[7A] A few minutes later, however, one B-29 jettisoned a string of bombs only 2,000 yards from the cruiser Helena (flag of ComCruDiv-5, RADM R. E. Libby) and destroyers Harry E. Hubbard (DD-748) and USS Roger (DDR-876), which had earlier bombarded Rashin and which were standing by to act as lifeguards if needed.

[7B] For the second time the Navy escorted B-29s, see “The Raid on Kowon,” in Chapter 13, “On the Line.”

[9A] For a description of the surface aspects of this interdiction effort, see the section, “Packages and Derails,” in Chapter 9, “The Seaborne Artillery.”

[9B] Yang-do was one of three islands three miles off the Songjin mainland, and had been captured in March 1951. On 20 February 1952, a determined attempt was made by the Communists to recapture the island. Although enemy troops succeeded in making a landing, the naval element—USS Shelton (DD-790, CDR Stephen Carpenter), USS Endicott (DMS-35), and HMMNZS Taupo—assisted in driving off the attack with gunfire.

[9E] Fishermen captured by the destroyer Fox (DD-779) in May 1952 from the coastal area between Hungnam and Songjin reported that trains had not passed “Package 5” in a month.

[10A] VC-4, the Atlantic Fleet Squadron, also supplied a few night fighter teams to Korea.

[10D] Functions Paper of the Armed Forces and the Joint Chiefs of Staff—The agreement established shortly after the unification of the Armed Forces whereby the particular responsibilities and type of operations of each of the three Services were established.

[10E] The Navy coordinated its own surface and air interdiction efforts, commencing in April of 1951, at which time Admiral Ofstie received approval of his proposal that Task Force 77 coordinate its interdiction contributions with those of Task Force 95.

[11A] The number of rounds of artillery and mortar fire received by the UN forces rose from an average of 150,000 to 200,000 rounds per month in the last six months of 1951 to more than 700,000 rounds in October 1952, the average per month in 1952 being approximately 350,000 rounds per month.

[12] Interview, 1 February 1956.

[14B] On page 1010 of the MacArthur hearings, General Bradley testified: “... In Italy where we had as good a chance as any I ever heard of of stopping a large hostile army by air, because much of the supplies came through the Brenner Pass, they continued to supply about 25 German divisions even though we bombed the Brenner Pass practically every day.”

LOCATION OF MAJOR BRIDGES OVER THE YALU
KAPSAN AND THE EAST COAST RAIL NETWORK
Chapter 9. The Seaborne Artillery

[1] Readers should note that the limit of the blockade on the east coast excluded the port city of Rashin. On p. 2260 and 2276, *Hearings before the House Armed Services Committee and the Senate Foreign Relations Committee, “Military Situation in the Far East,*" Admiral Sherman testified: “The Russians had an arrangement to use Rashin. They did use it at times since the war began.” On p. 2097, Lieutenant General Emmett O’Donnell, Jr., testified: “. . . As I remember it, Rashin is a warm-water port. I believe that the Soviet leases that port for its own use and has been doing so for some time. It is possible they have a submarine base there. . . .”

[1A] Interview with authors, November 1955.

[4A] HMS *Cockade* (LCDR H. J. Lee, DSC), HMS *Comus* (LCDR R. A. N. Hennessy); HMAS *Bataan* (CDR W. B. M. Marks, RAN); HMCS *Cayuga* (CAPT J. V. Brock, DSC, RCN), HMCS *Athabaskan* (CDR R. T. Welland, DSC, RCN), HMCS *Sioux* (CDR P. D. Taylor, RCN); HMNZS *Tutira* (LCDR P. J. H. Hoare, RN), HMNZS *Pukaki* (LCDR L. E. Herrick, DSC, RN); Hr. MS. *Evertsen*.

[6] List of party: CDR W. B. Porter, USN; 2nd LT R. M. Johnson, USMC; Myron K. Lovejoy, GMC; Junior E. Wilson, GM3; Howard C. Scheunemann, GM3; Paul A. Keane, BM2; Willard L. Crider, PFC, USMC; Robert E. Dugan, PFC, USMC; Wm. J. Ghrist, PFC, USMC; and Jack L. Pope, PFC, USMC.

[6A] The three units of this special operating group were awarded the Navy Unit Commendation for this series of raids. UDT One was later awarded a second NUC for the period 2 November to 1 December 1950.

[7] Personal letter to authors, 28 March 1956. For a complete description of the interdiction campaign, see Chapter 8, “The Struggle to Strangle”.

[7B] *Missouri* had to absorb a lot of good-natured ribbing on arrival in Korea. Upon joining the assault forces a few days later at Inchon, *Toledo* wigwagged the question: “Found a mudbank to sit on, Mac?” The “Big Mo” replied: “Go home, small fry, we brought the real guns.”

[9A] The reason for doing this was to consolidate the various operating naval task forces so that the Commanding General, Eighth Army, would only have to deal with Com 7th Fleet. In the past he had had to deal with CTF-77, 90, or 95 on an individual basis.

[10A] Hr. Ms. is a prefix designating ships of the Royal Netherlands Navy.

AGC—an amphibious command ship; APA—an attack transport.

White is the traditional color of mourning in Korea. Since it is worn for 3 years for close relatives, Korean families are in mourning much of the time.

The UN Command delegation succeeded in obtaining Communist agreement to consider press representatives as part of its working personnel with access to the conference area. The Communists also agreed to provisions which would insure neutrality of the conference zone.

Korea was called “Chosen” by the Japanese Government of occupation prior to World War II, and subsequently adopted by the North Korean Communist government. The word “Hankuk” was used by South Koreans to mean the Republic of Korea.

For a similar effort by naval air, see “The Battle of Carlson’s Canyon,” page 233.

Letter to authors, 1 May 1956.

New Jersey’s gunfire was in support of the First Marine Division. Her assistance had been requested by dispatch to Commanding General Tenth Corps, who in turn requested the support from Commanding General Eighth Army, who forwarded the request to Com7thFleet. At this time a request for gunfire support had to be separately submitted for each period that a ship was desired. A specific justification for the request had to be included, and a list of targets to be fired upon had to be furnished.

Interview, 1 February 1956.

Interview, 18 March 1956.

In conjunction with the surface interdiction effort described herein, refer to Chapter 8, “The Struggle to Strangle,” which describes the naval air interdiction effort.

Commanding General First Marine Division dispatch 150109Z, January 1952.

One of the Korean war’s strange coincidences occurred to Thompson (which was struck by enemy gun fire on 3 separate occasions). On 20 August 1952, the same Songjin guns succeeded in hitting her again, striking the flying bridge. Three men were killed, ten injured. Iowa rendezvoused with the Thompson, sent her doctor aboard, and then took aboard the casualties by highline. Later that evening, Iowa bombarded the gun positions which had hit Thompson.

Interview with authors, July 1955.

Personal letter to authors, 8 September 1955.

Flaherty recovered but was later discharged from the service with a partial disability. He credits his life in part to a tourniquet which was torn from an American flag carried by the whaleboat.

“Willie-Peter”—white phosphorous.

CVG-2 Action Report, page 5, for 13 April 1952.

Missouri had bombarded Chongjin in November 1950.

Interview, 30 January 1956.

PACKAGE ONE was a small bridge and embankment about 25 feet high and 3,000 feet long. It carried a single-track railroad across a level valley between two tunnels. PACKAGE TWO was a 220-yard stretch of single-track railroad between two tunnels. PACKAGE THREE was a stretch of railroad track on an embankment with a small 35-foot two-span bridge crossing a drainage canal. PACKAGE FOUR was a section of track at the foot of a mountain only 20 feet above the sea coast. There was also a tunnel. PACKAGE FIVE was a bridge and approach embankment crossing a small stream at the coastline.

As the war went on, and the primary work of the carriers of Task Force 77 shifted from interdiction to close air support, “Cherokee” missions and maximum air strikes, the primary responsibility for “Package” became more and more the responsibility of the surface units.
[22] Personal interview, 22 August 1955.

[22A] By reducing the amount of ammunition fired at night and on harassment missions, and emphasizing ammunition economy, an approximate 50 per cent reduction was made in the amount of ammunition fired:

JULY 1952--Rounds fired (all sizes): 33,500 (of which 32% were unobserved)
Short Tons expended: 2,590.3

OCTOBER 1952--Rounds fired (all sizes): 17,069 (of which 11% were unobserved)
Short Tons expended: 1,451.0

The cost of all types ammunition, delivered to the ships in Korea, had been calculated to be $1,940 per short ton. The saving in cost after July 1952 was more than two million dollars per month—and this did not take into account wear and tear on either guns or ships.

[23] Interview, 27 February 1956.

[23A] The “Trainbusters Club” of Task Force 95 was organized in July 1952 by Captain H. E. Baker, CTF-95’s operations officer. (Many ships which had destroyed trains before this date were not included.) The following is the list of members of the “Trainbusters Club” and the number of trains credited (not claimed) to each ship as determined by TF 95 records: HMCS Crusader, 4 trains; USS Endicott, 3; USS Orleck, 2; HMCS Haida, 2; HMCS Athabaskan, 2; USS Pierce, 2; HMS Charity, 2; USS Porter, 1; USS Jarvis, 1; USS Boyd, 1; USS Truthen, 1; USS Eversole, 1; USS Kyes, 1; USS Chandler, 1; USS McCoy Reynolds, 1; Hr. Ms. Piet Hein (LCDR Jonkheer H. de Jonge van Ellemeet), 1; USS Carmick, 1; USS Maddox, 1; total, 28 trains.

Each ship whose gunfire had destroyed a train was presented a certificate which read: “For her contribution to the United Nation’s cause against Communist aggression by destroying-Communist train(s). In recognition of a job well done CTF-95.”

[25A] However, the Communists were making increasing use of influence-fuzed shells. It should be noted, moreover, that the enemy was equipped with radar-controlled AA guns.

[25B] USS Merganser (AMS-26); USS Firecrest (AMS-10); USS Pelican (AMS-32); USS Colahan (DD-650); USS Waxwing (AM-389); USS Kidd (DD-661).

[25D] CAPT Maginnis was the senior U.S. naval officer wounded in the Korean War. He was transferred to the Manchester and thence to Japan for a series of three operations. He has since returned to active duty.

[25E] After absorbing this punishing naval gunfire for more than three years, the Communists finally developed a tactic which was occasionally and partially successful. First, they discovered and listened in on the ship-shore circuits. As the ships sang out “On the way,” the Communist artillerymen would open fire on the UN observation posts in order to keep the spotters’ heads down and prevent them from seeing the fall of shells of the ships’ fire and thereby correct it.

Chapter 11. The Amphibious Threat (1951-1953)

[1A] General Mark W. Clark, From the Danube to the Yalu.
[2A] A boat assignment table is a table for determining what boats are availability, and how and when they will be used in the ship-to-shore movement.
[5] Interview with authors, 13 April 1956.
Notes

Chapter 12. The Siege of Wonsan

[1] “Siege is the surrounding and investing of an enemy locally by an armed force (land or sea), cutting off those inside from all communications for the purpose of starving them into surrender, for the purpose of attacking the invested locality and taking it by assault.” From *International Law (Chiefly as Interpreted by the United States)*, by Charles Cheney Hyde.

[1A] Because of its strategic location, Wonsan received the greatest attention. However, the east coast ports of Songjin and Hungnam were also besieged, although not as closely as Wonsan. The former two ports were besieged from their outer harbors as contrasted to Wonsan’s inner harbor.

[1B] Personal letter to authors, dated 20 August 1952.

[1E] According to RADM Dyer, the original 4-foot searchlight was replaced in the early fall of 1951 with a battleship searchlight. “Getting it ashore was quite a problem,” the Admiral wrote.

[1F] The island of Hwangto-do was successfully raided by Communist sampans on the night of 28-29 November 1951. All of the ten houses were burned by the raiders, seven Korean Marines and one civilian killed, and five civilians captured.

[1G] The LSMR division fired twelve thousand nine hundred and twenty-four 5-inch rockets at Wonsan from June through September 1951. Their first and biggest day in Wonsan was the night of 20-21 May, when “Operation Fireball” was completed. Two LSMRSs—401 and 403—fired a total of 4,903 rockets at Wonsan targets in a 35-minute period.

[1H] See Chapter 10, “The PatRons.”

[3A] Sydney created a record for this time by flying 89 sorties in one day, and 147 sorties in two days.

[5A] The “War Dance” can be defined as high speed evasive maneuvering to avoid enemy gunfire.

[5B] In addition to the title “Mayor of Wonsan,” RADM Allan E. Smith held the title “Duke of Wonsan.”

[5C] Refer Commander Blockade and Escort Force letter P15, serial 573 dated 20 April 1954. RADM T. C. Ragan herein states: “At the the time the idea of the ‘Mayor of Wonsan’ award was conceived, this staff expended considerable effort searching the records to establish the time of origin of the ‘Key to the City’ and of the title ‘Mayor of Wonsan.’ The best information indicated that it started in May 1952. From that date on, the relieving of duties as Commander Task Unit 95.2.1 by Destroyer Squadron commanders had an additional ceremony included. The incoming commander was presented the wooden ‘Key to the City’ and given the title ‘Mayor of Wonsan.’”

[6A] Main Supply Route.

[7B] Murphy, a night attack pilot, had been shot down in the Hungnam area. When the rescue helicopter (piloted by LTJG J. T. Stultz and R. L. Martin, ADAN), reached the scene, Murphy was seen running across the snow-covered rice paddies pursued by enemy soldiers. When he stopped momentarily to light a flare, a bullet creased his neck. Stultz landed and picked up Murphy, who said he had been running for thirty minutes.
[7C] Combat Air Patrol.
[8A] Riedl was rescued the next morning by Iowa’s helicopter (flown by LT Robert L. Dolton and crewman Willis A. Meyers, AM1) after a wet, sleepless, and insect-ridden night during which time Red soldiers had come within ten feet of his hiding place. During the rescue of Riedl, the airplane of Ensign Robert E. Roberts of VF-193 was struck by antiaircraft fire, punching a 3-inch hole in the wing, and smashing the canopy. Roberts suffered cuts and lacerations but landed safely aboard Princeton.
[9A] “Riding shotgun,” a term adopted from the Old West, meant acting as guard and protector of another ship exposed to enemy action and unable to protect itself, or, in minesweeping, the mine-destroying vessel itself.
[10B] For one month after this typhoon, the Seventh Fleet sighted and sank more than forty mines which had broken their moorings and drifted out to sea. It was one of these mines which caused the loss of Sarsi, a tug, and damage to destroyer Barton. Also, it was Typhoon Karen which caused the siege ships to temporarily leave the harbor for the safety of deeper water. This was the only lapse in the siege of Wonsan.
[11A] By photo interpretation, it was estimated that slightly more than 1,000 guns (75-mm. and larger), artillery emplacements, mortars (81-mm. or larger), and machine guns were positioned in the Wonsan area. Percentagewise, this number constituted approximately fifty-five per cent of the air and coastal defenses of North Korea. The majority of these were antiaircraft guns; approximately 160 of the enemy guns were able to shoot at the siege ships.
[12] Personal letter to authors, 10 September 1955.
[12A] Small cargo ship.

The Sea War in Korea

Notes

Chapter 13. On the Line

[1] The hydroelectric plants had been placed out of bounds early in the war: “Joint Chiefs of Staff in view of alarming situation which CINCFE has reported, authorized him (MacArthur) to undertake the planned bombing in Korea near the frontier including target at Sinuiju, the Korean end of the Yalu bridges, provided CINCFE at the time of receipt of message still considered such action to be necessary to the safety of his forces. He was not authorized, however, to bomb any powerplants on the Yalu River. . . ”; JCS despatch 7 November 1950 to CINCFE (summarized by General Collins to a Congressional subcommittee).

[1A] Interview, 7 January 1956.

[4A] Package containing survival gear.

[5A] It must be recalled that Suiho was only one of 13 power plants struck on 23 and 24 June. For these two days of attacks, the Navy flew 546 sorties; the U.S. Marines, 139. The U.S. Air Force communiqué of 2 July 1952 summarized the Suiho damage:

“The Suiho hydroelectric plant is unserviceable. Overall damage at Suiho installation was severe, although the dam itself was purposely left intact. The target lay on the North Korean side of the river and was attacked without any overflight of Manchurian territory. Serious damage to the Suiho generator and control house was caused by direct bomb hits. Several buildings were destroyed and others damaged near the plant. Other bomb bursts caused major damage in the transformer yard.”

[5B] In a congratulatory message to the Naval and Air Force pilots participating in the attacks, Lieutenant General O. P. Weyland, Commanding General, FEAF, said that the raids constituted a fitting climax to two years of coordinated and applied air power and “may be taken as a gentle hint of more to come if the Commies want it that way. . . . “

[7B] Pyongyang was again heavily attacked by Task Force 77 five weeks later, on 29 August 1952, in an operation named “All United Nations Air Effort.” This second raid was even larger (1403 sorties) than the one on 11 July. Two hundred and sixteen sorties from Boxer (CVG-2) and Essex (ATG-2) struck warehouses, gun positions, railroad cars, a rubber factory, and oil tanks. Seven Boxer aircraft were hit by the AA fire, but no pilots were lost. All targets were well covered.

[7C] ATG-1 had a second tour in the Korean theater aboard Boxer, commencing 12 May 1953.

[9] Interview, October 1955.

[10] Interview, 1 February 1956.

[12] A VT-fuzed bomb is one which bursts into hundreds of fragments close to the ground. It is a particularly good weapon for anti-personnel work.
[16] Interview, 17 July 1956.
[17A] This was the F9F5’s first appearance in the Korean War.
[19A] The fate of the pilot of this MIG is unknown. “Due to faulty plotting,” said VADM Clark, “the ships closest to this area regrettably failed to make a search for the MIG pilot. We didn’t pick him up.”
[20A] Russian trainer aircraft, nicknamed “Sewing Machines,” had been similarly used against the Germans in World War II.
[22] The Sun, Baltimore, June 17, 1953.
[23] Interview, 14 February 1956.
CHEROKEE STRIKES CUT ENEMY GUN POTENTIAL NEAR KUMWHIA BY NINETY PER CENT
SOUTH KOREAN AIRFIELDS
[1] Department of Defense press release 1088-54. These figures are described as “tentative final.”
# APPENDIX I

*Naval Commanders During Korean War*

## Commander Naval Forces Far East

- **VADM C. T. Joy** 26 Aug 49–4 June 1952
- **VADM R. P. Briscoe** 4 June 52–27 July 1953

## Commander Seventh Fleet (TF-70)

- **VADM A. D. Struble** 6 May 50–28 March 1951
- **VADM H. M. Martin** 28 March 51–3 March 1952
- **VADM R. P. Briscoe** 3 March–20 May 1952
- **VADM J. J. Clark** 20 May 52–27 July 1953

(Note: The above represents 56 changes of command among 13 Rear Admirals during 37 months of combat.)

### AMPHIBIOUS FORCE FAR EAST (TF-90)

- RADM I. N. KILAND: 24 Jan–3 Sep 1951
- RADM T. B. HILL: 3 Sep–8 Oct 1951
- RADM C. F. ESPE: 8 Oct 51–5 June 1952
- RADM F. X. McNERNEY: 5 June–21 Nov 1952

### FIRST MARINE AIR WING (TF-91)

- MGEN F. HARRIS: 25 June 50–29 May 1951
- BGENT J. C. CUSHMAN: 29 May–26 July 1951
- MGEN C. F. SCHILT: 27 July 51–11 Apr 1952
- MGEN C. C. JEROME: 11 Apr 52–8 Jan 1953
- MGEN V. E. MEGEE: 8 Jan 53–27 July 53

### BLOCKADE AND ESCORT FORCE (TF-95)*

- RADM J. M. HIGGINS: 23 June–23 July 1950**
- RADM C. C. HARTMAN: 25 July–12 Sep 1950
- RADM A. E. SMITH: 12 Sep 50–19 Feb 1951
- VADM W. ANDREWS, RN: 19 Feb–3 Apr 1951
- RADM A. E. SMITH: 3 Apr–20 June 1951
- RADM C. G. Dyer: 20 June 51–31 May 1952
- RADM J. E. GINGRICH: 31 May 1952–12 Feb. 53
- RADM C. E. OLSEN: 12 Feb 53–27 July 53

* On 3 April 1951, Task Force 95 was placed under 7th Fleet for direct operational control in Korean operations.

** Then "Japan-Korea Support Group." UN Blockade and Escort Force was first organized on 12 September 1950.
FIRST MARINE DIVISION

BGEN E. A. CRAIG  7 July 1950*–3 Sept 50
MGEN O. P. SMITH  25 July 50–25 Feb 1951
  5 Mar–25 Apr 1951
BGEN L. B. PULLER, Acting**  25 Feb–5 Mar 1951
MGEN G. C. THOMAS  26 Apr 51–10 Jan 1952
MGEN J. T. SELDEN  11 Jan 1952–Beyond 30 June 1952

* 1st Provisional Marine Brigade, date on which its formation was directed, began unloading at Pusan, 2 August 1950.
** While MGEN O. P. SMITH commanded IX Corps.

LOGISTIC SUPPORT FORCE (TF-92)*

CAPT J. M. P. WRIGHT  3 Apr 51–29 Feb 52
RADM B. B. BIGGS  29 Feb 1952–21 Nov 52
RADM F. X. McINERNEY  21 Nov 52–13 Feb 53
RADM M. E. MURPHY  13 Feb 53–27 Jul 53

* Activated 3 April 1951 and placed under operational control of Com7thFleet for Korean operations. Its formation combined into one force all ships of ComServRon 3 and ComServDiv 31 previously operating under Com7thFleet as TG-70.7 and TF-79, and under ComNavJap at TG-96.4.

FLEET AIR WINGS

KOREA

FLEET AIR WING ONE DETACHMENT JAPAN
(25 June to 4 Aug 1950)  CAPT Etheridge Grant

FLEET AIR WING SIX (Commissioned 4 August 1950)

CAPT J. C. Alderman, Acting  4–29 August 1950
CAPT J. M. Carson  29 August–9 October 1950
CAPT R. C. Bauer, Acting  9 October–8 November 1950
CAPT H. J. Dyson  8 November 1950–10 Nov 1951
CAPT J. D. Greer  10 November 1951–(16 Oct 52)*
CAPT A. D. Schwarz  (22 Apr 53)*–27 July 1953

FLEET AIR WING FOURTEEN

CAPT J. B. Paschal  (15 Oct 52)*–(22 Apr 1953)*

1 On 16 October 1952, FAW 14 relieved FAW 6.
2 On 22 April 1953, FAW 6 relieved FAW 14.

Sources for information on all four wings were: Historical Reports, PacFt Evaluation Group Reports, and BuPers Awards directives.

FORMOSA

FLEET AIR WING ONE

CAPT E. Grant  1 July 1950–2 March 1951
CAPT F. R. Jones, Acting  2–9 March 1951
CAPT L. T. Morse, Acting  9 March–4 April 1951
CAPT J. F. Greenslade  4 April 1951–16 June 1952
RADM T. B. Williamson (with addtl dy as 16 June 1952–(8 Sep 1952)*
  Com FAW-2, assumed 12 June)
CAPT T. O. Dahl  (7 Mar 1953)*–5 June 1953
RADM T. B. Williamson  5 June 1953–15 July 1953
RADM T. J. Hedding  15 July–27 July 1953

FLEET AIR WING TWO

RADM T. B. Williamson  (8 Sep 1952)*–7 March 1953

1 On 8 September 1952, FAW-2 relieved FAW-1.
2 On 7 March 1953, FAW-1 relieved FAW-2.

Glossary of Technical Terms and Abbreviations

AD  Skyraider-Douglas Divebomber
AD  Destroyer Tender
AE  Ammunition Ship
AF  Store Ship
AGC  Amphibious Force Flagship
AH  Hospital Ship
AK  Cargo Ship
AKA  Assault Cargo Ship
AKL  Cargo Ship—Light
AKS  Stores Issue Ship
AM  Minesweeper
AMS  Auxiliary Motor Minesweeper
ANGLICO  Air and Naval Gunfire Liaison Company
AO  Oiler
AOG  Gasoline Tanker
AP  Transport
APA  Assault Transport
APD  High Speed Transport
ARG  Repair Ship—Internal Combustion Engines
ARH  Repair Ship—Heavy Hull Damage
ARL  Repair Ship—Landing craft
ATF  Ocean Tug—Fleet
AV  Seaplane Tender
AVP  Seaplane Tender, Small
CA  Heavy Cruiser
CinCFE  Commander in Chief, Far East
CinCPacFlt  Commander in Chief, Pacific Fleet
CL  Light Cruiser
CMC  Commandant of the Marine Corps
CNO  Chief of Naval Operations
ComCarDiv  Commander Carrier Division
CO  Commanding Officer
COMNAVE—Commander Navy Far East
COMPHIBGRUONE—Commander Amphibious Group One
CTF  Commander Task Force
CVA  Aircraft carrier—Attack
CVE  Aircraft Carrier—Escort
CVL  Aircraft Carrier—Small
DD  Destroyer
DDE  Escort Destroyer
DDR  Radar Picket Destroyer
DMS  Destroyer Minesweeper
EUSAK  Eighth United States Army in Korea
FAFIK  Fifth Air Force in Korea
FEAF  Far East Air Force
FECOM  Far East Command

11 July 53  MAJ J. F. Volt (Exchange Duty with the 5th Air Force)  6 MIGs
20 July 53  MAJ T. M. Sellers (Exchange Duty with the 5th Air Force)  2 MIGs
§ Date of 5th and 6th kills; dates of first four not in historical records.

APPENDIX VIII

U. S. Navy Casualties in Korean War*

DEATHS

a. Killed in action  279
b. Died of Wounds  23
c. Missing in action and known or presumed dead  156

458 TOTAL

Wounded in action  1,576

Missing in Action (Of this number, 35 were returned to naval control after prisoner exchange)  9†

TOTAL CASUALTIES  2,043

* From DOD Press Release #1088—54 dtd 5 November 1954.
† Of these nine, six are possibly alive although the Reds deny they hold them. “... there are reports that they were paraded through the streets of Swatow, China after their plane was shot down by the Chinese in January 1953. The other three Navy “missing” are believed to be dead but sufficient evidence for a finding of presumptive death has not been found as of September 30th.” (1954)—Quoted from Defense Department press release, mentioned above.

