“I believe that when the truce talks began, the Communists really wanted to have a cease fire. However, even that was difficult to determine accurately. While Nam Il was senior delegate for the Communists and made some minor decisions, for the greater part he had to turn to the Chinese delegate and get his opinion before he would answer a question or make a statement. Of course, behind the Chinese delegate was, and still is, the Kremlin. So it is very difficult to say with any certainty that the Communists did or did not want an armistice. Nobody can know that for sure except the Kremlin.

“Some of the meetings did border on the humorous. I recall one such meeting during which we sat completely silent for 45 minutes, neither side saying a single word until both sides finally got up at the same time and left the tent. Because both delegations merely represented their governments, it was necessary to recess whenever neither delegation had anything new to offer in order to give the respective governments time in which to produce some new proposal with which to try to break the deadlock.

“When the Communists agreed on a demarcation line I was frankly somewhat optimistic and thought that perhaps we might eventually arrive at complete agreement. But now I can see that in too many cases it was the UN delegation which had to give in. The Communist delegation does not give in or arbitrate. Perhaps one of the reasons why this is so, is because the United States was in a very difficult position by virtue of the fact that it was taking such an active leadership in the war itself. Russia, on the other hand, was in a much easier position because it was still supposedly a somewhat disinterested spectator and could exert influence from behind the scenes.
“I suspect that the single event which made me the most angry occurred when one of the North Korean delegates wrote on a small piece of paper the words, ‘Imperialist dog is worse than food given to beggars at a funeral home.’ However, I realized that such things only pointed up more vividly the wrongness of their cause, their desperation. They had to resort to such personal slander because they did not dare to discuss the issues at stake candidly and truthfully.

“I am convinced that if a truce is finally signed, and the UN troops are withdrawn from Korea, it will be but a short time before we have another and far more disastrous aggression. And the next time the Communists will make complete preparations so that they will not fail. I hope and pray that UN troops will remain in Korea. Not just for the sake of Korea, but for the sake of the free nations of the world. Korea today stands as a symbol of a willingness and a determination to fight aggression wherever and whenever it may appear. For the free nations of the world to back down even once might prove to be disastrous in the extreme.”

General Paik Sun Yup’s letter to the authors was dated 12 September 1952.

The truce talks were not to end until 27 July 1953, ten months later.

First Year Boxscore for Surface Ships, 25 June 1950—30 June 1951

Aircraft: 2 destroyed
Ammunition dumps: 11 destroyed, 3 damaged
Artillery positions: 128 destroyed, 52 damaged
Bridges: 31 destroyed, 125 damaged
Buildings: 311 destroyed, 300 damaged
Junks and sampans: 213 destroyed, 147 damaged (plus 9 captured)
MG and mortar positions: 33 destroyed, 15 damaged
Mines: 700 destroyed
Motor boats: 22 destroyed, 6 damaged
Pillboxes: 12 destroyed, 9 damaged
PT boats: 3 destroyed
Land mines: 83 destroyed
Railroad cars: 74 destroyed, 101 damaged
Supply dumps: 22 destroyed, 16 damaged
Tanks: 9 destroyed, 3 damaged
Troop concentrations: 2 destroyed, 150 attacked
Troop casualties: 12,476
Trucks and other vehicles: 134 destroyed, 64 damaged
Warehouses: 33 destroyed, 46 damaged
(Also 537 POWs)
The Combative Spirit

For destroyer skippers especially, the naval war along the Korean coastline was a fertile field for the exercise of initiative and the display of command, and what Rear Admiral George C. Dyer, CTF 95, referred to as “the combative spirit.” Especially after the truce talks began, a blockade assignment could either be a monotonous patrol or an action-packed opportunity, depending on the initiative and aggressiveness of the individual commanding officer.

Patrolling ships had specific tasks: the blockade was to be maintained, fishing suppressed, enemy coastal traffic interdicted, mines swept, rescue performed, and the captured islands supported. Those commanding officers who were also element commanders had additional command duties. From them, a nicety of judgment was required to weigh the current situation, balance and apportion the assigned forces, and establish time schedules for replenishment, as well as fight the war. These duties and tasks could be performed routinely, or they could be performed with imaginative aggressiveness.

“Korea was an opportunity to discover and uncover those commanding officers who had a combative spirit,” said Rear Admiral George C. Dyer, “An otherwise outstanding naval officer, who might be the best engineer, shiphandler, and administrator in the Service, might also not have that extra quality of combat aggressiveness and pugnacity which is the mark of the victorious naval officer. As a matter of fact, few military leaders have this inner fire and this love of battle which has been traditionally vital to the success of our Navy. The naval war along the Korean coast gave ship skippers the chance to reveal whether or not they had such a combative spirit.”

In Admiral Dyer’s opinion, many of his ships exhibited a combative spirit, doing more than was expected of them. A typical one of these was the destroyer Stickell (DD-888, CDR Jesse B. Gay, Jr.).

The Stickell had joined the Northern Patrol (TE 95.22) off Songjin on 16 May 1951. On 24 May, Gay assumed Task Element command.

“I decided that the most effective means of disrupting coastwise rail communications was to knock out a railroad bridge readily observable from sea,” said Gay, “and then keep it unusable. I selected for destruction a small bridge between two tunnels south of Songjin. To conserve ammunition and increase gunfire accuracy, the Canadian destroyer Nootka (CDR A. B. F. Fraser-Harris), using her whaleboats and a small minesweeping rig, swept a channel inside the 100-fathom curve to within 2,500 yards of the beach. After this, the Stickell destroyed the bridge with single gun ‘short-range battle practice’.”

Thus commenced the “Battle of the Bridge,” which would continue until 28 June.

The North Koreans began immediate repairs, using stacked railroad ties for foundations (called
“cribbing”)—repairs which were discouraged by intermittent air bursts night and day from blockade ships in the vicinity.[12E] At two to three-day intervals, whenever repairs appeared near completion, and after dusting off gun positions in the nearby hills with 40-mm. fire, the *Stickell*, covered by ships of Task Element 95.22, proceeded in the swept channel and destroyed the cribbing.

After *Stickell’s* gunfire had demolished the Communist repairs several times, the North Koreans gave up trying to repair the trestle, and, being unable to bypass it due to the terrain, laboriously commenced filling the 30-yard ravine, still harassed by the blockading ships.

On 14 June, *Stickell* landed a group of South Korean soldiers from two small sampans in the area of the besieged bridge. Two prisoners were captured, one of whom was lost when a near miss from a mortar shell capsized one of the two sampans during retirement.

The surviving prisoner stated that he was the boss of a repair gang brought from a town near the Manchurian border to assist in the repair of the bridge. He also revealed that his party had travelled the entire way by train, but that numerous trains were now held up in the tunnels awaiting repairs to the Songjin bridge. The next day the prisoner pointed out various real and fake gun emplacements in the area, and also the police station in a village area south of Songjin, which was taken under fire and destroyed.

For two more weeks, the blockading ships kept the rail line inoperable. Finally, with the bridge gap almost filled with rock and dirt, the *Stickell* chose another bridge a short distance to the north of Songjin and commenced a second “destroy-repair-destroy” cycle.

“The presence of some fifteen South Korean marines and an English-speaking Korean naval lieutenant on board provided excellent opportunities to conduct beach raids,” said Gay, “in addition to the routine around-the-clock interdiction and bombardment fire at Chongjin. Great credit is due to the brave Korean marines, who several nights every week went cheerfully ashore onto hostile beaches. Sometimes they went ashore during a thick fog, guided by radar; on other occasions, they went in during bright moonlight, armed with rifles and Browning semi-automatic rifles and carrying hand grenades and a couple of handbags of clips. Their discovery and progress on the beach could always be followed by the clatter of small arms fire.

“On one occasion, after a reconnaissance in the Chuuron-jang area south of Chongjin, our landing party reported several large sampans on the beach which were being armored with heavy iron plating on the inside. As intelligence reports had also been received of a Communist plan to recapture the islands held by our forces in Wonsan harbor, using armored sampans, we made plans to destroy the reported sampans at our first opportunity.

“Two nights later, the *Stickell* steamed into Kyojo-wan an hour before sunset, ready to destroy the sampans by gunfire. While approaching the desired firing position, a radar target was picked up which was identified as a large motor schooner fleeing to the safety of the Chuuron-jang River. We opened fire at 10,000 yards and hit it at 8,500 yards just as it entered the river. The schooner burst into flames from bow to stern, ran on the beach, and burned for the remainder of the night. Prisoners we captured later revealed that this schooner was manned by North Korean naval personnel and was carrying arms, fuel, and supplies.

“We now returned our attention to the armored sampans.

“On reaching the 100-fathom curve to seaward of them, we discovered that they were protected from our direct fire by large stone masses. I made the decision to land the Korean marines, retiring until after dark and providing gun cover as necessary.

“The ship’s motor whaleboat, with Ensign J. B. Farrell, USN, as boat officer and spotter, left the ship about four miles off the beach, towing a sampan filled with the Korean marines. A thousand yards from the selected landing spot, the sampan was cast off to proceed alone, and the spotting party prepared for action.

“As the sampan approached the beach, it was taken under small arms fire from the nearby cliffs, but our call-fire quickly drove off the defenders and the boat landed safely.

“The Koreans located three large armored sampans and destroyed them with hand grenades before being
pinned down by mortar fire from a nearby village. Illumination from the *Stickell* permitted the spotter in our whaleboat to locate the enemy mortar and it was promptly silenced, permitting the Korean marines to withdraw without incident under covering fire.”

*Stickell’s* landing force performed another type of operation on the night of 14 June when Gay decided to seize one of the Communist-held Yondo Islands about ten miles northeast of Chongjin. The *Stickell’s* Korean marines were disembarked from two sampans at the closest point of the 100-fathom curve. Again, the destroyer’s whaleboat was used to tow the sampans close to the beach. The marines landed undetected on the one inhabited island of the group. Local opposition did not develop. Considerable intelligence information was gained from the natives. The natives revealed that an official North Korean delegation was due to visit the islands the following day.

“I ordered our landing party to remain ashore to greet the dignitaries,” said Gay.

“Unfortunately, the movements of the *Stickell* in the general vicinity of the Yondo Islands aroused suspicions of the North Koreans that something was amiss, for the scheduled visit failed to materialize.”[13]

On the departure of *Stickell* from the theater, on 29 June, the following message was received from Commander Seventh Fleet:

“I have followed *Stickell’s* exploits in Songjin during the past two weeks with great interest. The effects of your aggressive spirit and initiative will be remembered by the enemy. Well done. Vice Admiral Martin.”

On 29 June 1951, the new ComCruDiv-5, Rear Admiral Arleigh A. Burke, had gone ashore on the east coast near Pohang to witness ROK troop maneuvers as the guest of the Eighth Army Commander, Lieutenant General James Van Fleet. Van Fleet asked Burke to accompany him to a certain area by jeep. Burke suggested it would be easier and quicker to go by helicopter, and that, afterward, Van Fleet could return with him to the cruiser *Los Angeles* for a dish of ice cream.

As the helicopter, piloted by Chief Aviation Pilot C. W. Buss, approached the *Los Angeles* about 1535, the wheels touched the life nets, followed by an RPM loss, and the ’copter crashed on the fantail, dumping both passengers on deck unceremoniously but uninjured.

“With the helicopter out of action,” said General Van Fleet “the question arose how I was to get ashore. Burke told me we’d have to make it by boat. We did so without incident, but I didn’t know until long after the war that the boat coxswain had not previously had experience in navigating through breakers, and that Burke himself had taken personal charge of the boat and made the landing himself.”

On 12 July the *New Jersey* (Captain David M. Tyree, USN) was at the bombline with the destroyer *Leonard F. Mason* (DD-852)(CDR J. B. Ferriter). The battleship’s fire that day killed 129 enemy troops. On 18 July, she returned to Wonsan to initiate an intensified bombardment plan known as “Operation Kick-Off.” For days and weeks hereafter, ships would fire at known and suspected positions of enemy harbor defense guns in Wonsan with both delayed-burst and air-burst shells.

The no-fishing rule was enforced more rigidly than ever in northeastern Korean waters. The 6th of August saw USS *Carmick* (DMS-32) destroying four fishing sampans near Changjin and taking their 13 occupants into custody. Eight days later, the USS *William Seiverling* (DE-441) (LCDR W. C. Cole) captured nine more poachers off Tanchon. The 19th of August found USS *Thompson* (DMS-38) (LCDR W. H. Barckmann) capturing two fishermen at Tanchon.

**The Han River Demonstration**

On 26 July 1951, as the truce delegates at Kaesong began what would be a four-month wrangle over the establishment of a military demarcation line, a special naval demonstration was commenced in the Han River.

The reason for this special patrol was to counteract the Communists’ immediate claim made at the truce
table that the 200 square miles south of the 38th parallel and west of the Imjin River (including the Ongjin peninsula) were in their hands.

This territory was actually patrolled by UN guerrilla forces. Furthermore, since the city of Seoul was located at the headwaters of the Han River, it was important to insure that any cease fire agreement would provide that the maritime approaches to Seoul were not under Communist control.

It was therefore deemed urgent and prudent to demonstrate visibly to the Communists that this vital area was in UN hands.

On 28 July, accordingly, the USS Los Angeles (CA-135, CAPT R. N. McFarlane) entered the swept channel of Haeju-man to commence a shore bombardment of enemy frontline positions, assisted by plane spot. The Communists were caught by surprise; the Reds obviously did not consider that such a large ship could get so far into this shallow and mined sea area and bring guns to bear on the front lines. Los Angeles fired forty-four 8-inch rounds and sixty-six 5-inch rounds into frontline positions and received a “well done” for her work.

“The Han River demonstration was a very difficult naval operation,” said Rear Admiral George C. Dyer, CTF, who was in charge of its establishment.

“The Han River is a small-sized Yangtze, and its currents run from four to ten knots. The channel shifts rapidly from one side of the river to the other. There are no water-borne navigational aids, and the tides run from twelve to twenty-five feet.

“The first thing we had to do was to survey the channel. This survey work in the Han River was done most capably and energetically by the navigators of the frigates of the British Navy.

“The United States Navy supplied the anchors and buoys and the tugs to handle them.

“The survey work was conducted in power boats which could only work for a period before and after slack water, since at other times their speed of six to eight knots was either just equal or less than the speed of the current.

“The sequence of events was: (1) the small boat survey, (2) the small mine sweepers, (3) the tug with the buoys, and (4) the frigates. Up-river progress was at the rate of about three miles a day until we reached Kyodong Island.

Click here to view map

“My hat is off to the British Navy and the Commonwealth Navies for the courage, tenacity, and high degree of seamanship they showed in accomplishing this job.

“When they reached the Kyodong Island area, we established an anchorage there, and commenced taking the enemy under fire.

“The survey then proceeded both westward and eastward. However, the only navigable channel found was one that went westward along the north of Kyodong Island, then turned north at Inson Point and proceeded to the eastward.

“As soon as we showed up north of Kyodong Island, the enemy started constructing batteries at Ayang Point and at the mouth of the Yesong River.

“There was a railroad line that ran from Yenan to Kesong, and a ferry across the Yesong River. There was heavy traffic on this ferry. To shell it regularly, the frigates had to get up to the mouth of the Yesong. The enemy would plant machine guns and mortars in the rice fields at night, and when the frigate came along in the morning, would shell the frigate, and there would be a close fight.”

Dyer happened to be on board HMAS Murchison (LCDR A. N. Dollard, RAN) for a tour of the estuary during one particularly hot action on 28 September 1951.

“About 1600,” recorded LCDR Dollard, “unsuspected batteries of 75-mm. guns, 50-mm. guns, and mortars opened fire on us from the north bank of the Han. We had just reached the Yesong River and had dropped our anchor to let the current turn us around when the first mortar hit.”
The Australian frigate picked up her anchor and maneuvered clear, with all guns blazing. The *Murchison's* 4-inch fire scored several hits and silenced all opposition.

This Han River demonstration lasted until 27 November 1951, at which time the negotiators agreed upon a provisional cease fire line.

The disputed territory was recognized as in UN hands.
Chapter 9. The Seaborne Artillery
Naval Gunfire at the Bombline

At the bombline in September, 1951, several naval ships had an opportunity to display their gunnery prowess. *Los Angeles* fired all batteries at enemy troops and gun positions near Kojo on 3-4 September. One hundred and ninety-seven rounds of 8-inch and 123 rounds of 5-inch fire were expended. The shore party controlling her fire was commendatory:

“Many enemy casualties. Explosion observed with considerable smoke and spreading fire. . . . Rounds flushed enemy troops who began fleeing inland. Fire landed among them. In one incident, troops began running back over a small hill, and as they reached the top of the hill, a series of eight-inch air bursts exploded about twenty-five feet above their heads. . . . Your firing destroyed at least three enemy gun positions and caused an untold number of casualties.”

The *New Jersey* had a chance to work at the bombline intermittently from 23 September to 3 October 1951.[13A] The naval gunfire liaison party that spotted for her made the following comments:

“24 September: ‘. . . 27 rounds of 16-inch were fired with good effect on Hills 1190 and 951, with many bunkers destroyed, others revealed, and many casualties inflicted on the enemy. . . .’

“2 October: ‘. . . four missions were fired, expending 136 rounds on Hills 802 and 951. Air observers and enemy POWs reported 25 counted enemy bunkers destroyed, 45 estimated destroyed; 200 killed, 400 wounded. . . .

“3 October: ‘. . . *New Jersey* fired 81 rounds on Hills 796 and 802 with good effect. . . .’

The cruiser *Los Angeles* also was credited with saving the First ROK Corps on the night of 21 November.

“In early November,” said VADM J. J. Clark, then Commander Task Force 77, “intelligence sources indicated a strong buildup of enemy forces, with increased artillery and automatic weapons fire in the Kojo area. During the night of 21 November I received an urgent call for assistance to the First ROK Corps, then on the line near Kojo. General Van Fleet’s headquarters reported that the enemy was breaking through the Korean lines, and had captured a hill on which an important outpost was located. The First ROKs had run out of ammunition, and the enemy was mauling them very badly. Could we send a ship down there?

“The location of the break-through was beyond the range of destroyer fire. The only heavy ship I had was the heavy cruiser *Los Angeles*.

“I proposed sending her, but my staff called attention to a standing order requiring that one heavy cruiser or battleship be kept with the fast carrier task force at all times to provide AA protection in the event of an air attack. Another reason for this requirement was in case any of those Russian cruisers came out of Vladivostok and ran down into our area during the night.

“These seemed like pretty worthless reasons just then, so I overrode the requirements and ordered the *Los Angeles* to get down there at high speed.

“She arrived off Kojo about 0230 and her 8-inch guns turned the tide of battle. Her 91 rounds of 8-inch fire drove the Communists back and gave the First ROK Corps a breathing spell until morning, when they were able to replenish their ammunition supplies.”[14]

The last month of 1951 saw destroyer *Beatty* (DD-756, CDR Means Johnston, Jr.) patrolling the east coast north of Hungnam—“firing at any target worth our ammunition.”

During a Sunday patrol southward from Cha-ho, *Beatty* spotted but could not positively identify lines of black dots across all the harbors and inlets along the coast. They appeared to be buoys and were estimated to be
supports for anti-landing nets.

Reporting this information to Commander Task Group 95, *Beatty* received the following order: “Put a whaleboat in the water and have a closer look-see.”

*Beatty* complied, selecting the large harbor of Yangwa.

*Beatty’s* whaleboat, manned by a crew of volunteers commanded by Ensign Hugh H. McCreery, USN, was lowered into the water shortly after dawn and proceeded on its mission deep inside the enemy-held harbor. Since the boat crew could not comply with their mission of determining the nature of the objects until there was sufficient light, they remained inside the harbor for over two hours in broad daylight.

When about 1,500 feet off the beach, the whaleboat was suddenly caught in a crossfire from three machine gun nests. Ensign McCreery later estimated more than 100 rounds near the whaleboat, with the bullets walking by as close as five feet.

Over the “walkie-talkie” radio the ship could hear the rat-tat-tat of the machine guns. “I asked Ensign McCreery if he was firing at the enemy or was he being fired upon,” said CDR Johnston. His reply was ‘Affirmative to both.’ Almost simultaneously I asked him if he wanted the *Beatty’s* 5-inch guns to commence firing. I ordered my gunnery officer, LT Walter W. Schwartz, USN, to use white phosphorous ammunition which had proved very effective in counterbattery fire.”[15]

The whaleboat was directly in the line of fire as the first round was fired. McCreery (also *Beatty’s* assistant gunnery officer) radioed spot corrections. The first correction was almost on, and the second resulted in a direct hit on the first machine gun nest. On the third spot, fire was shifted to another nest with another direct hit. Several rounds were fired at the third, which was quickly silenced, although its destruction could not be confirmed. The crew of the whaleboat was simultaneously firing on the enemy with machine guns and even pistols.

The *Beatty’s* whaleboat returned unscathed, with a very detailed drawing of the buoy arrangements.

The lines of black dots proved to be anti-landing nets, illustrating the Communists’ inbred fear of another amphibious assault.
At the beginning of 1952, the war ashore had assumed all the aspects of a stalemate. Ground action was sporadic, and consisted mainly of probing raids and patrols, varying in size and violence.

Despite the intense and combined efforts of air and naval forces, it was apparent that interdiction of the enemy’s supply lines in Korea was not being achieved. The Communists were succeeding in steadily building up their military strength all along the battlefront, and their flow of supplies, while hampered and harassed, was not being interrupted to a critical degree.

The enemy’s amazing and rapid capacity for repairing his roads, tunnels, and bridges plus his unlimited manpower, and his protected supply bases north of the Yalu, required greater effort and more efficient interdiction of the blockade forces if the supply networks were to be closed off to an effective degree. The Navy had to draw the blockade and bombardment noose a few notches tighter.[15A]

What more and what else could be done to hurt and harass the Communists?

To Admirals Joy, Martin, and Dyer, there was little new that could be done. With the number of ships available, and the political and military restrictions imposed upon the conduct of the war, only an intensification of effort and improvements in technique could increase the Navy’s contribution to the war.

In this sense, several things could be done.

First of all, the surface ships operating with the carrier and blockade forces could be more frequently used for bombardment and interdiction, especially during replenishment and bad weather. As a calculated risk, escort and heavy supporting ships around the carrier task force could be absent from the task force on a one-day-at-a-time basis for gun strikes. The escort of convoys could be reduced.

Secondly, the closer the co-operation between Task Forces 77 and 95, the greater would be the damage inflicted upon the enemy. Commander Task Force 77 was therefore given the task of coordinating the interdiction campaign by air and naval gunfire.

Third, still closer liaison could be established with the U.S. and ROK troops at the bombline, so that naval gunfire at the battlefront might be improved in its effectiveness.

Fourth, the spotting of naval gunfire must be increased; better control would mean greater accuracy and greater damage.

Fifth, additional areas close inshore could be swept clear of mines, and more patrols established to completely eliminate any enemy attempts to short-haul supplies by junk or sampan.

And lastly, a better scheme for the coordination of the air and ground interdiction campaign could be worked out. It was this objective which brought into being the “Package” and “Derail” operations, described on page 349.
After relieving the First ROK Army Corps, the First Marine Division had taken up positions on the eastern end of the battleline. On their right flank was the First ROK Army, adjacent to the sea. However, the Marine division itself was still within the long-range reach of either cruisers or battleships.

In November 1951, the Marine division requested again that naval ships be made available to support them. Both Tenth Army Corps and COME-USAK approved this request, and a schedule of naval ships to support the division was drawn up.

In the four months which followed, it became standard practice for a new ship, reporting to the Marine Division to perform gunfire support for the first time, to send representatives to a liaison conference. At this meeting the Marines would furnish the necessary maps and overlays of the frontlines and bombline, would explain the terrain topography and targets, and would furnish information regarding voice calls and frequencies. In return the ship’s gunnery officer would present information on ammunition availability, times on station, expected periods of replenishment, and other problems. These exchanges always proved invaluable.

During this period on the eastern front, the Marines were facing a deeply entrenched enemy whose main fortifications had been erected on the reverse sides of the steep mountains, away from the Marines. (See drawing on page 284.) These positions had proved invulnerable to all but the heaviest ordnance, namely, the naval gunfire of cruisers and battleships.

Major General John T. Selden, USMC, emphasized the importance of naval gunfire in a despatch request for continued gunfire support addressed to Vice Admiral Harold W. Martin, Commander Seventh Fleet.

“Since September the First Marine Division has blasted the majority of enemy’s trenches and firing positions on forward slopes. The enemy now mans these with only a sentry force. The majority of his troops remain on the reverse slopes in areas protected from our tank and artillery fire. These down-slope positions are so constructed as to be invulnerable to all but the heaviest ordnance. Artillery ammunition is limited and in general cannot destroy the desired targets. Close air support is not available in quantity. High level bombing rarely hits such targets. Naval gunfire is the only ordnance available which can be effectively employed to destroy these targets, which include regimental command posts and other enemy strongpoints. Request that naval gunfire be continued to hit maximum number these targets.”[16]

Vice Admiral Martin concurred, ordering that the maximum practical support be given to the Marines by Task Force 77’s and 95’s cruisers and battleships.

The assigned task for them was not an easy one. The average range to target would be 10 miles for the cruisers, and 16 miles for the battleships. In the very mountainous terrain, with variable and often unpredictable wind conditions, there was lubberly doubt that naval gunfire could be sufficiently accurate to destroy such small targets as artillery pieces, bunkers, and shelters. The naval gunner’s were certain they could hit the targets, but not so sure that the expenditure of ammunition might not be extravagant.

For two-and-a-half months, the bombline ships fired at the enemy’s front-lines. On 7 April 1952, General Selden passed out the report cards to Admiral Martin.

(1) Wisconsin had fired 977 rounds of 16-inch caliber projectiles in 43 missions at an average range of approximately 16 miles. This fire had killed an estimated 70 and wounded 359. Three artillery pieces had been destroyed and 7 damaged, 81 bunkers and shelters had been destroyed, and 105 damaged.
(2) *St. Paul* and *Rochester* had fired 1,661 rounds of 8-inch caliber projectiles at an average range of approximately 11 miles. This fire had killed 239 enemy troops and wounded 47. It had destroyed 2 artillery pieces and damaged 3. It had destroyed 116 bunkers and shelters and had damaged 127.

(3) *Manchester* had fired 470 rounds of 6-inch caliber projectiles at an average range of 11 miles. This fire had killed 163 enemy troops and wounded 47. One artillery piece had been destroyed and 8 damaged; 28 bunkers and shelters had been destroyed and 20 damaged.

Was such naval gunfire worth the effort and expense? The answer could only be yes. In General Selden’s words, “The support rendered during this period was both effective and justified.”

With an average expenditure of between 15 to 23 rounds per mission, naval gunfire was destroying targets for which the expenditure of 50 to 60 rounds of artillery fire was not uncommon. And the deleterious effect on the enemy’s morale was immense even if not fully measurable. The Communists had supposed their reverse slope entrenchments impervious to gunfire; consequently, the destruction of their bunkers, command posts, and artillery positions by the flanking and enfilading fire of the cruisers and battleships was totally unexpected.

Reports of the excellent results of naval gunfire came not only from spotters observing the ships’ fire but from captured enemy prisoners as well. One prisoner reported that *Wisconsin*’s fire on 25 January had hit his divisional command post, and that half the personnel in it were casualties. Another prisoner confessed that he had been induced to surrender after surviving a heavy naval bombardment, during which his unit had suffered severe casualties. In fact, one shell had landed near his position and had failed to go off. As he looked at the size of the 16-inch shell, he became convinced that it was time to surrender.

Still another prisoner reported that his battalion political officer had explained that the huge craters made by the 16-inch shells were made by atomic artillery.

General Seldon summarized the naval gunfire: “In view of the unusual circumstances confronting the First Marine Division, it is felt that the fire support ships have played a valuable and unique role in applying pressure against enemy military positions and morale.”
The Sea War in Korea

Chapter 9. The Seaborne Artillery
Communist Resistance to Blockade

Time after time the blockading destroyers would fire at the same coastal targets and provoke no fire in reply. On other occasions, without warning one or more enemy batteries would open a hot, intense, and accurate fire upon the tormenting ships. In several instances the enemy guns would remain purposely silent in order to entice the patrolling ships closer and closer inshore.

The USS *Thompson* (DMS-38, LCDR W. H. Barckmann) was an early example of how ships were often enticed close ashore by silence.

On 14 June 1951, while searching for lucrative targets in the vicinity of Songjin, the *Thompson* closed the beach to less than 3,000 yards. Suddenly, out of camouflage, four 3-inch mobile batteries commenced a hot and heavy fire on her. The *Thompson* increased speed and headed seaward, while returning the surprise fire. However, before moving clear, she had been struck 13 times, had suffered 6 casualties (3 killed and 3 wounded), and had received extensive damage to her director, radio equipment, and radars. *Thompson* acquitted herself with an equally intense fire on the four guns, forcing them to cease fire.[16A]

The USS *James C. Owens* (DDR-776, CDR Robert B. Erly, USN) was another destroyer to receive a sudden and heavy attack from enemy guns. On 7 May 1952, the *Owens* was interdicting enemy coastal traffic in the vicinity of Songjin and had destroyed two railroad cars and a truck when she received information of activity in the Songjin railroad marshalling yards.

Moving the *Owens* to within 3,000 yards of the target, Erly opened direct fire on the marshalling yards, demolishing a switch engine and eight railroad cars.

At this point, approximately ten enemy guns opened a savage and accurate fire upon the *Owens*. The first salvos straddled immediately. For eleven minutes the enemy’s fire was intense and rapid, resulting in six direct hits and much shrapnel from many near misses. Three separate fires broke out in the *Owens* 40-mm. ready-service magazine and two ready-service ammunition racks.

The *Owens* counterbattery fire was equally intense. Two of the enemy guns were seen to explode, and several others silenced.

As the *Owens* left the harbor, she had the satisfaction of continuing the fire several minutes after the enemy guns had quit.

Three *Owens* men had been killed and five wounded. The after officers quarters had been wrecked; cables to the after 40-mm. mounts had been severed. *Owens* made her own repairs, transferred her dead and wounded, and resumed normal operations and was again under fire at Hungnam in less than twenty-four hours.

The USS *Cunningham* (DD-752, CDR A. A. Clark, USN) was likewise to find herself in a hornet’s nest of enemy gunfire. After a week of unchallenged inshore patrolling near Tanchon on 19 September 1952, the *Cunningham* had closed to within 3,500 yards of the beach while firing at a repair crew driven into the railroad tunnel.

“At 1430,” said Clark,[17] “the enemy batteries opened fire and scored a direct hit with their first salvo. We immediately increased speed, turned to open the range, and started chasing splashes. Within about two minutes we took four more direct hits and about seven to eight air-bursts close aboard. One direct hit ruptured four depth charges, splattering burning TNT over much of the deckhouse aft, the dense smoke making fire control difficult. The leadership and professional skill of the mount captains and after Director Officer were magnificent. The guns which would bear—the after 5-inch mount, and after twin 3-inch/50—countered with 118 rounds of 5-
inch/38 and 36 rounds of 3-inch/50 in spite of dense black smoke through mount 51 and air bursts over mount 33.

“Thereafter we weren’t hit, although the shore guns kept firing at us all the way out to 16,000 yards, expending an estimated 125 rounds of 75 to 155-mm. The five hits and near misses cost us thirteen casualties (none killed), besides disabling our SG radar and demolishing a forced-draft blower in the forward fireroom.”

Clark was fairly certain that the airbursts near Cunningham were VT-fuzed, as there were no airbursts away from the ship.
Better liaison, better coordination, and better spotting—these were the improved techniques which would increase the effectiveness of naval gunfire upon the enemy.

Of the three, perhaps the most important was spotting, whether air spot (airplane or helicopter) or the actual observation and control of gunfire by spotters on the ground. However it was done, all hands agreed that the effectiveness of the naval gunnery would be in direct proportion to the amount and quality of the spotting.

The first west coast blockade commander, Rear Admiral W. G. Andrewes, RN, had appraised the value of non-spotted fire in these words: “Unobserved fire is useful for morale purposes, both from the point of view of our own forces and of upsetting the enemy,” he said.[18] “Apart from that, it is of little real value, and many thousands of shells must have fallen harmlessly on the barren hills and rocks along the east coast of Korea.”

Helicopter spotting was a new gunnery technique, first used in combat by the Helena in August of 1950. Opinion was unanimous that a ship using its own helicopter and carrying its own spotting officer possessed one of the best assists to accurate marksmanship that a ship could have.

But helicopter spot had its drawbacks and limitations. In the first place, only certain of the cruisers and battleships had helicopters. Helicopter spot was only rarely available to the destroyers, which expended approximately 90 per cent of the bombardment ammunition fired in the Korean War. Secondly, helicopters were very susceptible to enemy gunfire, even small arms. If there was any enemy opposition, the use of helicopters was extremely hazardous. In Wonsan harbor, for example, helicopters were available, but their primary tasks were minehunting and search and rescue; their use for spotting purposes in that besieged city was highly dangerous because of the heavy enemy antiaircraft fire.

Air spot by regular airplanes had its limitations, too. The first limitation was training. The majority of the spotting pilots, both U.S. Air Force and Navy, were well trained in the technique and doctrine of gunfire spot. In a few instances, however, a lack of training, sometimes humorous, was reflected in the use of non-standard phraseology. The British Admiral in command of Task Force 95.1, Rear Admiral A. K. Scott-Moncrieff, RN, reported in April 1952 that the Dutch ship Hr. Ms. Piet Hein (CDR von Freytag Drabbe) became completely bewildered by the use of incorrect procedure by an airborne spotter. “Fortunately,” wrote Admiral Moncrieff, “the shot was prevented from being abortive by the presence of a liaison officer from my staff who was able to translate the vernacular into simple English.”

The use of jet aircraft for spotting later in the war revealed the limitations of these aircraft: limited endurance and their need to fly at fairly high altitudes in order to maintain a satisfactory rate of fuel expenditure.

As for propeller-type spotting planes, their value was occasionally diminished by the presence of enemy antiaircraft fire in certain areas such as Wonsan, which forced them to such altitudes as to make their spotting efforts questionable.

Aside from these practical limitations, the use of air and ground spot increased steadily for the remainder of the war. Never was there enough. Requests for spotting assistance always exceeded the capacity for giving it. But the maximum available was hereafter used to increase the effectiveness of naval gunfire on enemy targets.
Chapter 9. The Seaborne Artillery

Whaleboat Operations

As already described, one of the tactics used to advantage by the blockading ships of Task Force 95 was the use of ship’s whaleboats for the detection of targets along the coasts or in harbors, as well as for the direction of the ship’s gunfire and the capture of enemy sampans and junks.

One outstanding whaleboat operation was conducted by the destroyer USS Halsey Powell (DD-686, CDR Francesco Costagliola, USN) on 18 January 1952, near Hungnam. This operation, to neutralize an enemy supply buildup where a destroyer’s gunfire could not reach, came to be known as “Chicken-Stealer.”

“Shortly after I arrived in the Hungnam area to be Commander Task Element 95.24,” wrote CDR Costagliola,[19] “all ships of the blockade force received a despatch from Admiral Dyer. In essence this despatch pointed out that on many occasions recently, ships had reported destroying single junks. Admiral Dyer stated that in his opinion we should show more dash and enterprise in capturing junks, which were useful for intelligence purposes, rather than sinking them. This operation had the code name ‘Junket’.

“This despatch was received about 13 January 1952. Since I had a shipload of eager lads, we accepted Admiral Dyer’s despatch as a direct challenge. We did not think we had much chance of encountering a junk offshore in our area, but in addition to planning for such an eventuality, we thought there was a good possibility there might be some behind such islands as Mayang-do in our area. My executive officer, operations, gunnery, communications, and shore fire control party officers were particularly active in working up a plan to steal a junk. My crew nicknamed our two boats ‘Hawk’ and ‘Falcon’.

“Having received intelligence to the effect that there were many small boats in the harbor of Sam-ho, and since Sam-ho was within enemy gun range from the sea but obscured by a promontory, we requested aircraft spot from CTF 77 for 1000 on the 18th of January. No planes showed up. We decided to try our boats. The spotting boat directed ships’ fire on jetties, boats, and a warehouse.

“Upon their return, the boat crew reported the Sam-ho warehouse gutted, jetties damaged, and many of the small boats riddled with shrapnel. The whaleboats had been fired on by a shore battery but escaped damage.

“The whaleboat fire caused considerable damage to the enemy’s machinery and equipment. The whaleboats had been driven ashore by the shore battery, but the crew managed to get back to their ships unharmed.

“On 19 January, in the Hungnam area, close scrutiny of the shore line through binoculars revealed a man standing at the entrance to a large cave facing us on the island of Hwa-do. We also observed seven or eight workmen with digging tools enter the cave. The information we had on the island was not clear as to whether or not it was in friendly or enemy hands. Certainly, the cave looked suspicious. Despatches to our immediate superior. ComDesRon-17 (CTG 95.2, CAPT C. E. Crombe) and the local minesweeper commander, confirmed that there were no friendly forces on that island.

“The cave entrance was sprayed with concentrated fire, and a few rounds were fired to destroy the machinery and equipment inside. The cave was then sealed off, and the area was declared secure.

“All this activity on Hwa-do really roused our curiosity. But from our position (which we could not vary very much) we knew something was afoot. The only way to see was to use our whaleboats. On this day, however,
the seas were rough and conditions were not considered suitable for launching and loading boats.

“The decision was therefore to remain in this location until morning, with our anchor ‘underfoot’ to help keep the ship from drifting.

“Next morning, Sunday, January 20, 1952, the seas were calm. We started putting the boats over at 0630. Although it was only about 8,000 yards from the ship to Hwa-do, the two boats had to travel about twice that far in order to get behind it and do it surreptitiously. Although risky, I decided to keep my ship in the same spot it had been for the last twenty-odd hours, because it was the only one where we could stay close to the island and also observe the section of beach where all the activity had been observed the day before.

“About 0745, the boats were in position, ready to spot our fire. The ship opened fire, one round at a time, as directed by Ensign James Winnefeld, the spotting officer in the first boat. Lieutenant Theodore Curtis, my operations officer in charge of the second boat, kept a few hundred yards away to provide support to the first boat if needed.

“The ship had only two 5-inch mounts manned, as the crew had not quite finished breakfast. Just at eight o’clock we were startled by an explosion about 50 feet off the starboard bow. Water splashed all over the bridge. Within seconds we were backing out of there emergency full. Shells seemed to be falling all around us. Our anchor was still underfoot, but fortunately it did not snag on anything and came along with us.

“At least four guns on Sohojin Point, located about 9,000 yards north-northeast of our position, were shooting at us. Needless to say, we were at General Quarters, shooting back with all our mounts, in very short order. Although we were straddled several times, the ship was not hit and the enemy shells began to fall consistently short, then ceased.

“The boats, meanwhile, were still behind Hwa-do to the west, reconnoitering and encountering no opposition. We returned to a point about 2,000 yards south of our former location, out of range of the enemy battery, and resumed shooting at Hwa-do targets. Unfortunately, a good proportion of possible targets were on a steep reverse slope where the ship could not get at them.

“However, Ensign Winnefeld reported all houses in three small villages had been covered with shrapnel, and four houses completely gutted. Boats along the beach were sprayed with shrapnel. One was destroyed and one was sunk.

“When it became apparent that not much more could be done without the expenditure of a great deal more effort, I recalled the boats. The next couple of days and nights, Hwa-do continued in our plans and operations as a target to receive harassing fire.

“Shortly after this operation, the thought was generated that a bazooka would be a very useful weapon in stepping up the wallop of the whaleboats. On the afternoon of 22 January, the *Halsey Powell* (DD-686) was relieved as TE 95.24, and proceeded to Sasebo for upkeep. There, through Rear Admiral George C. Dyer and the assistance of CMD R. M. Hill (OinC Naval Ordnance Facility, Yokosuka) and the local Army unit, we obtained two 3.5-inch bazookas and a 75-mm. recoilless rifle, with ammunition for both types.

“Upon our return to the Hungnam area on January 30, the weather was bitterly cold and the boats wouldn’t start. The engineers worked ’round the clock to get them going. Between rough weather and the severe cold, it wasn’t until the afternoon of 6 February that both boats were again running and the sea was calm enough to get them in the water to take a look at the situation on Hwa-do. Finally, at 1430, we got them in the water. One boat had the 75-mm. recoilless mounted on a platform in the bow. The other boat included a 3.5-inch bazooka. Once again, Ensign Winnefeld commanded the 75-mm. boat and Lieutenant Curtis the 3.5-inch.

“The ship went to General Quarters about 1530, ready for any eventuality, and commenced a slow bombardment to keep the enemy occupied.

“About 1545, the boats reported in position and began to direct our fire. As before, however, because of the reverse slope, we were not doing much damage. Permission was requested and granted for the boats to try
their luck with the bazooka and recoilless rifle. I gave them permission and the ship ceased fire. The whaleboats took turns, one standing off for support while the other went in to shoot at close range.

“Meanwhile, aboard ship, I nervously looked at the clock. It was 1625. I decided to issue the recall order at 1630. Just then a not very clear communication was received from one of the boats indicating some sort of difficulty. Our first impression was that one of the men had gotten singed on his backside from being too close to the back blast of the recoilless rifle. The next thing we got was a frantic call for fire on a certain area of the island.

“We were a little hesitant to open fire because we couldn’t see the boats and were using indirect fire. However, we started pouring out the 5-inch until we heard from the boats again. The boats reported that one man—Donald Flaherty, DC2—was injured and would require the attention of a medical officer. He had been shot in the ankle and the groin. We had no doctor aboard.

“While the boats were making their slow trek back to the ship we radioed our immediate superior in Wonsan, CTG 95.2, Captain C. E. Crombe, for medical assistance. He dispatched the Twining (CDR M. C. Osborne) which was also at Wonsan, and which had a medical officer embarked, to meet us.

“It was nearly dark when we finally got the two boats aboard and ran south to rendezvous with Twining. We did not have to go very far, however, for she had been steaming at high speed in our direction. Flaherty was soon safely transferred.

“After retrieving the two boats, we got the full story from the boat crews. While shooting at the various targets on the beach, they had spotted a couple of sampans which they thought they could capture (one had fresh fish in it). When the sampans were secured in tow, the two whaleboats started back to the ship, but were taken under small arms fire by the enemy. This was when Flaherty was hit. The radioman in the other boat—William Harrison, RM2—had a bullet graze his head which severed the headband of his earphones. Arthur Talley, BM3, was steering his boat lying on the bottom, using a rifle as a stick to guide the tiller. They still had the sampans in tow when some bigger guns, probably 75-mm., opened up with considerable accuracy and forced them to abandon the prizes.

“Fortunately, the ship’s fire managed to stifle the enemy’s guns before any more damage was done.

“After Flaherty was transferred, we returned to the vicinity of Hwa-do Island and Hungnam about 2200. There was a bright, red glow over Hwa-do indicating that fires the boats had set with their shooting in the afternoon were still burning brightly.”

**Capturing Sampans**

On the night of 17 February 1952, minesweeper *Murrelet* (AM-372) was steaming independently on blockade and anti-mining patrol between Hungnam and Cha-ho. Near Songdo Gap, radar contact in the direction of the beach was made at a range of 10,000 yards. *Murrelet* changed course to close the range and to get between the target and the beach in order to prevent escape. It was dangerous but exhilarating work.

At a range of 400 yards, *Murrelet* illuminated the target with her 12-inch signal searchlight, and the light disclosed a large two-masted sampan with all sails set. *Murrelet* fired one 20-mm. burst through the rigging, severing and dropping both sails of the sampan. *Murrelet* came alongside, threw over two grappling hooks, and secured the junk. Just as *Murrelet* prepared to put her boarding party aboard, six North Koreans crawled from below decks, raised their hands, and surrendered. The sampan was taken in tow and delivered to the ROK Navy.

“The *Murrelet* got the armed whaleboat idea from Admiral Dyer’s ‘dashing’ and ‘aggressive’ despatch,” said LCDR J. W. O’Neil. “We procured walkie-talkies, built a radar reflector screen for the whaleboat, and then called for volunteers. Almost the entire crew stepped forward. The crew selected was LTJG W. F. Gillen, USNR; ENS Suh In Byuk, ROK Navy; Frank H. Kennon, Jr., BM1; Brown, TN; Cluke, SN; French, SN; Beaugard, QM2; Sherer, RD3; and Chance, FN. A few daylight practice runs proved that we could operate the boat.
effectively three or four miles from the ship.

“Our method of operation was quite simple. On our night patrols, if a sampan was detected in swept water, the capture would be effected by the ship. If the sampan was detected in unswept water, we would get as close as possible, stop, and put the armed boat in the water. The radar reflector in the boat made a good target and we were able to vector them to any contact very effectively. The whaleboat would approach the sampan and ENS Suh would call on them in Korean to surrender. Then the sampan and occupants would be towed back to the ship.

“This plan met with success the instant it was put in operation. The whaleboat was vectored out on contacts six times and captured six sampans and twenty-six prisoners.

“The seventh time did not work out too well. The whaleboat was vectored about 3.5 miles into Hongwon Roads to a double contact we had picked up. They were successful in making an undetected approach and called upon five North Koreans in each sampan to surrender. The occupants stood up with their hands in the air. The whaleboat took one sampan in tow and started to go alongside the other. So far everything was routine and a carbon copy of the other raids.

“Suddenly one of the Koreans threw a hand grenade into the after compartment of the whaleboat. The explosion killed Kennon, the coxswain, wounded Brown and Cluke, and blew a three-foot hole in the port quarter. Our remaining crew members immediately opened fire with rifles and sub-machine guns, and after a brief but intense fire-fight, killed the occupants of both sampans.

“LTJG Gillen was then faced with the prospect of getting the badly damaged whaleboat back to the ship. The hole was plugged with life jackets, but it was necessary to bail continuously with helmets to stay ahead of the incoming water. Meanwhile, on the Murrelet, we listened to the reports of the action via walkie-talkie and were helpless to assist. The ship could not be taken into mined waters. It took the whaleboat about twenty-five minutes to make the return trip. Murrelet then ran at top speed to Wonsan and obtained medical attention for the wounded men.”

**Shore Battery Dueling**

One of the most successful ships in dueling with the enemy’s coastal guns was the destroyer *Douglas H. Fox* (DD-779, CDR James A. Dare). This ship worked up a procedure especially adapted to the Communist defenses.

“One lesson that I taught my crew which I had learned from World War II,” said CDR Dare, “was that if you wanted to make good gunners out of mediocre gunners, simply take them under enemy fire. Also this procedure seems to have a remarkably good effect on morale.

“In the Korean blockade and bombardment work, every ship had to choose between the evil of long periods at General Quarters, the increasing strain in Condition II; or the relative lack of gunnery coverage in Condition III.

“The *Fox* solved this problem by calling away two sections of Condition III when we were in fairly dangerous territory. This always provided a fore-and-aft 5-inch mount and complete 40-mm. coverage, plus an augmented engineering watch to man the smoke generator and to keep a man in steering aft. Since we could choose the time and duration of these extra stints, it provided fairly easy strain on all concerned.

“The coastal guns of northeast Korea, for the most part, were field artillery pieces. They had no modern control equipment or automatic computers. In my opinion, when the Commies fired at our ships, and ships opened the range and ceased counterbattery fire too soon, it gave the Reds confidence and courage. I feel that if the *Fox* had done this, the Communists would have fired on us every time we came in range, probably with more accuracy each time.

“Our system, instead, was to approach a known enemy gun position, probing it with single shot,
deliberate fire. When the enemy gun answered, we closed the range and commenced a heavy barrage to smother the battery. After we silenced the gun, we shifted to deliberate fire again to destroy it.

“In dangerous areas, I usually kept one 5-inch mount in reserve, one barrel loaded with white phosphorous and the other with VT-fuzed common. A few salvos of this mixture silenced the enemy fire completely (and usually for several days.)”

A typical result of Fox’s doctrine was the destruction of an enemy battery on Mayang-do, on 7 May 1952.

At 1155, Fox received 12 rounds of fire from the enemy three 76-mm. gun battery. Half of the rounds were white phosphorous. The opening salvo was 20 to 50 yards away, and other straddled within 100 yards. Fox closed the range and commenced a rapid, smothering fire, forcing the enemy guns into silence.

Four nights later, in the same area, Fox captured eighteen fishermen, of whom nine lived on Mayang-do. The prisoners reported that Fox’s fire had destroyed both the gun and the housing of one large 105-mm. gun. The gun chief and five gunners were killed, and another gun dismounted.

“The Mayang-do battery never fired on us again,” said Dare.
Destroyer *Douglas H. Fox* was also to have her name recorded very often in action reports during the spring of 1952. In a period of four weeks, *Fox* made the North Korean fishing industry exceedingly unprofitable.

“Our anti-fishing campaign was carefully worked out and centered about our whaleboat raiding party,” said CDR Dare. “Since all raiding would be done at night, we put corner reflectors on staffs in the bow and stern of the whaleboat which permitted us to follow it out as far as 14,000 yards on the SG radar.

“In addition to small arms and radio, the whaleboat crew carried hand grenades, demolition charges, hack saws, axes, bolt cutters (for destroying fishing nets), and an engine repair kit in case the whaleboat engine ever failed. Part of the time the whaleboat also carried a 75-mm. recoilless rifle, with about 15 rounds of HC and 15 rounds of white phosphorous. The ‘Willie-Peter’ was wonderful for establishing a reference point on the beach from which to direct ship’s gunfire.

“The selection of a crew for the whaleboat required careful attention. Not every officer or enlisted man is the right type. My boat cox’n, Shepard, was the kind who could steer by the seat of his pants once he was given a compass course. He was tough and slightly reckless.

“The officer in charge of the boat, LT William R. Doran, was a very good leader, having all the better command virtues. He was also adept with all sorts of small arms; he was the ship’s assistant gunnery officer and therefore knew what type of fire support he could get from the ship.

“The ROK naval officer, Ensign Un Soo Koo, was a bright, extrovert type. On many occasions he managed to get information from the captured prisoners in about 30 seconds, which was then transmitted to the ship by radio. One time, he convinced two prisoners, caught 30 minutes earlier, to help spot gunfire on the loading piers and warehouses behind Mayang-do. (I am not certain the prisoners weren’t spotting our fire onto their creditors’ homes.)

“The other men in the boat crew were the rough and ready ‘can-do’ type.

“Since I felt rather keenly the risks being taken by my men in the whaleboat raiding party, I always ran the bridge plot of their track and controlled them personally from a portable radio mounted on top of the pilot house. Obviously it was important never to lose track of the whaleboat when sending it 5 to 7 miles away from the ship into the midst of a harbor or into a group of 15 to 20 sampans. In order to intercept the relatively immobile sampans, we usually vectored our whaleboat *inshore* of the targets; the whaleboat would then herd the fishermen to seaward.

“Capturing fishermen required some thoughtful procedures. Invariably, every craft brought alongside was thoroughly searched beforehand. The whaleboat party, therefore, had to do everything to guarantee the ship’s safety as well as their own. They did this by going alongside and boarding, searching both sampan and prisoners on the spot, by the light of battle lanterns. After this the sampan would be towed back to the ship *alongside*, rather than astern, so that all guns in the boat could bear. I didn’t want an accident like the tragic one which happened to *Murrelet*.

“After capturing sampans, our whaleboat always took care to identify itself on its approach to the ship by pointing a battle lantern toward us until we were quite certain there could be no mistake.”

The very successful, one-month anti-fishing campaign which *Douglas H. Fox* conducted while patrolling “Engine Block” and at the bombline is outlined in *Fox*’s war diary. Here, incidentally, the historian’s problem is reflected with clarity, for the brief and official words of action reports and war diaries do not contain the colorful
and memorable details so important for reader understanding and interest. Accordingly, each entry from Fox’s war diary is supplemented by remarks from her commanding officer obtained later by correspondence and interview:

**War Diary:** 30 April 1952. “... Fox raiders in motor whaleboat investigated small radar contacts inshore of rendezvous area at 0217...”

**Commanding Officer:** “The radar contacts proved to be Dan buoys left by the minesweepers, but were not indicated on my charts. As soon as this was ascertained, we sent the boat in to the small rock island which lies in the mouth of Hungnam harbor. The raiding party planted an American flag on the island, plus a sign with surrender instructions printed in Korean, and a white flag on a short staff to wave at us. The raiding crew also painted the Fox’s name rather prominently on both sides of this rock.”

(Note for history readers): The next day, 1 May, would be the Reds’ May Day celebration. When the Communists began their festivities the next morning, they would do so in sight of the Stars and Stripes.

**War Diary:** 6 May 1952: “At 0200, raiders suspended operations after having captured three sampans and 15 North Korean fishermen in the vicinity of Chang-ho ri. Fox hoisted two sampans aboard, cut third adrift, and resumed southern patrol. . . . at 1148 proceeded to Wonsan to transfer prisoners and sampans to TE 95.23 at Yodo. . . . USS Ptarmigan (AM-376) and USS Toucan (AM-387) conducted night anti-sampan patrol. At 2315, Fox raiders captured 23 North Korean fishermen and one 32-foot sampan in vicinity of Paegan-dan...”

**Commanding Officer:** “This was the first night the raiders investigated the harbor closure net off Sin ‘Chang-ni. They reported it to be a 4-inch hemp cable supported by oil drums, and that the net dropped from it was fairly old and rotten.

“The 23 fishermen off Paegan-dan were nearly their total fishing population. We never again observed more than one or two boats there, and these were very close inshore.”

(Note for history readers): Upon being questioned, the fishermen were able to locate a 122-mm. gun at Kajin-ni, which they said was serviced by a company of North Korean soldiers who lived nearby in underground caves. They further reported that the gun was positioned so that only the barrel protruded, and that it had taken four horses to move this gun to its hilltop position. The fishermen also revealed that they had no motorized sampans in their area, that food was scarce, and that soldiers checked them in and out on the hours of 2000 and 0400.

**War Diary:** 8 May 1952: “D. H. Fox raiders cut and destroyed 6,600 feet of fish net and sank 130 main floats of Communist dual-purpose fishing and harbor closure nets off Sin ‘Chang-ni.”

**Commanding Officer:** “These nets were formed into interior and exterior traps at both ends. Our Korean ensigns estimated they would provide food for 500 or 600 people. The nets were destroyed by the raiders by first cutting the bolt rope in seven or eight places, towing the sections apart to rip the nets all the way down, and then sinking the whole mess. We doubted that they could be usefully recovered thereafter.”

**War Diary:** 9 May 1952: “D. H. Fox raiders conducted close-in search of Hungnam harbor, capturing 12 North Korean fishermen and two junk-type boats with sails. At 0335 completed raiding operations and fired on numerous factories in Hungnam...”

**Commanding Officer:** “This was the morning that the officer in charge of the raiding party, LT Doran, made me think back to LT Stephen Decatur. Doran was motoring about in Hungnam harbor in the midst of 30 to 40 sampans. He sized up the two biggest ones, stopped them, searched them, forced them to hoist sail, and escorted them out of the harbor. The sun was almost up as they sailed back into the swept area.”

(Note for history readers): The destroyer Fox’s initiative and aggressiveness during a one-month period resulted in the capture of 120 fishermen and 29 boats, and the destruction of 24,000 lineal feet of fish traps and nets. The captured fishermen also furnished valuable military intelligence.
The Sea War in Korea
Malcolm W. Cagle and Frank A. Manson

Chapter 9. The Seaborne Artillery
Air-Gun Strikes

On 4 April 1952, Vice Admiral Joy gave Task Force 77 an additional mission: to coordinate its air strikes with simultaneous gun strikes by the blockade forces. Such a system would increase the damage inflicted, and it would enhance training. Fire from the surface ships would help reduce the enemy antiaircraft fire upon the naval aircraft. In return, the naval aircraft could spot the surface fire of the ships.

These combined strikes were to take place until the end of the war. The coordination of the fire power of surface ships and the lethal power of a carrier task force’s airplanes commenced with the 13 April air-gun strikes on Chongjin.

*Philippine Sea* (CVA-47, CAPT Willard K. Goodney) and *Boxer* (CVA-11, CAPT John B. Moss) would furnish the air strikes, while the USS *St. Paul* (CA-73, CAPT Roy A. Gano), *Hanson* (DDR-832, CDR W. J. Henning), *T. E. Chandler* (DD-717, CDR T. H. Wells), and British destroyer HMS *Concord* would furnish the gun strikes.

The Chongjin targets were choice ones, especially for the carrier airmen, whose appetites had long been dulled by the steady menu of interdiction targets. Chongjin’s Japan Rayon Company and Mitsubishi Iron Works would be primary targets. In addition, the city’s numerous warehouses, gun positions, supply buildings, fuel tanks, and barracks would receive attention.

Each carrier launched its entire air group twice during the day; *Boxer*’s Air Group Two (CDR A. L. Downing) at 0600 and 1200; *Philippine Sea*’s Air Group Eleven (CDR J. W. Onstott) at 0800 and 1600. Each strike numbered from 52 to 58 planes, and 200 tons of heavy ordnance were pin-pointed on the Chongjin targets.

“My planes flew 132 sorties and dropped 119 tons of ordnance,” recorded Commander Downing. “I led the early morning hop, while CDR G. A. Sherwood, the commanding officer of VA-65, led the afternoon flight. Our targets included buildings, large cranes, a loading platform, a drydock, and five fuel tanks, as well as the rayon and iron factories.

“Although it was difficult at the time to assess damage because of the smoke from the fire and explosions, we achieved excellent results, as determined by post-strike photography. We only had one F4U, one AD, and one F9F sustain minor damage because of flak, largely because we sent the Panther jets in ahead on flak-suppression runs and they effectively silenced the AA.

“Fire and explosions shook the city during the attacks,” said Downing, “and reports of troop casualties and damage came in from outside sources for days after the strike.”[20]

Rear Admiral Apollo Soucek, Commander Task Force 77, had another observation:

“As the air-gun strikes were planned and conducted,” he said, “the pilots’ enthusiasm was observed to swing upward.”

The surface ships were equally pleased with the new system. The coordination of the firing with the bombing improved the accuracy of each while reducing the danger of all.

On 25 April, the USS *Iowa*, accompanied by USS *Duncan* (DDR-874), USS *McCoy Reynolds* (DE-440), and HMAS *Warramunga* (CDR J. H. Ramsay, RAN), was joined by four strikes of 50-odd planes each from Task Force 77 to plaster the industrial targets of Chongjin. It was the second time a battleship had operated so far north.[20A]

“We arrived and fired the first shot at 0530 in the most beautiful dawn you can imagine,” recorded Captain W. R. Smedberg, III. “The sea was flat calm—mirror like—and the temperature a balmy 68°. The sun
was bright, there was not a cloud in the sky, and a soft breeze was just sufficient to move the dust and smoke away from our targets and our line of fire.

“However, the beautiful dawn didn’t remove a feeling of tension. Since Chongjin was the most important industrial and rail transportation center in North Korea, only 48 miles from the Russian border, we had reason to be worried. I couldn’t understand how the Reds could sit and watch us wreck that city, with their own planes just across the border. We could see the Russian planes take off on our radars, but they never came closer than 20 miles from us.

“During the day we had grandstand seats for the four hour-long 50-plane carrier strikes that were nicely coordinated with our firing. A total of 200 planes dropped some 230 tons of bombs and napalm. We fired 213 tons from this ship alone. The DDs probably contributed another 25 tons, with approximately 800 rounds of 5-inch.

“Three large steel and iron works, a sprawling rayon factory, three large power and transformer stations, a big roundhouse, two marshalling yards, and a boat repair shop which included eight huge Gantry cranes and one big hammer head or traveling crane were our targets. We had the most fun getting the ship into a spot where we had five of the big cranes enfiladed; we capped the ‘T’ on them, as it were, and then just started mowing them down. The task force, some 40 or 50 miles away, did a beautiful job of keeping constantly in the area two spotting planes for this ship, so we had a combination of plane and direct spot of the many targets on the waterfront, and excellent plane spot with perfect radio communication for the deeper targets.

“At noon, during the bombardment, we intercepted a short range radio broadcast from Peking, which said that American ships were shelling women and children in the densely populated city of Chongjin. At 3 p.m., we heard another broadcast saying that three of the four ships had been sunk.”

After this strike, the Iowa proceeded south on 27 May to fire at coastal bridges south of Songjin. The battleship fired 98 rounds of 16-inch fire at them and succeeded in damaging all the bridges and closing all the tunnel entrances.

“The remarkable thing about the bombardment work by the battleships in Korea,” said Smedberg, “was the most careful supervision of its delivery. Whereas in World War II our BBs fired many nine-gun salvos in bombardment, in Korea we rarely fired anything except single shots. Moreover, most of the battleship fire was spotted. I would also like to emphasize that none of our planes or ships ever shot into villages or residential areas.”
As has been explained in Chapter 8, entitled “The Struggle to Strangle,” there was no effort made during the course of the Korean war to coordinate the interdiction campaign in Korea at the theater level. However, within its own area of responsibility (the northeast coast of Korea), the Navy performed its own coordination. On 24 April 1951, Vice Admiral Joy approved the proposal of Rear Admiral Ofstie and directed that the interdiction efforts of surface and air be coordinated. For this purpose Task Force 95 was placed under the operational control of Task Force 77. The senior cruiser division commander (CTG 77.1) henceforth served as CTG 77’s representative for the surface gunfire. His duties included the maintenance of an up-to-date list of worthwhile gunfire targets, recommendations for and conduct of the necessary gun strikes, and the periodic evaluation of the program.