### APPENDIX X

**Statistics on U. S. Naval Operations in Korea**

**A. Naval Air Combat Operations**

   (Of this total, 204,995 were offensive sorties; 44,160 defensive and 26,757 reconnaissance. The total figure does not include non-combat flights.)
2. Ordnance Expenditures by Navy/Marine aircraft:
   (a) Bombs (tons): 163,062 (178,399) *
   (b) Rockets (number): 267,217 (274,189) *
   (c) Ammunition (thousands of rounds): 68,608 (71,804) *

3. Damage inflicted on enemy (25 June 50–8 June 53)
   (a) Troops killed 86,265
   (b) Buildings destroyed 44,828
   (c) Locomotives destroyed 391
   (d) Railroad cars destroyed 5,896
   (e) Vehicles destroyed 7,437
   (f) Bridges (rail and road destroyed) 2,005
   (g) Tanks destroyed 249
   (h) Bunkers destroyed 20,854
   (i) Power plants destroyed 33
   (j) Supply dumps, shelters, stacks destroyed 1,900
   (k) Enemy vessels destroyed 2,464

4. Enemy aircraft destroyed by Navy/Marine Corps (25 June–31 May 53)
   (a) Aerial combat 23
   (b) Destroyed on ground 74

5. Navy Marine aircraft lost to enemy action (25 June 50–27 July 53)
   (a) Aerial combat 5
   (b) Anti-aircraft fire 559

B. Naval Surface Operations: (25 June 1950–31 May 53)
1. Shipboard ammunition fired
   (rounds—16” to small arms) 4,069,626

2. Damage inflicted on enemy:† June 50–June 52
   (a) Buildings destroyed 3,334
   (b) Vessels and small craft destroyed 824
   (c) Locomotives destroyed 14
   (d) Trucks destroyed 214
   (e) Tanks destroyed 15
   (f) Bridges destroyed 108
   (g) Supply dumps destroyed 93
   (h) Mines destroyed 1,535
   (i) Troops (Casualties) 28,566

3. U.S. Navy Ship Casualties:
   (a) Ships damaged 73
   (b) Ships sunk (4 minesweepers, 1 tug) 5

C. Military Sea Transportation Service‡ (June 50 to June 53)
1. Cargo (Measurement tons) 52,111,299
2. Passengers 4,918,919
3. Petroleum (Long tons) 21,823,879

* Figures in parentheses are estimates for period ending 27 July 53. Other figures are through 31 May 1953 only.
† Latest figures available. Figures when used in text are projected on basis of past operational reports. In all cases projections are conservative.
‡ Figures to, from and within the Far East.
Chapter 1. Korea, Doorstep of Strategy

[6] *Ibid.*, 214, 244. Such seizures were in violation of international law, of course, and Soviet Russia had pledged the prompt repatriation of Japanese prisoners at the Potsdam Conference in July 1945.
[12] GHQ, FECOM, MilIntelSec, GS, Allied Translator and Interpreter Sec (FECOM, ATIS), *Enemy Forces* (Interrogation Reports [InterRpt], Sup No. 4), 16.
[16] ROK, of course, denotes the Republic of Korea, and NK (North Korea) is the abbreviation usually applied to the self-styled People’s Democratic Republic of Korea at Pyongyang. Both sets of initials are used more often as adjectives than nouns. See the Glossary in Appendix A for definitions of other symbols and military terms found in text.
Chapter 2. Red Aggression in Korea

[2] Ibid.
[4] Ibid., 52–75.
[5] Ibid.
[7] Ibid.
[9] Ibid., 90–99. Communist chiefs preferred to work behind a screen of secrecy and deception, so that it was difficult to obtain accurate personal data. Not only did some of the NKPA war leaders have obscure origins, but they added to the difficulties of biographers by deliberately falsifying the record for propaganda purposes. It is to the credit of U.S. Army intelligence officers that they have managed to piece out this material from prisoner interrogations and captured enemy documents.

[20] Ibid.
[23] Ibid.
[25] The absence of a 4th Division is explained by an old Korean superstition. Because the symbol for that number resembled the ancient symbol for death, it was regarded as unlucky. Apparently the North Koreans managed to overcome this superstition, however, in numbering their units.

[35] Ibid.
[36] Ibid., No. 3, 29 Jul 50. Actually, as the report itself states, this figure is a meaningless statistic, and exceeds the real total by several hundred. It was the practice not to subtract missing-in-action casualties until 30 days after losses were reported. Also, casualty reports from far-flung subordinate units were received irregularly, and some of these undoubtedly were not available when this tally was made.

[12] MajGen Oliver P. Smith, Notes on the Operations of the 1st Marine Division during the First Nine Months of the Korean War, 1950–1951 (MS), 3–4. (Hereafter, O. P. Smith, Notes.) Among the most valuable sources of the present book are the Chronicle of the Operations of the 1st Marine Division During the First Nine Months of the Korean War, 1950–1951 (MS), (hereafter, O. P. Smith, Chronicle), and Notes prepared in typescript by the commanding general of the division. The Chronicle is a day-by-day account of planning, command decisions, and resulting events, while the Notes are an analytical review of the relative facts, statistics, and directives. Combining accuracy with a keen sense of historical values, the Marine general by his knowledge of shorthand was able to keep a fairly complete record in the field which he later checked with official reports.
[19] O.P. Smith, Notes, 18, 41.
[22] Ibid.; Col A. L. Bowser ltr to CMC, 11 Feb 55.
[28] See Appendix B for the build-up of the 1st Marine Division and Appendix C for the Task Organization.
[29] This account of the build-up of the 7th Marines is based on the summary in PacFlt Interim Rpt No. 1, XV:Zebra, pt. V.

The Inchon-Seoul Operation
Notes
Chapter 5. Embarkation and Assault

[2] O. P. Smith, Notes, 82. See v. I of this series for a detailed account of the Brigade in the second battle of the Naktong and the embarkation from Pusan.
[4] As a time-saving measure, it was decided to combat-load only the assault elements, allowing the other elements to go as organization loads. This was considered an acceptable risk in view of the enemy’s lack of effective air and submarine forces.
[6] See Appendix D for a list of supplies and equipment to be embarked in assigned shipping, as prescribed by 1st MarDiv Embarkation Order 1–50 of 31 Aug 50.
[10] Ibid. Colonel Ely actually did embark with his Special Operations Company and make the approach, but the landing was called off because of his last-minute decision that too great a distance had to be covered in rubber boats.
[11] Ibid. It later developed that the 32d Infantry, first regiment of the 7th Infantry Division ashore, did not land until D-plus 3.
[12] See Appendix D.
[18] Ibid.
[23] 1st MarDiv SAR, Annex Queen; and O. P. Smith, Notes.
[24] The following narrative is derived from 1st MarDiv SAR, Annexes Queen Queen and Oboe Oboe; 1st MAW SAR; 1st MarDiv C/S Journal, 15–20 Sep 50; Taplett interv, 25 Aug 54; Maj R. A. [31] 1st MarDiv, SAR, Annex Queen Queen; O. P. Smith, Notes, 255–256.
Chapter 11. The Fight for Yongdungpo

[2] Unless otherwise noted, the story of 1/5’s fight is derived from 1st MarDiv SAR, Annex Queen Queen.
[3] Ibid.; and Capt. P. F. Pedersen memo to authors, 30 May 55.
[7] Ibid.; and Myers interv, 1 Feb 55.
[9] 2/1 SAR; 1st MAW SAR, Annex Jig; Easy; and Cunliffe interv, 24 Aug 54.
[10] Owing to the crude design, the top of the wooden box mine must protrude above the road for best effect. Although the Communists sometimes concealed the projections with debris, Marines usually had no difficulty in spotting them.
[15] Rice bags filled with dirt commonly were used by the NKPA for barriers in place of sandbags.
[17] Ibid.; and 2/1 SAR.
[18] 2/1 SAR; Sutter-Codispoti interv, 25 Jan 55; and Cunliffe interv, 24 Aug 54.
[20] 7th InfDiv (USA) Opn Rpt, in Inclusions to 7th InfDiv War Diary for Sep 50.
[21] 1st MarDiv SAR, Annex Peter Peter; Maj R. H. Barrow interv, 17 Aug 54; and LtCol J. Hawkins ltr to CMC, 21 May 55.
[22] Ibid.; and Fenton ltr, 1 Jun 55.
[23] Ibid.; and Bates interv, 27 Aug 51.
[24] The account of this counterattack is taken from: 1st MarDiv SAR, Annex Peter Peter; 2/1 SAR; Sutter-Codispoti interv, 25 Jan 55; Cunliffe interv, 24 Aug 54; and CMH Citation for PFC W. C. Monegan, Jr.
[25] Marine losses were surprisingly small, although the exact number cannot be determined. In the whole course of 20 September, 2/1 sustained four KIA and 32 WIA, but these figures included losses during the Marine advance after the NKPA counterattack.
[27] Ibid.; and Capt D. A. Rapp interv, 18 Nov 54, with comments by Capt E. A. Bushe.
[28] 1st MarDiv SAR, Annex Peter Peter; and 7th InfDiv OpnO 2.
[29] Though not provided for in Fleet Marine Force T/O, the “supporting arms center,” a provisional facility for coordination modeled after the regimental SAC, was a favorite with many battalion commanders in the field.
[30] The following narrative is taken from: Bates interv, 27 Aug 51; Barrow interv, 17 Aug 54; and Captains F. B. Carlon and J. M. McGee interv, 9 Feb 55; Hawkins ltr 21 May 55; and Maj R. P. Wray ltr to CMC, 30 May 55.
[31] Barrow interv, 17 Aug 54; and SSgt C. O. Edwards interv, 12 May 54.

[8] JCS msg 92801, 27 Sep 50; Truman, Memoirs, II, 360; MajGen Courtney Whitney, MacArthur, His Rendezvous with History (New York, 1956), 397. Commenting on the JCS authorization Gen MacArthur stated, “My directive from the JCS on 27 September establishing my military objective as ‘. . . the destruction of the North Korean Armed Forces’ and in the accomplishment thereof authorizing me to ‘. . . conduct military operations, including amphibious and airborne landings or ground operations north of the 38th parallel in Korea. . .’ made it mandatory rather than discretionary . . . that the UN Forces operate north of that line against enemy remnants situated in the north. Moreover, all plans governing operations north of that Parallel were designed to implement the resolution passed by the UN General assembly on 7 October 1950, and were specifically approved by the JCS. Indeed, the military objectives assigned by the JCS, and the military-political objectives established by said resolution of the UN could have been accomplished in no other way.” Gen D. MacArthur letter (ltr) to MajGen E. W. Snedeker, 24 Feb 56.

[12] US Ambassador, England msg to Secretary of State, 3 Oct 50; Truman, Memoirs, II, 361–362. The information was forwarded to Tokyo but MacArthur later claimed that had never been informed of it. Military Situation in the Far East. Hearing before the Committee on Armed Services and the Committee on Foreign Relations United States Senate Eighty-second Congress, First Session, To Conduct an Inquiry into the Military Situation in the Far East and the facts surrounding the relief of General of the Army Douglas MacArthur from his assignments in that area (Washington, 1951, 5 vols.), (hereafter MacArthur Hearings), 109.

Chapter 2. The Wonsan Landing

[1] 1stMarDiv Embarkation Order (EmbO) 2-50, 6 Oct 50; Smith, Notes, 394.

[9] ComPhibGruOne “Operations Report,” 10. SCAJAP is the abbreviation for Shipping Control Authority, Japan. Under this designation were American ships lent to Japan after World War II, of which many were recalled during the Korean War to serve as cargo vessels.

[12] These totals were authorized: C-Rations for five days; individual assault rations for one day; POL for five days; Class II and IV supplies for 15 days; and five units of fire (U/F). Ibid.; 1stMarDiv Administration Order (AdmO) 13–50, 8 Oct 50. A unit of fire is a convenient yardstick in describing large quantities of ammunition. It is based on a specific number of rounds per weapon.

[17] CG 1stMarDiv msg to All Units, 0752 11 Oct 50; Smith, Notes, 373.

[21] “. . . Division [1stMarDiv] Advance Parties were flown to Wonsan in accordance with a definite plan which materialized just before we set sail from Inchon. As a matter of fact the personnel for these parties and even some of the jeeps were already loaded out and had to be removed from the shipping prior to our sailing.” Col A. L. Bowser, Comments, n. d.

[23] X Corps Operation Instruction (OI) 11, 14 Oct 50; Smith, Notes, 385.

[24] According to General Smith, “The reason for issuing 1stMarDiv OpnO 17–50 was to provide for an administrative landing in sheltered waters just north of Wonsan where there would be easy access to the existing road net. The ship-to-shore movement provided for in 1stMarDiv OpnO 16–50 was retained intact. This plan [OpnO 17–50] had to be dropped when it was found that Wonsan Harbor was completely blocked by mines, and that it would be much quicker to clear the approaches to the Kalma Peninsula where we eventually landed . . . 1stMarDiv dispatch [1450 24 Oct] cancelled both 1stMarDiv OpnOs 16 and 17 and provided for an administrative
landing on the Kalma Peninsula as directed by CTF 90.” Gen O. P. Smith ltr to authors, 3 Feb 56. Hereafter, unless otherwise stated, letters may be assumed to be to the authors.

[26] Ibid., VI, 1088–1089; Smith, Notes, 404; Karig, Korea, 301. See also ADVATIS Rpt 1225 in EUSAK WD, 24 Oct 50.

[42] Unless otherwise stated this section is based on: 1stMAW HD, Oct 50; 1stMAW SAR, annex K (hereafter MAG–12 SAR), 1, appendix G (hereafter VMF–312 SAR), 3, 5–6; and Smith, Notes, 433–441.

[51] Ibid., 20–32.

[52] The following summary of the Wake Island meeting is primarily based on: Gen O. N. Bradley, Comp., Substance of Statements Made at Wake Island Conference on October 15, 1950 (Washington, 1951); and Truman, Memoirs, II, 364–367. These accounts are strongly objected to in MacArthur ltr, 24 Feb 56. For a differing

[53] By way of comparison, MacArthur paid tribute to the Marine Corps’ highly technical system of tactical air employment: “Ground support is a very difficult thing to do. Our marines do it perfectly. They have been trained for it. Our own Air and Ground Forces are not as good as the marines but they are effective.”

[62] 1stMarDiv *OpnPlan 4–50*, 22 Oct 50. “G–3 (Col Bowser) and G–4 (Col McAlister) landed by boat at Wonsan through a very narrow swept channel on the 23rd or 24th of October. Advance Parties of the Division were contacted at this time and a reconnaissance of the entire Wonsan area was made to select and mark administrative assembly areas for units of the Division. Included in this reconnaissance was the St. Benedict Abbey, which was selected as the assembly area for the 7th Marines in view of its projected employment to the north shortly after landing.” Bowser Comments.

[64] 1stMarDiv SAR, annex PP (hereafter 1stMar SAR), 4; and Smith, *Notes*, 407–409. The orders covering the actual debarkation of troops were contained in CTF 90 msgs to CTG 90.2, 0240 and 0910 23 Oct 50; CTG 90.2 msg to CTE 90.22, 1328 25 Oct 50; and CG 1stMarDiv msg to subordinate units, 1450 24 Oct 50. The order to land was given in CTF 90 msg to CTG 90.2, 0707 25 Oct 50.

[65] “At the time of the administrative landing we thought that we might as well use the planned ship-to-shore movement for scheduled waves in order to avoid making a new ship-to-shore plan. In this way we were able to execute by referring to our original plan [OpnO 16–50] for the assault landing without issuing an entire new order.” Bowser Comments.

The “Bouncing Betty” type of antipersonnel mine was equipped with a spring which sent it several feet into the air to explode with maximum destructive effect.

General Ruffner, Chief of Staff of X Corps, later commented: “Personally, I always had a feeling that the Marines did a masterful job at Majon-ni. To begin with, it was a very tough assignment and in the second place I always felt that it broke up what remained of organized units in the North Korean Army that would otherwise have given us a tremendous amount of trouble in our backyard at Wonsan. A lot of determined enemy action on our perimeter at Wonsan would have been most disconcerting, troublesome, and unquestionably slowed down our subsequent movement to the north.” MajGen C. L. Ruffner ltr to MajGen E. W. Snedeker, 13 Jan 56.
MAJON-NI PERIMETER

[5] CG’s Diary in X Corps WD, 2 Nov 50. Smith, Notes, 463-464. The Special Operations Company was a commando-type U.S. Army organization, generally employed in such operations as raids and reconnaissance. The strength, weapons, and organization depended on the mission.
[9] Smith, Notes, 534; 1stMarDiv PIR 4; 1stMarDiv SAR, 30. These prisoners were later interrogated by Gen Almond himself and formed the basis of the first official report of Chinese intervention. Almond Comments, 21 Jun 56; FECOM msg C 67881, 31 Oct 50.
[17] Ibid., xiv-xv.
[19] The first blows between the Marines and the Chinese Communists took place not in Korea, but along the Peiping-Tientsin highway as early as October, 1945.
[21] Unless otherwise noted, this section is based on the following sources: GHQ, FECOM, Order of Battle Information, Chinese Third Field Army (1 Mar 51) and Chinese Fourth Field Army (7 Nov 50); 164-MISDI, ADVATIS, and ADVATIS FWD rpts in EUSAK WDs, passim; X Corps PIRs; 1stMarDiv PIRs; 1stMarDiv SAR, 30; G-2 SAR, 16-18; Far East Command, Allied Translator and Interpreter Service (ATIS), Enemy Documents, Korean Operations, passim; Fleet Marine Force Pacific (FMFPac), Chinese Communist Forces Tactics in Korea, 5-11; Maj R. C. W. Thomas, “The Chinese Communist Forces in Korea,” The Army Quarterly, Oct 52 (digested
in *Military Review*, xxxii, no. 11 (Feb 53), 87; LtCol Robert F. Rigg, *Red China’s Fighting Hordes* (Harrisburg, 1951); Walker: *China Under Communism*.

[25] There is some evidence of an attempt to supply troops from division stocks. See ADVATIS 1245 in EUSAK WD, 4 Dec 50, and 164-MISDI-1176 in *Ibid.*, 1 Nov 50. Normal CCF doctrine, however, held that a division should be committed to combat for about six days and then withdrawn to replenish its supplies and replace casualties. This procedure, naturally, definitely limited the extent of an attack by the CCF and prevented the maintenance of the momentum for an extended offensive. MajGen D. G. Barr testimony in *MacArthur Hearing*, 2650; Bowser Comments, 23 Apr 56.

[34] *Ibid*.

[35] Bowser Comments, 23 Apr 56.

[36] The above description was derived from S. L. A. Marshall, “CCF in the Attack” (EUSAK Staff Memorandum ORO-S-26), 5 Jan 51.

[38] These weaknesses, however, were confined to the early months of CCF participation in the Korean conflict. Following the peace talks in the summer of 1951—an interlude with the enemy exploited for military purposes—the Chinese gradually built up to an equality with UN forces in mortars and artillery.

[20] Smith, Notes, 552–553.
[21] X Corps OpnO 6, 11 Nov 50.
[22] X Corps Special Report on Chosin Reservoir, 27 Nov to 10 Dec 50, 9; X Corps WDSum, Nov 50, 5.
[24] MajGen O. P. Smith ltr to Gen C. B. Cates, 15 Nov 50. Gen Almond comments: “I am very mindful of the skepticism of General Smith in all of the supply plans that X Corps conceived and I sympathize with his viewpoint very thoroughly. However, in my mind there was always the assistance to be gained by air supply either drop or landing them and the counterpart of that, the evacuation to be expected by plane from the air field that we were to build.” Almond ltr, 22 Jun 56.
[26] This section is based on: X Corps Special Report, Chosin Reservoir, 9; and X Corps WDSum, Nov 50, 5–6, 51–52.
[27] 1stMarDiv OpnO 21–50, 13 Nov 50. The orders for the seizure of Hagaru and the 5th Mar’s movement of a battalion to Koto-ri had been issued in CG 1stMarDiv FragO, 2130 12 Nov 50. Hagaru was occupied without a
fight at 1300 on the 14th. CO 7thMar msg to CG 1stMarDiv, 1437 14 Nov 50.

[28] Smith, Notes, 592–594.

[29] Bowser Comments.

[31] Smith, Notes, 614; LtGen F. Harris ltr, 24 Aug 56.

[33] 1stTkBn SAR, 18; 1stEngrBn had been ordered to prepare the MSR for tank use on 6 Nov. CG 1stMarDiv msg to CO 1stEngrBn, 1530 6 Nov 50.

[34] CG 1stMarDiv msg to CG X Corps, 1229 18 Nov 50; Partridge interv, 25 Jun 51, 39–40.

[66] Smith ltr, 15 Apr 56. See also Smith, Chronicle, 79, 82, 87.
Chapter 8. Crisis at Yudam-ni

[3] The transport priority given the move of the 5th Marines prevented H&S and Weapons (—) Companies from moving to Yudam-ni. Fox Company moved to Toktong Pass on the 27th while How Battery of 3/11 remained at Hagaru to support Fox Company. The two rifle companies of 2/7 at Yudam-ni were assigned to 1/7 for operational control. MajGen H. L. Litzenberg Comments, 19 and 20 Jul 56; LtCol W. D. Sawyer Comments, 7 Sept 56.
[4] Col Roise states that he was attached to the 7th Marines in the absence of the Commanding Officer, 5th Marines. The record does not indicate a formal attachment. Col Litzenberg appears to have acted in his capacity as senior officer present. See Col R. L. Murray Comments, n. d.; Col H. S. Roise Comments, n. d.; LtCol H. J. Woessner Comments, 13 Nov 56.
[5] 7thMar SAR, 20; 2/5 SAR, 14; 2/5 HD, Nov 50, 8–9; Litzenberg Comments, 19 and 20 Jul 56; Sawyer Comments, 7 Sep 56. Roise Comments.
[8] Cooke had taken over the company on 12 November, and Lieutenant H. H. Harris reverted to ExecO.
[9] Unless otherwise stated this section is derived from: 7thMar SAR, 20–21; RCT 7 URpt 5; 3/7 SAR, n. p.; 2/5 SAR, 15–18; 2/5 HD, Nov 50, 9; 1stMarDiv SAR, annex SS, appendix A (hereafter 1/11 SAR), 8–9; VMF-312 SAR, 15; CO 7thMar msg to CG 1stMarDiv, 1945 27 Nov 50; LtCol M.A. Hull Comments, n. d.
[10] Feehan, on 15 Nov 50, had relieved LtCol Ransom M. Wood who had commanded 1/11 since its arrival in Korea with the 1st ProvMarBrig on 2 Aug 50.
[11] While returning to the rear to bring up reinforcements, George Company’s commander, Capt Cooney, was mortally wounded. LtCol M. E. Roach Comments, 24 Jul 56.
[15] LtCol Lockwood had relieved Maj Sawyer as CO 2/7 on 5 Nov.
[16] Four M-4 tanks of the Provisional Tank Platoon had attempted to come through from Hagaru but gave up the attempt when all slid off the road. Later on the 27th one M-26 succeeded in completing the trip, but the Chinese cut the road before the others could follow. 1stTkBn, SAR, 21.
[17] 7thMar SAR, 42–43; 5thMar SAR, 45–50; 1stMarDiv SAR, annex FF (1stServBn); 1stMTBn SAR, 9; Roach Comments, 24 Jul 56.
[18] Unless otherwise noted, this section is derived from 7thMar SAR, 21, n. p.; RCT 7 URpt 5; 2/5 SAR, 17–18; 2/5 HD Nov 50, 9; CO 7thMar msg to CG 1stMarDiv, 2253 27 Nov 50, 1000 and 1250 28 Nov 50; Capt Samuel Jaskilka, “Easy Alley,” Marine Corps Gazette, xxxv, no. 5 (May 51), 15-18; Maj S. Jaskilka Comments, n. d.
[20] Unless otherwise stated the sources for this section are: 7thMar SAR; RCT 7 URpt 6; 3/7 SAR, n. p.; 2/5 HD, Nov 50, 9–10; 2/5 SAR, 18–19; CO 7thMar msg to CG 1stMarDiv, 0810 and 1000 28 Nov 50; Jaskilka, “Easy Alley,” 18-19; Capt M.P. Newton Comments, n. d.
[21] LtCol Harris, son of MajGen Field Harris, had relieved Maj Roach on 11 Nov.
[22] ATIS, Enemy Documents: Korean Operations, Issue 84, 38. Except where otherwise noted, this section is based on: Ibid., 26–43; LtCol R. D. Taplett interv, 3 May 56; 1stLt R. T. Bey ltr to Maj A. C. Geer, 26 Jun 52; RCT 7 URpt 5; CO 7thMar msg to CG 1stMar Div, 1000 28 Nov 50; 7thMar SAR, 21; CO 5thMar msg to CG 1stMarDiv, 0730 28 Nov 50; 3/5 SAR, 13–14; Hull Comments; Capt J. H. Cahill ltr, 3 Jul 56. The ATIS translation contains a number of detailed and apparently accurate critiques of small unit actions. An earlier translation is to be found in ATIS, Enemy Documents: Korean Operations, Issue 66, 87-134.

[28] This description of the third night on Fox Hill is derived from McCarthty, “Fox Hill,” 21.
The Chosin Reservoir Campaign
Notes

Chapter 10. Hagaru’s Night of Fire

[1] This section is derived from: 1stMar HD, Nov 50, 2; 3/1 SAR, 26 Nov–15 Dec 50, 2–3; Col T. L. Ridge ltr, 22 Sep 55, and Comments, 7 Jun 56; LtCol E. H. Simmons Comments, n. d.

[5] D/Engr SAR.

[11] This section is based on Ridge, Notes, and Comments, 7 Jun 56; Narrative of Capt R. E. Carey, 3 Feb 56. The need for NCOs in rifle platoons was so pressing that the former intelligence chief, TSgt James E. Sweeney, had been transferred from the S–2 Section just before the move to Hagaru.

[12] The possibility of an attack from the East Hill area was considered, since Chinese forces were known to be east of the hill. Col Ridge states “I assume[d] that the build up of such forces would not allow their capability of a strong attack.” Ridge Comments, 7 Jun 56.

[13] This section, unless otherwise noted, is based upon the following sources: 3/1 SAR 26 Nov–15 Dec 50; Ridge, Notes; Maj A. J. Strohmenger ltr to Col T. L. Ridge, 17 Aug 55; Corley narrative; Narrative of Maj J. R. Fisher, n. d.; Simmons Comments.

[15] CG Diary, in X Corps WD, 28 Nov 50; X Corps WDSum, Nov 50, 16.

[17] This was made official by CG 1stMarDiv msg to Subordinate Units, 1625 28 Nov 50.

[19] “CO 2/7 and his headquarters were not given a specific mission because it was assumed that his uncanceled order from CO 7th Marines would require his further efforts in the relief of Fox Company.” Ridge Comments, 7 June 56.

[20] This section, unless otherwise noted, is based on: 3/1 tel to CO 1stMar, 2100 29 Nov 50; Ridge, Notes; Simmons interv, 1 Dec 55 and Comments; Fisher narrative; Corley narrative; Narrative of Capt R. L. Barrett, Jr., 9 Aug 55; Capt J. H. Miller ltr to authors, 10 Oct 55; and Sgt K. E. Davis ltr to authors, 20 Oct 55.

[22] Partridge interv, 25 Jun 51, 45. Ridge Comments, 7 Jun 56, questions whether the floodlights were on during the whole attack.

[23] Smith, Chronicle, 93.

[28] Ibid., 209–210; CG 1stMarDiv msg to CG X Corps, 1445 29 Nov 50.
[29] Narrative of Capt N. A. Canzona, 28 Mar 56.
[31] Strohmenger ltr, 17 Aug 55.
[32] Corley and Barrett narratives.
[33] POW reports stated that the Chinese assault force in this sector had been one regiment. CIC tel to G–2 1stMarDiv, 1715 29 Nov 50.
[34] Capt R. E. Jochums ltr, 16 Dec 55; Myers Comments.
[36] Myers Comments state: “High ground was taken. But [we] could not control movement of the enemy on the reverse side. As a result [we] could not stay on top.”
[37] Myers Comments.
[38] Canzona narrative, 28 Mar 56. Col Brower points out that the Chinese positions were defiladed from artillery fire. Col J. H. Brower Comments, n. d.

Notes
Chapter 11. Task Force Drysdale

[1] This section is based upon the following sources: 1stMar SAR, 13–14; 1stMar Urpt (S–3) 13, 1–2; VMF-312 SAR, 16; LtCol D. M. Schmuck interv, 2 Apr 56; Maj W. L. Bates, Jr., interv by HistDiv HQMC, 16 Mar 53; Col D. M. Schmuck Comments, n. d.

[5] The remainder of this section is based upon: 2/1 SAR, 12–13; HqBn Urpt 12. LtCol J. C. McClelland, Jr., ltr, 21 Feb 56; Col A. Sutter Comments, n. d.

[8] Unless otherwise noted, the sources for this section are the same as the preceding, plus: Statement of Capt M. C. Capraro, 12 Feb 51; MSgt E. F. Grayson, Sgt E. J. Keeton, and Cpl E. McCandell interv by Capt K. A. Shutts, 17 Feb 51; Capt M. C. Capraro interv by Capt Shutts, 11 Feb 51; CWO D. R. Yancey interv by Capt Shutts, 11 Feb 51; Sgt C. W. Dickerson, Cpl C. W. Williams, Sgt M. L. Estess, SSgt J. B. Nash, and TSgt C. L. Harrison interv by HistDiv HQMC, 25–31 Jul 51; Col H. S. Walseth interv by Capt Shutts, 26 Jan 51; LtCol J. N. McLaughlin Comments, 5 Nov 56. Nash, Harrison, Dickerson, Estess, and Williams were among the men captured with McLaughlin. They escaped from Chinese imprisonment several months later.