In late 1951 Rear Admiral F. Moosbrugger, Commander Cruiser Division Five, summarized the experience of Task Force 95’s interdiction efforts by saying that the only effective fire from surface forces was deliberate fire with air- or groundspot. Non-spotted fire might have psychological or harassment effect, he said, but its actual damage to the enemy was limited. A strip of railroad track, or even a bridge, was a very small target, and unless naval gunfire was both accurate and controlled, the ammunition was largely wasted. Admiral Moosbrugger also called attention to the need for better and more complete intelligence on what the blockade and bombardments were accomplishing.

A further step to increase the effectiveness of naval gunfire and to coordinate it with the air strikes of Task Force 77 was instituted on 11 January 1952 by the introduction of two programs known as “Package” and “Derail.”

“Package” was a shoreline target suitable both for ships and airplanes. Five points along the main Songjin-Hungnam railroad were carefully chosen (see chart), and given the code name “package,” plus a number. At three of the five “packages,” the targets included bridges. Radar reflector buoys were planted off each one to assist navigation and gunfire accuracy. At night, ships could get as close to the five targets as 1,500 to 2,000 yards, in most cases.

The “package” targets were also ones which would be difficult for the enemy to repair. And all of them were along the main east coast supply route. If these “packages” could be interdicted, the flow of enemy supplies from the Manchurian sanctuary would be seriously impeded.[21A]

The initial plan called for the cutting of the “packages” by air strikes. Thereafter, air reconnaissance would reveal the enemy’s progress in repairing the damage and reopening the rail-line. When the Communist repair effort was about complete, other air strikes would destroy the target again.[21B] However, when the carriers were replenishing, or when bad weather prevented air strikes, the surface forces of Task Force 95 were to take over and keep the “packages” destroyed by gunfire. In addition, patrolling ships were to fire a specified number of rounds (at irregular intervals) every day and every night to hamper and destroy the enemy’s repair efforts.

The second program was code-named “derail.” The “derail” targets were ones to be kept destroyed solely by naval gunfire. A study of the northeast coast was made, and eleven rail targets chosen.

Like the “packages,” the “derail” targets were along the coast, accessible to naval gunfire, and on the main Chongjin to Hungnam railroad. At each “derail,” patrolling ships would fire a limited number of shells into
them during each 24-hour period.

By thus concentrating and coordinating both naval air strikes and naval gun strikes upon the “package” and “derail” targets, it was hoped that the Reds’ logistic efforts along the route could be reduced to a trickle—perhaps even brought to a standstill.

Chapter 9. The Seaborne Artillery
Rear Admiral Gingrich Takes Over Task Force 95

The 31st of May 1952 saw the sixth American naval officer take command of Task Force 95. Aboard the USS Dixie Rear Admiral John E. Gingrich, USN, relieved Rear Admiral George C. Dyer, USN.

At the time of this change of command, the bombardment and blockade forces of Task Force 95 had been ranging the Korean coasts unchallenged except for coastal gunfire for 23 months. Added to the hundreds of air strikes conducted on the coastal communications by the carriers of Task Force 77 were the hundreds of gun strikes by the surface ships of Task Forces 95 and 77. By now, every worthwhile target within reach of naval gunfire along the enemy-held coast had been repeatedly under siege, and had been hit repeatedly, time and again.

“Reports of destruction, when added together from every source,” said Rear Admiral Gingrich, “were such an array of bridges and tunnels, locomotives and trucks, that there was scarcely room in Korea for all of them.”

Opportunities for firing at fresh targets were almost non-existent, and there was little reason to waste ammunition on targets that were already untenable or destroyed. In fact, there was some suspicion that the Oriental enemy was purposely planting worthless targets in the oft-shattered areas of northeast Korea simply to invite our ships to waste ammunition on them. Moreover, there was still a great lack of information on precisely what damage our gun strikes were actually achieving.

To Admiral Gingrich, the same conditions which had long existed on the battlefront—stalemate—had now become equally applicable to the war at sea. The war in Korea—in the air, on the ground, and on the seas—was a war of attrition. It seemed to Gingrich that the expenditure of every naval shell had to have some real expectation of damage or it should not be fired. The phase of shooting just to be shooting was over; when targets were ample, it was the only policy an offensive-minded American Navy could follow. Henceforth, thought Gingrich, every bullet and every shell ought to have some Communist’s name on it.

“The cost of a 5-inch shell at the end of the Korean pipeline was approximately $200,” said Rear Admiral Gingrich. “Unless it did that much damage, we were hurting ourselves more than the enemy.”

Moreover, naval gunfire had to be tailored to the target. Five-inch and 3-inch fire was known to be far less effective upon railroad tracks than large caliber fire. The most efficient use of destroyer fire was not to destroy, but to keep the enemy from repairing the track damage. Moreover, rather than shooting in a flat area, it would be better to shoot at the tracks where there were hills and embankments. Any “over” shell which missed the track itself might cause landslides to block the track.

Furthermore, there was little logic in thin-skinned destroyers under the command of “hairy-chested” skippers dueling with enemy coastal batteries simply for the sake of dueling. What gain was there in firing one hundred rounds back at a cavemouth from which a single or half-dozen rounds had been fired? The fire of the Communists was steadily increasing along the coasts in both accuracy and intensity; fuzed projectiles were now being used; some even thought that enemy radar-controlled guns were in evidence. Would the severe damage or even loss of a destroyer be warranted just to silence a single enemy gun manned by perhaps a dozen men?

Gingrich was no less anxious than his predecessors to bring every ounce of his naval strength to bear upon the enemy, but the naval war, he felt, had entered a new phase. If the Korean war was one of attrition, then the UN surface forces must insure that the Communists were more attrited than we.
The life of a fisherman in North Korea, even before the war, was a very difficult one. As the farmers had been forced to sell their rice to the Red government at fixed, low prices, so fishermen had to sell their fish at government prices. Quantity quotas were established. If a fisherman met his quota, it was increased. If he did not, his license to fish was revoked. Not long after the war started, the North Korean government enforced a “Fishing Union” which exercised complete control; unless he was a member of the union, a fisherman could not obtain hooks, nets, floats, and other essential equipment.

The northeast coast of Korea was dotted with fishing villages at almost every place where adequate boat shelter could be found. Traditionally, the coastal Koreans rarely bothered with agriculture, and did not maintain rice paddies. Their dependence upon fish was even more complete than that of the inland Koreans.

The inexorable pressure of the tight naval blockade along the northeast coast made the fisherman’s life ever more unbearable. This was evident from the steady stream of escapees and defectors from North Korea. So numerous were the refugees that special UN internee camps had to be established on the islands of Yang-do, near Songjin, and Yo-do, in Wonsan harbor. These two islands became collection points for the hundreds of men, women, and children who left hardships and retaliation by their Communist village overseers, who risked the hazards of the open sea in small boats, who accepted the risk of being mistaken for minelaying personnel while escaping, and who braved these dangers despite the Communists’ warning that the Americans automatically killed any North Korean they captured.

The principal reason for so many refugee North Koreans was simply starvation. Fishing had become almost impossible.

Daytime fishing was suicidal because of the carrier and patrol planes and ships patrolling every section of the coast constantly. And at night, when the sampans of a fishing village put out to sea for a catch of pollack or sardines, they could often expect either a warning star shell over their heads, followed by gunfire to drive them ashore, or perhaps an armed whaleboat manned by eager American destroyer or minesweeper sailors, to capture them.

In an effort to break the tight blockade, the Communists organized each coastal village with one or more overseers, who endeavored to prevent the North Koreans from escaping seaward or southward, and who forced the fishermen to fish despite the dangers. The Red procedure was simply to herd the fishermen into their sampans, place guards with machineguns and hand grenades in several of the boats, and at gunpoint, force the fishermen to sea. Any sampan which ventured further than a prescribed distance from the rest of the group was fired upon. On some occasions, entire villages banded together, killed or captured their overseers, and escaped southward by sea en masse.

At some points along the east coast, such as the choice fishing grounds at the island of Mayang-do, the Communists installed radar to warn of the approach of a blockade ship. A system of flashing lights from the radar station would warn the fishermen to return ashore. At other places, warning sirens were installed which howled a warning on the approach of ships. Telephone calls were made from one fishing village to another to warn that a blockade vessel was headed their way.

Click here to view map

“The enemy had an excellent alarm system,” said Rear Admiral George C. Dyer. “The east coast of Korea had thousands of Point Lomas and as soon as one of our ships would heave into sight, the word would
spread in the vicinity, and the fishermen would head for the beach. Gradually, the enemy built up radar defenses for night alerts against our marauders.

“Rough weather, or weather in which open whaleboats could not operate, limited our operations to about 50 per cent of the days and 35 per cent of the nights.

“It took great intestinal fortitude on the part of our young boat officers and men to engage in this campaign, and it soon separated the men from the boys. The anti-fishing campaign called for the seagoing and small boat talents that were in existence in the earlier days of our Navy.”

The flight of civilians from North Korea attested to the success of the anti-fishing campaign. “On 26 September 1952,” said CDR A. A. Clark, commanding officer of the USS Cunningham, “my ship carried seventy-one refugees south from Yang-do to Yo-do for interview and for further transportation to South Korea.

“Through our ROK naval officers who were aboard for training, we were able to talk to these people, many of whom were women and children—entire families, in fact. These people had been starving, as evidenced by the way they ate the food we prepared on board for them. They also told us that they understood the reason why we had curtailed fishing in North Korea.

“As for my own ship’s company, we had lost our feeling of compassion about the hardness of the anti-fishing campaign on the civilian populace when a fishing boat dropped a floating mine for us on 19 September. We sank it with rifle fire.”

The blockading ships frequently found small sampans far out at sea, some with only fishermen aboard, some with a single family; and on one occasion, a sampan with a group of young teen-aged boys. Destroyer Fox picked up an open boat with three families on 2 May; of the eighteen aboard, nine were women, including five children, aged one to nine. The escapees had planned an escape for three months and had purposely selected the night of the Red May Day celebration to make their way to freedom.

The sailor of the blockade fleet, upon seeing the desperate condition of the refugees, invariably gave them old clothing, food, candy, and money. Many ships adopted “mascots” and took up collections for the orphanages where some of the younger refugees were taken.

“The internee camp on Yo-do was just to the south of the tiny village of Yodo-ri,” said LCDR A. Christopher, intelligence officer of TG 95.2, whose post was on Yo-do island in Wonsan harbor. “It was located on the south side of the air strip, and had the usual barbed wire barricade. The refugees—who averaged 60 to 70 in number—lived in caves which we dug out for them; one cave was a gigantic one which held about 90 people comfortably by Korean standards. These caves were necessary to protect the refugees from the sporadic gunfire which the Communists in Wonsan fired at the air strip.

“Each morning, the KMC guards ladled out their rations and rice which the refugees cooked themselves. It was my job to interrogate them and to get any useful information they might have. We questioned everybody, including the kids. In fact, one ten-year-old boy told us the location of a mine storage. After interview, the refugees would be transported south to the main camp at Chumunjin.

“From hundreds of interviews of refugees, it was plain that the ‘no-fishing’ rule had given the Communists extra burdens. The Reds had to try to replace the fish the North Koreans couldn’t get with imported fish from Manchuria and China; and because of the battering our planes gave the roads and railroads, this wasn’t easy.

“So tight was the naval blockade, in fact, that some of the refugees told me that they had been reduced to eating bark. They couldn’t even get fishhooks. As a consequence, they made fishhooks from the bits of metal they
could find. Even so simple an item as cordage was unavailable, and therefore the fishermen had no way to repair their nets. As more and more Koreans escaped, and more and more sampans were demolished by ships’ fire, the availability of sampans became acute. One group of fishermen that I interviewed said that the blockade was so tight that they had been reduced to spearing sting-rays to keep from starving.\[23\]

Chapter 9. The Seaborne Artillery
“Train-Busting”

An elite fraternity of blockade ships was organized in July 1952, called the “Train Busters.” To become a member of this exclusive organization, a ship had to receive confirmation of a train’s destruction. The first member of the club was the destroyer Orleck.

“On July 5th, 1952,” wrote CDR E. L. Yates, “my destroyer, the USS Orleck, was assigned to the northern patrol—from Yang-do Island to Chong-jin. This run was always made during daylight.

“Our routine instructions required that we provide harassing fire at Chongjin, the northern terminus of the patrol. After sending four 6-gun salvos into certain military targets in the town of Chongjin, we headed south to register on and harass some reported shore batteries located on a ridge 13 miles south of Chongjin.

“We opened fire on the batteries while on a southerly course and were turning back north for a second firing run when the batteries opened up on us. Their opening salvo was a straddle at 10,000 yards—amazing accuracy!

“Needless to say, we immediately performed that classic naval maneuver known as ‘Getting the Hell out of There’. The enemy guns continued to hold us under fire to an estimated 14,000 yards, but their accuracy diminished rapidly. Inspection of shell fragments, picked up about the decks, indicated that 105- and 155-mm. guns had been used. No damage was sustained and only one man was slightly wounded by a shell fragment. My engineering officer later reported that he was making over 24 knots on two boilers without superheat! This sort of performance in a long-hull destroyer is distinctly frowned on by BuShips.

“Our Patrol Instructions also required that we interdict the ‘packages’. The normal procedure was to proceed south from Yang-do, and, on arrival at a ‘package,’ throw a few rounds in for track damage, then proceed to the next ‘package,’ and so on to the end of the patrol route; then return to Yang-do.

“In itself, firing at the ‘packages’ was just another chore. A great many of us had doubts about the value of these bombardments, for we never saw trains in the daytime, nor any lights at night. Yet all the intelligence reports insisted that the rail system was being used at night.

“The ‘package’ bombardments gave us the idea that by careful planning and preparation, we might catch one of these ‘ghost’ trains. First of all, we made careful visual inspections of the five ‘packages’ during daylight from positions as close as safe navigation would permit. We concluded that if we were to trap a train, it could not be done by the rare coincidence of ship and train arriving at the same ‘package’ at the same time, but rather in the normal manner of catching a train anywhere—just going to the station and waiting for one. And the best time to do so was obviously at night.

“We chose ‘Package Two’ as our ‘station’; the railroad line was within a few hundred feet of the water’s edge, and several conspicuous rocks offshore provided excellent radar fixes.

“Setting our train-trap presented a few problems, however. For example, we needed to get as close to the rail-line as possible for both good observation and accurate shooting. But getting closer than 5,000 yards meant that we couldn’t use our star shells, because at less than 5,000 yards the parachutes on the illuminating candles were supposed to rip out and drop the flare like a lead balloon. We solved this one by ignoring the BuOrd warning. (It is of interest to note that only about ten per cent of the parachutes failed at 2,500 to 3,000 yards range.)

“Our gunnery problem was solved by designating one 5-inch mount as a destructive mount and the other Condition III 5-inch mount as the illuminating mount. In this manner rapid destructive fire and illumination could
be provided with a minimum of flail or warning to enemy observers.

“All methods and techniques having been solved, the Orleck on the afternoon of 14 July proceeded from Yang-do on the southern patrol, and arrived at ‘Package Two’ about sunset. Six or eight registering rounds were fired, and at dusk the Orleck continued south into the darkness to return an hour or two later. It was hoped that this feint would lull the track repair crews living in the tunnels into the belief that we wouldn’t be back that night.

“On July 15th, the Orleck crept in to about 3,000 yards from ‘Package Two’. Our topside blowers were secured and the ship was lying quietly to.

“At 0100, the OOD, LT P. H. Klepak, USN, heard the sound of a train approaching from the north. He illuminated immediately and simultaneously opened fire, aiming for the northern tunnel.

“We hit the last car—a caboose—and knocked it athwart the tracks, stopping the train. Further illumination disclosed 15 cars trapped between the tunnels; only the locomotive and tender were able to reach shelter in the southern tunnel.

“The rest of the night was devoted to the systematic and leisurely destruction of this prize: five gondola cars loaded with ten heavy field pieces, a flat car with a tank embarked, and about nine boxcars containing explosives. The exploding of these latter cars made for a completely satisfying night’s work.

“Our success that night stirred a competitive spirit between my OOD’s—and this competition was ‘waiting at the station’—again ‘Package Two’—for a train. At 2200, LT Richard P. Carson, USNR, the OOD, spotted a flickering light moving from south to north between the tunnels. He immediately gave orders to illuminate and commence destructive fire. The results were a locomotive, one tender, and one boxcar destroyed. This train was northbound, and the flickering light apparently was from the firebox.

“As a result of these successes we received two very pleasing despatches:

“‘CONGRATULATIONS TO THE DESTROYER ORLECK, TRAIN SMASHER. DESTROYING TWO ENEMY TRAINS IN 12 DAYS IS SUPERB FIGHTING. THE EIGHTH ARMY IS PROUD OF YOU AND YOUR SHIP’S COMPANY. VAN FLEET.’

“And the second one from Vice Admiral Clark:

“‘CONGRATULATIONS TO THE FIRST OF THE NEW TYPE DESTROYER TRAIN SMASHER ORLECK. WELL DONE.’

“I believe that the destruction of these two trains dispelled any lingering doubts other destroyers may have previously entertained (including ourselves) concerning the nighttime use of the east coast railroad by the Communists. Our own success in this respect was quickly followed by similar successes by other destroyers, and led to the establishment of the ‘Trainbusters Club’.”[23A]

Chapter 9. The Seaborne Artillery
“The Rails Are Rusty”

Destroyer *Hollister* (DD-788, CDK Hugh W. Howard, USN) was in several scrapes in July 1952, and generally could call herself a lucky ship.

“This was *Hollister’s* second cruise in Korea,” wrote Howard,\[24\] “having been in action from Inchon to Hungnam in 1950-1951. On the first cruise I had had a veteran crew. On the second I had almost a new complement, except the leading petty officers. I also had fourteen new ensigns. However, the entire crew was an eager lot.

“On Thursday, 10 July, we were proceeding along the Hodo Pando-Hungnam-Cha-ho route—we called this area ‘The Boulevard’—when we were suddenly taken under accurate enemy gunfire. We responded with counter-battery fire, going to twenty-five knots and making smoke. As we fired, we weaved in towards shore, presenting both a small deflection target and a fast-changing target in range. Then we retired through our smoke, using our after battery in indirect fire. We counted thirty-two splashes around us, some of them close enough to soak our bridge, but there were no casualties.

“That night we returned and bombarded Mayang-do and Hongwan. During the bombardment we noted an unidentified blip on the radar screen slowly closing us in the vicinity of Mayang-do. We approached cautiously with our depth charge K-guns manned to protect against small craft treachery. Out of the darkness we could make out a sampan, and we closed it. The armed guard on our deck threw grappling irons over, and in moments we had three prisoners.

“The three were only youths about 16 years old. We took them into our head, scrubbed them, put them into dungarees, and then turned them into a temporary ‘brig’ we had rigged in the boatswain’s locker forward. With the aid of our ship’s artist, who made sketches of mines, guns, caves, troops, pillboxes, etc., we extracted the information that there were five guns secreted in caves firing at the *Hollister*, and that these guns were fitted onto tracks and could be rolled out for firing, and rolled back into the caves for protection.

“Having this information, and in the spirit of ingenuity and initiative urged by Admiral Gingrich, I asked for volunteers to form a landing party. Following the drawing of straws, the selection was narrowed down to one officer and five men, one of whom was my quartermaster, Buckmaster. The officer was young Ensign J. W. Kline, USNR. Kline had developed a theory during all our interdiction fire at the east coast rail line. If we could only have a look at the rails, Kline said, and if they were rusty, we could save a lot of ammunition. His theory sounded logical to me.

“They immediately started to get their equipment ready, including a rubber boat, a radar reflector (which they made from a five-gallon milk can), a walkie-talkie radio, and a compass. Using this makeshift equipment, we would be able to vector the rubber boat into the beach.

“At 2000 we were off Hongwan. There was no moon, and as the recon party in the rubber boat departed the *Hollister* and headed into the beach only 1,500 yards away, I told them I would return at 2400 to pick them up in the same spot. We shoved off to do some bombardment farther north, while they headed into the harbor of Hongwan.

“At the dot of 2400, I had the *Hollister* back at the assigned rendezvous, but there was not a pip on our scopes and there was complete quiet ashore. I have never gone through three more agonizing hours as that long wait offshore, lying-to and fearful of dawn, yet not willing to leave my men.

“At about 0230, after what seemed hours, a small pip finally appeared on the radar scope which indicated
that a target was closing us from the shore. As the target came closer we challenged it, and to our great relief they answered. I went to the quarterdeck as the party came alongside. With a sickened heart I suddenly realized there were only four men in the rubber boat. Kline and my quartermaster were missing.

“Meanwhile, my radar operators reported another pip slowly closing the ship from the north. We immediately locked on this target ready to open fire. As it came closer, we could make out a sampan, from which an apparition rose, calling out not to shoot. It was Ensign Kline and the quartermaster. In the darkness they had become separated from the others, but Kline came back with his answer. ‘The rails are rusty,’ he proclaimed.

“In addition the raiding party established the location of lines of prepared trenches and pillboxes, spotted a new sampan anchorage, and discovered the existence of an antiboat boom.

“This raid made a crew out of my ship overnight.”

Reporting this raid to Commander Task Force 95, Admiral Gingrich informed Hollister that such a raid wasn’t a normal part of a blockading destroyer’s duties.

On the 13th of July, Hollister again was taken under fire near Sinch’ant by three guns which made 108 splashes near the destroyer. Hollister’s answering fire scored a direct hit on one gun and silenced the other two. As before, the Hollister went unscathed.

Two days later, again at Mayang-do, Hollister was taken under fire for the fourth time in less than a week. Again the enemy’s fire was very close, but again the Hollister suffered no hits.

Despite the repeated bracketing by enemy gunfire, the Hollister did not qualify for combat pay, as a ship had to be taken under fire six times in a period of a month in order to make the grade.

“We joked about our failure to qualify for combat pay,” said Howard, “as it appeared that the Communists had read the AlNav and deliberately ceased fire after the fifth day just to thwart us!”
The Sea War in Korea
Malcolm W. Cagle and Frank A. Manson

Chapter 9. The Seaborne Artillery
Package One Blocked For Twelve Days

Shortly after midnight on 12 October, 1952, the USS Walker (DDE-517, CDR M. C. Walley, USN) patrolling at Package Two, received the following message by voice radio from HMS Charity at Package One:

“Have succeeded in stopping train, but need assistance as I am almost out of star shells.”

Steaming northward at high speed, the Walker joined the British destroyer, which was also experiencing difficulties with her fire control system.

“Since there was only a single track rail line from the Manchurian border to Hungnam,” said Walley,[25] “it was apparent that if we could keep this line blocked, nothing could move by rail in either direction. We therefore set about damaging the caboose and engine ends of the train sufficiently to prevent its removal, and attempted, with only minor success, to cut the track ahead and astern of the train. We also maintained harassing fire to prevent repair crews from working.

“After a couple days of this, the Iowa (CAPT J. W. Cooper, USN) showed up and we asked that she cut the roadbed for us. This she accomplished quickly and effectively with her 16-inch high-capacity shells. She also hit the locomotive, and dished out a huge hunk of that from the boiler. Returning strikes from Task Force 77, which had unexpended ordinance, were also sent over for our control to assist in maintaining the block.

“During daylight hours the Walker lay offshore at a range of 7,000 to 8,000 yards and from time to time lobbed in a shell or two to harass the enemy repair crew as much as possible. In their white clothing they were plainly visible to us.

“One day during this period, my junior officer of the watch, Ensign Dennis O’Connor, got an idea how we might harass the Reds and hold up the work without even firing a shot. O’Connor had noticed that whenever we fired a round, the repair crews would scamper for shelter even before the shell hit. Obviously the Reds had a lookout posted, who, as soon as he saw the flash of our gun, sounded a warning to the repair crew so that in the approximate ten seconds it took for the projectile to reach the tracks and explode, the repair crews had taken cover. So, O’Connor asked my permission to light off our 24-inch searchlight, and I said, ‘O.K.’

“We all lined the bridge with binoculars to see what would happen. Sure enough, as O’Connor trained the searchlight in their direction and snapped the shutter open and shut, the repair crews dropped their shovels and ran like hell. Of course, we had a big laugh, and after that it became standard practice for us to use the searchlight every now and then just to save firing a shell. Package One was thus blocked for twelve full days.

“At night the Walker moved in to the 100-fathom curve, about 2,500 yards off shore, while another ship would lie-to farther out and furnish illumination fire. This hampered but did not completely stop the Communists’ effort to clear the tracks.

“After about a week, apparently realizing that they were not going to roll the cars away, the Communists began doing what we had carefully avoided all this time—one by one the railroad cars were dynamited clear out of the roadbed, and in a few more nights the track was cleared and patched and the ‘Red Ball’ express was rolling again.”
The steady increase in the number of coastal defense guns which the enemy employed in North Korea gave evidence of the effect of the blockade and bombardment effort. If the attacks were not wreaking damage and slowing the movement of supplies, why should the Communists bother? The expense of building gun emplacements, the cost of ammunition, the drain of personnel, all added to the enemy’s burdens.

More and more often the rocky coasts of North Korea were to see coastal guns installed at points where the roads and rail lines were exposed, or where amphibious attacks might come in. These guns were cleverly placed and almost impervious to gun attack.

Caves were dug in the face of the cliffs either from the front or from the reverse side of the hill. Usually the caves were in groups of three, although single caves were fairly common. The openings were small, only large enough to give the gun a reasonably wide arc of fire, and in no case larger than eight feet square. The entrances of these caves were usually covered with yellow-green cloths, tree limbs, or woven mats—or, in the time of snowfall, by white drop cloths. As a result the entrances were difficult to see, and even more difficult to hit. In fact, the expenditure of ammunition on them rarely succeeded in more than superficial damage.

Most of the guns in these caves were simple field artillery pieces, 75-mm. or 105-mm. On other occasions, tank guns and self-propelled guns were used by the Communists. In a few instances, the wheels would be removed from artillery pieces and the pieces secured on railroad flatcars. The flatcars would then be wheeled into a nearby tunnel until ready for use.
The third year of war, which began 25 June 1952, found the blockade and bombardment operations more standard and routine than ever, but nonetheless arduous and dangerous. Enemy shore-battery fire increased in accuracy as well as amount. The Communists’ ability to score hits on our ships at slow speeds and at close range showed steady improvement.

On the ground in Korea, both the Communists and UN forces were digging ever deeper into caves, bunkers, and trenches, laying minefields and stringing barbed wire. Little movement of the frontlines had been seen in over a year, and fighting was largely confined to small-sized but bloody clashes.

At Panmunjom, under a drab circus tent, the UN and Red truce teams remained deadlocked on the thorny problem of prisoner exchange. There was little prospect for a truce; and in fact, the truce talks were recessed in October 1952 for nearly seven months.

Ships of the U.S. Navy were completing their second and third tours of duty in Korean waters, many of them having accumulated eighteen or more months in the theater. An unlucky few ships would spend their fourth Christmas in Korean waters. Personnel aboard ships who had served one previous tour numbered more than seventy-five per cent; and one quarter of the officers and men of the American Navy in Korea had seen three full tours in the battle zone. A measure of relief had been introduced as Atlantic Fleet ships appeared for combat service more frequently.

Action reports and war diaries of this period reveal the routine nature of the naval war. Many entries in war diaries simply read, “No Comment,” and a few action reports state, “Nothing to report.” The feelings of many were summarized by the skipper of De Haven (CDR T. C. Siegmund): “We had learned to live with an unsatisfactory situation and still do a good job, no matter how dull it was.”

Even the enemy occasionally took a callous and indifferent attitude toward the war. Night-heckling pilots occasionally reported that despite their attacks on truck convoys, the drivers would not extinguish their lights. Ships firing at Wonsan reported the same thing.

The tedium and monotony, however, did not diminish the stringency of the blockade.

The increasing coastal fire from the Communists—which doubled from July 1952 to January 1953—had two immediate results: first, ships increased their patrolling speeds, changed their courses more frequently, and opened their patrolling range to the beach; secondly, ships tried to make sure that every shell fired was a winner. The enemy seemed to have very few radar-controlled coastal guns,[25A] which meant that in nighttime, blockading ships could move closer ashore for their intercepting and gunnery efforts, with far less danger from enemy counterbatteries.

The oft-tried tactic of manning a whaleboat with a reconnaissance party, and dispatching it close aboard the designated beach for target observation, still paid dividends from time to time. The whaleboat crews would lie to, waiting, watching, and listening for trains, maintaining communications to the parent ship by walkie-talkie radio.

In many instances they were successful. The effort on 14-15 August 1952 by destroyers Jarvis (DD-799) and Porter (DD-800) was typical. In this case, in addition to whaleboat parties, the two destroyers were assisted by at ROK torpedo boat. Lying approximately 3,000 yards offshore south of the Songjin area, Porter succeeded in damaging two trains while Jarvis was getting one.

The sailors of the U.S. Navy, in their ships off Korea, had little to complain about in comparison with
their countrymen in the trenches and dugouts of Korea. At sea, at least there were no fleas, no flies, no bunker life. Still, while there was less danger of injury or death than during the Pacific war, and little to be feared from enemy aircraft or submarine torpedoes, the sailormen had an irritating, uncomfortable, and unpleasant existence.

When in range of enemy guns, ships stayed “buttoned up” and personnel were forbidden to expose themselves topside. During the hot summers of Korea, temperatures below decks were stifling, and rest was impossible for the many who found the irregular gunfire too regular for sleeping. The constant jarring of the gunfire caused the glass wool insulation of many ships’ overheads to shake loose; no one could sleep in the top bunks from the irritating effect of the glass fibers.

Winters in Korean waters brought the chill and biting Siberian winds, heavy seas, and sub-zero temperatures. Ships’ superstructures were frozen beneath tons of ice, locking the forward mounts in azimuth and freezing depth charges in their racks. The icy wind had such a razor’s bite that refueling and replenishment often took place on a down-wind course.

But to most of the sailormen, worse than either the blistering summer heat or the biting winter cold was the tedious routine of the war.

The destroyers assigned to Task Force 95 could predict the statistics of a tour in Korean waters with precision: a typical tour would require 110 underway replenishments; the average ship would burn more than 3,000,000 gallons of fuel oil while in the theater. And it would see the expenditure of an average of 2,360 5-inch rounds and 1,341 3-inch rounds.

The endless siege of Wonsan, Hungnam, and Songjin went on and on. Ships patrolled “Tailight,” “Engineblock,” and “Windshield” day after day after day. Minesweepers in Wonsan made another circuit of “Muffler,” and the minesweeps at Songjin went round the harbor once again. The air-gun “Cobra” strikes increased.

In this manner, 1953 arrived.
In January of 1953, a bitterly cold month at sea, six American ships were taken under fire by Communist batteries, but none was hit. On 27 January one destroyer reported tracking a “skunk” by radar for nearly an hour and a half with plotted speeds as high as twenty-five knots. Did the Communists at last plan to oppose the strangling blockade with torpedo boats?

February 12, 1953 saw the seventh change in Commander Task Force 95 as Rear Admiral Clarence E. Olsen relieved Rear Admiral John E. Gingrich. A change was also made in the Task Force 95 organization. Hereafter, the cruiser division commander serving with Task Force 77 as CTG 77.1 would also have additional duty as CTG 95.2, relieving the destroyer squadron commander who had performed this duty.

At the armistice conference table, meanwhile, the peace talks were still suspended. Liaison officers met occasionally, but neither side was willing to alter its position.

At sea, the blockading ships increased their activity as winter relaxed its grip.

On 6 March, the destroyer *Laws* (DD-558), near Hungnam, joined hands with Task Force 77’s airplanes to damage several railroad cars despite heavy enemy counterbattery fire. Five days later, *Trathen’s* (DD-530) guns damaged several rail cars of a train near Package Four. The Red engineer detached his locomotive from the train and fled into the closest tunnel.

As March passed, and the muddy and slippery roads of Korea dried out, patrolling ships reported increasing numbers of truck convoys along the coastal road. Approximately 500 vehicles were seen on the night of 15-16 March. They were taken under fire, but no estimate of damage could be made.

Along with the enemy’s increased coastal defense fire and truck activity, the mine activity increased too. USS *Epperson* (DDE-719) was able to sink five in one day.

The advancing spring saw two ships—one American, one Canadian—clobber trains. HMCS *Crusader* shelled and stopped three trains at Package Three on 15 April. USS *Endicott* (DMS-35) got three out of four on 11 May, also at Package Three.

April saw a sharp upturn in the enemy’s counterbattery fire, especially in the vicinity of Wonsan. Four American ships were hit during this month: *Los Angeles*, *Manchester*, *Maddox*, and *Kyes*.

For the remainder of the war, destroyer *James E. Kyes* (DD-787, CDR R. A. Thacher) was to receive more than her share of enemy attention. She first reported being shot at near Songjin on 16 March. Ten days later, in the same area, *Kyes* was again taken under fire, this time escaping damage from some fifty rounds of fire. Two days later, accompanying sweeper *Waxbill* near Hungnam, *Kyes* observed ten splashes in their vicinity.

By now the Communists should have learned that American destroyers can be pushed too far. On 1 April, *Kyes* loaded her boat with a reconnaissance party and dispatched them to the area of Cha-ho to watch and listen for trains. Sure enough, one was spotted, but it was in such a position that *Kyes*’ guns could not bear. Rather than let the train escape, *Kyes* contacted a night-heckling Fifth Air Force B-26 and vectored him to the area. *Kyes*’ initiative was rewarded by hearing the Air Force pilot report “several box-cars destroyed.”

April 4 saw *Kyes* under fire again, this time near the island of Mayang-do. *Kyes* got even on the 18th, near Cha-ho, and fired at an enemy train. The enemy’s counterbattery fire was rapid and more accurate than usual, and *Kyes* was forced to open range. She would return.

On 17 May, in company with USS *Brush* (DD-745), *Kyes* supported a ROK raiding party above the
battleline near Kojo. The ROK troops reported the destruction of two automatic weapons and fourteen sampans.

But *Kyes* did her best night’s work on the 19th of May while in company with *Eversole* (DD-789). At Cha-ho, where enemy guns had fired upon her so often and *Kyes* herself had fired at trains several times, *Kyes* and *Eversole* at last succeeded in hitting and stopping a nocturnal train. Illuminating the area with 128 star shells, the two destroyers pumped 418 rounds of 5-inch shells into the doomed train.

This time there could be no doubt of a train’s complete destruction.

In late April, at long last, there was a break in the armistice talks, and on the 20th, the exchange of sick and wounded prisoners commenced in “Operation Little Switch.”

This break in the negotiations reflected a new atmosphere regarding a truce. To all concerned, it was now apparent that under the imposed political and military limitations, the present two-year stalemate in Korea could not be broken, except at prohibitive cost and the full-fledged extension of the war to the mainland, and perhaps even the use of atomic weapons. Otherwise the war in Korea might continue indefinitely. One GI summarized the conflict in these succinct but bitter words: “The war we can’t win, we can’t lose, we can’t quit.”

It was obvious that the Chinese could never win, and it was equally obvious that unless and until the UN changed the framework of its fighting, neither could the UN.

For psychological reasons, however, the Chinese wanted to give the impression that they were winning the war during the last few days. The Chinese high command ordered an intensification of the fighting everywhere to create this illusion.

Accordingly, pressure at the frontlines increased, and the Chinese made several herculean efforts to penetrate the UN main line of resistance. At one or two points in the First Marine Division sector, the Communists succeeded in gaining some terrain of little value but at fantastic cost to themselves—16,300 killed or wounded and 81 prisoners taken. Since the objectives themselves were certainly not worth this blood, it was concluded that by these pyrrhic victories the Chinese would claim that the UN was signing an armistice in order to keep them from “winning” the war.

Along the coasts, the enemy’s coastal gunfire increased in intensity and accuracy, keeping pace with the activity at the front. Patrolling ships were equally aggressive in matching this enemy fire. The USS *Chandler* (DD-717), assisted by USS *Wiltsie* (DD-716), did her part by destroying one train near Tanchon on 3 June.

At Hungnam, on 12 June, while *Manchester* (CL-83) and the USS *Carpenter* (DDE-825) were bombarding harbor targets, sixteen rounds of enemy fire were observed.

On the 25th of June (the third anniversary of the war), near Tanchon, the USS *Gurke* (DD-783) was taken under fire by heavy enemy guns. Two direct hits and several minor ones were received. Fortunately, no one was killed and only three minor personnel casualties were received.

On the morning of 8 July, ten miles south of Songjin, the USS *Irwin* (DD-794, CDR G. M. Slonim) took a shrapnel explosion in her mainmast from an estimated 80 rounds, which seriously wounded Captain Jack Maginnis (Commander Destroyer Squadron 24) and four other personnel. All electrical and electronic cables on the mast were cut.[25D]

During this final period, the battleship *New Jersey* supported by heavy cruisers *Saint Paul* and *Bremerton* and light cruiser *Manchester*, plus twelve destroyers, stood guard at the east coast bombline. It was the first appearance of a battleship for naval gunfire support at the bombline since *Iowa* in October 1952.

The sixteen ships rotated in three groups (CTU 95.28, 77.1.8, and 77.1.9) at the bombline to give constant support to the eastern anchor of the line. Thirteen thousand rounds of 5-inch, 2,800 rounds of 8-inch, 700 rounds of 6-inch, and 1,774 rounds of 16-inch were poured into enemy positions during the last two months of the war.[25E]

A large part of the credit for preventing the enemy’s frantic efforts to advance along the east coast during the final days of the war was due the naval sharpshooters. When the demarcation line was finally set, there was a
definite northward curve on the east coast where the battleline was ahead of the rest of the front.

Vice Admiral Briscoe congratulated the bombarding fleet on 19 June: “Your straight shooting of the past 12 days will not soon be forgotten by the enemy. You knocked him off Anchor Hill, ripped up his frontlines and supply routes, and added another chapter to the lesson that the way of the aggressor is hard.”

Thus the longest blockade and bombardment effort ever imposed by the U.S. Navy came to an end.
The revised “Functions of the Armed Forces and the Joint Chiefs of Staff” assign, as one of the primary functions of the Navy, this duty:

“A.1(a) To seek out and destroy enemy naval forces and to suppress enemy sea commerce.”

A collateral function of the Navy reads as follows:

“B.1. To interdict enemy land and air power and communications through operations at sea.”

Any study of the blockading efforts of the United States Navy in Korea must conclude that the naval blockade imposed during the Korean War was both effective and successful. Three of the enemy’s five main supply lines were blocked: (1) his deep-water shipping along the east coast; (2) his shallow-water coastal shipping on the west coast; (3) his deep-water shipping routes to the Asiatic seaport cities in China, Manchuria, and North Korea. The enemy was denied the use of the sea for military movements, for the transportation of supplies, and for fishing. In normal times, thousands of junks and numerous steamers moved hundreds of thousands of tons of supplies by sea. The imposed naval blockade of the UN was almost 100 per cent effective. Only an exceedingly small trickle of sea traffic—and that coastal and nocturnal—succeeded in escaping the tight barricade thrown around the peninsula.

This blockade was imposed, however, under very special circumstances, and any conclusions based on the blockading operations in Korea must take into account the almost total absence of enemy air opposition and active enemy naval opposition. Had either or both of these elements been introduced, a totally different blockading operation would have resulted. The siege of the ports of Wonsan, Songjin, and Hungnam might not have been continuous. To have imposed a blockade against vigorous enemy air and submarine opposition would have required many times the numbers of vessels that Task Force 95 was operating. However, even against enemy air and naval opposition, a naval blockade could have been established and made effective, although it doubtlessly would not have been as airtight as was the case, and it would have been infinitely more costly to both Chinese and American forces. Certainly, the pattern and tempo of operations, the weapons used, and the area of operation would have been much different. This blockade had further significance because of the fact that it was the first blockade applied by the U.S. Navy since the Civil War. The British had established a blockade in World War I, and the U.S. Navy had assisted. But this effort was relatively minor and passive. The blockade of the Korean peninsula, therefore, gave the U.S. Navy training and experience for the application of a blockade in other areas.

The effectiveness of the naval blockade, and the enemy’s failure to oppose it actively, opened both the Korean coasts for the application of a bombardment and interdiction effort which had known no similar parallel in American naval history. Naval gunfire, designed primarily to attack targets at sea and to support amphibious landings, was given three novel roles: (1) the support of fixed positions at the battlefront (as contrasted with the fluid targets of an amphibious assault); (2) the task of securing both flanks of the UN battleline; (3) the interdiction of rail and road lines along the northeast coast.

The first of these tasks was performed in a highly creditable manner. At every stage of the war, the accuracy and volume of naval gunfire (even at maximum ranges) given to support friendly frontline positions elicited the highest praise from both U.S. Army and the U.S. Marines, and, for the most part, compared most favorably with artillery fire. The devastating effect of the naval seaborne artillery was indicated by the fact that near the coast, the UN frontlines were invariably ahead of the main line of advance.

Generally speaking, the greater the caliber of the naval gun, the greater its effectiveness upon enemy...
targets at the frontline. If further proof was needed, the 16-inch guns of Iowa, Missouri, Wisconsin, and New Jersey demonstrated that pound for pound they were the most efficient rifles in the Korean War. While no effective liaison or standard doctrine existed between the Army and the Navy for the use or control of naval gunfire in the first part of the war, these were quickly established, and proved to be effective for the duration. In the words of Rear Admiral Allan E. Smith, the first commander of the “United Nations Blockading and Escort Force,” “There were no ready communications between ships and troops in the initial phases because of the prewar attitude that amphibious landings were antiquated and naval gunfire obsolete.”[26]

Had the UN forces on the ground been engaged in an offensive war of movement rather than a sit-down war of stalemate, the pattern of naval blockade effort might have been different and the contributions of the blockade forces greater. It was the opinion of Rear Admiral A. K. Scott-Moncrieff, RN, the British west coast blockade commander, that a more aggressive blockade policy, heavily pointed and sustained over 7- to 10-day periods, might have caused the enemy more inconvenience than a steady tempo of operations along both coasts. Admiral Scott-Moncrieff also opined that the UN’s failure to make additional amphibious landings had enabled the enemy to build up his defenses all along the coasts, possibly liberating a number of troops.[27] A more offensive blockade policy could not have been taken independently of the ground action, however, but would have been related to offensive action on the ground and in the air as well.

Whether or not naval gunfire could have been as effective or as much used in the face of enemy air and surface opposition must remain a moot question. More active enemy opposition would undoubtedly have expedited the development and use of sea-to-shore missiles fired from distant ranges. The excellent gunfire support supplied by the battleships under the existing artificial conditions in Korea was not sufficient to warrant retention of large rifled guns in the U.S. Navy.

The second task given naval gunfire—security of the flanks—was one of the most important contributions made by the naval blockade forces. “Never in history,” said Rear Admiral Allan Smith, “has an Army had its flanks so firmly secured as in the Korean War by our Navy. In March 1951, Admiral Struble and I visited General Ridgway in Taegu. His subordinate generals had kept telling him that the enemy could outflank our western front troop line because of the shallow waters and sometimes dry land. He was assured that our Navy would not let this happen; and Ridgway replied that he would give the matter no more concern.

“This mobile artillery and naval air power on both flanks enabled our Army commander to concentrate his strength where such would put the greatest pressure on the enemy. Imagine an Army commander being relieved of concern about his flanks!”[28]

Regarding the third novel task, the collateral one of interdiction, the Navy did not succeed in denying either the east coast rail or road systems to the enemy despite the most intense, prolonged, and ingenious efforts to do so. As described in the chapter, “The Struggle to Strangle,” neither could the air attacks on the UN’s air forces. At no time during the course of the war did either the UN’s surface or air interdiction efforts succeed in stopping the flow of enemy supplies from Manchuria to the front to a decisive degree. The gun strikes of the ships of Task Forces 77 and 95 hampered, hurt, and harassed, it is true; but they had neither direct nor decisive effect upon the course of the ground fighting in Korea.

The significance of this failure is to point up the need for balanced forces in the U.S. military establishment. Assuming that the war had to be confined to the peninsula, there was only one way to have stopped the steady and constant movement of enemy trains and trucks within North Korea: the physical occupation of the ground, and physical force applied by armed men attacking and holding the routes themselves. Because of the terrain, paucity of suitable targets, and character of the enemy, it is doubted that even the local use of atomic weapons could have isolated the battlefront of Korea.
The first-syllable-accented word “patron” is defined in the dictionary as an “upholder” or “supporter.” While this word has no direct connection to the naval aviation term “PatRon,” (an amalgamation of the two words “Patrol” and “Squadron”), it haply has an indirect relationship in meaning.

Operations by the Navy’s patrol squadrons in the Korean War, like those of the submarines and the Service Force, were usually neither glamorous nor newsworthy. Rather, the PatRons were the upholders and supporters of the Korean War. The routine tasks and accomplishments they performed in the Far East were more important and essential in a negative or defensive sense than in a positive or offensive sense. To naval strategists during war, negative information is as vital as positive information. There are no enemy ships in the area, there are no typhoons or other weather reported which will interfere with the blockade, carrier operations, or an amphibious operation. There is no evidence of fishing or mining activities. The enemy is not concentrating his shipping forces for an invasion of Formosa.

Such essential information was supplied by the patrol squadrons throughout the Korean War despite weather, night, or the constant danger of enemy fighter opposition.

One of the major duties performed by the patrol squadrons during the Korean War was the careful and constant surveillance they kept over Formosa. In the physical sense, the Seventh Fleet, charged with that island’s protection, could not be in two places at once. In the strategic sense, however, it could be, thanks to the PatRons. The ceaseless flights of the patrol squadrons droning back and forth through the Formosan Straits made it impossible for the Chinese to attack Formosa so quickly or unexpectedly that the Seventh Fleet could not speed from Korean waters to its defense.

In Korea proper, the flights of the patrol squadrons added to the effective naval blockade. One of the primary missions was the surveillance and photography of merchant shipping. North Korean fishing efforts were constantly under observation by the patrol squadrons. The mere presence of the VP squadrons in the area was a deterrent to the enemy against any use of submarines. Additionally, the weather reconnaissance flights on behalf of the carrier forces, the search for and destruction of mines, and flare-dropping flights were missions whereby the PatRons contributed to the Navy’s over-all effort in Korea.

This chapter records the vital part played in the Korean War by the Navy’s patrol squadrons, land and sea.
Chapter 10. The PatRons
Division of Patrol Squadron Operations

For ease of understanding and explanation, patrol squadron operations during the Korean War are divided into two areas according to the geography of the operating zone in the Far Fast—Korea and Formosa.

In the Korean area, one Fleet Air Wing staff was assigned to control the three to five squadrons, plus tenders, based in the Japanese-Korean area (usually three land-based squadrons and two seaplane squadrons).

To protect Formosa, another Fleet Air Wing, consisting of one land-based squadron, one seaplane squadron, and one tender, was assigned to control patrol squadron operations in that area.

Fleet Air Wing Six was the patrol squadron command in the Japanese-Korean area, while Fleet Air Wing One was the staff controlling patrol operations in the Formosan Straits.
When the war began, there were 8 patrol-type airplanes in the immediate area of Korea: five PBM Mariner seaplanes from Patrol Squadrons 46 (LCDR M. F. Weisner) and 47 (CDR J. H. Arnold) operating from the Naval Air Facility, Yokosuka, supported by a detachment of Fleet Aircraft Service Squadron 119, and 3 additional VP-46 aircraft at Sangleys Point, Philippine Islands. There was no Fleet Air Wing staff, no tender, and no land-based aircraft in the immediate area of Korea. VP-46 was in the process of relieving VP-47. During its 6-months’ tour in the Far East, VP-47 had also maintained detachments of aircraft at Hong Kong and, occasionally, at Buckner Bay, Okinawa.

On 25 June 1950, Patrol Squadron 47, having completed its normal half-year’s tour, was just being relieved. Three of its homeward-bound planes were already at Pearl Harbor, a fourth was at Guam, and a fifth was in the air between Guam and Hawaii. These aircraft were hurriedly recalled and ordered to report to Yokosuka. By 7 July, Arnold’s squadron had reassembled and was in action.

One of this squadron’s first tasks, commencing 15 July, was the antisubmarine coverage of the convoy travelling from Japan to Pohang to make the amphibious landing of the First Cavalry Division at that point. Another of its early missions was to assist the U.S. Air Force in the rescue of aviators in Korean waters.

Upon the transfer of the Seventh Fleet to General MacArthur’s operational control, a detachment of Fleet Air Wing One (based in Guam) was established in Japan. Captain John C. Alderman, Fleet Air Wing One’s chief of staff (who happened to be on leave in Japan), was given command of this detachment. This temporary command was known as Fleet Air Wing One Detachment, Japan. Assigned to assist Alderman in the subsequent hectic days of July were CDR D. C. Higgins, CDR D. J. Omeara, LCDR J. L. Burge, LT W. E. Davis, and LT J. B. Black. Alderman’s tasks were not only to operate the patrol aircraft assigned to him, but also to take care of all other naval aviation matters of supply and logistics in the Korean area.

By 12 July, thanks to the arrival of Rear Admiral R. W. Ruble, USN, Commander Carrier Division Fifteen, and his staff, it was possible to reorganize and expand the naval air organization. A new command, Naval Air Japan, was established. As best it could, this interim staff dealt with the ever-rapidly increasing demands being made upon naval air for support and coverage.

On the 4th of August 1950, Fleet Air Wing Six was commissioned. This wing would operate and control the patrol squadrons in Korea in lieu of Fleet Air Wing One Detachment, Japan. Fleet Air Wing Six was given control of all American and British patrol squadrons operating in the Japanese-Korean area.

By 9 August 1950, Rear Admiral George R. Henderson, Captain W. E. Gentry, and Captain Joseph Murphy had arrived to form the nucleus of the Fleet Air Japan staff, a naval aviation area command which would function for the remainder of the war.

While these organizational changes were being made, other U.S. Navy patrol squadrons were arriving in the area. VP-6 (CDR A. F. Farwell) flying P2V3 Neptunes had arrived in Japan on 7 July and commenced operations initially from Johnson Air Force Base, near Tokyo, and three weeks later from Tachikawa Air Force Base.

The next squadron to arrive was VP-42 (CDR G. F. Smale). This squadron’s PBM5 Mariner aircraft landed at Iwakuni, Japan, near Hiroshima, on 21 August 1950.

In addition to these U.S. Navy patrol squadrons, two Royal Air Force squadrons operated under the command of Fleet Air Wing One Detachment, Japan, and later under Fleet Air Wing Six. RAF Squadron 88
(Squadron Leader M. Helme) flew from Hong Kong with four Sunderland aircraft, and had begun its patrols on 1 August. A second Royal Air Force squadron, 209 Squadron, commanded by Squadron Leader P. LeCheminant, commenced flight operations (flying four Sunderlands) on 10 September 1950 from Iwakuni.

During the early period of the Korean War, the missions given Fleet Air Wing Six were several: antisubmarine patrol along both coasts of Korea, search and reconnaissance, convoy escort, and weather reconnaissance to assist the operating combat ships. In addition, other missions such as search and rescue, anti-mine, photographic missions and various logistic flights were assigned.

In the first months of the war, the patrol squadrons were able to corroborate the fact that the naval blockade of Korea was effective. Numerous, often vague reports were being received in Tokyo that the North Korean Army was being supplied by sea in its advance on Pusan. These reports, often sightings by high-flying bomber aircraft, were proven false by the patrol squadrons whose visual, photographic, and radar surveillance of the coasts showed the “supply” fleets actually to be “fishing” sampan fleets.

Daily patrols were flown along the western shores of Korea in the Yellow Sea and in the Bay of Korea, on the east coast of Korea in the Japanese Sea, as well as in the Tushima Straits. Whenever the carriers of Task Force 77 were replenishing, an ASW patrol was maintained over them at all times. In addition, a nightly weather reconnaissance mission was flown for the benefit of the carrier task force. The weather information was also beneficial to the shore-based Marines and Air Force aircraft in Korea.
In addition to the routine antisubmarine patrols, weather and coastal reconnaissance, there were several unique and unusual missions performed by patrol squadrons during the early period of the Korean War. The first of these was the spotting of naval gunfire.

On 2 August 1950, a VP-6 aircraft conducted a spotting mission for the bombardment of Mokpo by HMS Cossack and HMS Cockade. So successful was this mission that a second mission was conducted by VP-6 on 6 August, using two P2Vs, when spotting services were furnished to British cruisers Kenya (CAPT T. W. Brock) and Belfast (CAPT Sir Aubrey St. Clair-Ford, Bt, DSO), the two British destroyers Cossack and Charity, and the Dutch destroyer Eversten (LCDR D. J. VanDoorninck). The targets were military installations in Inchon. The USS Sicily provided four Marine Corsairs from VMF-323 as escort for the two spotting Neptunes. Heavy antiaircraft fire was expected, but none was seen. The P2Vs were piloted by LT George D. Anderson and LT John W. Stribling; the spotting pilots were Britishers—Royal Artillery Captain Thompson from the fleet combined operations bombardment unit, who spotted for Ceylon, and Royal Navy Lieutenant Handley (a Seafire pilot from HMS Triumph), who spotted for Kenya. The bombardment group fired many salvos into the Inchon railroad station, the Jinson Electrical Works, and the oil storage tanks on the northeast side of the city. The spotters described the results as excellent.

On 7 August, a third spotting mission was conducted by aircraft from Patrol Squadron Six for a bombardment of Tanchon by the USS Helena and four destroyers.

Later in the Korean War, a patrol aircraft was called upon for some emergency naval gunfire spotting. On 12 October 1950, while searching for mines in Wonsan harbor, a VP-47 PBM flown by LCDR Randall Boyd was present when the sweepers Pirate and Pledge were sunk.\[1A\] Also present was the destroyer minesweeper Endicott. The Wonsan batteries opened fire on the sweepers Pirate and Pledge, and in attempting to dodge the gunfire, Pirate struck a mine and sank. Before Pledge could move out of range, she suffered the same fate.

Lieutenant Commander Boyd flew over the stricken vessels to give support and to draw the fire from the Wonsan batteries. Air support from the carriers was requested. Meanwhile, the PBM continued to circle the area, spotting the gunfire of DMS Endicott. The enemy’s surface batteries were effectively silenced.
For the first month after VP-6’s arrival, this squadron made many attacks on North Korean targets. The P2V3 Neptunes were capable of carrying a heavy load of either bombs or rockets, in addition to their six bow machine guns. Since VP-6’s coastal patrols along the northeast shore of Korea paralleled the rail network, targets along this part of North Korea were frequently seen.

On 29 July 1950, two P2V3s, piloted by LCDR R. L. Ettinger and LT William J. Pressler, were on a coastal reconnaissance patrol near Chongjin. The two Neptunes sighted a railroad train, an appropriate target for their 16 HVAR rockets. The train was quickly destroyed with rockets and 20-mm. fire from the bow guns.

On 13 August, in a flight led by VP-6’s executive officer, LCDR E. B. Rogers, two Neptunes attacked several camouflaged power boats and barges at Chinnampo which were engaged in minelaying (although this fact was not then recognized). Three of these boats and two barges were sunk in the attack. Rogers’ plane took six holes. On the same day, camouflaged Communist ships and patrol craft in the Wonsan area (believed later to have been laying mines) were attacked by other VP-6 aircraft. Two surface craft were damaged in this attack.

A similar attack on 16 August, on the west coast of Korea, on similar surface craft resulted in the loss of the first P2V. The plane, piloted by ENS William F. Goodman, had completed an attack on a small patrol-type enemy vessel in the Chinnampo area when the crew observed fire in the starboard engine. Ensign Goodman made a successful ditching a short distance from the enemy shoreline and the plane’s entire crew was later rescued without casualty by the British cruiser *Kenya*.

As a result of the loss of this Neptune, orders were issued that henceforth patrol aircraft squadrons should not be assigned to attack missions. Specifically, the order read: “Aircraft of this force will normally not attack surface or land targets unless specifically directed to do so.”
One of the most unusual tasks performed by the patrol squadrons during the Korean War was the spotting and destruction of mines. This task commenced in late September 1950 and became increasingly important. After the amphibious assault at Inchon, two PBM aircraft from VP-42 were flown to Inchon harbor and tendered there by the USS *Gardiners Bay*. Their task was to fly low over the approaches to Inchon and Chinnampo, and to spot the anchored mines for the surface sweepers.

The two VP-42 aircraft arrived at Inchon on 2 October and commenced mine search operations the next day. Many minefields were located and reported, as well as numerous drifting and floating mines. A number of these were sunk or destroyed by gunfire by the PBMs.

This initial operation was successful because low tide left the mines exposed or “watching.”

In anticipation of the amphibious landing at Wonsan, VP-42 changed its operating locale to Wonsan in early October, joining with the aircraft of VP-47 in the search for mines. In this task, the Mariners teamed with helicopters and surface ships to clear a path through the minefields for the amphibious forces. During this period, VP-42 was credited with the destruction of eight mines.

Mine hunting in a large, slow seaplane was not without its hazards. The Wonsan shore batteries were frequently active. One VP-42 aircraft received two bullet holes from rifle fire north of Wonsan on 28 October. And the destruction of a mine by aircraft machine gun fire required skill and accuracy. The circling pilot had to bring his aircraft close enough to the mine to permit accurate gunfire—but not too close, in order to avoid the subsequent five- to six-hundred-foot geysers of water sent up by the mine’s explosion.

An aerial mine search was as tedious and difficult as a search for a periscope feather. Even when a minefield’s general location was known, the search demanded excellent and trained eyesight, good surface and water conditions, and, most of all, patience. The surface of the sea could neither be rough nor muddy; the elevation of the sun had to be right. Mine lookouts found that a slightly overcast sky furnished the best type of suffused light for spotting submerged mines.

In regard to mine hunting, the commanding officer of VP-42, Commander G. F. Smale, recorded:

“. . . The quality of patience on the part of the plane commander and crew is as important in the search for mines as it is for submarines . . . Lookouts succeed only after many hours of negative results. . . .”

The patrol aircraft of FleetAirWing Six succeeded in destroying 54 mines during the months of September and October—31 of these in the Chinnampo area.
Another of the important collateral tasks performed by the patrol squadrons in the Korean area during the early part of the war was the many logistic and liaison flights flown. Since there were no adequate landplane fields at either of the Fleet bases at Yokosuka and Sasebo, the seaplane patrol squadrons performed a very vital function by linking the naval command in Tokyo and the two major Fleet operating bases.

An outstanding example of this role was the occasion after the Inchon landing when an aircraft of VP-42 carried a cargo of 75 cases of whole blood, weighing 7,000 pounds, from the Naval Air Facility at Yokosuka to the fighting forces at Inchon on 7 October 1950.
Flare Missions

Early in 1951, still another unique mission, code-named “Firefly,” was given to the patrol squadrons: flare-dropping missions. This coordinated action of flare and attack aircraft was a distinctly new application of air power in support of ground operations.

As has been recorded in Chapter 8, “The Struggle to Strangle,” a principal reason for the failure of air power to isolate the battlefield was the limited ability of airplanes to locate and destroy enemy trains and trucks at night. Uncontested air-sea control made it very difficult for the Chinese and North Koreans to move their supplies and munitions by day. By night, and during bad weather, however, the enemy moved his supplies and replenished his needs with little hindrance.

In an effort to hamper and harass the enemy’s nocturnal movements, Admiral A. W. Radford, while on an inspection trip to Korea, suggested the use of P4Y2 aircraft as flare planes. Major General Field Harris, Commanding General of the First Marine Air Wing (then operating a night-flying squadron of F4U4N Corsairs and a night-flying squadron of F7F3N Tigercats) formally requested the assignment of appropriate naval aircraft to assist his heckler aircraft by carrying a large number of flares and accompanying them over the roads and rail lines north of the battlefield. Marine All Weather Fighter Squadron 513 had already developed flare tactics using transport-type (R4D) aircraft. However, these planes lacked both self-sealing tanks and armor protection, and the antiaircraft hazard was great.

No specially trained pilots or suitably equipped planes were available for carrying and dropping highly-dangerous magnesium flares. The only possible aircraft that could be modified for the task was a World War II aircraft, the P4Y2 Privateer. (The Air Force used C-47s and C-46s for the flare task.) Two such squadrons were available: VP-772 (CDR D. D. Nittinger) and VP-28 (CDR C. S. Minter, Jr.). It was decided to modify one P4Y2 to carry and drop flares, and to evaluate its performance in Korea.

Accordingly, one P4Y2 aircraft and crew from VP-772 (first reserve patrol squadron in action in Korea) was assigned to the Marine Wing. This aircraft was modified for flare missions by squadron personnel who removed the bomb-bay gasoline tanks and certain electronic equipment so that the aircraft could carry 150 to 250 flares, depending on their size and weight. The squadron also rigged flak curtains around them. On 12 June, this aircraft reported to Pusan, Korea.

The initial evaluation flights proved “excellent,” according to Major General Field Harris. The controlling observer, riding in the nose of the P4Y, had good visibility and could make the flare drops more accurately than from a transport. Commencing on 29 June, flare missions were alternated between VP-772 and VP-28, with four aircraft assigned.

“When the P4Ys were first used for the flare dropping operation,” said CDR Minter, “the Marine Air Wing was based at K-1, a field near Pusan. Our operations were normally conducted along the road complex leading south from Wonsan, although the area was frequently changed because of weather or other factors. The flare planes and the Marine intruders[1D] did not depart in company from K-1 since the VP plane cruised at a slower speed than the fighters (though not much slower when the bomb and rocket load was as big as the Marines liked to carry). Rendezvous was accomplished in the target area either by the night fighter picking up the flare plane on radar and homing in, or by the flare plane dropping a flare and having the fighter home on it. A flare mission normally lasted for approximately six hours, one plane having the sunset to midnight session, and a replacement having the midnight to sunrise stint.
“Each plane was scheduled to work with a total of four fighters, which came on the scene individually, spaced approximately one-half hour apart. If a fighter had to abort for some reason, the flare plane frequently was able to work with other planes for illumination purposes for bombing runs or anything else that might be required. The arrangement was obviously quite flexible and was quite interesting for the VP boys, who were accustomed to long, monotonous hours of overwater flying. This seemed almost like legalized flat hatting.”[2]

The flare-dropping task called for the patrol aircraft to depart after sunset with a two-ton load of flares and to fly over Korea accompanied by several Marine night-intruder aircraft. (Sometimes as many as seven attack aircraft would utilize the P4Y2’s flares for a single flight, although the average was three to four.) Such missions required the most careful and complex teamwork on the part of these planes. First of all, the flare-carrying P4Ys (called “Lamp Lighters”) had to make a rendezvous with the night-attack aircraft. When this had been done, a search for enemy truck lights was commenced by the intruder and the flare plane. Upon finding a suitable target, a string of four to seven flares would be dropped to illuminate the target area. The attacking pilot might also ask for the flares to be dropped on a certain heading, and for repeated runs.[2A]

Once the area had been illuminated, the attack pilot searched the ground and attempted to locate targets while the VP plane kept the area illuminated. The Marine intruder pilot had to make his search quickly before the enemy trucks had time to conceal themselves beneath trees or other cover.

These flare-dropping flights proved to be very popular and effective, and were continued by VP-28 and later by VP-871.[2B]

The historical part of Commander McAfee’s report reads: “The operation was conducted on a large scale . . . the outstanding fact was that it was one of simplicity and ingenuity. The turning of night into day was realized.”
One of the most important duties performed by patrol squadrons during the Korean War was the task of weather reconnaissance flights flown each night on behalf of Task Force 77 operating in the Sea of Japan. Weather flights were flown in the Sea of Japan and the Yellow Sea to estimate and evaluate the next day’s weather for carrier operations.

During the winter months, this service was especially helpful when the bitter Siberian weather with its sudden fogs and lowered visibility conditions might hamper the carrier task force’s operations. In July 1951, a similar weather service was inaugurated by the planes of Fleet Air Wing Six for the west coast escort carriers of Task Force 95.2.
The latter part of the Korean War saw two incidents between patrol aircraft and enemy MIGs. The first occurred on 11 May 1952 when a VP-42 PBM reconnaissance patrol over the Yellow Sea near the Korean coast was attacked by two enemy fighters. One 20-mm. hit in the wing did only minor damage, and the plane returned safely to Iwakuni.

The second attack occurred on 31 July 1952 when a Mariner assigned to VP-731 (CDR W. T. O'Dowd) was attacked by two Chinese MIG aircraft. At the time of this attack the plane was on a reconnaissance mission over the Yellow Sea off the west coast of Korea. Without warning, the two attacking MIGs made a firing run from astern, killing Aviation Machinist’s Mate H. G. Goodroad, the tail gunner. The PBM, piloted by LT E. E. Bartlett, Jr., dived to 250 feet and turned toward Japan. The two MIGs made several more firing runs. During the second run, a 37-mm. shell exploded in the PBM’s turret hatch, killing Airman Claude Playforth and wounding the starboard waist gunner, Aviation Ordnanceman Third Class R. H. Smith. On the third run, Airman Apprentice H. T. Atkins was injured from exploding 23-mm. projectiles. The Mariner, while seriously damaged, was able to land at the island of Paengnyong-do, off western Korea, for temporary repairs.

Chapter 10. The PatRons
The Formosa PatRons

At the outbreak of the Korean War, there was one Fleet Air Wing in the Pacific, with headquarters at NAS Agaña in Guam. The Fleet Air Wing commander, CAPT Etheridge Grant, was also Commander Fleet Air Guam. On 25 June 1950, CAPT Grant's command consisted of one land-based patrol squadron (VP-28, CDR C. F. Skuzinski—nine P4Y2s) based at Agaña, Guam; and a seaplane squadron (VP-46, LCDR M. F. Weisner—nine PBMs) based at Sangley Point, Philippines. One tender, the AVP Suisun (CAPT H. G. Sanchez), was in Tanapag Harbor, Saipan.

Upon the outbreak of the war, Fleet Air Wing One was given the task of preventing any attack upon Formosa. In view of this assignment, Captain Grant was relieved of his duties as ComFairGuam in order to give his full attention to the protection of Formosa.

A daily reconnaissance of the northern sector of the Formosan Straits was begun on 16 July by VP-28, operating from Naha, Okinawa. Patrol Squadron 46 commenced daily reconnaissance patrol of the southern sectors of the Formosan Straits and the China Coast on 17 July, tendered by the USS Suisun.

For the remainder of the war, Fleet Air Wing One operated in the Formosa area the land-based patrol squadron at Naha, Okinawa, while the seaplane squadron based in the Pescadores during the summer months shifted its operations to the Philippines during the typhoon season. These two squadrons maintained a continuous 24-hour patrol of the Formosan Straits and the China coast, supported by ready-duty destroyers from the Seventh Fleet maintained in constant readiness in Formosan waters. A round-the-clock coverage of the China coast was maintained with two flights of landplanes of seven to eight hours’ duration during the daylight hours and one seaplane patrol during the period of darkness. The area covered was in international waters from south of Swatow to north of Shanghai. The destroyers were occasionally supplemented by cruisers from the Seventh Fleet or the blockade forces operating in Korea.
Chapter 10. The PatRons
Operating in the Formosa Area

On 26 July 1950, only a few days after the Formosa reconnaissance patrols had been established, a VP-28 aircraft (CDR C. F. Skuzinski) was attacked in the northern part of the Formosan Straits by F-51 type enemy planes with North Korean markings. The attack did no damage, but it was the first of several such attacks which were to occur.

On 7 December 1950, there was an alert in the Straits. In the early morning darkness, a patrolling VP-46 aircraft, piloted by LTJG R. C. McGuffin, showed an unusual number of targets on its radar scope. McGuffin turned directly toward the blips and passed overhead at 1,000 feet. None of his crew was able to see lights below, but the radar picture showed hundreds of targets in a systematic formation headed eastward toward Formosa. Perhaps this was the first wave of a Chinese assault on Formosa. Perhaps it was only another fishing fleet.

McGuffin turned his Mariner aircraft around and reduced his altitude to 100 feet to make a low-altitude approach across the unknown formation. As McGuffin closed the target, he illuminated it by searchlight. Hundreds of junks in close formation were revealed. They showed no lights and were all headed eastward. The best estimate McGuffin’s crew could make was 500 junks.

If this were an invasion attempt, this group would not be alone, certainly. Expanding his search, McGuffin turned northwestward. Approximately 70 miles from the first group, an additional group of approximately 250 junks was contacted. Like the first group, this formation of junks was also on an easterly course.

Could this be an invasion attempt? McGuffin radioed his base and alerted the patrolling destroyers. He then returned to cover and trail the first group.

By this time the ships had reversed course and were sailing westward toward China.

It was never known whether this sighting was a feint, a possible full-fledged attack on Formosa, or merely an incidental meeting of two large formations of fishing vessels.

If either a feint or a full-fledged attack, the Chinese Communists discovered that there was little hope of catching the U.S. Navy off guard.
During mid-1952, several contacts between the aircraft patrolling the Formosan Straits and Communist Chinese MIGs occurred. There were other incidents of surface vessels firing at the patrol airplanes. On 9 September, one of VP-28’s planes was fired upon by a Chinese Communist LCI-type vessel. A week later, a similar attack occurred. The next day, a third attack was made; but in all three cases, no damage was received.

On and 20th of September, and first enemy action near Formosa by MIG aircraft occurred. On that day, in the sea near Shanghai, a VP-28 P4Y piloted by LT Harvey R. Britt was attacked by two MIGs. Although five firing passes were made, there was no damage to the P4Y.

On the 22nd of November 1952, a second incident with a MIG occurred. In the sea off Shanghai, a VP-28 P4Y was attacked by one MIG. The Chinese MIG made eight firing runs during a fifteen-minute period, while the P4Y was at an altitude of 200 feet over the ocean on an easterly course. The weather was good, although there were cumulus clouds at 2,500 feet. The MIG was first identified by the tail gunner, who spotted it coming in astern at a range of five miles. The MIG came under the tail of the P4Y, opened his dive brakes, and flew formation alongside the port wing for approximately ten seconds. Obviously, the Chinese pilot was trying to identify this large blue airplane. As for and MIG, the P4Y pilot and his crew were positive of its identity. A large and a small red star were visible on the side of the fuselage, with Chinese characters alongside.

Satisfied that this was an enemy plane, the MIG peeled off to port, commenced a climb to about 1,000 feet and then began his attack. As he did so, the pilot of the big P4Y turned his plane into the MIG and brought his five turrets into action. For the remaining seven runs, the MIG alternated from side to side, starting his runs about three miles away and pressing them home. His gunnery was atrocious, spoiled by the skillful airmanship of the P4Y pilot and his crew. There was no damage to either plane.
Chapter 10. The PatRons

Significance

Of the three elements of naval aviation in Korea—carrier, marine aviation, and patrol—the patrol squadrons had the most routine operations. This does not mean that their operations were without contribution or significance to the war effort. Patrol squadrons increased the effectiveness of the blockade by their reconnaissance flights, the search for and the destruction of mines, and the surveillance of enemy fishing activity. Patrol squadrons furnished up-to-date weather information for the carrier forces which was always helpful and frequently vital. The patrol squadrons performed the unique and unusual mission of providing flare illumination for the Marine night-intruder pilots. They obtained reconnaissance of the coastal areas of Korea, and kept surveillance over merchant shipping in the immediate area of Korea. The seaplane squadrons provided certain logistic and transport functions which could not be supplied by landplane types. The mere presence of highly trained, antisubmarine squadrons in the Korean area discouraged the use of submarines by the enemy. Lastly the patrol squadrons minimized the danger of any invasion of Formosa by the Communists.

In Korea, the land-based patrol airplane proved more efficient than the seaplane. The landplane squadron had greater endurance, greater self-protection and greater operational versatility. For the first time in the history of naval aviation, it saw greater use than did the seaplane. For every nine seaplane sorties, the patrol landplane flew twelve. During World War II, the ratio was reversed.

However, the landplane squadrons required more shore support and provoked sovereignty and basing problems. While seaplane squadrons were more mobile and could operate more flexibly, their operations were not as economical. Seaplane operations in Korea and Formosa highlighted the need for the development of new types of tenders.

To both the seaplane and the landplane, the war in Korea ushered in the electronics era.

Chapter 11. The Amphibious Threat (1951-1953)
“Korea Is a Peninsula”

The value of amphibious operations was well understood by the United Nations’ high command in Korea: MacArthur, Ridgway, Van Fleet, and Clark. This fact is illustrated by the initial remark made by Lieutenant General Van Fleet to Rear Admiral George C. Dyer, soon after the latter had reported for duty in Korea as Commander Task Force 95.

Van Fleet and Dyer had first become acquainted during the Greek Civil War in 1947 when Van Fleet was in charge of the U.S. Military Mission to that country. At the time Dyer was Commander Cruiser Division Ten.

“At our meeting in Greece in 1947,” said Dyer, “I stressed the fact that Greece was a peninsula. Its geography made the application of naval power particularly appropriate. Her coastlines were vulnerable both to amphibious assault and naval bombardment.”

Admiral Dyer further pointed out to General Van Fleet that Greece had a small but first-rate Navy, and it was his belief that these naval units could be very helpful against the Communists. Van Fleet never forgot the discussion.

Four years passed before Van Fleet and Dyer met again in Seoul, Korea, in June 1951. There, as Dyer was being ushered into Van Fleet’s office, the three-star general rose from his chair, threw his arms skyward, and exclaimed, “Korea is a peninsula!”

Generals Ridgway and Clark also knew the value of amphibious attack and took advantage of every opportunity to keep the UN amphibious threat alive to the enemy. They ordered amphibious training exercises conducted both in Japan and Korea. Marines of the First Division performed landing exercises in Hwachon Reservoir in plain view of Communist observation posts.
The complete control of the air by UN air forces over the battleline forced the Communists to burrow ever deeper into the ground. As a result, their frontline defenses became increasingly immobile and vulnerable to amphibious attack. By the fall of 1951, in fact, fighting on the Korean peninsula had degenerated into trench warfare reminiscent of the Civil War siege of Richmond, or Flanders in World War I. Conventional weapons—artillery, close air support—were at best only partially effective.

By the summer of 1952, the Communists had taken advantage of the stalemate to build as strong a defense line as military history had ever seen. General Maxwell D. Taylor, who had helped to crack Germany’s Siegfried line during World War II, considered the Chinese defenses along the 150-mile Korean front even more formidable than the Siegfried Line.

Essentially, the Communist defense was a honeycomb of underground tunnels stretching from one coast of Korea to the other. A single tunnel might extend for miles. Many of the tunnels and fortifications were so deep and strongly built that they were impervious to bombs and artillery fire. Not only had the Communists reverted to trench warfare, they had been forced to glorify it—largely because of the threat of UN firepower from air, land, and sea.

As soon as the Reds retreated to a new hill, the hole-boring began. First, they dug on the protected side near the top; then they gophered their way around to the side facing the UN lines. Gradually, transections were dug linking all the tunnels together in a spiderweb of passages, bunkers, observation posts, and gun positions. To U.S. Marines who had fought at Tarawa, Iwo Jima, and Okinawa during World War II, the defensive trench system in Korea was more elaborate, although not as formidable.

At the same time the enemy was rat-holing at the front, he was also strengthening his coastal defenses. The Communists had been caught napping at Inchon and they were already too much committed on the stalemated battleline to be caught flatfooted a second time. With Pohang, Inchon, Wonsan, Iwon, and Hungnam as constant reminders, the Communists knew and feared the United States amphibious capability.

General Mark Clark aptly described the Communists’ fear of amphibious assault: “... The enemy had an overwhelming preoccupation with the defense of his coastline. He had tasted the whip of our amphibious techniques at Inchon and was afraid of it. He did everything he could, particularly on the beaches around Wonsan on the east coast, to prepare for a possible new assault from the sea by our amphibious infantry units. And he knew that every one of our American divisions had been, or could easily be, trained to wage amphibious warfare.

“Heart of thousands of North Koreans built and manned the beach defenses along every stretch of coastline that conceivably could be used for an amphibious invasion. Behind them were Chinese Communist forces in reserve positions from which they could move quickly to bolster the defenses at any beach under attack.

“The defense system along the beaches, like the defense system at the front, was very deep and depended in large measure on underground installations for its effectiveness. But in addition to the underground works there were lines of open trenches spreading back from the beaches so that any troops attacking from the sea would be forced to attack one line of trenches after another, once they attained their foothold on dry land. Barbed wire was strung along the water’s edge. Minefields were plentiful. Large areas of rice paddy land were flooded to make them giant tank traps which would mire our equipment in mud. Preparations were made to flood other areas during an invasion so that flood waters themselves could be used as a defensive weapon.”
For the final two years of the war, United Nations commanders continuously considered the feasibility of amphibious attack against both the east and west coasts of Korea. For example, it was once proposed by Vice Admiral Clark to make an amphibious assault north of Wonsan, just above the Hodo Pando peninsula. The idea was not to permanently hold Hodo, but to seize the land long enough to locate and spike the vexatious guns of that area. Other full-scale assaults were proposed and considered at various times.

“On the west coast, the Haeju peninsula looked the most promising,” said Vice Admiral Robert P. Briscoe, who was then COMNAVFE. “Tentative plans were made for a corps landing in that area in the event the truce negotiations fell apart.

“We gathered all the advance intelligence that was needed, estimated the size of forces required, and defined the major problems that would most likely be encountered.

“It developed that the major problem of an amphibious assault at Haeju was not the assault itself, but how we would get our heavy equipment across the rice paddies to high ground, once we were ashore. The Haeju problem was further complicated by the lack of reserve troops in the area. To make a landing in Corps strength, we would have needed two Army divisions and one Marine division from the United States.”

On the east coast, the most promising site for an amphibious operation was the Kojo peninsula just south of Wonsan; from there, UN forces could move down the valley to the southwest and cut off communications between the North Korean and Chinese armies.

“Neither of these amphibious assaults was ever conducted,” said Briscoe, “because we simply did not have the troops available in the Far East. We had sufficient shipping, we had the necessary gunfire and air support for a landing, but we simply did not have the troops. After the stalemate developed, we never had more than two reserve divisions in the Far East area at any given time. One of these was kept in Japan, and the other was held in reserve in Korea.”

Had General Van Fleet been permitted to do so, he would have broken the stalemate with an amphibious landing.
A plan to land at Kojo was first proposed in mid-1951 by Rear Admiral T. B. Hill while Chief of Staff to Commander in Chief, Pacific Fleet. Hill envisioned an amphibious end-around landing on Korea’s eastern coast, in the vicinity of Kojo. Once ashore, the troops would drive southwestward to link up with the Eighth Army and thereby cut off the North Korean Army from its source of Chinese supply.

“This plan was known as ‘Wrangler,’” said Vice Admiral Clark, “and it appeared to have excellent chance of success.

“It had the approval of the Commander in Chief Far East, General Ridgway, and also General Van Fleet, Eighth Army. But very soon after I arrived in October 1951, General Omar Bradley, Chairman of the Joint Chiefs of Staff, visited the Eighth Army headquarters in Korea and disapproved the plan, stating: ‘We want no more of the enemy’s real estate.’

“For more than a year I heard no more about Kojo,” Clark continued, “until October 1952, when I was Commander Seventh Fleet. At that time Admiral Radford arrived, in company with Vice Admiral Briscoe, to inspect the Seventh Fleet. Radford remained overnight in the flagship, and visited Task Force 77 the next day. Briscoe had proposed feinting an amphibious demonstration in the Kojo area in an attempt to draw enemy troops from their underground frontline positions. It was never intended to land any of our troops, but it was hoped that the enemy would react to the demonstration by sending his troops to the defense of Kojo, and that the Navy and Air Force could then destroy the enemy as they moved. General Mark Clark approved the idea, and designated me as Commander Joint Amphibious Task Force Seven, placing under my command various amphibious forces, including units from the Sixteenth Corps, the First Cavalry Division, and 118th Regimental Combat Team. Major General Anthony Trudeau was in command of the troops, and Rear Admiral Francis X. McInerney commanded the amphibious group.”

The Kojo operation, known as “Operation Decoy,” had the following concept in the operation plan of Commander Joint Amphibious Task Force Seven:

“This force, supported by coordinated joint action, will seize by amphibious assault, occupy and defend a beachhead in the Kojo area with the Eighth Cavalry Regimental Combat Team in order to:

b. Draw enemy reinforcements to defense of the objective area

c. Fully exploit the enemy’s physical and psychological reaction.”[2]

A noteworthy feature of the Kojo plan was that it made no mention that the operation was to be only a demonstration landing.

“For deception purposes,” said Admiral Clark, “knowledge of the demonstration aspect was confined to only the highest echelons of command.”

The subordinate commands, including the carrier and the minesweeper commanders, were unaware that the operation would be a feint.

October 15th was tentatively chosen for D-day. In accordance with Clark’s orders, Joint Amphibious Task Force Seven prepared and distributed plans on 25 September both for a Corps landing and for a Regimental landing. On 4 October, General Clark authorized execution of the Regimental landing plan.

The existence of two plans caused little inconvenience at the Army Corps and Division and the naval task force levels; but on the lower levels, where movements actually had to be made, ships’ capacities determined,
boat assignment tables[2A] developed, and command relationships and liaison established, there was considerable
difficulty in separating the two operations.[3]

Commander Seventh Fleet agreed that the requirement for the development of two plans did cause some
confusion, but the most complicating factor was the short planning time. Admiral Clark considered it remarkable,
in view of this disadvantage, that the plan was resolved so satisfactorily.[4]

Ship movements for the Kojo operation began on 1 October. Troop-loading operations commenced 6
October at Muroran, Otaru, and Hokkaido, where the Eighth Regimental Combat Team was located. Troop
transports —Task Group 76.4 (ComTransDiv-14) in the Bayfield (APA-33)—began departing Hokkaido for the
rehearsal area at Kangung, Korea, on 9 October.

Rehearsal operations were conducted on D-minus-three day, 12 October, under most adverse weather
conditions. Winds in excess of 25 knots caused a two-hour delay in the H-hour rehearsal time. Four LCVPs
broached during landing operations and were lost. Another was lost as it was being lowered into the water.
Because of the dangerous surf conditions, the ship-to-shore movement was discontinued after the fifth wave. High
winds and heavy seas prohibited the planned minesweeping for that day.

“At sunrise on the morning of the 14th,” said Admiral Clark, “my flagship, the USS Iowa, joined the
other ships in a bombardment of Kojo in a realistic softening-up process preparatory to the mock landing—but the
Communists still did not know it was to be a mock landing. Every effort was made to give them the impression
that another invasion such as the one at Inchon was impending.”

The Iowa, the cruisers, and the destroyers continued shelling the beaches all night, until H-hour the next
morning. The only ships to receive heavy counterbattery fire were the minesweepers, which were operating within
visual range of enemy gunners.

“The transports held reveille at three A.M. the morning of D-day,” said Commander Paul J. Hidding,[5]
executive officer of the U.S. transport Mountrail (APA-213, CAPT William H. Farmer). “As dawn broke, the
clouds were so heavy and visibility so poor that the enemy could not possibly have seen us. Therefore, he could
not have been fooled into thinking we were really going to land.

“As a consequence, the announcement of H-hour was postponed until about 1130, at which time we were
told that H-hour would be at 1400.

“Our transport, which was 23,000 yards offshore, immediately started lowering boats and loading troops.
The troops were re-embarked aboard ship, however, before the boats departed for the beach. At this time the
weather was fairly calm. But in the 45 minutes it took them to reach the turnaway line, 5,000 yards from the
beach, the wind whipped up to 35 or 40 knots. The enemy also lobbed a few shells at the incoming boat waves
without causing damage. By the time the boats got back to the ship, the wind had intensified to 55 knots. Ours
was the only transport to send all its boats ashore. With the winds at gale force, we had quite a time picking up 26
boats, particularly the LCMs. One of the transports—Okanogan (APA-220)—had four boats completely
destroyed during recovery. Thanks to excellent seamanship, all of the other boats were recovered without serious
casualty by 1630. The transport group then departed for Pohang-dong to disembark the Eighth Regimental
Combat Team.”

“Naval air and gun bombardment continued throughout D-day in spite of high winds and heavy seas,”
wrote Captain P. W. Watson, commanding officer of Bon Homme Richard.[6] “Both props and jets smashed at
the beaches and their approaches in anticipation of a landing. In addition to pummeling strong points, the flyers
destroyed 12 buildings, blew up an ammunition dump, and caused a large secondary explosion in a fortified area.
Meanwhile, the landing craft headed for the beach, but on reaching a point 5,000 yards out, they reversed course
and returned to the ships. Shortly thereafter, the operation was officially termed an exercise. One Skyraider
received a direct hit in the wing from medium flak but was able to ditch safely. The pilot, LTJG Walter Alt, was
picked up in good condition by the helicopter of the USS Iowa.
“Having no indication whatsoever that the projected ‘landing’ was not genuine, the *Bon Homme Richard* and Air Group Seven spared no effort to make the Kojo operation a success. Consequently, when the real nature of the operation was disclosed, many of those concerned felt let down.”

Air and naval bombardment continued throughout D-plus-one day, 16 October. At 1900 Joint Amphibious Force Seven was dissolved and all naval units returned to their routine assignments.
Chapter 11. The Amphibious Threat (1951-1953)

Significance

Except for the manning and activation of formerly unoccupied gun positions at Kojo, after D-minus-three
day, there was actually little evidence of enemy reaction to the Kojo feint.

A U.S. intelligence agent who landed at Kojo on the night of 13 October reported enemy beach defenses
had been evacuated, and that only a small number of troops were seen in the objective area. The intensified shore-
battery fire later encountered by our minesweepers and the fire support ships indicated that these guns were
manned, possibly by troops already in the immediate areas.

On D-minus-three day, pilots from Task Force 77 reported sighting approximately 1,000 enemy troops
passing through the objective area. The cause of this troop movement was never determined.

In his action report,[7] Commander Task Force 77 reported that only ten enemy troops were killed by air
attack in the period from 12 to 18 October. If the Kojo demonstration had brought any large number of enemy
troops into the open, it was only at night.

Intelligence reports disclosed, however, that in the three months following the Kojo feint, the enemy
relocated both North Korean and Chinese Communist reserve divisions from interior positions to coastal areas
around Wonsan and Kojo. Although there is no indication that such a plan was afoot before the demonstration, it
cannot be concluded that this change resulted from the demonstration. “The actual effect of the Kojo amphibious
demonstration is difficult to determine,” said Vice Admiral Briscoe, “except that the immobility of the
Communist forces was strongly indicated.”

As far as damage inflicted on the enemy during the aerial and surface bombardment, Commander
Seventh Fleet drew the following conclusions:[8]

“Aircraft Operations. It is impossible to draw a direct comparison of damage between the two periods,
due to the diversified nature of the targets; however, it will be noted that the destruction achieved by aircraft in the
1–5 October period was, in general, slightly greater than that achieved in the 12–16 October period, with slightly
less tonnage of bombs and considerably fewer sorties. This is attributed to the fact that the former period was
devoted primarily to prebriefed and coordinated heavy strikes, while by contrast the amphibious operation
required a much greater percentage of non-attack missions. . . . It is concluded that less damage was done by
aircraft, with a greater expenditure of effort, during the Kojo demonstration than during a normal operating
period.

“Ship Bombardment. It appears that considerably more damage was done by naval gunfire during the
period of the Kojo demonstration than during the earlier period. This opinion is reinforced by the fact that a
greater percentage of unobserved and unevaluated fire occurred during the operation than during normal periods
of deliberate gunfire. Considering these factors, it is estimated that approximately three times as much damage
was done by naval gunfire during the Kojo demonstration as during a normal 5-day period; however, the
expenditure of ammunition was about five times the normal.

“Another factor to be considered in arriving at a cost analysis of this operation is the interruptions of
upkeep schedules of ships which were mobilized for the operation. This is particularly applicable in the case of
destroyers, which are in short supply, as always. The operation required 128 destroyer days which would
otherwise have gone into much-needed upkeep.

“The foregoing is not intended to belittle the value of the demonstration as a training maneuver. Such
training is invaluable, and cannot be measured in the light of cost. However, it is considered that the concept of
drawing the enemy into the open in order to inflict severe losses on him was not realized and, in retrospect, had very little possibility of succeeding under the existing conditions of stalemate and limited United Nations resources.”

Perhaps the most serious deficiency encountered in the Kojo demonstration was the lack of a means for early and positive identification of aircraft. Numerous instances occurred when unidentified aircraft appeared over Wonsan and in the objective area during the actual operation. Although no enemy air attacks were made on either ships or aircraft, lack of early warning and positive identification was a source of much worry.

In his action report, Admiral Clark stated, “Air defense was the greatest weakness of advance force operation, due to the difficulty of locating and identifying bogies. The ships’ radars experienced considerable interference due to proximity to land so that blind alley of approach existed. . . . A contributing factor also was the presence of numerous Air Force aircraft and their reluctance to respond to calls for identification.”[9]

Subordinate commanders, particularly the carriers and minesweepers, commented adversely on not knowing the true nature of the Kojo operation. Until the night before D-Day, only the highest echelons knew that the landing was to be a fake. Some of the lower echelon commands considered the risks taken and the casualties sustained were not justified.

“On the other hand, if Kojo was to fool anybody, we had to make it look real,” said Admiral Briscoe. “Then, too, there was the possibility the landing would actually be made, and it was not decided until after the troops were loaded that it would be a feint.”

In summary, the Kojo operation was designed to bring the enemy out into the open, to expose him to attack, and to throw him off balance in the belief that a major amphibious assault was in progress. It did not achieve all that was hoped for. However, the operation did prove that the United Nations forces would have been able to land at Kojo against very little opposition and with few casualties. Communist prisoners of war stated later that the Communists had planned to wait until our troops had landed at Kojo before making any countermoves.

Regarding the probable result of any major amphibious assault in enemy territory, the principal Navy and Army commanders were emphatic.

“An amphibious assault behind enemy lines would have broken the back of the Chinese Communist forces at any time,” said Vice Admiral Briscoe, “due to the concentration of Communist forces near the battleline. An attack against their rear would have cut their line of supply and brought them out into the open where our superior firepower would have been decisive.

“But an amphibious assault would have required more troops—and we did not have the troops.”

General Van Fleet believed an amphibious assault might have been decisive, but that the war could have been won without one.

“The Navy could have shot us ashore,” said Van Fleet, “and kept us ashore as we built up. We could have built up faster than the Chinese could have met our attack.

“In fact, the Chinese could not have met us at all. He was not flexible enough. He had no method of movement or control. He had no concept of fast moves, he had no communication systems, he had no mobility, he had no logistics support system to maintain his momentum, as we have.

“This was the Chinese Communist Army’s greatest weakness. He could not sustain an offensive—nor could he long hold out against a sustained offensive. The enemy didn’t have the means of logistic support, he didn’t have the ‘know how,’ he didn’t have the schooling. It takes a long time to learn about supporting a moving army.

“If UN forces had opened up an offensive all along the front and continued to push” said General Van Fleet, “we would have put such a strain on his logistic supply line, forcing him to work in the daytime as well as night, that he would have been given an insoluble logistic problem. In short, if United Nations forces had utilized their inherent advantages of mobility, flexibility, and firepower, we could not have been stopped. We could have
won the war at any time. Instead of doing that, we fought the war on the enemy’s terms and according to his rules. The war was never stalemated. It was a sit-down on our part.

“Winning the war was not our job. Our job was to sit on the battleline and let air drop in and punish him in the hope it would subdue him enough to sign on the dotted line. It was a sit-down by order of the United Nations. It was a self-imposed loss, because we could and should have won it.”
Chapter 12. The Siege of Wonsan

Conception of Siege[1]

The American naval siege in Wonsan harbor, which grew to be the longest in modern American naval history, was begun on 16 February 1951.\[1A\]

On the day the operation began, there was no plan to lay an indefinite or constant siege to Wonsan. The “siege of Wonsan” was progressive, originally conceived by Rear Admiral Allan E. Smith, during the period of the Hungnam evacuation as part of a plan for capturing certain islands on both coasts, including at least one in Wonsan harbor.

At the time Smith proposed his plan, UN forces were in retreat from the initial onslaught of the Chinese Communist armies. During the confusing days of December 1950, UN forces faced not only the prospect of being forced off the Korean peninsula, but also the possibility that World War III was beginning.

Smith’s immediate evaluation was that his blockade and bombardment forces had to get back on the offensive; that if they had something tangible to accomplish, they could contribute to the stabilization of the land fighting.

“My evaluation,” Admiral Smith recorded,\[1B\] “showed that it would be good naval warfare to hold certain strategically-placed islands. The first one I chose was Cho-do, in the entrance of Chinnampo. The next one was Paengnyong-do, just south of Changsangot Peninsula. The third one was Tokchok-to, at the entrance to Inchon. The fourth one was off Kunsan (not needed as the frontline held to north of it). And the fifth was the island group in Wonsan harbor.

Smith’s plan was to put on these islands 150 or 200 South Korean Marines. This he did, equipping them only with rifles, though later they were issued a few burp guns and hand grenades. Thus when the Eighth Army came north again, these positions would have been retained, and we would not have to recapture all those hundreds of islands on the west coast.

Smith proposed this plan to COMNAVFE and it was approved.

It is thus clear that the “siege of Wonsan” was originally only a plan to seize one or more of the dozen-odd islands in the harbor until the UN forces again fought their way northward to capture North Korea, including Wonsan itself. The prospect that the war would stalemate in a few months across the narrow waist of Korea south of that port was not then a matter for consideration.
To appreciate the extraordinary nature and the importance of the 861-day naval siege of Wonsan, a description of that city and the geography and hydrography of its harbor are needed for the reader’s understanding and interest.

The city of Wonsan, strategically located on Korea’s east coast in the relatively tideless Sea of Japan, was the principal seaport of North Korea. The harbor was large—three hundred square miles—and naturally protected from storms. In a part of the world often plagued with typhoons, the Japanese had named the port the “Harbor of Refuge” because it was rarely in a storm’s track.

Unlike other ports to the north, Wonsan was ice-free in winter. Its anchorage had a mud bottom over good holding ground in six to eight fathoms of water.

These were the features which, in 1880, caused the Japanese (who had just been granted use of the harbor) to begin its maritime development. In that year Wonsan was only a small, sleepy, and isolated village.

In 1950, the city of Wonsan had grown to be a thriving and modern seaport by Oriental standards. It was a strategic rail center, a naval base, a road transportation hub, and an industrial complex. The city’s estimated population was 100,000.

Wonsan was the terminus of the cross-peninsular rail and road line to the North Korean capital of Pyongyang. It was also a pivotal location for the north-south rail line, and for highways in both directions.

The principal industry centered around its huge petroleum refinery—a plant covering 4,000,000 square feet, with an annual capacity of almost 2,000,000 barrels. Before the Korean War commenced, it was believed that the Wonsan refinery was supplied by ships from the Russian wells on Sakhalin, the long and rugged island adjoining Siberia.[1C]

In addition to the refining industry in Wonsan, several other industries were located in or near the city. The Korean Railroad Company maintained a modern plant in Wonsan for the construction, repair, and maintenance of locomotives and rolling stock. A lead smelting company, a steel pipe company, a coke plant, a flour mill, a shipyard, a fishing cannery, and a “sake” brewery were also numbered among the Wonsan industries. Wonsan was also the center of great fishing activity.

Wonsan’s seaport had excellent facilities. A 900-foot concrete wharf in the inner harbor was equipped with warehouses and railroad sidings. A large 40-ton travelling crane was reported in use on this wharf. At either end of the wharf were several quays and piers for small vessels. The oil refinery had its own pier several hundred feet in length.

These features and industries, therefore, as well as the importance of the harbor, were the factors underlying the establishment of the naval siege.

The physical features of Wonsan made it a location of great beauty. The islands dotting the harbor, the mountains which rose up within and behind the city and to the north on the peninsula called Hodo Pando, and the picturesque curve of the bay, had made Wonsan a summer resort center.

This was the city which would see the longest siege in modern naval warfare.
Chapter 12. The Siege of Wonsan
Difficulties and Advantages of Siege

To besiege Wonsan’s inner harbor actively and at close range involved risks and dangers. First, the harbor was landlocked, and enemy gunfire from all sides could be expected. Second, much of the old minefield was still present, and it was safe to assume that the Communists had refreshed the swept areas since December 1950, and would try to re-mine the harbor at every opportunity. This could be, and was, done surreptitiously at night from the small, ubiquitous fishing sampans. Third, the siege of Wonsan would be hazardous because of the restricted navigation. In addition to mines, the numerous islands and shoals in the harbor would complicate navigation and gunnery.

On the other hand, there were many advantages in besieging Wonsan, in holding its harbor and capturing its islands. First, the enemy would be forced to divert large numbers of troops to protect himself against a second invasion—troops which might otherwise be in or supporting the battlefront. Second, by holding and clearing the Wonsan minefields, UN forces would be able to invade whenever it suited their purposes. Any movement of UN ground forces north of Wonsan would demand the opening of an additional port for logistic support of the armies. Third, as has been stated, the city of Wonsan was an important Communist transportation center, lying astride the main rail and road arteries between northeast Korea and the frontlines. It was also the terminus of the only east-west railroad in North Korea. Naval gunfire could bring these important transportation routes under fire. Fourth, by holding the harbor, the best port in North Korea would be securely closed; fishing activity therein could be controlled by establishing a checkpoint on one of the nearby harbor islands. Fifth, the harbor could be an effective base from which to obtain enemy intelligence and conduct guerrilla operations. Sixth (although this reason was not initially apparent), Wonsan harbor could be an important search and rescue point for our aviators and aircraft.

And last, to be able to lay siege to the main port in North Korea, to hold its islands, and to bring gunfire to bear on its military targets, would have demoralizing effect upon the Communists, and be of great psychological value to the United Nations.

These were the reasons why it was essential to lay siege to Wonsan.
After a path through the minefield had again been swept by MinRon Three commencing 12 February, the initial siege operations in Wonsan were begun by the destroyers USS *Wallace L. Lind* (DD-703, CDR E. B. Carlson) and USS *Ozbourn* (DD-846, CDR C. O. Akers) on 16 February 1951. Rear Admiral Smith, the blockade commander, was on hand, embarked in the cruiser *Manchester*.

The two destroyers bombarded the harbor’s military installations, but the swept area was so small and navigation so difficult that the two destroyers fired the bombardment at anchor.

Two days later, again at anchor, and at the conclusion of a snowstorm, *Ozbourn* received from Sin-do Island, the first Wonsan counterbattery fire, which wounded two men. Dragging her bottomed anchor, *Ozbourn* got underway toward the outer harbor. Her Mark 56 director was damaged, her after deckhouse holed, her starboard searchlight demolished. She was the first U.S. siege ship to be struck in Wonsan.

It was obvious that if a siege was to be effective, Wonsan’s harbor islands had to be captured or neutralized.
Chapter 12. The Siege of Wonsan
The Harbor Islands (1951)

Of the numerous islands in the Bay of Wonsan, UN forces eventually occupied and used seven: Yo-do, Mo-do, Sa-do, Sin-do, Tae-do, Ung-do, and Hwangto-do.

The first island captured was Sin-do. Enemy troops as well as enemy guns had been reported on Sin-do. To prepare the island for capture, therefore, two destroyers and two frigates, under the command of Commander Destroyer Division 112 (CAPT B. F. Roeder), commenced a two-hour bombardment at 0700 on the morning of 24 February, with spotting furnished by Manchester’s helicopter. Three hundred fifty-eight 5-inch and two hundred and fifty-nine 3-inch shells blasted the island at 0900. Following this bombardment, a detachment of 210 Korean marines went ashore. The landing was unopposed and the island was reported secure at 1018. Sin-do, lying only 4,000 yards from Kalma Gak, would provide a fine observation post for spotting naval gunfire and for observing the train and truck traffic in Wonsan city.

The next island occupied was Yo-do, the largest island. There was no opposition or interference, and the occupation by 210 Korean marines was without incident.

Yo-do was approximately 2,500 yards long and 1,500 yards wide, with an elevation of 377 feet. One cove and beach, suitable for landing, were located on the western side of the island. Nearby was the tiny fishing village of Yodo-ri, with a population of some 70 men, women, and children. The town consisted of several huts and one school. The size, location, and topography of Yo-do made it an ideal base for implementing the siege.

In mid-March, the Communists made an attempt to make a sampan landing on Tae-do, but were driven off by gunfire from the destroyers.

Three days after this attempt, 24 March 1951, the U.S. destroyer English (DD-696) (CDR R. J. Toner) landed a shore fire control party on Tae-do. Except for a leper colony of one hundred fifty people, Tae-do was not occupied. The island was also the site of a former Japanese fort, and lay even closer to Wonsan. On the following day, the cruiser Saint Paul and four destroyers, including the English, fired on targets in Wonsan with good results, their gunfire being corrected by the spotters on Tae-do.

Operating from Yo-do, the Korean marines gradually expanded control over several other islands in the bay: Mo-do, So-do and Hwangto-do. The latter island was the best spotting and observation post of all.

The first naval officer assigned to the Wonsan harbor islands was LT James S. Lampe, Jr., an intelligence officer from the staff of Commander Task Force 95. Lampe, the son of Presbyterian missionary parents, spoke fluent Korean, having been born in Korea and having lived there for eighteen years.

“I landed on the island of Yo-do on 13 June 1951, with orders to report to CTG 95.2,” said Lampe. “At this time, we held and were using five of the harbor islands: Yo-do, Hwangto-do, Sa-do, Mo-do, and Sin-do. By far, the most important were Yo-do, our base island, and Hwangto-do, our naval gunfire spotting island.

“I lived on Yo-do. It was the best island for a base and was far enough out in the harbor to be reasonably safe from enemy guns, and in a good position where our ships could support us in case of a counterinvasion.

“Before I arrived, the Korean marines, in March or April 1951, had installed a large 4-foot searchlight on the top of the hill on the north side of Yo-do, just above the village. Power for the light was furnished by a gas engine, and it was manned by a crew of Korean marines. In case of invasion, this light was to be used to illuminate the beach in front of the village; otherwise we used the searchlight at night to give our planes a checkpoint. (Incidentally, this searchlight drew a great deal of fire from the Wonsan batteries—almost every day
after a night’s use. However, no direct hits were ever received up till the time I left (August 1952), although there were near misses several times.[1E]

“For several months, I lived in a tent near the small village of Yodo-ri. On 14 July 1951, the island of Yo-do became the headquarters for units of the 41st Royal Independent Commandos, commanded by LTCOL D. P. Drysdale, MBE, Royal Marines. The next day, the U.S. Marine who was to command the Wonsan islands, LTCOL Richard G. Warga, established his new command on Yo-do (CTE 95.23).

“There were several tents in our 95.23 camp—four for living quarters, one for a messhall, and one for an outhouse. They were placed on a little slope near the village and in the trees. During my fourteen months on Yo-do, I tried unsuccessfully to get a toilet seat from one of the destroyers for our outhouse; we did our best to sand and whittle the seat to make it more comfortable, but it never was.

“Our group of tents made a nice target. Many times when the Hodo Pando batteries fired at the ships near Yo-do, a few rounds would strike near our tents. Although there were many close hits and fragments, luckily, no casualties were suffered from this fire.”
Chapter 12. The Siege of Wonsan
Shore Fire Control Parties on Hwangto-do

Perhaps the most useful of the Wonsan harbor islands for the siege ships was the island of Hwangto-do, one of three islands used for the spotting of ships’ gunfire. The barren and rocky island, without a single tree, had an elevation of 160 feet, and was only 3,000 yards from the shore, and therefore closest to enemy guns and mortars. Hwangto-do was also closest to the city of Wonsan, to the much-battered Wonsan airfield, and to the important road running southward to the front through the Anbyon Valley. This road was the enemy’s main supply route in the eastern sector. From the observation post atop Hwangto-do, spotters could look directly upon Wonsan, the Anbyon Valley road, and several important bridges along this railroad and highway.

Until June 1951, Hwangto-do could only be approached in sampans because of the mine danger. Sampans were not endangered because the mines were anchored six to ten feet beneath the sea surface and below their keels. Because of the island’s proximity to enemy gunfire, all movement to and from this island was at night. A Korean Marine Corps LCVP was used to carry food and other supplies to the other “friendly” islands but had not been used to supply Hwangto-do.

“In July,” said LT Lampe, “we were told by a prisoner that the minefields protecting the eastern beach of Kalma Gak were in two rows, and that a boat could go safely from the middle of Tae-do to the western tip of Hwangto-do without crossing a mine line. Since the garrison platoon on Hwangto-do had been asking for food, ammunition and additional men, the situation warranted trying to take the LCVP to the island. That particular day, a strong westerly wind made it impractical to try to send the usual sampans. It would have been necessary to scull all the way from Yo-do, a trip that would have taken all night.

“Therefore I loaded the LCVP with all the things Hwangto-do needed, and I headed for the island following the route recommended by the POW. The trip was without mishap and turned out to be the first of many. Thereafter, I took all the supplies into Hwangto-do by LCVP, always at night.

“In early July 1951, Captain W. L. Anderson, USN, was CTG 95.2, embarked in USS Blue (DD-744). While discussing the effectiveness of the ships’ gunfire with the captains of the Blue (CDR R. S. Burdick) and the USS Frank E. Evans (DD-754, CDR G. L. Christie), it was brought out that the fire might be more effective with a Shore Fire Control Party stationed close in to the targets. I assured them that the island of Hwangto-do could be used for this purpose and would be an ideal location.

“We made out a list of the things the party should take with them. Included was all the food they would use, the kind of clothing and bedding, the kinds and numbers of weapons, and the amount of ammunition and the radio gear most suitable. A volunteer party was picked, and a night chosen to go in. Volunteers were requested because the party could expect to be under close, accurate enemy artillery and mortar fire, and, of course, there was the ever-present threat of an enemy landing. Raiding sampans coming out from the south couldn’t be detected by radar from the siege ships, and the ships would be unable to take them under fire when they were close to the island. Even so, everyone wanted to volunteer.

“On the night of 5-6 July 1951, I took them in to Hwangto-do in one of the destroyer’s whaleboats and got them ‘squared away’. The whaleboat carried a radar reflecting screen, and the ships kept a close watch on our progress. We landed on the only beach on the island. This beach was on the west side of the island and was very exposed to enemy fire. The rest of the island coast was rough rock and couldn’t be approached because of underwater rocks. Nearby was a cluster of ten fishing huts.

“The shore fire control party holed up in one of the fishing huts. The Korean Marine Corps garrison
platoon was most happy to have them on the island.

“The results achieved by the *Evans* and the *Blue*, using this shore fire control party, were extremely good. As I recall, they fired at a torpedo station and supply buildings in Wonsan. The team stayed on the island for three or four days and I brought them out. From time to time, other ships’ teams took their place. The ships’ interdiction and bombardment fire was materially improved.”

This employment became more frequent with many other siege ships landing their own SFCPs on Hwangto-do. A small party of U.S. Marines was posted to Hwangto-do on 19 July 1951, and remained there for the rest of the siege, the personnel being rotated every four months.[1F]

Chapter 12. The Siege of Wonsan
Siege Procedure

As has been stated, one of the main purposes of laying siege to Wonsan, in addition to being able to bombard the enemy’s main road and rail lines leading to the front, was to clear the enemy minefields still remaining in Wonsan, and to prevent the enemy from planting others. This was no easy task. Minesweeping had to be continuous. In a single day the Communists could re-mine the swept areas, using a few of the always-plentiful sampans. Even a small sampan could carry as many as four mines.

“During my period in Korea as CTF 95,” said Rear Admiral George C. Dyer, “most new mines were laid during periods of rainfall, snowfall, or winds strong enough to raise the waves in Wonsan to the ‘high chop level’. During such periods, with the radars in our ships it was impracticable to detect sampans laying mines. None were laid during actual typhoons because the winds and sea currents caused the enemy to know that the mines would probably be wasted, and they had none to waste.”

To clear the minefields, four or five minesweepers were assigned to the Wonsan task group, two of them operating every day sweeping the harbor and its approaches. Since these small vessels lacked the means of fully defending themselves from Wonsan’s shore batteries, it was the duty of two (sometimes three) assigned destroyer types patrolling Wonsan to suppress enemy fire upon them.

By the end of April the sweepers had sunk or exploded 29 mines in the harbor of Wonsan. March 30th was the big day when Thompson, Pelican, Chatterer and Merganser had swept and destroyed 15 mines.

At this early stage of the siege, a typical day’s routine can be described as follows:

The minesweepers, supported by destroyers, would make a daily sweep in an assigned area. If the sweeps were fired upon, the destroyers would retaliate. During a day’s patrol, the destroyers would also have certain bombardment missions. And whenever lucrative targets were spotted in Wonsan (either by ship spotters, naval gunfire parties on the islands, or aircraft) they would be taken under fire by the destroyers.

At night, alone or in conjunction with night-heckling and reconnaissance aircraft from the carriers or the Fifth Air Force in Korea, the destroyers would fire at assigned or observed targets, in most cases with the spotting assistance of the shore fire control parties stationed on the “friendly” islands.

From time to time, the siege would be augmented by the rocket attacks of the LSMR division, by the air strikes from Task Force 77, and by heavy gun strikes. During mid-March 1951, the first of many cruiser and battleship bombardments to strike Wonsan during the siege was conducted. Manchester (CL-83, CAPT Lewis S. Parks) accompanied by Lind (DD-703, CDR Edward B. Carlson) made a surprise raid on enemy troop barracks in Wonsan on 17 March. Intelligence reports later stated that more than 6,000 casualties had been inflicted. On 19 March, the first battleship to participate in the siege, the USS Missouri, blasted enemy gun positions with her 16-inch fire.

Chapter 12. The Siege of Wonsan
Wonsan Bombardments by Night

In early April 1951, an interesting experiment was initiated between the bombarding ships of Task Force 95 and the aircraft of the Twelfth Reconnaissance Squadron, Fifth Air Force. Already, as the result of both air and gun strikes on their supply lines, the Communists had suspended efforts to move supplies by day. All resupply through the Wonsan transportation complex was done at night. Reconnaissance aircraft of the Air Force had the mission of photographing the road and rail lines of North Korea every flyable night so that a check could be kept on the number and amount of supplies getting through to the enemy frontlines. Other night-flying aircraft of the First Marine Air Wing (F7F Tigercats and F4U Corsairs) and Fifth Air Force (largely B-26s) were out upon every occasion to damage and destroy as much of this night supply work as possible. In this effort, the attacking Navy, Marine, and U.S. Air Force aircraft were ably assisted by flare-dropping P4Y2 Privateers from Fleet Air Wing Six.

At Wonsan, the night-heckler and night-attack aircraft found the siege ships willing teammates. Star shells fired by the destroyers enabled the attack aircraft to locate targets more easily and make attacks upon them. The aircraft, in return, spotted the bombardment fire of the destroyers and increased its effectiveness.

The work of DesRon One ships Floyd B. Parks (DD-884), Agerholm (DD-826), and John R. Craig (DD-885) on the night of 5 May 1951 was typical of this work.

"This was the Parks’ first of two 30-day periods in Wonsan," recorded CDR H. G. Claudius, USN.

"Two of my officers, LT Harold A. Bres, USN, and LTJG Urban G. Whitaker, Jr., USNR, worked out an excellent procedure for working with our own Task Force 77 planes during the day and with Air Force planes at night. Many Air Force planes checked in with us at night looking for targets. We gave targets to these planes, and in addition to vectoring them in, we assisted them to locate the target area with star shells. On their arrival in the area we would illuminate the target for them to make their runs and drop their ordnance. We continued illumination to assist them in evaluating their attack.

"After unloading their bombs, the planes usually had thirty to forty minutes they could remain in the area, and they were generally glad to use this time to spot for us. During this night bombardment work, the planes kept clear of our fire but remained in a position where they could spot our fall of shot, using illumination provided by star shells fired from another mount. The spotting ability of these pilots varied but was generally considered good, and in the case of some Air Force pilots who had had some Navy spotting indoctrination was excellent. Nearly all the pilots we worked with were most enthusiastic, with the result that the Reds in Wonsan got little rest or freedom of movement day or night."

With the Agerholm illuminating, the B-26 spotting plane directed the fire of Parks and Craig on a Wonsan bridge. The two destroyers fired ten rounds and made two direct hits. After demolishing a new supply building, the attention of the spotting plane was called to a truck convoy moving through Wonsan. While the destroyers furnished illumination, the B-26 attacked and destroyed several of the trucks.

Later the same night by the light of the destroyer’s star shells, a second B-26 damaged a chemical factory and demolished four storage tanks.
On the 95th day of the Wonsan siege, 22 May 1951, an enemy shore battery succeeded in bringing death aboard one of the blockading ships.

“When we arrived for our first two-week tour in Wonsan,” wrote CDR A. F. Beyer, Commanding Officer, USS *Brinkley Bass*,[3] “everything appeared to be quiet. Enemy shore batteries were relatively inactive, and our ships would anchor during daylight as well as at night, providing a sitting-duck situation for the enemy but a simplified fire control problem for us. Shortly after arrival we were fired upon and lost our anchor in the hurry to maneuver clear. We quickly learned to provide a moving target during good visibility, but we continued to anchor at night. We also learned other important survival techniques, such as keeping men clear topside, wearing as much protective clothing as possible (we would have welcomed some of those flak suits used later on during the war), wearing Kapok life jackets, etc.

“On 20 May 1951 we were left alone in Wonsan. The other ships were on other assignments or were receiving logistic support. At one time during the day we were at our battle stations and close enough to the enemy beaches at Umi-do so that we could spray the area with 40-mm. fire. . . . Not many hours later we were on the receiving end of their shells. Rapid maneuvering and heavy counterbattery fire kept us from receiving any direct hits; however, we were finally sprayed with shrapnel as a result of a 120-mm. near miss to starboard. This resulted in ten personnel casualties (we were at General Quarters and manning our 40-mm. guns) and superficial structural damage. Three of the casualties were serious, and one man, Fireman Apprentice John D. Bryan, died later. After that day we decided not to man our machine guns but to keep the personnel involved below decks. Later the same afternoon, the *Manchester* and several destroyers returned. We transferred our wounded to the *Manchester* and continued firing on assigned targets.

“Every day thereafter we could expect some enemy action, especially late in the afternoon, because the setting sun favored the shore batteries due west of the swept areas. Knowing this, the situation was never dull and all hands kept themselves ready to come to General Quarters on a moment’s notice. It was almost a relief when we returned fire in an effort to destroy the enemy’s gun emplacements. At least we lost some of the tense feeling.

“Moreover, there was enough humor aboard to keep us on an even keel. For example, we continued to show movies in the messhall and in the wardroom. One picture was a World War II battle action story. At the exact moment when General Quarters was sounded in the movie, our own G.Q. announced the fact that we were again under fire. For a brief second there was some confusion, but not for long.”

Two days before the *Bass* suffered her casualty, the battleship *New Jersey*, while bombarding Wonsan targets, took a hit atop Number One turret. This shell did little damage, but a subsequent near miss killed one man and wounded three.

On 24 May, cruiser *Manchester* and destroyer *Brinkley Bass* detected targets south of Hodo Pando islands and opened fire. A Communist sampan formation was broken up and four sampans captured, each of them reinforced for carrying four mines.
Chapter 12. The Siege of Wonsan

Results of First 100 Days of Siege

At the completion of the first 100 days of the Wonsan siege, 27 May 1951, Admiral Smith reported that it had cost the enemy the following:

- 107 trucks destroyed, 238 damaged
- 8,195 troop casualties
- 149 buildings destroyed, 466 damaged
- 34 bridges destroyed, 83 damaged
- 63 railroad cars destroyed
- 3 tunnels damaged
- 11 locomotives damaged
- 54 small boats destroyed, 238 damaged

Despite flurries of enemy gunfire and a few hits, the cost of wreaking this damage upon the Chinese and North Korean enemy had been small.

As on the railroads in North Korea, the Communists in Wonsan had been forced to organize a repair effort for the city’s road and rail lines as a result of the destructive attacks of UN ships and aircraft.

On several occasions during this period, the enemy’s fire had suddenly picked up as the Communists made determined efforts to drive the siege ships out of the harbor. Following a heavy Task Force 77 strike of 270 sorties on 6 July, the Reds retaliated with an especially heavy bombardment on 17 July 1951; more than 500 splashes were counted in the water around *O’Brien* (DD-725, CDR C. W. Nimitz, Jr.), *Blue* (DD-744, CDR R. S. Burdick), and *Cunningham* (DD-752, CDR L. P. Spear). In return, the three destroyers pumped out 2,336 rounds of 5-inch fire, in a four-and-a-half hour exchange. The Communist bombardment was continuous and well coordinated from three areas—Umi-do, Kalma Gak, and Hodo Pando—but inflicted no more serious damage than spraying two LSTs near Yo-do with fragments.

“This exchange was known as ‘The Battle of the Buzz Saw’,” said RADM Dyer. “After this date I made it compulsory that at all times in daylight, and for all bombardments, either night or day, ships should be underway.”
As the siege of Wonsan was laid, there were few enemy batteries around the bay of Wonsan. As the siege lengthened, however, the number of guns defending the harbor rose steadily.

Likewise, the enemy shore defense system in Wonsan, which in the beginning was limited, was steadily strengthened. As UN minesweeps swept “Broadway” and “Lower Broadway” ever closer to the shore, the enemy’s entrenchments were expanded to include the beaches nearest the swept areas. Shore entrenchments were also positioned at other places where the Communists thought the UN forces might land—the beaches near Wonsan city and on the south coast of the bay and, later, in the western portions of the bay.

The Communists’ shore batteries were placed so as to cover both the ship operating areas and to sweep the potential landing sites: heavy machine guns and mortars were positioned near the probable landing beaches, and 76-mm. batteries in the nearby hills. The harbor’s heavy guns (122-mm. and 155-mm.) were located farther back from the shoreline and positioned to take the ship operating area under fire.

In the early months of the siege, the enemy’s batteries were located as follows:

All harbor guns were of the field artillery type, as distinguished from naval or regular fixed shore defense guns. With few exceptions, these guns were hidden in caves or tunnels, cleverly camouflaged, and were rolled out for firing and rolled back inside for protection, for the Communists soon learned that an exposed gun was certain to be destroyed.

In the early months of the war a great many empty gun emplacements, caves, and tunnels were in evidence. Two reasons are likely. First, in case one position became too hot, a gun could be moved to a new position. Second, empty gun positions often attracted fire from planes and ships. By the end of the second year of the siege, however, there were few empty gun positions, as more guns were brought into the area.

“Most of the low, near-to-the-water gun positions in the Wonsan area had a single entrance,” said LT James S. Lampe, the intelligence officer assigned to Yo-do. “This entrance was for the gun itself, and it was always as small as possible. Only a few of the gun caves—usually the big ones—had a personnel entrance. These came in from the back side of the hills, permitting the crews to man their guns without being exposed to our fire.

“Most of the heavy gun positions had large rooms for ammunition storage as well as crew’s quarters. The Communists did not seem concerned about having their ammunition and gun crews in the same hole.

“In addition to the field artillery pieces, there were two other types of guns used against our siege ships: tanks and rail-mounted guns.

“Tanks were positioned at several points around the bay, but were most prominent at certain positions on ‘Sugar Loaf’, a small hill on Kalma Gak, plus other tanks on Kalma Gak proper. Two of these tank positions were set-up so that the tank could fire through ‘gunports’ located at the very base of the hill. The tank itself was never exposed, but was moved forward until the gun barrel protruded from the port. Another tank often came around the north end of ‘Sugar Loaf’ to fire, but beat a hasty retreat whenever it was taken under fire.

“In the latter part of 1951, four rail-mounted guns appeared in the bay. “Three of these were north of the city, not far from the beach. These, too, were retractable into caves.

“As far as I could determine from the refugees who fled to the islands from Wonsan, all of the harbor defense guns were North Korean manned. It is doubtful that the Chinese manned any of the guns. North Korean Army units manned most of the harbor guns except the Hodo Pando batteries, which were manned by a North Korean Navy unit.
“In regard to their control procedures, they zeroed-in certain positions where they were most apt to catch a ship with little maneuvering room. In many of the firing positions, the Communists hacked a circular groove in the hard-packed ground, into which the wheels of the gun carriage fitted snugly. Around this circular track various points were marked to zero-in selected points with rapidity. The Red gun crews learned to work as teams, and even developed a definite plan of coordination between the widely-spaced batteries. Spotting stations equipped with plotting boards were established and splash information was passed by telephone to a fire control station. The fire control station would calculate corrections and phone them to the batteries. The Reds had no automatic machines or computers, but nonetheless they became fast and accurate. They also reported ships sunk from time to time. One destroyer was reported sunk three times, and when it appeared the fourth time in the bay, they claimed we had changed the numbers on a new ship.

“The presence of our siege ships and minesweepers inside the harbor was definitely a severe irritant and worry for the Communists. During the first year of the siege of Wonsan, there were four occasions when the Reds believed a landing was imminent. These scares usually followed a maximum air strike by Task Force 77 or a heavy bombardment by a battleship, or a combination of the two. They were kept continually on their toes and never dared to leave the harbor lightly defended.”

The increase of enemy gunfire resulted in six ships being hit in July: Everett (PF-8); LSMR-409; LSMR-525; O’Brien (DD-725); LSMR-412; and Helena (CA-75). In August, the siege ships were untouched. In September, two were hit: William Seiverling (DE-441); and Heron (AMS-18).

“The limited area available to the ships in Wonsan made it extremely difficult for our ships to maintain their positions when subjected to fire from the shore batteries,” wrote RADM George D. Dyer, the blockade commander. “In order to provide them with more advantageous positions, the sweeping of additional areas between the islands and the providing of so-called escape routes from the inner harbor were undertaken in mid-June 1951. This extremely hazardous operation was pressed in the ‘Lower Broadway’ area with vigor. Upon completion of the initial sweeping in late August 1951, sweeping was started on 2 September in the new ‘Muffler’ area. This latter area permitted a much closer approach to the city.”