[9] Maj McLaughlin was one of the TTU instructors who had transferred to the X Corps Staff. He was an Assistant G–3 and Corps liaison officer with 1stMarDiv.

[10] Distances are approximate, since it is understandable that estimates made by participants in the darkness varied a great deal.

[11] LtCol Chidester and Maj Eagan were still missing at the end of the conflict, when the exchanges of prisoners took place. From the information that LtCol McLaughlin has been able to secure, it appears that both officers died of wounds prior to reaching a prison camp. McLaughlin Comments, 5 Nov 56.

[12] Ibid. A postscript to the Hell Fire Valley fight was written the following spring in front-page headlines announcing the escape from a CCF prison camp of 17 enlisted Marines and a soldier. Among them were five NCOs who contributed firsthand accounts for these pages. Of the 44 Marines listed as MIA, a total of 25 either escaped or survived their prison camp experiences and were liberated in Operation Big Switch.

[13] This section, except where otherwise specified, has been derived from the following sources: 3/1 SAR 26 Nov–15 Dec 50, 4–5, 8–9; 1stTkBn SAR, 24–25; Ridge, Notes; Sitter ltr, 4 Oct 55; Simmons interv, 22 Mar 56; Jochums ltr, 16 Dec 55; Canzona narrative, 27 Mar 56; Carey narrative, 3 Feb 56.

[16] Smith, Chronicle, 95; X Corps WD Sum, Nov 50, 16–17; CG’s Diary Extracts in X Corps WD, 30 Nov 50.

[17] Col E. H. Forney, Transcript of Special Report, Deputy Chief of Staff, X Corps, 19 August, 21 December
1950, 3.
[18] Smith, *Chronicle*, 95. These decisions were confirmed by CG X Corps msg X 13522, 1 Dec 50.
[19] X Corps *OpmO* 8, 30 Nov 50. See also X Corps *WD Sum, Nov 50*, 16–17; and CG’s Diary Extracts in X Corps *WD* 30 Nov 50.
[24] Sources for the balance of this section are as follows: Smith, *Chronicle*, 97–100; 3/1 *SAR* 26 Nov–15 Dec 50, 5–6; Ridge, *Notes*; Sitter ltr, 4 Oct 55; Canzona narrative, 8 Mar 56; Pendas ltr, 18 Dec 55; Carey ltr, 14 Feb 56; Capt E. L. Meeker interv, 10 Apr 56.
[26] The sources for the operations of Task Force Faith, unless otherwise noted, are: Statement of Capt Edward P. Stamford, n. d., 2–15; Statement of Dr. Lee Tong Kak, n. d.; Capt Martin Blumenson, USA, “Chosin Reservoir,” in Capt Russell A. Gugeler, *Combat Actions in Korea*, 63–86; X Corps *WD Sum, Nov 50*, 33–34. Chinese accounts of these actions may be found in ATIS *Enemy Documents: Korean Campaign*, Issue 84, 7–15 and 20–25. LtCol Faith had distinguished himself in World War II as aide to MajGen Matthew B. Ridgway, then commanding the 82d Airborne Div.
[27] VMF(N)–542 *SAR*, sec C, 1–2; VMF(N)–542 HD, Dec 50, 1–2; 1stMAW *SAR*, annex J, (hereafter MAG–33 *SAR*), sec B, 5, 8–9. See also descriptions of air support in 1stLt H. S. Wilson interv by Capt J. I. Kiernan, Jr., 29 Jan 51; 1stLt K. E. Kiester interv by Capt Kiernan, 25 Jan 51; Capt C. P. Blankenship interv by Capt Kiernan, 26 Jan 51; and 1stLt W. R. Lipscomb interv by Capt Kiernan, 18 Feb 51.
[28] The courageous Army officer was awarded posthumously a Congressional Medal of Honor.
[31] *Ibid.* Estimates of the number of soldiers evacuated by air from Hagaru as casualties run as high as 1500, but no accurate records were kept. Any such total, moreover, would have to include men from the Army units stationed at Hagaru as well as survivors of the Task Force Faith disaster.
[38] Smith, *Notes*, 1001–1004.

The Chosin Reservoir Campaign

Notes

Chapter 14. Onward from Koto-ri

[3] Bartley ltr, 7 Feb 56. This section is also based on 1stMar *SAR*, 18–24, and the 2/1 *SAR*, 15–18.
[4] Not so fortunate was 2/31, which lost 5 KIA and 10 WIA expanding the perimeter to the south on 3 Dec. CO 1stMar msg to CG 1stMarDiv, 1850 3 Dec 50.
[15] 1stMarDiv *OpnO* 26–50, 7 Dec 50. The task organization remained as it was during the move from Hagaru to Koto-ri. For the regimental orders, see 1stMar *OpnO* 16–50, 7 Dec 50; 5thMar *OpnO* 44–50, 7 Dec 50; and 7thMar *Frag O*, 7 Dec 50. Other sources for this section are: 11thMar *SAR*, 9; and Smith, *Notes*, 1062.
[16] CG 1stMarDiv msg to COs 1st, 5th, 7th Mars, 1stTkBn, 1100 8 Dec 50.
[21] 1/5 *SAR*, 19; S-3 5thMar tel to G-3 1stMarDiv, 1800 8 Dec 50; Maj Stewart tel to CO 5thMar, 1940 8 Dec 50; 5thMar *SAR*, 34; Smith, *Notes*, 1072.
[22] G–3 1stMarDiv tel to CO 1stEngBn, 1325 8 Dec 50; G-3 1stMarDiv tel to G-3 X Corps, 1450 8 Dec 50, in
According to the terms of the Armistice of 27 July 1953, the remains were delivered to the Americans after the cease-fire.

The Marine Provisional Tank Platoon had reached Koto-ri with only two M4A3 tanks, one of which had to be cannibalized. Then the platoon was disbanded and integrated with its remaining M4A3 into B and D companies. All the other tanks in the column were M-26s.

This description of the ambush at the rear of the tank column is based upon: Capt E. C. Hargett, interv by HistBr, G-3, 14 Dec 53; Maj W. Gall, 1stLt R. B. Grossman, 1stLt F. R. Kraince, 1stLt E. C. Hargett, 2dLt C. E. Patrick, and 2dLt D. W. Sharon, interv by Capt K. A. Shutts, 11 Feb 51; MCB Study, II-C-111–113; Smith, Notes, 1087; HqBn URpt 14; Williams Comments, 26 Dec 56; Maj E. C. Hargett Comments, 17 Oct 56.

Developed by the scientists of the Naval Field Medical Research Laboratory at Camp Lejeune, the ordinary utility jackets contained thin plates of fiberglass which would stop most shell or grenade fragments. Five hundred jackets had been air-shipped to the 1st Marine Division for field tests, but other supplies had a higher priority.
during the Chosin Reservoir campaign and only the 50 garments sent to Recon Company were worn in combat. Lynn Montross, “Development of Our Body Armor,” *Marine Corps Gazette*, xxxix, no. 6 (Jun 55), 10–16. The full story of the development of body armor, one of the most important tactical innovations of the Korean conflict, will be told in the next two volumes of this series.

[48] CO 1stTBn tel to G-3 1stMarDiv, n.t., 11 Dec 50, gives tank personnel losses as 4 MIA.

The Chosin Reservoir Campaign

Notes

Chapter 15. The Hungnam Redeployment

[3] *Newsweek*, xxxvi, no. 24 (11 Dec 50) 11. “Such quotations,” comments General MacArthur, referring to the excerpts from *Time* and *Newsweek*, “certainly do not reflect the mood of the American public at the time, but rather the emotional reaction of irresponsible writers. . . . Neither [of the two news magazines] had the slightest access to the basic information and factors which involved the decisions and operations of our government and its higher military commanders. . . . The unreliability of these nonprofessional estimates of the situation is indeed eloquently demonstrated by comparing them with the actual military reports by the commands involved.” Gen D. MacArthur ltr to MajGen E. W. Snedeker, 17 Oct 56.

[4] The Division Embarkation Section began revision of its standby embarkation order on 10 December and the following day was able to issue Embarkation Order 3–50. EmbO memo to HistO, subj: Historical Diary, 19 Dec 50.

[7] ComNavFE endorsement on CG FMFPac ser 8432, 6 Dec 50. “Although it was not necessary for me to exercise my command functions,” commented General Shepherd, “I had been orally directed to do so by both Admirals Radford and Joy if I considered it expedient. As I recall, I was directed to take charge of the naval phase of the evacuation of Hungnam as Representative of the Commander, Naval Forces, Far East. In compliance with these instructions I exercised close overall supervision of this phase of the operation and made suggestions to both Admiral Doyle and General Almond relative to the embarkation and evacuation of the Marine Forces from Hungnam.” Shepherd ltr, 25 Oct 56.

[10] Unless otherwise stated, the sources for this section are the same as for the last.

[14] Smith, *Notes*, 1126. A detailed account of the arrival of the 1st Marine Division at Pusan and Masan will be found in the first chapter of Volume IV of this series.

[16] General MacArthur’s comments are as follows: “This, again, is a non-professional estimate belied by the facts and the viewpoints of all senior commanders present . . . . It was the purpose of Red China to overwhelm
and annihilate, through a ‘sneak’ attack, the Eighth Army and X Corps by the heavy assault of overwhelming forces of a new power, not heretofore committed to war, against which it knew or rightly surmised there would be no retaliation. This plan was foiled by our anticipatory advance which uncovered the enemy’s plot before he had assembled all of his forces, and by our prompt strategic withdrawal before he could inflict a crippling blow of a ‘Pearl Harbor’ nature. . . . This was undoubtedly one of the most successful strategic retreats in history, comparable with and markedly similar to Wellington’s great Peninsula withdrawal. Had the initiative action not been taken and an inert position of adequate defense assumed, I have no slightest doubt that the Eighth Army and the X Corps both would have been annihilated. As it was, both were preserved with practically undiminished potential for further action. I have always regarded this action, considering the apparently unsurmountable difficulties and overwhelming odds, as the most successful and satisfying I have ever commanded.” MacArthur ltr, 17 Oct 56.

[18] The material in this section is derived from: MAG-12 SAR, annex C, 10; VMF-214 SAR, annex F, 23; 1stMAW SAR, annex J, appendix S (VMF-323), 4, 9, 11; 1stMAW SAR, 5–7; Maj H. D. Kuokka Comments, n. d.

[20] The remainder of this section, unless otherwise noted, is based upon: Smith, Notes, 1149–1161, 1222.

[23] ComNavFE msg to CinCPacFlt, 0858 1 Oct 50; CinCPacFlt msg to ComNavFE, 2245 2 Oct 50; CG 1stMAW msg to CO VMR-152, 0620 12 Oct 50; VMF-152 SAR, 6; Col R. R. Yeaman Comments, 19 Sep 56 and 6 Nov 56. By 25 December when VMR-152 returned to Navy control it had flown 729,790 miles in Korean lifts and carried 8,068,800 pounds of cargo, 234,000 pounds of mail and 11,314 passengers, including 4276 casualties.

[26] VMO-6 SAR, 20; LtCol V. J. Gottschalk, Transcript of Informal Remarks at HQMC, 17 May 51.

[27] Smith, Notes, 1146-1149. See Appendix E for a day-by-day accounting of Marine casualties.

[29] A CCF army consisted of three or four divisions and therefore might be considered generally the equivalent of a U.S. corps. This account of CCF units and movements is derived from the MCB Study, II-C-116-125, which in turn is based on an analysis of CCF prisoner interrogations and captured enemy documents. The Board, consisting of senior officers, was given the mission in 1951 of preparing “an evaluation of the influence of Marine Corps forces on the course of the Korean War, 4 Aug 50–15 Dec 50.”

[30] Translations of CCF documents referred to in this section are found in HQ 500th Military Intelligence Group, Document 204141, “Compilation of Battle Experiences Reported by Various in their Operation Against U.S. Forces in Korea.” Among the units covered are the 20th, 26th, and 27th Armies.

[31] 1stMarDiv PIR 47, encl. 1. The four armies referred to by the POW were the 20th, 26th, 27th, and 30th. Actually the 30th Army did not exist, as one of its divisions had been attached to each of the other three armies.

[33] Quotations in this section, except when otherwise noted, are from the MCB Study, 11-C-125-127.

[35] Time, lviii, no. 9 (26 Feb 51).

[36] Gen Douglas MacArthur, CinCUNC, 11th Report of the Operations in Korea of United Nations Forces, 31 Jan 51. See Appendix H for transcript of Presidential Unit Citation awarded to the 1stMarDiv and the Distinguished Unit Citation awarded to the 1stMAW.

[3] Sources for this section are EUSAK Cmd Rpt, Jan 51, 4–5, 7, 9, 27, 62–65.
[8] The term “scramble” in military aviation parlance refers to an expeditious takeoff in response to an emergency call or an alert. With highly trained personnel, it is a pattern rather than a panic.
[16] Material relative to Marine replacements has been derived from FMFPac HD, Dec 50 and Jan 51.
[17] The balance of this section is derived from the Dec 50 and Jan 51 historical diaries of VMF–352, VMR–152, 1st MAW, and FMFPac.
[18] This section is based on the 1st MAW and MAG–33 HDs of Jan 51; Fifth Air Force History (hereafter to be designated FAF), Dec 50 and Jan 51; AHS–72, 35–37; EUSAK Cmd Rpt, Jan 51, Sec II, 12, 63, 64–65; PacFlt Interim Rpt No. 2, II, 969, 1062; Mobile Construction Battalion Two (hereafter MCB–2) Report of Activities for Jan 51; Col T. J. Noon, interv of 5 Jun 58.
[22] Ibid., 13.
[23] The day had not yet dawned when the hydrogen bomb would have a much greater potentiality for frightfulness.
The East-Central Front
Notes
Chapter 3. The Pohang Guerrilla Hunt

[4] Units of these armies, it may be recalled, were not identified again in the CCF order of battle before the middle of March 1951. Until that time, the possibility of these enemy troops being used for a surprise stroke had to be taken into consideration.
[6] This section, unless otherwise stated, is based on the January historical diaries of the following organizations: 1st MAW; MAG-33; MAG-12; VMF-312; VMF-214; VMF-323; VMF(N)-513; VMF(N)-542; MWSS-1; FMFPac. Another source is PacFlt Interim Rpt No. 2, II, 969.
[8] 5thMar WD, Jan-Feb 51.
[10] The remainder of this section, except when otherwise noted, is based on 1stMAW HD, Jan 51 and VMF(N)-513 HD, Jan 51. See Glossary in Appendix A for explanations of aircraft designations.
[15] Organized from units of RCT-1 on 25 January when Colonel Puller was promoted to the rank of brigadier general. On that date Colonel McAlister assumed command of RCT-1.
[19] Ibid.
[21] References to the 1st KMC Regt in this chapter are based on Smith, Notes, 1450-1458, and Col C. W. Harrison, Narrative, n.d., 1-15. Previous periods of KMC attachment to the 1stMarDiv are described in Vols I, II, and III of this series.
[22] What would normally have been the 4th KMC Battalion was designated the 5th because the Korean word for 4th is the same as the word for death and is considered unlucky.

Notes
Chapter 9. Renewal of the Attack

[1] Sources are 1stMarDiv HD, Aug 51, 3–5; Col B. T. Kelly’s contemporary “Notes on my Service in Korea, 14 Apr–13 Sep 1951” (hereafter Kelly, Notes).
[2] This section, except when otherwise specified, is based on 1stMarDiv HD, Aug and Sep 51; X Corps Cmd Rpt, Sep 51; 2/7 and 3/7 HD, Aug and Sep 51; Kelly, Notes; Col G. P. Groves, ltr of 8 Apr 58.
[5] This section, except when otherwise specified, is based on the following sources: EUSAK Cmd Rpt. Sep 51, 38–53; X Corps Cmd Rpt, Sep 51, 9–12; 1stMarDiv HD, Sep 51, 8–14; 7th Mar HD, Sep 51; 1st, 2d, and 3d Bns of 7th Mar, HDs for Sep 51.
[8] PacFlt Interim Rpt No. 3, VI, 6–6, 6–7; 1stMarDiv SAR, Jun 51.
[11] Sources for this section are as follows: EUSAK Cmd Rpt, Sep 51, 35–53; X Corps Cmd Rpt, Sep 51, 9–12; 1stMarDiv HD, Sep 51, 10–16; 1st Marines HD, Sep 51; 1/1, 2/1, and 3/1 HD, Sep 51; Class “C” Rpt, Employment of Assault Helicopters, 1–6; Lynn Montross, Cavalry of the Sky (New York, 1954), 159–162, (hereafter Cavalry of the Sky).
[12] CMC ltr to CO MCAS, Quantico, 3 Dec 47.
[14] Auxiliary airstrips in Korea had an “X” designation and fields in the “K” category were major installations. Those in proximity to U.S. Army centers were designated “A.”
[16] Sources for this section are the same as for the previous section except when otherwise noted.
[19] Ibid., Pfc Edward Gomez citation, 38.
[20] On 14 September, LtCol Horace E. Knapp, Jr., the previous commanding officer of 1/1, was severely wounded while reconnoitering forward positions. He was evacuated, and the executive officer, Major Edgar F. Carney, Jr., commanded until LtCol John E. Gorman assumed command at noon on the 16th.
[22] Cavalry of the Sky, 162.
[23] 1st Marine Division losses of 33 killed and 235 wounded during the three-day attack were incurred for the most part by the 5th Marines in general and 2/5 in particular. Enemy casualties of this period were reported as 972 KIA (265 counted) and 113 prisoners.
The East-Central Front

Chapter 10. The New Warfare of Position

Notes

[1] EUSAK Cmd Rpt, Sep 51, 47. Other sources for this chapter are comments and criticisms by the following officers, all but one of whom are U.S. Marines. Ranks in each instance are those held at the time of interview or correspondence.

[5] Ibid., 7–9 and Plate No. 4.

[6] Ibid., 5–6, and Plate No. 1.

[8] EUSAK Cmd Rpt, Sep 51, 47.

[10] The balance of this section is based on the 1stMarDiv HD, Sep 51, 18–24, and on 1/1 and 3/1 HD, Sep 51.

[11] Sources for the action on Hill 854 are the 1/1 and 3/1 historical diaries for September 1951.

[13] Sources for this section, unless otherwise specified, are the following: DivReconCo HD, 1stShorePartyBn HD, HMR–161 HD, Sep 51; Type “C” Spec Rpt, “Employment of Assault Helicopters,” 7–13; Cavalry of the Sky, 162–165.

[16] Ibid.

[22] The remainder of this section, unless otherwise specified, is based on the 1stMarDiv HD, Oct 51, 3–12.

[23] This account of the raid is derived from the 1/7 HD, Oct 51, and the 1stMarDiv HD, Oct 51, 7.

[30] Ibid., 32.

[31] The remainder of this section, unless otherwise specified, is derived from the 1stMarDiv HD, Nov 51, 1–20.
The initials TOT stand for Time on Target—an artillery order calling for all guns to time their firing so that projectiles will hit the target simultaneously.

The source for the remainder of this section, unless otherwise stated, is the 1stMar-Div HD, Dec 51, 1–17.

Two of the original 15 HRS–1 aircraft had been damaged in accidents, but one was later restored to action with parts cannibalized from the other.
Chapter 11. Winter Operations in East Korea

[2] Ibid., 1, 6, 7.
[4] Sources for this account of the raid, unless otherwise specified, are Maj J. B. Ord, Jr., intervs of 3 Sep and 24 Oct 58; and Appendix VI, 1stMarDiv HD, Jan 52, a five-page special action report of the operation.
[5] Later in the chapter this innovation will be described.
[6] Sources for this section, unless otherwise indicated, are the 1stMarDiv HD, Jan, Feb, and Mar 52, and PacFlt Interim Rpt No. 4, IX.
[7] Ibid.
[9] Sources for this section, except when otherwise specified, are the following: ACofS, G–4, Rpts of 2 Jan, 29 Feb, and 15 May 52 (in G–4 files, Headquarters Marine Corps); Rpt of Test (Project 671) by MCEB, Quantico, Va., 3 Jan 1952; LtCol G. A. Hardwick, ltr of 30 Jun 1954; LtCdr F. J. Lewis (MSC) USN, ltr of 21 Jun 1954.
[13] Ibid.
[14] Sources for the helicopter operations described in this section are the following: HMR–161, HD, Jan and Feb 51; Cavalry of the Sky, 176–175. Veterans of the Korean conflict will recall that “changie-changie” meant “swap” in the pidgin English serving as a conversational medium between Americans and Orientals. Hence it was applicable to a relief operation.
[15] This section, unless otherwise specified, is based upon the 1stMarDiv HD, Feb 52, 1–12; and PacFlt Interim Rpt No. 4, IX.
[19] The battleship Wisconsin had a main battery of 16–inch guns with a maximum range of about 23 miles. The heavy cruiser St. Paul had a main battery of 8-inch guns with a maximum range of 16 miles.
[21] 1st MarDiv HD, Feb 51, App No. 5. Other sources for this chapter are comments and criticism by the following officers: (Ranks listed below are those held at time of interview or comment.) Gen. G. C. Thomas; LtGen J. T. Selden; BrigGen S. S. Wade; BrigGen C. R. Allen; Col J. H. Tinsley; Col F. B. Nihart; Col J. F. Stamm; Col B. T. Hemphill.
Chapter 12. The Move to West Korea

[1] Wilford G. Burchett: This Monstrous War (Melbourne, 1953): J. Waters, 121–122. Burchett was a Communist free lance correspondent for left-wing newspapers. He wrote several books and articles lauding the Communist cause in the Korean War.

[6] Ibid.

[9] Previous chapters discuss the background and development of these innovations.

[13] Sources for this section are 1stMarDiv HD, Mar 52, 9–10; 1st MT Bn HD, Mar 52; 7th MT Bn HD, Mar 52.

[14] Col T. A. Culhane, Jr., Comments, 4 Mar 59, and others.

[15] Ibid.

[16] Col F. B. Nihart, Comments regarding author James Michener’s visit to 1stMarDiv, ltr of 23 Mar 59.

Operations in West Korea

Notes

Chapter 1. Operations in West Korea Begin

[3] China did not attend. Instead, it received an advance copy of the proposed text. President Chiang Kai-shek signified Chinese approval on 26 July. A few hours later, the Potsdam Declaration was made public. Foreign Relations of the United States: The Conferences at Cairo and Teheran, 1943 (Department of State publication 7187), pp. 448–449; The Conference of Berlin (The Potsdam Conference), 1945, v. II (Department of State publication 7163), pp. 1278, 1282–1283, 1474–1476.

[4] The 7th Marines was on its way to Korea at the time of the Inchon landing. The brigade, however, joined the 1st Division at sea en route to the objective to provide elements of the 5th Regimental Combat Team (RCT).

[9] The 1st KMC Regiment was again attached to the Marine Division on 17 March 1951 and remained under its operational control for the remainder of the war. CinCPacFlt Interim Evaluation Rpt No. 4, Chap 9, p. 9–53, hereafter PacFlt EvalRpt with number and chapter.

[10] Command responsibility of 1st MAW changed on 29 May 51 when Brigadier General Thomas J. Cushman succeeded General Harris.

[12] Col Franklin B. Nihart comments on draft MS, Sep 66, hereafter Nihart comments.
[13] Marine commanders and staff officers involved in the planning and execution of the division move were alarmed at the amount of additional equipment that infantry units had acquired during the static battle situation. Many had become overburdened with “nice-to-have” items in excess of actual T/E (Table of Equipment) allowances. Col William P. Pala comments on draft MS, 5 Sep 66, hereafter Pala comments.
[14] Heavy equipment and tracked vehicles were loaded aboard LSDs and LSTs which sailed from Sokcho-ri to Inchon.
[16] Unless otherwise noted, the material in this section is derived from: 1stMarDiv ComdD, Mar 52; CIA, NIS 41B, South Korea, Chap I, Brief, Section 21, Military Geographic Regions, Section 24, Topography (Washington: 1957–1962); Map, Korea, l:50,000, AMS Series L 751, Sheets 6526 I and IV, 6527 I, II, III, and IV, 6528 II and III, 6627 III and IV, and 6628 III (prepared by the Engineer, HQ, AFME, and AFME/8A, 1952–1954).
[17] The two other reasons were the weakness of the Kimpo defenses and abandonment of plans for an amphibious strike along the east coast. Montross, Kuokka, and Hicks, USMC Ops Korea, v. IV, p. 253. Planning for a Marine-led assault had been directed by the EUSAK commander, General Van Fleet, early in 1952. The Marine division CG, General Selden, had given the task to his intelligence and operations deputies, Colonel James H. Tinsley and Lieutenant Colonel Gordon D. Gayle. On 12 March General Van Fleet came to the Marine Division CP for a briefing on the proposed amphibious assault. At the conclusion of the meeting the EUSAK commander revealed his concern for a possible enemy attack down the Korean west coast and told the Marine commander to prepare, in utmost secrecy, to move his division to the west coast. Lynn Montross, draft MS.
[18] Unless otherwise noted, the material in this section is derived from: PacFlt EvalRpt No. 4, Chap. 9; 1stMarDiv, 1stMar, 5thMar, 7thMar, 11thMar ComdDs, Mar 52; 1st KMC RCT Daily Intelligence and Operations Rpts, hereafter KMC Regt UnitRpts, Mar 52; Kimpo ProvRegt ComdDs, hereafter KPR ComdDs, Mar-Apr 52.
[20] The following month the 1st Amphibian Tractor Battalion would be added to the four regiments on line, making a total of five major units manning the 1stMarDiv front. It was inserted between the Kimpo and 1st KMC regiments.
[27] Ibid.

Chapter III discusses in detail the construction of bunkers.

One of those wounded was Corporal Duane E. Dewey, a machine gunner. He was wounded twice, in fact, the second time from an exploding enemy grenade which he had rolled upon to shield two nearby comrades. Dewey somehow survived, and the following March, after release from the Marine Corps, he went to the White House where he received the Medal of Honor, the first to be presented by the new President, Dwight D. Eisenhower. (Duane E. Dewey Biog. File)

Culhane ltr.

LtGen Merrill B. Twining ltr to Deputy Asst CofS, G–3, HQMC, dtd 19 Aug 54.

Unless otherwise noted, the material in this section is derived from: PacFlt Eval Rpt No. 4, Chap. 9; 1stMarDiv ComdD, Apr 52; KMC Regt UnitRpt 46, dtd 17 Apr 52.

Colonel Flournoy became regimental CO on 10 April, succeeding Colonel Wade.

Company A, 1st Amphibian Tractor Battalion had been attached to the Kimpo Provisional Regiment since 31 March and Company B was supporting MAG–33 at Pohang.

Unless otherwise noted, the material in this section is derived from: PacFlt Eval Rpt No. 4, Chaps. 9, 10; 1st MAW, HMR-161, VMO-6 ComdDs, Apr 52; Lynn Montross, Cavalry of the Sky—The Story of U.S. Marine Combat Helicopters (New York: Harper & Brothers, 1954), hereafter Montross, SkyCav, quoted with permission of the publishers.

PacFlt EvalRpt No. 4, 10–73.

PacFlt EvalRpt No. 4, p. 9–50.

Rotary wing aircraft assigned were two types, HTL–4 and HO3S–1. The former is a two-place, plastic-dome Bell product; the latter, the first helicopter operated by the Marine Corps, is an observation-utility, three-passenger Sikorsky-made craft. HistBr, G–3 Div, HQMC, Marine Corps Aircraft, 1913–1965, Marine Corps Historical Reference Pamphlet (Washington: 1967 ed.) pp. 34, 38.