If the enemy hoped to lift the siege with increased gunfire, however, and provide himself an opportunity for re-mining the swept areas and recapturing the harbor islands, he failed.
Chapter 12. The Siege of Wonsan
Doubts Raised Regarding Continuance of Siege

While none of the ships of the UN Navy had yet been lost or even seriously hit, there began to be some doubt as to whether the siege was worthwhile. In the first 180 days of the siege, approximately 50,000 naval shells had been pumped into the city’s targets. The doubts were expressed largely because there was no accurate way of determining precisely what the bombardment was doing to the enemy’s over-all capability and to his morale.

Outwardly, a little speculation was in order. It was evident, after six months of the siege, that neither the bombs from aircraft nor the gunfire from ships, even in combination, had succeeded in halting the steady flow of material through Wonsan at night. The daytime flow had been effectively dammed, however, and a great deal of damage had been done in six months:
- Guns: 262 destroyed, 230 damaged
- Trucks—Vehicles: 178 destroyed, 348 damaged
- Juks—Sampans: 89 destroyed, 299 damaged
- Bridges: 36 destroyed, 100 damaged
- Tunnels: 15 damaged
- Railroad cars: 66 destroyed, 80 damaged

But at night, as the observers on the friendly islands could plainly see, the enemy trains and trucks rolled steadily southward despite the gunfire and harassment. In view of this heavy nocturnal traffic, was the known and estimated damage sufficient to justify the risks being taken? The risk to the destroyers and minesweepers in the harbor was already great and was still growing. It was easy to imagine the tragedy which might occur if a lucky hit in a steering mechanism should veer a speeding ship into the minefield or aground on one of the numerous islands.

Risk to the siege ships was accepted. Damage to the enemy, however, was only one criterion of the value of the siege. The very fact that enemy resistance was on the increase was evidence that the siege was hurting. Also, it was known that large numbers of enemy troops were bivouacked near Wonsan to defend the area from an amphibious assault. One intelligence report said that 79,200 troops were stationed in the vicinity of Wonsan to counter an invasion. Several American aviators—Air Force, Navy, and Marine—had already been rescued from the harbor where they might have been captured or lost. And by what yardstick could the psychological value of this thorn-in-the-side siege be measured?

“The question of the desirability of continuing the Wonsan siege was raised at least twice during my tenure as CTF 95,” said Admiral Dyer. “The best brains in the Army and Navy—Forrest Sherman, MacArthur, Ridgway—were all convinced of the necessity of the siege.”

The siege was therefore continued and accelerated.

A heavy gunstrike by surface forces (New Jersey and Toledo) pounded Wonsan targets on 2 July 1951. On 18 September 1951, the first coordinated air-gun strike by Task Force 95 was conducted in Wonsan commanded by Rear Admiral George C. Dyer aboard USS Toledo (CAPT Hunter Wood). Other ships included HMS Glory, USS Parks, USS John R. Craig, USS Orleck, and USS Samuel N. Moore. The same ships repeated the bombardment next day, joined by the three rocket ships, LSRM-409, 412, and 525.

The air-gun bombardment was repeated on 10 October. For this strike, a British task force, under the command of Rear Admiral A. K. Scott-Moncrieff, participated, led by the Australian light aircraft carrier Sydney [3A] (CAPT D. H. Harries, RAN) and supported by cruiser HMS Belfast and destroyers HMS Concord, USS
Colahan, HMCS Cayuga, HMS Comus, and USS Shields. A large enemy troop center had been located in Wonsan, and heavy damage was done to this concentration.

A third heavy bombardment, led by Wisconsin, struck military targets in the besieged city on 20 December.
Chapter 12. The Siege of Wonsan
The Helicopter Ship (LST-799) in Wonsan

The value of holding the harbor of Wonsan for rescue purposes is revealed by the fact that LST-799 (the first ship of the U.S. Navy to serve as a helicopter carrier in wartime) rescued twenty-four aviators between March 1951 and November 1952, most of them while operating in or near the Bay of Wonsan.

“After the Hungnam evacuation,” said LT T. E. Houston, skipper of the LST-799, “we returned to Yokosuka for a conversion which was designed to make us into a helicopter base for minespotting helicopters and a tender and supply ship for minesweeping boats and ships. We had space and facilities topside to handle three helicopters, although we frequently had but two aboard, and more often only one.

“The planned use for our helicopters was originally that of minespotting, not rescue; but as time went on, our ’copters got more and more into the role of rescue.”

After conversion, LST-799 arrived in Wonsan on 20 March 1951 to serve as a harbor headquarters for ComMinRon Three (Captain Richard C. Williams, USN) and a floating helicopter and minesweeping boat base.

“On our arrival in Wonsan,” said Houston, “we anchored on the leeward side of Yo-do. At this state of the siege, we weren’t concerned about shorebattery fire; and our helicopter pilots in March and April of 1951 had quite a lark. They used to fly around the city of Wonsan quite freely and unharmed. The North Koreans and Chinese would wave at them and seemed not to care.

“By mid-summer, however, the honeymoon was over, and the Reds were no longer hospitable to sightseeing helicopters. I was told that this unfriendliness on their part was attributable to the practice of some helicopter pilots’ dropping hand grenades in the general vicinity of the North Koreans while they were enjoying their toilet.”[4]

LST-799 effected its first rescue in Wonsan on 5 April. The rescued pilot was Ensign M. S. Tuthill.

“It was a beautiful spring afternoon,” recalled Houston, “and we had just finished an emergency rescue drill. The alarm sounded, and the boatswain passed the word, ‘Away the rescue party, away!’ Our rescues were usually performed by helicopter, but we also kept an LCVP ready.

“Dashing out on deck, I joined the rest of my crew topside watching a parachuting figure whose plane was just crashing into the ocean.

“The LCVP was away first, and the helicopter soon after. But the ’copter reached the downed pilot first, and as it often happened, the helicopter crewman had to jump into the water and assist the downed pilot into the hoisting sling. While the helicopter returned the pilot, the LCVP picked up the crewman. Except for a chill, both were in good shape. This was Ensign Tuthill’s second dunking and helicopter rescue; he understandably had a high regard for the whirley-birds.

“The majority of our rescues were performed while underway,” continued Houston, “and most of them were over land. If a rescue call came in while the ’copter was flying a mine spot mission, the ’copter would return, refuel, assemble all the information, and take off again. I would head the LST to the nearest safe spot to landward to close the distance as much as possible.

“The rescue missions themselves were carried out independently by the helicopter unit. They did the job as they saw fit.”

One of the most tragic helicopter rescue attempts took place on 3 July 1951 from Wonsan harbor. LST-799 temporarily left the harbor, and the MinRon-3 helicopter unit was based aboard the relief helicopter ship, the LST Q-009.
The helicopter pilot was LTJG John Kelvin Koelsch, who had recently completed a full tour of combat rescue duty flying from the USS Princeton. Upon the return of Princeton to the United States in late May 1951, Koelsch volunteered for an additional combat tour, and was assigned to ComMinRon-3 in early June.

Koelsch had given an outstanding account of himself aboard Princeton, rescuing at least two of his shipmates. He had also developed a type of floating sling that came to be adopted by others, and he had personally engineered and developed several safety devices for the operation of helicopters in cold weather.

“Koelsch was based on LST-799 for just a few weeks,” said LT Houston, “and he impressed me as being a very quiet, reserved person who was always ready for any rescue mission, no matter how dangerous, and he let this be known. If anything happened, he wanted to be a part of it. While on board, he rescued Ensign M. D. Nelson, near Yo-do, on 22 June.”

On the late afternoon of 3 July, about an hour before darkness, a “Mayday” call was received aboard LST Q-009 saying that a Marine pilot had been shot down twelve miles west of Kosong, a small town thirty-five miles south of Wonsan. Despite the late hour, and the worsening weather, LTJG Koelsch and his crewman, George M. Neal, AM3, volunteered to make the pickup.

Covered by a flight of four Corsairs, Koelsch proceeded to the rescue area, but because of a nearly solid overcast of low clouds, was forced to leave his protective escort. Koelsch was last seen descending through a break in the low overcast about 1810.

Koelsch first located a parachute, then proceeded to search the surrounding area in the gathering darkness. This area, the Anbyon Valley, was the enemy’s main supply road leading to the battlefront from Wonsan. Accordingly, this road was infested with AA guns and automatic weapons.

A few moments later, the circling pilots heard Koelsch’s radio message that he had found the downed pilot and was heading for the pickup.

This was the last word of Koelsch, Neal, and the Marine pilot (CAPT James V. Wilkins, USMC) until the end of the war. In December 1954, as a result of an award recommendation by Captain Wilkins, the subsequent events of the rescue and the captivity of Koelsch were laboriously pieced together.

Despite intense ground fire which had struck his helicopter in one place, Koelsch had pressed on to make the pickup. Of this fire, Captain Wilkins later said: “He found me, after two passes into the most intense small-arms fire I’ve ever witnessed.”

As Captain Wilkins secured himself in the hoisting sling, a burst of AA fire struck the helicopter, and it crashed against the mountainside. Of the three, the only one who suffered injuries was Captain Wilkins, who was seriously burned on the legs.

For nine days the three men avoided capture. Captain Wilkins was unable to walk, and Koelsch and Neal made a crude pallet and were attempting to carry him to the coast.

On 12 July, having reached the beach, the three were captured while Koelsch was attempting to obtain food and water from a village. Koelsch’s subsequent conduct and example in prison camp elicited the highest praise from his fellow prisoners.

A few months later, LTJG Koelsch died of starvation and dysentery. For his gallantry and heroism during the rescue attempt and his subsequent captivity, he was posthumously awarded the Congressional Medal of Honor on 3 August 1955.
Chapter 12. The Siege of Wonsan
Air-Surface Teamwork

By mid-summer 1951, the siege ships assigned to Task Group 95.2 in Wonsan harbor for thirty-day periods had learned to whet air-surface teamwork and coordination to a razor sharpness. Task Force 77 periodically assigned aircraft to the bombarding vessels for spotting duty in order to increase the effectiveness of the naval gunfire. The ships themselves sent shore fire control parties to Hwangto-do, Mo-do or Tae-do islands to assist the naval gunfire liaison parties spot the ship’s gunfire.

The alacrity and effectiveness of the teamwork developed between naval ships, shore fire control parties, and planes is illustrated by an event recorded by CDR H. G. Claudius, commanding officer of the USS Floyd B. Parks, during September 1951:

“We had a shore fire control party from the ship on Hwangto-do, who spotted for us during the day and sometimes at night. One afternoon we had two Task Force 77 planes spotting our bombardment on Kalma Gak. At the same time, two of our AMS-type minesweeps in formation were sweeping just off the south beach of the harbor. We received a hurry-up call from our shore fire control party on Hwangto-do that they could see the Reds were working two guns out from caves to open up on the minesweepers, who were probably only about 4,000 yards from the gun positions. We immediately vectored the two TF 77 planes, who still had rockets, to the enemy guns. All in a couple of minutes, and before the enemy guns could get off a shot at the minesweepers or return to the cover of their caves, the planes had been vectored in to where they could see the guns and plaster them with a full load of rockets. Through the alertness and instant action of the shore fire control party, the ship’s CIC and gunnery team, and the TF 77 pilots, our minesweepers were probably saved from casualties and damage and two enemy guns were damaged or destroyed.”[5]
Chapter 12. The Siege of Wonsan

The Second Year

The first anniversary of the Wonsan siege—16 February 1952—found the destroyers Rowan (DD-782), Twining (DD-547), and Gregory (DD-802) pounding the Wonsan targets with the usual harassing and interdiction fire.

The mineswept areas of the harbor had been gradually increased to the west and southwest, enabling the ships to get closer and closer to targets ashore. The swept areas were marked with yellow buoys to delineate the edge of the minefields. Near these buoys, and in the close-ashore portions of the swept areas, the siege ships soon learned to be especially alert and mobile, for the Communist gunners had carefully “zeroed-in” the marker buoys, and used them for spot correction of their gunfire.

While sweeping mines in “Ulcer Gulch” on 5 March 1952, USS Pelican (AMS-32) and USS Curlew (AM-8) were taken under fire by the Kalma Gak batteries. Both ships lit off their smoke generators and escaped being hit. The use of smoke to cover the retirement of the sweepers always proved helpful and became standard practice.

The enemy guns continued active in March. Manchester (CL-83), Kyes (DD-787), McGinty (DE-365) and Douglas H. Fox (DD-779) were on the receiving end of a heavy and accurate outburst on 13 March, but aided by a Task Force 77 strike, succeeded in silencing the enemy guns. On 20 March Wilsie (DD-716) and Brinkley Bass (DD-887) came under fire. Osprey (AMS-28) was the next day’s target; while on the 22nd of March, Brinkley Bass (DD-887) and Stickell (DD-888) were under fire.

On 24 March, the enemy guns achieved a direct hit on Brinkley Bass amidships, just aft of the torpedo tubes, which seriously wounded one man and caused injuries to four others.

On 28 March, the frigate Burlington (PF-51) was straddled.

April 1952 was to see even greater efforts made by the enemy to cripple or sink a ship. On 18 occasions the patrolling minesweepers, destroyers, and ships of the Wonsan element were fired upon. Only three were hit, however—destroyer Leonard F. Mason on the 2nd of May (no casualties) and Cabildo (LSD-16) on the 25th of May (two personnel casualties).

During April and May, the fire of the bombarding ships took a steady toll of guns, junks, trucks, tanks, bridges, and buildings in Wonsan harbor. On the last day of April Maddox (DD-731) and Laffey (DD-724) damaged ten boxcars of a nocturnal train.

This period saw Maddox (CDR H. A. Hanna) and Laffey (CDR H. J. Conger) on the receiving end of one of Wonsan’s longest and heaviest bombardments. The two destroyers were supporting two sweepers, one working in “Tin Pan Alley” with Laffey, the other in “Muffler” with Maddox. Shortly afterwards, the Hodo Pando guns opened the duel. Maddox and Laffey increased speed to 25 knots, opened fire, commenced the “war dance” and turned to make a fast changing target in deflection.

“We were intermittently under fire from Hodo Pando, Kalma Gak and the Umi-do area,” said CDR Conger. “I personally saw about 200 splashes around us, although some thought they counted as many as 300. One hit close enough to throw a handful of shrapnel on our bridge, one chunk knocking out one of the bridge windshields.”

For six hours, the two destroyers made figure eights between Ung-do and “Ulcer Gulch.”

“I feel certain our counterbattery fire did a lot of damage to the Hodo Pando batteries,” said Conger.

“This duel took place on the second day of our thirty-day tour in the harbor, and those particular guns never fired...
on us again.”

Malcolm W. Cagle and Frank A. Manson

Chapter 12. The Siege of Wonsan
The “Mayor” of Wonsan

The siege of Wonsan during this period can be illustrated by the typical experiences of one of those who held the title “Mayor of Wonsan.”[5B] A non-political office, this honorific title was conferred, beginning in May 1952, upon those who held the command of Task Unit 95.2.1. The evidence of the title was a large, gilded wooden key.

The creator of the title “Mayor of Wonsan” is unknown to the authors despite considerable research.[5C] However, the symbolic “Key to the City of Wonsan” was originated in May 1952 by CDR R. J. Ovrom, then Commander Escort Squadron Nine.

Commander Ovrom had the gilded key made at Ship Repair Facilities, Yokosuka, Japan, by a Japanese craftsman; on one side was the inscription, “Welcome to Wonsan”; on the other, “The Bay of Eternal Prosperity.” This key was passed from one CTU 95.2.1 to another until the end of the war, when the key was sent to the U.S. Naval Academy museum for safekeeping.

Captain R. D. Fusselman, as Commander Escort Destroyer Division Thirteen, aboard the USS Jenkins, held the title during the period of 16 September to 6 October 1952.

“Being the ‘Mayor of Wonsan’,” said Captain Fusselman,[6] “gave me the task of running the activities within the harbor itself; to supervise the minesweepers working in the western end of ‘Muffler’ and in the southern end of ‘Tin Pan Alley’; to furnish covering destroyers and destroyer escorts; to work closely with our naval personnel, Marines, and the Koreans on the friendly islands; to coordinate and work with the ships of the outer harbor blockade; and of course, to keep CTF-95 (Admiral Gingrich) informed.

“By the time I assumed the job, the Communists had added shore defense guns all around Wonsan harbor, so that it was necessary for the patrolling ships to maintain a good speed, about fifteen knots, and never to stay on one course too long. By this time, also, the enemy gunfire had gotten so accurate that we no longer anchored at night.

“The enemy guns, for the most part, were practically invisible. Most of them were dug into caves in the hillsides and could be retracted for protection. Others were on the reverse slopes and couldn’t be seen. Still others were mobile, and the Communists changed their locations every so often. The only way you could spot them was by the flashes and smoke of their fire. Sometimes, you couldn’t see the flashes because of the sun, and many of their guns didn’t put out a lot of smoke.

“It was a common chuckle among our ships that the Communists had a gunnery school right in Wonsan city, and that one of our primary jobs was to serve as suitable targets for the training of artillerymen.

“At any rate the enemy’s gunnery improved constantly and kept us on our toes. Personally, I think my ships were lucky not to be hit. The only reason they weren’t was because of our evasive tactics. Whenever the enemy guns opened up on us, our ships cranked on speed, started the ‘war dance’, and made themselves a rapidly moving target.

“The minesweepers had the toughest job, having to work close to the beach and in constant danger of gunfire. The sailors on the destroyers realized this and often contributed their ice cream ration to those fellows.

“Over-all, I believe that the siege of Wonsan was very worthwhile. We did a lot of damage on the MSR [6A] and to military installations in Wonsan. Also, with the harbor kept free of mines, our Navy posed a constant threat of invasion.

“But more important, perhaps, was the excellent training our ships and people received. Wonsan taught...
us not to forget basic gunnery doctrines and techniques; it taught us the value of knowing how to use optical control and of having a good director setup, and not to depend entirely on our electronic equipment.

“The 30-day duty in Wonsan gave all hands a boost in morale, pep, enthusiasm, and efficiency. There was a noticeable buildup in unit pride, and a visible determination not to have a machinery breakdown that would force a ship off the firing line.

“Most of all, the duty at Wonsan gave all hands a feeling of mutual interest and interdependence. To those who served there, Wonsan pointed up the need for balanced forces within our Navy—forces which intimately know each other’s capabilities and limitations.”

Chapter 12. The Siege of Wonsan
The “Bald Eagle” of the Essex

The naval aviator of the Korean War most rescued from the harbor of Wonsan was Commander Paul N. Gray, commanding officer of VF-54, a Skyraider squadron aboard the Essex. To him especially, and to the dozens of other pilots who ditched and parachuted to safety there, the occupation of Wonsan harbor was justified as a collecting point for disabled airmen and aircraft.

“My first misfortune” wrote Gray,[7] “occurred on 7 September 1951, while dive bombing a bridge at a place called Majon-ni. I was hit in the engine and I had a tense flight of about 50 miles as the oil ran out. I watched the pressure drop to zero about five miles short of Wonsan but was able to glide to the harbor, where a South Korean patrol boat picked me up.

“The second misfortune, and probably the closest of all, happened while strafing a train in the railyard at Wonsan. I sustained a direct hit by heavy enemy antiaircraft fire. A later count showed 57 separate holes in my plane. I landed at an emergency strip in South Korea, and after plugging the most essential hydraulic lines, took off again and flew the plane back to the Essex, where it was used as a source of spare parts. The date was 28 October 1951.

“From this time until January 1952, I avoided further emergency landings mainly because the AA fire missed the vital parts of my plane. However, on 22 January, my luck changed and I was hit again by a 37-mm shell directly in the engine. At the time I was leading a bombing hop on the rail line north of Wonsan, about 25 miles from the harbor. The plane immediately caught fire and the engine quit. Apparently three or more cylinders had been blown off by the explosion. Largely because of my loud prayers, the engine caught again and ran intermittently until I got to the water just off the beach at Wonsan. The USS Gregory fished me out of the very cold water more frozen than I ever care to be again.

“Later, on 30 January 1952, while bombing a rail line south of Kowan, I was again presented with another 37-mm. hit in the engine. This one blew off a blade of the propeller, and before I could cut the mixture, the engine almost vibrated itself off the airplane. By alternately opening and closing the mixture control, I again nursed the plane just off the beach at Wonsan, and was picked up by the USS Twining.

“Upon returning to the Essex, RADM John Perry told me that the Navy could take no more chances on my getting ‘smoked’, and restricted me thereafter to flying antisubmarine patrol missions in the vicinity of the task force.”

During these episodes, the pilots of VF-54 posted a sign in the squadron ready room in honor of their bald-headed skipper: “Use caution when ditching damaged airplanes in Wonsan harbor. Don’t hit CDR Gray.”
Chapter 12. The Siege of Wonsan
The Emergency Airstrip on Yo-do

As the air interdiction campaign to cut the Communists’ rail and road supply lines in 1951 and 1952 intensified, there was a rise in the damage and loss of naval aircraft.[7A] Many damaged planes had ditched alongside the siege ships in Wonsan harbor in similar fashion to Commander Gray, although not as frequently. This fact highlighted the need of an emergency airstrip on one of Wonsan’s captured islands.

To illustrate this fact, the helicopter ship, LST-799, had rescued 24 aviators—U.S. Navy, South African, U.S. Marine, and British—the majority of them in the vicinity of Wonsan. The following are summaries of most of these rescues:

“30 September 51 at Hungnam, rescued CAPT J. W. Tuttle, USMC, pilot delivered to LSD5. (Helicopter flown by LT J. M. Farwell and J. E. Kincaid, AD1.)
“3 October 51, rescued 2nd LT A. M. Muller attached Second Squadron Bon Homme Richard, delivered to LSD 5. Intense small arms fire in the pickup area. As helicopter ascended, several riflemen popped up from underbrush and opened fire. (Helicopter flown by Chief Aviation Pilot C. W. Buss and R. O. Sherrill, AD3.)
“3 October 51, rescued 2nd LT A. M. Muller attached Second Squadron South African Air Force, 55 miles west of Wonsan. Heavy small arms fire encountered. Pilot delivered to LSD 5. (Helicopter flown by LT J. M. Farwell and crewman W. H. Williams, AD2.)
“6 October 51, rescued ENS W. C. Bailey, USN, 507924, attached VA-923, Bon Homme Richard, effected from Wonsan. Downed pilot fifteen miles northeast Hungnam. (Helicopter flown by Chief Aviation Pilot C. W. Buss and S. W. Manning, AT3.)
“22 October 51 at Wonsan, rescued CAPT Edward N. Lefarvie, 30579, USMC, from behind enemy lines 40 miles southwest of Wonsan. Antiaircraft and small arms fire encountered throughout the mission. (Helicopter flown by LTJG G. Hamilton and crewman D. J. Cowser, AD3.)
“29 January 52 at Wonsan, rescued LT S. B. Murphy, 428338, USN.[7B]
“3 February 52 at Wonsan, rescued LT Robert J. Geffel of VF-653.
“20 March 52 at Wonsan, rescued ENS E. B. Bernard, 506693, USN, attached to USS Philippine Sea. (Helicopter flown by LT C. R. Severns and crewman T. C. Roche, AD2.)
“30 March 52 at Wonsan, rescued ENS H. E. Sterrett, 538313, USNR. (Helicopter piloted by LT C. R. Severns and crewman T. C. Roche, AD2.)
“12 May 52 at Wonsan, rescued LT J. Newendyke, 471388, USNR. (Helicopter piloted by ADC(AP) W. L. Dunn and crewman C. H. Cooley, ADC.)
“29 May 52 rescued ENS Glen M. Wicker, USN, 507908, attached to USS Philippine Sea. (Helicopter piloted by ADC(AP) W. L. Dunn and crewman E. Stewart, AD2.)
“9 June 52 at Wonsan, rescued ENS F. Lofton, USN, 507764, attached to USS Princeton. (Helicopter piloted by LT B. F. McMullen and crewman T. C. Roche, AD1.)
“10 June 52 at Wonsan, rescued ENS R. N. Hensen, from USS Princeton. (Helicopter flown by LT C. R. Severns and crewman T. C. Roche, AD1.)
“10 June 52 rescued LCDR Cook Cleland, 99640, USNR, attached VF-653 from USS Valley Forge.
13 June 52 rescued LCDR Leonard Robinson, commanding officer VF-64, USS Boxer.
13 June 52 rescued LTJG W. F. Moore, USN, 508222, attached VF-193, USS Princeton.
13 June 52 rescued LTJG C. K. Afford, 460904, USNR, VF-193, USS Princeton.
16 June 52 rescued LTJG W. A. Buttlar, 494638, USN. (Helicopter flown by LT B. E. McMullen, crewman R. A. McDaniel, AD3.)
18 June 52 rescued LTJG A. Zimmerly 507754, USN, VF-63, USS Boxer. (Rescued by LT B. E. McMullen and crewman Decker.)

"The 799’s total pilot recovery score," said LT Paul D. Drummond (who had relieved LT Houston as its skipper in November 1951), "was twenty-four, two of which were by boat and twenty-two by helicopter. Our big rescue day was 13 June 1952.
At about 1300 we received a ‘Mayday’. Lieutenant Birton E. McMullen, the helicopter pilot, took off with his crewman, R. A. MacDaniels, AD3, in the direction of Hodo Pando. Information received via radio indicated that there was a pilot down about ten miles inland and that a CAP was orbiting him.
McMullen proceeded to the scene and located the downed pilot. Because of ground fire and rough terrain, the pickup had to be made by hoist on the run.
The CAP did a good job of strafing during the pickup, with some of the pilots making dry runs because they were out of ammunition. The downed pilot, who turned out to be LTJG C. K. Alford, was in good shape, with only slight burns on one hand and one on the side of his face.
Alford’s plane had caught fire, and he had bailed out. During his descent, he was fired upon, and returned the fire with his own pistol. Upon reaching the ground, he discarded his parachute. Three armed soldiers approached his hiding place. When they were within fifteen feet, Alford opened fire, dropped two, and the third soldier fled.
During the course of the return trip," continued Drummond, "one of the escort airplanes spotted a dye marker. This pilot was LTJG W. F. Moore, who had been hit by AA fire and had ditched just east of Hodo Pando. LT McMullen located Moore and picked him up. This made four people in a ‘copter designed to carry only three.
For this reason we on the ship were concerned lest the helicopter’s heavy load make landing aboard hazardous.
However, McMullen reported that since he was almost out of gas, his load wasn’t excessive.
When the copter got close enough for us to see, it looked like four people were riding in the front seat of a Model T Ford. I doubt if a helicopter ever brought back a more satisfying load.”
Two famous aviators—one Navy and one Marine—were rescued by LST-799 from Wonsan. On the 10th of June 1952, LCDR Cook Cleland was rescued. Cleland was skipper of reserve squadron VF-643 from Valley Forge. He was the aviator who had won the Thompson Trophy race at the National Air Races in Cleveland, Ohio, in 1948.
The famous Marine aviator whose life was saved by a helicopter from LST-799 was Colonel Robert E. Galer, USMC, a Congressional Medal of Honor winner of World War II.
"The ‘May Day’ came in about 1700," said LT Drummond. “The report stated there was a pilot down about sixty miles in a straight line southwest of Wonsan, and about all of this distance inland. This 120-mile round trip was just about maximum for a rescue helicopter. It was also very late in the afternoon, and there was doubt that enough daylight remained to effect a rescue. Flight after sunset was extremely difficult because the horizon was often not visible. Moreover, the flight had to be made over a circuitous route to skirt known gun positions. And to make the rescue even more ticklish, the rescue would be made at a height near the helicopter’s ceiling.
“It was decided to give it a try, however. The helicopter pilot was LT E. J. McCutcheon, who had been
aboard only a few days, and who, except for one or two mine reconnaissance missions, had had little time to acquaint himself with the area. McCutcheon took off and headed for the coast where the CAP of two Corsairs were waiting to lead him in.

“‘Mac’ was fortunate in that the weather was clear, and after sunset he had a beautiful full moon, which permitted him to see the horizon.

“The helicopter arrived at the pickup position while there was still light enough for him to find LTCOL Galer, and he commenced making the pickup. This had to be done ‘on the run’ to retain enough ‘lift’ to keep from crashing the helicopter on the hillside. As it turned out, the ‘copter did slide off and dragged LTCOL Galer through the underbrush before ‘Mac’ lifted him clear of the ground. Control was recovered before anything more serious occurred, and the ‘copter cleared the area for the trip home.

“As soon as we heard he was on the way home, we made a beeline for the point where he was expected to cross the coastline. By this time it was dark, and McCutcheon’s fighter escort was low on fuel. There was a ‘Dumbo’ (amphibian) in the air to relieve his escort in the vicinity of the coastline and to assist in guiding the ‘copter back to the ship. We lighted ship, lining the edges of the main deck with battle lanterns laid on their backs, turned both signal search lights vertically, and fired flares every few seconds.

“The ‘Dumbo’ contacted ‘Mac’ and got him headed in our direction. Just about the time McCutcheon was starting to throw gear overboard to lighten his load, he spotted us. He arrived on deck about 2030 with approximately ten gallons of gas and a great sense of relief. Other than bruises and one or two possible cracked ribs, COL Galer was in good condition.”

There was little doubt that the siege of Wonsan proved worthwhile for the rescue of UN aviators. To the Naval and Marine officers who were living on Yo-do during this period, the value of having an emergency airstrip was easy to recognize.

The naval officer assigned to Yo-do, LT James S. Lampe, Jr., also a naval aviator, has recorded how the idea of an airstrip on Yo-do originated.

“The credit for proposing an airstrip on Yo-do belongs to LTCOL Richard G. Warga, USMC, the Commander East Coast Defense Element (CTE 95.23),” said Lampe. “He and I were billeted together in our tent camp on Yo-do when the idea was broached. We had seen several planes ditch in the general area of Wonsan during the summer of 1951 and we had talked to most of the pilots. Winter was approaching, and ditching planes in that frigid water would make survival even more difficult.

“One morning in August, LTCOL Warga was hunkered over our Coleman burner on the floor of our tent, frying the eggs I had scavenged from a destroyer the previous day. Warga asked me, as an aviator, if it wouldn’t be possible to crash land a plane on one of the Yo-do beaches, rather than ditch it in the harbor. I told him no, it wouldn’t, because no beach of the island was long enough and the curvature of the beaches wasn’t right. We then got to wondering if a plane could crash land in the ‘valley’ portion of Yo-do.

“As far as I know that was how the idea to build an airstrip on Yo-do germinated. After breakfast, COL Warga and I walked from one end of the ‘valley’ to the other several times, estimating its usable length, how much leveling would have to be done, and how much equipment would have to be moved ashore. We estimated that two bulldozers could make a ‘crash’ strip in a couple of weeks, and, with additional time, a short landing strip. The possibility looked good to us.

“COL Warga sent a dispatch to CTF 95 recommending the project—not without misgivings, however. We both knew how close the airstrip would be to enemy artillery fire.”

Of the several friendly islands of Wonsan, Yo-do was the only one suitable for an airstrip. Even so, the strip would be short and would accommodate only propeller-type planes—no jets. By running the emergency field completely across the island in the “valley” from northeast to southwest, a runway length of some 2,400 feet could be obtained.
But many obstacles to building an airstrip on Yo-do were evident. Could it be kept operational in such close proximity to the Wonsan shore batteries? The Kalma Gak batteries were 13,500 yards distant. The batteries on Hodo Pando were 10,000 yards distant. And the batteries behind Umi-do were closest of all—only 8,000 yards. Building a strip under the muzzles of these guns might be difficult. And after it was built, could it be operated? Perhaps the enemy guns could keep the strip so pocked with holes that it would be useless for landing aircraft.

There was also some opposition to building a field on an island above the stagnant battlefront which, if a truce were ever signed, would have to be evacuated. Why build an airfield and later have to donate it to the enemy?

Finally, there was the consideration that the island of Yo-do might be recaptured. In Wonsan itself, the memory of the 28-29 November 1951 raid on Hwangto-do was still fresh. On the west coast of Korea, the Communists succeeded in recapturing one of the ROK-held islands in the Yalu Gulf (the island of Taehwa-do). On the east coast near Songjin an enemy raid had been carried out on the Yang-do islands, a tiny three-island group about five acres in area, on 19 February 1952. Thirty sampans had attacked the little island of Kil-chu at 0130. Destroyer Shelton (DD-790, CDR Stephen W. Carpenter), the New Zealand frigate Taupo (LCDR K. A. Cradock-Hartoff, MBE, RN), and the USS Endicott (DMS-35, LCDR L. W. Barnard) helped break up the attack. Two waves of enemy troops succeeded in getting ashore, but a stout defense by the defending 83rd ROK Marine Corps Company (led by former all-American halfback First Lieutenant Joseph Bartos, USMC) killed or captured the attackers. Of the 86 enemy raiders who had landed, 80 were killed and 6 were wounded. A simultaneous raid on the nearby island of Myongchon by 15 sampans was broken up, the ships sinking 10 sampans and inflicting heavy casualties in the remaining five. A near miss punctured Taupo’s engine room and Shelton suffered 15 casualties from three shore battery hits.

Building an airstrip on Yo-do might invite its capture.

The Seventh Fleet Commander, Vice Admiral Robert P. Briscoe, took all these factors into consideration, but when considered in the light of how many Seventh Fleet aircraft might have been saved and might be saved in the future, the dangers and obstacles were readily accepted. In fact, the salvage of a single plane would be worth the effort. The mental comfort such a field would give to Task Force 77 pilots was yet another factor in favor of the airstrip.

“We made an effort to talk to each pilot who ditched in Wonsan,” said Lampe, “and without exception every one said that such a strip would be a great help and a great comfort when they were striking in the Wonsan area.”

The Seabees of ACB-1 (Naval Beach Group One, Officer in Charge, CDR Wm. C. Bowers, CEC) were confident that if the Marines could hold it and the Navy operate it, they could build it.

With typical enthusiasm and zest, the Seabees (3 officers and 75 men) sailed from Japan aboard LST-692 on 3 June 1952, debarking on Yo-do and commencing work on the airstrip on 9 June.

“The LST arrived at Yo-do with a long pontoon strapped to each side,” said LT Lampe. “Each of these pontoons ran almost her entire length. Because of this, and because our only beach had a very shallow gradient, I anticipated some trouble in getting her close enough to the beach to offload equipment.

“However, the Seabees had it all worked out. Before beaching, the pontoons were dropped in the water, strapped together, and then pushed onto the beach with the bow of the LST. The Seabees were offloading their heavy equipment in jig time.”

Engineers had estimated that 45 days would be required to construct a 120 × 2,400 foot strip. Despite annoying gunfire on two days (13 and 21 June), the Seabees finished the job in one-third the estimated time, reporting the runway operational on 25 June. By removing rock from one end of the field, the Seabees managed to widen the strip to 200 feet, and improved one end of the runway by adding ramps to the water’s edge in order to
facilitate the removal of dud aircraft by barge.

The strip was first used on 15 July 1952 when seven Corsairs of VF-193 *(Princeton)*, ran low on fuel after an afternoon’s fruitless search for their downed comrade, LTJG Harold A. Riedl, who had been shot down 30 miles northwest of Hungnam. Three of the searching Corsairs refueled on Yo-do and returned to *Princeton*. The other four spent the night, and returned safely to their carrier the next day.[8A]

Although the Communists tried many times to neutralize the field with gunfire, they never succeeded. In honor of the officer who had ordered it built, Vice Admiral R. P. Briscoe, now COMNAVF E, the airstrip was named Briscoe Field.

Briscoe Field was to prove of immense value the final year of the war, as it became the rescue point for many pilots and aircraft.
The Sea War in Korea  
Malcolm W. Cagle and Frank A. Manson

Chapter 12. The Siege of Wonsan  
Patrolling “Muffler” and “Tin-Pan Alley”

To the destroyer-minesweeper teams besieging Wonsan’s harbor day after day, the duty was routine but never monotonous. Even in the swept areas of “Muffler” and “Tin-Pan Alley,” there was constant danger not only from enemy gunfire on three sides, but from drifting mines and surreptitiously planted moored mines as well.

“The Chinese needed only a few hours and they could have re-mined Wonsan,” said Rear Admiral Gingrich, CTF 95. “Our intelligence revealed how the Communists would tie mines to logs and float them down the Namdae Chon River into the harbor to try and drive us out.

First they used plain logs and timed their passage from the launching points out into the swept areas of ‘Muffler’ and ‘Tin-Pan Alley’, watching them with binoculars. After they had established the time pattern, they would lash contact mines to other logs, using a pelican hook with a soluble washer. This soluble washer was timed to dissolve and deposit the mine in the swept area.”[9]

The accuracy of the enemy guns steadily improved, and they were able to achieve hits with fewer and fewer rounds. USS Lewis (DE-535, LCDR G. B. Hawkins) was struck twice on 21 October 1952. The first shell struck the forward fireroom and disabled the number one boiler, but fortunately it was a dud. The second shell struck Lewis’ fantail, doing minor damage. Lewis’ casualties were seven dead and one wounded.

“Nowhere was the primitiveness of the Korean War more evident than in Wonsan harbor,” said Commander Sheldon H. Kinney, commanding officer of the USS Taylor (DDE-468). “We only had to worry about mines and shore guns; not aerial, naval, or submarine opposition. Even so, these two were enough to keep us on our toes.

“There were several thumb rules which were pretty generally accepted by the destroyers that worked in Wonsan. One was that if you got close to the corners of the swept areas, especially those close inshore, your chances of being fired upon were increased, because these positions had been zeroed-in. Second, if two or more ships were operating in the same area close together, the probability of receiving enemy fire was greater. The Communists fired often because the swept areas were fairly small and in maneuvering the ships to stay clear of their gunfire, the danger of collision or running into the minefields was greater. Third, the Communists usually fired late in the afternoon when the sun was in position to make us excellent targets and to make it very difficult to locate the offending battery. Somebody even coined a phrase for this, ‘the Wonsan cocktail hour.’

“During the entire period my destroyer was in Wonsan harbor, we followed the usual procedure of being in a modified Condition III. At no time did we ever sound General Quarters. We kept one mount of our 3-inch and two 5-inch mounts manned with control and plotting crews on station. A senior gunnery department officer on watch was free to conduct indirect call fire from CIC or direct fire from the MK 37 director. This arrangement permitted prompt fire when required. Below decks, we set Condition Able continuously.

“Our most interesting and busy day in Wonsan,” continued CDR Kinney, “occurred on 18 September. On this particular day, Taylor was ‘riding shotgun’[9A] on the USS Heron (AMS-18) (LTJG Dixon Lademan), which was conducting a routine minesweeping operation in ‘Tin-Pan Alley.’

“About 1130 that morning, both ships commenced to receive very accurate and heavy enemy fire estimated to be 155-mm. in size. The first salvo bracketed both ships. We checked the surrounding land areas but were unable to see where this fire was coming from. The Heron immediately cut loose her heavy magnetic minesweeping gear and commenced a retirement in a northeasterly direction towards Yo-do island.

“I rang up 22 knots and commenced making a smoke screen with both fog generator and fireroom
smoke, laying it in between the Heron and the firing batteries. This smoke proved very effective in screening Heron, and Taylor then doubled back to enjoy the immunity from observation. The enemy fire ceased.

“A spotter on one of the friendly-held islands reported to us that the probable location of the guns was in the hills to the south of the city, and that their range was too far from us to permit reaching them with our 5-inch fire. Not being able to return the enemy fire irked us.

“Several days later, however, we got even. On the 26th of September the visibility was particularly excellent. At this time the island spotters were able to make a very good count of visible gun positions in the surrounding hills. They counted about thirty guns. We fired at several things during the day—sampans in the harbor; boxcars and flatcars in the marshalling yards, using air spot from Air Force Mustang aircraft; and enemy gun batteries.

“Early in the afternoon, the crew of the main battery director detected smoke from an enemy battery on a hill behind the city. The range was 16,600 yards. We plotted the guns in and determined that these were the same guns that had fired on us but a few days before. We closed in to the very edge of the southwest corner of ‘Muffler’ in order to come within range. Then we opened fire. ‘Fire for effect’ was followed by a direct hit which sent a billowing cloud of white smoke towering into the sky. The gun was silenced, and it was later verified by the island spotters that a large supply of ammunition had been detonated.”[10]
By the fall of 1952, seven islands in Wonsan harbor were in UN hands—Yo-do, Mo-do, Sa-do, Tae-do, Sin-do, Ung-do and Hwangto-do. The rest of the numerous small islands had been rendered untenable by the raids of the Korean Marine Corps. After the leper colony from Tae-do had been evacuated by UN forces to an island off South Korea, that island was used as a gunfire spotting post. Ung-do had been garrisoned to prevent its capture and use by the Communists.

The largest island, Yo-do, continued to serve as harbor headquarters for CTE 95.23, commanded by a colonel or lieutenant colonel, U.S. Marines, with 12 U.S. Marines. Also, the island was headquarters of the Seventh KMC battalion, approximately 700 marines, who had the mission, under CTE 95.23, of protecting all the “friendly” Wonsan harbor islands. Atop Yo-do, 377 feet high, was an observation post which commanded a good general view of the entire harbor.

Three of the friendly islands were utilized as spotting posts for ANGLICO shore fire control parties: Mo-do, Tae-do and Hwangto-do.

The island of Mo-do was closest to the Hodo Pando batteries, approximately 6,000 yards distant. Although many of the 40-odd Hodo Pando guns were on reverse slopes, the flash of their fire could be seen from Mo-do, and bearings taken. Simultaneous bearings on the Hodo Pando guns were also taken from Yo-do, to accurately position the location of these batteries.

With an elevation of 236 feet, Mo-do also commanded a good view of the enemy batteries which had the nickname “Ink Spots” (see chart). These guns were heavy batteries (155-mm.) and could reach all the harbor islands, including Yo-do. The “Ink Spots” were also in a position to defilade the entire swept channel of “Muffler,” and were a constant irritation to the sweepers working in that area.

Mo-do was the usual post of one naval officer and three men of the ANGLICO, whose duties, in addition to spotting naval gunfire, were to maintain a plot of worthwhile targets, of the Hodo Pando batteries and the “Ink Spots,” and to maintain a nightly count of truck traffic moving south. Whenever the siege ships were firing into Mo-do’s area, the naval gunfire spotting team would correct the ships’ fire.

The island of Tae-do was closest to the Kalma Gak batteries, and was the duty post of one naval officer and three men of the ANGLICO.

Still the most important and hazardous island was Hwangto-do. Assigned to this island was a U.S. Marine Officer and three spotters, plus a contingent of Korean Marines to protect the island from nocturnal sampan raids. As at Mo-do and Tae-do, the duty was four months in duration.

Life on Hwangto-do was a cave existence of C-rations, noise, and darkness. The occupants could come outside only at night. A light or a fire at night drew heavy mortar fire. Daylight meant constant danger from mortar and machine gun as well as artillery fire. The shore fire control parties dug bunkers on the north side of the island, where they lived, and a lookout bunker on the top of the island for observation purposes. The island was without water, except for one small well. Additional water, food, ammunition, and supplies had to be brought in at night across a small landing beach which faced Wonsan.

On clear nights, the enemy truck traffic moving south from Wonsan was visible from the Hwangto-do observation post. The number of trucks whose headlights could be counted averaged 300. On occasions, the south-ward-moving truck count rose as high as 700. For every truck in convoy whose headlights could be seen, three or four without headlights could not be seen. Whenever the truck count out of Wonsan was above normal,
increased activity along the battlefront could be expected a few days later.

The senior naval officer ashore on the harbor islands was the intelligence officer of Commander Task Group 95.2, a destroyer or destroyer escort squadron commander, who was afloat.

“I arrived on Yo-do on 16 July 1952 as the relief of LT James S. Lampe, Jr.,” said LCDR A. Christopher, “remaining on Yo-do until March 1953. Lampe met me at the just-finished airstrip in a jeep, and we started up to the camp. We hadn’t gone fifty feet when a 155-mm. shell exploded about 250 yards away. Before we got to the camp near the top of the hill, three or four more lit around the road. That was quite a greeting!

“The campsite was protected by a forty-yard-wide land minefield which surrounded the site. Only the road and one guarded path passed through the minefield. The land mines were a mixture of trip-wire mines and regular mines. We also had a few machine gun posts around the site.

“All of the Americans on Yo-do lived in this tent camp. Later, we dug ourselves more comfortable bunkers. The camp had been well placed on a reverse slope so that the enemy’s artillery fire couldn’t reach us too well. Once in a while, however, we took some tree bursts on the ridge behind us that shook us up. Below our camp was a bluff, which fell some 100 feet almost vertically to the sea.

“Near our tents were slit trenches where we retired whenever the Reds were shooting at us; also available was a communal privy.

“My companions numbered three other intelligence officers: LT Joseph B. McNeill, Jr., USN; an Air Force officer, 1st LT John Intorcia; and my South Korean assistant and interpreter, LT Chiang Jung Taek.

“Our worst night, I suppose, was during Typhoon Karen, which passed just south of Wonsan on 18 August 1952. It blew like hell, and during the night our tents took off. Every few minutes a tree would fall down, or a limb would be torn off and fall into the land mines, causing them to explode. From one explosion, a few fragments of shrapnel went through my tent.

“The rest of the night we were wet, cold, and miserable. But the thing which really set our nerves a-jangle was to have an enemy mine break its moorings, hit the rocky beach below us, and explode.[10B]

“Mostly we ate canned food, although the destroyers and heavy ships were always generous about giving us fresh food whenever we went aboard. Later on, we established a better messing system. All water had to be chlorinated.

“I had several duties on Yo-do. Among other things, I served as intelligence officer for CTG 95.2 and kept a situation plot for the island defense element commander. I also did all the interrogations of the North Korean refugees and prisoners of war.

“Each morning I assembled all the information from the shore fire control parties who were assigned to Mo-do, Tae-do and Hwangto-do—truck counts, target information, active gun positions and the like.

“Whenever I received word that one of our cruisers or battleships was coming in for a bombardment of Wonsan, I would make a trip to the other islands where we had shore fire control parties, getting the best and latest target information.

“When the ‘heavy’ came in, I would meet her in the outer channel, go aboard, and give her the target information. Once aboard, my first job was to get the ‘heavy’s secondary battery all lined up on the Hodo Pando guns, so that they could be taken under fire as the ship entered the inner harbor. I assisted optical control in spotting the exact caves in which the guns were located.

“After orienting the secondary battery, I commenced briefing the main battery plot on their targets.

“I think the Wonsan bombardments which were set up in this fashion did a lot of damage. Our shore fire control parties on Mo-do, Tae-do, and Hwangto-do were sharp and experienced. When they gave a 50-yard spot correction, it was fifty yards.

“One excellent bombardment took place on 23 September 1952, when the Iowa had General Mark Clark, Admiral Briscoe, and Vice Admiral J. J. Clark aboard. We had late target information on some of the Hodo Pando
guns, and when the ‘Big Mo’ opened up on them she got a magnificent secondary explosion from an ammunition storage for that battery. The smoke went several thousand feet in the air. These particular guns were permanently silenced.

“In my opinion, the siege of Wonsan was very worthwhile for a number of reasons. It was valuable as an intelligence outpost. It was valuable as a rescue point for aviators and airplanes. And it was a thorn in the side to the Communists, who could never be sure we wouldn’t make a landing some place in the area.”[11]
Chapter 12. The Siege of Wonsan
Third Year of Siege

The start of the final year of the siege saw destroyers *De Haven* and *Samuel N. Moore* on guard in Wonsan. For the remaining five months there was little change of pattern, although there was a constant increase in Communist effort to drive the American Navy out of the harbor. The Communist gunners seemed determined to sink at least one American ship to compensate for the 861-day long siege. The enemy’s ammunition, which from time to time had been rationed, was used liberally as a truce approached. April, May, and June witnessed the heaviest volume of enemy fire as the Communists fired approximately sixteen hundred, thirteen hundred, and eleven hundred rounds respectively—more than half of them at the siege vessels.

The “friendly” islands, too, received a steady increase in the enemy fire, particularly the island of Yo-do.

“I lived on Yo-do for the last four and one-half months of the war,” said LCDR William L. Thede, assigned to COMNAVFE Special Support Group, TG 96.8. “I lived in a bunker near the airstrip, and from time to time helped to control the fire of the siege ships.

“Commencing in February 1953, we noted increased fire from the Won-san batteries, both on the islands and at the siege ships. One of these batteries was on Hodo Pando, and we believed it to be a battery of Russian Naval 107-mm. guns. We dug up several duds from one of the Yo-do rice paddies from this battery. The shells were new, definitely of that odd size, and Russian. However, I have no reason to think the guns were manned by other than North Koreans.

“But the worst and most frequent fire on Yo-do was 90-mm. fire which came from the Umi-do area (we called this area ‘Little Eva’) and from the hills behind Wonsan city (an area we called the ‘Shooting Gallery’). We also took a lot of fire from Kalma Gak and other areas of the bay.

“On many days, as the end of the war approached, we received as many as two or three hundred bursts in the Yo-do area in a single day.

“The purpose of this fire, in my opinion, was to neutralize Briscoe airfield, although they never did it. Occasionally, the guns seemed to be shooting for the FS-type ship which occasionally anchored off Yodo-ri, bringing our supplies. The Wonsan guns rarely fired at night, although I do remember one occasion when the ‘Little Eva’ battery kept firing until 2130, ‘walking’ shells up and down the strip. That day we had several planes—four or five—land on the strip, and apparently they were trying to hit them. After they completed firing at the strip, we would destroy the duds, and the Seabee Detachment would repair all strip damage during the hours of darkness. The strip was never inoperable as a result of enemy fire.

“With all their fire on Yo-do, the Communists never made a direct hit on any planes while I was there, although several were hit with shrapnel while on the strip. The Air Force C-47s from Seoul which landed on the Yo-do strip bringing our supplies never stayed long. They would taxi up to the seaward end of the strip, unload as quickly as possible, keeping their engines running, and then take off immediately.

“As for our carrier planes, we rarely had more than two or three on the field at any one time. We had three revetments on the seaward end of the strip, and these positions gave pretty good protection to any planes parked there.

“The worst damage that Yo-do took from the Wonsan guns happened in May 1953. At this particular time we were in the process of moving into a new area, and were building an ammunition bunker; temporarily, we had stored a batch of 30- and 50-caliber machine gun ammunition, some land mines, C-3 explosive, and hand grenades in a pit at the far end of the airstrip. Just before lunch a lucky round made a direct hit on this storage,
for 45 minutes, we had quite a noisy, smoky mess on our hands. No one was hurt, however.

“As for the ships, the fire on them increased steadily, and the ability of the Reds to get hits with fewer and fewer rounds improved. Also, the Reds made much greater use of air burst shells in the last months of the siege. In my opinion, the Reds were using a ‘barrage’ or area type of fire, where they would ‘zero-in’ a particular area, or spot, and then fire a barrage at that general spot with a certain number of rounds whenever a ship was close to it. Maneuvering ships, instead of receiving a steady volume of fire, went through areas of gunfire. We drew two lines on our charts toward the ‘Little Eva’ batteries. Outside these lines ships would not be taken under fire; but if they crossed them, they would almost invariably be taken under fire by the ‘Little Eva’ batteries.

“In my opinion, the siege of Wonsan was well worthwhile. At one time, in 1951, as many as 60,000 troops were reported in the Wonsan area to guard against an amphibious landing. By holding the harbor we forced the Chinese to defend it with guns and troops which otherwise could have been used at the front, or elsewhere.”

Five times in each of the months of April, May, and June, the Wonsan batteries succeeded in hitting an American ship. The cruiser Los Angeles was lightly damaged twice in a week—the last time on 2 April.

Most of the other hits were on the patrolling destroyers, causing only superficial damage to the ships, but not always so in personnel casualties. Maddox had three casualties from a direct hit on the main deck on 16 April. Kyes had nine casualties from a fantail hit on 19 April.

“The opening salvo was so far off we weren’t even sure they were firing at us,” said Commander R. A. Thacher, Kyes’ commanding officer, “but they quickly spotted on. They must have estimated our speed correctly at 25 knots, which was the speed most destroyers went to for counter-battery fire. Since we couldn’t go faster with two boilers, we slowed to 15 knots, and most of the following salvoes were over’s. I believe firmly that if we hadn’t slowed, we would have been hit several times around the bridge area.”

Accompanied by cruiser Bremerton, and destroyers Twining and Colahan, the battleship New Jersey fired 115 rounds into Wonsan on 5 May. Her first salvo destroyed a main observation post. Sixteen-inch shells also struck and exploded a concrete ammunition bunker. The “Big Jay” also fired at an enemy battery at Hodo Pando, collapsing the cave mouths and obliterating the firing tracks. For almost three weeks this battery was silent. Again on 11-12 July, the “Big Jay” plastered the Hodo Pando guns. These 164 rounds silenced the battery for the rest of the war.

USS Brush had nine casualties on 15 May; USS Wilsie took a single hit on 11 June as the result of 45 rounds of 105-mm. fire; on 14 June the heavy cruiser Bremerton counted four rounds in the seas around her. On 15 June, USS Lofberg (DD-759), USS John A. Bole (DD-755) and USS Current (ARS-22) were on the receiving end of more than 100 rounds of large caliber fire, but none of the three was hit. On 17 June, Henderson (DD-785) received superficial damage from 80 rounds from the Wonsan batteries.

On the 18th of June, a bad day for the siege ships, cruiser Saint Paul was under fire. USS Irwin (DD-794) took a main deck hit which caused five casualties. The hardest hit was Rowan (DD-782). Forty-five rounds of shellfire bracketed her, five striking. One shell, thought to be a 155-mm., punched a two-foot hole on her starboard side at frame 209, a scant eight inches above the waterline. Another shell demolished the Mark 34 radar. Several other holes were visible in her side. Nine people were wounded, two of them seriously.

Gurke had three casualties on 25 June. The daylight patrol movements of the ships were somewhat restricted during June and July, but there was no intention of abandoning the siege, even for an instant.

Minesweeper Symbol (AM-123) and destroyer Wilsie (DD-716) drew fire on 7 July. The same day Lofberg (DD-759), John W. Thomason (DD-760) and Hamner (DD-718) received 300 rounds, Thomason being slightly damaged by straddling air bursts. On 11 July, cruiser Saint Paul was hit by one 105-mm. shell at her 3-inch/50 gun mount, but no personnel were injured, as these guns were not manned. On the 23rd, she was again under attack, some of the shells falling as close as ten yards; but this time, there was no damage.

The Red gunners in Wonsan were to succeed in neither of their missions: they could neither sink a ship
nor could they drive the American Navy out of the harbor.
Chapter 12. The Siege of Wonsan

The Siege Ends

On the last day of the war, 27 July 1953, amidst preparation to abandon the harbor in accordance with the truce, the siege ended as it had begun, with minesweepers sweeping and the destroyers patrolling, taking the Wonsan targets and guns under fire. Destroyers *Wiltsie* and *Porter*, and cruiser *Bremerton* fired salvoes at Wonsan targets until a minute before the 2200 deadline. The smaller harbor islands were abandoned on the day of the truce. Yo-do, with its more extensive installations, took longer to evacuate; equipment had to be removed, storage dumps emptied, fortifications destroyed.

The last two ships to leave the harbor—the cruiser *Bremerton* and destroyer *Cunningham*—did so on the late afternoon of 1 August, after a day of pleasant swimming in the harbor which had felt the fury and stricture of a full-scale siege.

The siege of Wonsan had demonstrated the courage and tenacity of the American Navy. The important rail and highway center, with its many industries, once a city of 100,000 and now half that size, was a mass of cluttered ruins. So important had this city been as a transportation hub that the Communists had been forced to great effort to repair and rebuild the almost daily damage. Hardly an undamaged building was visible. Many industries had gone underground.

In a land-locked harbor which had been heavily mined and which the enemy had sought constantly to re-mine, where shallow, shoal-filled waters abounded, and despite the most intense enemy opposition, a siege of 861 days had been imposed with skill, determination, and success by a tireless and efficient team of American sailormen.
The Sea War in Korea

Chapter 13. On the Line
Introduction

Only rarely during the height of the interdiction campaign (on such occasions as the Hwachon Reservoir attack in May 1951 and the raid on Rashin in August) was the mission of Task Force 77 varied. Commencing with the air-gun strike on Chongjin on 13 April 1952, however, and definitely after June, the missions given the carrier airmen of Task Force 77 turned more and more toward strikes on industrial, military, and frontline targets, and less and less to interdiction and armed reconnaissance flights. As was described earlier, there was plentiful evidence that the interdiction campaign was a failure. For the next six months of the final year of the war, the carriers’ efforts would strike primarily industrial targets in North Korea. For the last six months of the war, Task Force 77 would give the bulk of its support to frontline troops.

This shift of emphasis and employment was heartening and pleasing to all hands, planners and pilots alike. To the carrier division commanders and their staffs, such attacks were more in keeping with the inherent ability of a carrier task force to employ surprise and concentration. To the pilots, such attacks were happy respite from the dangerous and dreary interdiction and armed reconnaissance missions. As to accomplishments, the sudden onslaught of combined carrier strikes upon an oil refinery, a manufacturing installation, or a supply concentration point meant greater destruction and damage, with less risk of damage or loss to our own forces. Such employment also kept the enemy off balance. The initial strikes in June 1952, on the enemy’s hydroelectric plants, for example, brought on little anti-aircraft fire; the same attack a few weeks later provoked AA fire of greater intensity and accuracy. The intervening time had allowed the enemy, anticipating repeated attacks, to rush guns to that location for its protection. A few months after the Suiho attack, for example, photo analysis revealed that the number of heavy and automatic guns surrounding the dam had increased from 71 to 167. Meanwhile, the carriers had shifted their offensive power to other targets.

By thus avoiding a rigid and unchanging routine, the naval aviators were able to inflict heavier damage at lesser cost. Too often in the Korean War, the conflict became rigidly set in fixed patterns: the enemy could be fairly certain that our night flyers would appear over the coast a few minutes after sunset or three hours before daylight; he could be certain, if he saw a colored-smoke rocket or our troops laying down their colored frontline panels, that a close air support strike was enroute; from previous attacks he could often anticipate what the direction of dive-bombing approach would be, and thus better emplace his AA defense weapons in preparation.

The final year of the Korean War saw a definite trend toward more flexible employment of the carriers. While the interdiction effort continued until the end of the war (the plan was to strike the rail lines and bridges at least once every three weeks), it received less emphasis. Bridge and track-busting strikes were employed only to keep the enemy’s AA dispersed and his repair organization tied down.

In the final twelve months of the war, the carriers attacked a variety of targets, from hydroelectric plants to zinc mills, more than forty times, and developed a new type deep support air mission (termed the “Cherokee” strike).
Chapter 13. On the Line
The Attack on Suiho (23 June 1952)

The ceaseless and unspectacular attacks upon interdiction targets during months on end had a welcome climax on 23 June 1952, when, as an explosive finale to the first two years of war, the Navy, Marines, and Fifth Air Force in Korea began a two-day series of attacks upon the thirteen major electric power plants in North Korea.

For twenty-four months, these hydroelectric power plants had been ordered spared from destruction.[1] In the early months of the Korean War, this had been done partly in hope that the war would be won, North Korea occupied, and a costly and needless destruction avoided. After the Inchon landing, the hydroelectric power system had not been molested lest it give the Chinese Communists an excuse for entering the war. Later, after the Chinese Communists’ entrance, there was some thought that attacking the power plants might prejudice the course of the armistice negotiations.

By June 1952, however, after nearly a year of wrangling at the truce table, it was clear that there was little immediate hope either of negotiating a cease-fire or of capturing all of Korea by force. Continuing to spare any legitimate military target in North Korea for fear of prejudicing the armistice talks no longer was justified.

The truce talks, in fact, were destined to drag on for another year. Key military leaders in the Far East had consistently held that the North Korean hydroelectric power plants were legitimate military targets, that their continued operation directly contributed to the enemy’s war effort. These power plants furnished the Communist radar network with electrical power; they operated the MIG-15 air complex near Antung. It was known that many small, isolated and underground factories making war material in North Korea used this electric power. Moreover, a large portion of the system’s electrical capacity was transmitted to Manchuria for such arsenals as the Anshan steel industry, the Antung aluminum plant, and the Fushun coal mines.

“The spark to attack the North Korean hydroelectric power plants was struck by the Navy,” said LCDR Nello D. S. Andrews, USNR, intelligence officer, Staff, Commander Task Force 95.[1A] “In April 1952 I had briefed Admiral Dyer on the report of an interrogation of a North Korean Brigadier General of Artillery by the name of Lee II, who had escaped to the Wonsan harbor island of Taé-do on 21 February 1952. He told us that the Communists were aware that UN forces had a policy not to hit their power installations. According to him, this policy was a source of great comfort to the Reds, for the electrical power provided heat for their buildings and power for their underground factories.

“Upon hearing this, Admiral Dyer immediately requested by despatch to CINCFE that the ban be lifted. A few days later CINCFE advised us that the matter was under study.

“Approximately a month later, during the turnover period when Admiral Gingrich was relieving Admiral Dyer, it seemed appropriate to bring up the matter again. That morning, I had just received a Task Force 77 press release concerning the preceding day’s operations, which included mention of damage to an electrical transformer in the Wonsan area. I explained to Admiral Gingrich the long-standing prohibition against bombing or bombarding the hydroelectric system, part of which was exposed along the east coast in our area of responsibility. Admiral Dyer asked me to leave the briefing and get copies of our exchange of despatches recommending that we lift this restriction.

“Immediately after the briefing, Admiral Gingrich and Admiral Dyer helicoptered from our cruiser to the Missouri to have lunch with Vice Admiral J. J. Clark, who had recently relieved Vice Admiral Briscoe as Commander Seventh Fleet.
“Admiral Clark gave the proposal his enthusiastic approval, I was told, and personally took the matter up with Admiral Briscoe (COMNAVFE) and General Mark Clark (CINCFE), who in turn referred the matter to the Joint Chiefs of Staff.”

General Mark Clark has described before a Congressional subcommittee how the authority to strike the North Korean power complexes was obtained:

“. . . When I went to the Far East, I looked around to see what can I do on my own responsibility within my sphere of authority, what can I do in Korea over here to make the Communists realize that we are still fighting . . . . These hydroelectric plants which were turning out the power for Manchuria, for their industry, it seemed to me, should be destroyed. I was denied the right to hit the Suiho, the big one, so I sent a message to the Joint Chiefs of Staff just telling them that I was going to attack the following places, and I told them how I was going to attack them, with what kind of planes, with what kind of bombs, and gave them a certain number of hours notice that if they wanted to stop me, they would have time.

“I did not ask for permission. Much to my surprise, that came back approved and saying ‘We delegate to you the authority to bomb the Suiho dam . . .’”[2]

The Navy’s part in the raid was laid on personally by Vice Admiral J. J. Clark.[3]

“I was aware,” said VADM Clark, “that General Clark had informed the JCS that he was going to bomb the hydroelectric plants. It happened that I was on a visit to Tokyo and sitting in the office of Rear Admiral McMahon (Chief of Staff, COMNAVFE) when the JCS’s approval despatch came in.

“I told McMahon that bombing the big Suiho dam was a job for the Navy, and he commented that the Air Force would probably be glad to have us. I told him to offer them 36 ADs, each of them loaded with 5,000 pounds of bombs, and he wrote up a message to FAFIK to that effect.

“On my way back to the operating area aboard the Philippine Sea two days later, I decided to go directly over to Seoul and discuss the Suiho mission in person with LTGEN Glenn O. Barcus, Commanding General, FAFIK. In the interval, there had been a flurry of despatches between General Barcus and Admiral Soucek, and the Navy’s contribution had been reduced to only 20 divebombers.

“Later, I learned that the Suiho hop was almost cancelled at this stage because of the serious MIG interference potential near the Suiho dam. In fact, General Barcus had a despatch all written up ready to send to FEAF and to General Clark recommending cancellation of the strikes on Suiho.

Click here to view map

“It was at this moment that Barcus got my departure report saying I was headed for Seoul to see him. When he received it, he told his staff to hold up the Suiho cancellation despatch until I got there, for he had guessed why I was coming.

“After going over the problem with General Barcus, I told them I didn’t see any reason we couldn’t hit Suiho. I said that we could get in and out of there without too much trouble. I noted that the strike plans called for only 20 Navy divebombers; I said that 20 weren’t enough, that we ought to send as heavy a strike in there as possible and really clobber that dam. I offered him 36 divebombers, and he accepted that.”

Like the 1950 attacks upon the Yalu bridges, an attack upon the Suiho installation would be difficult. The fourth largest power plant in the world (about 400,000 KW, the same as U.S.’s Bonneville), the power plant lay on the North Korean side of the Yalu River within sight of the untouchable Manchurian territory, only 35 miles from the Antung air complex loaded with more than 250 MIGs. Because of the importance of this installation any strike in that vicinity would probably arouse intense Communist fighter opposition. The site was heavily defended—28 heavy antiaircraft guns and 43 automatic guns, some of them radar-controlled—and many of them on the Manchurian side of the river. Moreover, the Chinese had taken advantage of our “holy land” restrictions against over-flying Manchuria and had emplaced their batteries to better cover the only directions of attack. From long experience in “MIG Alley” above Suiho, it was known that the fire from these guns was intense and
accurate.

The location of the hydroelectric plant at the western mouth of the Yalu River meant that an attack upon it by the Seventh Fleet’s aircraft would require a long, cross-Korea flight. Unless skillfully planned and executed, this would give the enemy’s antiaircraft and fighter defenses an ample alert period. And like the Yalu bridge attacks, the necessity of avoiding Manchurian territory predetermined the choice of attack courses. (This strike would be the first time that naval aircraft had operated in “MIG Alley” since the attacks on the Yalu bridges in the fall of 1950.)

The active planning, which had begun at the JOC at Seoul two days before the strike, included general target assignments and allocated attack forces, not only for Suiho, but for the twelve other hydroelectric dams in North Korea. Early in the planning, it had been decided not to use B-29s for the Suiho attacks. The “Superfort” bombers were not considered suitable because of the necessity for surprise, the heavily-defended nature of the target, and the need for pinpoint bombing (concentrating on the powerhouse, transformer yards, and penstocks on the North Korean side of the river, and not the dam itself). B-29s had proven too vulnerable to MIGs in daylight attacks, and there was no assurance that they could make the strike without violating the Manchurian sanctuary in their bombing runs, or without having some of the bombs released at high altitude fall on the wrong side of the river. Instead, the fighter-bombers of the Navy, Marines, and Air Force were selected to strike Suiho, although there was some doubt whether, since the B-29s had been unable to penetrate the alert MIG defenses, the Skyraiders of the Navy could do so. The carrier aircraft of the west coast carrier, under Commander Task Force 95, who would join the attacks, had to be carefully coordinated with the others.

H-hour of 0930 June 23 was chosen for the attack.

The day before the attack, Admiral Apollo Soucek’s staff and the flight leaders, supervised by the strike leader, CDR A. L. Downing, USN, worked ’round the clock preparing the details of the strike: the ordnance loadings, the fuzing, the flight schedules. Intelligence materials were assembled and distributed, and pilot briefings held. Strike leaders busily worked out the details of navigation, rendezvous, fuel consumption, order of attack, direction of attack, and direction and route of recovery.

“The strike planning was done aboard the Boxer under CDR A. L. Downing’s supervision,” said CDR Neil MacKinnon, Commanding Officer, VA-195.[4] “Although we had to anticipate that the hop into that heavily defended area of ‘MIG Alley’ would be rough, we still welcomed a change of pace from bombing the railroads.”

“Our attack plan was very tight,” said CDR Downing. “We had a plus or minus one minute to get on target and three minutes to attack and clear the target. Arrival too soon and killing time over the target would not be popular, nor would a melee with the F84s that were to follow us be a pleasant exercise.”

Early in the morning of the 23rd, H-hour was postponed on account of weather, the Fifth Air Force saying that a 48-hour delay might be needed. Shortly before lunch, however, another message flashed into the Boxer, flagship of Admiral Soucek, then Commander Task Force 77. The weather outlook over the target was improving. Attack on Suiho was re-scheduled for 1600.

“When H-hour was being kicked around that morning,” said Downing, “me and my plotting board were in a sweat trying to figure out the new launch times so we could all arrive at the proper time over the target.”

During the morning, while this rash of despatches concerning the possible cancellation of the strike was being exchanged, Bon Homme Richard and Philippine Sea joined with Boxer and Princeton. For the first time in 18 months, a full carrier task force of four carriers would be operating together. The attack from their decks was to be the biggest to date of the entire Korean War.

At 1400, with the Fleet into the wind, launching for the Suiho attack commenced. Thirty-five AD Skyraiders rendezvoused from VA-65 (CDR G. A. Sherwood, USS Boxer), VA-195 (CDR Neil MacKinnon, USS Princeton), and VA-115 (CDR C. H. Carr, USS Philippine Sea). Thirty-one of these Skyraiders carried two 2,000-pound bombs and one 1,000-pounder each; the remaining four, in addition to two 2,000-pounders, carried a
survival bomb[4A] for dropping to anyone unfortunate enough to be shot down.

Shortly after the 35 Skyraiders passed the North Korean coast, the jet fighters joined up. These 35 planes were flown from VF-24 (LCDR William A. Jernigan, Jr., USS Boxer), VF-191 (CDR John Sweeny, USS Princeton), and VF-112 (CDR James V. Rowney, USS Philippine Sea). Twenty-four of the F9Fs were each carrying two 250-pound general purpose bombs, and all carried full trays of ammunition for their guns. (The jets not carrying bombs were the target combat air patrol planes, which required extra fuel.)

The weather over Korea was improving to the naval airman’s advantage. The route and the vicinity of the target still were reported clouded, but the area near the Suiho dam was reported clear. This meant that the pilots could use cloud cover for surprise before and concealment after the raid.

The attack group skimmed among the clouds and past the highest mountain tops of North Korea, then commenced a slow let-down to remain below radar detection height. The route chosen across Korea was over isolated territory in order to minimize the possibility of ground spotters detecting and reporting the group.

Already circling the Yalu in “MIG Alley” were eighty-four F86s whose task it was to provide continuous cover for the naval group. Eight minutes before the scheduled time of attack, the Sabre pilots reported to CDR Downing that more than 200 swept-wing MIGs were visible, parked on the airfields in the Antung complex.

When would they come up?

At 1555, only five minutes from the target, the attack group from Task Force 77 commenced a high-power climb to reach dive-bombing altitude. If surprise had not been achieved, the MIGs from Antung and the guns surrounding Suiho would soon be working them over; but as the group came in sight of the huge dam, it was obvious that surprise had been achieved.

Commander Downing ordered the attack to begin. The Panthers commenced their flak-suppression dives. The ADs, meanwhile, reversed their course and commenced their runs. Downing led the Boxer dive-bombing planes in; on his tail was MacKinnon with the Princeton divebombers; and following him, Carr led the Philippine Sea’s ADs.

“Our target was not the dam itself but the Suiho powerhouse,” said CDR MacKinnon, “and it was an excellent aiming point. It was a building 80 feet by 500 feet housing the generators, transformers, and switching equipment. There was a fair crosswind blowing north to south which complicated our bombing, but which cleared the target of the smoke and dust of the exploding bombs. I saw a few puffs of AA fire as we were in our attack, but it was not enough to hinder us.”

Other targets were the transformer yard and the penstocks. Each Skyraider salvoed its bombs at 3,000 feet, simultaneously firing its machine guns to keep enemy heads down, and levelling from its run by 1,500 feet altitude.

The antiaircraft fire was now coming up, and pilots later reported it as “intense machine gun fire, plus moderate, continuous predicted fire from heavy weapons and automatic antiaircraft fire.” Bursts were accurate at all levels up to 10,000 feet. As expected, most of the fire was “out of bounds” from across the river in Manchuria.

As the last Skyraider entered its dive, the final flights of flak-suppression F9Fs dove on the defending guns on the North Korean side of the river. Of their work, LT T. G. Dreis later said: “The flak suppression was terrific. The AA looked rough when the jets first went in. After they made their runs, there was nothing to it. They really did a job.”

In less than 180 seconds, the entire Navy attack, having dumped ninety tons of bombs on Suiho’s installations, was up and away, streaking to the southeast.

“The majority of the bombs were on target,” said Vice Admiral Clark, “and post-strike photography showed no misses.”

Two or three secondary explosions were observed to follow from inside the powerhouse, and all of the pilots could see dense smoke and dust roiling from the powerhouse, thousands of feet high. Of the attack CDR
Downing said: “The bombing was excellent; the powerhouse looked like a volcano erupting.”

Despite the large number of enemy guns surrounding the dam, only five of the Navy’s planes were hit by antiaircraft fire. One Skyraider from VA-115, flown by LTJG M. K. Lake, was seriously hit and set on fire in the starboard wheel well; but with his wingman, Lake was able to reach Seoul’s Kimpo airfield, where a successful wheels-up landing was made. Considering the concentrations of guns protecting Suiho, the flak-suppression efforts of the jets had been highly effective.

“It was obvious that we had caught them flatfooted,” said CDR MacKinnon. “I attribute our success to the excellent planning and leading by CDR Downing, to our mountain-top approach, and to the sudden, last-minute climb to bombing altitude. The strike, which we had anticipated would be a rough one, turned out to be a textbook hop. The timing was perfect, we hit every checkpoint on schedule, and the bombing was excellent.”

“Although we only had one briefing with the strike leaders,” said CDR Downing, “the entire exercise went off as though we had been doing it for years. By my own timing, the last man was out of his dive and on retirement course in two minutes flat from the first flak-suppression pass—a real tribute to the superb work of the flight leaders of the following elements.”

As the naval aircraft concluded their runs, the U.S. Air Force’s attacking F84 Thunderjets—124 of them—appeared in a well-coordinated second strike. Interservice teamwork was excellent. If any reprisal was to come from the MIGs across the Yalu, surely the moment had come; but by now, the high-circling Sabres could see less than 80 airplanes instead of the more than 200 observed a few minutes earlier.

Where were the MIGs? Had they assumed that industrial targets in Manchuria were to be hit and flown off to cover them? Or was an attack on the Antung air base complex itself expected and the planes hastily flown clear? Or were the Red pilots simply without orders, unready or unwilling to interfere?

Whatever their reasons, the expected stiff aerial opposition never materialized, and the remainder of the U.S. Air Force attack blasted the Suiho plant opposed only by the defending guns. Concurrent with the Suiho attack, twelve other power complexes in North Korea received similar treatment.

The next day, the Suiho plant was still smoking, and North Korea’s electric power was seriously reduced. The capital of Pyongyang was without power; factories on both sides of the Yalu were paralyzed, and lights all over Korea and Manchuria were going out.

The attack on the North Korean power plants had done several things, not the least of which was to rekindle enthusiasm among the naval airmen, sated by the monotonous routine of interdiction. The strike had shown the Navy’s flexibility to surprise and accurately hit a heavily-defended target. It had also shown the harmony of effort and precision which the U.S. Navy and U.S. Air Force could effect, which prompted General Barcus to say “My hat’s off to the Navy for a terrific job. We must get together again sometime.”

The Chief of Naval Operations, Admiral William Fechteler, congratulated the Seventh Fleet Commander and the pilots of Task Force 77:

“It is with great pride that I read the despatch and news reports of the magnificent accomplishment of your forces in the superb attacks upon the North Korean power installations. The excellent performance of duty and high combat effectiveness demonstrated by your forces and particularly the pilots involved in the actual combat are deserving of the highest praise and inspiration of your own people and a warning to the enemy of his inevitable defeat. Well Done.”

The surprise assault certainly caused extensive damage[5A] to the electric system of North Korea and Manchuria. The strikes forced the relocation of enemy AA guns all over Korea. Rear Admiral H. E. Regan, Commander Carrier Division One, only a month later was able to report the successful destruction of several bridges which, prior to the hydroelectric power raids, had been too well defended to attack.

Finally, the Communists were left in doubt as to the future targets and locations which might be attacked.

Chapter 13. On the Line
The Strike on Pyongyang (11 July 1952)

The highly satisfactory results achieved by the carrier strike on 23–24 June not only inflicted severe
damage to the hydroelectric system of North Korea, but the attacks were also visible demonstration to the
Communists that a new corner in the Korean War had been turned. The psychological effect was pronounced,
both at the Panmunjom armistice table and in the North Korean capital. The Pyongyang radio denounced the
missions as “sneak attacks,” adding that “anyone with common sense knows that a hydroelectric power station is
a project of peaceful construction devoid of all military significance.”

But even more impressive strikes were now being scheduled. A plan was developed at Far Eastern Air
Force headquarters in Tokyo to attack military targets in the North Korean capital city of Pyongyang. Its 40-odd
military targets—warehouses, bridges, troop barracks, factories, and Army headquarters—had been spared for
months for the sake of the armistice talks. But now there was even less reason to withhold attacks upon the capital
city’s military targets than there had been for withholding attacks on the hydroelectric plants.

Attacking Pyongyang’s military installations, however, would be a difficult and demanding task. Many
planes had been lost over Pyongyang, and pilots generally considered the city one of the worst “flak-traps” in
North Korea. Photographic interpretation showed 48 heavy antiaircraft guns and more than 100 smaller automatic
guns ringing the North Korean capital. The enemy’s antiaircraft opposition was certain to be both intense and
accurate. Moreover, there were prisoner-of-war camps in the environs of the city, and these had to be avoided in
the bombings.

Two carriers were scheduled to make a full-scale, full-day contribution: Princeton and the Bon Homme
Richard, the latter recently arrived in Korean waters for her second tour, with Air Group Seven aboard.

“This was the first time in our six months’ tour that my Air Group joined with another one for a
combined strike,” said CDR G. B. Brown, Commander Carrier Air Group Seven.[6]

“The strike on Pyongyang was scheduled for 11 July. Since our ship was carrying Admiral H. E. Regan,
then CTF 77, and his staff, the Princeton air group commander, CDR William Denton (CVG-19), flew over to our
ship a couple of days prior to the attack, bringing some of his squadron commanders, and we laid our plans for the
strike.

“Our plans followed the now-standard strike procedure: the jets being launched some time after the
props, joining us a few miles from the target, and preceding us down in our dives in order to knock out the enemy
guns. The props, both Corsairs and Skyraiders, would follow them, and after their recovery, the jets would again
cover our retirement.” the launch began at 0831 on 11 July with a single mishap. Ensign E. B. Conrad, a VF-72
pilot flying an F9F-2, lost power after the catapult shot and ditched. Conrad was unhurt, and was quickly rescued
by the Princeton helicopter.

Bon Homme Richard launched 45 aircraft; Princeton, 46. The combined strike group, led by Commander
Denton, CVG-19, rendezvoused over the island of Yo-do in Wonsan harbor. Brown, leading the Bon Homme
Richard aircraft, and flying an AD himself, joined above and behind the Princeton strike group.

“The weather at the time of launching was pretty good,” said Brown, “although there was only a very
small spread between the wet and the dry temperatures.

“Our course to the target took us directly over the enemy town of Yongdok, a supply storage site which
had been on the receiving end of dozens of naval air attacks. On this occasion, even though we were flying along
at approximately 18,000 feet, the Yongdok guns opened upon us, and shrapnel from one burst hit one of my
Corsairs—not seriously, however, and it was able to continue. But it was a prelude of what was to come.”

The carrier aircraft had been chosen to make the initial attacks and to strike several targets in Pyongyang on the southeast side of the city, the ones nearest the POW camps: an ammunition storage area, a vehicle camp, a headquarters and troop billeting area, a factory, a railroad locomotive repair shop, and a railroad roundhouse. Other target areas had been assigned to aircraft of the U.S. Fifth Air Force, the U.S. Marines, the Australian Air Force, and aircraft from HMS Ocean (CAPT G. L. G. Evans, RN), the British carrier operating under Commander Task Force 95. These elements of the UN air force were scheduled to relieve each other in an all-day, all-out attack on the city’s military targets.

As the carrier aircraft sped toward the target, the Sabres of the Fifth Air Force were taking off from their South Korean bases to form a barrier patrol in “MIG Alley,” and thereby prevent MIGs from interfering with the attacks on Pyongyang.

“The weather over Pyongyang was good,” said Brown. “Exactly on schedule, our flak-suppression jets from the task force joined up and took high cover; we picked up speed during the run-in. Each one of my ADs was carrying three 1,000-pound bombs; the Corsairs, one each.

“As we neared the city, which was very prominent because of its location in a big bend of the Taedong River, the AA commenced. It started at Sonchon and followed us all the way in. It was as heavy and accurate as anything I saw during World War II; moreover, much of this stuff came from radar-controlled mounts, something we hadn’t worried about during the Pacific war.

“The flak-suppression dives of the jets were effective and timely. Later, we gave them credit for destroying five guns and silencing two more. Despite their good work, however, some of my boys were hit. LT E. P. Cummings and his observer, L. L. Tooker, AT1, took a direct hit which blew off part of the AD’s tail surface. We saw their plane go straight in and crash about a mile from the target.

“Two other Richard aircraft were hit prior to the commencement of our bombing runs. One Corsair, flown by LTJG G. G. Jeffries, took a direct hit by heavy AA in the leading edge of his port wing, but the shell passed on through without exploding; even so, Jeffries pressed home his attack despite the damage.

“The Bon Homme Richard’s targets were the railroad roundhouse, the locomotive repair yard, and the ammunition storage area. LCDR F. H. Ervin, LCDR W. M. Harnish, LTJG J. A. Ryes and ENS P. G. Merchant made direct hits on the large rail repair shop. LCDR W. E. Teufer and LT W. L. Harris made direct hits on the roundhouse. As for the ammo’ storage area, all bombs fell within the assigned area, and it looked well battered.”

The bombing by the Princeton strike group was equally effective. During the dive LCDR L. F. Dutemple, flying an AD from VA-195, was hit and lost to AA fire, and his aircraft was seen to crash nearby. Two Corsairs from VF-193 were also hit, but landed at friendly bases in South Korea.

Photographs taken after the strike showed that the roundhouse was 60 per cent destroyed, including two locomotives therein, while the railroad repair shop was 50 per cent destroyed.

“This mission was one of the most accurate attacks that my air group made,” said Brown. “The antiaircraft fire we encountered from Pyongyang’s radar-controlled heavy guns, and the fire from their medium and automatic weapons was the heaviest and most accurate we encountered during our entire tour.”

The Princeton pilots agreed.

“It was the heaviest flak we saw,” recorded LCDR N. W. Boe, commanding officer of VF-193. “It was so thick we could have dropped our wheels and landed on the stuff.” [7]

As the naval aircraft recovered from their attacks and headed homeward, the high-flying jets soon picked up radio reports from the Fleet. The weather in the Sea of Japan and along the east coast of Korea had suddenly worsened, fog had formed, and ceilings were down to 200–300 feet, with visibility reduced to less than 500 yards.

“The jets in our strike group, on hearing this, decided to land at Suwon and Kanghong,” said Brown. “The rest of us—all props—kept heading homeward. We vectored into the Fleet by YE.[7A] and let down
through a 5,000-foot overcast division by division, at two-minute intervals. Upon breaking out of the stuff at about 300 feet, and being vectored in to the carrier, we couldn’t see across the task force. However, with the aid of our ‘hooker’ control atop the *Bon Homme Richard* bridge, we all got aboard without further incident.”

The remainder of the carrier strikes against Pyongyang had to be cancelled because of the weather.

The strikes on the capital city, less Task Force 77 aircraft, continued the rest of the day. A total of 1,400 tons of bombs and 23,000 gallons of napalm were delivered upon Pyongyang’s targets during an 11-hour period by 1,254 aircraft.

For two days the Pyongyang radio was off the air. When a weak signal was again emitted, the North Koreans called the day’s strikes “brutal,” adding that they had been ordered as retaliation for the failure of the armistice talks.

The Pyongyang radio also stated that 1,500 buildings had been destroyed and 900 damaged. One bomb had made a direct hit on a large air raid shelter, causing large casualties among high Communist party members.

[7B]
The success of the raids on Suiho and Pyongyang, which had cost the enemy so much and the Allied air forces relatively little, was accepted as good evidence of the wisdom of de-emphasizing the interdiction program. True, there were only a few targets in all of North Korea like the hydroelectric plants and the military concentrations in Pyongyang worthy of massed air attacks. But this more flexible pattern of air attack meant greater damage inflicted in proportion to losses sustained.

From June until the end of 1952, naval air conducted a series of attacks which took the formidable title “coordinated maximum effort air strikes.” On twelve days of July 1952, Task Force 77 aircraft struck a variety of industrial targets, ending with an attack on the Sindok lead and zinc mill and the Kilchu magnesite plant on 27 and 28 July.

The zinc mill had been processing and shipping 3,000 tons of zinc and lead to Russia via China every month. Destroying it would certainly cost the Communists more than another hundred breaks in the rail lines.

In the now well-established pattern, the jets struck the antiaircraft guns first and last, allowing the propellered ADs and F4Us to saturate the area with 500-pound, 1,000-pound and 2,000-pound bombs.

“Bon Homme Richard 27 July; Sindok: ‘... Flak suppression was effective, accurate bombing and strafing runs taking its toll in Communist gun positions. The ADs dropped all their bombs in the target area, destroying or badly damaging the main plant and heavily damaging the transformers and other buildings in the vicinity...’

“Princeton 28 July; Kilchu Magnesite Plant: ‘... A total of thirty-eight aircraft (25 F4Us and 13 ADs) in two strike groups dropped forty tons of bombs and rockets resulting in 60 per cent destruction of the magnesite plant; complete destruction of a thermo-electric plant which furnished power to the magnesite plant; major damage to a barracks area; also three to five cuts in the main railroad bridge leading south from Kilchu’.

All planes but one returned safely from the strikes. LTJG E. M. Crow of VF-193 bailed out and was rescued by Helena’s helicopter during the Kilchu strike.
Chapter 13. On the Line

The Raid on Changpyong-ni (20 August 1952)

The year 1952 saw the “air task group” concept tested in the Korean War. Two such groups, Air Task Group One (CDR C. H. Crabill, Jr., aboard *Valley Forge*) and Air Task Group Two (CDR J. G. Daniels, III, aboard *Essex*) saw action and both groups performed excellently.

The air task group concept had arisen during the early days of the Korean War, during the time when the largest single attack group launched from the carriers rarely exceeded 12 to 16 planes. Only on the most infrequent occasions had the carrier air group commanders functioned in their designed role of tactical airborne coordinator. During the first 18 months of the war, even squadron commanders found few missions for leading their entire squadrons at one time. Squadrons had as many as four or five officers who were qualified and experienced to lead the usual four to twelve planes launched on close air support, interdiction, or armed reconnaissance missions.

With this pattern, obviously, the airborne duties of the air group commander in the Korean War bore little resemblance to similar duties in World War II.

However, there were other reasons for the air task group idea. The principal advantage was that a carrier’s complement of aircraft could be tailored to suit the mission at hand. If the mission was attack, the aircraft could be predominantly attack types. If air defense was the mission, all fighters could be carried. And for such hostilities as those in Korea, a balanced group could be placed aboard.

Whatever the carrier’s airplane complement, a senior naval aviator of the rank of commander, supported by a small staff, would be assigned as Air Task Group Commander. There would be no administrative organization; the designated squadrons would simply report to the Air Task Commander for operational control.

“There were some misgivings about the air task group concept at first,” said Commander Daniels ATG-2 commander. “The principal reservation was that such a grouping of squadrons might lack the traditional sense of pride, unity, and loyalty that comes with belonging to any organization. However, in actual practice in Korea I believe there was as much fierce pride among my pilots for belonging to Air Task Group Two as there was in any air group.

“Actually the air task group is analogous to an air group except that the air task group commander doesn’t have to contend with the petty administrative details of the chain of command. He simply has an air group without paper work. His primary job is to get the group in fighting shape.

“In my opinion, the tours of ATG-1 and ATG-2 in Korea certainly proved the merit of the air task group concept.”

Typical of the performance of Air Task Group Two was the 20 August 1952 attack on Namyang-ni, a large supply area located south of the Yalu River, on the west coast of Korea.

“This was another of the several mass attacks of this period,” said Daniels, “similar to the ones on the hydroelectric power plants and the two attacks on Pyongyang in July and August. This particular mission was at extreme range for the jets, and it demanded the most careful timing and integration, not only among the planes of the *Essex* but between the various other elements of the UN air forces.”

Since the target was only a few miles from the Yalu River, and almost directly beneath “MIG Alley,” it was expected that fighter opposition would be heavy.

“Our flight was made up of 43 planes from the *Essex* and 62 from the *Princeton*,” said Daniels. “The weather over Korea was good, with only a few scattered clouds over the mountains.
“I was leading the Essex Panther jets, so we took off quite a bit later than the props. We joined them on schedule northwest of Wonsan.

“As we neared the target, we could see the Yalu River. I had good voice communications with the Air Force F86s who had set up the usual barrier patrol in ‘MIG Alley’.

“We arrived at the push-over point exactly on time, and went in just ahead of the props. The Air Force had given us the intelligence on the location and number of the enemy AA guns, and I must say that their information was excellent. On an attack such as this, its success depends on accurate knowledge about the guns; if their exact locations are known, the flak-suppression aircraft can really do a job on them. Otherwise, if you are not sure of their whereabouts, all you can do is strafe the general area, and that’s not too effective.”

The flak-suppression runs of the Essex and Princeton aircraft were precise, and the Corsair and Skyraider pilots later reported the flak as light and inaccurate.

“None of the Essex planes were hit,” said Daniels, “and our entire attack was completed in less than two minutes. As we cleared the targets, a strike of Fifth Air Force F84 fighter bombers came right in behind us. It was beautiful coordination.

“As we climbed for altitude, I got a jolt. The Sabre jets patrolling above us near the Yalu River said that twelve MIGs had broken through and were heading our way.

“We climbed as rapidly as possible for altitude to protect the props. We had gotten back up to about 12,000 when my section leader, LT Hal Crumbo, tally-hoed four MIGs.

“Their pass was simply one quick ‘whoosh’ high above us, with no one exchanging a shot. I don’t think they spotted the prop planes below us.”

Flying high cover at 16,000 feet with 12 Princeton Panther jets. Commander John Sweeny (Commanding Officer, VF-191) had also spotted the MIGs.

“We had radio contact both with the Air Force radar station on Cho-do island, and with the Sabres above us,” said Sweeny, “so we had ample warning that they were coming.

“My three divisions were in step-up formation, with my team on top and staggered to the north. There was about 1,000 feet between divisions.

“I first spotted two MIGs jumping us front abeam. We immediately went to 100 per cent power, and at the right time turned into them, when they broke off and climbed away. Immediately after, three MIGs came up on our tail, so we reversed course to take them head-on. At this, they pushed over to pass beneath us. I got my sights on the lead plane, but he was so far below me that there was no reason to waste the ammunition. As we reversed to base course, two more MIGs started a run from the other beam, but again broke off when we turned into them. They simply put on full power and left us. The speed and rate of climb of those MIGs impressed all of us. They were painted green and brown, and their red stars were plainly visible. But I certainly wasn’t impressed with either their formation flying or their flight discipline.

“At no time did they come close enough for us to get a shot, yet all the while they were shooting wildly at nothing.

“All considered, it wasn’t much of an engagement, but it was the only time in my tour that we got close to MIGs. However, that small episode gave my pilots a lift, for it was quite apparent that the airmanship and teamwork of the MIG pilots were as bad as their gunnery.

“After this hop we kept hoping to get back into MIG territory and suck them down to low altitude where we could turn inside them. But it never happened.”[8]

The homeward flight of the strike group was uneventful.

“Of the nineteen buildings in the supply area,” said Daniels,[9] “photo reconnaissance showed ten of the buildings completely destroyed, while the other nine had up to 70 per cent damage.

“The significance of this strike was its split-second timing and coordination, the beautiful teamwork that
was achieved with the other Air Force and Marine planes attacking the same target, and the effective flak suppression which permitted almost casual bombing with excellent accuracy by the Sky RAIDERS and Corsairs.”
The Sea War in Korea

Chapter 13. On the Line
The Boxer Drones (28 August 1952)

On 28 August 1952, the Navy began a series of guided missile operations by Guided Missile Unit 90 aboard the USS Boxer. Pilotless radio-controlled World War II “Hellcats” (F6F5) converted to guided missiles, equipped with a television guidance system, and loaded with high explosives, were conducted to the target by control planes.

Between 28 August and 2 September, six guided missile attacks were launched against selected bridges. This marked the first use of the guided missile in combat from carriers. Several missiles found their targets, and only one was abortive due to faulty control.
The Sea War in Korea
Malcolm W. Cagle and Frank A. Manson

Chapter 13. On the Line
The Destruction of the Aoji Oil Refinery (1 September 1952)

One of the few targets in northeast Korea suitable for a massed carrier air strike was the oil refinery at Aoji, a synthetic oil producing center in the far northeast corner of Korea, only eight miles from Russian territory and four miles from the Manchurian border.

Here was a target that only the Navy could strike under the accepted ground rules which specified “no flying” over the Manchurian arsenal-sanctuary. This tip of northeast Korea was beyond the effective reach of land-based fighters; and it could not be touched by B-29s without their overflying one or both of the borders. But from the mobile air bases of the Navy, the target was only a skip and a jump.

“Aoji was one of the main sources of gasoline for the Communists in Korea,” said VADM J. J. Clark, Commander of the Seventh Fleet.[10] “This huge petroleum center had been long spared because of its location. I knew that naval air could knock it out.

“I went to General Mark Clark, the Commander in Chief of the United Nations Command, and asked authority to strike it.

“After referring the problem to the JCS, General Clark gave me the go-ahead.”

Three carriers—Essex, Princeton, and Boxer—furnished two large coordinated strikes to smash the Aoji refinery on 1 September 1952. Essex launched 29 planes from ATG-2, Princeton launched 63 planes from CVG-19, and Boxer launched 52 planes from CVG-2.

Simultaneous naval air strikes were also directed upon an iron works near Munsan and the thermoelectric plants, transformers, warehouses, and supply buildings in Chongjin.

The strike on the Aoji refinery was routine and almost leisurely. No antiaircraft fire or MIG opposition was encountered, permitting repeated runs on the target.

The destruction of the refinery was complete, as indicated in these excerpts from the reports of the strike:

“Princeton: ‘. . . extensive damage to the refinery with smoke and flames visible to a great distance. . . .’

“Essex: ‘. . . completely successful with 100 per cent coverage and damage on all targets assigned. . . .’

“Boxer: ‘. . . No opposition was offered and Boxer planes inflicted heavy damage. . . .’

The total absence of antiaircraft fire from Aoji proved conclusively that the Communists had taken advantage of this “restricted” area’s nearness to Manchuria and Russia. By building industrial plants in this northeast corner, the Communists believed them to be inviolate.

This largest all-Navy air attack of the Korean War proved them wrong.
The Sea War in Korea
Malcolm W. Cagle and Frank A. Manson

Chapter 13. On the Line
The Raid on Kowon (8 October 1952)

The second instance of the Navy’s escorting B-29s during the Korean War occurred on 8 October 1952 (the first had been the raid on Rashin in August 1951).

“One of the worst flak traps in northeast Korea was the rail center at Kowon,” said Captain Ray M. Pitts, USN, operations officer of Commander Seventh Fleet.[11] “Every time we sent a strike in there, we ran into trouble, and dozens of pilots had been lost or suffered damage from the intense antiaircraft fire which surrounded Kowon.

“It occurred to our Seventh Fleet staff that a joint raid could be worked up by the Air Force and the Navy for hitting Kowon. On one of my trips to Tokyo, I went over to FEAF headquarters and told them about the Navy’s plan.

“Our idea was to send an escorted group of B-29s over Kowon. The Superforts would be loaded with 500-lb. VT-fuzed bombs.[12] Their bombing targets would be the antiaircraft guns around Kowon. Immediately after their attack, while the Reds were all torn up by the effect of this bombing, the Navy would send in a low-level strike right behind the Superforts. The Navy’s targets would be the marshalling yard and the supply and storage areas of Kowon. I offered to furnish Navy fighter escort for the B-29s.”

The plan was accepted. On 8 October 1952, a combined Air Force-Navy strike walloped Kowon.

Twelve F2H2 Banshees, led by Commander Denny P. Phillips, Commanding Officer, VF-11, from the USS Kearsarge, rendezvoused with ten Superforts over South Korea. The B-29s’ base altitude was 21,000 feet, with the three levels of Banshee cover at 25,000, 30,000, and 35,000 feet.

The Superfort attack was without incident, except for one brief moment during the approach to Kowon when a group of fighters was tally-hoed in the distance. Prompt recognition of the planes by LT Jack O’Donnell as F-86 Sabres, not MIGs, settled the pilots’ nerves.

The marksmanship of the ten B-29s was precise, and CDR Phillips recorded his squadron’s praise: “The Air Force was to be commended, both for perfection in carrying out the scheduled rendezvous and the excellence of their bomb drop.”

Four minutes after the B-29 attack, a large strike group from Air Groups 19 and 101, and Air Task Group 2, numbering 89 aircraft in all, bombed and rocketed Kowon. The rail, communication, troop, and supply facilities were successfully bombed and rocketed, with much reduced interference from the Kowon gun.

The Navy’s opinion of the attack system was high. Rear Admiral R. F. Hickey reported that the joint attack “opened the door to future coordination highly desirable in certain areas of enemy territory.”

The strike on Kowon, however, proved to be the last instance during the Korean War of the Navy escorting B-29s.

“The Kowon coordination was a great success,” said Captain Pitts, “but unfortunately, we were not able to do it again.

“It was my understanding that at this time our Air Force bombers were shifting to a ‘jet-stream’ type of single-plane, night-time bombing attack; they told me that putting any large groups of B-29s over Korea for a daylight attack wasn’t possible.”

The successful attack on Kowon and the teamwork between Air Force and Navy was summed up by a VF-11 historical report:

The raid was highly successful and all aircraft returned safely.
As the interdiction campaign dwindled, and the carrier strikes such as those just described blasted the few industrial targets in Korea, it was appreciated that a more fruitful employment for naval air power ought to be found. Under the self-imposed ground rules, it was obvious that the war might continue indefinitely unless some new way could be found to make the enemy return to and be more amenable at the truce table. October 1952 had seen an indefinite suspension of the truce talks, a recess which would last for 199 days (until 26 April 1953).

But a new target system or even a worthwhile old one for naval air power was hard to find. “Strategic” type targets had never been plentiful in North Korea, even in peacetime. The few that had existed had been hit repeatedly. After two years of war, new or worthwhile strategic targets did not exist. “Maximum air effort” targets, such as Chongjin, Aoji, Wonsan, Suiho, and Pyongyang, were few and had been frequently hit. The transportation networks, in the waning interdiction campaign, had been demonstrated to be unproductive target systems. Standard close air support missions (which had been resumed on 13 July 1952) were often disappointing along the stalemated and stagnant battleline. The Communists were so deeply and solidly entrenched that strafing attacks and the delivery of light bombs and rockets had little effect.

What, then, could the carriers do?

The answer was found by Vice Admiral J. J. “Jocko” Clark, the Seventh Fleet’s commander.

“In May 1952, shortly after I had taken command of the Seventh Fleet,” said VADM Clark, “I visited Korea at the invitation of General Van Fleet, and remained with him at his headquarters for several days. He arranged trips for me to visit the battlefield. On 30 May I visited Major General J. T. Selden, commanding the First Marine Division, at his headquarters south of Panmunjom. General Selden flew me up and down the frontlines in his helicopter and then took me to individual command posts in the frontlines by jeep.

“While flying behind our frontlines, I noticed many concentrations of our own forces that were not underground. These included supply concentrations, personnel housing, medical centers, truck parks, and ammunition dumps. As I flew over these areas, it occurred to me that if the enemy had the same air power and air supremacy that we enjoyed at the battleline, it would be impossible to have so much of our material freely exposed and in the open. I then reasoned that the enemy could not fight a kind of war he was fighting and still have all his forces, supplies, and equipment underground. Some of his stocks of supplies had to be above ground, out of sight and out of range of our artillery.

“On returning to the Seventh Fleet on 31 May, therefore, I asked Rear Admiral John Perry, Commander Carrier Division One, to obtain aerial photographs of the territory behind the enemy’s frontlines which was out of reach of artillery.

“Later, after the photos had been assessed, Perry reported a multitude of worthwhile targets all along the front.

“In the pictures, many underground tunnels were visible, and in some cases the enemy had even dug tunnels all the way through the mountains. Of course these fortifications and the stagnant condition of the frontlines made regular close air support strikes ineffective. But even though he might have a lot of his war supplies buried in the hills, a lot of it was exposed which would make excellent targets for the concentrated, surprise and pinpoint attacks of naval aircraft.”[13]

This was the origin of what came to be known as the “Cherokee Strikes,” named in Clark’s honor because of his Cherokee ancestry.
“The decision to call the new system ‘Cherokee’ may have sounded whimsical to some,” said Captain Ray M. Pitts, “but there was a definite reason for choosing it. We thought first of giving the system a name that would have tactical significance—like ‘carrier tactical strike.’ But we decided against that for we wanted a name that would mean something totally different from ‘close air support.’ You can’t hang an argument on a word like ‘Cherokee.’

“After Admiral Clark germinated the idea, the rest of the staff set to work to translate it into action.

“I made a trip through the lines in Korea to see if the general concept was workable. First, I checked with the key officers of our First Marine Division. I also made a swing around several battalion command posts discussing the proposed ‘Cherokee’ system with them.

“Next I went to Seoul to the JOC to clear the concept with the Fifth Air Force on the working level. There was nothing in writing.

“Then I went to Tenth Corps headquarters and talked to them.

“Everybody was enthusiastic and thought the ‘Cherokee’ plan would work and that it deserved a try.

“My own opinion was that the best place for our naval air power to destroy enemy supplies was at the front, not somewhere back in North Korea. At the front, every bullet, every round of artillery, every pound of supplies was twice as expensive to the Reds as it was crossing the Yalu. In my opinion, we could do more harm in a stalemated war by destroying the enemy’s logistics at the battleline.

“Upon my return, Vice Admiral Clark and I went over to Rear Admiral Hickey’s flagship. His operations officer (CDR Louis Hurd) and air intelligence officer (CDR R. P. Fuller) took a look at all the maps and photos I had brought back and they agreed we had found a worthwhile new target system.

“That was how the ‘Cherokee’ system got underway.”[14]

The first Cherokee strikes were flown on 9 October 1952. Three strikes, totalling 91 aircraft, were launched from Kearsarge, Princeton and Essex on troop and supply areas beyond the range of Tenth Corps artillery.

To the carrier aviators, the first Cherokee strike was simply “one more hop,” and there is little in either ship or squadron records to distinguish the day of 9 October. VF-821’s report mentions the day in one brief sentence: “Flak-suppression hop of eight F9Fs led by CDR D. W. Cooper.” Another Essex squadron history, VF-871 says simply, “eight planes hit troop bunkers.” CDR L. W. Chick’s squadron, VA-55, records the results of two missions that day without embellishment: “Twelve ADs destroyed eight mortars, three 37-mm. gun positions, 400 feet of trench, eight bunkers, and started two fires;” and “eight ADs destroyed two artillery positions and three bunkers while covering 90 per cent of the target area.” Kearsarge’s Skyraider squadron, VA-702, recorded that “eleven aircraft hit a supply area twenty miles north of the Punchbowl.”

“By mid-October,” continued Vice Admiral Clark, “Task Force 77 had gradually shifted a large proportion of its strike effort to the Cherokee program until about 50 per cent of its air attack potential was being devoted to this type mission. General Van Fleet enthusiastically approved the program and authorized the division commanders to move their bomblines temporarily to include worthwhile targets for the duration of the strike.”

Especially happy was the foot soldier in the line. To him, the various concepts of close support, its mechanics, and its methods of control, were meaningless. To him, also, the sight of a large number of planes, from whatever source, demolishing enemy targets with heavy bombs was an exhilarating tonic.

After the first few Cherokee strikes, however, there was confusion at the JOC and concern at Air Force headquarters. The Fifth Air Force in Korea looked on the new missions as regular close air support, while the Far East Air Force headquarters was concerned lest the new system jeopardize Air Force control of air power over the frontlines.

Lieutenant General Otto P. Weyland, FEAF, informed Vice Admiral Clark that he did not believe that the FAFIK controllers were capable of handling large numbers of strike aircraft loaded with large bombs on missions
so close to friendly lines. He added that in recent months, there had been seven cases of unidentified but friendly aircraft inadvertently dropping bombs on the friendly side of the front. None of these was definitely attributable to the Navy, he said, but such accidents did emphasize the need for proper liaison and control.

"The initial confusion," said Vice Admiral Clark, "was one of simple misunderstanding. My only objective in originating and planning the Cherokee hops was to utilize the striking power of the Seventh Fleet for the infliction of the greatest possible damage upon the enemy with the least cost to our own forces.

"The misunderstanding was due to two things: first, the basic difference between a ‘Cherokee’ type strike and a regular close air support mission; and second, the method of controlling them."

The Cherokee strikes were different from close air support strikes in several respects. In the case of close air support, missions were not pre-briefed, the planes carried a standard bomb loading, and only eight planes could be handled over any particular target at one time. No flak-suppression planes accompanied the close air support aircraft. Moreover, the close air support aircraft were required to remain on call for considerable periods of time. The flights checked in with the frontline control parties and were often controlled by the light Mosquito aircraft who spotted their targets and directed their attacks. Finally, close air support targets were those limited to the area between the main line of resistance and the bombline. Good visibility was required to identify targets and deliver close air support.

The Cherokee strikes, on the other hand, were heavy air power missions outside of the bombline. They were pre-briefed, pre-arranged strikes, carrying weapons specially selected for the target. The number of planes over the target was unlimited because no individual control was needed. The target was selected from intelligence or photographic interpretation, and at the pre-briefing all pertinent information available was given to the pilot. The Cherokee strike aircraft used jet aircraft loaded with antipersonnel bombs for flak-suppression. Artillery, when available, was also used to augment the flak-suppression. The Cherokee strikes proceeded to the target as an organized unit, and the timing of the attacks called for delivery immediately upon arrival, with a minimum of time on station.

The misunderstandings of Cherokee were satisfactorily resolved on 17 November at a conference between Eighth Army, Commander Seventh Fleet, and Fifth Air Force. It was agreed that close air support missions would continue as before, that the Cherokee strikes were different, and would not interfere with them. However, the Cherokee strikes henceforth would be coordinated through FAFIK, would check in and out with the TACP[14A] of the Army Corps in the area, and would use Mosquito type aircraft to mark the targets. Eighth Army also agreed to move the bombline position closer to the frontlines on specific occasions in order to permit the naval aircraft to strike. In some cases the bombline was moved as close to friendly troops as 300 yards—a rare tribute to the accuracy of the naval airmen.

The use of the Cherokee strikes at the battleline reached its peak in November and December, with the Air Force joining the Cherokee campaign.

The opinions of the pilots of Task Force 77 with regard to the Cherokee program ran to each end of the enthusiasm-apathy scale. Those who were fortunate enough to see tangible evidence of their attacks could appreciate why the “ground-pounders” in the frontlines were enthusiastic. Those who saw or heard no results of their work—and pilots often saw little because of the smoke and dust—were unimpressed. VA-702 recorded this opinion: ‘Much enemy flak was encountered on these missions, and pilots usually considered a Cherokee strike as ‘hot’. The strikes are very effective in knocking out enemy artillery pieces.”

On 22 November, the Essex and Kearsarge teamed up for two coordinated Cherokee missions in the Kumwha sector of the front witnessed by a distinguished group of observers: General Hoyt Vandenberg, Commanding General U.S. Air Force; Lieutenant General O. P. Weyland, Commanding General Far Eastern Air Force; Lieutenant General Glen O. Barcus, Commanding General FAFIK; and Lieutenant General James Van Fleet. This enemy sector had come to have the name “Artillery Valley” because of the intense AA fire which was
frequently poured into UN lines. Lieutenant General R. H. Jenkins, Ninth Corps Commander, moved the
bombline south about 5,000 yards to permit the Task Force 77 aircraft to strike. Click here to view map

The first strike on “Artillery Valley” was credited with destroying three artillery pieces and five enemy
bunkers, and damaging four artillery pieces and five enemy bunkers. The second strike destroyed twenty-five
personnel shelters and damaged ten more. The frontline controllers reported that ninety per cent of the Navy
planes’ 1,000-pound bombs were on target.

“It was impressive to see those divebombers and fighters dive so steeply,” said General Van Fleet. “The
heavy bombs they carried (2,000 lbs.) were really mountain busters, and even from our distance the whole earth
shook.”

After watching the strikes, General Van Fleet radioed the Fleet:

“I witnessed two magnificent strikes totalling thirty-six aircraft at approximately 1500 today. Present
were Generals Vandenberg, Weyland, and Barcus. Congratulations on the accurate and breathtaking performance.
Hope all pilots and planes returned safely. Van Fleet.”

“By a combination of Navy and Air Force Cherokee strikes and Army artillery efforts,” said Vice
Admiral Clark, “the enemy’s gun potential in the Kumwha area was reduced to about 10 per cent of what it had
been.”

The new strike program steadily grew in proportion until more than half the naval air effort—
approximately 2,500 sorties per month—was being applied along the frontlines—either as close air support
missions (nicknamed “Call Shot”) or as pre-briefed strikes (nicknamed “Cherokee”). The period from 2
November to 25 November was typical: 522 Cherokee missions, and 212 Call-Shot sorties.

“On several occasions,” said Captain Ray M. Pitts, “the Cherokee program was credited with disrupting
several major buildups and attacks by the Communists north of the bombline in the fall of 1952.

“On one occasion, I was attending a briefing at First Marine Division headquarters. During the briefing,
it was revealed that there was an enemy buildup in their area, and they had reports of a limited Communist push.

“This enemy concentration seemed an ideal target for a Cherokee, so I copied down the coordinates of
the area and fired a priority despatch to Commander Seventh Fleet for information of Commander Task Force 77.
“Admiral Clark verified the mission to CTF 77 by voice radio. Next morning at first light, a Navy jet
photo plane took pictures of the area.

“The developed pictures corroborated the buildup; by 1030 that same morning, a heavy Cherokee strike
was on its way.

“Later, our forces captured some prisoners who told us that this raid had taken a heavy toll; that the
Chinese were burying their dead the rest of the night, including their general.”[15]

The table of total damage by the Task Force 77 aircraft for this period was as follows:

Supply Areas: 5 destroyed, 3 damaged
Bunkers: 56 destroyed, 102 damaged
Trenches: 680 yards destroyed, 435 yards damaged
Mortars: 40 destroyed, 15 damaged
Artillery: 34 destroyed, 31 damaged
Personnel Shelters: 34 destroyed, 7 damaged
Troop Casualties: 59
Caves: 1 destroyed, 5 damaged
Buildings: 6 destroyed
Rail Cuts: 6 destroyed
Railroad Cars: 1 destroyed, 4 damaged
Usually, only estimates of damage to the enemy fortifications could be given, except on the occasions when a hill or a section of the enemy line was captured. The Communist entrenchments were well constructed and deeply tunneled into the rocky Korean hills. As many as six openings led from bunkers. The bunkers were strongly built, usually fifteen feet in diameter.

On such deeply-dug entrenchments, only the heaviest bombs proved effective. Light bombs, even napalm, did little damage to the tunnels, bunkers, and dugouts. The 1,000- and 2,000-pounders carried by the Corsairs and Skyraiders, however, often collapsed the tunnels and bunkers, burying alive the Communist soldiers therein. On other occasions the terrific blast of these bombs was sufficient to kill. Dead Communist soldiers were sometimes found with their brains oozing from their ears as a result of the heavy blasts.

The Cherokee strike pilots also dropped heavy bombs fuzed for delays of up to twelve hours in order to harass and hamper the enemy for long periods during the nights.

“On one day in early December in the ‘Iron Triangle’ area,” said CDR R. P. Fuller, Air Intelligence Officer of Carrier Division Five, “TF-77 planes had twenty-seven secondary explosions from Cherokee strikes. One ammo storage blew so high that the smoke rose up to 2500 feet.”

As the year 1953 commenced, the Cherokee program hit a snag.

“The danger of bombing friendly troops in the Cherokee program was always recognized,” said Vice Admiral Clark, “and every reasonable precaution was taken to prevent it. Target location and identification was very difficult because of the similarity of terrain, the profusion of ridges, ravines, canyons and streams along the battlefront. This problem was intensified by the snows and fog of wintertime.”

During January to September 1952, there had been no less than 63 instances of bombs having been dropped behind friendly lines. Of the 63, the Fifth Air Force was responsible for 39 and the Marines 18, and the Navy was thought accountable for the six unidentified flights.

“In December and January,” continued Admiral Clark, “bombs were dropped on four occasions inside friendly lines. Newspaper correspondents happened to be on the scene and published detailed accounts of the mishaps. One of them occurred on 21 December, when a CTF 77 airplane accidentally released a bomb on Republic of Korea troops. One man was killed and four injured. Again on 17 January, two bombs were dropped by early morning night-hecklers which killed three ROK Army soldiers and wounded eight others.

“In view of the publicity, General Clark activated an inter-Service board to investigate the incidents and to assign Service responsibility.

“Since the Fifth Air Force in Korea was charged with the sole responsibility for the prevention of friendly bombings,” said Admiral Clark, “a campaign was immediately instituted by them to prevent recurrence. The Fifth Air Force instituted a policy that any air group commander whose planes were involved would be relieved, and the pilots involved recommended for court-martial. As a result, Fifth Air Force’s participation and interest in the Cherokee strikes dwindled, and to some extent the Navy’s did also. This was unfortunate, because it slowed down the use of Cherokee strikes at the battleline for several weeks.”

By March 1953, however, control procedures, careful briefings, and improving weather permitted a return to heavier emphasis on Cherokee support to the frontlines. Planes with missions at or near the frontlines were controlled by radar until they were definitely north of the bombline.

Cherokee targets were selected jointly by the Commander Task Force 77 planning officer and Headquarters Eighth Army in a new attempt at closer liaison and control.

On 1-10 March, Admiral Hickey and his staff toured the frontline areas to obtain the Army reactions to the Task Force 77 attacks.

The general Army opinion of the heavy Cherokee strikes continued to be excellent. The strikes, they said, usually demolished the targets. While the results were not always visible or measurable, the program was undoubtedly hurting the enemy and reducing his attack potential. In fact, several of the Cherokee missions had
blunted and even prevented enemy attacks.

“I was on this frontline inspection trip,” said CDR R. P. Fuller, “and every single Army man and Marine we spoke to, from private to general, praised the Cherokee strikes. ‘Can you imagine’, they would tell us, ‘what our reaction would be if the Reds had their airpower striking us here in the frontlines?’

“The best evidence that the Cherokee program was hurting the enemy was his AA reaction,” continued Fuller. “The Communists never wasted ammunition, yet they often exhausted their local stores of ammo trying to counteract the Cherokees.”[17]

The Army suggested that naval flight leaders, in addition to bringing their own jet fighters for flak suppression, might want to request friendly artillery fire to keep the Communists’ heads down. The Philippine Sea’s pilots were quick to recognize that the antiaircraft suppression effect of artillery fire, when it could reach a Cherokee target, often was superior to that of the jet fighters.

Lieutenant General James Van Fleet, Eighth Army’s commander, had an excellent opinion of the effectiveness of the Cherokee program. Indeed, the General visualized it as having a potential for something more than defensive strikes in defense of a static front.

“The Cherokee strikes really clobbered the enemy,” said General Van Fleet, “and would have been better if we had just put on a ground attack with them. The Cherokee program was a system which, properly used, could have broken the sit-down; they were heavy strikes of concentrated effort delivered over a short period. If followed up by ground action, they might have caused a break-through or caused the enemy to react violently to restore his lines, consuming his reserves of manpower and ammunition until he was exhausted over a period of a week to ten days. Then the ground armies could have been released to produce a war of movement instead of a war of digging in.”

The Cherokee strike program continued for the remainder of the war.
One of the most dramatic incidents of the Korean War happened on 18 November 1952, when U.S. Navy pilots encountered Russian MIGs.

On this day, Task Force 77 (under the command of Rear Admiral R. F. Hickey) was operating in far northern Korean waters, engaged in a two-day “maximum air” strike effort on targets in North Korea, principally against industrial targets in Chongjin, Kilchu, and Hoeryong, a city on the Yalu River. On the previous day, Task Force 77 had launched five coordinated air strikes on Chongjin, and the coastal city had also been bombarded by the battleship *Missouri* and the heavy cruiser *Helena*.

On the 18th of November, as on the day before, the task force was operating southeast of Chongjin (approximately 90 miles from Vladivostok), striking Hoeryong. The task force was in the same sea area that it had used on many previous occasions.

Cruising at 13,000 feet above the task force, centered around the carriers *Oriskany*, *Essex*, and *Kearsarge*, was a team of four F9F5 Panther aircraft[17A] from *Oriskany*’s VF-781 Pacemaker squadron (LCDR S. R. Holm).

The Panther pilots were:
- LT Claire R. Elwood—Team Leader
- LTJG John D. Middleton—Wingman
- LT Elmer R. Williams—Section Leader
- LTJG David M. Rowlands—Wingman

Because of a fuel boost pump failure in LT Elwood’s plane, the four Panther aircraft had descended from normal combat air patrol altitude to the 13,000-foot level.

Shortly after noon, various groups of unidentified aircraft crossing ahead of the task force from northwest to northeast were detected by the task force on radar at distances of from 40 to 100 miles.

At 1335, however, a group of unidentified aircraft, estimated at eight, was plotted on a direct approach toward the task force.

The *Oriskany*’s air controller alerted the CAP and ordered a vector and climb toward the unknown aircraft.

Because of his malfunctioning engine which forced him to remain at a lower altitude, Elwood detached his second section (LT Williams and LTJG Rowlands) to make the contact. Williams and Rowlands continued the climbing vector. At approximately 1350, upon reaching 15,000 feet, Williams tally-hoed seven condensation trails high above him. The aircraft were MIGs. At the time of contact the planes were approximately north of the task force, 45 miles away. The fight which followed lasted a furious and confused eight minutes.

In a loose, abreast formation, the seven silver-colored MIGs passed high above the two Panther pilots, made a descending turn, and split into two groups—one four-plane group and one three-plane group—in an attempt to box in the two Navy planes.

“At this point,” said LT Williams,[18] “we lost sight of the MIGs because their contrails had stopped. However, we continued our climb to 26,000, and upon levelling off I spotted four MIGs making a flatside attack on us from the ten o’clock position.

“As the four came toward us and reached firing range, I turned hard left into them, spoiling the effectiveness of their run, even though neither Rowlands nor I was able to bring our own guns to bear.
“The four MIGs recovered to our right, in a sort of strung-out formation, with the fourth MIG especially far back.

“I continued my wrapped-up turn, and came on around for a tail shot at this last MIG. I commenced firing from 15° off his tail.

“My first burst sent him into an uncontrolled spiral. Dave Rowlands followed this crippled MIG down to 8,000 feet, where he left it smoking in a deep graveyard spiral. Later, gun camera film confirmed the kill of this MIG.

“Meanwhile, the other three MIGs pulled up and away from me, and split into a pair and a single in an attempt to get on each side of me.

“The pair of MIGs then made an attack. I rolled into a sharp turn, and got a head-on burst at the second one.

“I kept turning into subsequent attacks,” continued Williams, “and on several passes, I was able to reverse my turn in time to get a shot at an overshooting MIG. In one such counter I scored some hits, for in the gun camera film which was later developed, parts could be seen flying off. Either by my gunfire or this pilot’s deliberate action, the MIG ran out his dive brakes and decelerated so rapidly that I had to pull away sharply. I only missed a collision with him by a narrow margin.”

As Rowlands rejoined the fight from below, a MIG promptly made a head-on attack on him. The dogfight became a melee. At some unknown time during the dogfight, the three other MIGs joined the battle.

“This MIG started firing at me from ’way out,” said Rowlands, “and then broke off his attack in a steep-climbing turn. By now, there seemed to be MIGs all around me.

“I countered each attack as best as I could. On one of them, I succeeded in getting a MIG in my sights and fired a long burst. He started smoking, but a split second later my attention was diverted by another MIG making an attack on me. He and I wound up in a tight circle across from each other, and neither of us able to get on the other’s tail. Finally, the MIG simply leveled his wings and climbed very rapidly away from me.”

Until now, despite all the flying bullets, the two naval aircraft had not suffered a hit. Both Williams and Rowlands were operating their engines at 100 per cent power.

“At this point,” continued Williams, “I succeeded in getting another MIG burning. I stayed on his tail, trying to finish him off, when I spotted another MIG coming up my tail. As I rolled into a hard right turn, I felt my plane shake.”

A high explosive shell had struck Williams’ plane, severing the rudder control and knocking out the aileron boost. With the MIG still on his tail, Williams dived his crippled plane for the clouds, 10,000 feet below.

“The MIG stayed right behind me in a tight trail position,” said Williams, “and continued to fire at me even as we went into the clouds. My only evasive maneuver was a series of zooms—applying hard forward and back pressure on the stick control.”

Meanwhile, a third Navy Panther was climbing to join the fracas. At his request, LTJG Middleton was detached from his leader, LT Elwood, and climbed to join the scrap involving his two squadron friends.

Upon reaching the fight, a MIG made a head-on run at Middleton. Simultaneously, Middleton saw Williams, a MIG, and Rowlands diving for the clouds. Rowlands, out of ammunition, had fallen in alongside the MIG, flying a loose wing position on it in an effort to draw him away from Williams.

“The most unbelievable part of the incident,” said Middleton, “was the sight of Rowlands sitting so close on a MIG’s tail with the MIG firing away like mad at Williams.”

While Middleton dove toward his teammates to render aid, a second MIG attacked him, but his shots missed.