PacFlt EvalRpt No. 4, pp. 10–2, 10–108. This record was established despite the fact that the Marine squadron, with 10 jets, flying out of K-3 (Pohang) was more than 150 miles further from most targets than the other major photo unit, the 15th Tactical Reconnaissance Squadron of the 67th Tactical Reconnaissance Wing, based at K–14 (Kimpo).
One artillery weapon, in particular, as well as the Marine tanks habitually drew the fury of Chinese counter-
fire. The heavy destructive power of the U.S. Army 8-inch, self-propelled howitzers firing on tough Chinese
defensive positions, generally brought down on their own emplacements a rain of enemy shells, so sensitive were
enemy commanders to these hard-hitting weapons. *Pala comments.*

BGen Frederick P. Henderson ltr to CMC, dtd 6 Sep 66, hereafter *Henderson ltr II.*

The medical officer’s report to CinCPac noted that a vast
improvement “in the spaces allocated for the care of the sick and wounded” had been made.

Flights were not made in heavy fog. Test use by the Marine Corps Equipment Board of some
of the equipment needed to navigate under conditions of reduced visibility was nearing the end of its development
cycle.

2/5 SECTOR
15-16 APRIL 1952

[2] General Van Fleet, CG, EUSAK since April 1951, had advocated a program in which South Korean troops would be rigorously trained to take over an increasingly greater part of the UNC defense efforts in Korea. See Mark W. Clark, *From the Danube to the Yalu* (New York: Harper & Brothers, 1954), p. 185, hereafter Clark, *Danube to Yalu*, quoted with permission of the publishers.

[3] Unless otherwise noted, the material in this section is derived from: *PacFlt EvalRpts* No. 4, Chap. 9; No. 5, Chap. 8; West Coast Island Defense Element ComdDs, Feb–Oct 52, hereafter WCIDE ComdD, with date; East Coast Island Defense ComdDs, Jan–Oct 52, hereafter ECIDE ComdD, with date; Col William K. Davenport ltr to CMC, dtd 27 Jun 52, Subj: Type D Report of duty as Commander West Coast Island Defense Element (CTE 95.15); Cagle and Manson, *Sea War, Korea*; Field, *NavOps, Korea*.

[4] Evidence of Chinese concern about such rear area attacks is apparent in the countermeasures taken: “Order of Battle reports indicated that a total of three North Korean Corps and three Chinese Communist Armies were engaged in coastal defense operations on the east and west coasts of North Korea.” *PacFlt EvalRpt*, No. 5, p. 8–79.

[6] First Lieutenant Joseph S. Bartos, Jr., a former All-American football great, also distinguished himself during the Yang-do action. His cool, resourceful, and valiant leadership during the two-day defense earned him the Silver Star Medal. BGen Frank M. Reinecke comments on draft MS, dtd 25 Aug 66.

[9] Colonel Davenport later pointed out that the enemy could easily employ high-powered rifles against Ho-do occupants, that resupply posed problems to his command, and that at times the enemy could even walk to Ho-do over the winter ice. Col William K. Davenport ltr to HistBr, G-3 Div, HQMC, dtd 7 Sep 66.

[10] A T/E is a listing of equipment that a unit needs to accomplish its mission. Tables vary according to type of unit and its mission.

[11] Commenting on logistical matters, Colonel Kenneth A. King, who during 1952 commanded first the WCIDE and then 1st CSG, was of the opinion that the main difficulty lay “not in getting requisitions filled, but in getting delivery of what was approved” due to the fact Marines were not assigned to processing of requisitions and delivery of supplies. He had high praise for the concern and assistance of 1st MAW units as well as Captain G. L. G. Evans (RN) of HMS *Ocean* and various other United Kingdom ship captains. Colonel King further commented that “for the benefit of Marines who may have to serve in isolated areas, and I imagine this often prevails in Vietnam today, it cannot be emphasized too strongly that the Marine Corps should be very reluctant to leave the support of any of its elements, no matter how small, to other services or nationalities.” Col Kenneth A. King ltr to Hd, HistBr, G-3 Div, HQMC, dtd 24 Aug 66.

[12] Unless otherwise noted, the material for this section has been derived from: *PacFlt EvalRpts* No. 4, Chap. 10; No. 5, Chap. 9; 1st MAW ComdDs, May–Aug 52; MAG–12 ComdDs, Jun, Aug 52; Robert F. Futrell. *The

[14] Two months earlier, FAF had begun “a program for training pilots in close air support techniques. . . . Initially, all training missions for this division were flown by Air Force aircraft.” The flights, not in response to specific requests, were assigned by the G-3, I Corps. CG, 1stMarDiv ltr to CG, FMFPac dtd 23 May 52, Subj: CAS sum for pd 1 Jan–30 Apr 52, cited in PacFlt EvalRpt No. 4, p. 10–196. These flights ceased just before the ones from MAG–12 began. 1st MarDiv ComD, May 53, p. 4. A 1st MarDiv staff officer, who had observed the frequency of General Jerome’s visits to the division CP to discuss the new close air support training program, has credited the two Marine CGs for their “great amount of coordinated personal aggressiveness in bringing this about.” Col Robert A. McGill comments on draft MS, Sep 66, hereafter McGill comments.

[19] As an Air Force spokesman noted, “. . . the AN/MPQ–2 radars introduced into Korea in January 1951 were Strategic Air Command bomb scoring radars and not tactical equipment. This would explain the large vans.” Robert C. Futrell, Historian, Hist Studies Br USAF Hist Div, comments on draft MS, dtd 12 Oct 66. Dr. Futrell authored the definitive unclassified history of Air Force operations in Korea, previously cited as USAF, Korea.

[20] These letters indicate first, the type of installation; next, the kind of electronic equipment; and finally, its purpose. In this case, M-mobile “ground installation, P-radar, and Q-intended for a combination of purposes. The figure indicates the model number in the developmental history of the equipment.

[23] General Mark W. Clark had succeeded Ridgway as UN Commander on 12 May 1952. Ridgway was to take over as the new Supreme Allied Commander, Europe, 1 June, replacing General of the Army Dwight D. Eisenhower, who was returning to the United States.

[30] The AU is the attack version of the Marines’ famed World War II fighter, the F4U Corsair.

[33] Ibid., p. D-4.

[34] Futrell, USAF, Korea, p. 616.

[35] TACC is the senior agency for controlling all tactical aircraft and air warning functions; the TADC performs similar functions in an area controlled by the TACC. JCS, Dictionary of United States Military Terms for Joint Usage (Short title: JD), JCS Pub. 1 (Washington, 1964), p. 141, hereafter JCS, JD.

[36] VMF(N)-513 ComD, Jun 52, App II, p. 5. Mention of a flak analysis program first appeared in the March 1952 records of MAG-33. Aircraft losses on interdiction strikes (the program was not applicable to CAS
missions) dropped for the next several months. When Lieutenant Foley transferred to the night squadron, he took his system with him and had it put into operation there. LtCol Kenneth S. Foley interv by HistBr, G–3 Div, HQMC, dtd 24 Mar 66.

[38] Pala comments; Nihart comments. Both of these officers, the former artillery, the latter infantry, recall flak suppression firing late in 1951 or early in 1952 when the division was on the eastern front. Colonel Nihart pointed out, in addition, that “such expedients and new tactics went on for some time before getting into the regimental commander’s reports.”

[40] LtCol Gerald T. Armitage interv by HistBr, G–3 Div, HQMC, dtd 15 Aug 61.

[42] An SOP, standing operating procedure, is a set of instructions for conducting operations that lend themselves to established procedures. JCS, JD, p. 133.

[43] With respect to the effect of enemy fire on attack aircraft, the CO, MAG–33 later commented that “Antiaircraft artillery has a direct deterioration effect on pilot accuracy, particularly with regard to care in getting on target and doing a precise job.” CO, MAG–33 ltr to CG, 1st MAW, dtd 25 Jul 52, quoted in PacFlt EvalRpt No. 5, p. 9–76.

[44] Henderson ltr II.

[46] Henderson ltr II.

[47] Unless otherwise noted, the material in this section is derived from: PacFlt EvalRpts No. 4, Chap. 9, No. 5, Chap. 8: 1stMarDiv ComdDs, Apr–Jun 52; 5thMar ComdDs, Apr–Jun 52; 7thMar ComdD, Jun 52; 11thMar ComdDs, Apr–May 52; 1/5 ComdD May 52; 1/7, 2/7 ComdDs, May 52.

[50] LtCol Bruce F. Hillam comments on draft MS, dtd 31 Aug 66.

[51] A type of proximity fuze, the V.T. depends upon an external source, such as an electronic signal, rather than the force of ground impact, to detonate the shell at a predetermined height over the target.

[53] The 7th Marines advanced to the line to relieve the 5th Marines in the center sector on 11 May.

[54] The artillery regiment had earlier developed the “box-me-in” fires for outpost defense. If under heavy attack the outpost could call for these preplanned close-in fires that completely surrounded the position. In event of radio or wire communication failures, the outpost could call for “box-me-in” or “Fire VT on my position” by signal flare or other pyrotechnic device. Henderson ltr II.

[55] This support squad itself was later ambushed. The heavy casualties it received prevented its further participation in the raid. KMC Regt UnitRpt 53, dtd 4 May 52.

[56] This position, the site of the mid-April battle, along with several others had been abandoned when the division withdrew its OPLR late in April. Infantry regiments dispatched frequent patrols in an attempt to discourage the enemy’s incorporating the hill into his own OPLR.

[57] 1/5 ComdD, May 52, p. 10.

[58] Lieutenant Colonel Nihart believed that the heavy enemy shelling, which had caused the early retirement of his battalion, had been possible either because Chinese mortar and artillery positions were so well camouflaged that intelligence had not located them or else so well protected that UNC counterbattery fire had failed to destroy them. Nihart comments.
This force and its mission at various times were known as “Task Force Jig” or “Operation Snatch.”

Maj Kenneth A. Seal comments on draft MS, dtd Oct 66. At the time of this attack, Lieutenant Seal commanded the 2d Platoon, A/1/7.

Two Marines killed in the action were later posthumously awarded the Medal of Honor. Corporal David B. Champagne, A/1/7, was responsible for saving the lives of the three other members of his fire team. When a grenade fell in their midst, Champagne grabbed it to hurl back to CCF positions. Just as it cleared his hand, the grenade exploded, showering lethal shrapnel into the body of the 19-year-old Rhode Islander. One of the C/1/7 reinforcement Marines, Private First Class John D. Kelly, had conducted a one-man assault against a dug-in Chinese machine gun crew. Though painfully wounded during this encounter, he disposed of the enemy, then reduced a second weapons bunker. While firing point-blank into a third position the brave Marine was fatally wounded. This 1/7 action was the first in the western Korea defense to result in multiple Medal of Honor awards.

Unless otherwise noted, the material in this section is derived from:

PacFlt EvalRpts No. 4, Chap. 9, No. 5, Chap. 8; 1stMarDiv ComdD, Jun 52; 5th Mar ComdDs, Apr, Jun 52; 7thMar ComdDs, May–Jun 52; 1/7 ComdD, May 52; KMC Regt UnitRpt 120, dtd 30 Jun 52.

BGen Austin R. Brunelli ltr to Hd, HistBr, G-3 Div, HQMC, dtd 13 Sep 66, hereafter Brunelli ltr. The division chief of staff during more than half of 1952, Colonel Brunelli later observed that the “school produced more effective patrolling and . . . contributed to reducing our casualties.”

Ibid.

Unless otherwise noted, the material in this section is derived from:

PacFlt EvalRpt No. 4, p. 9–33.

Brunelli ltr.

The leadership, bravery, and unselfish devotion to duty earned for Sergeant Shuck the Medal of Honor, an award made to 14 Marines during the fighting in West Korea. During the earlier part of the war, 28 Marines had received the Medal of Honor. Of these, 17 were awarded posthumously. Five Navy hospital corpsmen, all attached to the 1st Marine Division, also earned the MOH. These awards, with one exception, were for heroism under combat conditions during the 1952–1953 period of the Korean War.

In the TOT technique, participating units time their initial volleys to ensure that their shells arrive on the target at the same time.

Among division commanders in the I Corps area, General Selden was not alone in his grave misgivings of this method of gaining information about the Chinese. Major General A. J. H. Cassels, 1st Commonwealth Division, shared with the Marine commander the belief that such operations were too costly for the intended purpose.

1st TkBn ComdD, Jul 52.

The material in this section is derived from the 1stMarDiv ComdD, Jul 52.

Unless otherwise noted, the material in this section is derived from PacFlt EvalRpts No. 4, Chaps. 9, 10; No. 5, Chaps. 8, 9.
The KSC was a ROK quasi-military organization for logistical support of the UNC. Personnel were drafted from those rejected for Army service. Each KSC unit had a cadre of ROK officers and enlisted. All types of labor except personal services were performed by these Koreans. During its period in western Korea, the 1st Marine Division was supported by the 103d KSC Regiment of 5,222 men. CG, 1stMarDiv, Civ Afrs and KSC, pp. 8–9.

Col Harry D. Clarke ltr to Hd, HistBr, G–3 Div, HQMC, dtd 1 Sep 66.

This included employment of the 60-inch searchlight for night illumination, maintenance of boats for debris removal, and operation of the M–4 ferry. Other preparations by the division, of a non-engineer nature, included positioning of 13,000 life-saving floatation devices for use by frontline troops should they become shut off from planned evacuation.
Chapter 3. The Battle of Bunker Hill

[1] Unless otherwise noted, the material in this section is derived from: *PacFlt EvalRpt* No. 5, Chap. 8; 1stMarDiv ComdDs, Jul-Aug 52; 1stMar, 2/1, 3/1 ComdDs, Aug 52; 1st MAW ComdD, Aug 52.
[9] “The Chinese attack by ‘shovel’ proved effective and difficult to combat. They burrowed forward almost continuously, even under direct observation. Every foot of advance provided added opportunity to attack Marine COPs with greater impunity. While this activity possibly provided Marines with target practice in both small arms and mortars, these CCF working parties in a narrow trench 7 to 10-feet deep probably took very few casualties.” Col William R. Watson, Jr. ltr to Hd, HistBr, G-3 Div, HQMC, dtd 18 July 67.
[14] Since bunkers were in everyone’s mind and frontline units were heavily involved in the bunker-construction program, it is felt likely “someone in G-2 arbitrarily assigned the name.” Col Gerald T. Armitage ltr to Hd, HistBr, G-3 Div, HQMC, dtd 6 July 67, hereafter Armitage ltr.
[15] Two days earlier Colonel Layer had taken over the command from Colonel Flournoy.
[16] Lieutenant Colonels Gerald F. Russell and Anthony Caputo, respectively, commanded 3/7 and 2/7 at this time.
[18] Frequently cartographers use elevations for names of hills. Heights on the Korean maps are in meters, and many of these hills derive their name (i.e., number) from their elevation. For changing meters to feet, the conversion factor 3.28 is used.
[19] A saddle, the low point in the crest line of a ridge, is much in appearance like the side view of a riding saddle.
[20] Unless otherwise noted, the material for this section is derived from: 1stMarDiv ComdD, Aug 52; 1stMarDiv G–3 Jnls, 9–11 Aug 52; 1stMar, 1/1, 2/1, 3/1 ComdDs, Aug 52.
[22] Unless otherwise noted, the material for this section is derived from: Encl (1) to CG, FMFPac ltr 0762/161 over A9 to CMC, dtd 25 Nov 52, Subj: “Summary of 1stMarDiv Sit from 20 July–20 Oct 52,” hereafter FMFPac, *1stMarDiv Sum, Jul–Oct 52*; 1stMarDiv, IstMar, 2/1, 1st TkBn ComdDs, Aug 52.
[23] Recalling the Marine seizure of Bunker, the G-3, 1stMarDiv at that time expressed the view that “taking these places was easy but holding them under heavy Chinese artillery and mortar fire was extremely costly. Our counterbattery fire was ineffective because we were limited to from one to eight rounds per tube per day,
depending on the weapon, by Army order, because of an ammunition shortage.” Col Russell E. Honsowetz MS comments, dtd 15 Jun 67, hereafter Honsowetz ltr II.

[24] Initially the diversionary attack against Siberia and subsequent assault against Bunker had been made by Marines of 2/1 since Siberia was in the 2/1 sector. On 12 August operational control was transferred to 3/1 as the fighting continued at Bunker, in the area of responsibility of the left battalion sector.

[25] From the division reserve, Captain Anthony J. Skotnicki’s company, I/3/7, was en route to take over the I/3/1 sector. As an interim measure, Captain Byron J. Melancon’s Company H extended its MLR positions to the right to cover the Company I area.

[26] Unless otherwise noted, the material for this section is derived from: 1stMarDiv ComdD, Aug 52; 1stMarDiv G–3 Jnl, 12–13 Aug 52; IstMar, 1/1, 3/1 ComdDs, Aug 52.

[27] A characteristic of 4.5-inch rocket launcher is the discharge of 24 rounds in quick succession, called a ripple. A battery of six launchers can fire 144 rounds on target in less than a minute.

[30] During the fighting on the 13th, Hospitalman John E. Kilmer was mortally wounded while “administering aid to the wounded and expediting their evacuation.” Though wounded by enemy mortars, he continued his life-saving efforts until another barrage took his life. He had died shielding a wounded Marine undergoing emergency treatment. Hospitalman Kilmer, a distant cousin of poet Joyce Kilmer, became the first of four corpsmen serving with the 1st Marine Division to be awarded the Medal of Honor during the trench warfare in western Korea.

[31] Unless otherwise noted, the material in this section is derived from: IstMarDiv, IstMar, 3/1, 1st TkBn ComdDs, Aug 52.

[33] Unless otherwise noted, the material in this section is derived from: PacFlt EvalRpt No. 5, Chaps. 8, 9; 1stMarDiv ComdD, Aug 52; 1stMarDiv G–3 Jnls, 4–16 Aug 52; 1st Mar, 1st TkBn ComdDs, Aug 52; MAGs–12,–33 ComdDs, Aug 52.

[34] Two days later, Colonel Lambrecht, flying a F3D twin jet night fighter with his radar operator, Second Lieutenant James M. Brown, disappeared while on a night flight. The last known position of the plane was over the Yellow Sea, 50 air miles west of Pyongyang. At about that point the aircraft faded from the radar screen. Efforts to re-establish communications failed. It was reported that observers at sea sighted a crash and explosion at about this same time. Extensive search failed to uncover any trace of the Marines or their aircraft.

[36] BGen Frederick P. Henderson ltr to Hd, HistBr, G–3 Div, HQMC and MS comments, dtd 20 Jun 67, hereafter Henderson ltr III.

[37] Armitage ltr and comments, p. 12.

[38] Many of these targets were CCF choke points, dumps, and weapons emplacements. Targets were identified and confirmed by a highly developed system that employed air spotting, aerial photographic interpretation, artillery evaluation, and POW interrogation.

[39] The use of fighting lights to illuminate targets for tank gunners had been undertaken in July, but the results were inconclusive, owing to failure of one of the bulbs of the two lights tested. 1st TkBn ComdD, Aug 52, App. VI, Encl. 2. Declared the G-3, 1stMarDiv: “The diversion on Siberia was 100 percent effective, due largely to the new tank battle lights which we were using for the first time.” Honsowetz ltr II.

[40] Unless otherwise noted, the material in this section is derived from: FMFPac, Ist-MarDiv Sum, Jul-Oct 52; PacFlt EvalRpt No. 5, Chaps. 8, 9; 1stMarDiv, 1stMar ComdDs, Aug 52.

[41] CG, FMFPac, Lieutenant General Hart, requested the Commandant to delay decision until FMFPac could survey the combat replacement situation and aircraft availability. After a quick evaluation of both these factors,
General Hart on the 14th recommended approval. FMFPac ComdD, Aug 52, App. I, Encl. (6). The air lift of 500 replacements to Korea was an “all out effort for Marine Aviation Transport based on the West Coast. This general support of Korean based forces demonstrated the total capability of Marine Aviation in support of ground forces.”

[44] Earlier, on 13 August, a flare drop requested by the 1st Marines went awry when the aircraft got off course and dropped the flares forward of the 5th Marines main line. 1stMarDiv G–3 Jn1, 13 Aug 52.

[47] Armitage ltr and draft MS comments, p. 7. For further details of the Bunker Hill action, see Armitage ltr in v. V, Korean comment file.

[48] Ibid., p. 8.

[49] Ibid.

[50] Ibid., p. 9.

[51] As the military situation changed in Korea to become increasingly one of a battle of position and attrition, the Marine Corps Basic School, Quantico, Va. curriculum was revised to give greater emphasis to tactics of positional warfare. Close attention was paid to terrain evaluation, employment of infantry units, offensive and defensive use of automatic and supporting weapons, night counterattacks, field problems of reverse slope defense, and even tasks of “research into WW I—and the American Civil and Revolutionary Wars for the tactic of Reverse Slope defense.” Armitage ltr.

Operations in West Korea  
Chapter 4. Outpost Fighting Expanded

[1] Unless otherwise noted, the material in this section is derived from: 1stMarDiv ComdD, Aug 52; 1stMarDiv PIRs 661-675, dtd 18–31 Aug 52; 1stMar, 5thMar, 2/1, 3/1 ComdDs, Aug 52.
[2] Command responsibility for this sector changed on 20 August, when Lieutenant Colonel William S. McLaughlin took over the battalion from Lieutenant Colonel Cross.
[3] To escape the murderous hostile fire, the Marines sought shelter in a trench nearby. During the ensuing clash, a Chinese grenade landed in the midst of the Marines. Private First Class Robert E. Simanek, E/2/5, unhesitatingly threw himself upon the deadly missile an instant before it exploded. Although gravely wounded, his courageous action prevented injury or death to fellow patrol members. The following year, President Dwight D. Eisenhower presented the Medal of Honor to the Detroit, Michigan Marine for his “daring initiative and great personal valor.”
[6] Unless otherwise noted, the material in this section is derived from: 1stMarDiv, 1stMar, 5thMar, 2/1, 3/1, 2/5, 3/5 ComdDs, Sep 52; KMC Regt UnitRpts 188–189, dtd 6–7 Sep 52.
[7] Normally a component of the 2d Battalion, Company E had been attached to the 3d Battalion on 1 September when the company took over the Bunker Hill outpost. The relieved Company H was then attached to 2/1, the reserve battalion, from 1–3 September.
[8] On 20 August Lieutenant Colonel Altman became the commander of 3/1 in relief of Lieutenant Colonel Armitage.
[9] Colonel Smoak had relieved Colonel Culhane on 15 August.
[10] Although 1/5 (Lieutenant Colonel Alexander W. Gentleman) was the regimental reserve at this time, the regiment had assigned one company to 2/5, manning the right sector.
[11] Still another award of the Medal of Honor was to come out of the action that ended on 5 September. Hospitalman Third Class Edward C. Benfold had ministered aid to several wounded Marines and was searching for others who needed medical attention when he saw two wounded Marines in a shell crater. Just as he neared its edge two grenades fell into it and two Chinese prepared to assault the Marines. “Picking up a grenade in each hand, Benfold leaped out of the crater and hurled himself against the onrushing hostile soldiers, pushing the grenades against their chests and killing both . . . He gallantly gave his life for his country.” Medal of Honor citation, case of Hospital Corpsman Third Class Edward C. Benfold, USN, 4168234.
[12] Contemporary records of the 1st KMC Regiment for 1952–1953 identify this as Outpost 37. Current reviewer comments refer to this hill as OP 67. LtCol Kim Yong Kyu, ROKMC, ltr to CMC, HQMC, dtd 5 Jul 67.
[13] Unless otherwise noted, the material in this section is derived from: 1stMarDiv ComdD, Sep 52; KMC Regt UnitRpts 195–202, dtd 13–20 Sep 52.
[15] Ibid.
[16] When the 7th Marines took over this sector from the 5th in early September, the names changed to Carson, Vegas, Detroit, and Seattle respectively. COP Bruce was also redesignated as Reno. Since the old names of the outposts were well known to the enemy, for purposes of security it was decided to identify them differently. U.S. cities were selected.
[17] Unless otherwise noted, the material in this section is derived from: 1stMarDiv, 1stMar, 7thMar, 2/1 ComdDs, Sep 52.
[18] Unless otherwise noted, the material in this section is derived from: FMFPac, 1stMarDiv Sum, Jul–Oct 52;

[19] The outpost at the extreme right flank was given the name “Verdun” because of its World War I connotation of “They shall not pass.” Col. Leo J. Dulacki ltr to Hd, HistBr, G–3 Div, HQMC, dtd 2 Jun 67, hereafter Dulacki ltr.

[20] During the latter stage of the fight for Warsaw, a Chinese soldier tossed a grenade into a bunker shared by five Marines. Private Jack W. Kelso, of I/3/7, quickly picked up the missile and ran outside with it. As he was throwing the grenade back to the Chinese, it went off in his hand. Disregarding his wounds, the Marine moved back inside the shelter, directed the other four to return to the MLR, and went outside to cover their exit. As he was firing at the advancing Chinese soldiers, Private Kelso was hit several times by enemy bullets. His “conspicuous gallantry and intrepidity at the risk of his life” was later recognized in the posthumous award of the Medal of Honor.

[21] This squad was from Company A (Captain Frederick C. McLaughlin), which came under the operational control of 3/7 at 1130 on 3 October, relieving Company C (Captain Paul B. Byrum). The latter company had reported to the 3d Battalion from regimental reserve at 2130 the previous day. Company D was sent immediately to reinforce the hard-pressed Company I.

[22] At the same time one company, I/3/7, became the regimental reserve, having been relieved on the MLR at 1500 the previous day by A/1/7.

[23] During the predawn attempt to retake Frisco on 7 October, Staff Sergeant Lewis G. Watkins, I/3/7, although already wounded, led his rifle platoon in the assault against Frisco. When an enemy machine gun impeded their progress, Staff Sergeant Watkins grabbed a wounded man’s automatic rifle to help get the assault moving forward again. At that instant, an enemy grenade landed in the midst of the Marines. Staff Sergeant Watkins immediately seized it. Just as he was about to hurl it away it exploded in his hand. The grenade took the sergeant’s life but he had saved his fellow Marines. For his bravery Staff Sergeant Watkins was posthumously awarded the Medal of Honor.

[25] Unless otherwise noted, the material in this section is derived from: PacFlt EvalRpt No. 5, Chap. 9; 1st MAW ComdDs, Jun–Oct 52; MAG–12 ComdDs, Jun, Sep 52; MAG–33 ComdD, Aug 52; MACG–2 ComdD, Sep 52; VMA–312 ComdDs, Sep–Oct 52; VMA–323 ComdDs, Jun–Jul, Sep 52; VMF(N)–513 ComdDs, Jun–Jul 52; VMJ–1 ComdD, Jul 52; Cagle and Manson, Sea War, Korea; Clark, Danube to Yalu; Field, NavOps, Korea; Futrell, USAF, Korea; Rees, Korea.

[26] The 1st MAW chief of staff during this period, then Colonel Samuel S. Jack, offered the opinion that “the Fifth Air Force was most sympathetic to Division requirements for close air support from Wing sources. The Eighth Army in the Joint Operations Center proved to be the principal limiting factor in the assignment of air in accordance with these requests. Also, requirements that Division CAS requests filter through I Corps and JOC constituted a major factor in Wing response.” Jack ltr.

[27] Futrell, USAF, Korea, p. 482.

[29] Futrell, USAF, Korea, p. 482.

[30] Clark, Danube to Yalu, p. 209. “I told you so” leaflets were dropped after the raid to impress the inhabitants with the importance of believing the warning leaflets. USAF, Ops in Korea, No. 127, pp. 36, 37.

[31] Futrell, USAF, Korea, p. 489.

[33] Ibid., p. 9–143.

[34] The first Marine night ace was Captain Robert Baird, who shot down six Japanese planes between 9 June and
14 July 1945. Sherrod, *Marine Aviation*, p. 404. Lieutenant Andre’s first four planes were also downed during World War II. See Appendix F for Marine air kills during the Korean War.

[36] The exchange program “appears to have originated with the participation—at Tactical Air Command’s invitation—of two Marine Corps and two Navy pilots . . . in the fall of 1947.” Within two years, the program designed to “indoctrinate selected Air Force and Navy pilots in the air operational and air training activities of each other’s service, had received Department of Defense approval.” On 1 October 1949 the program went into effect. Initially the exchange period was one year, but after the Korean fighting broke out, the period was reduced to approximately three months. Marine participation began late in 1951. Atch 1 to Hq, USAF (AFCHO) memo to Maj J. M. Yingling, HQMC, dtd 16 Jan 67 in v. V, Korean comment file.

[37] On 15 September, Major Gillis had shot down a solo MIG–15.

[38] *PacFlt EvalRpt*, No. 4, Chap. 10, p. 10–77.

[40] Although not definitely proven, there were “some indications of false radio beacons being used by the enemy in clandestine operations in the K–2 area.” *Jack ltr*.

[41] Unless otherwise noted, the material in this section is derived from: *PacFlt EvalRpt* No. 5, Chaps. 8, 9; 1st MAW ComdD, Oct 52; HMR–161 ComdDs Aug–Sep 52.

[42] *Henderson ltr III*.

[43] For example, on 25 September, rain soaked the cardboard cover of the rations, adding extra weight to each preloaded lift of these Class I supplies. On the other hand, a heavier load could have been used at times. As the helicopter used up its fuel, a commensurate increase in cargo could have been carried.

[44] Spare parts shortages are “inherent in the introduction of new equipment into the field and prior to the development of usage data.” A major effort was made at this time by 1st MAW to improve its critical spare parts support by improved stock control procedures and complete inventory. *Jack ltr*.

[45] On 4 April Lieutenant Colonel Alton L. Hicks assumed command of the battalion; Lieutenant Colonel Jacob E. Glick relieved him on 3 August.

[46] Communication with General Kendall’s I Corps consisted of radio-teletype, telephone, radio relay, courier plane, and motor messenger. *PacFlt EvalRpt* No. 5, p. 8–68. The 11th Marines also had an additional 1,100 miles of communication wire. *Henderson ltr III*.
LEGEND

Δ Combat outpost (COP).
Δ COP end date withdrawn.

1/7 boundary established 5 October.
Companies A and B on line 1/3/7 in reserve after 5 October.
Chapter 5. The Hook

[2] Responsibility for this part of the 7th Marines line changed on 13 October, when Lieutenant Colonel Barrett took command of 3/7 from Lieutenant Colonel Russell. The latter then was assigned as division senior liaison officer to the KMC regiment.

[3] Heinl, memo. The originator of this memo, Lieutenant Colonel Robert D. Heinl, Jr., was an experienced Marine officer and military historian who had just been assigned to the division for duty. Temporarily attached to the 7th Marines as an observer, his brief visit there happened to coincide with the beginning of the Hook battle.

[5] The Marine division artillery regiment reported that in late October nine battalions of Chinese artillery, ranging from 75 or 76mm guns or howitzers to 122mm howitzers, opposed the 7th Marines. It was estimated that one other 122mm battalion was also emplaced north of the right division sector. In addition to these CCF units, elements of a 152mm self-propelled howitzer unit were also believed to be in the area. Late in November two batteries of 152mm howitzers were tentatively located about 4,000 yards west northwest of the Hook. Disposition had been determined “as a result of crater analysis, shell reports, sound plots, and capabilities of the weapon.” 11thMar ComdD, Nov 52, “Enemy Artillery Activity Rpts,” Nos. 21, 23, dtd 1, 21 Nov. 52.

[8] 11thMar ComdD, Oct 52, App III, Sheet 3. Eighteen of the weapons (the 623d Field Artillery Battalion) had just moved into the Marine sector and begun operating on 14 October. The unit remained under I Corps operational control, with the mission of providing general support reinforcing fire.

[12] Ibid.

[13] For example, during the latter part of the month each rifle company in the Hook battalion was limited to 150 hand grenades. The total 11-day allowance for Lieutenant Colonel Dulacki’s 81mm mortars was 475 rounds. 1/7 ComdD, Oct 52, App. III.

[14] Heinl, memo.

[15] 1stMarDiv PIR 729, dtd 24 Oct 52, p. 2. Ronson, the Hook, and Warsaw are within the 1,000-meter square, CT 1010.

[16] Heinl, memo.
Due to the width of the Hook sector, it was necessary to keep all three rifle platoons in the line. A reinforced platoon from the battalion reserve outposted Warsaw. While Company A was on line, a Company C platoon manned the outpost; when Company C was relieved on 26 October, a Company A platoon was sent to Warsaw. Maj Frederick C. McLaughlin ltr to Dir, MCHist, HQMC, dtd 27 Jan 70, hereafter McLaughlin ltr.

On 24 October, Battery M of the battalion was temporarily relaid to provide additional support to Colonel Moore’s regiment.

The flight had been scheduled to attack active artillery positions 3 1/2 miles north of the Carson-Reno-Vegas area. When some of their ordnance was unexpended after putting these guns out of action, the planes were ordered to take on the trench target.

Within the division there were no reports of sightings of unusually large groups of enemy soldiers in this area. In fact, there were fewer enemy seen on the 26th than any other day since 18 October. During the 23rd and 24th, about 100 enemy had been observed almost a half mile closer to the Hook than the hideout area used on the 26th. 11thMar ComdD, Oct. 52, p. 12; 1stMarDiv PIR 729, dtd 24 Oct 52, p. 2.

Unless otherwise noted, the material in this section is derived from: 1stMarDiv ComdD, Oct 52; 1stMarDiv G–3 Jnl, 26 Oct 52; 1stMarDiv PIRs 723, 734, dtd 27, 29 Oct 52; 7thMar, 11th Mar, 1/7, 4/11, 1st TkBn, VMF (N) –513 ComdDs, Oct 52; Heinl, memo.

Prior to the enemy’s steady shelling of the Hook, the trenches were six feet deep. The preparatory fires of the past several days had been so intense that in nearly all areas the trenchline had been leveled by the time of the Chinese attack. “I am convinced that the Chinese didn’t realize that they had penetrated our MLR or they would have exploited the penetration.” Col Russell E. Honsowetz ltr to Dir, MCHist, HQMC, dtd 26 Jan 70.

The material in this section has been derived from 7thMar, “Summary of Action, 26 Oct–1 Nov 52, Hook, Reno, Ronson”; 2/7 ComdD, Oct 52.

 Unless otherwise noted, the material in this section is derived from: 1stMarDiv ComdD, Oct 52; 1stMarDiv G–3 Jnl, dtd 27–28 Oct 52; 7thMar, 11thMar, 1/7, 4/11, 1st TkBn, VMAs–121, –212, –323 ComdDs, Oct. 52.

At 0545 on the 25th, Company I (Captain John Thomas), then the regimental reserve, and Captain Belant’s Company H, responsible for the right sector of 3/7, had exchanged roles.

Another Medal of Honor resulting from the Hook action was awarded posthumously to Second Lieutenant Sherrod E. Skinner, Jr. for “conspicuous gallantry and intrepidity.” Lieutenant Skinner, whose twin brother was also a Marine officer, had been assigned as an artillery forward observer with F/2/11. When the Chinese attack hit the MLR, Lieutenant Skinner organized the surviving Marines in defense of their observation post. Fighting off the enemy and calling down defensive artillery fire on the assaulting Chinese, he delayed capture of the position. Twice he left the bunker to direct fire on the enemy and get more ammunition. When the Communists finally overran the bunker, Lieutenant Skinner instructed his fellow Marines to pretend they were dead; during the next three hours several different enemy groups frisked the inert Marines without discovering their ruse. Later, when a skeptical enemy soldier hurled a grenade into the bunker, Lieutenant Skinner unhesitatingly rolled on top of the missile, shielding the two surviving Marines. By thus absorbing the full force of the explosion, he sacrificed his life for theirs. (2dLt Sherrod E. Skinner, Jr. Biog. File)

The new squadron commander had relieved Lieutenant Colonel Maurice Fletcher two days earlier. This
flight was the first of two CAS attacks in behalf of the Hook forces that the new commanding officer participated in that day.

[32] During this action, the company suffered 15 killed, 71 seriously wounded, and 6 slightly wounded. 3/1 ComdD, Oct. 52, p. 3.

[34] As a part of the reorganization, H/3/1 remained in the right sector, and Company C, of the Hook battalion, filled in the middle. Company A was in position on the friendly side of that part of the ridge held by Captain Byrum’s Company C. During the afternoon of the 28th, I/3/1 and H/3/7 also left Lieutenant Colonel Dulacki’s area to rejoin their parent organizations.

[35] Unless otherwise noted, the material in this section is derived from: 1stMarDiv ComdD, Oct 52; 1stMarDiv PIRs 734–735, 741, dtd 29–30 Oct 52, 5 Nov. 52.

[36] The CCF casualty figures were derived from a comparison of reports of participating Marine battalions, the 7th Marines, and division. In addition to these losses caused by Marine infantry units were enemy casualties listed by the artillery and tank battalion command diaries and records of participating air squadrons; these supporting arms figures amount to 468 casualties, more than one-third the total number.

[38] Comments by Dr. Robert F. Futrell, USAF Historian, in ltr to Dir, MCHist, HQMC, dtd 2 Feb 70: “The Air Force position about the accumulation of munitions at frontline units was that by exercising supply discipline and refraining from combat, the enemy could hoard and build supply over a period of time.”

[39] 1stMarDiv PIR 738, dtd 2 Nov 52, p. 3. The Chinese also used hand grenades in searching the bunkers. All of these explosives had been widely employed during World War II.

[41] 1/7 ComdD, Nov 52, App. VI.

[42] CG, FMFPac ComdD, Nov 52, App IV, Encl (8), Anx G, p. 4. During the Hook fighting, General Hart also witnessed the helicopter deployment of the 4.5-inch rockets. He was impressed with the progress that had been made in this helicopter-ground team performance, particularly the speed and efficiency with which these weapons could be set up to fire and then displaced to a new position.

OUTPOST RENO ATTACKS
27 October 1952
[1] Unless otherwise noted, the material in this section is derived from: 1stMarDiv ComdDs Oct–Nov 52; 1stMarDiv PIRs 737–738, dtd 31 Oct–1 Nov 52; KMC Regt UnitRpts 238–244, dtd 24–30 Oct 52.
[4] The attack on the 31st took place after the KMC 5th Battalion had taken over the right regimental sector, at 1700, from the 3d Battalion. The Chinese often deliberately timed their outpost attacks to coincide with a relief of lines. Company personnel of both the 5th and 3d Battalions were on line during the fighting. KMC Regt UnitRpts dtd 1 Nov 52, p. 4; 245, dtd 2 Nov 52, p. 4.
[5] KMC Regt UnitRpt 244, dtd 1 Nov 52, pp. 1, 4. A different account as to size of attacking units is given in Maj Kang Shin Ho, ROKMC ltr to Dir, MCHist, HQMC, dtd 30 Apr 70, which states two reinforced enemy companies assaulted COP 33 and an estimated enemy battalion struck COP 31.
[6] Ibid.
[7] Unless otherwise noted, the material in this section is derived from: Barclay, Commonwealth; Cagle and Manson, Sea War, Korea; Clark, Danube to Yalu; Field, NavOps, Korea; Futrell, USAF, Korea; Walter G. Hermes, Truce Tent and Fighting Front—United States Army in the Korean War (Washington: OCMH, DA, 1966), hereafter Hermes, Truce Tent; Miller, Carroll, and Tackley, Korea, 1951–1953.
[8] For details of this action see Canadian Department of National Defence ltr to Dir, MCHist, HQMC, dtd 8 Jan 70 in v. V, Korean comment file.
[10] Quoted in Cagle and Manson, Sea War, Korea, p. 461.
[12] Eisenhower had resigned his commission, following his return to the States in April to seek election.
[13] Joy, Truce Negotiations, p. 156. The proposal was a “complete armistice agreement” not merely another offer to solve the prisoner question.
[16] Unless otherwise noted, the material in this section is derived from: 1stMarDiv ComdDs, Nov 52–Jan 53; 1stMar ComdDs, Nov 52–Feb 53; 5thMar ComdD, Dec 52; 7thMar ComdDs, Nov 52, Jan 53; 11thMar ComdDs, Jan–Feb 53; 2/1 ComdD, Nov 52; 1stMAW ComdD, Jan 53; MAG–12 ComdD, Jan 53; MAG–33 ComdD, Oct 52; MACG–2 ComdD, Feb 53.
[17] At this time a new limiting point between the division and British division was also established. This slightly reduced Marine division frontage to 33 miles and allowed the two MLR regiments to shorten their lines and maintain somewhat larger reserve units. PacFlt EvalRpt No. 5, Chap. 8, p. 8–23.
[21] Unless otherwise noted, the material in this section is derived from: PacFlt Eval Rpts No. 5, Chap. 9 and No. 6, Chap. 10; 1stMarDiv ComdD, Nov 52; 1st MAW ComdDs, Oct 52, Jan–Feb 53; MAG–12 ComdDs, Nov 52, Jan 53, Mar 53; MAG–33 ComdDs, Nov 52, Jan–Mar 53; VMA–121 ComdDs, Nov–Dec 52; VMF–115

[22] A total of 1,362 CAS sorties were flown, with 443 for the 1st Marine Division. Interdiction missions numbered 1,842, plus additional miscellaneous and air reconnaissance flights. 1st MAW ComdD, Oct. 52.

[24] A relatively small number of night med evac flights was also being flown by HMR–161. During March 1953, for example, in transferring 283 casualties to the hospital ships, squadron helicopters made only 15 flights at night.

[26] *PacFlt EvalRpt* No. 6, p. 10–76.

[27] *Ibid*.

[32] Unless otherwise noted, the material in this section is derived from: *PacFlt EvalRpts* No. 5, Chaps. 8, 9, No. 6, Chaps. 9, 10; 1stMarDiv ComdDs, Jan–Feb 53; 1/1 ComdD, Feb 53; HMR–161 ComdD, Feb 53; Montross, *SkyCav*.

[33] *PacFlt EvalRpt* No. 6, p. 10–133.

[34] 1stMarDiv ComdD, Jan 53, p. 3.

[35] The following month, HMR–161 engaged in a four-day ammunition resupply operation for the division. Except for one day, the 22d, all available helicopters were assigned to that mission, beginning 20 March. HMR–161 also had a new CO by that time, Colonel Owen A. Chambers who had taken over from Lieutenant Colonel Carey on 15 March.

[36] Unless otherwise noted, the material in this section is derived from: KPR ComdDs, Jun, Aug, Oct–Dec 52, Jan–Mar 53; 1st AmTracBn ComdDs, Mar–Dec 52, Jan–Mar 53.

[37] On the west, the Yom River similarly separates the Kimpo Peninsula from Kanghwado Island, second in size of all Korean islands and a base for friendly intelligence operations.

[38] Identified as elements of the 195th CCF Division of the 65th CCF Army and an unidentified CCF division, in a revised EOOB issued in December. Previously, units of the 193d CCF Division were at the front in this far western sector. KPR ComdDs, Oct–Dec 52.

[39] Colonel Tschirgi had taken command of the KPR on 1 December from Colonel Richard H. Crockett, who previously relieved Colonel Staab (the original KPR commander) on 31 August.

[40] Comprising a platoon from Company B and several headquarters elements, the provisional company was disbanded on 14 June when Company B that had been supporting MAG–33 at Pohang was reassigned to the battalion.

[41] Formerly the executive officer, Major Saussy took over unit command on 7 November, when Lieutenant Colonel Wheeler was transferred to the 5th Marines. Lieutenant Colonel Frank R. Wilkinson, Jr., became the next commanding officer on 16 March 1953.

[42] The material in this section is derived from: *PacFlt EvalRpt* No. 5, Chap. 8.

[43] The 1st Commonwealth Division, to the Marine right, utilized a different defense system. Instead of relying on the COPs forward of the main line of defense as major deterrent positions, the British preferred to include all strategic terrain features within the MLR itself. They followed a policy of active patrolling to the front and, at night, occupied selected ground sites, preferring to fight the enemy from their main battle positions rather than from more isolated COP positions. *PactFlt EvalRpt* No. 6, Chap, 9, pp. 9–92, 9–93.
The military crest is that point along the slope of a hill from which maximum observation up and down the hill can be obtained. The topographical crest is the highest point on a hill or ridge.

Commenting on the heavy destruction of Hook fortifications by CCF preparation, one 7th Marine company commander stated: “Enemy artillery and mortars did tend to destroy the protective wire. We noted especially that the Canadian ‘Random Wire,’ although it tended to move about under fire, did hold together and continue to offer good protection.” McLaughlin ltr.

Unless otherwise noted, the material in this section is derived from: PacFlt EvalRpt No. 6, Chap. 9; 1stMarDiv ComdDs, Feb–Mar 53; 1stMar ComdD, Mar 53; 5thMar ComdDs, Feb–Mar 53; 7thMar, 11thMar, 1st TkBn, 1/5, 2/5, 1/7 ComdDs, Feb 53.

For a detailed account of the tank action in the CLAMBAKE raid see Col Clyde W. Hunter ltr to Dir MCHist, HQMC, dtd 6 Jun 70, in v. V, Korean comment file.

In order to assure better close air support during the assault, an SOP for the airborne tactical controller was proposed and drafted by MAG–12 for 1st MAW approval. The plan utilized the marking of targets by rocket and subsequent corrections to be made by the FAC. This enabled MAG–12 aircraft “to scramble, fly a CAS mission at the Division front and be back at the field at K–6 in approximately 40 minutes.” Col Wayne M. Cargill ltr to Dir MCHist, HQMC, dtd 8 Jan 70.

Lieutenant Colonel Peatross had succeeded Lieutenant Colonel McLaughlin as battalion CO on 11 Sep 52.

Beginning morning nautical twilight is that period before sunrise or after sunset (BENT, or beginning evening nautical twilight) when visibility is limited to approximately 300 yards.

In nearly three hours of firing, the 11th Marines and its reinforcing and attached units, including the 1st Royal Canadian Horse Artillery, expended 11,881 rounds. Indicative of the meticulous planning that preceded an operation such as CHARLIE is the 11th Marines report of this raid. 11thMar ComdD, Feb 53.

Prior to the raid various combinations of flamethrower fuels and pressure were extensively used. The purpose was to determine the maximum effective range of the flamethrower teams in order to “neutralize the hand-grenade throwing potential of the enemy, this being one of the major problems confronting assault elements on other raids.” Final tests resulted in flame being thrown more than 40 yards up hill. 1/5 ComdD, Mar 53, App. IVf, p. 3.

Notes
Chapter 7. Vegas

[2] Since the first of the year division intelligence reports had given the CCF the capability of mounting limited objective attacks ranging from company to regimental size. *PacFlt EvalRpt*, p. 9–28, quoting 1stMarDiv PIR 860, dtd 4 Mar 53.

[3] The 1st KMC Regiment had been redesignated the 1st KMC/RCT on 15 Dec 52. Continuing under opcon of the 1stMarDiv, the Korean RCT consisted of four infantry battalions, plus attached artillery, armor, engineer, and service units. *PacFlt EvalRpt* No. 5, Chap. 8, p. 8–64.

[4] To the Marine division right were the U.S. 2d Infantry, ROK 1st, and U.S. 7th Infantry Divisions.

[5] No stranger to the 5th Marines, Colonel Walt had served with this regiment during World War II at Guadalcanal, Cape Gloucester, and Peleliu. He had commanded, on separate occasions, 2/5 and 3/5 and had earned two Navy Crosses for combat leadership and bravery.

[6] Normally Ava was a squad-size outpost. Prior to and during the late March attacks, all 5th Marine COPs were strengthened.

[7] Company B from 1/1 had been assigned to operational control of 2/1 when the latter unit relieved 1/7 on line on 10 March. The increased personnel enabled the battalion to position a company-size detachment at the strategic high ground, COP 2, that overlooked Panmunjom and the critical truce talk site.

[8] Regimental command changed 27 March when Colonel Glenn C. Funk, former commanding officer of the 1st Shore Party Battalion, was assigned to the 7th Marine. succeeding Colonel Haffner, who became G-2.

Notes
Chapter 8. Marking Time (April-June 1953)

[5] With resumption of truce negotiations, the 1st Marines, whose left battalion sector was immediately adjacent to the Panmunjom neutral zone between the two battle lines, took certain precautionary measures. The regiment set up radio communication with the UN base camp at Munsan and reactivated its rescue task force. This unit was on alert to evacuate the UN truce team from Panmunjom in the event of Communist hostile action or any threat to security. While the talks were in session, a forward covering group, composed of a reinforced rifle company and 1st Tank Battalion platoon, occupied the high ground east of Panmunjom at COP 2. Here the Marine rescue force maintained close surveillance of the enemy in the Panmunjom peace corridor as well as the safe arrival and departure of the UN truce team shuttled in by helicopter or motor convoy. 1stMar ComdD, Apr 53, pp. 5, 14 and App. II, pp. 1–4.

[6] The battalion’s new commanding officer was Lieutenant Colonel Francis “X” Witt, Jr., who a week earlier had succeeded Lieutenant Colonel Francis W. Augustine.

[8] The 684 UNC prisoners returned in LITTLE SWITCH represented 471 South Koreans, 149 Americans, 32 British, 15 Turks, 6 Colombians, 5 Australians, 2 Canadians, 1 Greek, 1 South African, 1 Filipino and 1 Netherlander.

[10] Ibid., p. 3.

[11] In brief, these were: (1) that the Neutral Nations Repatriation Commission (NNRC) take custody of Chinese nonrepatriates but give Korean POWs the option of settling either in North or South Korea, as they wished; (2) that troops from just one country (India) be used to guard nonrepatriates, rather than the unwieldy five-nation force earlier proposed by the Communists; and (3), that specific procedures, which were clearly spelled out, be followed for granting political asylum to returning prisoners who refused repatriation.

[12] Unless otherwise noted, the material in this section is derived from: *PacFlt EvalRpt* No. 6, Chap. 9; 1stMarDiv ComdD, Apr 53; 1stMarDiv PIRs 896–900, dtd 8–12 Apr 53; 1stMar, 5thMar, 7thMar, 11thMar, 2/5, 1/7, 2/11, 1st TkBn ComdDs, Apr 53; VMAs–121, –212, –323, VMFs–115, –311, VMF(N)–513 ComdDs, Apr 53.

[13] Official records are at variance on this point. The 2/5 command diary indicates that the battalion continued the exercise on 16–17 April, returning the latter date. The 5th Marines report categorically indicates that
MARLEX XX was cancelled on 15 April, because of the weather.
[14] Now under a new regimental commander, Colonel Tscherig, who had joined the 5th Marines on 14 April, succeeding Colonel Walt, newly assigned division G–3.
[15] Throughout the three-day action, gun tanks from Companies A and B (the forward reserve unit) and the regimental antitank company fired a total of more than 1,469 90mm shells to neutralize enemy positions and weapons.
[16] This same date was significant because it marked the first time a searchlight-guided night close air support mission was flown by 1st MAW in the division sector.
[17] Unless otherwise noted, the material in this section is derived from: PacFlt EvalRpt No. 6, Chap. 9; 1stMarDiv ComdDs, Apr–May 53; 1stMarDiv G–3 Jnls, 22 Apr–13 May 53; 1stMar ComdDs, Apr–May 53; 5thMar, 7thMar, 11thMar ComdDs, May 53; 1st EngrBn ComdDs, Apr–May 53; Hermes, Truce Tent.
[19] The two divisions had also seen combat together early in WW II, at Guadalcanal. Col R. D. Heinl, Jr. ltr to Dir, MCHist, HQMC, dtd 22 Sep 70, hereafter Heinl ltr.
[20] Soon after assuming command of the Eighth Army, in mid-February, General Taylor had begun to stress the need for a complete eight-week training program for reserve divisions before reentering the line, detailed rehearsal of patrols, and more frequent rotation of artillery battalions to maintain their basic mobility. Hermes, Truce Tent, p. 391.
[21] The regiment was newly-commanded by Colonel Nelson, the former UN Personnel and Medical Processing Unit officer, who succeeded Colonel Adams as CO, 1st Marines on 1 May.
[22] On 23 April, 2/7 had relieved 1/7 in the left battalion sector and 1/7 became the regimental reserve. There was no change in 3/7’s location in the right sector. These were the positions for transfer with the Turkish troops in early May.
[23] ROKMC Comments.
[24] Final relief was largely complete at this time. Exceptions were the 7th Marines reserve battalion, 1/7, relieved by TAFC forces at 0350 the following day and a few remaining Marine rear echelon elements that closed out the sector on 7 May.
[25] The 1st Tank Battalion was now commanded by Lieutenant Colonel Charles W. McCoy, who had relieved Lieutenant Colonel Williamson on 16 April 1953.
[26] The tanks were not kept in exposed firing positions at all times. They were parked in protected, defilade revetments and were periodically driven into the firing slots to zero in on targets of opportunity. One tank might thus use any of several slots, and in cases of major attacks reserve tanks could reinforce. LtCol Robert J. Post ltr to Dir, MCHist, HQMC, dtd 28 May 70, hereafter Post ltr.
[27] Later, the Turkish forces were to place three battalions forward [adding the 2d], with a fourth in reserve.
[28] General Clarke had succeeded General Kendall on 10 April 1953.
[30] Unless otherwise noted, the material in this section is derived from: PacFlt Eval Rpts No. 5, Chap 6, No. 6, Chaps. 7, 9; 1stMarDiv ComdDs, May–June 53; 1stMarDiv G–3 Jnls, 22 Apr–30 Jun 53; 1stMar, 5thMar, 7thMar, 11thMar, 1st EngrBn, HMR–161, VMO–6 ComdDs, May–June 53; Field, NavOps, Korea.
[31] Relief from the Eighth Army defense line provided the first opportunity for expansion of the 1st Marine Division amphibious training to regimental level. Amphibious training in battalion-sized MARLEXES had been under way since June 1952, upon transfer of the Marines to the western coastal sector. This had, in fact, “produced an extra dividend as [their] amphibious retraining program, conducted throughout the summer in the Tokchok Islands, was apprehensively observed by the enemy.” Field, NavOps, Korea, p. 430.
[32] CTE 90.85 constituted the MARLEX training element of TF-90, Amphibious Force Far East, redesignated
Amphibious Group Western Pacific earlier that month.

[37] Total ammunition expenditure by the 11th Marines and the 25th Division artillery batteries was 11,527 rounds, to the Chinese output of approximately 10,000 rounds. 11thMarDiv ComdD, May 53, p. 13.

[39] Some historians indicate that the 120th Division initially sent four battalions forward in the action, with two against the main objective, Vegas. Hermes, *Truce Tent*, p. 463.

[40] Discussing the Army employment of tanks in fixed MLR positions, Lieutenant Colonel Post recalled that although many Marine tankers were originally opposed to this procedure, “I am forced to confess that it worked well in that static defensive situation.” A major advantage resulting from this change was that tanks effectively linked the MLR with rear area CPs through land line and radio. While initial preparatory fire often tore out the phone lines, the radios worked well and this was “generally the only reliable means of communications with the scene of action.” *Post ltr.*

[45] The strong likelihood of such attacks at this time had been noted by Eighth Army in a warning issued the previous day that reminded all commanders to be “particularly alert” at this time. CG, 8th Army msg to CG, 1stMarDiv and addees, G–3 Jnl, dtd 24 Jun 53.