Following this attack, the MIG reversed its course and the pilot either lost Middleton in the sun or became engrossed in getting ready to make an attack on Rowlands. In either case, Middleton was now in position...
for a full-deflection shot at his attacker. He commenced firing from far out, and continued firing as the MIG’s superior speed left his Panther tailing behind. Middleton saw the enemy pilot bail out, and the MIG crashed into the sea.

“After watching the enemy pilot land in the water,” said Middleton, “I orbited around him with my emergency IFF on, as I was convinced he would be of more benefit to us alive than dead.”[19A] “I am convinced that Middleton saved my life,” said Rowlands, “as the MIG he shot down was making a run on me.”

After reaching the safety of the clouds, the three Panthers were given a radar steer to return to the task force. All three pilots landed aboard Oriskany without further difficulty.

As the task force retired toward the south at the conclusion of the two-day effort, all ships in Task Force 77 were a buzz of activity and talk. Radar plots and logs were exchanged; Williams, Rowlands, and Middleton were pumped for observations, opinions, and comments.

That the MIGs were Russian ones from the Vladivostok complex there seemed little doubt.

“Every time we had taken the task force up that far north before, or even just a battleship, we got some kind of reaction in the form of airplanes rising up from the vicinity of Vladivostok,” said VADM J. J. Clark, Commander Seventh Fleet aboard Missouri. “This was plain from many radar plots. Usually, they seemed to be just flying some sort of barrier patrol as protection for their own area.

“On this occasion, however, there were about 60 or more images on the radar scope at various times during the afternoon. The bunch which tangled with our planes were headed straight for the Fleet, and only 35 to 40 miles away when the initial contact was made. I can only surmise that they had orders to attack.”[20]

Said the Air Intelligence Officer of ComCarDiv-FIVE, CDR R. P. Fuller, “At the time of this melee, there was one division of F9F2s and one division of F2H2s from the Kearsarge Air Group airborne and less than two minutes away. Why they were not vectored into the scrap, I’ll never know.”

Both Williams and Middleton were convinced that the MIG pilots had not used the superior points of their aircraft to advantage.

“The poor showing of the MIGs was not wholly due to inexperience,” said Williams, “although that was a factor. They seemed to use good offensive tactics, but their gunnery was not good. Part of their failure to shoot us down was no doubt wild shooting. But I believe another reason for their poor marksmanship was the inferior gunsight with which the MIG was equipped.”

Rowlands was in agreement with his team leader.

“The pilots of VF-781 concluded that we were very fortunate to have come back with our whole skins,” said Rowlands. “The MIG pilots were inexperienced and sacrificed their aircraft’s advantages without hesitation. As for their gunnery, theirs was about like mine—wild. All of them fired too far out for accuracy.”

The Navy-MIG incident was still a conversation piece during the visit of the newly-elected U.S. President, Dwight D. Eisenhower, to Korea in early December, three weeks later.

“On 3 December,” said Vice Admiral Clark, “I was invited by General Van Fleet to his headquarters in Seoul to meet the President-elect, Dwight D. Eisenhower. At the suggestion of Admiral Briscoe, I took along in my plane the three Oriskany pilots—Lieutenants Williams, Middleton, and Rowlands—who had fought the Russian MIGs so that they would be available in case Mr. Eisenhower might wish to see them. As it happened, he did.

“When we arrived in Seoul at the Eighth Army Headquarters I told General Van Fleet I had brought them along, and he said he’d tell ‘ Ike’ they were present. The President came out, shook hands, and invited them into his private suite. Present were the Secretary-designate of Defense, Mr. Charles E. Wilson, Admiral Radford, Admiral Briscoe, General Van Fleet, and myself.

“While the three officers were telling their story to the President, in walked General Weyland,
commanding the Far East Air Force, and Lieutenant General Barcus, commanding the Fifth Air Force. It was at once realized by everybody present that the Navy had stolen the show.”

The naval pilots were impressed by the knowledge of air warfare that the President displayed, and his desire to know what the pilots wanted in their combatant aircraft.

“President Eisenhower congratulated us,” said Rowlands, “and was quite interested in just where the fight started and who had started it. He also wanted a firsthand account of the fight.”

“The President’s reaction to our story was one of elation,” said Williams, “but what impressed me most was his desire to get our opinion and evaluation of our present aircraft and what we pilots wanted in performance of future aircraft.”

Later that evening, Vice Admiral Clark took LT Williams and his wingmates to Admiral Radford’s quarters for a further interview.

“Admiral Radford was critical of our pilots becoming separated during the dogfight,” said Vice Admiral Clark, “because, according to accepted combat doctrine, it is basic that fighter planes stick close together for mutual protection. I had to agree with Admiral Radford, except for the final score; that was in our favor.”

Minor though it was, this encounter had several results and repercussions. It had demonstrated the definite superiority of the MIG over the most advanced Navy fighter then operational in the Fleet: the F9F5. Only the superior training and better marksmanship of the naval pilots had evened the score. Official records credit Williams and Middleton with the destruction of one plane each, Rowlands with one damaged. This is undoubtedly conservative. Later compilations of radar plots and pilot interviews indicated a strong possibility that only one or possibly two of the original seven MIGs returned to base. Five or perhaps even six were either shot down directly, damaged so severely as to crash, or ran out of fuel on the way home.

Another result of the incident was to re-emphasize the basic purpose of the fighter: air-to-air combat. The peculiar nature of the Korean War and the usual employment of Navy fighters had unconsciously subordinated their primary function to bombing, rocketing, and flak-suppression.

Also, the scrap had partly counterbalanced two recent Task Force 77 losses to enemy MIGs. On 4 October 1952, LT Eugene F. Johnson, a VF-884 Corsair pilot aboard Kearsarge, had been shot down by a MIG near Wonsan. Johnson’s was one of seven F4Us attacking Yongpo. While in a dive, he had been attacked by four MIGs, and his plane was seen to crash.

Three days later, a second Navy pilot had been lost to MIGs. On 7 October 1952, near Hungnam, a Princeton F4U pilot, ENS John R. Shaughnessy, VF-193, had been set afire and shot down by a MIG. Shaughnessy had succeeded in parachuting clear of his burning Corsair, and been picked up by the USS Boyd (DD-544). While in the water, Shaughnessy had become entangled in his parachute shroud lines and been nearly drowned when rescued. He expired on board the Boyd.

“These MIG attacks followed no special pattern,” said VADM Clark. “Each time they appeared, the Task Force would send our jet combat air patrol out to catch them, but when our jets were on station, the MIGs failed to appear. Indications pointed to the fact that the Communists were using radar control for these MIGs. As a result of these attacks, Task Force 77 began a program of destroying these enemy radar stations which continued through the rest of the war as the opportunity afforded.”

To many of the naval airmen, the destruction of the MIGs on the 18th of November had partially evened the score.

Finally, the battle had tested the air defense capability of a carrier task force.

In the official report of Commander Carrier Division Five, Rear Admiral R. F. Hickey reported that the task force communications and radar performance had been “excellent” and the “coordination between ships’ CIC’s (Combat Information Centers) highly efficient.”
During the last several months of the Korean war, the Communist enemy adopted a tactic which long went uncountered—the use of “Bedcheck Charlies.”

The Bedcheck Charlies were antique aircraft of two types—YAK-18 Soviet-built training planes (a low-wing, single-engine aircraft with a cruising speed of 100 knots and a cruising radius of approximately 200 miles); or PO-2s (a Russian-built wood and fabric bi-plane with a top speed of 110 mph). Each of these aircraft was capable of carrying one or two small bombs.

At odd intervals on dark nights, singles or small groups of YAK-18 or PO-2 aircraft would fly from grass fields in North Korea over the battleline or to the Seoul area, flying as low as possible to reduce the possibility of radar detection. Their wood and fabric construction made radar detection difficult. Buzzing low over the city in the darkness, these raids succeeded in arousing the sleeping city. Air raid alarms would be sounded; in most cases searchlights would be lit off; and during the course of these nocturnal maraudings, the Bedcheck Charlie would drop one or two small bombs. The damage was usually trivial and often nonexistent. But the harassment and nuisance value was far from insignificant.

In May and June, the Reds became increasingly bold and succeeded in doing some damage. On 3 May, a group of Bedcheck Charlies dropped nine bombs in the X Corps and I ROK Corps areas along the battleline, but no casualties were reported. Shortly after midnight, 26–27 May, a group of Bedcheck Charlies (estimated at six PO-2s) succeeded in dropping four small 100-pound general purpose bombs and eight 50-pound artillery shells on K-14 airfield near Inchon, puncturing the gasoline pipeline. On the night of 2 June a group of Bedcheck Charlies was reported over K-6 airfield (near Pyong-taek, 30 miles south of Inchon), obviously feeling for the neat lines of parked airplanes. This was the greatest danger of these raids—the possibility that the Bedcheck Charlies might locate and inflict severe damage to aircraft parked on the South Korean airfields, some of which had little or no suitable AA defenses for low, slow-flying, wooden training planes.

The night of 8 June saw a nine-plane raid on Seoul which, according to newspaper reports, killed two persons and injured eight. The first bomb hit only 1,000 feet away from President Syngman Rhee’s residence, while a second hit a school building 400 yards away. Another bomb struck in front of the Seoul press billets, and flying glass slightly injured a *Life* magazine photographer. Many thought the attack on Rhee’s residence was an attempt to make the ROK President more amenable to the impending truce.

On the night of 16 June, a 15-plane Bedcheck Charlie raid succeeded in bombing a petroleum, oil, and lubrication dump near Inchon, torching 52,000 gallons of petroleum products. The raid commenced at 10:30 P.M. and continued for two hours, as searchlights and AA fire criss-crossed the skies. Smoke and flames from the burning 40-acre area were visible the next day for 40 miles. It was the Seoul area’s fifth raid in nine nights.

To combat these raids, there were not available either to the Fifth Air Force in Korea or the First Marine Air Wing planes which were slow enough to destroy these trainers and which were also equipped with the necessary night-fighter electronic equipment to detect them. The jet-type night fighters employed (FAFIK was flying F-94s; the Marines, F3D Skyknights) could not slow down sufficiently to engage the Bedcheck Charlies. On a few occasions a team of flare-dropping aircraft and a T-6 “Texan” trainer had been launched while a Bedcheck Charlie raid was in progress, with the hope that they could illuminate and destroy the pestiferous planes; but the system never worked.
“When I learned about these enemy night raids,” said VADM J. J. Clark, Commander Seventh Fleet, “I asked my staff if there wasn’t something the Navy could do to lend the Air Force a helping hand.

“The operations officer for CarDivOne, CDR John P. Conn, suggested that we send Corsair F4U5N night fighters ashore to assist in combating these nuisance raids. Since our planes were Corsairs, and the Marines had an airfield at K-8 from where they operated Corsairs, the F4U5Ns could be based at that airfield, which was 35 miles south of Seoul.

“Without further ado, and not waiting for him to accept, I sent a message to Lieutenant General S. E. Anderson, commanding the Fifth Air Force, advising him that a detachment of Corsairs from the Fleet was on its way to report to him in an effort to knock out these Bedcheck Charlies. Two F4U5Ns were sent in from each carrier.

The Navy night pilots (all from VC-3) received a week’s familiarization. On the night of 29 June, LT Guy P. Bordelon, attached to Princeton, shot down two of the Bedcheck Charlies.

“Admiral Briscoe told me about this when I arrived in the office on the 30th for a routine visit,” said VADM Clark. “I immediately decided to award LT Bordelon a Silver Star Medal for his feat, and since I was scheduled to fly back to Korea that night, I decided to go to K-6 to witness the operations of our night fighters and to lend encouragement to their efforts.

“As we approached the field at about 2230 that night, we were ordered to land at K-3 because of an air raid. We turned around and flew to K-3, but that field was blanketed by heavy fog. We finally landed at 0130 next day at Taegu.

“Afterwards we learned that the reason for the alert at K-6 had been another enemy raid. LT Bordelon had shot down two more night fighters. Then and there, I decided to present him with a gold star in lieu of a second Silver Star.

“Accordingly, I flew to General Anderson’s headquarters in Seoul. Both the feats of LT Bordelon had been confirmed by the radar track kept by the Air Force, although no wreckage of the downed planes was ever found. I then flew to K-6 where luncheon was given in honor of LT Bordelon by Major General McGee, USMC, under whose immediate jurisdiction the feats had been accomplished, and who had flown over for the occasion from K-3. Bordelon told us that when he had made contact with the enemy planes, each of them began to take violent evasive action.

“In a traditional ceremony I presented Bordelon with both awards at the same time, promising him, or anyone else who shot down five planes at night, a Navy Cross.

“On the night of July 17th, Bordelon succeeded in bagging his fifth enemy plane. Since his operations were conducted under General Anderson, commanding the Fifth Air Force, after obtaining authority from the Secretary of the Navy, I asked the General to make the presentation of the Navy Cross at once. This he did at an appropriate ceremony at Fifth Air Force headquarters.

“LT Bordelon had attained for himself the distinction of being the first and only night ace in the U.S. Navy. As a result of his effort, enemy night raids on Seoul ceased, and the city was able to sleep once more.”
Chapter 13. On the Line
The Truce Talks Resumed

During the winter months of 1952-1953, the stalemated war dragged on in the same monotonous pattern, with little change in the battleline, with little ground action other than patrol activity, and with little hope for an end to the bleak and bitter war.

January at Panmunjom saw occasional meetings between liaison officers, at which the Communists made false charges about overflights and bombardments of the neutral zone. The fighting along the front consisted only of harassing probes and limited objective offensives. By Presidential order, the island of Formosa was de-neutralized.

February saw little change, with continued limited activity along the front. Late in the month, there was a pickup in close air support by Seventh Fleet aircraft. Typical of this work was a mission on 21 February 1953. Six Valley Forge VF-54 ADs, led by their skipper, CDR Henry J. Suerstedt, Jr., were diverted from a routine close air support mission and put to work on a hill in Ninth Corps area where UN troops were attempting to regain control of the crest. Communist troops were dug in on the defilade side of the crest and artillery could not reach them. Suerstedt’s ADs made runs parallel to the front of the UN troops, dropping 500- and 1,000-pound bombs on the Communist side of the ridge at distances reported by the “Mosquito” as only 75 yards from the UN troops. Following these runs, three of the ADs strafed. The ridge was reported as taken. The “Mosquito” reported 100 per cent accuracy and ordnance effectiveness: sixteen bunkers destroyed or severely damaged, and two caves destroyed, along with many enemy troops.

March saw a die-hard Communist riot in the POW compounds at Yongcho and Koje Islands, and several hard attacks by the Reds, but with no exchange of real estate, however.

April and springtime, however, brought new developments.

The major event was a resumption of the deadlocked truce talks. To a UN invitation to exchange seriously sick and wounded prisoners in accordance with the Geneva Convention, the Communists surprised the world by saying “Yes.” On 6 April, therefore, talks were commenced at Panmunjom which led to agreement on 11 April. “Operation Little Switch” commenced on 20 April. Six thousand six hundred and seventy Communist personnel and 684 UN prisoners (149 of them U.S.) were exchanged.

Spurred by this speedy agreement, steps were taken to reopen the main truce talks.

On 26 April, following the exchange of sick and wounded, the 199-day recess of the armistice negotiations was ended. Prospects that an end to the stalemated conflict might be imminent suddenly became brighter.

At sea, April Fool’s Day began with Task Force 77 repeating the oft-repeated tasks once again. The rail lines from Kilchu to Tanchon were hit. Close air support was given to U.S. IX Corps. Naval gunfire spot was furnished for still another bombardment of Songjin. Targets in Wonsan, including the harbor guns, were struck. One F9F5 from VF-51 (flown by LT E. J. Thabet) was hit by flak. Thabet parachuted to safety over Wonsan, being rescued by LST helicopter.

On 13 April, the beleaguered city of Chongjin was battered in another maximum air-gun strike. One hundred and nineteen sorties from Philippine Sea’s Carrier Air Group Nine and Oriskany’s Carrier Air Group Twelve hit the city’s transportation network and its mining and ordnance areas. Pilots reported the destruction of a communications center in a harmless-looking bank building.

April 21st was “Boy-San Day,” when the pilots of Princeton and Oriskany struck targets of their own
preference. Two hundred and twenty-three sorties were flown. Even so, the targets were much the same—the supply and industrial areas of northeast Korea, the Hodo Pando guns of Wonsan, a jet sweep past Pukchong, and naval gunfire support and Cherokee missions. The best result, perhaps, was the fact that no pilots were lost.
As the main armistice talks were reopened, there was only one major obstacle to a truce: what to do with the 114,500 Chinese and 34,000 North Korean prisoners who refused to return to their homeland. The Communists insisted they had to be returned—using force if necessary. The UN’s position was that no prisoner who refused repatriation should be returned to Communist control against his will. The government of the United States refused to compromise on this cardinal principle. “... The principle that force shall not be used to compel resisting prisoners to go home excludes every form of coercion. We cannot, consistently with that principle, create a situation where such persons are offered no alternative to repatriation other than indefinite captivity or custody.”

For weeks, the truce talks pivoted on this thorny issue. At the resumption of the plenary sessions the Communist negotiators made a proposal that all prisoners not directly repatriated be sent to an agreed neutral state where, for the succeeding six months, representatives of the states to which they belonged would “explain” to them matters related to their return. The disposition of any remaining nonrepatriates after the six months had passed would be referred to the political conference called for under the draft Armistice Agreement. Subsequent negotiations centered upon three matters: the choice of a suitable neutral state; the question whether the prisoners who did not accept repatriation should be turned over to the neutral state outside Korea, which the United Nations Command considered a difficult and unnecessary operation; and the length of time the nonrepatriates should remain in neutral custody, after which the UN Command insisted they must be released to civilian status.

On May 7 the Communist representative submitted a revised proposal providing for establishment of a neutral commission, to be called the Neutral Nations Repatriation Commission and to be composed of the four states already agreed upon as members of the Neutral Nations Supervisory Commission—Czechoslovakia, Poland, Sweden, and Switzerland—plus India. This proposal provided that the Commission would take custody of the prisoners in Korea. It further provided that the nonrepatriates would remain in neutral custody for four months, and that thereafter the disposition of any remaining prisoners would be referred to the political conference.

On May 13 the United Nations Command presented a counterproposal providing for the release of all Korean nonrepatriates immediately after the armistice, sending only the Chinese nonrepatriates into neutral custody where India alone would provide the necessary military forces for their control, and shortening to two months the period during which the non-repatriates would remain in neutral custody.

This proposal was immediately rejected by the Communists.

Optimism plummeted once again.

To further complicate the truce negotiations, President Syngman Rhee announced on 25 May that his Republic of Korea government would not accept any armistice that would leave Korea divided; his government further threatened to withdraw all ROK divisions from the UN command and use them independently to continue the war if a truce was signed. On the same date the UN team issued a counterplan, which provided for the transfer of all nonrepatriates to neutral custody for 90 days. However, the guarantee that no prisoner would be forced home against his will remained. This was followed by a ten-day recess.

On 4 June, the much-recessed armistice talks were resumed, and another attempt was made to settle the repatriation issue. Rhee ordered his ROK truce team member to boycott further meetings. The Communists agreed to accept an “explanation” period after the armistice, during which time, under the Five Power Commission’s supervision, they could interview each Chinese and Korean prisoner who refused repatriation and try to induce him to return to Communist homeland.
With this stumbling block removed, the single issue obstructing a truce was the readjustment of the military demarcation line on which the armistice was to be based.

As before, whenever the truce prospects brightened, the enemy increased his efforts to gain ground along the MLR (Main Line of Resistance). Several outposts changed hands repeatedly, but no major change had yet occurred in the location of the frontlines.

“The pattern of enemy offensive activity intensified early in June,” said VADM J. J. Clark. “The UN command received reports of troop movements toward the front, and many concentrations of Communists armies in the forward area were noted. Attacks along the line increased, ranging from company to division size. The heaviest concentration was in the eastern sector.

“All this activity on the part of the Communists was simply a question of ‘face’, which is all-important to the Oriental mind. At the time of the armistice, the Reds wanted to appear in an offensive role. They seemed determined to seize enough ground for propaganda purposes so they could say that UN forces were signing an armistice to avoid a military defeat.”

On the eastern sector, after a bitter struggle, Anchor Hill and Hill 812 passed into enemy hands in late May and early June. This was followed by heavy action in the central sector, where the Communists attacked the Ninth U.S. and Second ROK Corps in division strength. Heavy concentrations of enemy artillery and mortar fire preceded all attacks. In the Second ROK Corps sector, Communist forces succeeded in pushing back the main line of resistance, capturing Capitol Hill, Finger Ridge, Outpost ‘Texas’, and portions of Christmas Hill.

“Noting this heavy enemy activity,” continued VADM Clark, “I visited General Taylor’s Eighth Army headquarters. On 6 June, I ordered Task Force 77 and Task Group 95.11 to exert maximum carrier air effort in support of the United Nations troops at the battleline.”

During this final period of the war, Task Force 77 saw a new burst of activity. Four carriers operated on the line almost continuously, despite poor weather. Many operating records were smashed: total sorties flown, tonnages of armament delivered, total days at sea. Underway replenishment at night—of a magnitude never before known (27 times in 49 days)—became routine.

The following are excerpts from reports of the period:

**Boxer:** (CAPT Marshall B. Gurney; Air Task Group One, CDR L. A. Whitney)

“11 June 1953: 130 sorties. The ADs proved exceptionally effective in a close air support mission on the central front. The Mosquito controller reported 500 yards of trenches destroyed, 15 mortar positions destroyed, and 12 secondary explosions . . . .

“14 June 1953. 131 sorties. Jet Cherokee strikes hit supply buildings near the eastern frontline near Anchor Hill. ADs and jets were both used in close air support on eastern and central MLR. 1625 yards of trench, 8 mortar positions, and 9 gun emplacements were destroyed by close air support missions. . . .

“15 June 1953: 147 sorties. Today’s strikes were part of the maximum effort put out by Task Force 77 in support of a counteroffensive by UN forces to retake ground lost the previous week in the vicinity of ‘Anchor Hill’. In the effort, 650 yards of trench, 3 machine gun positions, 7 mortar positions, and 73 buildings were destroyed. ‘Well Done’s’ were received from CG 8th Army, ComSeventhFlt, CTF 77, CincPacFlt, and ComNavFe. . . .”

**Lake Champlain:** (CAPT George T. Mundorff, USN; CVG-4, CDR John Sweeny)

“15 June 1953: Props again rendered close air support to United Nations troops, and jet strikes were directed to billeting and supply targets in the Cherokee area. One hundred forty-seven sorties were flown, dropping 103 tons of ordnance. The Lake Champlain (which had commenced combat operations two days earlier) received the following from CTF 77: ‘You amateurs turned in a veteran performance today X We are proud of you X’.”

**Philippine Sea:** (CAPT Paul H. Ramsey; Carrier Air Group Nine, CDR T. D. Harris)
“15 June 1953: The heaviest naval air blow of the conflict was struck today. . . Today was an all-Navy show for strikes in support of the ground forces to regain ‘Anchor Hill.’ At the end of the day’s operation, ‘Anchor Hill’ was referred to by Air Group pilots as ‘Anchor Valley.’ The hill was regained by friendly ground forces and the operation was praised by General Lee of the ROKs and General Taylor of the Eighth Army. . . .”

Princeton: (CAPT O. C. Gregg; Carrier Air Group Fifteen, CDR John E. Parks)

“15 June 1953: The combat sortie record for aircraft carriers is believed to have been broken when 172 and 184 sorties were launched during 2 single-day operations (14 and 15 June).”

On 14 and 15 June, Task Force 77 had delivered 300 and 403 frontline missions respectively. Admiral Clark described the Seventh Fleet’s contribution to the Anchor Hill operation.

“After conferences with Lieutenant General H. K. Lee, who commanded the First ROK Corps, I ordered a concentrated surface gunfire and carrier Air Group strikes to support the recapture of Anchor Hill and its surrounding terrain. My flagship, the New Jersey, and the cruiser St. Paul would join the shoot.

“Carrier planes, assisted by the New Jersey, and the St. Paul, began an intense bombardment and bombing of the area on the 14th which continued throughout the morning of the 15th.

“Accompanied by Rear Admiral Harry Sanders (Commander Cruiser Division One) and Captain Herschel A. House of my staff, I flew by helicopter to an outpost near the scene of action. There I witnessed the attempt to re-occupy the lost territory.

“Supported beautifully by Seventh Fleet’s planes, General Lee’s troops had no difficulty in recapturing two of the hills, but on the main peak of Anchor Hill the enemy held out stubbornly until after four o’clock in the afternoon.”

The battleship New Jersey laid down one of the heaviest bombardments of the war to assist in the capture of Anchor Hill. (This was the first use of a battleship at the bombline since Iowa had been so employed in October 1952.) The “Big Jay” reported 44 bunkers destroyed, 20 heavily damaged, 2 caves closed, 610 yards of trench torn up, 13 gun positions destroyed, and 13 others damaged.

“I have never seen a greater display of courage than that of the ROK troops in climbing the mountainous terrain of Anchor Hill,” said Clark. “The ROKs would climb a few steps, only to be picked off by machine gun and artillery fire which was deadly accurate. Other ROKs would take the place of their fallen comrades. There was a large bomb crater about halfway up the hill in which several men had taken shelter from the blistering barrage. As I watched with binoculars, the enemy dropped a mortar shell into the crater, and men could be seen rolling part way down the steep slope until they stopped and lay still. They were dead. Again, farther up the hill, other ROK soldiers reached rocky terrain which offered some protection for a time, but the enemy again waited until twenty or thirty troops were concentrated among the rocks, then he delivered a heavy artillery barrage in their midst.

“Despite the enemy’s intense opposition, the ROK Fifth Division troops reached the summit about four o’clock, supported by Seventh Fleet planes and ships. The entire complex was captured. The Communist enemy had suffered more than 3,000 casualties, while the First ROK Corps casualties were only 200 killed and 300 wounded. Lieutenant General Lee credited the carrier aircraft and the naval gunfire support for making it possible for his forces to seize Anchor Hill.

“Unfortunately,” said VADM Clark, “the enemy regained the main peak later that night due to faulty leadership and supply arrangements. The enemy offensive on the eastern front was crushed, however, and fighting in that area subsided.”

Congratulatory despatches for the naval support came from many commands. General Taylor said in his despatch:

“Today has been a costly one for our enemies. The frontline troops of Army Eight were in praise of the magnificent report they received from the planes of the Seventh Fleet and the gunfire of the ships at sea. . . .”
Lieutenant General Lee radioed:

“Please accept my deepest thanks and appreciation for the magnificent effort of your naval air and surface forces in support of the Corps’ operation. I have never seen a better performance. . . .”

For 700 days, Communist intransigence had opposed the truce. Ironically, on 16 June, as a truce agreement was finalized at Panmunjom, a sudden and unexpected action on the part of President Syngman Rhee came close to ending the truce talks once and for all.

At lunch that day, Lieutenant General William K. Harrison, Jr., the senior UN negotiator, had confided to Vice Admiral Clark that the last remaining adjustment of the demarcation line was about to be made and that he expected an armistice within three or four days. At four o’clock in the afternoon, in fact, Harrison telephoned Clark to say that all remaining points of discussion had been agreed upon and that it was only necessary to translate the terms into the various languages before the armistice would be signed. In four days, Harrison told Clark, the actual signing could take place.

It was at this stage of the negotiations that President Syngman Rhee dramatically released the 27,000-odd anti-Communist prisoners in his custody. Rhee also declared martial law throughout the Republic of Korea and recalled his army officers stationed in the United States, saying that the armistice meant suicide for South Korea, and that if the United States signed the armistice, it would be an act of betrayal and appeasement.

At Panmunjom, the Communists hotly denounced the action of Rhee, accusing him of freeing the prisoners so they could be enlisted in the ROK Army, and further accused the United States of complicity in the release. The Communist negotiators demanded that the released POWs be recaptured—a manifestly impossible task.

For several anxious days there was deep concern in UN circles, particularly among the Allies who had contributed forces to the UN command, lest the unilateral action by Rhee break up the truce negotiations, rekindle the war, and perhaps even expand its scope.

In late June, the President of the United States, Dwight D. Eisenhower, sent Mr. Walter S. Robertson, the Assistant Secretary of State for Far Eastern Affairs, to Korea to confer with Mr. Rhee.

Upon Robertson’s arrival, 26 June, a series of demonstrations took place throughout South Korea. President Rhee repeated that it was South Korea’s desire not to sign an armistice, but to fight on to the bitter end. On 25 June, speaking to 300,000 Seoul citizens on the occasion of the third anniversary of the Korean War, President Rhee asked that his country “. . . be allowed to decide our own fate.”

The Communist response to these demonstrations and announcements was one of the heaviest attacks of the war. The Chinese attack was directed at the Second ROK Corps, commanded by General Chung Il Kwon, in what many considered to be a punishment attack to belittle the ROK Army and to persuade President Rhee to agree to a truce.

The Reds struck in force on the night of 13 June. Six enemy divisions, numbering 13,000 men, assaulted the Second ROK Army Corps sector of the battleline. When their administrative allotment of artillery ammunition had been expended, the Second ROK Corps withdrew in good order to a distance of six to eight miles, fighting a delaying action. On the right flank the ROK Capitol Division, commanded by General “Tiger” Song, gave ground slowly and successively, withdrawing its artillery safely, and bloodily punishing the enemy.

For the next six days the carriers of Task Force 77 stood by the endangered sector. Vice Admiral Clark directed on 14 July that until further notice, all Task Force 77 air effort would support the battlefront.

Lake Champlain (CAPT L. B. Southerland; CVG-4, CDR J. R. Sweeney)

“15 July 1953: . . . inclement weather limited flight operations to 23 sorties. . . concentrated on close and deep support of hard-pressed UN troops along the east central front. The Tactical Air Controller of one of the Cherokee missions reported that their drop on an ammunition dump, which resulted in five secondary explosions, was ‘the best run in weeks’.”
Boxer (CAPT M. B. Gurney; ATG-1, CDR L. A. Whitney)

“16 July 1953: 111 sorties were flown, almost all in the bulge area of the front near Kumwha. . . . Two Cherokee strikes . . . destroyed 35 personnel shelters, 20 bunkers, 400 yards of trenches and an artillery position. Three secondary explosions resulted. Other Panther flights of the day destroyed eight trucks, cut five bridges, and damaged storage and staging areas.”

To quell the attack, Eighth Army also requested that armed reconnaissance flights along the enemy’s main supply routes be increased. To advance, any Chinese offensive must be supported logistically, and by daylight.

By chance, one Lake Champlain squadron commander had driven over the same roads and across the same bridges in June that he would be bombing in July.

“To the novice in Korea, a particularly good way to distinguish North Korea from South Korea was by the quality of roads and bridges,” said CDR W. W. Kelly, commanding officer of VF-62. “In South Korea, the roads looked like clean white ribbons from the air. The bridges were wide, white, and conspicuous-looking. In contrast, the North Korea roads and bridges were small, damaged, and unused-looking.

“On 16 July, I was leading an armed recco hop when the main controller called on the radio, diverted my flight, and ordered us to bomb all the bridges in a certain area.

“We quickly plotted the coordinates and found that the targets were in friendly territory. I could identify this particular area personally because, a few days before, I had been on a board of investigation and had driven over it in a jeep.

“I immediately thought this might be a fake enemy transmission since the sender was diverting my flight and asking us to bomb our own territory. After he authenticated, however, he told us that the Chinese forces had broken through in this area, and we were to knock the bridges out to slow them down.

“Unfortunately, we were not armed for bridge-busting. We did our best with our 250-pound bombs, and I think it kept the enemy slowed down. Just as we were leaving the target, my air group commander came along with eight Lake Champlain Skyraiders. They had 2,000-lb. bombs, and I personally saw CDR Sweeney’s bomb blow a section of bridge high in the air.”[23]

For the remaining two weeks of the war, the four carriers pounded the enemy forces, setting new records for sorties flown on three successive days—24 July, 598; 25 July, 608; 26 July, 649. Seven thousand five hundred and seventy-one offensive sorties, half of them at the bombline, were delivered in an all-out effort to stabilize the front.

“As it turned out,” said Admiral Clark, “the Chinese Communist Army was not prepared for a general offensive. Most of the Communist soldiers had only two or three days’ rations in their pockets, and they couldn’t move fast enough.

“By the 19th of July, the full weight of the enemy onslaught had subsided and friendly counterattacks gradually reduced the extent of his frontal penetration.

“This release of prisoners by President Rhee had prolonged the war about five weeks, during which time United Nations troops, including South Koreans, sustained 46,000 casualties while the Communists had suffered an estimated 75,000 casualties.”[24]

Vice Admiral R. P. Briscoe, Commander Naval Forces Far East, despatched his congratulations:

“Please pass to all units of your Fleet my congratulations upon the superb effort they have put out during the past few weeks. In spite of almost impossible operating weather, they have prevented the enemy from capitalizing on his advantage and have added immeasurably to the destruction of his resources. A hearty well-done to all of you.”
The last day of the war began like the ones before. Task Force 77 aircraft destroyed and damaged 23 railroad cars, 11 railroad bridges, one railroad tunnel, 69 buildings, 100 yards of trench and 9 highway bridges. Forty rail and three highway cuts were made.

**Philippine Sea:**
“The day had a fast start with 49 sorties launched before the truce . . .”

**Boxer:**
“On 27 July, 77 sorties were flown. Missions consisted of strikes, armed reconnaissance, and interdiction. At 1000, the cease-fire agreement was signed at Panmunjom which became effective twelve hours later. At 2200, all hostilities ceased, but until that time F9Fs hit airfields at Yonpo, Koeman, and Hamhung West.”

**Lake Champlain:**
“On 27 July, in conjunction with the signing of the truce, a leaflet drop was conducted on major cities along the east coast of Korea. Simultaneously, strikes were made to render all airfields in North Korea non-operational at the time of the signing of the truce. Close air support missions were carried out by the props before the truce was signed—124 sorties flown, 61 tons dropped.”

To some pilots of Task Force 77 the last day was unusual only in the sense that targets were plentiful but couldn’t be hit. To others it was a last chance to qualify for an Air Medal.

“My flight was assigned the airfield at Hyesanjin,” said CDR W. W. Kelly. “Our orders, which we had acknowledged receipt of in writing, were to hit only the airfield, and if for any reason we couldn’t do it, we were to jettison our loads at sea.

“Our flight of eight Banshees hit the coast at Kilchu, staying under a low overcast as we headed up the valley. Here, in the same places we had often looked in vain for fruitful targets, and where if we found a train or a truck we’d fight among ourselves to see who would get a shot at it, we suddenly saw large piles of material—one large pile of what looked like telephone poles; larger crates of material, lumber, etc.

“Then to complete our sense of frustration, we saw a train chugging down the valley very conspicuously. We couldn’t and we didn’t shoot it up, but went on to our target at Hyesanjin.”

At sea, the blockade and bombardment work went on as before. The cruiser **Saint Paul** (CAPT C. W. Parker, USN) fired the last round of the war at sea at 2159.

On the harbor islands of Wonsan the day was no different either, although the tempo was less. At the designated time of cease fire—2200—the east coast islands’ defense forces commenced the destruction of the islands’ fortifications.

Ashore, the front was generally quiet, although a few rounds of enemy mortar and artillery fire were received in the First Marine Division’s area until 2153, when five rounds of 82-mm. mortar landed in the First Korean Marine Corps Regimental Combat Team’s area.

Some U.S. Marines reported Chinese policing their front a full thirty minutes before the agreed-upon hour of 2200. Chinese troops could be seen looking for souvenirs. Some of the enemy troops waved lighted candles, flashlights, and banners in celebration.

On “T-Bone Hill”, the Communists erected an arch of tree limbs and called out for UN troops to “come on over and we will walk through the arch as brothers.”

On “Old Baldy,” North Korean girls could be seen singing and dancing, while the Red soldiers waved
large papier-mâché Picasso peace doves as the hillside microphones blared out an invitation to “come on over and talk.”

On “Arsenal Hill” a man’s voice invited the UN soldiers to join him in the song, “My Old Kentucky Home.” Other Chinese soldiers danced and sang, banged pans together, and erected huge signs proclaiming the signing of the Armistice.

One group of Chinese soldiers approached a Marine listening post, asked for water, and tried to carry on a conversation. Still others hung up gift bags and shouted, “How are you? Come on over and let’s have a party!”

It was a strange ending to the strangest war the United States Navy had ever fought.
Chapter 14. Conclusion

At 2200, on the night of 27 July 1953, an uneasy truce settled along the battleline in Korea. The 37-month-and-2-days war had ended. It had cost the United States 142,091 casualties[1] and almost twenty billion dollars.

What had been gained by this expenditure of blood, time, and treasure? Had the United Nations and the United States won or lost the Korean War?

A single, simple answer to that question cannot be given as this book goes to print, for there still are two diametrically opposed views, which cause continued and bitter argument. One view, although not wholly accepted in political and diplomatic circles, is that the Korean war represented a victory for the West since the Free World was able to demonstrate the real value of collective security; and furthermore, it was able to accomplish what it set out to do: to localize and punish aggression, to drive the invader back to his lair, and to notify him that future forays would be met with even greater force.

This viewpoint is summarized by a 12 February 1956 editorial in the Washington Post.

“President Truman, for the United Nations, fought the war for a limited objective, and this he achieved. He achieved a successful result, moreover, without damaging our dominion in world strategy. Actually, that dominion was improved, and in the process Mr. Truman kept the Russian intervention limited with his atomic deterrent.”

This point of view also holds that any expansion of the Korean War, inside or outside Korea, might have brought Russia into the conflict; and since neither the Free World nor the United States was then militarily prepared for a larger conflict, the risk of involving the Soviets was not to be taken.

The other view, generally prominent in military circles, is that the Korean War was a loss, militarily as well as psychologically. Even though the means for defeating the enemy were available, they were not used; and our failure to defeat the aggressor was an invitation to future aggression and truculence.

These views were reflected in such statements as General Mark Clark’s, “We lacked the determination to win the war”; and by Admiral J. J. Clark’s remark to the authors: “You shouldn’t be in a war if you don’t want to win it”; or in General Van Fleet’s answer to the authors’ question, “Under the accepted conditions of war, could the Korean War have been won without too great a cost?” General Van Fleet’s reply was that the Chinese Communists were beaten in June 1951 when a truce was first requested, and they could have been beaten “any time” in succeeding months. These views were certainly held by General MacArthur. When asked by the authors, “With forces available in the Far Eastern theater, what strategy should have been followed after Chinese entry?”, General MacArthur replied: “It was fundamental that the only strategy to be followed in such a situation was to apply maximum power of our naval and air arm in support of our hardpressed ground forces. This means: to have directed our attack against the nerve center of the Chinese ability to sustain his operations in Korea.”

This point of view holds that Russia would never have dared to intervene in Korea.

To the question, “Did the United States win or lose the Korean War?” therefore, no answer can now be given. For if the United Nations (or the United States) had taken military action to defeat the Red Chinese either under the MacArthur formula (blockade China, bomb across the Yalu, use Chiang’s troops)—or the Van Fleet plan (decisively defeat the Chinese on the Korean peninsula itself)—or the “Jocko” Clark format (drop just one A-bomb anywhere in North Korea)—no one can say now whether the Soviets might have intervened. As Admiral Clark said, “The only man who can say if such actions would have expanded the war or not is Stalin—and he’s dead.”
Leaving this question to future historians to answer, one thing nevertheless remains plain. Without command of the seas between the Free World and Korea, and in the waters adjacent to that beleaguered peninsula, the Korean War, as fought, most certainly would have been lost both militarily and politically with a finality that would now be plain to every American. Operations by ground and air forces were completely dependent on a steady flow of personnel and supplies, the bulk of which came across the vast Pacific ocean.

This conclusion is substantiated by these factors:

a. Six of every seven people who went to Korea went by sea.

b. Fifty-four million tons of dry cargo, 22 million tons of petroleum products went to Korea by ship.

c. Every soldier landed in Korea was accompanied by five tons of equipment, and it took 64 pounds every day to keep him there.

d. For every ton of trans-Pacific air freight, there were 270 tons of trans-Pacific sea freight. For every ton of air freight, four tons of gasoline for the airplanes had to be delivered across the Pacific by ship.

No war involving the United States exemplified the value of sea power better than the Korean War. The need of a strong, balanced, and adequate U.S. Navy for controlling the oceans for our purposes and for denying them to an enemy was made elementarily clear.

General Van Fleet’s opinion of the Navy’s work in Korea was direct and to the point: “We could not have existed in Korea without the Navy,” he told the authors. “The sea blockade was so complete that it was taken for granted. And at the same time the enemy could not supply himself by water. Naval gunfire on both east and west coasts added to his burden; and had the Eighth Army wished to go on the offensive, naval gunfire on the flanks would have made it much easier. Freedom from enemy air and naval attack left us free to operate in the open.”

Without seapower, certainly, the United States could never have gotten her soldiers and their equipment, her airmen and their aircraft, to the scene of conflicts, nor supplied them once there. Nor could the weight of this nation’s strength have been applied upon the enemy without the American Navy.

One principal result of the Korean War was to validate the naval concepts about future war which had been revealed in the B-36 Hearings before Congress in the fall of 1950: that the United States must have flexibility, mobility, and balance not only in its military planning but in its military machinery. The “modern” military school of thought that had thrived between 1945 and 1950—that a Navy’s use in any future war would only be that of convoy and patrol—was proved fallacious.

Concerning what Korea had proved about the future of the Navy and the Marine Corps, two leading Generals of the U.S. Army were emphatic. General Van Fleet, asked if a Navy was necessary in the atomic age, said abruptly, “The need of a Navy is a self-evident fact.” General MacArthur was equally certain: “Naval supremacy,” he wrote, “is essential to the conduct of any insular campaign.” Regarding the need and use of the U.S. Marine Corps in the event of future Korean type conflicts, General MacArthur said: “Any campaign of this type at once calls for the employment of amphibious maneuver for which, by virtue of its training and integration with sea-borne operations, the Marine Corps is far better adapted than any other military unit.”

Vice Admiral C. T. Joy, the naval theater commander for the first two years of the war and the chief of the UN Command Truce Delegation Team, made the following cogent summary upon his departure from the Far East:

“The Korean War may not go down in history as a major war or as a war that appreciably changed the maps of the world. But it nevertheless is a war of deep significance. It has been a war to prevent a larger war by serving notice on a ruthless enemy that he can go so far and no farther. From the standpoint of national preparedness we have been awakened to the danger that surrounds us. Let us hope that we remain awake. From the standpoint of battle effectiveness, the Korean War has re-emphasized lessons which were almost lost sight of in the years that closely followed World War II. We know now that there is no quick, easy, cheap way to win a
war. Sole reliance for our security cannot be placed in any one weapon or in any one branch of the Services. We cannot expect the enemy to oblige by planning his wars to suit our weapons. We must plan our weapons to fight war where, when, and how the enemy chooses. The choice of time, place, and circumstances rests with him.

“We need balance between the Services and balance within the Services. In the Navy, for example, we have learned that we cannot ever again neglect our minesweeping force. We cannot neglect our air arm. Inchon and Hungnam have again forcibly emphasized the vital need for our amphibious force. We cannot write off the naval gun as obsolete; the Korean War has again proved its worth. We have found a pressing need and full use for all of our naval weapons. And while the Navy’s role in the war has gone unpublicized for the most part, it is sufficient to know that but for the Navy the war in Korea would come to a sudden halt. The job of getting the troops there and keeping them supplied is just as essential as it ever was, whether it makes interesting reading or not.

“During the last ten months of my tour in the Far East I was fortunate, or unfortunate, enough to face our common enemy across the conference table. If there are still those in the Free World who believe that the enemy can be moved by logic, or that he is susceptible to moral appeal, or that he is willing to act in good faith, those remaining few should immediately disabuse themselves of that notion. It was a mistake to assume, or even hope, that the enemy was capable of acting in good faith. Future textbooks can set down the maxim that the speed with which agreement is reached with the Communists varies directly as the military pressure applied, and that the worth of any agreement is in proportion to the military strength you are able and willing to apply to enforce it.

“As for the future, it should be clear that there is nothing inevitable about the onward and upward progress of the United States or the United Nations. In fact there is nothing inevitable about our survival. History is littered with the graves of civilizations that assumed all is well. All is not well. We will survive and progress to the extent that we are aware of the enemy who threatens us, and to the extent that we stay strong enough to meet him in the arena of his choosing. Nothing can erase the tragedy that is Korea. But if Korea has taught us that in unity lies the strength that will preserve our freedom, then Korea has not been in vain. . . .”

Foreword

AN ABILITY TO furnish skilled forces to meet emergency situations on short notice has long been a hallmark of the Marine Corps. When the call came for such a force to be dispatched to Korea on 2 July 1950, the Corps was handicapped by the strictures of a peacetime economy. Nevertheless, a composite brigade consisting of a regiment and an air group was made available within a week’s time.

With a reputation built largely on amphibious warfare, Marines of the 1st Brigade were called upon to prove their versatility in sustained ground action. On three separate occasions within the embattled Perimeter—south toward Sachon and twice along the Naktong River—these Marine units hurled the weight of their assault force at the enemy. All three attacks were successful, and at no point did Marines give ground except as ordered. The quality of their performance in the difficult days of the Pusan Perimeter fighting made them a valuable member of the United Nations team and earned new laurels for their Corps.

Preface

THIS IS THE first volume of a planned series dealing with United States Marine Operations in Korea during the period 2 August 1950 to 27 July 1953. Volume I is designed to give the military student and the casual reader an accurate and detailed account of the operations in which Marines of the 1st Provisional Brigade and Marine Air Group 33 participated during the fighting in the Pusan Perimeter, from the date of their landing on 2 August until their withdrawal on 13 September 1950, in preparation for the Inchon landing.

Since this is primarily a Marine Corps story, the activities of other services during this period are not described in detail except to present a proper background to the overall account.

Many officers and men who participated in this campaign have contributed to the preparation of the book by answering inquiries, submitting to interviews, and commenting on the preliminary manuscript. Their assistance has been invaluable. Special acknowledgment is also extended to the Office of the Chief of Military History, Department of the Army, Pacific Section, and particularly Lieutenant Colonel Roy E. Appleman, USA, for enemy intelligence material; to the Marine Corps Board Study: An Evaluation of the Influence of Marine Corps Forces on the Course of the Korean War for its interpretations and conclusions; and to Life Magazine for courtesy shown in permitting use of Korean photographs made by Mr. David D. Duncan. Maps included herein were prepared by the Reproduction Section, Marine Corps Schools, Quantico, Va. United States Army, Navy and Marine Corps photographs have also been used to illustrate this monograph.

--Brig. Gen. T.A. Wornham, USMC, Assistant Chief of Staff, G-3
IT MEANT LITTLE to most Americans on 25 June 1950 to read in their Sunday newspapers that civil strife had broken out in Korea. They could hardly have suspected that this remote Asiatic peninsula was to become the scene of the fourth most costly military effort of American history, both in blood and money, before the end of the year. Yet the danger of an explosion had been present ever since the end of World War II, when the United States and the Soviet Union rushed into the political vacuum created in Korea by the defeat of Japan.

The Korean question came up officially for the first time at the Cairo Conference of December 1943. With Soviet Russia not yet being represented as a belligerent in the Far East, the United States, Great Britain and China agreed that “in due course Korea shall become free and independent.”[1]

Any discussion of this issue had to take into consideration Korea’s status as a Japanese possession since 1910. Government, industry, commerce, agriculture, transportation—all phases of Korean life had been administered by Japanese for the benefit of Japan. As a consequence, the 25,000,000 inhabitants of the peninsula were woefully lacking in experience to fit them for the responsibilities of independence.

Syngman Rhee, the elderly Korean patriot, had long been clamoring for recognition of his Korean government in exile. The United States hung back because of reluctance to offend Joseph Stalin, the Soviet dictator, at a time when Russia was a powerful military ally. Moscow had a strong bargaining point, moreover, in the prospect of giving military aid to the United States in the fight against Japan. Such an alliance was particularly desirable from the American viewpoint early in 1945 because of the losses resulting from Japanese kamikaze tactics. In the belief that active Soviet participation might shorten the war and save thousands of American lives, President Franklin D. Roosevelt was disposed to compromise with Stalin.

The two agreed informally at the Yalta Conference of February 1945 that Korea should be independent “. . . and that if a transition period were necessary, a trusteeship should be established,” according to James F. Byrnes, United States Secretary of State. He added in his memoirs that “a desire to help the Koreans develop the skills and experience that would enable them to maintain their independence was the inspiration for President Roosevelt’s acquiescence in the trusteeship idea.”[2]

The Soviet dictator made a plea at Yalta for historical justice. Although Czar Nicholas II had been execrated as a tyrant and warmonger in Communist doctrine, Stalin demanded that the “wrongs” resulting from the Russo-Japanese War be righted 40 years later. The price of Soviet military aid against Japan, in short, was the restoration of Russian territory in the Far East that had been lost in the defeat of 1905.

Chapter 1. Korea, Doorstep of Strategy
The Historical Background

It was inevitable that the fate of Korea would be involved in any such readjustment. Korea is one of those tragic areas of the earth’s surface which are destined in all ages to be a doorstep of strategy. As the focal point of the China-Russia-Japan triangle, the peninsula offers each of these powers a threshold for aggression against either of the other two. Possession of Korea has been for centuries an aim of aspiring conquerors in the Far East, and all three rival nations have had a turn.

China was first. From ancient times down to the last quarter of the 19th century, the Chinese Empire held a loose suzerainty acknowledged by the Koreans. Japan won a brief foothold in the 16th century under the great war lord Hideyoshi, only to learn the painful lesson that control of the sea is requisite to a seaborne invasion of a peninsula. Naval victories by the Koreans cut Hideyoshi’s line of communications, and he withdrew after frightful devastations which left an enduring tradition of fear and hate. Both Japan and Korea then entered upon a period of self-imposed isolation lasting until their political hibernation was rudely interrupted by Western nations clamoring for trade.

The United States took the lead in inaugurating a new era in the Far East. Commodore Perry and his American warships opened up Japan to commerce in 1853. Several persuasive bombardments of coastal cities by American, British and French naval guns were required to end Japan’s seclusion; and in 1871 an American squadron was sent to Korea after the destruction of an American merchant ship and massacre of its crew. United States Marines and bluejackets stormed Korean river forts defended by cannon. All objectives were taken and heavy casualties inflicted, but it remained for Japan to open up the “Hermit Kingdom” to trade 4 years later with the threat of war.

Russia had not been a disinterested bystander during this era of cannon-ball diplomacy. Her participation in Far Eastern affairs dated back to the 17th century and had once extended to the North American mainland. The sale of Alaska to the United States in 1867 indicated a renunciation of this phase of expansion, but Russia had no intention of abandoning her ambitions in the Far East. Shortly after Japan compelled Korea to sign a treaty of amity, the Russians offered to train Korean officers and lend military aid to the faction-ridden kingdom.

At this point China took a hand. Suspecting that the two rival nations were dabbling in Korean affairs for purposes of their own, the Celestial Empire attempted to restore her suzerainty.

This policy was bound to lead to a collision. Western nations were not surprised when Japan and China resorted to arms, but few observers expected the supposed dwarf to beat the giant with ease. Japan’s well led army, equipped with the best modern weapons, landed at Chemulpo (Inchon) and captured the Chinese fortress at Pyongyang in northwest Korea. Sweeping across the Yalu into Manchuria, the invaders overran the strategic Liaotung Peninsula, taking Port Arthur and Dairen.

It was all over in a few months. When the Empire proper was threatened with invasion, the Chinese government sued for peace in 1895.

The Japanese terms were more than severe, they were humiliating. They included: (1) a large indemnity; (2) the cession “in perpetuity” of the Liaotung Peninsula as well as Formosa and the Pescadores group; and (3) Chinese recognition of what the Japanese were pleased to call “Korean independence.”

But the victors had overdone it. Russia, Germany, and France formed the Triple Intervention which compelled Japan to relinquish the Liaotung Peninsula. The three European powers preferred that this strategic bastion remain in the possession of China, which was ripe for despoiling at the convenience of the Western
Russia now assumed the role of a friend binding China’s wounds. The secret treaty of alliance signed by the two empires in 1896 was aimed like a pistol at Japan. In return for promises of support in the event of further Japanese aggressions, China gave Russia the right to extend the Trans-Siberian Railroad to Vladivostok across Chinese territory in Manchuria. 

The precept was not lost upon other European nations. England, Germany, and France also established spheres of influence in China after forcing the government to lease territory or grant special privileges. And Russia added to former gains by a 25-year lease of the Liaotung Peninsula.

China’s Boxer Rebellion of 1900 interrupted the march of events, but two treaties in 1902 indicated that Japan and Russia would soon be at each other’s throats. Japan acquired an ally in England, as a result of that nation’s alarms over Muscovite designs, so that the neutrality of European powers was practically assured. Russia and China drew closer meanwhile with a new treaty of alliance. The stage was set for a fight to the finish in the Far East.

Possession of the Philippine Islands had given the United States a new interest in Far Eastern affairs since the Spanish-American War of 1898. John Hay, Secretary of State, realized that the American “open door” policy was imperiled by the situation in Asia.[3] But he admitted in April 1903 that nothing short of the threat of armed force could have checked Russia’s encroachments.
A candid comparison would reveal a striking similarity between the aggressions of Czarist Russia in the early 1900’s and those of Soviet Russia half a century later. The expression “cold war” was not current in 1903, but the account of Russia’s threats, seizures and violated agreements has a dismally familiar aspect to the modern reader. Rudyard Kipling paid a bitter tribute at the turn of the century to these techniques of the Russian Bear in his lines:
“When he stands up like a tired man, tottering near and near;
When he stands up as pleading, in wavering, man-brute guise,
When he veils the hate and cunning of his little swinish eyes;
When he shows as seeking quarter, with paws like hands in prayer,
That is the time of peril—the time of the Truce of the Bear!”

Following the Sino-Japanese War, the truce between Russia and Japan in “independent” Korea was broken by both nations whenever a favorable opportunity arose. Both of them intrigued constantly at Seoul. For a time, indeed, the Korean government was directed from the Russian legation with the backing of Russian troops. Twice, in 1896 and 1898, Russia and Japan signed agreements reaffirming Korea’s independence and promising anew to withdraw their forces. These pacts were promptly violated by both contestants for power, but Japan prepared more realistically for the forthcoming struggle. On a February night in 1904, without the formality of a declaration of war, a Japanese squadron attacked the Russian warships anchored at Port Arthur. This surprise blow was followed shortly by the landing of Japanese troops at Chemulpo. They advanced to the frontier and defeated the Russians in the battle of the Yalu—a victory that has been compared with the battle of Valmy in the French Revolution as a landmark of history.

Certainly the West was made aware that an Oriental nation had risen to the stature of a world power for the first time in modern history. The value of Korea as a strategic springboard was demonstrated when Japanese land and sea forces isolated the fortresses on the Liaotung Peninsula. Port Arthur fell after a bloody siege of 6 months. Next, the Japanese invaders of Manchuria defeated an army of 350,000 Russians and inflicted 150,000 casualties in the four-week battle of Mukden. This was the decisive clash on land; and in the one-sided naval battle of Tsushima, Admiral Togo annihilated the Baltic fleet which the Czar had ordered on the long voyage to the Pacific.

The end came abruptly in the summer of 1905. In the Treaty of Portsmouth, signed on 5 September, Russia ceded the southern part of Sakhalin Island to the victors while recognizing their “paramount” interests in Korea. All rights in the Liaotung Peninsula went to Japan as well as important concessions in Manchuria. Not much was left to Russia in the Far East except a precarious foothold in northern Manchuria.

Chapter 1. Korea, Doorstep of Strategy
Korea as a Japanese Colony

For 5 years Japan kept up a pretense of a protectorate in Korea. Then, in 1910, came outright annexation. Europe’s “balanced antagonisms” soon flared up in World War I, leaving Japan free to exploit Korea as a colony. Western observers might have noted such evidences of modernization as new docks, railroads, factories and highways. But they were administered by Japanese overseers as Koreans sank to the level of coolies without a voice in the government.

Although Japan joined the fight against the Central Powers in World War I, her military efforts were made against allies as well as enemies. Using Korea as a beachhead, she attempted to enlarge her empire on the Asiatic mainland at the expense of Russia, then in the throes of revolution. Three years after the Armistice, a Japanese army still occupied the Vladivostok area; but the United States took such a firm diplomatic stand that Tokyo backed down.

This retreat was only a postponement. During the next decade Japan set up a strategic shield to the east and south by fortifying the mandated islands of the Pacific, awarded to her after the war. Treaties and agreements were violated whenever convenient, and in 1931 she turned westward again to satisfy her appetite for Russian and Chinese territory.

The time was well chosen. With the Western nations in the depths of an industrial depression, Japan began a series of aggressions against the Chinese in Manchuria. The gains were consolidated in a puppet state known as Manchukuo, comprising a fertile and populous area as large as California. China was unable to offer much resistance, and Soviet Russia could not risk a major war in the Far East. Even so, some of the Soviet border clashes with the Japanese in time of “peace” were actually battles fought with tanks and planes.

In 1937 came the Japanese invasion of China proper. Germany and Italy were launching aggressions of the same stamp in Europe and Africa, and the world was to know little stability until all three totalitarian states had been crushed in World War II.

Soviet Russia had a grim struggle for survival while resisting the full tide of Nazi invasion. But at the time of the Yalta Conference, Stalin was in a position to ask a stiff price for military aid in the Pacific. The United States agreed that the Port Arthur area and southern Sakhalin should be returned to Russia to redress the “wrongs” of 1905. Concessions were also made in Manchuria and outer Mongolia.

Stalin, for his part, consented to sign a treaty of friendship with Nationalist China as an ally of the United States. Later events made it evident that he had no intention of keeping his pledges. On the contrary, Soviet policy already visioned a Communist empire in the Far East which would include China as well as Korea.

The Yalta Agreement was stridently criticized in the United States after Stalin’s duplicity became apparent. But the War Department took a realistic view as early as the spring of 1945:

“The concessions to Russia on Far Eastern matters which were made at Yalta are generally matters which are within the military power of Russia to obtain regardless of United States military action short of war... The Russians can, if they choose, await the time when United States efforts will have practically completed the destruction of Japanese military power and can then seize the objectives they desire at a cost to them relatively much less than would be occasioned by their entry into the war at an early date.”[4]

This was precisely what happened. Moscow waited to declare war until 8 August 1945—6 days before the imminent collapse of Japan. Soviet forces fought only a few actions in Siberia with a Japanese army stripped of planes for home defense. As a consequence, Russian propagandists found it hard to paint a convincing picture
of “the heroic deeds of our brave Far Eastern warriors.” Obviously they had met little resistance while overrunning Manchuria and northern Korea to accept the surrender of nearly 600,000 Japanese troops, including 148 generals. These prisoners were sent to Siberia for years of servitude; and the “conquerors” despoiled Manchuria of heavy machinery, turbines, dynamos and rolling stock.

The value of this booty has been estimated at a billion dollars, and the forced labor of Japanese war prisoners during the next 5 years was worth at least another billion. Not satisfied with these spoils, Moscow also demanded a share in the occupation of Japan. This design was balked by General of the Army Douglas MacArthur, supreme Allied commander, who made it plain that he needed no such assistance.

Even after the guns fell silent, there was no peace. One enemy had been exchanged for another, since Soviet Russia took advantage of war-weary allies to follow in the footsteps of Germany and Japan. There was the same familiar pattern of encroachment both in Europe and the Far East. There were the same violations of treaties, the same unfriendly acts falling just short of hostilities. The cold war had begun.

Oppression at home and aggression abroad—this had been the policy of Russia’s czars, and it became the policy of Russia’s dictators. Despotism had been replaced by Communism, but there was little difference. Communism proved to be an old tyranny presented as a new ideology, and Joseph Stalin succeeded where Nicholas II failed. Circumstances were kinder to Stalin, and he gobbled up territory in Poland, Estonia, Latvia, Czechoslovakia, Austria, Germany, Hungary, Rumania, Mongolia and Manchuria.

Never before had one man ruled so much of the earth’s surface. Yet there was something neurotic and fear-ridden about the Kremlin’s outlook which success could not cure. It has long been a historical theory that this psychosis may be traced back to Russia’s bondage in the Middle Ages under the Mongols and Tartars. At any rate, victory and enormous spoils did not give Moscow a sense of security in 1945. Buffer state was piled upon buffer state, and thousands of World War II prisoners were enslaved behind the “iron curtain” to build new Soviet military installations.
The importance of Korea in the Soviet scheme of things was indicated by the haste with which Russian troops crossed the frontier on 12 August 1945, three days after the declaration of war. They were the vanguard of an army numbering a quarter of a million men led by General Ivan Chistyakov, a hero of the battle of Stalingrad.

The surrender terms called for a joint American and Soviet occupation, with the 38th parallel serving as a temporary line of demarcation. Not until 8 September, however, did Lieutenant General John R. Hodge reach southern Korea with the first American troops.