[46] This change was due to the existing policy of not having a United States unit serving under operational control of a Korean commander. Had the 7th Marines or other U.S. unit been so committed, it is expected that a provisional task force would have been created for the assignment, under a non-Korean commander. *PacFlt EvalRpt* No. 6, Chap. 9, p. 9–20. Actually, the 7th Marines alert on the 25th was of such short duration that no mention of it appears in the regimental command diary, although the fact is so noted in division records. The 1st KMC/RCT was ordered to move out from the Indianhead area at 1630 on 26 June and came under operational control of 1st ROK Division at 1540, 27 June. By 0100 the following day, it had relieved 11th ROK Regiment. *ROKMC Comments*.

[48] Unless otherwise noted, the material in this section is derived from: *PacFlt Eval Rpts* No. 4, Chap 10, No. 5, Chap 9, No. 6, Chaps. 9, 10; 1stMarDiv ComdD, Apr 53; 1/7 ComdD, Apr 53, App. IV, Rpt of Night Air Strikes; 1st MAW, MAGs–12, –33, VMAs–121, –212, –323, VMFs–115, –311, VMF(N)–513, VMJ–1 ComdDs, Apr-Jun 53; VMA–312 ComdDs, Apr-May 53; VMA–251 ComdD, June 53; VMO–6 ComdD, Apr 53; Futrell, *USAF, Korea*; Hermes, *Truce Tent*.

[50] Confirmed damage assessment in this period: 75 enemy KIA, 5 WIA; 25 bunkers, 12 personnel shelters, 20 mortar positions, 32 automatic weapons positions, 1 ammunition bunker, and 1 37mm AA position destroyed; 1
supply area, 3 weapons damaged; 1,545 yards trenchline destroyed; and 190 secondary explosions or fires. Due to operating conditions, these figures represented only 80 percent of the total flights made on which TAOs confirmed results. VMF(N)–513 ComdDs, Apr–May 53.

[52] PacFlt EvalRpt No. 6, Chap. 10, p. 10–70.

[53] Ibid., p. 10–99.

[54] Also characterized by squadron members as the “tired old Tigercats” in reference to the war-weary, 1945-vintage aircraft. VMF(N)–513 ComdD, May 53, p. 6.

[55] CO, 19th Bomber Group (Col Harvey C. Dorney, USAF) msg to CO, VMF(N)–513 (LtCol Robert F. Conley), n.d., reading: “19th Bomber Group Airborne Commander and crews participating in attack on Sinanju Bridge Complex, 11 April, have high praise for night fighter protection. All feel that without their protection severe damage or loss of B–29’s would have resulted.” VMF(N)–513 ComdD, Apr 53, p. 6.

[56] Prior to early May, VMA–312 had been based aboard the USS Bataan (CVL–29). The carrier itself was scheduled for relief from the Korean Theater shortly before the new afloat MAG–12 squadron reported in, and a transfer was made by 312 to the new, larger escort carrier on 8 May.

[57] Comments PacFlt EvalRpt No. 6, Chap. 10, p. 10–33: “Severe tactical operations weakness developed throughout the war in Korea which can be traced directly to the individual pilot rotation system. These weaknesses are inherent in any system which precludes pre-combat unit training of pilots in the tactical squadron with which they later go into combat. The situation is aggravated further when pilots, many of them inadequately pre-combat trained, are rotated through combat engaged units so rapidly that squadron esprit cannot develop to a degree which will insure a high standard of tactical efficiency.”

[58] MAG–12, since 1 April, had been under Colonel Edward B. Carney, who assumed command upon reassignment of Colonel Bowman to the States.

[59] See Chapter VI.

[60] The magnitude of the VMJ–1 work load can be gauged by one day’s peak effort of 5,000 exposures, which, if laid end to end, would cover a strip of ground one and one half miles long.” PacFlt EvalRpt No. 4, Chap. 10, p. 10–67.

[64] Between 15–18 April the west coast carrier squadron was under a FEAF order restricting normal interdiction missions. This was to protect UNC sick and wounded POWs in transit from China to Kaesong for final exchange at Panmunjom. VMA–312 air operations were held to CAS along the bombline. “Marine fliers of the ‘Checkerboard’ squadron proved adept at this unusual role [CAS support missions along the front lines], and received a ‘well done’ from JOC Korea as the Corsairs flew more than 100 close air support sorties from 16–18 April.” PacFlt EvalRpt No. 6, Chap. 10, p. 10–110.

[66] Their respective locations were: 7th Division, at the extreme right of I Corps sector; and further east, the 3d Division occupied the corresponding right flank of IX Corps sector. VMF–311 concentrated on the 7th Division targets while VMF–115 efforts were devoted primarily to the 3d Division.

[68] This figure does not include sorties by VMA–312 (carrier-based), VMO–6, or HMR–161, the latter two under operational control of the 1st Marine Division.

[70] Ibid.
[71] Ibid.

[73] Presentation of this second Korean PUC to the 1st MAW was made by South Korean President Rhee in impressive ceremonies 12 June at MAG–33 headquarters, K–3. Among the many ranking military officials attending the ceremony was Admiral Radford, former CinCPacFlt, and newly-appointed Chairman, Joint Chiefs of Staff.

[75] Unless otherwise noted, the material in this section is derived from: PacPlt Eval Rpts No. 5, Chaps. 2, 8, No. 6, Chaps. 2, 9; WCIDE(U) ComdDs, Oct 52–Jun 53; ECIDE(U) ComdDs, Oct 52–Jun 53; Cagle and Manson, Sea War, Korea; Field, NavOps, Korea.

[76] Locations given on WCIDE map, Chapter II.

[77] PacFlt EvalRpt No. 6, Chap. 9, p. 9–128. See also Chapter II.

[78] An average day’s enemy harassment consisted of 4, 7, 10, or at the most approximately 28 rounds of fire. WCIDE ComdDs, passim.

[79] See Chapter II and ECIDE map.

[81] Field, NavOps, Korea, p. 434.

[83] Ibid.

[84] ECIDE(U) ComdD, Feb 53, p. 1. Seventh Fleet intelligence estimated that there were no less than “21 active batteries emplaced on Wonsan Bay and within range of our islands.” Heinl ltr.

[85] ECIDE(U) ComdD, Jan 53, p. 3.

[86] Another record at this time was the spate of senior visiting officers. Seven times during the month no less than 15 flag and general officers had taken their turn inspecting the ECIDU command headquarters at Yo-do. Services represented were the Marine Corps, U.S. Army, Korean Marine Corps, ROK Navy, and ROK Army. “One local statistician computed the total number of stars for the month (one side of the collar only) as 38,” the monthly report brightly noted. This was believed possibly an all-time high for any headquarters in the Korean theater, short of the Eighth Army. ECIDE(U) ComdD, Mar 53, p. 1.

[87] The previous T/O for the ECIDU was 5 officers and 30 enlisted USMC, 15 USN attached primarily to the Navy maintenance unit, and 55 officers and 1,217 enlisted KMCs.

[89] Unless otherwise noted, the material in this section is derived from: PacFlt EvalRpt No. 6, Chap. 9; 1stMarDiv; 1stMar, 5thMar, 7thMar ComdDs, Jun 53.

Chapter 9. Heavy Fighting Before the Armistice

[4] Unless otherwise noted, the material in this section is derived from: PacFlt EvalRpt No. 6, Chaps. 9, 10; CG, 1stMarDiv, Berlin Rpt; 1stMarDiv ComdD, July 53; 1stMar Div G–3 Jnls, 1–10 Jul 53; 1stMarDiv PIR 992, dtd 8–9 Jul 53; 5thMar, 7thMar, 11thMar, 1st TkBn, 1/7, 2/7, 3/7, 2/11, 4/11 ComdDs, Jul 53; 1st MAW, VMF–311, VMO–6, HMR–161 ComdDs, Jul 53; Hicks, Outpost Warfare; MacDonald, POW.

[5] Discussing this phase of operations, the 2/7 commander stated: “As it turned out we were in great shape with both Marines and Turks fighting side by side in some instances. We had a great rapport with the Turks in that they had previously relieved 2/7. In fact, they made us honorary members of their battalions, giving each 2/7 Marine one of the unit patches.” Col Alexander D. Cereghino ltr to Dir MCHist, HQMC, dtd 19 Jun 70.

[6] On 7 July, 2/11 had become the direct support battalion for the 7th Marines.

[7] The ridge on which COP Berlin was located was split by two valleys. Both of these and the ridge itself served as approaches to the Marine MLR. PacFlt EvalRpt No. 6, Chap. 9, p. 9–169.

[12] On 9 July Company C relieved Company B on the MLR in support of the 7th Marines. Both tank companies had been in action with the TAFC during the entire 60-day period the division was in I Corps reserve. Due to the rotation system, however, Baker Company had been on line longer and transferred to the rear ranks for a “much needed test and rehabilitation.” 1st TkBn ComdD, Jul 53, p. 3.

[13] Later it was determined that only two were actually captured and they were subsequently repatriated. MacDonald, POW, p. 211.

[14] Unless otherwise noted, the material in this section is derived from: PacFlt EvalRpt No. 6, Chap. 9; 1stMarDiv ComdD, Jul 53; IstMarDiv G–3 Jnls, 10–17 Jul 53; 1st MarDiv PIRs 923–930, dtd 10–17 Jul 53; IstMar, 5thMar, 7thMar, 11thMar, 2/5, 1/7, 3/7, 2/11 ComdDs, Jul 53; Hermes, Truce Tent.

[15] The 1st KMC/RCT turned over its sector of the 1st ROK Division front to the 1st ROK Regiment at 1800 on 8 July and relieved the U.S. 27th Infantry Regiment on 12 July. ROKMC Comments.

[16] Spoonbill Bridge was submerged under 11 feet of water and destroyed by the pressure against it on 7 July. Flood conditions existed again on 14–15 July when the Imjin crested at 26 feet at Libby Bridge. Roads in the vicinity were impassable for three days. Resupply of forward companies was made via Freedom Bridge. One command diary writer, discussing the elaborate series of six moves made by 1/1 during July, added a touch of unconscious humor when he observed, “During the month, it seemed as if the Battalion was constantly on the move . . . Rain hampered these moves considerably. The weather between moves was generally clear and dry.” 1/1 ComdD, July 53, p. 1; 1st TkBn ComdD, Jul 53, pp. 5, 11–12, 23; PacFlt EvalRpt No. 6, Chap. 9, pp. 9–68, 9–136.

[18] ROKMC Comments.

[19] One, who died that morning, was squad leader Sergeant Stephen C. Walter, posthumously presented the Navy Cross. Also awarded the nation’s second highest combat medal for extraordinary heroism in a patrol action on 16–17 July was Private First Class Roy L. Stewart, of the 5th Marines.

[20] Unless otherwise noted, the material in this section is derived from: PacFlt EvalRpts No. 4, Chap. 10, No. 5, Chap. 9, No. 6, Chap. 10; 1stMarDiv ComdD, Jul 53; 1stMarDiv PIR 924, dtd 10–11 Jul 53; 1st MAW, MAGs–12, –33, VMAs–121, –212, –251, –323, VMF(N)–153, VMF-311 ComdDs, Jul 53; Field, NavOps, Korea; Futrell, USAF, Korea.

[21] Marine Attack Squadron 251 (Lieutenant Colonel Harold A. Harwood) administratively joined MAG–12 on 6 July for 323, which had rotated back to MCAS, El Toro three days earlier. Movement of –251 aircraft to Korea could not take place, however, until 12 July. When VMA–323 (Major Woten) departed, the famous “Death Rattlers” had the distinction of being the Marine tactical (VMA/VMF) air squadron in longest service during the Korean War. The unit’s final combat mission on 2 July brought its total Korean operations to 20,827 sorties and 48,677.2 hours. On 6 August 1950, roaring up from the flight deck of the USS Badoeng Strait, the VMA–323 Corsairs (then VMF-323) had launched their opening blow against North Korean installations, led by Major Arnold A. Lund, CO. The initial Marine air offensive action of the Korean War had been flown three days earlier by VMF–214. This unit was reassigned to CONUS in November 1951, giving the Death Rattlers the longest continuous service flight record. Jul 53 ComdD, 1st MAW, p. 2; USMC Ops Korea-Pusan, v. I, pp. 89–90, 98; VMF–214 Squadron History, HRB.

[22] Individual reports by the two groups result in a slightly higher figure. MAG–12 recorded 2,001 combat sorties (including more than 400 flown by carrier-based VM–332, not in the 1st MAW sortie rate). MAG–33 listed 945 sorties, or a combined group total of 2,946 for the month. ComdDs Jul 53 MAG–12, p. C-1 and MAG–33, p. I.

[23] Colonel Stacy was group commander until 24 July, when he was detached for assignment to 1st MAW as Assistant Chief of Staff, G–2. He was succeeded at MAG–33 by Colonel John L. Smith.

[24] Wing casualties for July 1953 were listed as three killed, seven missing, and two wounded in action. Names of enlisted crew members on flights are not always given in air diaries, which accounts for the discrepancies.

[26] The 19th of July, ironically, was the date that truce negotiators working at Panmunjom had reached final agreement on all remaining disputed points. Staff officers were scheduled to begin drawing up details of the armistice agreement and boundaries of the demilitarized zone. USMA, Korea, p. 51.

[27] Company E and a detachment of the 81mm mortar platoon from the 2d Battalion remained on line. They were attached to the 3d Battalion when the sector command changed.

[28] Three Marine, one TAFC, and two Army battalions.

[29] At a routine conference that same morning attended by CG Eighth Army (General Taylor), CG I Corps (General Clarke) and CG 1st Marine Division, the earlier decision about not regaining the outposts was affirmed. General Taylor maintained the positions “could never be held should the Chinese decide to exert sufficient pressure against them” and recommended instead that the sector be organized on a wide front defense concept. Actually, following the initial Berlins attack of 7–8 July, a discussion about possible readjustment of the Marine sector defense had been initiated by General Pate. A staff study recommending that just such a “strongpoint”
concept (rather than the customary linear defense) be adopted had been completed by Marine Division officials on 15 July. I Corps staff members had concurred with the study and it was awaiting consideration by CG, I Corps when the Berlins were attacked for the second time on 19 July. CG, 1stMarDiv, Berlin Rpt, pp. 3–4.

[30] Commenting on this point, the I Corps commander noted: “The outposts in front of the MLR had gradually lost their value in my opinion because, between the MLR and the outposts, minefields, tactical wire, etc. had made their reinforcement and counterattacks very costly.” Resupply was thus restricted to narrow paths on which the CCF had zeroed in and “holding poor real estate for sentimental reasons is a poor excuse for undue casualties.” Gen Bruce C. Clarke, USA, ltr to Dir, MCHist, HQMC, dtd 20 May 70.

[31] The new squadron commander had taken over 16 July from Major Braun.

[32] BGen Manly L. Curry ltr to Dir, MCHist, HQMC, dtd 28 May 70, hereafter Curry ltr.

[33] Tank and artillery ammunition allocations had been cut 50 percent the afternoon of the 19th, with a subsequent reduction of normal destruction missions and elimination of H&I fires. ComdDs Jul 53 1st TkBn, p. 3 and App. 2, p. 4 and 1/11, p. 5.

[34] 3/7 ComdD, 20 Jul 53, p. 5. With respect to the number of enemy casualties that night, battalion, regimental, artillery support, and division command diaries given differing accounts. Other figures cited are: 9 CCF killed, between 234–284 estimated killed, and 630 estimated wounded.

[35] Subsequently, it was learned that of 56 Marines unaccounted for at the time, 12 were actually captured. They were returned after hostilities ended. Several men from 1st Marines units under operational control of the 7th were also taken in this battle. MacDonald, POW, pp. 212, 268–269.

[37] One additional flight expending three 1,000-lb. bombs was made 22 July by a single AD from replacement squadron VMA–251. This was the unit’s first combat sortie in support of the 1st Marine Division after its indoctrination flights. VMA–251 also flew four MPQ flights for the 7th Marines in the early hours of 24 July, the day the outposts were attacked again. VMA–251 ComdD, Jul 53.

[38] A similar incident had occurred on 7 July when the 7th Marines was attacked while in the process of relieving a regiment of the 25th Infantry. PacFlt EvalRpt No. 6, p. 9–58.

[40] One participant remarked: “I think the Boulder City action . . . is the classic example of where the Army system worked well. The tanks were generally given credit for saving the position, and I seriously doubt our ability to have done the job under the previous system, which would have required the tanks to move to the scene after the action had begun.” Post ltr.

[41] In retaliation, between 2200 and 0600, the four tanks at Hill 119 drew 2,200 rounds of enemy mortar and artillery.

[42] The British were not hampered by any ammunition restrictions at this time. The excellent liaison between the 11th Marines and Commonwealth Division Artillery resulted in a humorous incident. After the battle of 24–25 July, a young British artillery officer arrived at a Marine regimental CP. He identified himself as being from the unit that had provided artillery support to the Marines the previous night, for which he was profusely thanked. Before his astonished audience he then unrolled an impressive scroll. This proved to be a bill enumerating the various types and amounts of projectiles fired and specifying the cost in pounds sterling. When he felt the Marine staff was properly flabbergasted, he grinned and conceded waggishly: “But I am authorized to settle for two
bottles of your best whiskey!” *Curry ltr.*

[43] Seventh Marines units were Companies D and E, and elements of the 4.2-inch Mortar Company.

[44] Casualty breakdown: 181 killed, 86 missing, 862 wounded and evacuated, 474 wounded (not evacuated), and 10 non-battle deaths.

[45] During this period 186 Marines were killed and 1,798 listed as casualties.

[46] Col Gordon H. West ltr to Dir, MCHist, HQMC, dtd 1 Jul 70, hereafter *West ltr.*

[47] Minor realignments of the military line of demarcation were made in the center sector to include a few miles of territory gained by the Communists in their massive July offensive there. Clark, *Danube to Yalu*, p. 292; Futrell, *USAF, Korea*, p. 640; Leckie, *Conflict*, p. 385.

[51] See Map 33 for Eighth Army dispositions on the last day of the war.

[53] The CO of the direct support artillery battalion in the defense of Boulder City, recalled that “on the evening of the 27th, with the Armistice only hours away, 2/11 received heavy Chinese artillery fire apparently directed at the batteries. Of the many rounds . . . 80% were duds and no damage was done. Numerous time fuzed shells detonated hundreds of meters above ground. We figured that they were using up old rounds to keep from hauling them back north.” *West ltr.*

[54] 1st MAW ComdD, Jul 53 (Folder 3), CTF–91 msg to ComNavFE, dtd 27 Jul 53.

[55] 1stMarDiv, ComdD, Jul 53, p. 2. One Marine officer, Major General Louis Metzger, who at the time was Executive Officer, Kimpo Provisional Regiment, recalled how voices of the Chinese Communists’ singing and cheering drifted across the Han River that night. “It was an eerie thing . . . and very depressing.” MajGen Louis Metzger comments on draft MS, dtd 1 Jul 70, hereafter *Metzger comments.*

Chapter 10. Return of the Prisoners of War

[1] Unless otherwise noted, the material in this section is derived from: PacFlt EvalRpt No. 6, Chaps. 9, 10; 1stMarDiv ComdDs, Jul–Sep 53; 1stMarDiv G–3 JnlS, Jul–Aug 53; 1st MAW ComdD, Jul 53; 11thMar, MAG–33 ComdDs, Jul 53; HRS Subject File VE23.2.S8 “CMC Statements on Korean POWs”; HRS Subject File #1 “Prisoners of War—Korea—General”; HRS Subject Files “Prisoners of War—Korea—News Clippings, folders #1, #2, #3”; Korea War casualty cards from Statistical Unit, Casualty Section, Personal Affairs Br, Code DNA, HQMC; MacDonald, POW; Berger, Korea Knot; Clark, Danube to Yalu; T. R. Fehrenbach, This Kind of War—A Study in Unpreparedness (New York: The Macmillan Co., 1963), hereafter Fehrenbach, Kind of War, quoted with permission of the publisher; Field, NavOps, Korea; Hermes, Truce Tent; Leckie, Conflict; Rees, Korea; USMA, Korea; MSGt Roy E. Heinecke, “Big Switch,” Leatherneck, v. 36, no. 11 (Nov 53), hereafter Heinecke, “Big Switch”; Life Magazine, Jul–Aug 53 issues; New York Times, 5 Aug–6 Sep 53; Washington Post, 5 Aug–6 Sep 53.

[2] Marine Corps prisoners, including their unit designations and date of release (or death), are listed in MacDonald, POW, pp. 249–273.

[6] Ibid.

[7] Ibid., p. 45.

[8] Ibid.

[9] For at least two Marines their return home was news in itself. Captain Paul L. Martelli, VMF–323, had been reported KIA. First Lieutenant Robert J. O’Shea, of division headquarters, the son of Marine Brigadier General George J. O’Shea (Ret), had also been thought dead by his family. He had been reported missing in July 1951 and had not been carried on the official POW list released the following December.

[12] Ibid.

[15] As the exchange got underway, General Mark Clark was on a trip to the U.S. Unable to greet the returning prisoners, as he had at LITTLE SWITCH, the UNC Commander had a welcoming letter waiting for each repatriate. A booklet especially prepared for returning POWs which contained a quick fill-in on world news and sports events they may have missed as prisoners was also given each returnee. Washington Post, dtd 5 Aug 53, p. 3.

[21] Ibid.
In July 1951, fighting had quieted down all along the UNC front, as a result of truce talks initiated by the Communists. This conveniently provided the enemy, at that time hard-pressed, a much-needed breathing spell. The lull in ground fighting continued until late August when the truce negotiations were suspended.

Records indicate that 3 officers and 18 enlisted died while in captivity. Three officers and 3 enlisted POWs were also presumed to have died. MacDonald, *POW*, pp. 257–259.

A similar mishap had dire consequences for Major General Dean of the Army. Cut off from his unit, he was attempting to return to the U.S. line. Lacking a compass he walked to the southwest—and thereby into NKPA hands—instead of the southeast where U.S. troops were then heavily engaged in the fierce battle of the Pusan Perimeter.

A radio-jeep driver, Private First Class Barnett, was returning to his unit when he made a wrong turn and, instead, came upon a group of North Koreans. The enemy fired and halted the vehicle, quickly taking Barnett prisoner. Beaten, searched, and interrogated, the Marine was placed in a heavily-guarded cellar. For several days he was given only a few crackers to eat. On the third night, unaccountably, the Koreans took him along on an attack. As they neared the objective, Barnett noticed that all but one of his NKPA guards had gotten ahead of him. He deliberately fell, throwing a rock in the face of the nearby guard, and raced for safety. Successfully eluding his captors, Private First Class Barnett later rejoined his own forces. MacDonald, *POW*, pp. 8–10.

One Marine who had conducted volunteer AAA reconnaissance missions over North Korea was Lieutenant Colonel Charles W. May, CO of the 1st 90mm AA Gun Bn. In December 1951 he was lost in such a mission—the same flight in which Lieutenant Colonel Thrash, of VMA–121, was captured. MajGen A. F. Binney ltr to Hd, HistBr, G–3 Div, HQMC, dtd 14 Sep 66.

Unless otherwise noted, the material in this section is derived from: MacDonald, *POW*; Montross, Kuokka, and Hicks, *USMC Ops Korea—East-Central Front*, v. IV; Barclay, *Commonwealth*; Fehrenbach, *Kind of War*; Leckie, *Conflict*; Rees, *Korea*. 

[33] Ibid.

[34] The same flight in which Lieutenant Colonel Thrash, of VMA–121, was captured. MajGen A. F. Binney ltr to Hd, HistBr, G–3 Div, HQMC, dtd 14 Sep 66.
[42] Although some American prisoners were taken in the summer of 1950, it was not until the late autumn that large numbers of men taken in several major engagements created a need for a permanent prison-camp system. Rees, Korea, p. 330.

[46] The Secretary of Defense Advisory Committee on Prisoners of War later adjudged Pak’s to have been “the worst camp endured by American POWs in Korea.” MacDonald, POW, p. 104.

[49] Negotiations broke down at this point. No other list was offered by Communist officials until the first exchange of wounded POWs, 17 months later, in the April 1953 LITTLE SWITCH operation. Montross, Kuokka, and Hicks, USMC Ops Korea, v. IV, p. 223.

[51] Ibid., p. 164.

[52] Ibid., pp.165–166.

[53] Ibid., p. 190.

[54] Ibid., p. 195.

[55] Unless otherwise noted, the material in this section is derived from: MacDonald, POW; Barclay, Commonwealth; Clark, Danube to Yalu; Fehrenbach, Kind of War; Leckie, Conflict; Rees, Korea.

[56] MacDonald, POW, p. 61. One former Marine POW commented: “The ‘lenient policy’ applied to the ‘liberated soldiers,’ who had supposedly been ‘liberated’ from the American capitalists by the Chinese People’s Volunteers. Unless a prisoner accepted this absurd concept, he was a ‘war criminal’ and subject to being treated as such. The North Vietnamese use this same characterization (‘war criminal’) in reference to U.S. POWs when queried by U.S. representatives at the Paris talks.” MajGen John N. McLaughlin ltr to Dir, MCHist, HQMC, dtd 17 Jul 70.

[57] Rees, Korea, p. 337.

[58] There were, for example, instances when POW columns were being marched north and the NKPA treatment was so rough that “Chinese guards intervened to protect the prisoners from the North Koreans.” MacDonald, POW, p. 43.

[59] Ibid., p. 60.

[60] Rees, Korea, p. 334.

[61] Ibid., p. 335.

[62] Davies was the only one of the four captured UNC chaplains who survived the war. During his imprisonment, he visited hospitalized POWs at the makeshift hospital near Camp 2 and held weekly community services. Another well-remembered chaplain was Captain Emil J. Kapaun, Chaplains Corps, USA. The Catholic priest stole food and sneaked into the enlisted compounds at Camp 5 to distribute it. His heroic behavior and selfless interest in his fellow-men were an inspiration to fellow POWs. MacDonald, POW, pp. 77, 136.

[64] Ibid., p. 337.

[65] Some analysts have pointed out that the Lenient Policy with its “emphasis on confession and repentence, and its propaganda exploitation” closely resembled POW indoctrination tactics developed by the Russians with their German prisoners in World War II. Rees, Korea, p. 338.

[66] Unless otherwise noted, the material in this section is derived from: MacDonald, POW; Fehrenbach, Kind of War; Leckie, Conflict; Rees, Korea.

[70] Unless otherwise noted, the material in this section is derived from: *PacFlt EvalRpt* No. 6, Chap. 10; MacDonald, *POW*; Fehrenbach, *Kind of War*.

[73] A hollowed-out compartment of the leg was used to hide written records on deaths, atrocities, and other administrative data. Ultimately, the records were brought back to the U.S. The Air Force officer was a cousin, interestingly enough, of the chief Allied truce negotiator, General Harrison. MacDonald, *POW*, p. 227, and *Washington Post* dtd 5 Aug 53, p. 1.

[74] The crucifix was brought back to freedom by Camp 2 POWs and later placed in the Father Kapaun High School, in Wichita, Kansas. MacDonald, *POW*, p. 172.

[76] Parachuting from his burning plane after it was struck by hostile AA fire, Captain Flynn duplicated an earlier action from World War II. In July 1945 he had bailed out of an aircraft similarly hit by fire while on a combat patrol over Japan. Biog File, HRS, HistBr, G–3 Div, HQMC.

[86] Unless otherwise noted, the material in this section is derived from: MacDonald, *POW*; Korean War casualty cards from Statistical Unit, Casualty Section, HQMC.

[89] Roster of this May 1951 escape group: 1stLt Cold, H&S/3/7; MSgt Dunis, Military Police Co; SSgt James B. Nash, MPCo; Sgt Charles W. Dickerson, 1stTkBn; Sgt Morris L. Estess, 1stSigBn; Sgt Paul M. Manor, A/7 MT Bn; Cpl Clifford R. Hawkins, 1stTkBn; Cpl Ernest E. Hayton, 1stTkBn; Cpl Frederick G. Holcomb, 11thMar; Cpl Leonard J. Maffioli, 1stTkBn; Cpl Theodore R. Wheeler, 1stServ Bn; Cpl Calvin W. Williams, Hq, 1stDiv; PFC John A. Haring, 7thMar; PFC Theron L. Hilburn, 1stTkBn; PFC Charles M. Kaylor, W/2/7; PFC Paul J. Phillips, A/7 MTBn; and PFC Charles E. Quiring, 5thMar. MacDonald, *POW*, pp. 260–263.