By that time the Russians had gone through their usual routine, and the machinery taken from northern Korea was estimated at 30 to 40 percent of the industrial potential. Looting by Soviet troops went unpunished, and regular supplies of food for the huge army were demanded from an impoverished people just freed of the Japanese yoke.[8]

The Russians had a tremendous advantage over United States occupation forces. Since World War I more than a million Koreans had found a refuge from Japanese bondage on Russian or Chinese soil. Thousands of men had been indoctrinated with Communist principles and given military training to aid the Chinese Reds fighting the Japanese invaders of China. Thus in 1945 the Russians could count on the efforts of Korean revolutionists to establish Communist rule in their homeland behind a façade of democracy.

The United States forces, on the contrary, did not even have enough interpreters. They impressed the Koreans at first as being alien occupation troops setting up a military government. Meanwhile, the Russians had installed an interim civil government at Pyongyang. Korean Reds filled the key positions, and Stalin’s portraits and the hammer and sickle emblem were seen at political rallies.

Koreans of all persuasions opposed the division of their country into two zones on either side of the 38th parallel. The Reds at Pyongyang contrived to lay the blame on the Americans. They made a further appeal to Koreans on both sides of the boundary by announcing a land reform in the northern zone. Ever since 1905 a Japanese landlord had been the hated symbol of oppression. Pyongyang won a great propaganda victory, therefore, by announcing the confiscation of all large estates, Korean as well as Japanese, and the division of the land among the peasantry.

The bait was so tempting that the hook did not become apparent until too late. Then the beneficiaries of the Agrarian Reform discovered that they could neither sell nor rent the land, nor could they use it as security for loans. If anyone ceased to work his holding, it reverted to the People’s Committee, which allocated it to some other family. The State retained possession, in short, and the peasant remained as much of a serf as ever. Worse yet, the taxes disguised as “production quotas” eventually amounted to 60 percent of the total crop, which was more than the Japanese had extorted.[9]

This is a sample of the methods used to reduce North Korea to a police state, just as similar states were being organized in occupied lands of Europe by local Reds doing the bidding of Moscow. In the Soviet zone of Korea all banks, factories and industries of any consequence were nationalized by the so-called People’s Committee.[10] Military training for offensive warfare was given to men armed with captured Japanese weapons. Pressure was put upon these recruits to “volunteer” for combat service with the Chinese Reds waging a civil war against the Nationalists.[11]
Chapter 1. Korea, Doorstep of Strategy
Red Victory in China

Moscow was secretly backing the Communists led by Mao Tse-tung in their efforts to wrest China from the Nationalist government of Chiang Kai-shek. Such activities, of course, were in violation of the treaty of friendship and alliance with Nationalist China which Stalin had signed on 14 August 1945. But agreements were never allowed to interfere with Soviet ambitions, and Moscow aimed to create in Asia a bulwark of Communist puppet states extending from the Arctic to the tropics.

Asiatic soil was peculiarly suited to the growth of such institutions. Although Communism derived originally from the theories of a German revolutionist, Karl Marx, it was adapted by Lenin and Stalin to the political climate of Asia. Human lives and liberties have always been held cheaply in the East, and absolutism has been the rule in government. Communism, as it developed in Russia after the revolution of 1917, would probably have been better understood by Genghis Khan than Marx. For it is significant that no Western nation has ever embraced this political faith voluntarily, even though it has attracted a minority of radicals and malcontents in nearly every country.

Asia was ripe for change after World War II. In spite of Japan’s defeat, that nation had made a good deal of progress with its “Asia for the Asiatics” propaganda. The Far East seethed with unrest in 1946, and Communism spread ominously through a China weakened by three decades of invasion, revolution and civil war.

While Nationalists and Communist armies contended for the ancient empire, an undeclared war went on in the background. This was the cold war between the United States and Soviet Russia as they supplied arms and munitions to the opposing forces. Russia also supplied troops and laborers. For it has been estimated that no less than 250,000 North Korean Reds were induced to serve in various capacities with the Chinese Communists in Manchuria.[12] There the soldiers completed their military training in actual combat, with veteran Chinese officers as instructors.

By 1948 there was no longer much doubt about the outcome in China. In the battles of Tsinan, Changchun and Mukden, the Nationalists lost 33 divisions, totaling more than 320,000 men, in killed, wounded and missing. Losses of equipment included 250,000 rifles and vast quantities of other arms and equipment. During the four and a half months following the fall of Tsinan in September 1948, the Nationalist losses were estimated at a million men and 400,000 rifles. Even planes of United States manufacture were captured by the Reds, who also acquired a cruiser that the British had transferred to the Nationalists.[13]

“The unfortunate but inescapable fact,” concluded the United States State Department in 1949, “is that the ominous result of the civil war in China was beyond the control of the Government of the United States. Nothing that this country did or could have done within the reasonable limits of those capabilities could have changed that result; nothing that was left undone by this country could have contributed to it. It was the product of internal Chinese forces, forces which this country tried to influence but could not. A decision was arrived at within China, if only a decision by default.”[14]

As a result, Mao Tse-tung’s forces could claim a sweeping victory by the end of 1949. Only the island of Formosa was left to Chiang Kai-shek and his battered remnants. Meanwhile, it grew increasingly plain that Korea was destined to be the scene of the next great tug-of-war between Communism and the free nations.
Not only had the Russians made the 38th Parallel a political boundary in Korea; they had also resisted all American attempts at unification. This meant that economic recovery was badly handicapped. For the mines, heavy industries and hydroelectric plants were located in the north, while the south had most of the agriculture. Products once exchanged with mutual benefit now had to be imported from abroad.

Trusteeship was hotly resented by all Koreans, even though few of them had gained administrative or technical experience under the Japanese. This prejudice was exploited by Soviet propagandists who denounced the “undemocratic” American policy of bringing in administrators, technicians and educators. As a consequence, the United States military government made a poor showing at first in comparison to the puppet government of Communist-trained Koreans installed at Pyongyang by Russians pulling the strings behind the scenes. Anti-American propaganda won converts to the south as well as north of the 38th Parallel, with General Hodge being accused of maintaining a harsh military rule.

At the Moscow Conference of 1945 the Soviet Union had agreed with the United States that the whole of Korea was to be given a democratic government after passing through the trusteeship phase. A Soviet-American Joint Commission was to meet and make recommendations for this purpose; but as early as 1946 it became evident that the Soviet representatives had been instructed to sabotage any attempt to create a united Korea with its own government.

After the failure of the first year’s efforts, Hodge ordered the establishment of an Interim Legislature at Seoul as the counterpart of the People’s Assembly at Pyongyang. Of the 90 seats, half were to be filled by popular vote and the remaining 45 by Korean appointees of the Military Government. The election was a triumph for the American-educated Dr. Syngman Rhee and the rightists. Hodge tried to give the other South Korean factions a voice by appointing moderates and liberals, but the Interim Legislature had no solution for the discontent in Korea as the economic situation went from bad to worse in spite of American aid.

Although the Americans on the Joint Commission did their best, they were blocked by all manner of Soviet-contrived delays and obstacles. Finally, in 1947, the United States submitted the question to the United Nations. After long discussion, the General Assembly resolved that all the people of Korea be given an opportunity in the spring of 1948 to elect a national assembly for the entire country.

A commission representing nine member nations was appointed to visit Korea and supervise the voting. But the Russians not only refused to participate in the election; they went so far as to bar the commissioners from entering North Korea.

The new National Assembly elected in May 1948 by South Korea had the task of forming a government. On 17 July the first constitution in 40 years of Korean history was approved by the deputies, who elected Syngman Rhee to a 4-year term as president.

It was an eventful summer south of the 38th Parallel. The Republic of Korea came into being on 15 August, and on that day the American military government ended. John J. Muccio was appointed by President Truman to represent the United States in Korea with the rank of ambassador. Plans were made to withdraw the 50,000 United States occupation troops during the next 8 months, leaving only 500 officers and men as military instructors for the training of a Republic of Korea security force.

In the northern zone the Communists organized demonstrations against the United Nations Commission. Strikes and disorders were fomented south of the 38th Parallel, and 200,000 North Koreans marched in protest at
There was an air of urgency about such attempts to prevent the election in South Korea. The exposure of the Agrarian Reform as a fraud had hurt the Communists, and the disinterested spirit of the United States occupation was gaining recognition throughout Korea in spite of initial blunders. Pyongyang could not afford to let South Korea take the lead in forming a government, and July 1948 dated the creation of a Communist state known as the People’s Democratic Republic of Korea. After adopting a constitution modeled after that of Communist Bulgaria, the Supreme People’s Council claimed to represent all Korea. In justification it was charged that “American imperialists carried out a ruinous separate election and organized a so-called National Assembly with the support of a traitor minority and with the savage oppression of the majority of the Korean people.”[15]

The Russians announced in December 1948 that they were withdrawing all occupation troops. It was no secret, however, that they would leave behind them an NK army that far surpassed the ROK military establishment.[16] Kim Il Sung, the Red Korean prime minister, referred to it pointedly as a “superior army” in an address at Pyongyang.

“We must strengthen and improve it,” he declared. “Officers and men must establish iron discipline and must be proficient in the military and in combat techniques.”[17]

Numbers at the end of 1948 were estimated at 60,000 regulars in addition to constabulary, railroad guards, and trainees. These troops were equipped by the Russians with captured Japanese weapons, and Russian arms were shipped into northern Korea to meet the needs of an expanding army.[18]

It was a military force of an entirely different character that American officers organized on the other side of the 38th Parallel. The new ROK army was strictly a defensive force, trained and equipped to maintain internal security and guard the border and seacoast. Neither tanks nor military planes were provided by the Americans, who leaned backward to avoid any suspicion of creating an instrument for offensive internecine warfare.

Raids by Red Korean troops across the border became a frequent occurrence throughout 1949. One of these forays, supported by artillery, was a large-scale NK thrust into the Ongjin Peninsula. Heavy fighting resulted before the invaders were driven back into their own territory.

Having failed to prevent the formation of a democratic Korean government—the only government in Korea recognized by the United Nations—the Reds at Pyongyang were making every effort to wreck it. Since 80 percent of the ROK electric power originated north of the frontier, they were able to retard economic recovery by cutting off the current at intervals. There was no other unfriendly act in the Communist bagful of tricks that Pyongyang neglected to employ while its radio stations blared forth a propaganda of hatred.

Early in 1950 the situation grew more tense daily as thousands of veterans returned to North Korea after serving in the Communist armies which overran China. When Radio Pyongyang began making appeals for peace that spring, it should have become obvious to practiced observers of Communist techniques that preparations were afoot for war. On 10 June 1950 the Pyongyang government announced a new plan for unification and peace after branding the top ROK officials as “traitors.” The motive behind this proposal was apparently the usual Communist attempt to divide an enemy on the eve of an aggression. For the long-planned blow fell at 0400 (Korean time) on Sunday morning, 25 June 1950. Russian-made tanks spearheaded the advance of the NK ground forces across the 38th Parallel, and Russian-made planes strafed Seoul and other strategic centers.

Captured NK documents offer proof that the invaders had already set the machinery of aggression in motion while making their plea for peace. This evidence included the written report of instructions given by one Lieutenant Han to a group of picked men on an intelligence mission. On 1 June 1950 they were to proceed by power boat to an island off Inchon, where confederates would help them make their way to the mainland. “Our mission,” explained Han, “is to gather intelligence information concerning South Korean forces and routes of
advance ahead of our troops. We will perform this task by contacting our comrades who are scattered throughout the length and breadth of South Korea.”[19]

The lieutenant explained that the forthcoming attack on South Korea was to be the first step toward the “liberation” of the people of Asia. And his concluding remarks leave no doubt as to the complete confidence with which the Korean Communists began the venture:

“Within 2 months from the date of attack, Pusan should have fallen and South Korea will be again united with the North. The timetable for this operation of 2 months’ duration was determined by the possibility of United States forces intervening in the conflict. If this were not so, it would take our forces only 10 days to overrun South Korea.”[20]
IT WAS AN army of veterans that broke the world’s peace in Korea. There were thousands of veterans of the Chinese civil war and Manchurian guerrilla operations. There were even a few scarred warriors who had served with the Soviet forces in such World War II operations as the defense of Stalingrad.

Practically all the commissioned and noncommissioned officers were battle-hardened, and a majority of the rank and file had seen action. The origins of this army were deeply rooted in Asiatic soil. During World War II an endless stream of Koreans escaped from Japanese bondage and found a refuge in Soviet or Chinese territory. Some of them took to banditry, others were absorbed into the Soviet or Red Chinese armed forces. These refugees dreamed of a united and independent homeland; and at Yenan, China, the Chinese Communists encouraged this movement as early as 1939 by supplying arms to a force known as the Korean Volunteer Army. During the first month alone the KVA attracted 3,000 recruits, and at the end of the war an advance column marched back to Korea under a leader named Kim Mu Chong.[1]

Although the heads of the KVA had been thoroughly impregnated with Communist doctrine at Yenan, they were coldly received by General Chistyakov and the Russian occupation forces. It was a Soviet puppet state that the Kremlin wished to see established in Korea, not a Red-tinted independent Korean government. Communist right-thinking did not save Kim Mu Chong and his KVA troops from the humiliation of being stopped at the frontier in September 1945 and disarmed.

The Russian commander piously justified his decision on grounds of upholding international law. But he offered to return the confiscated arms if the Korean Reds would retrace their steps and join the CCF fight against the Nationalists. He promised that after the struggle had been won, the KVA would be welcomed back to Korea. [2]

Accepting these terms, Kim Mu Chong marched into Manchuria to aid the Chinese Reds. His force numbered nearly 20,000 the following spring, but the KVA lost its identity when the men were mingled with Chinese and Mongolians in the CCF Northeast Democratic United Army. Most of the officers and NCO’s of the former KVA were organized into teams to recruit and train Korean volunteers both in Manchuria and Korea. As combined military instructors and political commissars, they created an integrated Communist force out of such oddly assorted material as peasants, guerrillas and bandits. Used first as security troops and later welded into a regular army structure, these thousands of Korean Reds undoubtedly had the principal part in “liberating” Manchuria from the Chinese Nationalists.

Meanwhile, the Russian occupation forces did not neglect the conversion of North Korea into a satellite state. One of the first steps was the establishment of a military academy at Pyongyang in the autumn of 1945. Founded ostensibly for the training of police, it had as its primary purpose the instruction of army officers. Graduates of the first and second classes became teachers when branches of the academy were set up at Nanam, Sinuiju and Hamhung. These offshoots, known as the Peace Preservation Officers’ Schools, turned out the cadres which were later activated as the 1st, 2d and 3d Divisions of the new North Korean army. For more than 2 years, however, the fiction was maintained that graduates were to patrol rural areas, protect railroads and guard the frontier.
Chapter 2. Red Aggression in Korea

Units of North Korean Army

Not until 8 February 1948 did the “North Korean People’s Army” come into official being with the activation of the 1st, 2d and 3d Infantry Divisions. At that time there were some 30,000 troops and 170,000 trainees in North Korea, according to later United States Army intelligence estimates.[3]

The 4th Infantry Division was formed in 1948 from trainees plus a veteran regiment transferred from the 2d Division. Two new infantry divisions, the 5th and 6th, were organized the following year when Korean veterans of the 164th and 166th CCF Divisions returned as units with their arms and equipment.[4]

It is probable that the leaders of the North Korean state were committed early in 1950 to the invasion of the Republic of Korea. At any rate, the training and organization of new units was accelerated during the spring months. From February to June nine new divisions were activated—the 7th, 8th, 9th, 12th, 13th, 14th, and 15th Infantry Divisions, 10th Mechanized Infantry Division and 105th Armored Division.[5]

Two factors combined to hasten the NKPA aggression. It had undoubtedly become evident to the Kremlin in 1949 that the Republic of Korea could never be brought into the Communist fold by propaganda, subversion, incitation of disorders or any other means short of a victorious civil war. Moreover, a successful war of invasion was equally desirable as a cure for political discontent at home. Not only was the Agrarian Reform resented everywhere in North Korea, but taxes had gone up as high as 60 percent of the crops to maintain the top-heavy military structure and pay for tanks, planes, howitzers and other arms supplied by the Soviet Union.

Although most of the heavy industries of Korea were located north of the 38th Parallel, they included no arms plants with the exception of a small factory capable of turning out submachineguns and ammunition. North Korea was also able to produce 80 percent of its own POL products for military purposes and some of the army uniforms. Other supplies, all the way from the Tokarev semiautomatic pistol (adapted from the U.S. .45 Colt) to the T-34 tank, were imported from the U.S.S.R.[6]

Most of the weapons were old models of recent manufacture. The heaviest load came by rail from Siberia through Manchuria via Antung and crossed the Yalu into Korea at Sinuiju. As many as three freight trains a day rumbled over the bridge between those cities and continued along the west coast to Pyongyang. Supplies were also received from Vladivostok by water to Chongjin or by the east coast rail line to Wonsan.[7]

It must also be remembered that thousands of Korean veterans of the Chinese civil war returned with their arms and equipment, including American-manufactured weapons surrendered by the Nationalists. The NKPA was second only to the Soviet Army itself in the spring of 1950 as the best armed and equipped military force of its size in the Far East.

The U.S.S.R. did not limit its aid to arms. Lieutenant General Vasilev and a group of Soviet military instructors arrived at Pyongyang in 1949 to train NKPA staff and line officers for offensive warfare. About 3,000 promising NKPA candidates were sent to Soviet schools that year for courses in such specialties as artillery, air and tank tactics.

Of the original 14 NKPA divisions, the first 6 were composed largely of well trained troops. The 12th Division, like the 5th and 6th, consisted of Korean veterans of the Chinese civil war. Constabulary troops made up the 8th and 9th, while the 7th, 13th, 14th, and 15th Infantry Divisions and the 10th Mechanized Infantry Division were formed of conscripted trainees for the most part.[8]

The picture grows confused in the spring of 1950, with 8 new divisions being organized in 5 months. Many of the recently drafted men received only the most sketchy training; and some of the older units were
weakened by drawing off well trained men to stiffen the new outfits. All accounts agree, however, that the NKPA leaders anticipated an effort of only a few days, ending with the destruction of the ROK army. This was not an unreasonable assumption, since a swarm of NKPA spies had brought back accurate reports of unpreparedness. Not only was the Republic of Korea weak militarily, but a bad economic situation had been made worse by increased population due to immigration.

Altogether, Pyongyang could put nearly 100,000 fairly well-trained and armed troops in the field, with about half of that number in reserve as replacements, occupation troops or constabulary. But the problem of manpower did not worry Communists who were not squeamish about violations of international law. For the aggressors planned to make war nourish war by conscripting both soldiers and laborers in invaded regions of the Republic of Korea. It was an old Asiatic custom.
With few exceptions, the North Korean war leaders proved to be willing and able instruments of policies formulated in Moscow. Kim Il Sung, the prime minister and commander in chief, was an imposter named Kim Sung Chu who made a bid for popular support by taking the name of a dead Korean resistance hero. As a youth he had fled from Korea and joined the Communist party in Manchuria. There he distinguished himself in guerrilla operations against the Japanese. In 1938, after rising to the stature of a corps commander, he met military reverses and found a refuge in Soviet territory. Legend has it that he attended a Soviet military academy and took part in the battle of Stalingrad. However this may be, he returned to Korea in August 1945 as a 35-year-old captain in the Soviet army of occupation.[9]

South Korean descriptions of Kim Il Sung as an uneducated ruffian were doubtless prejudiced, but certainly he was a ruthless guerrilla leader who showed an uncommon aptitude for politics. His rise in the new North Korean state was spectacular, for in September 1948 he became the first prime minister. The following year he went to Moscow for conferences at the Kremlin, and nine days after the outbreak of civil war in Korea he was appointed commander in chief of the invading army while retaining his position as prime minister.

In contrast to this rough diamond, Marshal Choe Yong Gun cut a reserved and dignified figure as deputy commander in chief and minister of national defense. Born in Hongchon, Korea, at the turn of the century, he had the equivalent of a high school education. In 1925 he went to China and is believed to have attended the Whampoa Military Academy at Nanking and the Yenan Military School. At Yenan, after being converted to communism, he became a political instructor and later served in the 8th Route Army. Choe was commander of the Korean Volunteer Army in 1941 and fought against the Japanese in Manchuria. Returning to Korea in 1945, he commanded the Cadre Training Center until 1948, when he was named the first commander in chief.

Even Choe’s enemies in South Korea credited him with a high order of intellectual capacity and moral courage. Despite his Communist party membership, he opposed the invasion of the Republic of Korea. He was cool, moreover, toward Lieutenant General Vasilev and the other Soviet advisers who reached Pyongyang in 1949 to prepare the Korean armed forces for an offensive war. This attitude probably explains why he was sidetracked in March 1950, when Vasilev took charge of the combat training and re-equipment program. Although Choe was not on good terms with Kim Il Sung at this time, he was regarded as a superior strategist and administrator. And after being bypassed temporarily, he continued to be respected as a leader by the North Korean army and peasantry.

Nam Il stood out as the most cosmopolitan and polished of the North Korean war leaders. Born in 1911, he was Kim Il Sung’s schoolmate in Manchuria and the two remained lifelong friends. As a young man, Nam Il made his way across the U.S.S.R. to Smolensk and attended college and a military academy. He entered the Soviet army at the outbreak of World War II and is said to have participated along with Kim Il Sung in the Stalingrad defense.

Both of them returned to Korea with the rank of captain in the Soviet army of occupation, and both entered upon successful Communist political careers. In 1948 Nam Il was elected to the Supreme People’s Council and became vice-minister of education in charge of military instruction. The most Russianized of the North Korean leaders, he took pains to cultivate the good will of the Soviet advisers. Speaking English, Russian, and Chinese as well as Korean, he held an advantage over his North Korean rivals in such contacts. He also made a better appearance, being tall for an Oriental and always well turned out in a meticulously pressed uniform and
gleaming boots.

A major general without an active field command at the outbreak of war, he was rapidly advanced to the rank of lieutenant general and chief of staff. His stern demeanor, while seated stiffly in his black Chrysler driven by a uniformed chauffeur, soon became one of the most impressive sights of Pyongyang. But his talents remained more political than military, and he never won the respect which the army accorded to Choe Yong Gun.

Among the corps commanders, there was none more able than Lieutenant General Kim Ung. About 40 years old at the outbreak of war, he had graduated from the Kumchon Commercial School in Korea and the Whampoa Military Academy in China. As an officer of the 8th Route Army, he won a reputation for daring in 1939 by tossing hand grenades into a conference of Japanese generals at Peiping and escaping after inflicting numerous casualties. Returning to Korea in 1946, he started as a regimental commander and made a relatively slow rise because of his CCF background. But after lining up with the Soviet faction in the army, he was promoted to the command of the 1st Division in 1948 and of I Corps during the invasion.

The rapid ascent of Lieutenant General Yu Kyong Su to the command of III Corps would indicate that promotion was sometimes due to political influence. A graduate of a Red Army tank school in 1938 at the age of 33, Yu served throughout World War II as a company grade officer in a Soviet tank unit. After his return to Korea, he married Kim Il Sung’s sister and shot up from the command of an NK tank regiment in 1948 to the rank of corps commander late in 1950. During the first few weeks of the invasion, he was awarded the highest NKPA decoration, the “Hero of the Korean Democratic People’s Republic,” with a concurrent award, the “Order of the National Flag, 1st Class.”

On the other hand, the career of former Lieutenant General Kim Mu Chong, ex-commander of II Corps and ex-chief of artillery, was blasted by the opposition of Kim Il Sung and Nam Il. A CCF veteran, Mu had served under Mao Tse-tung on the “Long March” as one of 30 Koreans to survive the ordeal. He commanded a Chinese artillery brigade and was rated the best CCF artilleryman. In 1945 he came back to Korea and conducted a speaking tour stressing the desirability of cooperating with Red China and omitting any reference to the Soviet Union. This lapse explains his failure in North Korean politics, but in deference to his high military reputation he was given command of II Corps in June 1950. The poor showing made by his units on the central front was ascribed by Mu to the fact that Kim Il Sung picked him for missions which could not succeed. Although he did not lack for support in the army, Mu was relieved of his command and other positions in the late summer of 1950. Expulsion from the North Korean Labor Party followed after Kim Il Sung denounced him in a speech for disobedience of orders.

Mu’s downfall was only one chapter in the bitter struggle for power waged by two opposing tactical schools in the North Korean army from 1948 to 1950. Veterans of CCF campaigns against the Japanese and Chinese Nationalists upheld a system of large-scale guerrilla warfare refined into a military science. Approach marches under cover of darkness, infiltrations, probing night attacks—these were the basic tactics employed by Mao Tse Tung’s forces for the conquest of China. Although mobility was the keynote, a rigid tactical system allowed little latitude of decision to officers below the regimental level. School solutions were provided for every military problem that could be foreseen, and many of the North Korean officers had graduated from the CCF military academy at Yenan.

Another group of officers advocated the tactics learned at Soviet military schools and in Soviet campaigns of World War II. This system, of course, made the CCF tactics seem primitive in comparison. For the Russians placed much more dependence in armor and artillery as preparation for infantry envelopments. Such tactics called for more supplies and ammunition than could have been provided by the elementary CCF logistics.

The CCF veterans seemed to have the upper hand in the North Korean army early in 1948. But a survey of NKPA officers’ careers during the next 2 years indicates that their opponents triumphed. Thus, at the onset of civil war, most of the key positions in the army were filled by men who had hitched their wagons to the red star of
Moscow, both militarily and politically.

This does not mean that CCF tactics had been put aside entirely. On the contrary, these methods had evolved out of military poverty and were admirably adapted to an Asiatic peasant army. The North Korean forces, being compelled to import arms, were never able to afford enough planes, tanks, and artillery to make the best of the Soviet system. And it was inevitable that heavy losses of such equipment in combat would cause a reversion to CCF tactics.
No child ever bore a more striking likeness to its parent than did the NKPA to the Soviet organization of World War II.

The army as a whole came under the overall control of General Headquarters at Pyongyang, which planned and directed the invasion of ROK territory. As the troops advanced, a Front Headquarters was set up to control corps operations. This organization of Soviet origin was the highest tactical echelon of command. Normally including three or four corps of several divisions each, it resembled an army group in military establishments of other nations. Front Headquarters had only a wartime mission and could be disbanded in time of peace.[10]

Next to the corps in the chain of command was the infantry division, the basic tactical formation, modeled after that of the Red Army in World War II. Of triangular design, numbering some 11,000 men, it was reported by POW’s to consist of a headquarters, three rifle regiments, an artillery regiment, a signal battalion, an antitank battalion, a training battalion, a reconnaissance troop, and such division rear services as medical, veterinary, transport, and supply units.[11]

Division Headquarters, with about 120 men, included the commander, a major general, and officers of the division and special staff. Closely associated with the CG, and possessing almost as much power and responsibility, was the division political deputy, usually a senior colonel, who supervised politico-military activities and reported any deviations from doctrine. This was a peculiarly Communistic institution, of course, and it was the duty of the deputy to see that officers and men of the division remained well indoctrinated.

The NKPA rifle regiment, with a T/O strength of about 2,500 men, consisted of 3 rifle battalions and supporting artillery. Each of these battalions, numbering some 650 officers and men, included 3 rifle companies, a heavy machinegun company, a mortar company, an antitank gun platoon and an antitank rifle platoon in addition to signal, medical, and supply platoons.

An NKPA rifle company, which had a T/O strength of about 150 men, was made up of a headquarters, 3 rifle platoons and a heavy machinegun section. The rifle platoon had 4 squads and a T/O strength of 45 men. Squad weapons were said to include a light machinegun, a sub-machinegun and Soviet M1891/30 rifles. Two hand grenades were carried by each rifleman.

An army patterned after the Soviet system was certain to emphasize artillery, and the NKPA artillery reserve at the outset of the invasion consisted of 3 regiments—1 attached to GHQ, and 1 to each of the 2 corps operating at that time. But shortages of equipment and logistical problems made it necessary in actual combat for the NKPA to concentrate most of its artillery potential within the rifle division.

The organic artillery support of each division included a regiment with a T/O total of approximately 1,000 men. Two 76-mm. gun battalions, a 122-mm. howitzer battalion and a headquarters company numbered some 250 men each. A battalion consisted of 3 firing batteries with 12 artillery pieces each, and personnel carried M1938 carbines.

There was also a self-propelled artillery battalion made up of 3 gun companies, a signal platoon and a rear services section with a total of 16 SU-76 pieces. A lieutenant colonel commanded this unit, which had a T/O strength of 110 officers and men.

The other major components of the NKPA infantry division were as follows:

SIGNAL BATTALION. — a wire company, radio company and headquarters company, making a total
of 260 officers and men.

ANTITANK BATTALION.—about 190 officers and men in three 45-mm. antitank companies and an antitank rifle company.

ENGINEER BATTALION.—T/O of 250 officers and men carrying M1944 rifles and equipped with picks, shovels, axes, saws and mine detectors.

TRAINING BATTALION.—About 500 officers and men charged with the responsibility of training NCO’s for the division.

RECONNAISSANCE COMPANY. — an estimated strength of 4 officers and 90 enlisted men equipped with 80 submachineguns, 20 Tokarev pistols, 4 telescopes and 5 pairs of binoculars.

REAR SERVICES.—a medical battalion, a transport company, a veterinary unit and a supply section. Of the 200 personnel in the medical battalion, about 60 were women, according to POW testimony. The transport company, with some 70 men, was composed of 50 2 ½-ton trucks, 6 or 7 motorcycles and 10 horse-drawn wagons.[12]

The NKPA infantry division, in short, was a faithful copy of the World War II Soviet model. But it must be remembered that the foregoing T/O and T/E statistics represented the ideal more often than the reality. Owing to the speeding up of preparations in anticipation of an easy victory, many NKPA units lacked their full quotas of men and equipment at the outset of the invasion.
POW interrogations revealed that NKPA military aviation evolved from the North Korean Aviation Society, founded in 1945 at the Sinuiju Airfield by Colonel Lee Hwal, a Korean who had served in the Japanese air force. The organization consisted at first of about 70 students and 17 pilots who were veterans of Japanese air operations. Equipment included a few aircraft of Japanese manufacture and several gliders.\[13\]

In 1946 the Society was required to transfer its aircraft and trained personnel to the Aviation Section of the Pyongyang Military Academy. Soviet-trained Korean officers were placed in positions of responsibility under the command of Colonel Wang Yun, a former captain in the Soviet air force who replaced Lee Hwal.

The Aviation Section numbered about 100 officers, 250 enlisted men and 500 students by November 1948. Estimates of aircraft are contradictory, but one source reported 7 Japanese trainers, 6 Japanese fighters and a Japanese twin-engine transport. Shortly afterwards the first Soviet aircraft were received, and the NKPA Air Force was created from the Aviation Section and moved to the Pyongyang air base.

The final phase of development came in January 1950 with the expansion of the air regiment into a division under the command of Wang Yun, promoted to major general. Strength of the unit in April 1950 was estimated at about 1,675 officers and men, including 364 officers, 76 pilots, 875 enlisted men, and 360 cadets. The receipt of more Soviet planes at this time brought the number of aircraft up to 178, including 78 YAK-7B fighters, 30 PO-2 primary and YAK-18 advanced trainers, and 70 II-10 ground attack bombers.

Captured documents indicate that the aviation training program was speeded up along with other NKPA activities during the last few months before the invasion. In June 1950 each pilot was required to fly 40 training missions and attend 40 hours of lectures. As preparations for the invasion neared completion, a forward displacement of tactical aircraft was put into effect.\[14\]

The North Korean armored division, a copy of its Soviet counterpart, had only about half of the overall strength. Thus the NKPA 105th Armored Division, comprising some 6,000 officers and men, included 3 medium tank regiments, the 107th, 109th, and 203d, with 40 tanks each. Organic supporting units were the 206th Mechanized Infantry Regiment and the 308th Armored Battalion equipped with self-propelled 76-mm. guns. POW reports also mentioned reconnaissance, engineer, signal, ordnance and medical battalions and a mixed unit identified as the 849th Antitank Regiment, attached to the division after the invasion started.\[15\]

All reports indicate that the division was split in combat, with each tank regiment being assigned to an infantry division. Even the training of the regiments had been conducted separately, and there is no evidence of prewar maneuvers on the division level.

Each tank regiment had an estimated T/O strength of about 600 officers and men. The three medium tank battalions were supported by a regimental submachinegun company, a supply and maintenance company and a headquarters section in addition to engineer, signal, reconnaissance, and medical platoons. Forty T-34/85 medium tanks were divided into 13 for each battalion and 1 for the headquarters section, which also rated a CAZ/67 jeep.

Responsibility for the indoctrination of the regiment rested with a political section headed by a lieutenant colonel. As assistants he had 2 officers and 3 sergeants.

An NKPA tank battalion included a headquarters section and three 25-man companies. A company contained three platoons, each of which was assigned a medium tank. The standard crew consisted of the commander, usually a senior lieutenant, the driver and assistant driver, the gunner in charge of the 85-mm. rifle, and the assistant gunner operating the 7.62-mm. machinegun. The usual ammunition load was 55 85-mm. shells
and 2,000 rounds of machinegun ammunition.

Not much was known about the 206th Mechanized Infantry Regiment, but it was believed to consist of three motorized infantry battalions, a 76-mm. howitzer battalion, a 45-mm. antitank battalion, a 120-mm. mortar battalion, a signal company, and an NCO training company.[16]
Chapter 2. Red Aggression in Korea
NKPA Officer Procurement and Conscription

Officer procurement problems were solved in large part by the fact that thousands of North Koreans had seen combat service with the CCF forces. Many of these veterans were qualified as junior officers or NCO’s without further training. Remaining vacancies for company-grade officers were filled by officer candidate schools or the commissioning of qualified NCO’s.

The West Point of the NKPA, located at Pyongyang, turned out an estimated 4,000 junior officers from the time of its activation in 1946 to the beginning of the invasion. Courses normally ranged in length from 6 to 10 months, but were abbreviated to 3 months during the autumn of 1949 in anticipation of the invasion. After hostilities began, the need for replacement officers became so urgent that one entire class at the Pyongyang academy was commissioned wholesale on 10 July 1950 and sent to the front after 20 days of instruction.[17]

Three Soviet officers, a colonel and two lieutenant colonels, reportedly acted as advisers to a faculty composed of NKPA majors. The five departments of the Academy were devoted to infantry, artillery, engineering, signaling, and quartermasters’ duties.

A second military academy at Pyongyang specialized in subjects which Communists termed “cultural.” So much importance was attached to political indoctrination that graduates of this school were commissioned as senior lieutenants and given unusual authority in their units. Although a 2-year Russian language course was offered, most of the candidates took the standard 9-month term.

Branches of the Pyongyang military academy were established as officer candidate schools in Hamhung, Chinnampo, Chorwon, Mesanjin, Kaechon and Kanggye. Applicants were required to have an acceptable political background and a 6-year minimum of schooling, though the last was sometimes waived.

A command and staff school at Pyongyang offered advanced tactical and administrative courses at the battalion and regimental level to selected officers. At the other extreme, NCO schools were located at Sadong, Sinuiju, Sinchon and Nanam. Tactical instruction was given at the platoon and squad level with emphasis on weapons courses. NCO training was accelerated in preparation for hostilities, and 4,000 veterans of CCF service in Manchuria completed 2-month courses at the Sadong school alone in the spring of 1950.

Technical training in aircraft, artillery, tank and engineering specialties was offered in schools for junior officers as well as enlisted men. But it appears that most of the officers above the company level received their instruction in Soviet schools.[18]

Conscription, according to POW accounts, was introduced as early as 1948. In the rural districts each myon (a political subdivision smaller than a county but comprising several villages) was given its quota of recruits to be furnished between the ages of 18 and 35. The village chiefs then assembled all the men in this age group and made their decisions on an arbitrary basis. Selectees had little or no hope of appeal, but were assured that provision would be made for their families during the 3-year term of service.[19]

The system was much the same in North Korean cities, which were divided into sections for conscription purposes. Sometimes the leaders in urban areas called for volunteers. If the response was lacking in enthusiasm, men were singled out and requested to “volunteer.” This method was invariably successful, since a man who refused could be deprived of employment.

The conscription program was speeded up along with other preparations as invasion plans neared completion. About 12,000 men were inducted from March through May 1950 and given 6 weeks of basic training at such camps as the No. 2 People’s Training Center at Sinuiju.
In some communities the men eligible for military service were requested to attend a meeting. Upon arrival, they were taken in trucks to a training center and compelled to enlist.

Harsh as such methods might seem, they were gentle as compared to the forced conscription of ROK civilians after the invasion got underway. Both men and women in captured cities were crowded into school buildings, given political indoctrination and forced to learn Communist songs. After a week of this curriculum, the men were inducted both as combat recruits and laborers. And though the women were told that their service would be limited to duty as nurses or clerks, some of them were coerced into carrying out reconnaissance or espionage missions. [20]
Chapter 2. Red Aggression in Korea
The NKPA Order of Battle

The transition from a cold war to a shooting war in Korea should not have surprised anyone familiar with the events of the past 2 years. For several hours, indeed, there was a reasonable doubt on the historic morning of 25 June 1950 whether an undeclared war had begun or merely another large-scale NKPA raid across the frontier. But this time it was the real thing. Commencing at 0400, 7 infantry divisions and an armored division swept across the 38th Parallel, with 2 infantry divisions in reserve. From right to left, the NKPA order of battle was as follows:

The 6th Infantry Division along the west coast, sealing off the Ongjin Peninsula and moving on Kaesong; the 1st Infantry Division advancing on Kaesong and Seoul; the 4th and 3d Infantry Divisions and 105th Armored Division attacking in west-central Korea and converging on Seoul; the 2d and 15th Infantry Divisions driving toward the Hwachon-Chunchon axis in east-central Korea; and the 5th Infantry Division taking the route along the east coast. Following close behind were the two reserve infantry divisions, the 13th and 15th.[21]

There was no question as to the outcome in the minds of observers who knew the composition of the ROK army. The very name was misleading, for it might more accurately have been described as a large constabulary in process of being converted into an army. Given another year of training and added arms and equipment, the Republic of Korea would perhaps have built up an adequate defense establishment. But the enemy took good care to strike while this development was still at the blueprint stage.

In June 1949, at the conclusion of the occupation, the United States forces turned over arms and equipment to the value of about $110,000,000. These supplies included 100,000 small arms (rifles, pistols and machineguns) and 50,000,000 rounds of ammunition; more than 4,900 vehicles of all types; about 2,000 2.36" rocket launchers and 40,000 rounds of ammunition; and a large number of 105-mm. howitzers, 37-mm. and 57-mm. antitank guns, and 60-mm. and 81-mm. mortars, together with 700,000 rounds of ammunition for those weapons. Twenty training planes (L4 and L5 types) were transferred as well as 79 light naval craft suitable for patrolling the coast.[22]

It is noteworthy that this list was limited to light arms for a constabulary of about 50,000 men. Tanks, military aircraft and medium or heavy artillery were significantly lacking.

At the request of the ROK government, a Korean Military Advisory Group remained in South Korea after the conclusion of the American occupation. Composed of 500 United States Army officers and enlisted men, the KMAG took on the task of directing the training of a ROK constabulary. The group was under the control of Ambassador Muccio, since General MacArthur’s responsibility for the defense had ended along with the occupation.[23]

After the NKPA invasion, the United States was severely criticized in some quarters for failing to provide the Republic of Korea with arms and training equal to those of the enemy. American reluctance was due in some measure to indiscreet declarations by that fiery old Korean patriot, Syngman Rhee. The ROK president, 74 years old at the outbreak of civil war, did not shrink from advocating the unification of Korea by armed force. On 20 February 1949 he predicted that his troops “could defeat North Korea within 2 weeks” if the U.S.S.R. did not interfere. Eight months later, on 7 October, his confidence had increased to the point where he was “sure that we could take Pyongyang in 3 days.”[24]

Such remarks placed the United States in an uncomfortable position. If aid to the Republic of Korea were to include tanks, military aircraft and training for offensive warfare, Americans would be open to the charge
of inciting civil strife. Communist propagandists would scream that accusation in any event, of course, but there
would be grounds for the suspicion of other members of the United Nations. Ambassador Muccio made sure,
therefore, that United States assistance did not extend beyond the legitimate needs of ROK frontier defense and
internal security.

The triangular ROK infantry division was modeled after the United States unit but numbered about 9,500
troops. Eight divisions and a regiment had been organized and partially trained by June 1950. They were the 1st,
2d, 3d, 5th, 6th, 7th, 8th, and Capital Divisions and the 17th Regiment.[25] Only 4 of these divisions, the 1st, 2d,
6th, and 7th, had their full complement of 3 regiments. All the others had 2 except the 5th, which had 2 and a
battalion.[26]

ROK military strength was estimated at 98,808 troops by the KMAG in June 1950. About 65,000 of
them had been given unit training for combat. They were fairly proficient in the employment of small arms and
mortars, but their instruction had not included defense against tanks. Command and staff work were still at a
rudimentary stage, and both officers and NCO’s needed seasoning.

The ROK Army of June 1950 had made good progress, in short, when it is considered that most of its
components had been activated within the past year. But it was no match for the Red Korean columns which
attacked at dawn on 25 June 1950. The ROK order of battle, if such it could be called, consisted of a regiment and
four infantry divisions ranged from left to right across the peninsula—the 17th Regiment and the 1st, 7th, 6th, and
8th Divisions. The remaining divisions were dispersed for purposes of internal security: the Capital at Seoul; the
2d at Chongju and Taejon; the 3d at Taegu; and the 5th at Kwangju.

The ROK frontier forces were not well disposed for defense in depth. Taken by surprise, they put up an
ineffectual resistance despite brave fights here and there against odds. On other occasions the sight of an enemy
tank or armored car was enough to scatter ROK riflemen, and the progress of the invading columns resembled an
occupation rather than an attack.

Before sundown on the day of invasion it appeared that NKPA leaders had not erred in allowing a
timetable of 10 days for overrunning the Republic of Korea. The question now was whether the conflict could be
confined to that Asiatic peninsula. Communist aggressions were no novelty, to be sure, either in Asia or Europe.
But in the past there had always been some show of peaceable intentions, however hypocritical, or some shadow
of legality. This was the first time that a Soviet puppet nation had been permitted to go as far as open warfare.
Matters had come to a showdown, and it could only be interpreted as a challenge issued by Communism to the
free nations of the world.
Chapter 3. The Marine Brigade

AT THREE O’CLOCK in the morning of 25 June 1950 the telephone rang in the New York suburban home of Trygve Lie, secretary-general of the United Nations. He was informed that North Korean forces had crossed the 38th Parallel to invade the Republic of Korea.

The news had just been received by the United States Department of State directly from Seoul. Ambassador Muccio had emphasized that this was not one of the large-scale North Korean raids into ROK territory which had become an old story during the past 2 years. For his report concluded:

“It would appear from the nature of the attack and the manner in which it was launched that it constitutes an all-out offensive against the Republic of Korea.”[1]

The implications were disturbing. Every middle-aged American could recall the failure of the League of Nations to halt Japanese, Italian, and German aggressions of the 1930’s with moral suasion. Even when economic sanctions were invoked, the aggressors went their way defiantly without respect for anything short of armed force. And now history seemed to be repeating itself with dismaying fidelity as new aggressors challenged the new union of nations striving to maintain peace after World War II.

There was even an ominous parallel in the fact that another civil conflict in another peninsula had been the prelude to Armageddon in the 1930’s. For it might well have been asked if the Korea of 1950 were destined to become the Spain of a new world war.

The answer of the United Nations was prompt and decisive. At 2 o’clock in the afternoon on 25 June 1950, a meeting of the Security Council was called to order at New York. A dispatch had just been received from UNCOK—the United Nations Commission on Korea—reporting that four Soviet YAK-type aircraft had destroyed planes and jeeps on an airfield outside of Seoul. The railway station in the industrial suburb of Yongdungpo had also been strafed.[2]

By a unanimous vote of nine member nations (with the U.S.S.R. being significantly absent and Yugoslavia not voting) the blame for the aggression was placed squarely upon the North Korean invaders. They were enjoined to cease hostilities immediately and withdraw from ROK territory.

The United Nations had no armed might to enforce its decisions. But the Security Council did not intend to rely merely upon moral suasion or economic sanctions. At a second meeting, on 27 June, the Council proclaimed the NKPA attack a breach of world peace and asked member nations to assist the Republic of Korea in repelling the invasion.

For the first time in the war-racked 20th century, a group of nations banded together for peace had not only condemned an aggression but appealed to armed force to smite the aggressor. On the same day that the Security Council passed its historic resolution, the United States announced that it was giving immediate military aid to the Republic of Korea.

President Truman, as commander in chief, ordered American naval and air forces into action. Fifty-two other members of the United Nations approved the recommendations of the Security Council. Their pledges of assistance included aircraft, naval vessels, medical supplies, field ambulances, foodstuffs and strategic materials.

Only 3 of the 56 nations responding to the Council were opposed to the majority decision. They were the Soviet Union and her two satellites, Poland and Czechoslovakia, which had been brought into the Communist orbit by compulsion after World War II.

On 29 June President Truman authorized General MacArthur to send certain supporting United States ground force units to Korea. An American naval blockade of the entire Korean coast was ordered, and Japan-
based Air Force planes were given authority to bomb specific military targets north of the 38th Parallel.

These decisions were upheld by the wholehearted approval of nearly all Americans, according to contemporary newspapers.[3] Virtually the only dissenters were such left-wing extremists as the 9,000 who attended a “Hands off Korea” rally held early in July 1950 under Communist auspices in New York.[4] Barring such rule-proving exceptions, Americans had long been smoldering with indignation at Soviet cold-war tactics. They applauded the resolute stand taken by the United Nations, and they were proud of their country for its response. Unfortunately, they did not anticipate that anything more serious than a brief “police action” would be necessary to settle affairs. Never in their wildest imaginations had it occurred to them that an Asiatic peasant army might be more than a match for all the United States ground forces in the Far East.

Chapter 3. The Marine Brigade
NKPA Gains of First Week

It was by no means a contemptible army, judged even by Western military standards, which ripped through ROK defenses after crossing the 38th Parallel. The major effort was the two-pronged attack on Seoul, conducted with precision by the 1st NKPA Infantry Division, advancing through Kaesong and Munsan while the 4th and 3d united south of the frontier with elements of the 105th Armored to proceed by way of the Yonchon-Uijongbu and Pochon-Uijongbu corridors.

On the right the 6th Infantry Division made short work of overrunning the isolated Ongjin Peninsula and thrusting eastward toward Kaesong. On the left the offensive was covered by the drive of the 2d and 12th Infantry Divisions on Chunchon while the 5th made rapid gains along the east coast.

In this area the North Koreans initiated the first amphibious operations of the war with four Soviet-manufactured torpedo boats. Built entirely of aluminum, of about 16 gross tons displacement when fully loaded, these craft measured slightly over 19 meters in length and were powered by two 10-cylinder engines rated at 850 horsepower each. With a crew of 8 men, a cruising speed of 20 to 25 knots and a range of 15 hours, the boats carried 2 torpedoes and were armed with a 12.7-mm. heavy machinegun and 2 submachineguns.[5]

During the first 5 days of the invasion, the 4 torpedo boats escorted convoys which transported NKPA troops down the east coast for unopposed landings as far south as Samchok. But on 2 July 1950 the tiny North Korean “navy” was almost literally blown out of the water when it encountered UN Task Group 96.5 off Chuminjin while escorting 10 converted trawlers. With more bravery than discretion, the small North Korean craft accepted battle with the American light cruiser Juneau and two British warships, the light cruiser Jamaica and the frigate Black Swan. Evidently the enemy hoped to score with a few torpedoes at the cost of a suicidal effort, but the U. N. guns sank 2 of the aluminum craft and drove a third to the beach, where it was soon destroyed along with 7 of the convoy vessels. The North Koreans were credited with “great gallantry” in the British dispatch after the fourth torpedo boat escaped.[6] But it was the last naval effort of any consequence by an enemy strangled in the net of the UN blockade.

On land the NKPA columns advanced almost at will during the first 4 days. Nearly a hundred tanks and as many planes were employed by the two main columns advancing on Seoul, and on 27 June 1950 the ROK seat of government was removed to Taejon while Far East Air Force planes were evacuating United States citizens. ROK fugitives, winding southward in an endless stream of humanity, choked every road and multiplied the difficulties of the defense. To add to their misery, one of the bridges across the river Han was blown prematurely when masses of Koreans were crossing.

The fall of Seoul on the 28th ended the first stage of the offensive as the NKPA forces halted for regrouping. Chunchon had surrendered in east-central Korea, so that the invaders held a ragged line stretching from Chumunjin on the east coast through Chunchon, Kapyong and Seoul to the port of Inchon on the west coast.

The beaten and in some instances shattered ROK forces were meanwhile falling back through Suwon in the hope of establishing new positions of defense.
A strategy of delaying actions was the only course open to General MacArthur for the time being. One of his first decisions led to the establishment on 27 June of the GHQ Advanced Command Group at Suwon under the command of Brigadier General John H. Church, USA. This group had as its primary mission the reorganization of the demoralized ROK forces, which were already reporting thousands of men missing in action. Secondary missions were to keep Tokyo informed as to military developments and expedite the delivery of supplies. As early as 27 June, 119 tons of emergency supplies had been sent to Korea by air, and an additional 5,600 tons were being loaded on ships in Japan.[7]

American naval and air forces lost no time at getting into action after President Truman’s authorization. United States Naval Forces in the Far East, under the command of Vice Admiral C. Turner Joy, had as their principal element the Seventh Fleet, commanded by Vice Admiral Arthur D. Struble. Its tactical organization, Task Force 77, immediately clamped down a blockade on the Korean coast after wiping out enemy naval opposition. Other warships of the Seventh Fleet were meanwhile blockading Formosa to guard against the possibility of Chinese Communist intervention by means of an attack on the last Nationalist stronghold.

The United States Far East Air Forces, commanded by Lieutenant General George E. Stratemeyer, USAF, consisted of eight and a half combat groups responsible for the defense of Japan, Okinawa, Guam and the Philippines. Primary missions assigned to the fighter and bomber squadrons were the elimination of NKPA air opposition and the retarding of enemy ground forces by means of interdictory air strikes on bases and supply routes.
Chapter 3. The Marine Brigade

Geography of Korea

Geography being a first cousin of strategy, maps of Korea were almost literally worth their weight in diamonds both in Tokyo and at the Pentagon. For that matter, they were nearly as rare as diamonds, and it became necessary in many instances to work with outdated Japanese maps.

On the map of Asia the Korean peninsula resembles a thumb dipping down into the Yellow and Japan seas. For centuries it has been the sore thumb of Asiatic power politics, so that trouble in Korea resulted in a twinge being felt in the capitals of Europe. But small as Korea appears on the map, it is actually about 575 miles in length—a peninsula resembling Florida in shape but having about the area of Minnesota.

Variations in climate are comparable to the gradient from Maine to Georgia along the Atlantic seacoast of the United States. Extremes ranging from summer weather of 105° F. to winter temperatures of 40° below zero have been recorded. A monsoon season of floods is to be expected in July and August, followed by a period when typhoons are a possibility. Altogether, it is a climate which can contribute no little to the difficulties of a mechanized invader.

It would be almost an understatement to say that Korea is mountainous. Few areas of the earth’s surface are so consistently rugged. Bleak cliffs seem to thrust themselves dripping out of the sea on the East Korean littoral. The peaks become higher and more perpendicular as they march inland, until altitudes of 9,000 feet are reached.

The principal chain of mountains extends from the Yalu in the north along the east coast to the Pusan area. Just south of the 38th parallel a spur branches off diagonally to southwest Korea in the region of Mokpu. The remainder of the peninsula consists largely of smaller ranges and foothills.

The few broad valleys are found chiefly on the west coast, which has a good many indentations and estuaries. Here also are most of Korea’s large rivers, flowing west and south. Of little aid to navigation, these streams are broad and deep enough to hamper military operations; and in the monsoon season, floods become a menace.

As if the west coast were paying a penalty for being less mountainous, mud flats and islands hamper navigation. And here the tides are among the highest in the world, with an extreme range of about 30 feet existing at Inchon in contrast to unusually moderate tides along the east coast.

The west and south are the agricultural areas of Korea. Nothing is wasted by peasants who till every inch of the lowland flats, rice paddies, and terraced hills. Due to their back-breaking toil rather than many natural advantages, Korea was able to export as much as half of its two food staples, rice and fish, under the Japanese administration.

The population, estimated at 25,000,000 in 1945, increased both by immigration and a high birth rate during the next 5 years until as many as 29,000,000 inhabitants were claimed. Seoul was a capital of a million and a half residents, and the two leading seaports, Pusan and Inchon, had not far from a quarter of a million each. Modern office buildings, factories and street railways were found in combination with muddy streets and thatched huts on the outskirts.

A standard-gauge rail network, built largely by the Japanese, linked the principal cities and connected in the north with the Manchurian railways. The highway system was good for an Asiatic country but inadequate for the purpose of an invader on wheels and tracks. Hard-surfaced roads were few and far between, and the ordinary earth roads were churned into bogs during the monsoon season. Air transportation was limited to only a few large
airfields and emergency landing facilities.

Altogether, Korea promised to be a tough nut to crack, when it came to geography, for the officers poring over maps in Tokyo.
The United States ground forces in the Far East comprised the understrength 7th, 24th, and 25th Infantry Divisions and the 1st Cavalry (dismounted) Division of the Eighth United States Army, which had been stationed in Japan since the end of World War II. These divisions had only about 70 percent of their personnel, the regiments being limited to two battalions.

The explanation of these deficiencies goes back to the end of World War II. Popular clamor for the speedy discharge of the victorious United States forces had resulted in American military sinews becoming flabby during the next few years. Strenuous recruiting had been necessary to maintain the small army of occupation in Japan at part strength, and it was no secret that many of the men were attracted by the expectation of travel and light occupation duties. The possibility of battle had scarcely been anticipated when the invasion began, and combat readiness left a good deal to be desired. Training on the company level had been good on the whole, but both officers and men were handicapped by the lack of maneuvers for units larger than a battalion.

Shortages in equipment were equally serious. There were not enough mortars, recoilless rifles and other weapons even if there had been enough maintenance parts and trained maintenance technicians. Most of the arms, moreover, consisted of worn World War II equipment which had seen its best days. Finally, the divisional armored units had been provided with light M24 tanks, instead of the heavier machines normally employed, because of the weak bridges in Japan.[8]

It was, in brief, an unprepared and ill-equipped little army of occupation which represented the first line of United States defense in the Far East.

On 2 July the advance elements of the 24th Infantry Division, commanded by Major General William F. Dean, were flown from Japan to Korea. Two days later, on the American national holiday, the first contact of the United States ground forces with the enemy was made near Osan, about 8 miles south of Suwon.

The American force consisted of 2 infantry companies, a battery of artillery, two 4.2" mortar platoons, a platoon of 75-mm. recoilless rifles, and six 2.36" rocket-launcher teams. Named Task Force Smith after its commanding officer, Lieutenant Colonel Charles B. Smith, the first United States contingent collided on the morning of 5 July with a whole NKPA division supported by 30 T–34 tanks. Despite the odds against it, Task Force Smith put up a good delaying fight of 4 or 5 hours before pulling out with the loss of all equipment save small arms.[9]

On 7 July, the UN Security Council passed a resolution calling for a unified command in Korea, and President Truman named General MacArthur as commander in chief. Lieutenant General Walton H. Walker, who had been one of Patton’s best officers in World War II, was appointed commander of the Eighth United States Army in Korea (EUSAK) on 12 July, and 4 days later he assumed control of all ROK ground forces.

The ROK army, as might be supposed, was badly battered and much in need of reorganization. At the end of the first week of invasion, the ROK missing in action had reached a total of about 34,000. Whole battalions had been scattered like chaff, yet it speaks well for the spirit of the troops that most of the missing eventually returned to their units.[10] The odds against them had made it a hopeless fight, but these Korean soldiers would give a good account of themselves when they had better training and equipment.

The United States forces were finding it hard sledding, for that matter. The remaining units of the 24th Infantry Division were in action by 7 July, having arrived by sea from Japan. They were followed by the 25th
Infantry Division, commanded by Major General William B. Kean, which completed the movement to Korea on 14 July.

These first outweighed United States forces had no choice except to trade space for time in a series of delaying actions. Although the units had to be employed piecemeal at first, they slowed up the main thrust of the enemy—the advance of three NKPA divisions, well supported by armor, down the Seoul-Taejon axis.

Seldom in history have American forces ever endured a worse ordeal by fire. Unprepared morally as well as materially, snatched from soft occupation duties in Japan, they were suddenly plunged into battle against heavier battalions. The “Land of the Morning Calm” was to them a nightmare land of sullen mountains and stinking rice paddies. There was not even the momentary lift of band music and flag waving for these occupation troops, and they were not upheld by the discipline which stiffens the spines of old regulars.

Considering what they were up against, the soldiers of the 24th and 25th have an abiding claim to a salute from their countrymen. They fought the good fight, even though they could keep militarily solvent only by withdrawals between delaying actions.

Officers as well as men were expendables in this Thermopylae of the rice paddies. Because of the large proportion of green troops, colonels and even generals literally led some of the counterattacks in the 18th-century manner. Colonel Robert R. Martin, commanding the 34th Infantry of the 24th Division, fell in the thick of the fighting while rallying his troops. General Dean stayed with his forward units, personally firing one of the new 3.5” bazookas until the enemy broke through. He was reported missing for months, but turned up later as the highest ranking United States military prisoner of the conflict in Korea.

American light tanks could not cope with the enemy’s T–34’s; and even when the first few medium tanks arrived, they were equipped only with 75-mm. guns against the heavier NKPA armament. Not until the third week of ground force operations, moreover, did the United States artillery units receive 155-mm. howitzers to supplement their 105’s.

There was nothing that the ground forces could do but withdraw toward the line of the river Kum. Here a stand was made by 24th Division units at Taejon, an important communications center. But the enemy managed to establish bridgeheads, and the fall of the town on 20 July marked the end of the first phase.

Two days later the 24th Division, now commanded by General Church, was relieved south of Taejon by Major General Hobart R. Gay’s 1st Cavalry (dismounted) Division, which had landed at Pohang-dong on the 18th. And on 26 July the separate 29th Infantry RCT disembarked at Chinju on the south coast after a voyage from Okinawa.

The reinforced Eighth Army was still too outnumbered to vary its strategy of delaying actions with sustained counterattacks. While the new American units and the 25th Division fell slowly back toward the line of the Naktong, the regrouped ROK divisions were assigned sectors toward the north and east, where a secondary NKPA offensive threatened Pohang-dong. Meanwhile, the exhausted 24th Division went into Eighth Army reserve.

The ground forces would doubtless have been in a worse situation if it had not been for hard-hitting United States naval and air support. Major General Emmett O’Donnell’s B–29 Superforts of the FEAF Bomber Command took off from Japanese bases to fly strikes on enemy supply routes, communications hubs, marshaling yards and other strategic targets all the way back to the Yalu.

Task Force 77, ranging along the west coast, gave Pyongyang its first large-scale bombing on 3 July. Gull-winged F4U Corsairs, leading off from the Valley Forge flight deck with 5-inch rockets, were followed by AD Skyraiders and new Douglas dive bombers. Bridges and railway yards were destroyed by raiders who shot down two YAK-type planes in the air and destroyed two on the ground.

Along the east coast the Juneau and other warships of the Anglo-American blockading force patrolled the enemy’s MSR, which followed the shoreline. Salvos from the cruisers, fired at the sheer cliffs, loosed
avalanches of earth and rock to block the highway. Railways were mined and tunnels dynamited by commando parties landing from ships’ boats.

The combined U. N. efforts inflicted heavy material and personnel losses while slowing up the NKPA offensive. But it is a testimonial to Soviet and Red Korean preparations for aggression that the army of invasion kept on rolling. There was even some prospect late in July that the enemy would yet make good his boast of being able to take Pusan within 2 months in spite of United States intervention.
Upholding their long tradition as America’s force-in-readiness, the Marines have usually been among the first troops to see action on a foreign shore. Thus it might have been asked what was holding them back at a time when Army troops in Korea were hard-pressed.

The answer is that the Marines actually were the first United States ground forces to get into the fight after completing the long voyage from the American mainland. There were no Marine units of any size in the Far East at the outset of the invasion. But not an hour was lost at the task of assembling an air-ground team at Camp Pendleton, California, and collecting the shipping.

The spirit of impatience animating the Marine Corps is shown by an entry on the desk calendar of General Clifton B. Cates under the date of 26 June 1950. This was the day after the news of the invasion reached Washington, and the Commandant commented:

“SecNav’s policy meeting called off. Nuts.”[11]

On the 28th General Cates had his first conference with Admiral Forrest P. Sherman, Chief of Naval Operations. He noted on his calendar the next day: “Recommended to CNO and SecNav that FMF be employed.” Two days later General Cates “attended SecNav’s conference.” And on 3 July his calendar recorded more history:

“Attended JCS meeting. Orders for employment of FMF approved.”[12]

The steps leading up to this decision may be traced back to the conference of 28 June, when Cates gave Sherman a summary of the strength of the Marine Corps. Along with other branches of the service, it had taken cuts in appropriations since World War II, so that total numbers were 74,279 men on active duty—97 percent of authorized strength. The Fleet Marine Force had a strength of 27,656—11,853 in FMFPac (1st Marine Division, Reinf., and 1st Marine Aircraft Wing) and 15,803 in FMFLant (2d Marine Division, Reinf., and 2d Marine Aircraft Wing).[13]

Neither of these understrength divisions, General Cates pointed out, could raise much more than an RCT of combat-ready troops with supporting air.