Chapter 11. While Guns Cool

[1] Unless otherwise noted, the material in this section is derived from: PacFlt EvalRpt No. 6, Chaps. 9, 10; 1stMarDiv ComdDs Jul–Sep 53; 1stMarDiv Type “C” Rpt—Defense of “C” Sector, 27 Jul–31 Oct 53, Folder #3 (this and following 1stMarDiv end-of-war records currently retired in 61 A2265, Box 74, FRC, Suitland, Md.); 1stMarDiv G–J Jnl, 30 Jul–31 Aug 53; 1stMar Hist of Defense of “D” Sector, 27 Jul–31 Oct 53, Folder #3 (contains brief histories of 1/1, 2/1, 3/1, AT Co/1, 4.2-inch MortCo/1); 5thMar Hist of Def of “D” Sector, 27 Jul–31 Oct 53, Folder #3; 5thMar Hist, same period, Folder #4 (brief histories of 1/5, 2/5, 3/5, AT Co/5, 4.2–inch MortCo/5, DMZ Police Co/5), dtd 26 Dec 53; 7thMar Hist of Defense, 27 Jul 53–10 Feb 54 (brief histories 1/7, 2/7, 3/7, AT Co/7, 4.2–inch MortCo/7), Folder #5; 1stMarDiv-Type “C” Rpt—Defense of ‘C”’ Div Sect, 27 Jul–31 Dec 53, Folder #6 (containing, among others, brief rpts 11thMar, 1st TkBn, 1st Engr Bn, 1st MT Bn, 7th MT Bn, 1st KMC Regt, 2d KMC Regt).

[8] Other modifications and deadline extensions included: (a) withdrawal of all military forces, supplies, and equipment from coastal islands and waters north of the 38th Parallel within 5 days increased to 10 days; (b) Personnel and equipment to be evacuated from Korea only through those ports of entry specified in the armistice agreement. 1st MAW ComdD, Vol. III, Jun 53, Msg from CinCUNC to CG, AFFE, COMNAVF, CG FEAF, info 1st MAW and others, dtd 17 Jun 53.
[10] Ibid.
[18] Ibid.
[22] KSC units were deactivated shortly thereafter. Following a EUSAK order in August to begin discontinuing use of the Korean laborers, the number of KSC workers was reduced. By the end of October, the 103d KSC Regiment attached to the division had been completely disbanded.
1. With the exception of the DMZ Police, all persons entering the DMZ for salvage were required to check their weapons at the zone entry.

2. The Neutral Nations Supervisory Commission supervised all phases of implementation of the armistice. It consisted of the Secretariat and 20 neutral nations inspection teams staffed by personnel from Sweden, Switzerland, Poland, and Czechoslovakia.

3. Unless otherwise noted, the material in this section is derived from: 1stMarDiv ComdDs, Aug-Sep 53; 1stMAW ComdDs, Aug-Sep 53; MAGs-12, -33 ComdDs, Aug-Sep 53; MSgt Roy E. Heinecke, “Four Star Visit,” Leatherneck, v. 37, no. 1 (Jan 54).

4. A fuel bingo is the amount of fuel needed by a pilot to reach home base plus enough additional fuel to divert to an alternate airfield.

5. Postwar commanders of 1stMarDiv to date had been Major General Robert H. Pepper, who succeeded General Pate, and served from 12 May 54–22 Jul 54; Major General Robert E. Hogaboom, 23 Jul 54–17 Jan 55; and General Twining, beginning 18 Jan 55.

6. CGs, 1st MAW, in the immediate post-armistice period were: Major General Megee, until 4 Dec 53; Major...
Operations in West Korea
Notes
Chapter 12. Korean Reflection

[3] Ibid. Even though Marine air and ground forces had on occasion operated jointly ever since the 1920s, air support in the early days was considered a subsidiary rather than integral part of the team. The doctrine of Marine close air support was formulated in WW II but not fully employed before the end of hostilities.

[5] Ibid., p. 3.

[7] See Appendix E. Percentages represent Marine ground only; air casualties have been deducted. Of 1st MAW casualties of 432 (258 KIA, 174 WIA) during the entire war, 103 were KIA and 41 WIA during the April 1952-July 1953 period cited above.

[10] Unless otherwise noted, the material in this section is derived from: PacFlt EvalRpts No. 6, Chap. 9, No. 5, Chap. 8, No. 4, Chap. 10; USMC Board Rpts, vs. 1–11; Generals’ Summary; AnlRpt SecNav 1952–1953; USMC Ops Korea vs. I–IV, passim; Monograph, A Brief History of Marine Corps Aviation, (HistBr, G–3 Div, HQMC, 1960); Cagle and Manson, Sea War, Korea; Sherrod, Marine Aviation; LtCol C. A. Phillips and Maj H. D. Kuokka, “1st MAW in Korea, Part I, Pusan to the Reservoir: The Acid Test,” Marine Corps Gazette, v. 41, no. 5 (May 57), pp. 22–27; LtCol C. A. Phillips and Maj H. D. Kuokka, “1st MAW in Korea, Part II, January 1951 to the Armistice,” Marine Corps Gazette, v. 41, no. 6 (Jun 57), pp. 22–26; Brochure, Change of Command Ceremonies, 11 Jul 56, First Marine Aircraft Wing, FMF, 1st MAW folder, HRB ref. file.

[13] Technically, FAF had also been the controlling agency for air support during Pusan operations. Marine aviation units, as a component of an integrated Fleet Marine Force, however, were directed to fly support for 1st
ProvMarBrig as their highest priority. Except for the formality of checking in with the FAF Tactical Air Control Center (TACC) at JOC, 1st MAW units operated under the Marine Corps-Navy CAS doctrine. During the Seoul-Inchon campaign, control of air operations came under ComNavFE, since it was an amphibious operation, and the air system followed Marine-Navy doctrine. USMC Board Rpt, v. I, p. IV–B–9, 14.

[16] With phaseout of the Corsairs in 1952, the VMF squadrons were subsequently redesignated as attack units.
[17] In August 1952, FAF had introduced a new policy limiting pilots to one pass on general support or interdiction missions and two passes on CAS flights.
[19] Unless otherwise noted, the material in this section is derived from PacFlt EvalRpts No. 4, Chap. 9, No. 5, Chap. 8, No. 6, Chap. 9; USMC Board Rpt, v. I; Generals' Summary; USMC Ops Korea, vs. I–IV, passim; Montross, SkyCav.
[22] By contrast, in 1945 World War II campaigns the Secretary of the Navy James V. Forrestal had visited hospital ships and praised the air evacuation methods then in use when he commented, “I went aboard the Samaritan, where Navy surgeons and corpsmen were already dealing with the casualties from the day and night before.” Capt Clifford P. Morehouse, The Iwo Jima Campaign, (Washington: HistDiv, HQMC, 1946), p. 139.
[25] Hermes, Truce Tent, p. 184, comments: “In order to insure a steady flow of replacement craft, he [Ridgway] suggested that procurement be started on a scale that would permit manufacturers to expand production immediately.”
[27] Ibid.
[28] Ibid., p. 535.
[31] With 7,779 men in 1stMarDiv and 8,973 in the 2dMarDiv, even “had they been combined into a single unit, its numbers would still have fallen 20 percent short of one war-strength division.” Giusti, Mobilization, MCR, p. 9.
[34] Giusti, op. cit., p. 36.
[35] Even as late as July 1952, the influx of Class III volunteer reserve pilots, many of whom lacked adequate recent precombat flying experience, had presented a serious wing personnel problem and resulted in on-the-job training for pilots in the VMO–6 fixed-wing section. As another measure to improve squadron operational proficiency and partially correct weaknesses of the individual pilot rotation system and fast turnover, a 100-mission ceiling was inaugurated in February 1953. This applied to aviators in the VMF/VMA tactical units, with the exception of VMF(N)–513 pilots who were rotated after 60 missions.

[36] Assignment of Negro personnel in the armed forces continued to expand as a result of the President’s 1948 Executive Order on Equality of Treatment and Opportunity. The Far East Command in July 1951 and the European Command in April 1952 initiated steps towards the racial integration of combat units, followed by similar programs for service units. Semianl Rpt SecDef (1 Jan–30 Jun 1952), p. 21.

[37] For detailed breakdown of figures, see 1stMarDiv, 1st MAW ComdDs, Apr 53 and PacFlt Eval Rpt No. 6, Chap. 9, p. 9–54, Chap. 10, p. 10–29. Also, PacFlt EvalRpt No. 5, Chap. 8, p. 8–33 and No. 4, Chap 9, p. 9–26.

[38] Previously, Marine Corps views had been represented at the JCS level by the SecNavn or CNO.

[40] Thomas, Heinl, and Ageton, op. cit., p. 70.

[42] Unless otherwise noted, the material in this section is derived from: PacFlt Eval Rpts No. 4, Chaps. 9, 10, No. 5, Chaps. 1, 8, 9, No. 6, Chaps. 1, 9, 10; USMC Board Rpt vs. I-II; 1st Marine Division Training Bulletin No. 5–53, “Lessons Learned,” dtd 10 Jun 53, hereafter Lessons Learned 5–53; Generals’ Summary; Futrell, USAF, Korea; Heinl, Soldiers of Sea.

[44] PacFlt EvalRpt No. 5, p. 8–5. Subsequently, the division’s ground readiness was rated as excellent; a conservative estimate placed individual unit amphibious readiness at between 25 and 60 percent; and indicated a 30-day training period would bring the division to complete amphibious readiness. Generals’ Summary, p. 53.

[47] Lessons Learned, op. cit.

[48] PacFlt EvalRpt No. 6, p. 9–84.

[49] Basically, these consisted of a no-hostile-act three-mile circular area radiating from Kaesong; a six-mile radius forbidding FAF planes in the skies over Kaesong and another two-mile, no-fly radius over Panmunjom; and various other prohibitions on military craft, air-dropped leaflets, and firing of artillery to include propaganda shell leaflets.

[50] PacFlt EvalRpt No. 6, p. 9–78.

[53] Between December 1950–July 1953, the 1st Marine Division took 2,445 NKPA/CCF, with an additional 656 enemy seized by its attached 1st KMC/RCT, or a total of 3,101. Marine capturing units included Headquarters Battalion, 1st Tank Battalion, 11th Marines, the three infantry regiments, and 7th Motor Transport Battalion. An additional 4,792 POWs were also taken by the 1st Division in the early Inchon-Seoul operations. G–1 Folder, Aug 53 (Box 4), “Personnel Periodic Rpt.” No. 94, dtd 15–31 Aug 53; USMC Board Rpt, v. I, p. II–B–46.

[55] Ibid.

[56] Much of the unwritten but basic policy mitigating against full use of Allied air superiority stemmed from the desire to employ “humanitarian” standards in the UNC war effort. Following WW II there had been wide criticism of the “moral wrong of massed air bombardment” as well as employment of the atomic bomb by the
U.S. to hasten the end of the war. The UNC goal, in Korea, was to avoid needless civilian casualties and for air strikes to be directed against purely military targets. Futrell, *USAF Korea*, p. 41.

[58] Comments Futrell, *USAF, Korea*, pp. 430–431: “Despite the fact that responsible Eighth Army and Fifth Air Force commanders had decided that the rail-interdiction attacks would best accomplish the United Nations mission in Korea, Eighth Army subordinate commanders were gravely dissatisfied with the limitations [96 sorties daily for the entire Eighth Army front, decided upon by EUSAK-FAF in November 1951] placed on close support.” One of those dissenting subordinates at the time was CG, 1st Mar Div. Following the September 1951 heavy fighting in the Punchbowl area, General Thomas officially described the Marine division’s air support as unsatisfactory and stated his division had “taken unnecessary casualties because its air support had not been adequate or timely.” Average elapsed time between the division’s CAS requests and its 187 approved missions that month had been nearly two hours. Only 32 immediate air-support requests had been filled within 30 minutes.

[63] Cagle and Manson, *Sea War, Korea*, p. 270.

[66] *PacFlt EvalRpt* No. 5, p. 9–45.

[67] By contrast: in FY 1951, 1st MAW CAS sorties for 1st Mar Div were 7,000 of total 14,028 CAS sorties, or 50 percent; for FY 1953, the figure was 4,912 of total 14,540 CAS sorties, or 32.4 percent. *Generals’ Summary*, Chart C, following p. 58.

[70] The bombl ine had been moved in to an average of 3–4,000 meters from the MLR in December 1952 to expose more targets to the “mass” strike treatment.

[73] For a penetrating discussion of interservice problems dealing with air-ground liaison and communications, use of FACs, and CAS capability, etc., see U.S. Congress, Rpt of Special Subcommittee on Tactical Air Support of the Committee on Armed Services, Otis G. Pike, Chairman (House of Reps., 89th Congress, 1 Feb 66), Washington: GPO, 1966.

[75] If the enemy advanced closer than 50 yards, by closely following under heavy preparatory fires, he could
penetrate the position. At this close range, normal box-me-in artillery fires were not close enough to break up the attack. Lessons Learned 5–53, p. 10.

[100] The course of the war, particularly its protracted and static nature, had led to growing national apathy and opposition, particularly on the U.S. home front. In late 1950, national opinion polls found that 80 percent of the people were in favor of the war and seven months later that 67 percent were against it. On the Korean front lines, morale was generally highest during heavy ground actions or large scale air attacks. Washington Post, dtd 12 Jul 70, p. A–17; PacFlt EvalRpt No. 6, p. 1–16.
[101] Rees, Korea, p. 33.
[103] Rees, Korea, p. 431. In the three years of war, North Korea had gained 850 square miles of territory southwest of the Parallel, while the ROK acquired 2,350 square miles north of the original June 1950 boundary.
[105] Official records show that the 1stMarDiv inflicted approximately 59,805 CCF casualties (11,957 KIA; 15,111 estimated WIA or KIA; 32,643 estimated WIA; and 94 POWs) during the Apr 52–Jul 53 period on the western front. For the same time, Marine infantry casualties were approximately 13,000 plus some 2,500 for its 1st KMC/ RCT.

(12/28/50) Hungnam is destroyed by a Navy demolition team as UN forces evacuate the port city.
(9/23/51) USS Toledo (CA-133) fires 5 inch salvo at enemy installations in Wonsan, Korea.
(9/14/50) USS *Rowan* (DD-782) escorts USS *Mt. McKinley* (AGC-7) off the Korean coast en route to Inchon.
(3/18/52) The heavy cruiser USS *St. Paul*, (right) goes alongside the battleship *Wisconsin*, (center) to transfer wounded South Korean Marines while destroyer *Buck*, (left) gets her mail.
(8/7/51) The destroyer *Mason* is dwarfed by the towering, mist covered mountains of North Korea. Mason was teamed with the battlewagon *New Jersey* on a special mission of bombarding Communist troops lodged in the ridges pictured in the foreground when this photo was taken.
(7/1/51) On 29 June 1950, cruiser Juneau (CLAA-119) is the first Navy ship to fire her guns at the North Korean invaders.
USS Juneau (CLAA-119) at anchor in Kagoshima Wan on 25 June 1950, first day of the war.
Destroyer Lyman K. Swenson (DD-729) at sea in 1953.
(1/10/53) Providing anti-aircraft and anti-submarine protection for ships of Task Force 77, destroyer *Collet* cuts through the Sea of Japan off the coast of Korea.
Destroyer *Collet* (DD-730) in the 1950s.
Destroyer *Mansfield* (DD-728) in 1953.
(12/14/50) A temporary wooden bow is attached to USS Mansfield after losing her bow to a mine in Korean waters.
The destroyer *Dehaven* (DD-727), decks awash in a rough sea, refuels from an aircraft carrier off the coast of North Korea, typifying Navy "on the spot" replenishment.
(10/12/51) The veteran heavy cruiser *Toledo* takes its battle station off the East coast of Korea as part of Task Force 77.
(12/10/52) USS Rochester (CA-124) in a Japanese port preparing for her third cruise in Korean Waters. The heavy cruiser compiled an impressive record in two previous tours in the Far East, having aided in the amphibious landing at Inchon and the evacuation of Hungnam.
(1/24/51) Officers and enlisted men of the cruiser Rochester line the decks of the ship on arrival at Pearl Harbor to watch hula dancers performing on the dock
Heavy cruiser *Rochester* (CA-124) in 1952.
(10/21/50) USS Helina (CA-75) fires a broadside salvo at Chong Jin, Korea, 39 miles from the Soviet border.
Heavy cruiser *Helena* (CA-75) in the 1950s.
A cruiser and destroyer take a break from combat operations to refuel from a U.S. Navy oiler in 1951.
Destroyer George K. MacKenzie (DD-836) while at sea in February, 1951.
(12/23/50) The heavy cruiser *Saint Paul* fires a salvo turning night into day.
In this photograph, six vessels moored alongside the repair ship Jason represent four nations in the UN naval forces operating off Korea. The vessels are: USS Hamner, USS Gloucester, Colombian ship ARCC Aimirante Padilla, Australian HMAS Murchison, South Korean ROK Taedong, and USS Dextrous.
(6/18/52) The battleship *Iowa* (center) takes fueling lines from a Navy tanker (top) during refueling operations off the coast of Korea. A destroyer (bottom) takes fuel from the *Iowa*. 
(12/13/52) USS *Waxbill* (AMS-39) under fire by enemy shore batteries while laying a smoke screen in Wonsan Harbor, Korea.
(12/28/50) USS Begor (APD-127) lies at anchor ready to load the last UN landing craft as a huge explosion rips harbor installations at Hungnam.
(5/19/51) British cruiser Kenya replenishes its depleted fuel and ammunition stores in a Far East port after completing an extended cruise in Korean waters. The cruiser is a unit of the United Nations Blockading and Escort Force commanded by RADM Allan E. Smith, USN.
(1/23/53) The gun captain of this ice-covered mount inspects the de-icing job before him aboard the carrier *Oriskany* (CVA-34) in Korean waters.
(4/2/52) The battleship *Wisconsin*’s 40-mm guns open fire on a Communist railroad train as the Seventh Fleet flagship presses her attack on Red transportation facilities close to the coastline.
Battleship *New Jersey* sailors watch F4U Corsair fighters landing aboard the aircraft carrier *Boxer* (CV-21).
(5/14/52) Row after row of 16-inch powder charges on the deck of USS Iowa at a port in southern Japan.
(7/1/50) Crewmen stand alert at the gun turrets of the cruiser Rochester (CA-124).
Destroyer *Ernest G. Small* (DD-838) in 1952.
Damage control efficiency saved the destroyer *Small* when she struck a mine off the coast of Korea. The destroyer backs slowly toward Japan where temporary repairs will make the ship seaworthy for a trip to the United States.
The destroyer *Ernest G. Small* (DD-838), with its temporary bow, at dock in 1951.
(10/24/50) Two Seventh Fleet minesweepers work in a North Korean minefield at Wonsan, prior to invasion.
The crew of a disposal boat brings in a mine at Wonsan Harbor, Korea.
(8/22/50) The 8-inch guns of No. 3 turret on a U.S. Navy cruiser take a North Korean military target under fire off the east coast of Korea.
(10/16/50) An unscathed church amid the rubble of Pohang verifies the pin point accuracy of U.S. naval bombardment.
The American cruiser *Toledo* on the Korean East Coast during a shore bombardment.
An LSMR (Landing Ship Medium, Rocket) sends up flaming rockets.
USS Comstock (LSD-19), flagship for UN forces during landings at Chinnampo and Wonsan, Korea.
Attack cargo ship Achernar (AKA-53) at sea in 1952.
Attack Cargo ship *Thuban* (AKA-19) at sea in 1951.
USS George Clymer (PA-27) and USS Pickaway (PA-45) loading out at night.
(2/51) Attack transport Henrico (APA-45).
Transport *George Clymer* (PA-27) at sea in 1951 as part of the vital Korean War logistics effort.
(3/26/52) USS Fort Marion (LSD-22).
Attack cargo ship *Union* (AKA-106) at sea in 1953.
(3/26/51) Under the Seabees' know-how an LST does more than carry cargo. Here an LST is married to a causeway to provide a flow of needed supplies to shore.
(6/11/52) LST 799 conducts vital helicopter rescue operations in Wonsan Harbor. In one 24-hour period the ship's helicopter picked up three Navy pilots who had been forced to ditch at Wonsan because of damage to their aircraft.
Korea-bound troops debark from an U.S. Army transport at the San Francisco Port of Embarkation, California in 1950.
(10/2/50) Transports unload supplies for U.S. troops in Korea at Pusan.
(7/2/50) Troops board ships at a Japanese port for movement to the South Korean war zone.
A ground crewman at an advanced air base assembles deadly napalm bombs for use in Korea.
(11/1/51) A tired South Korean laborer hitches a ride to the airstrip on a train load of bombs at an American airfield in Korea.
Supplies aboard USS *Achernar* accompany Marines as they prepare to make an invasion somewhere along the Korean coast.
(10/13/52) Between sweeping assignments, minesweeper boats and their crews rest aboard the LSD USS *Fort Marion* in Wonsan Harbor.
(4/10/51) A U.S. Navy helicopter drops supplies to the deck of USS Fort Marion (LSD-22) off the North Korean coast.
(9/15/50) Sunrise in Inchon Harbor, as seen from the amphibious force flagship *Mt. McKinley*.
(9/15/50) A volley of rockets supports the first wave of Marines heading for the beach.
U.S. Army DUKWs bring supplies and equipment to shore from ships at Pusan Harbor, Korea.
(10/26/50) U.S. Marines dash ashore from LCVP’s (Landing Craft, Vehicle and Personnel) during the invasion of Wonsan.
(11/4/50) Ten LST's (Landing Ship Tank) of the U.S. Navy's 7th Fleet disgorge their freight of military vehicles at Blue Beach, Wonsan, Korea, where the 1st Marine Division was put ashore in late October.
(9/16/50) One bulldozer pulls another across the muddy shore of Wolmi Island, as equipment is unloaded from LST's.
(12/15/50) Tons of ammunition along a railroad track in Hungnam as landing craft aid the UN evacuation by taking aboard supplies and personnel.
(2/23/51) South Korean Marines land on the beaches of Sindo Island, after a heavy bombardment by U.S. Navy vessels.
(12/14/50) Hundreds of aviation gasoline drums lay at Hungnam prior to being loaded on to LST-898 during the withdrawal of the 1st Marine Division.
(9/4/50) An American soldier supervises the storage of combat rations by native labor at a Quartermaster Warehouse in Pusan, Korea.
Ten thousand bags of letters and packages are unloaded at a Korean port for delivery to U.S. combat forces at the front.
Christmas packages arrive for the worn-out Marines of the 7th Regiment near Koto-ri.
(9/15/50) Jeeps and ambulances pass two Russian-style tanks knocked out by U.S. Marines near the front in Inchon, Korea.
Marine Corps engineers repair a bridge in Korea as rolling stock detours through the riverbed.
(3/6/52) The Fifth Marines move out of "Camp Tripoli," Korea as they are airlifted to the eastern sector to thwart enemy guerillas.
Arms and equipment accompany an artillery unit as it moves into a mountain pass, somewhere on the Korean front.
U.S. Marines engaging Chinese Communists in northern Korea take a respite from the fighting.
(7/31/50) Two artillerymen rest in the rain between firing missions against the enemy, somewhere in Korea.
(4/5/52) Map in hand, a second lieutenant outlines an upcoming patrol for the men in his unit.
(4/5/52) Leaving his underground bunker, a Navy hospital corpsman hikes to a nearby Marine-occupied bunker on the eastern front with a cup of warm broth.
(12/22/50) - U.S. Marines rest in the snow after moving out of Kodari, Korea.
A Marine rifle squad in Korea fans out behind an M-46 tank.
Marine tanks blast their way through enemy positions near Seoul to prepare the way for the Leatherneck infantrymen’s assault.
First Division Leathernecks pass destroyed and abandoned equipment during their breakout from Chosin to the sea.
(12/22/50) U.S. Marines and tanks near Kodari, Korea.
(7/19/50) Two Marines report by field telephone from a platoon command post somewhere in Korea.
U.S. Marines drive forward to battle Chinese Communist units during recent fighting in Korea as Leatherneck aviators piloting F4U-5 Corsairs provide close air support for the troops.
(1/5/51) Elements of the First Marine Division rest on a snow-covered Korean roadside after successfully overcoming an enemy ambush.
Marines advance up a steep road past knocked-out tanks of Russian design. In the foreground, South Korean civilians remove a litter carrying a dead soldier to the rear area.
As tanks are unloaded in the background, Marines relax at a railway station before moving on to the front.
(4/8/52) Marines move out on an early morning patrol.
(4/4/52) With enemy troops in the area, crawling through a barbed wire entanglement is precarious. Two Marine sniper hunters keep a watchful lookout while their buddies start into the wire.
(2/21/52) A U.S. Marine infantry mortar crew goes into action against the enemy, somewhere on the Korean central front.
(10/28/52) Armor clad Marines hug the dirt in hastily erected trenches as incoming enemy artillery and mortar shells blanket the area. Hook Ridge, since dubbed "The Hook", is near Magae-Dong, Korea, and on the Marines' main line of resistance northwest of Koranpo-ri on the western front. The previous day, the 1st Marines had driven 800 Chinese Communists from this strategic position through bitter fighting.
(9/20/50) Marines of the Republic of Korea arrive across the Han River on the way to Seoul.
A Weapons Company section sets up its mortar to take Communist positions under fire near the Chosin Reservoir.
Through icy mountain passes, Chinese Communist attacks, and roadblocks, the First Marine Division and fleeing natives come down from Koto-ri. The Marines brought out their wounded and nearly all of their equipment.
Marines pushing to the summit of the Korean heights near the Naktong River are taken under fire by enemy mortars.
(4/5/52) Marines firing a mortar at enemy positions.
(10/28/52) Slung over his shoulders and neck like a vest, a Marine Ammo carrier waits impatiently as other Marines rip open ammunition boxes for front line troops.
Marines march south from Koto-ri, fighting their way through Chinese Communist hordes in the sub-zero weather of the mountains.
U.S. ground forces in Korea receive close air support in an attempt to flush enemy troops from their hillside entrenchment.
(6/13/50) Helicopters carry fully equipped Marines to a predetermined landing area, bypassing strong beach fortifications.
(9/16/50) North Korean defenders of Wolmi-do and Inchon, captured by elements of the 1st Marine Division and South Korean Marines. During the U.S.-led invasion of Inchon, repeated attacks by sea and air led to many of the garrison troops losing the will to fight and surrendering at the first opportunity.
A North Korean prisoner of war captured by U.S. Marines near Naktong River.
(4/24/52) Chinese prisoners-of-war on the island of Kojedo in Korea, site of the United Nations Prisoner-of-War Camps. They are a part of a working detail assigned the job of unloading cargo from ships.
(9/25/52) Smoke and debris from a 1000 pound bomb fills the sky near Taodoksan, North Korea, just behind enemy lines, as Corsair fighter-bombers support ground elements of the 1st Marine Division fighting in Korea.
A very important role for the helicopter, first tried in the Korean War, is evacuation of the wounded.
(2/26/52) His fellow GIs take a wounded infantryman to a waiting helicopter for transport to a Navy hospital ship offshore.
(5/16/52) Marines hurriedly load the last patient aboard an HTL-4 helicopter for evacuation to a rear area aid station.
Marines carry a wounded comrade from the front lines to a forward aid station.
(8/12/52) At Yokosuka, Japan, crew members carefully carry their shipmates who were injured during a fire aboard the carrier Boxer.
A group of women volunteers help several Korean battle casualties clean up during their short rest stop at Guam.
(10/14/52) A Navy chaplain administers communion to personnel at the UN Base Camp, Munsan-ni, Korea.
A Navy chaplain serving with the Fifth Marines, First Marine Division, conducting a service for Marine infantrymen atop "Vegas Hill."
(12/13/50) Marines of the First Division pay their respects to fallen comrades during memorial services at the division's cemetery at Hamhung, Korea, following the break-out from Chosin Reservoir.
(05/30/52) Marines bow their heads during Memorial ceremonies at Munsan-ni, Korea.
Korean refugees aboard the Meredith Victory as the ship lifts more than 14,000 refugees from Hungnam, Korea to freedom (part of the nearly 98,000 Koreans evacuated from the city).
(7/19/52) One of five drifting Korean fishermen rescued by the escort destroyer Taylor.
(2/18/54) In Pusan, a Korean sailor unloads one of 57 barrels of relief supplies at the Mary Knoll Clinic.
(8/22/51) Having just destroyed a vital bridge while supporting front line UN troops, a group of Skyraider dive bombers and Corsair fighter-bombers rendezvous off the Korean coast on their return flight to USS Boxer (CV-21).
(5/8/51) On the 40th anniversary of naval aviation, a carrier-based F4U Corsair fires an anti-tank rocket at a target in Korea.
(12/24/52) AD Skyraiders attack targets near Wonsan, Korea. Smoke and debris can be seen erupting skyward from the first plane's bombs.
(7/15/51) A Navy F4U Corsair from USS Boxer levels out to observe the destruction he has wrought to a highway bridge near Wonsan.
(9/10/51) A Navy Skyraider (inverted) and a Panther in an unusual configuration.
(8/52) A Grumman F9F attached to USS Bon Homme Richard (CVA-31) flies over Task Force 77 engaged in three-carrier operations against North Korean targets. The carriers are USS Bon Homme Richard, USS Essex (CVA-9), and USS Princeton (CVA-37).
(9/18/51) An F9F Panther jet returns to the aircraft carrier *Essex* after a successful air strike against Communist bridges, troops, and supplies. Flaps and hook are lowered for the recovery.
(8/52) A Grumman F9F attached to USS *Bon Homme Richard* (CVA-31) flies over Task Force 77 engaged in operations against North Korean targets.
(5/1/51) F9F Panther jet aircraft from the carrier Princeton (center) wing homeward after an air strike against Communist forces attacking in Korea. Another carrier, USS Philippine Sea (upper right), cruises in readiness to receive planes on a similar mission.
An F9F jet jettisons fuel over Task Force 77 in the Sea of Japan prior to landing on USS Bon Homme Richard (CVA-31).
(8/27/51) The destroyer *Tingley* in the Sea of Japan as Panther jet fighters from the fast carrier *Boxer* pass over the elements of Task Force 77 on their way to attack supply lines and military installations in North Korea.
Panther jets, returning at dusk from a strike over North Korea, circle Task Force 77. Planes such as these helped demolish four North Korean hydroelectric power complexes, one of them the Yalu River's Suiho Dam, largest in the Orient, on 23-24 June 1952.
(8/6/51) Two Navy F9F "Panther" jets move in on the devastated port of Wonsan, Korea (just beneath number 106 on the nose of the leftmost plane) as buildings hit by a previous strike continue to burn (right).
(5/19/52) Four F9F Panthers of Squadron VF-781 in mid-flight, with the lead plane starting a turning maneuver. Assigned to Air Group 102, this squadron of fighter jets served twice in the Korean conflict: 30 May-30 Nov 1951 aboard USS *Bon Homme Richard*; and 28 Oct 1952-2 May 1953 with USS Oriskany (CVA-34).
(5/23/52) A F9F "Panther" jet from the aircraft carrier Boxer, on an armed reconnaissance flight, takes a look at the damage done to a Communist airfield at Sandok in North Korea.
(5/23/52) A Navy Panther jet fighter makes a high speed run on Communist installations near Kowon, North Korea, a familiar scene as the carrier-based jets carry out their daily rail interdiction missions.
(6/9/51) A Navy Panther jet looks for targets near the North Korean city of Hungnam. Bomb craters left by planes of Carrier Task Force 77 can be seen in the background.
(7/15/51) Two "Panther" jets from the aircraft carrier Boxer join a concentrated attack on the North Korean port of Wonsan.
(7/15/51) A Navy Panther jet attacks supply dumps and warehouses near the North Korean village of Kowon, 20 miles northwest of Wonsan.
(7/15/51) Navy aircraft over Korea.
(12/14/52) A Navy F9F Panther jet of Fighter Squadron 72 from USS Bon Homme Richard passes over a Korean mountain range covered with the first snow of the winter.
(12/7/51) A twin-jet Banshee wings its way over the port of Wonsan, Korea. The Navy's newest high powered jet fighter in the Korean War, the Banshee first flew into action from the carrier Essex in August, 1950.
(6/7/51) A Royal Navy "Firefly" aircraft is launched from HMS Glory, a British light fleet carrier.
(12/21/52) An F2H-2F and an F2H attached to USS Kearsarge (CVA-33) flying over Korea.
(3/28/52) Taken from a Navy helicopter, this photograph shows conference tents and surrounding area of the Military Armistice Conference site at Panmunjom, Korea. Entrance to the immediate conference site is identifiable by the shrubs and sentry boxes on either side of the walkway.
(10/13/51) UN and Communist Liaison officers and their staffs enter the new site of the Military Armistice conference at Panmunjom, Korea.
(3/5/52) Guards at the entrance to the Panmunjom Military Armistice Conference site.
(7/27/53) General Mark W. Clark, Commander-in-Chief, UN Command, signs the armistice agreement as Vice Admiral Robert P. Briscoe, COMNAVFE (center); and Vice Admiral Joseph J. Clark, Commander, Seventh U.S. Fleet, look on.
Maj. General Henry I. Hodes, USA, and Rear Admiral Arleigh A. Burke, USN, delegates to the Panmunjom Sub-Delegation Conference, inspect a 200 year old stone located by the roadside 100 yards from the conference tent. The stone was placed to commemorate the irrigation of the Pan Mun Valley for the benefit of local farmers.
(5/1/52) Vice Admiral C. Turner Joy, USN, Commander Naval Forces, Far East and senior delegate to the Korean Military Armistice Conference arrives by sedan at Panmunjom for an Executive Session of the full delegation.
(10/13/51) Vice Admiral C. Turner Joy, USN, returns to the UNC Advance Camp in Korea October 10 in anticipation of resumption of the Military Armistice talks. Rear Admiral Arleigh A. Burke, USN, (back to camera), is on hand to greet him.
(9/25/52) General Mark Clark (kneeling center) studies the target data board on the fire control platform of the battleship Iowa as she fires at targets in Wonsan Harbor. Looking on (center) is Vice Admiral J. J. Clark, Commander Seventh Fleet, and Vice Admiral Robert P. Briscoe, Commander Naval Forces, Far East.
(11/2/50) U.S officers confer at Iwon.
A Marine helicopter comes in for a landing aboard the carrier Sicily.
(6/30/51) A helicopter from USS Boxer (CV-21) lands on the flight deck after completing an air rescue mission.
(3/15/53) F9F Panther jets taxi down a runway to position for take-off against Red targets in North Korea.
(10/8/51) On the flight deck of the fast carrier *Bon Homme Richard*, three Navy photo planes get an inspection by plane captains before taking off.
(11/16/50) Ordnance crewmen perform a final check of the F4U Corsair's armament aboard USS Sicily (CVE-18) prior to an air strike on Korea.
Belgian officials and a Belgian journalist inspect a Navy Panther jet on the flight deck of the aircraft carrier Antietam operating off the coast of Korea.
(7/30/51) Plane handlers push a F9F Panther jet fighter off the port elevator for storage on the hangar deck of USS Boxer (CV-21).
(3/15/52) A crew of plane handlers spots a Panther in its assigned position on the flight deck of USS Antietam.
Lt. (j.g.) William H. "Wild Bill" Elliott, USNR of Mill Valley, CA, is congratulated by Capt. Cameron Briggs, USN, skipper of USS Boxer, after making the 49,000th landing aboard the big Essex-class carrier.
(6/25/51) Crewmen fuel Panther jet fighters on the flight deck of USS Boxer (CV-21) between strikes against enemy targets in Korea.
(1/7/52) Crewmen use snow shovels to clean away the snow and ice covering the deck of USS Essex (CV-9).
(12/28/50) Flight deck crews of USS *Badoeng Strait* (CVE-116) "turn to" on the ice and snow covered flight deck after an icy storm swept out of Manchuria to plague this ship operating off the Korean coast.
(7/21/50) "Panther" jets aboard the U.S. Navy carrier Valley Forge (CVA-45) line up for takeoff on a strike against military targets in North Korea.
A Panther taxis along the flight deck of the carrier *Boxer*.
A typical flight deck scene before an air strike on Korea.
(1/18/52) A blinding snow storm slows TF-77 off the coast of Korea. Loaded for action, these Essex (CV-9) aircraft wait for a lull in the storm to launch strikes against the enemy.
(3/4/52) Having been released from the arresting gear, a Corsair fighter plane of squadron VF-713 folds its wings in preparation to park on the flight deck of the flattop Antietam in Korean waters.
(7/12/53) A flak-damaged Panther jet lands aboard the carrier *Philippine Sea* (CVA-47).
(11/22/51) While attempting a landing with the use of only one landing gear, this Panther jet is stopped short of a crackup as his tail hook catches and holds an arresting wire stretching across the flight deck of the USS *Bon Homme Richard*. 
(8/26/51) An F9F jet gets the "cut" signal from a LSO as it returns to USS *Bon Homme Richard* from a strike on North Korea.
(3/24/52) Somewhere off the Korean east coast, an F9F Panther jet touches down on the flight deck of the aircraft carrier Valley Forge (CV-45) to chalk up the 37,000th landing aboard the veteran Korean flattop.
(11/15/50) An F9F Panther returns to USS Leyte (CV-32) after participating in a fighter sweep against a North Korean Communist force around Wonsan.
(11/3/52) The first Navy all-night jet fighter was a Douglas F3D with intercept radar. Major William T. Stratton, Jr., USMC, piloted an F3D when he and his radar operator successfully intercepted and shot down a Russian built YAK 15 of the North Korean Air Force.
An oil painting of the attack on Hwachon Dam, 1 May 1951.
(8/10/50) A bomb strike on an oil refinery at Wonsan.
(6/16/52) The destruction noted in this photograph was once an enemy train. A couple of well-placed bombs by pilots from ships of Task Force 77 left it as pictured.
(8/7/52) A copper ore processing plant at Kilchu, Korea, takes a beating from Corsair fighter-bombers and Skyraiders flying from the fast carrier *Princeton*.
An F4U Corsair fires air-to-ground rockets in the mountains of Korea.
(7/15/51) After pulling up out of his dive, a Navy Corsair levels off to look back at the destruction done to the target - an enemy highway bridge a few miles outside the beleaguered city of Wonsan on the east Korean coast.
(5/8/52) The Navy and Air Force combined their assets in the air over Korea. Here, an Air Force F-80 Shooting Star releases a tank of napalm (below its left wing) destined for a supply building and courtyard filled with loaded supply vehicles at the Communist supply center at Suan, 35 miles southeast of Pyongyang.
(8/4/50) A Navy F4U Corsair fighter leaves the deck of a U.S. Navy carrier operating off the coast of Korea to sortie against Communist-led North Korean Forces.
(8/25/52) A Navy jet fighter is flung from the catapult of USS Antietam as the catapult officer (right) and an enlisted "talker" crouch to the flight deck to escape the following blast from the jet's exhaust.
(12/5/50) An F9F Panther jet is spotted on the catapult in preparation for takeoff from USS Princeton (CV-37).
An F9F fighter jet from squadron VF-837 takes to the air from the flight deck of USS *Antietam* (CVA-36).
(4/30/51) U.S. Navy F9F jets take off from USS Valley Forge (CV-45) for a strike on Korean Communist targets.
The escort carrier *Sicily*, home to Marine Squadron VMF-214, in the early 1950s.
(7/14/50) The escort carrier *Badoeng Strait* (CVE-116) leaving San Diego with Marine Corps fighters on board.
(6/15/53) The attack carrier Lake Champlain (CVA-39), five days after she arrived in the Korean war zone.
(6/29/52) USS *Oriskany* (CVA-34) rounding Cape Horn on her way to the Korean war zone.
The aircraft carrier *Oriskany* (CV-34) moored at a pier in Yokosuka, Japan during a break in combat operations.
(9/17/52) USS Kearsarge (CVA-33).
(3/16/53) The massing of men and planes make an impressive sight as a ceremony takes place aboard the Navy's aircraft carrier Princeton in Korean waters.
(9/10/51) Two Naval Reserve pilots return their Corsair night-fighters to USS *Boxer* (CV-21) from a dawn "heckler" over rail lines in Korea. During the mission, the two planes bombed marshalling yards and freight cars.
(8/24/50) Three U.S. Navy Essex Class aircraft carriers lie at anchor at a naval base in Japan.
(9/9/50) RADM. E. C. Ewens, Commander Task Force 77 and a UN delegate, discuss the Korean War aboard USS *Philippine Sea* (CV-47).
(4/16/51) General Clifton B. Cates, Commandant of the U.S. Marine Corps, holds a staff meeting with Lt. Gen. M. H. Silverthorn, Assistant Commandant (second from right); Lt. Col. Robert H. Thomas (left) aide-de-camp to the Commandant; and Col. J. H. Berry, military secretary.
General Clifton B. Cates, Commandant of the U.S. Marine Corps presents Korean campaign ribbons to a group of Marines.
Colonel Lewis B. Puller (left), commander of the spearhead regiment of Marines attacking Seoul, confers with Brigadier General E. A. Craig at a hill top command post overlooking the Korean capital.
(6/7/52) In ceremonies held in the rotunda of the Far East Naval Headquarters building in Tokyo, 4 June 1952, Vice Admiral Robert P. Briscoe, USN, (right) relieves Vice Admiral C. Turner Joy, USN, as Commander Naval Forces, Far East.
Vice Admiral C. Turner Joy, USN, leaving a UN Base Camp for Tokyo on May 22nd.
(3/25/52) Vice Admiral C. Turner Joy, USN, and Rear Admiral R. E. Libby, USN, (facing the lecturer on the left side of the table with his arms on the table) listen intently to a briefing on the techniques of combat photography.
(6/7/52) In the headquarters of the Commander Naval Forces, Far East, Vice Admiral Won Yil Sohn, ROKN, Chief of Naval Operations, congratulates Vice Admiral C. Turner Joy, USN, after presenting him with the Tae Guk Silver Star, a high Korean military decoration.
(12/19/52) Accompanied by Vice Admiral C. Turner Joy, USN (left), Superintendent of the U.S. Naval Academy, Vice Admiral Sohn Won Yil inspects the Marine Guard in his honor.
(5/23/52) Admiral Joy strides from the conference tent at Panmunjom, ending his last meeting with Communist negotiators as the UN Command's Senior Delegate.
(4/8/52) Vice Admiral Sohn Won Yil (left) visits with VADM. C. Turner Joy at the United Nations Forward Advance Camp, Munsan-ni, Korea.
(5/10/52) VADM. C. Turner Joy gives a press briefing at Panmunjom.
(5/13/52) VADM. C. Turner Joy, chief negotiator at the Military Armistice Conference in Panmunjom, Korea, meets with news correspondents after a meeting with Communist delegates. "I again regret to say that I cannot tell you anything," said the Admiral, "we meet again tomorrow."
VADM. C. Turner Joy delivers his farewell address in the rotunda of the Far East Naval Headquarters building in Tokyo, 4 June 1952, during change-of-command ceremonies in which he relinquished his command of U.S. Naval Forces, Far East, to VADM. Robert P. Briscoe, USN.
(5/23/52) With the words "I am going home" still reflected in his smile, VADM. C. Turner Joy, USN, waves farewell as he departs Panmunjom for Tokyo to resume his duties as COMNAVFE.
(5/24/52) Just prior to his departure from Korea VADM. C. Turner Joy stows his flag in a suitcase at Munsan-ni, Korea, where he served for over 10 months as Chief UN Delegate.
(5/23/52) VADM. C. Turner Joy, notes in hand, enters the conference tent at Panmunjom to confer with Communist delegates for the last time.
(10/23/50) VADM. C. Turner Joy is lifted from the deck of the destroyer Collett.
(2/16/52) VADM. C. Turner Joy with UN Correspondent Ernest Hoberecht at Panmunjom, Korea.
VADM. C. Turner Joy (foreground) heads for the conference building at Kaesong for the ninth day of the truce talks that would last another two years and eight days. Immediately behind are RADM. Arleigh Burke (left) and Maj. Gen. Henry I. Hodes.
(5/23/52) At Panmunjom, Admiral Joy shakes hands with an army corporal as he prepares to depart the conference area for the last time.
(9/29/50) General of the Army Douglas MacArthur, Commander-in-Chief, UN Command in Korea, leads the saying of the Lord's Prayer at ceremonies held at the Capitol Building, Seoul, Korea, to restore the capital of the Korean Republic to its President, Syngman Rhee.
(6/29/50) Margaret Higgins of the New York Herald Tribune interviews U.S. General Douglas MacArthur, who has flown in from his Tokyo headquarters to appraise the situation in South Korea.
General of the Army Douglas MacArthur, Commander-in-Chief, FEC (right), and Lt. Gen. Walton H. Walker, Commander, Ground Forces in Korea, arrive at the airfield in Korea, prior to General MacArthur's departure for Tokyo, Japan.
(9/29/50) VADM. A. D. Struble, Commander 7th Fleet, and General MacArthur, United Nations Commander, visit the front on D-Day-plus-2 at Inchon.
General of the Army Douglas MacArthur makes a jeep tour of port facilities just after the invasion at Inchon. With him are Maj. Gen. Oliver P. Smith, USMC, and VADM. A. D. Struble, USN.
(4/19/51) On his return to the U.S. after a 14-year absence, General of the Army Douglas MacArthur addresses members of Congress in the Capitol. Behind him are Vice President Alben Barkley (left), and Speaker of the House Sam Rayburn (right).
Admiral Arthur W. Radford, Commander-in-Chief Pacific and Pacific Fleet, and General Douglas MacArthur, Commander, Allied Forces, confer while awaiting arrival of the Joint Chief of Staff, 21 August 1950, in Tokyo, Japan.
(8/21/50) General of the Army Douglas MacArthur salutes the colors upon his arrival aboard USS Missouri.
On 22 August 1952, a ceremony is held in Seoul, Korea to initiate a program for the clearing of bomb damage in that city. Seen here, on the platform, saluting as the Korean National Anthem is played are (left to right) the Acting Mayor of Seoul, Korean President Syngman Rhee, and General Van Fleet.
(9/17/52) Four top U.S. military officials stand at attention and salute during an Honor Guard paraded for General Lemuel C. Shepherd (left), Commandant of the Marine Corps, during his visit to the Far East. From left to right are Gen. Shepherd; Gen. Mark Clark, USA, Far East Commander; Gen. Oliver P. Weyland, USAF, Commander, Far East Air Force; and VADM Robert P. Briscoe, USN, Commander Naval Forces, Far East.
(9/22/52) South Korean President Syngman Rhee offers congratulations to General Lemuel C. Shepherd, USMC, after presenting him with the South Korean Order of Military Merit with a gold star.
Lt. Gen. Lemuel C. Shepherd, USMC awards a Purple Heart to a seaman at the U.S. Naval Hospital, Yokosuka.
(7/3/51) Chief of Naval Operations Admiral Forrest P. Sherman visits USS Princeton (CVA-37) off the coast of Korea. With him are VADM. Harold H. Martin, Commander U.S. 7th Fleet, and RADM. George R. Henderson, Commander Carrier Division 5 and Task Force 77.
(8/12/50) Informal portrait of VADM. A. D. Struble, USN, Commander 7th Fleet, on the bridge of USS Rochester (CA-124), flagship of the U.S. 7th Fleet.
(9/4/51) Vice Admiral Arthur D. Struble, Commander of the Seventh Fleet from 6 May 1950 to 28 March 1951.
(10/21/50) USS Missouri bombards Chong-ji, Korea, with her 16 inch guns, to cut the lines of communication between the northern and southern parts of Korea. Chong-ji is approximately 120 miles from the Russian base of Vladivostok and 39 miles from the Soviet border.
(4/2/53) USS *New Jersey* (BB-62) operating in Korean waters.
(11/53) USS Manchester (CL-89) on duty in the Far East, returning to combat operations off the Korean coast after a short rest period in Yokosuka, Japan.
A starboard profile of the Australian Tribal class destroyer *Bataan*. HMAS. *Bataan* operated off Korea from June 1950-June 1951, and again from January-September 1952, steaming 98,000 miles.
The Australian frigate HMAS. *Shoalhaven* steamed 11,000 miles during its Korean tour of duty (June-September 1950).
(8/5/52) British light cruiser *Belfast*, flagship of the West Coast Blockade and Patrol Element off Korea.
(3/1/50) HMS Jamaica (CL-86), a Fiji class cruiser, less than four months before the breakout of the Korean War.
The British carrier *Triumph*, at anchor in a port in Malta.
Battleship Iowa (BB-61) leads a column of four battleships. All four of these Iowa class battleships saw combat in Korea.
Battleship *New Jersey* (BB-62) in the Sea of Japan after being damaged by enemy shell fire during a duel at Wonsan, Korea. USS *Philippine Sea* (CV-47) is in the background.
Battleship *Missouri* (BB-63) fires at enemy targets in Wonsan Harbor.
The 16-inch guns of battleship *Wisconsin* (BB-64) fire against enemy railroads off the east coast of North Korea.
Coast Guard LORAN Station Pusan, code-named Elmo #4 near Pusan, South Korea in November, 1952. The Coast Guard quickly built the base and put it into operation to satisfy the need for adequate navigational services to United Nation's forces during the conflict.
Coast Guard LORAN Station Pusan, code-named Elmo #4 near Pusan, South Korea in November, 1952. View of the transmitting antenna.
Aerial view of the Coast Guard LORAN Station Pusan, code-named Elmo #4 near Pusan, South Korea in November, 1952. The station was the only Coast Guard manned station on the Korean peninsula during the war.
A Coast Guard Martin PBM-5G Mariner. A seaplane such as this crashed while attempting to rescue the crew of a Navy P5M Neptune in 1953 off the coast of China. These large, twin-engine seaplanes were in wide use in the Coast Guard from 1943 through 1956. Note the detachable landing gear.
A Coast Guard Martin PBM-5G Mariner. A seaplane such as this crashed while attempting to rescue the crew of a Navy P5M Neptune in 1953 off the coast of China. These large, twin-engine seaplanes were in wide use in the Coast Guard from 1943 through 1956. The "R-22" painted on the side of the seaplane's nose indicates its radio call sign "Rescue 22."
A Coast Guard Martin PBM-5G Mariner taking off with the assistance of a JATO pack. A seaplane such as this crashed while attempting to rescue the crew of a Navy P5M Neptune in 1953 off the coast of China. These large, twin-engine seaplanes were in wide use in the Coast Guard from 1943 through 1956.
John Vukic (as an Ensign in this photo) was the pilot of the Coast Guard PBM-5G that attempted to rescue the crew of a Navy P5M Neptune off the coast of China. He was one of the most experienced seaplane pilots in the Coast Guard.
One of the Coast Guard's primary state-side tasks was to supervise the loading of ammunition and other dangerous cargoes throughout U.S. ports. Here was a primitive loading site at Umatilla, Oregon. The barge is being loaded with bombs needed used by the U.N. air forces in Korea. Each barge carried 500 tons of explosives to the Beaver Ammunition Storage Point where it was offloaded onto ships for shipment to Japan and Korea.
One of the Coast Guard's primary state-side tasks was to supervise the loading of ammunition and other dangerous cargoes throughout U.S. ports. Here was a primitive loading site at Umatilla, Oregon. The barge is being loaded with bombs needed by the U.N. air forces bombing North Korea. Each barge carried 500 tons of explosives to the Beaver Ammunition Storage Point where it was offloaded onto ships for shipment to Japan and Korea.
The Coast Guard contingent that assisted in developing a South Korean Coast Guard and Navy. The contingent first arrived soon after the end of World War II and members, including LCDR William Achurch, left, evacuated the peninsula on the heels of the North Korean attack in 1950.
The USCGC Durant, a Navy destroyer escort commissioned into Coast Guard service. The Coast Guard acquired a number of Navy destroyer escorts to fill the gap in available cutters due to the increase in the number of ocean stations the service was tasked with operating. The DE's were outfitted essentially as they had been during World War II with the exception of the addition of a weather balloon shack and launching platform.
The USCGC Bering Strait departing Honolulu Harbor on her way to her ocean station.
The USCGC Bering Strait departing Honolulu Harbor on her way to her ocean station.
The Coast Guard commissions the USCGC Finch, 24 August 1951. CPT Chauncey Moore, USN, the commander of Florida Group, supervises the transfer of the Finch to Coast Guard control. The Finch’s commanding officer, CDR George R. Boyce, USCG, stands to the rear on the right.
The USCGC Ramsden returns to Honolulu after a five month patrol in the Pacific. She served on the ocean station in the Northwest Pacific, 1953. Interestingly a Coast Guard crew manned the destroyer escort during World War II but remained a commissioned Navy warship. During her second career with a Coast Guard crew, she became a commissioned Coast Guard cutter.
The cutter Lowe sails out for a trial run prior to sailing for the Pacific.
The USCGC Vance in December, 1952. Note the PBM flying beyond her stern.
The crew of the Coast Guard cutter Chincoteague rearm the hedgehog anti-submarine mortar. During the Korean conflict every cutter was heavily armed, including anti-aircraft and anti-submarine weapons.
Senior Weather Bureau observer Edward J. Fencl seated at a RADIOSONDE receiver-recorder aboard the cutter Abesecon computes from a continuously moving graphic tape tracings transmitted from a balloon-borne RADIOSONDE transmitter high up in the atmosphere. His computations tell him the pressure, humidity, temperature, and wind velocity at various altitudes the balloon has reached.
Duty on a weather station could be rough! Here, during a heavy storm, the cutter Matagorda's bow is thrust out of the water while on ocean station duty in 1951. The cutters maintained their stations through the worst weather.
40mm gun drill on board a cutter while on ocean station duty.
A Coast Guard crewman readies a bathythermograph. The device recorded sea water temperature to a depth of 450 feet.
Crewmen prepare to release a weather balloon while on ocean station duty.
A crewman determines the velocity of surface winds by the use of an anemometer, one of the many instruments utilized by the ocean station cutters.
"In quest of 'PIBALS': That is to say: PIBALS are measurements of the direction and intensity of winds aloft obtained by tracking the movement of a small free balloon which has an assumed ascensional rate. The tracking is done visually with a special type of transit known as a theodolite. As these men, on board a cutter, prepare to gather this type of weather information, the man at the theodolite gets the instrument set while his partner awaits the word to let the balloon go."
"RADIOSONDE WEATHER BALLOON IN FLIGHT: A weather balloon is seen here at the instant of release from the deck of the cutter Absecon, just before the weight of the radiosonde transmitter is felt. Note the flattening of the upper side of the balloon."
The Korean naval base at Chinae, first established by a Coast Guard advisory team after the end of World War II. Chinae was a former base of the occupying Imperial Japanese.
7 February 1950. Discussing the value of and use of training aids with LCDR Chai, the liaison officer to the American advisors of the Korean Naval Academy. CDR William Achurch, the senior advisor to the Korean Navy, is on the left.
CDR Achurch and his wife entertain Chiang Kai-shek at the base at Chinae, during his visit to the base in August, 1949. He was establishing his Nationalist Chinese forces on the island of Formosa during this time after his defeat by the Communist Chinese.