Admiral Sherman asked CinCPacFlt on 1 July how long it would take to move (a) a Marine BLT and (b) a Marine RCT from the Pacific Coast. Admiral Radford replied the next day that he could load the BLT in 4 days and sail in 6; and that he could load the RCT in 6 days and sail in 10.[14]

Next, a dispatch from CNO to Admiral C. Turner Joy announced that a Marine RCT could be made available if General MacArthur desired it. COMNAVFE called personally on the general, who had just returned from a depressing inspection of the invasion front. Not only did CINCFE accept immediately, but he showed unusual enthusiasm in expressing his appreciation.[15]

Sunday 2 July was the date of the message from General MacArthur requesting the immediate dispatch of a Marine RCT with supporting air to the Far East. CNO acted that same day. With the concurrence of JCS and the President, he ordered Admiral Radford to move a Marine RCT with appropriate air to the Far East for employment by General MacArthur.[16]

Later, when General Cates asked CNO how the historical decision had been accomplished, Admiral Sherman replied cryptically in baseball language, “From Cates to Sherman, to Joy, to MacArthur, to JCS!”[17]
Even at this early date there was talk both in Washington and Tokyo of forming an entire Marine division after mobilizing the Reserve. For the present, however, it sufficed to organize the RCT requested by General MacArthur. There could be little doubt that the assignment would be given to an air-ground team built around the two main West Coast units, the 5th Marines and Marine Aircraft Group 33. They were activated along with supporting units on 7 July as the 1st Provisional Marine Brigade, commanded by Brigadier General Edward A. Craig, senior officer at Camp Pendleton. The air component, consisting of three squadrons of MAG–33, was placed under the command of Brigadier General Thomas H. Cushman, who was named deputy commander of the Brigade.

Lieutenant General Lemuel C. Shepherd, Jr., commanding general of FMFPac, and a G–3 staff officer, Colonel Victor H. Krulak, had been ordered on 4 July to proceed immediately to Tokyo and confer with General MacArthur. Before leaving, Shepherd found time to recommend formation of third platoons for rifle companies of the 5th Marines, and CNO gave his approval the following day.[18]

Unfortunately, there was not enough time to add third rifle companies to the battalions of the 5th Marines which had been training with two companies on a peacetime basis. Camp Pendleton and its neighboring Marine Air Station, El Toro, hummed with day and night activity as the Brigade prepared to sail in a week. Weapons and clothing had to be issued, immunization shots given, and insurance and pay allotments made out. Meanwhile, telegrams were sent to summon Marines from posts and stations all over the United States.

Among these Marines were the first helicopter pilots of the United States Armed Forces to be formed into a unit for overseas combat service. Large-scale production of rotary-wing aircraft had come too late to have any effect on the tactics of World War II, though a few Sikorsky machines had been used experimentally both in the European and Pacific theaters toward the end of the conflict. But it remained for the United States Marine Corps to take the lead in working out combat techniques and procedures after organizing an experimental squadron, HMX–1, at Quantico in 1947.

Seven pilots, 30 enlisted men and 4 HO3S–1 Sikorsky 2-place helicopters were detached from HMX–1 on 8 July 1950 for service with the Brigade. Upon arrival at El Toro, these elements were combined with 8 fixed-wing aircraft pilots, 33 enlisted men and 8 OY planes to form the Brigade’s air observation squadron, VMO–6.

This is an example of how units were assembled at Pendleton and El Toro. Major Vincent J. Gottschalk, appointed commanding officer of VMO–6 on 3 July, had orders to ready his squadron for shipment overseas by the 11th. Thus he had just 48 hours, after the arrival of the Quantico contingent, in which to weld the elements of his outfit together. Among his other problems, Gottschalk had to grapple with the fact that there were not enough OY’s in good condition at El Toro. He found a solution by taking eight of these light observation planes overseas with a view to cannibalizing four of them for parts when the need arose.[19]

There was not enough time in most instances for weapons familiarization training. Company A of the 1st Tank Battalion had been accustomed to the M4A3 Medium tank with either the 75-mm. gun or the 105-mm. howitzer. Activated on 7 July for service with the Brigade, the unit was equipped with M–26 “Pershing” tanks and 90-mm. guns. Captain Gearl M. English, the commanding officer, managed to snatch 1 day in which to take his men to the range with 2 of the new machines. Each gunner and loader was limited to 2 rounds, and the 90-mm. guns were never fired again until they were taken into combat in Korea.[20]

Support battalions were cut down to company size, generally speaking, for service with the Brigade.
Thus Company A of the 1st Motor Transport Battalion numbered 6 officers and 107 men; and Company A of the 1st Engineer Battalion (reinf.) totaled 8 officers and 209 men. The largest unit of the ground forces, of course, was the 5th Marines with 113 officers and 2,068 men commanded by Lieutenant Colonel Raymond L. Murray. Next came the 1st Battalion (reinf.) of the 11th Marines, numbering 37 officers and 455 men under the command of Lieutenant Colonel Ransom H. Wood.

Altogether, according to a report of 9 July 1950, the Brigade ground forces reached a total of 266 officers and 4,503 men.[21]

On this same date, the Brigade’s air component amounted to 192 officers and 1,358 men. The principal units were as follows:
VMF(N)–513: 15 officers, 98 men, 12 F4U5N aircraft.
VMO–6: 15 officers, 63 men, 8 OY and 4 HO3S–1 aircraft.[22]

Adding the ground force and air figures gives a grand total of 6,319—458 officers and 5,861 men—on 9 July 1950. Before sailing, however, the activation of third rifle platoons and the last-minute attachment of supporting troops brought the strength of the Brigade and its air components up to 6,534.

Most of the equipment came from the great Marine supply depot at Barstow in the California desert. Here were acres of “mothballed” trucks, jeeps, DUKW’s and amphibian tractors dating back to World War II. It has been aptly remarked, in fact, that “there were more veterans of Iwo and Okinawa among the vehicles than there were among the men who would drive them.”[23]

Rail and highway facilities were taxed to the limit by the endless caravan of equipment moving from Barstow to Pendleton and El Toro after being hastily reconditioned and tested. Not all the arms were of World War II vintage, however, and the Marines of the Brigade were among the first American troops to be issued the new 3.5” rocket launcher.
Chapter 3. The Marine Brigade
Brigade Leadership

It appeared to be a scene of mad confusion at Pendleton as Marines arrived hourly by train, bus, and plane. But the situation was kept well in hand by General Craig, who had seen many other departures for battle during his 33 years in the Corps. Born in Connecticut and educated at the St. Johns Military Academy, Delafield, Wis., he was commissioned a Marine second lieutenant in 1917 at the age of 21. Throughout the next 3 decades he served with distinction both as a line and staff officer, and both as student and instructor at the Marine Corps Schools.

During World War II he was executive and later commanding officer of the 9th Marine Regiment, which he led in the landing at Empress Augusta Bay on Bougainville and the recapture of Guam in the Marianas. Awarded the Bronze Star and Navy Cross for gallantry in these operations, Craig became operations officer of the V Amphibious Corps in time to help plan the Iwo Jima operation. After the war he returned to Guam for 2 years in 1947 to command the 1st Provisional Marine Brigade, Fleet Marine Force, before becoming ADC to Major General Graves B. Erskine, CG 1st Marine Division, in 1949.

The white hair and slender, erect figure of the dynamic Brigade commander would soon become a familiar sight to every platoon leader at the front. His assistant, General Cushman, was born in St. Louis, Mo. in 1895 and attended the University of Washington. Enlisting in the Marine Corps shortly after the outbreak of World War I, he completed flight training and was designated a naval aviator. Subsequent tours of aviation duty in Haiti, Nicaragua, and Guam were varied with assignments as instructor at Pensacola and administrative officer with BuAer in Washington. Cushman was a wing commander in World War II and was awarded a Bronze Star and Legion of Merit while serving in that capacity and later as chief of staff to the CG of Marine Aircraft Wings, Pacific. After the war he became commander of the Marine Corps Air Bases and CG of Aircraft, FMFPac.

Lieutenant Colonel Murray, CO of the 5th Marines, was born in Los Angeles in 1913. He graduated from Texas A. and M. College in 1935 and was commissioned a Marine second lieutenant. After prewar service in China and Iceland, he became a troop leader in three of the hardest-fought Marine operations of World War II—Guadalcanal, Tarawa, and Saipan. Awarded the Navy Cross, two Silver Stars, and the Purple Heart medal, Murray made a name for heroism that was noteworthy even in Marine circles.

This was no light achievement, for both CMC and CG FMFPac—General Cates and General Shepherd—had distinguished themselves as Marine combat leaders. Both were wounded in Marine operations of World War I, and both won later honors during Caribbean actions of the Marine Corps.

On 11 July, as Brigade preparations for sailing neared a climax, General Shepherd sent the first report of his visit to Korea. He and Colonel Krulak had held conferences with General MacArthur, Admiral Joy and Rear Admiral James H. Doyle, commanding Amphibious Planning Group 1. The commander in chief, said Shepherd, already envisioned a great amphibious operation with a complete Marine division and air components as his landing force. Not only was he “enthusiastic,” about the employment of Marines, but he believed in the necessity for employing them as an air-ground team.[24]

MacArthur was “not sanguine” about the situation in Korea. He felt that the nature of enemy resistance, combined with the rugged terrain and the possibilities of Soviet or Red Chinese intervention, threatened to protract operations. Thus he favored a Marine amphibious landing far in the enemy’s rear to cut off and destroy the North Korean columns of invasion.[25]

General Shepherd’s report made it seem likely, just before the Brigade sailed, that its units would
probably be absorbed soon into a Marine division with an amphibious mission. For the present, however, it was
enough to start the movement from Pendleton and El Toro to San Diego, where the convoy awaited. MAG–33
had orders to embark in the transports Anderson and Achernar and the carrier (CVE–116) Badoeng Strait. The
ground forces would make the voyage in the LSD’s Fort Marion and Gunston Hall, the AKA’s Alshain and
Whiteside, and the APA’s Pickaway, Clymer and Henrico.[26]

General Cates was on hand at the docks from 12 to 14 July when the Brigade sailed. His long cigarette
holders were famous, and no second lieutenant in the Corps could throw a more military salute. As he eyed the
ground forces filing past, the Commandant could only have felt that Marine traditions would be upheld. A good
many of the PFC’s, it is true, were too young to have seen action in World War II, though nearly all had been well
grounded in fundamentals. Perhaps at the front they might become victims at first of their own over-anxiety. But
they would doubtless grin sheepishly about it afterwards and become combat-hardened in a short time.

A glance at the NCO’s, the platoon leaders and company commanders of the Brigade could only have
brought a gleam of pride to the Commandant’s battlewise eye. With few exceptions, they were veterans of World
War II who could be relied upon to get the best out of their men. And it may be that the Commandant was
reminded of the remark attributed to General William T. Sherman during the Civil War:

“We have good corporals and sergeants and some good lieutenants and captains, and those are far more
important than good generals.”[27]

Nobody could give a more smooth and eloquent talk than General Cates before a Washington audience.
But when it came to saying farewell to the Brigade troops, he addressed them in the language of Marines.

“You boys clean this up in a couple of months,” said the Commandant, “or I’ll be over to see you!”[28]
Chapter 4. The Advance Party

AS THE SHIPS of the Brigade vanished over the horizon, Generals Craig and Cushman rushed to complete final administrative details at their respective West Coast bases. Then, in the early morning of 16 July, the advance party, consisting of the two commanders and parts of their staffs, boarded a transport plane at the Marine Corps Air Station, El Toro, and began the long journey westward.

The first stop was Pearl Harbor, T. H., island “Pentagon” of America’s vast defensive network in the Pacific. On arrival, Craig and Cushman immediately reported to General Shepherd. In company with him, the two visitors called briefly on Admiral Radford. Later, Shepherd, his staff, and the advance party met at Fleet Marine Force Headquarters for a conference on the problems incident to the Marine commitment in combat.[1]

The Brigade commander painted a vivid picture of his provisional fighting force, stressing both its potential and its handicaps. He repeatedly emphasized the necessity for the addition of a third rifle company to each infantry battalion. With equal fervor he spoke of the need for two more 105-mm. howitzers in each battery of his artillery battalion. He told how the Brigade had been forced to leave behind much of its motor transport because of limited shipping space, and he requested that replacement vehicles be provided as soon as possible.

His presentation was not falling on deaf ears; for combat-wise officers knew only too well how such shortages would restrict the maneuverability, firepower, and mobility of the Brigade. Finally, Craig repeated his earlier request that steps be taken immediately to provide for monthly replacement drafts of 800 men. If the peace-strength Marine unit were committed to combat in the near future, he said, it could ill afford to watch its already thin ranks dwindle indefinitely.[2]

Leaving behind a maze of support and reinforcement problems for FMFPac Headquarters, the Brigade advance party boarded its plane and set out for Japan. On 19 July the big aircraft discharged its passengers at the Haneda Airport, near Tokyo. General Craig immediately reported to his naval superior, Admiral Joy. Later the Brigade commander, General Cushman, and the other officers of the advance party, assembled at General Headquarters, Far East, where they would get their first glimpse of the war through the eyes of the United States Army.

They conferred first with Major General Edward A. Almond, USA, and Brigadier General Edwin K. Wright, USA. The former was Chief of Staff to General MacArthur, while the latter served as G–3 on the staff. After Almond and Wright had received a report on the organization and capabilities of the Brigade air-ground team, they ushered the two Marine generals into the office of MacArthur.[3]
Chapter 4. The Advance Party
Conference With CINCFE

The commander in chief greeted his visitors cordially and expressed his pleasure at having Marines in his command again. He commented briefly on the excellence of the 1st Marine Division and certain Marine air units which had served under him during World War II. The general smiled as he mentioned a rumor to the effect that he had been prejudiced against Marines during the Pacific War. Sweeping aside this tale as being unfounded, he said that he had always held the greatest admiration for the Corps and would welcome its units to his command any time.[4]

Following this reception, MacArthur meticulously briefed Craig and Cushman on the critical situation in Korea, where the war was already entering its fourth week. The commander in chief disclosed his tentative plans for commitment of the Marines: he would hold the Brigade in Japan as a force in readiness until an entire Marine division could be assembled. If he could have this division by September, he intended to launch an amphibious assault against the port of Inchon on the west coast. Striking deep in the Communist rear, he would sever the long lines of communications linking North Korean bases to the Communist invaders at the front. Thus isolated, the latter would quickly wither, and Walker’s Eighth Army could smash out of the Pusan Perimeter.[5]

When MacArthur concluded, he and Craig discussed the organization of the Brigade. The Marine general emphasized that his command was an air-ground team; and though few in numbers, the Brigade had a powerful potential if its air arm remained integral. MacArthur assured him that the Marine combination would remain intact, unless some emergency dictated otherwise.

Craig next mentioned that the infantry and artillery units of the Brigade were at peace strength. MacArthur was surprised to learn that each battalion had just 2 rifle companies, and each battery only 4 guns instead of 6. He was even more surprised to find that each of the 6 infantry companies had 50 men less than the number called for in Marine war tables. The Army leader had been aware of certain shortages when he sent a message to the Pentagon on 10 July, requesting the Joint Chiefs of Staff to authorize expansion of the Brigade to a full war-strength division.[6] He believed at the time, however, that the Brigade itself would be formed on a wartime basis. Now, confronted with reality, he ordered his chief of staff to prepare another dispatch to the Joint Chiefs, asking that the Brigade be expanded to full war strength and reiterating his request for an entire division.[7]

MacArthur concluded the conference by informing Craig that the Marine fighting team would remain in Japan under operational control of Joy’s headquarters. This was good news to the Brigade commander. Being attached to the Naval command meant that his Marines would be free to train and otherwise prepare for their future amphibious mission; whereas an assignment to the Eighth Army’s rear echelon might have entailed time-consuming occupational and administrative duties.[8]
Although the solution to Marine Corps problems had seemed simple enough in MacArthur’s office, it was quite another story on the other side of the world in Washington. The Joint Chiefs of Staff had rendered no decision on the general’s 10 July request for a Marine division. Nevertheless, General Cates ordered his staff to draw up detailed plans for expansion so that immediate action could be taken if authorization were forthcoming. As a result, Plans Able and Baker were prepared, the one designed to augment the Brigade to war strength, the other to explore the requirements for creating a full division. To cover these possibilities together with the Corps’ other irrevocable commitments throughout the world, Marine planners were drawn more and more toward a single basic conclusion—if President Truman and the Joint Chiefs of Staff granted MacArthur’s request, the Marine Corps Reserve would have to be mobilized at once.

When the Joint Chiefs received the message which MacArthur had dictated in General Craig’s presence, they requested an estimate from the Marine Corps on how long it would take to form a war-strength division. General Cates summed up his case: the Marine Corps, numbering only 74,279 officers and men,[9] was committed on a global basis. There was a brigade on its way to Korea, a peace-strength division on the Atlantic Coast,[10] and a battalion landing team permanently assigned to the Mediterranean Fleet. There were detachments of Marines assigned for domestic security, shipboard duty, and overseas security. Moreover, in order to carry out any expansion program on a sound basis, it would be necessary to maintain cadres of experienced personnel in various training centers. The Commandant’s presentation made it clear that any immediate expansion would, as proved by simple arithmetic, be dependent upon mobilization of the Reserve.

Accordingly, the Joint Chiefs of Staff recommended to President Truman that the Organized Marine Corps Reserve be called to active duty. That same morning, 19 July, Admiral Sherman notified General Cates of this decision. The Commandant lost no time at ordering his staff to alert all Reserve units. His grounds for haste were well founded; for in the afternoon a presidential proclamation announced that the “citizen-Marines” would be mobilized. The following day Cates called CNO and submitted Plans Able and Baker, the proposed procedures for building both the Brigade and 1st Marine Division to war strength.

In the meantime JCS had notified MacArthur that his request could not be granted until late fall “without unacceptable weakening {of} the Fleet Marine Force Atlantic.”[11] When the U. N. commander received this message, he countered immediately with the reply:

“... Most urgently request reconsideration of decision with reference to First Marine Division. It is an absolutely vital development to accomplish a decisive stroke and if not made available will necessitate a much more costly and longer operational effort both in blood and expense.

“... It is essential the Marine Division arrive by 10 September 1950 as requested. While it would be unwise for me to attempt in this message to give in detail the planned use of this unit I cannot emphasize too strongly my belief of the complete urgency of my request. There can be no demand for its potential use elsewhere that can equal the urgency of the immediate battle mission contemplated for it.

“Signed MacArthur”[12]

On 22 July the gears of mobilization were already enmeshed. Taking this into account along with the urgency of MacArthur’s last communication, the Joint Chiefs showed the first signs of relenting in their reply to Tokyo. This time they informed the Army general that they were reconsidering his problem, but added that he must advise them of the proposed employment of the Brigade up to 10 September and the possibility of adjusting
that deadline. The same message carried the encouraging news that a directive had already been issued to bring both the Brigade and its air group to full war strength.[13]

In answer, MacArthur stated his intention to retain the Brigade in Japan, unless a more critical situation developed in Korea prior to 10 September. He described his operation planned for mid-September as an amphibious landing in the rear of the enemy’s lines. This seaborne attack, he added, would be designed to envelop and destroy the Communist invader in conjunction with an offensive from the south by the Eighth Army. The General concluded his message on notes of conditional optimism and grave warning:

“Although exact date of D-day is partially dependent upon enemy reaction during month of August, I am convinced that an early and strong effort behind his front will sever his main lines of communications and enable us to deliver a decisive and crushing blow. Any material delay in such an operation may lose this opportunity. The alternative is a frontal attack which can only result in a protracted and expensive campaign to slowly drive the enemy north of the 38th parallel.”[14]

On 25 July these exchanges came to a climax when the Pentagon directed the Marine Corps to build its 1st Division to full war strength.

At this point the change of heart among the Joint Chiefs of Staff is pertinent because of its direct effects on the 1st Provisional Marine Brigade. As previously noted, the Pentagon on 22 July approved the Marine Corps’ plan Able which provided for the expansion of the Brigade to war strength. General Cates immediately set machinery in motion to bolster the ranks of that unit. With the approval of Admiral Sherman, he cut into the rosters of Marine security detachments throughout the United States and arranged for the personnel thus released to be channelled to Craig’s command. It was also possible now to implement an earlier plan relating to casualty replacements for the Brigade. As far back as 14 July, the Commandant had ordered activation of the First Replacement Draft, fixing its departure for Korea at 10 August.[15] Thus Craig could be assured of early reinforcement by more than 800 officers and men if the course of the war necessitated a premature commitment of his Brigade.
Generals Craig and Cushman were meanwhile assigned a large office in General Headquarters, Tokyo. There they cleared away much administrative detail which accumulates in the path of every military operation.

On 20 July the two commanders called on General Stratemeyer. Marine Air was the focal point of discussion as they again explained the organization of their fighting team. When they informed Stratemeyer of MacArthur’s decision to keep the Brigade intact, the air officer gave them further assurance that MAG–33 would always be available to support the Marine ground force.\[16\]

Originally, the Army planned to base the Marine ground elements at Sasebo, Japan, and the air group 400 miles away at Itami Field, near Kobe. Craig and Cushman realized that the resulting large gap would give rise to problems in liaison, training, and supply. Hoping to change such an undesirable arrangement, the Brigade staff carefully studied the layout of available land and facilities. Armed with the results of this research, Craig proposed to General Headquarters that all Marines be based in the Kobe-Osaka-Kyoto area. After he outlined the advantages of keeping the Brigade and its supporting aviation close together, Wright responded encouragingly to the recommendation.\[17\]

Confident that the suggestion would be favorably considered, the advance party flew to Itami on 21 July and made a detailed reconnaissance of debarkation, billeting, and training sites. While Craig inspected the area and prepared a report, Cushman examined the air base facilities and established his headquarters according to the initial plan. The Marine officers then returned to Tokyo 2 days later to push the request for getting both air and ground forces located in the same area. To support his proposal, Craig submitted a complete “floor plan” not only for the Brigade but also for the entire 1st Marine Division. MacArthur’s staff promptly approved.\[18\]

On the 25th the advance party again set out for Itami, this time to prepare for the arrival of the Brigade. Their plane was a scant 20 minutes out of Tokyo when an urgent message from General Headquarters directed their return to that city at once. The big aircraft roared back to the field, and a few minutes later the Marines were driving through the Japanese capital.

At headquarters, Wright summed up the most recent reports from the front. The American forward wall was crumbling under continuous hammering. A wide envelopment had just netted the whole southwestern tip of the peninsula for the Communists, who were now pressing in on Pusan from the west as well as north. Lacking sufficient troops to defend its broad frontage, the Eighth Army was falling back. If the Red tide continued unabated, there was imminent danger of losing Pusan, the one remaining major port in American hands. Should this coastal city fall, South Korea would be lost.

Wright told Craig that all available troops had to be thrown into the line to meet this threat. Therefore, General MacArthur had diverted the seaborne Brigade from Japan to Korea, where it would join General Walker’s beleaguered forces.\[19\]

Obviously, the Marines were not far from a fight.
At sea the 1st Provisional Marine Brigade was unaware of the decisions and difficulties developing on higher levels. Nevertheless, that tactical organization was having enough trouble of its own. On 12 July, Company A, 1st Tank Battalion, and the 1st Amphibious Tractor Company departed San Diego on board the LSD’s Fort Marion and Gunston Hall. Designated Task Unit 53.7.3, the twin amphibious ships sailed 2 days before the rest of the Brigade and were scheduled to join the main convoy, Task Group 53.7, before crossing 160° east longitude.\[20\]

At noon on 13 July, the well deck of the Fort Marion accidentally flooded, the water rising to a height of 5 feet among the Brigade’s M–26 tanks. An hour passed before the ship’s pumps could drain the compartment, and briny water damaged 14 of the new armored vehicles, 300 90-mm. projectiles (then in critical supply), and 5,000 rounds of .30-caliber ammunition.

When news of the flood damage reached Brigade headquarters, then still at San Diego, the message was rushed to Craig. He immediately sent a dispatch to Captain English, authorizing him to jettison the ruined ammunition. He added that replacement armor would be requisitioned from the Barstow depot without delay. Craig then contacted the supply base and was promised that 14 M–26’s would be commissioned and on their way to San Diego within 24 hours. The Brigade commander was preparing to request additional shipping for the vehicles when messages from the Fort Marion reported that 12 tanks could be restored to operating condition at sea. The remaining two would require new parts and 72 hours of repair work upon debarkation.\[21\]

As already noted, the Marines were placing heavy reliance on their armor, confident that it was a match for the enemy’s Russian-built T–34 tank in Korea. Consequently, Craig’s staff reacted to the flood reports with concern. Headquarters FMFPac was asked to include four M–26’s in its first resupply shipment to the Brigade; arrangements were made for new parts to be flown to the port of debarkation, and ammunition to replace that damaged in the flood was loaded on board the larger convoy.

Misfortune struck again a few hours after Task Group 53.7 steamed from San Diego on 14 July. The transport Henrico developed a serious mechanical failure and was declared temporarily unseaworthy. This ship was carrying Lieutenant Colonel Murray, his regimental staff, and the entire 1st Battalion Landing Team.\[22\] After Murray and his headquarters transferred to the APA Pickaway off San Clemente Island, the Henrico limped back toward California with about one-third of the Brigade’s fighting force. The vessel docked at the United States Naval Supply Depot, Oakland, on the 16th. Repairs were started in urgent haste, since there was no other ship available. For security reasons, the Marines were forbidden to leave ship except for training on the dock. On the nights of the 16th and 17th, they sat on deck and gazed longingly at the beckoning lights of San Francisco. Twice during this time the Henrico weighed anchor and passed westward under the Golden Gate bridge; twice it was forced to return for additional repairs. Finally, on the evening of the 18th, the vessel steamed under the great bridge for its third attempt. This time it kept going, but it would not overtake the convoy until the morning of the very day the ships reached their destination.

During the voyage, strict wartime security measures, including radio silence, were enforced on all ships. While the North Koreans were believed to have no warships left afloat, their naval capabilities remained hidden from the outside world by a blur of question marks. No one realized more than the commander of Task Group 53.7\[23\] that it was much too early to take Soviet Russia for granted.

The Henrico, now travelling independently, had a spine-chilling experience during her second night out
of Oakland. The ship’s radar picked up two “unidentified submarines” which appeared to be converging on the stern of the lone vessel. General Quarters was sounded. While sailors peered into the darkness from their battle stations, several hundred Marines joked weakly in the troop compartments below the waterline. After an anxious hour, the persistent spots on the electronic screen vanished.

Shipboard life for the Brigade was otherwise uneventful. The troops took part in physical drills as vigorously as the limited confines of vessels would allow. Daily classes and conferences emphasized those subjects most relevant to the news reports trickling back from the front. Success of North Korean armor stimulated keen interest in land mines and the new rocket launchers. Press commentaries on the battleground’s primitive environment made even field sanitation a serious matter. Since there was no military intelligence available on the North Korean forces, officers and NCO’s turned to publications on Russian tactics and weapons.

As previously noted, Sasebo, Japan, was the original destination of the ships transporting the Brigade’s ground elements. The Achernar, Anderson, and Badoeng Strait were bound for Kobe with MAG–33. When Craig’s proposal for consolidation was approved by General Headquarters, the entire convoy was ordered to Kobe. Then, on 25 July, Colonel Edward W. Snedeker, Chief of Staff, received the dispatch sending the ground force directly to Pusan.

This announcement came as no surprise to the majority of officers and men. Day by day, news reports had been outlining the course of the war. The shrinking perimeter of Walker’s army was traced on maps and sketches throughout every ship. After the Communist “end run” in southwest Korea, Marines began to wonder if there would be any front at all by the time they arrived. In the captain’s mess of the Pickaway, senior Marine and naval officers were giving odds that the Brigade would reach the South Korean port only in time to cover a general evacuation of the peninsula.[24]
With the Brigade well beyond the halfway point in its Pacific voyage, Craig and his staff could not afford to waste a minute. At 1700 on 25 July they left Tokyo by plane for Korea. En route they landed at Itami, where the Brigade commander and Cushman made hurried adjustments to meet the new situation. [25]

Leaving Itami on the 26th, they flew to Fukuoka, Japan. There they transferred from their 4-engine Marine aircraft to a smaller Air Force plane which could be accommodated on the primitive landing fields of Korea. On the last lap of their journey, they reached Taegu at 1400.

Taegu was a dismal place during this crucial phase of the UN delaying action. Hastily chosen as a headquarters by General Walker, the ancient town gave the appearance of a remote outpost. Its airstrip was crude. The fewness of the airmen and soldiers among the handful of transport and fighter planes served only to emphasize the critical situation of the UN forces. [26]

General Craig reported to General Walker immediately, while the Brigade G–3, Lieutenant Colonel Joseph L. Stewart, met with his Eighth Army opposite, Colonel William E. Bartlett. Later, Walker’s chief of staff, Colonel Eugene M. Landrum, assembled all the Marine officers for an official briefing. He explained that the Brigade had not been earmarked for any specific mission. The battle situation was too fluid for firm plans. Information from the field was sketchy and unreliable, as outnumbered Army forces slowly retreated. From the time of first contact by American units, the front had been more of a blur than a distinct line. Landrum concluded by saying that the Brigade must be prepared to move anywhere after debarkation—and on a moment’s notice. [27]

After he and his officers had been assigned rooms in a temporary barracks, Craig requested permission to reconnoiter the combat zone. [28] Walker assented, providing his own plane and pilot for the trip. Accompanied by Stewart and Lieutenant Colonel Arthur A. Chidester, his G–4, Craig flew first to Pusan, where he checked harbor facilities, roads, and railways. There he conferred with Brigadier General Crump Garvin, USA, to initiate preparations for the Brigade’s arrival. [29]

Leaving Pusan, the Marine officers flew over Chinhae, which they discovered to be a suitable base, if necessary, for VMO–6 and the Brigade’s air support control unit. Cruising westward, they passed over Masan, then continued toward Chinju. From the latter vicinity, the enemy’s envelopment was then threatening the western approaches to Pusan. Veering northward, the reconnaissance party paralleled the Naktong River. The pilot, who was familiar with the ground, briefed his passengers along the way. By the time the plane returned to Taegu, the Marines had a broad picture of the critical areas most likely to become Brigade battlefields. [30]

General Craig and his ground officers remained at Taegu 4 days. Attending daily briefings of the Eighth Army staff, they acquired a sound knowledge of the tactical situation. At a conference with Major General Earle E. Partridge and his Fifth Air Force staff, [31] the Marines were brought up to date on the disposition of aviation and its policy for supporting UN ground forces. [32]

In the fight for time, ground force units in line were frequently withdrawn and shuttled to plug gaps in the sagging front. Reports from the battlefield more often were food for the imagination rather than fact for the planning room. All of this created confusion among Eighth Army staff officers. [33]

In the Taejon area the 24th Infantry Division had lost 770 officers and men during the single week of 15–22 July. Of these casualties, 61 were known dead, 203 wounded, and 506 missing in action. [34] Among the missing was General Dean, and the wounded included a regimental commanding officer, a regimental executive officer, and a battalion commander. [35]
Following this ordeal, the 24th had been relieved by the recently arrived 1st Cavalry Division, which went into line alongside the 25th Division in the Kumchon area. ROK divisions held to the north and east, where NKPA forces were driving toward Pohang-dong.

The shape of strategic things to come was indicated late in July when two NKPA divisions completed a much publicized “end run” past the open UN left flank to the southwest tip of the peninsula, then wheeled eastward for a drive on Pusan.

General Walker reacted promptly to the danger by recalling the 24th Division from Eighth Army reserve and moving it southward from Kumchon to block the enemy near Hadong. With the recently landed 29th Infantry attached, the division totalled only 13,351 officers and men.[36] Its front extended from the southern coast near Hadong to the town of Kochang, 40 miles north.[37] In addition to manning this mountainous line, the 24th had troops in action at Pohang-dong, more than 100 miles away on the east coast. There some of its units fought as Task Force Perry, under direct control of Eighth Army headquarters.[38]

The 24th Division and 29th Infantry had no more than deployed when they found themselves plunged into a confused 5-day fight. Although they sold ground as dearly as possible, the Army units were compelled to give up Hadong and fall back toward Chinju.[39]

As the threat to Pusan grew more serious, the Eighth Army commander shifted units. In order to protect the approaches from Chinju to Pusan, he pulled the 25th Infantry Division back across the river Naktong near Waegwan and moved it from the northern to the southern front in 48 hours. The next day saw the 1st Cavalry withdrawing across the Naktong in the Waegwan area and blowing the bridges.

After being relieved in the south by the 25th Division, the 24th joined the 1st Cavalry withdrawal to hastily organized defensive positions east of the Naktong. ROK divisions continued to defend the northeast approaches, while the 25th Division stood guard to block any enemy move toward Chinju.[40]

At this juncture General Craig became increasingly concerned about prospects of maintaining the Brigade’s integrity as a Marine air-ground team. He and his staff were aware that elements of the 29th Infantry had been rushed from their ships directly into combat in the Chinju area, and some units were badly mauled. Craig took occasion, therefore, to remind Army leaders once more of the Marine tactical concept of the indivisible air-ground team.[41]

MAG–33, said Craig, would have to unload its planes and prepare them for action; and the control squadron would need an interval to set up co-ordinated tactical air support.[42]
As July drew to an end, the situation both on the northern and southwestern fronts was developing into a crisis. Hourly it grew apparent that the Eighth Army’s perimeter would have to shrink even more, so that defenses could assume some depth in sensitive areas. Landrum indicated for the first time that the Brigade was being considered primarily for a mission on the left flank. Guided by this possibility, Craig and his staff officers devoted a day to drawing up a flexible operation plan. The purpose of this directive was to advise the Brigade’s subordinate commanders of possible commitment in the Chinju, Kochang, or Kumchon areas, in that order of probability. Also included were detailed instructions for movement to forward assembly areas, broad missions for supporting units, security measures to be taken, and a general outline of the situation ashore.

The advance party extracted from the plan a fragmentary warning order suitable for radio transmission. This message was delivered to Eighth Army headquarters with a request that it be sent immediately to the Brigade at sea. Now Craig assumed that Snedeker and Murray would have a reasonable impression of the situation awaiting them. At an Army briefing on the 29th, the Marines learned that the UN left flank was collapsing. An air of uneasiness pervaded Taegu, and Eighth Army headquarters began preparations for displacement to Pusan. Craig was told that the Brigade definitely would be committed in the southwest, unless a more critical situation suddenly sprang up elsewhere. Again the Army officers added that the Marine unit actually must be prepared to move in any direction on short notice. With the approval of the Eighth Army, the Brigade commander immediately sent a message to COMNAVFE requesting that the Marine air group be made available to support the ground force by 2 August, and that VMO–6 be transported to Korea as quickly as possible. Time was drawing short.

On 30 July, General Craig had a final conference with Generals Walker and Partridge. This time, Walker himself told the Marine leader that the Brigade would be sent to the southwest; and that the unit, once committed, would be free to push forward without interference from Eighth Army. Partridge interjected that his planes would be available to support Craig’s ground troops if Marine air did not arrive in time. Immediately after the conference, the Marine officers set out for Pusan by jeep. While their vehicles bounced southward on the ancient road, army headquarters in Taegu was sinking to new depths of dejection. Chinju had just fallen, and the Red column was pounding on toward Masan.
AFTER THE ADVANCE party reached Pusan, General Craig established a temporary command post in the headquarters building of General Garvin’s Base Command. Then the Marine officers plunged into the final phase of planning and preparation for the Brigade, although they were still handicapped by the undisclosed secret of the convoy’s arrival date. Staff gears were meshing smoothly by this time, with solutions being ground out for one problem after another.

On the night of 30 July, Lieutenant Colonel Stewart and other staff officers were discussing whether MAG-33 would be able to get its planes airborne in time to support the Brigade in its initial combat. Acting on a hunch, Stewart picked up a telephone in the slim hope of placing a call through to Japan. The long shot paid off. After some wrangling by startled operators, he managed to contact Itami Air Force Base and talk to Colonel Kenneth H. Weir, Cushman’s chief of staff.

Stewart briefed the Marine aviator on the latest developments, emphasizing that the Brigade would undoubtedly get into the fight soon after arrival. He asked Weir to send the Air Support Section and helicopters to Korea by LST as quickly as possible after unloading in Japan.[1]

Craig received a radio message that same night from FMFPac, informing him that the replacements for the Brigade would not be sent directly to Pusan, as requested. They were to be assembled at Camp Pendleton for travel with the 1st Marine Division, and this meant a delay which could be critical. Craig immediately insisted that the reinforcements be sent to Pusan to replace Brigade battle losses and form the third rifle companies.[2] The Marine leader’s determination in this instance proved to be a blessing a few weeks later.
Chapter 5. Prelude to Battle
Reconnaissance by Jeep

On the morning of 31 July, Craig and Stewart set out by jeep to reconnoiter the rear areas of the crumbling southwestern sector. Kean’s 25th Division, having just replaced the 24th in line, was now blocking the threatened western approaches to Pusan. Since all indications pointed to the Brigade’s commitment in this area, Craig wanted to walk and ride over the terrain he had previously scouted from the air.\[3\]

He returned to Pusan just in time to receive a telephone call from Colonel Landrum of Eighth Army Headquarters. The chief of staff told him of General Walker’s intention to attach the Army’s 5th Regimental Combat Team, newly arrived from Hawaii, to the 1st Provisional Marine Brigade. With two regiments under his command, Craig would be assigned a vital area of responsibility along the Nam River, near its confluence with the Naktong north of Masan.\[4\] Unfortunately, the Brigade reached Korea 1 day too late. When the 5th RCT debarked at Pusan on 1 August, it was earmarked for the 25th Division and placed in Eighth Army reserve.\[5\]

Also debarking on the 1st was the Army’s skeletonized 2d Division. This unit cleared Pusan and hurried to the hard-pressed Taegu area where it also passed into Eighth Army reserve.\[6\]

During the last hours before the Brigade’s arrival, Lieutenant Colonel Chidester was diligently engaged in the task—or art—of procurement. It has already been explained why the Marine ground force would debark for combat with little more than what its troops could carry on their backs. In order to offset partially the deficiencies, the G-4 successfully negotiated with Army authorities for 50 cargo trucks, several jeeps, some radio vans, and various other items of equipment. Officers of the Pusan Base Command reacted to all of Chidester’s requests with as much generosity as their meager stocks of materiel would allow.\[7\]

Not until the morning of 2 August did General Craig learn that Task Group 53.7 was scheduled to dock at Pusan that very evening. The last-minute disclosure relieved him of considerable anxiety, but he was still disturbed for want of specific orders concerning departure of the Brigade from Pusan. His instructions from General Walker were to debark the ground force immediately and have it prepared to move forward by 0600 the following morning. The same orders advised him that a specific destination “would be given later.”\[8\]

“Later” did not come soon enough for the Marine commander. As the long column of ships steamed into Pusan Harbor in the early evening, he still did not know where he would lead his Brigade the next morning.\[9\]
When Task Group 53.7 entered Far Eastern waters, the ships transporting the forward echelon of the 1st Marine Aircraft Wing veered toward Japan, while the others continued to Korea. The Brigade’s air arm arrived at Kobe late in the afternoon of 31 July.

Within three hours debarkation had been completed and unloading was in full swing. A waiting LST took on Marine Tactical Air Control Squadron Two and the ground personnel and equipment of VMO-6. By the next morning it was steaming toward Pusan, carrying the vital link in General Craig’s air-ground team. Cushman and Weir were making good their promises.[10]

Since harbor facilities at Kobe were unsuitable for offloading aircraft, the Badoeng Strait stood out to sea on 1 August and catapulted 44 of its Marine fighter planes into the air. The aircraft sped to the field at Itami, where they were quickly checked by pilots and crews for their imminent role in combat. On the following day, the other 26 fighters left the carrier and joined the first group ashore for maintenance and testing.[11]

To achieve maximum mobility and striking power, Marine and Navy commanders agreed to base VMF’s 214 and 323 aboard aircraft carriers for initial operations over Korea. After only 1 day of refresher flights at Itami, the pilots of VMF-214 landed their planes aboard the U.S.S. Sicily. Two days later, on 5 August, Major Arnold Lund led his VMF-323 back to the Badoeng Strait.[12]

The squadron of night fighters, VMF(N)-513, was land-based. Having been assigned to the Fifth Air Force, it would be controlled by the Itazuke field for night heckler missions over Korea. This unit had time for only a few night training flights before being committed to combat.[13]

Kobe’s waterfront was the scene of feverish activity around the clock. The light observation planes and helicopters of VMO-6 were unloaded, assembled, and—to the amazement of local Japanese—flown from the very streets of the city to the base at Itami. There they were hurriedly checked by mechanics and prepared for the short ferry flight to Korea.[14]

Headquarters and Service Squadrons of MAG-33 were left with the task of unloading supplies and equipment from the Achernar and Anderson. Since the three fighter squadrons were farmed out to the carriers and Air Force, Group headquarters turned its attention to administrative and maintenance matters. For the next month it would be hard-pressed to keep the carrier squadrons supplied with spare parts while providing replacement aircraft for the sea-borne units, handling a variety of airlift requests with its lone transport plane, and making arrangements for the support of VMF(N)-513 at Itazuke.[15]
Chapter 5. Prelude to Battle
Landing of Ground Force

The hapless *Henrico* finally overtook Task Group 53.7 in the Tsushima Straits on the morning of 2 August. A few hours later the Marines of the Brigade got their first glimpse of Korea’s skyline. Seen from a distance, the wall of forbidding, gray peaks was hardly a welcome sight to men who had been broiled and toughened on the heights of Camp Pendleton.

For reasons unknown, neither Colonel Snedeker nor anyone else had received the operations plan which Craig had sent via Eighth Army at Taegu. Although every Marine in the convoy realized the gravity of the situation ashore, there could be no specific preparations by troop leaders whose only source of information was an occasional news broadcast.

Having heard nothing from his superiors, Lieutenant Colonel Murray was thinking in terms of a purely administrative landing. Had he known what awaited his 5th Marines ashore, he would have had his troops draw ammunition and rations while still at sea. Throughout the sleepless night that followed, he had ample time to reflect sourly on the fortunes of war.[16]

Shortly after 1700 on 2 August, the first ship steamed into Pusan Harbor. As it edged toward the dock, Leathernecks crowding the rail were greeted by a tinny and slightly tone-deaf rendition of the Marine Corps Hymn, blared by a South Korean band. Army troops scattered along the waterfront exchanged the usual barbed courtesies with their webfooted brethren aboard ship, and old salts smiled while noting that tradition remained intact.

When the *Clymer* approached its berth, Craig waved a greeting to Snedeker and shouted, “What battalion is the advance guard?”[17]

The chief of staff registered an expression of astonishment.

“Did you get my orders?” Craig called to Murray when the *Pickaway* slid against the dock.

“No, sir!”[18] replied the CO of the 5th Marines.

Craig ordered a conference at 2100 for the Brigade staff, Murray, battalion commanders, and the leaders of supporting units. When the officers entered the wardroom of the *Clymer* at the specified time, the last ship of Task Group 53.7 was being moored in its berth.

After introductory remarks by the general, his G-2, Lieutenant Colonel Ellsworth G. Van Orman, launched the briefing with a grim narrative of the enemy situation. Next came Stewart, who outlined tentative operations plans. The Brigade would definitely begin moving forward at 0600 the next morning, although a specific destination had yet to be assigned by the Army. Travel would be by road and rail. The necessary trains were already awaiting in the Pusan terminal, and the 50 trucks procured by Chidester were standing by, complete with Army drivers.[19]

Craig then summed up his earlier discussions with Walker. The Army leader had voiced a strong desire to use the Marines in an attack, for he felt it was high time to strike back at the Red invader. Employment of the Brigade as an offensive force was a natural conclusion to its commander, and he told his subordinates how he had won assurances for the integrity of the air-ground team. This was an encouraging note on which to close one of the strangest combat briefings in the history of the Corps. The leaders of over 4,000 Marines rushed from the ship to alert their units for movement into a critical tactical situation. They would leave in a few hours, but didn’t know where they were going.[20]
It is not surprising that the Pusan waterfront turned into a bedlam. As darkness settled, thousands of Marines poured onto the docks. Cranes and working parties unloaded vehicles, supplies and equipment, while a chorus of commands and comments was added to the roar of machinery. Supply points were set up under searchlights, and long lines of Marines formed on the docks, in buildings and along streets. Armfuls of C-rations, machinegun belts, grenades, and bandoleers gave men the appearance of harried Christmas shoppers caught in a last-minute rush.

The activity and din continued all night. Few men could sleep through the noise, crowding, and shuffling. Before dawn, new lines began to form in reverse as groggy Marines filed back aboard ships to get their last hot meal for many a day.

After the conference aboard the Clymer, Brigade headquarters resumed its efforts to obtain specific information from Taegu. Finally, at 2325, Landrum telephoned Craig and announced Walker’s decision—the Brigade would go westward to the vicinity of Changwon, where it would remain for the time being in Eighth Army reserve. Only Walker himself could order any further move. If some extreme emergency arose and communications with Eighth Army were lost, the Brigade would then come under the control of the CG, 25th Infantry Division.[21]

The long-awaited message gave added impetus to the unloading operations. Major William L. Batchelor’s shore party company devoted one of its principal efforts to the big howitzers and vehicles of 1/11, while English and his tankmen struggled to get their steel monsters ashore from the LSD’s. Engineer heavy equipment, mobile maintenance shops of the Ordnance Detachment, fuel, ammunition, and medical supplies swung from decks to docks, where waiting Marines rushed them off to staging areas around the waterfront.

Altogether, 9,400 tons of supplies were unloaded, and the vast majority were turned over to Army quartermaster authorities in Pusan. Four officers and 100 men of Major Thomas J. O’Mahoney’s Combat Service Detachment were designated as the Brigade rear echelon. This group would remain in the port city to handle logistical and administrative matters. Supplies were moved into Army warehouses, where they became part of the common pool shared by all units at the front. This led to confusion later, when the Brigade requested its own Class II and IV items, only to discover that they had already been issued to other outfits. But the Army divisions had already been fighting for a month in a war which caught the nation unprepared, so that the Pusan Base Command had no alternative but to issue supplies on the basis of immediate need, not ownership.[22]

The Brigade was prepared to travel light. Not only the bulk of supplies but also all personal baggage was left behind in Pusan, to be stored and safeguarded by the rear echelon. When dawn broke on 3 August, each Marine carried only his pack, weapon, ammunition, and rations.[23]

Chapter 5. Prelude to Battle
The Brigade at Changwon

Despite the tumult of the sleepless night at Pusan, Lieutenant Colonel George R. Newton’s 1st Battalion set out for Changwon shortly after 0600 on 3 August. As advance guard for the Brigade, it made the 40-mile trip in Marine and Army trucks, reaching a point 1 mile west of the town at 1400. There the battalion took up defensive positions astride the Changwon-Masan road in order to cover the arrival of the remainder of the Brigade. [24]

Although he had orders to bivouac at Changwon, General Craig decided to deploy the Brigade defensively to the west of the town. This decision was prompted by the enemy situation west of Masan, which was a scant 6 1/2 miles from Changwon. Then, too, the Marine commander saw the layover as a final opportunity to check the field discipline of the Brigade. [25]

Between 0630 and 0700, the main body of the Marine ground force moved out of Pusan by road and rail. Vehicles over 2 1/2 tons, all heavy equipment, and the M-26 tanks were transported on flatcars. The roads were narrow and bumpy, and the churning wheels of the trucks threw up clouds of stifling dust that hung in the air and painted Marines and equipment a ghostly gray. Aboard the primitive trains, which frequently jolted to stops for no apparent reason, men tried vainly to fit themselves to miniature wooden seats constructed in perfect right angles. And always, the troops inhaled that characteristic odor drifting in from well-fertilized rice paddies.

By 1600, all combat and support elements of the Brigade, with the exception of one tank platoon, had arrived in the Changwon area. Southwest of the city the 1st Battalion was relieved of its responsibility on the left side of the Changwon-Masan road, when 3/5 occupied the high ground in that area. Newton was then able to extend his right flank farther along the towering ridge north of the road. [26]

South of the MSR, a wide rice paddy stretched between 3/5’s positions and the town. Almost in the center of this low ground was a hill commanding a good all-around view of the entire area. It was on this dominating height that Lieutenant Colonel Harold S. Roise deployed his 2d Battalion. Behind Roise, General Craig established his CP in a small basin among hills in the immediate vicinity of Changwon. Close-in protection for his headquarters was provided by the engineer company and various headquarters units. Throughout the interior of the bivouac area were tank platoons and the batteries of Lieutenant Colonel Wood’s artillery battalion.

As night settled on 3 August, an army of phantoms invaded the Brigade perimeter and drove to the very fringe of Craig’s CP. The reaction of green troops was typical of men new to combat. Shortly after 2200, a rifle shot cracked. Many Brigade Marines had never heard a weapon fired in combat, so they concluded that likely targets were present in the perimeter area. As nerve-taut men stared fixedly into the blackness, forms that had been harmless bushes and rocks took on the guise of Communist infiltrators.

The first shot was soon followed by others. Toward midnight, the firing developed into a continuous crackle, particularly in the immediate vicinity of the Brigade CP. Palpitating hearts pounded even more strenuously when two Marine machineguns began chattering in positions occupied by Brigade headquarters troops.

Anxiety also spread to the foxholes of the 5th Marines. In 2/5’s area one man was shot. The 1st Battalion suffered 2 casualties, 1 resulting from mistaken identity during challenging, the other inflicted when a weapon discharged accidentally. [27]

The commotion finally died down around 0300, after cursing NCO’s convinced the military novices that
they had been firing at delusions of their own overwrought imaginations.

Although such a reaction is not uncommon among untried troops, this realization was no balm to a wrathful Brigade commander at dawn on 4 August. Craig called in leaders of the most obvious offenders and severely reprimanded them. He made it known in no uncertain terms that such conduct would not be tolerated again; and from that time on, every man in the Brigade took him at his word.

The remainder of the stay at Changwon was relatively calm. On one occasion a group of seven unidentified persons was spotted atop a mountain overlooking the Brigade area. Closer scrutiny disclosed that the individuals had radios and were carefully observing all activity within the Marine perimeter. A platoon of infantry was dispatched to destroy what was apparently an enemy observation post; but by the time the rifleman scaled the height, both intruders and radios had disappeared.

The climb caused a number of heat prostration cases within the platoon, for Korean terrain and heat were giving Marines their first bitter taste of a crippling combination. Brigade helicopters, flown to Pusan on 2 August, set a combat precedent by delivering rations and water to the infantrymen on the mountain, and by evacuating the more severe heat casualties.[28]

While Craig’s ground force spent its time patrolling and training around Changwon, VMO-6 and the Air Support Section (MTACS-2) were readying themselves. Accompanying the 4 HO3S helicopters in the flight to Pusan from Japan on 2 August were 4 of VMO-6’s OY-2 observation planes. The other 4 light aircraft remained in Japan, to be used as spares. On 4 August the LST which had been dispatched by Cushman and Weir also arrived at the South Korean port. While two helicopters flew to Changwon to operate from Craig’s CP, the others, together with the rest of VMO-6 and the Air Support Section, moved to the airfield at Chinhae. By 5 August, MTACS-2 had established communications with the Sicily and Badoeng Strait and was ready for business.
The big picture, militarily speaking, was outlined in somber colors during the first few days of August 1950. Only the southeast corner of Korea was left to the Eighth Army and its battered ROK allies. Space had been traded for time until there remained in effect merely a UN beachhead about 90 miles long and 60 wide.

Unremitting enemy pressure throughout July had pushed the UN forces back to positions stretching raggedly from Pohang-dong on the east coast to Masan on the south coast by way of Taegu in the center. The logistical lifeline extended from Pusan to Taegu both by road and rail, and some 300,000 tons of supplies were moved in July by the Pusan Logistical Command.

The vital seaport had to be held if the UN forces were to retain a foothold in the peninsula, and the enemy was already threatening both Pohang-dong and Masan, each within 50 miles. Only by courtesy could the irregular chain of UN positions have been called a line. Gaps were the rule rather than exception, and an entire enemy corps might have driven through the mountainous area between Andong and Yongdok without meeting serious opposition. Nor was this the only spot where the dangerously stretched UN forces had to depend on the terrain for support. Yet the time had come to make a stand, and this final UN beachhead has gone down in history by the name of the Pusan Perimeter.

From Taegu in the center to the eastern coast, five depleted ROK divisions were arrayed during the first week in August. East of the Naktong, from the Taegu-Waegwan area southward, the 1st Cavalry and the 24th Infantry Division held defensive positions. This left the southern sector to the 25th Division, reinforced by the Army 5th RCT and the 1st Provisional Marine Brigade.

The principal enemy units pressing toward Masan and Pusan in the southern sector were identified as the NKPA 6th Infantry Division and the 83d Motorcycle Regiment. Composed entirely of Chinese civil war veterans in July 1949, the 6th Division had at that time been the 166th Division, 56th CCF Army, which later entered Korea as a completely equipped unit. Its three infantry regiments, the 13th, 14th, and 15th, were distinguished throughout the invasion for a high esprit de corps. After capturing Yongdungpo, an industrial suburb of Seoul, the 6th had pushed southward and won fresh honors by forcing the river Kum and taking Kunsan by storm.

On the eve of the Kunsan operation, according to a captured enemy document, troops of the 6th were informed that they were facing a United States Army regiment. “Since this unit is planning to advance to the north, it is our mission to envelop and annihilate it. . . . We are fully prepared and confident of success in this operation.”

A numerical superiority as well as good combat discipline enabled the initial assault waves to cross the Kum in pneumatic floats and establish a bridgehead before noon on 16 July 1950. Half of the town of Kunsan was occupied before nightfall, and the United States and ROK defenders withdrew under cover of darkness.

Next came the “end run,” with 6th Division units racing toward the capture of Namwon, Kwangju, Yosu, and Mokpu in the southwest corner of the peninsula. No opposition awaited except ineffectual delaying actions by ROK constabulary troops. After mopping up a few small pockets of resistance, the 6th Division pushed eastward to lead the North Korean drive toward Pusan.

The capture of Sunchon gave the division an assembly area for the attack on Chinju. And on 28 July the commander, Major General Pang, issued a message to his troops:

“Comrades, the enemy is demoralized. The task given to us is the liberation of Masan and Chinju and the annihilation of the remnants of the enemy. We have liberated Mokpu, Kwangju and Yosu and have thereby
accelerated the liberation of all Korea. However, the liberation of Chinju and Masan means the final battle to cut off the windpipe of the enemy. Comrades, this glorious task has fallen to our division! Men of the 6th Division, let us annihilate the enemy and distinguish ourselves!”[31]

Up to that time the division’s total casualties had been remarkably few. Only 400 killed and wounded were reported from 25 June until after the capture of Kunsan, and the 6th had met scarcely any opposition since that action. It was just prior to the assault on Chinju, moreover, that the 83d Motorcycle Regiment was attached to reinforce the drive toward Pusan.

This unit had been part of the 105th Armored Division until June 1950, when it was given a separate existence. Equipment consisted of motorcycles with sidecars and jeeps of Soviet manufacture. Fixed machineguns on both types of vehicles were operated by the crews in addition to submachineguns. Not much is known about the numbers of the 83d at this time, but it had experienced little combat since the beginning of the invasion.[32]

During the advance on Chinju the NKPA column ran into elements of the United States 24th Infantry Division and was stopped by machinegun fire at Hadong. All three regiments of the 6th Division had to be committed before this halfway point could be secured, and the 83d Motorcycle Regiment was blooded in the attack. More hard fighting awaited on the road to Chinju, but the two NKPA outfits battled their way into the town on or about 30 July 1950.
Chapter 5. Prelude to Battle
Brigade Air Strikes First

These North Korean units were destined to become the opponents of the Brigade a few days later. Before the Marine ground forces could get into action, however, the air components struck the first blow.

When Lieutenant Colonel Walter E. Lischeid’s VMF-214 landed on board the Sicily on 3 August, eight of its Corsairs were immediately refueled and armed. At 1630, the initial Marine offensive action of the war was launched as the fighter planes roared up from the carrier’s flight deck. Minutes later their incendiary bombs and rockets were hitting Red-held Chinju and the village of Sinban-ni. A series of strafing runs concluded the Marines’ greeting to the North Korean People’s Army.[33]

While the 2 Red bases were erupting in smoke and flame, 2 other pilots of the squadron flew from the Sicily to Taegu to be briefed on the broad tactical situation. They returned from their visit with maps and intelligence material for guidance in future operations.[34]

The squadron flew 21 sorties on 4 August against enemy bases controlling the pressure on Eighth Army’s southern flank. Racing in from the sea, gull-winged Marine planes struck at bridges, railroads, and troop concentrations in the Chinju and Sachon areas.

On 5 August, the Sicily steamed into the Yellow Sea. Marine planes descended on Inchon, Seoul, and Mokpo, battering airfields, factories, warehouses, railroads, bridges, and harbor facilities. The same pattern of destruction was repeated the following day.[35]

On 6 August came a thundering bid for fame by VMF-323, as its sleek Corsairs streaked toward Korea. Operating from the deck of the Badoeng Strait, the squadron flew 30 sorties in deep support forward of Eighth Army lines. Carrying the mail with 500-pound bombs, 20-mm. cannon and 5-inch rockets, Marine pilots struck at Communist troop concentrations, vehicles, supply dumps, bridges and railroads.[36]

Chapter 5. Prelude to Battle
Planning the Sachon-Chinju Offensive

As early as 3 August, during the Brigade move from Pusan to Changwon, General Craig and Lieutenant Colonel Stewart had flown by helicopter to Masan for a conference of troop commanders. There they joined General Walker and General Kean at the latter’s 25th Division command post. Also present was Brigadier General George B. Barth, artillery officer of the 25th.[37] Craig suggested to the Eighth Army commander that some ROK army trainees be attached to the Brigade. There were thousands of such Korean recruits, and a few serving as scouts, interpreters, and rear-area guards would be of great value to the Marines. Walker agreed to provide the native troops and arm them as well. [38]

The Army leader confirmed the previous night’s telephonic orders which had caused the Brigade’s move to Changwon. After the four generals had discussed the tactical situation on the southern flank, Walker directed Craig to have the Brigade prepared for commitment to combat any time after the evening of 5 August.[39] This schedule worked out perfectly from Craig’s point of view. The Air Support Section at Chinhae had just established communications with the two carrier-based squadrons. Army-Navy-Marine co-operation thus enabled the Brigade commander to lead his entire air-ground team into battle.

On 5 August Craig and Stewart flew to Masan for a final meeting with Walker and Kean. The Eighth Army commander outlined his plans for the first UN counteroffensive. In forceful terms, he expressed his dissatisfaction with the course of the war up to that time. He announced that the strategy of trading space for time had come to an end, and he did not mince words in referring to past UN defeats. With firm conviction in the cause, he had ordered all units to stand to the death. The Eighth Army could not and would not lose more ground or equipment.[40] Advances had been made by the enemy with such rapidity that he had extended his supply lines almost to the breaking point, concluded Walker. The time had come to strike back[41]

To the 25th Division, 1st Provisional Marine Brigade, and 5th RCT would go the honor of launching the counterattack from Chindong-ni, a small coastal village 8 miles southwest of Masan on the road to Chinju. In its effort to roll up the southern UN flank, the NKPA 6th Division was exerting heavy pressure on Chindong-ni from both the west and north.

A few miles west, the irregular coastline takes a sharp turn to the south to form a stubby peninsula about 25 miles wide and 15 miles long. Near the western base is the important town of Sachon. About 10 miles above this western junction of peninsula and coast lies Chinju. Both Sachon and Chinju were the targets of Walker’s counteroffensive.

Approximately 3 1/2 miles west of Chindong-ni is the tiny thatched–hut hamlet of Tosan, an unimpressive road junction which could be easily overlooked. The western fork is merely the continuation of the main route leading directly to Chinju, some 25 miles distant. The other fork branches south from Tosan and also goes to Chinju; but it skirts the coastline of the peninsula just described, passing through the communication hubs of Paedun-ni, Kosong, and Sachon. Thus, while both roads lead to Chinju, the southern or peninsular route is 17 miles longer.

Since it was known that enemy forces were present on the small peninsula, any UN thrust astride the main road to Chinju would be exposed to a constant flanking threat from the left. To eliminate this danger, Walker had decided to send the 1st Provisional Marine Brigade around the southern route from Tosan to Sachon. After the peninsula was secured, the 5th RCT would strike out for Chinju along the main road, while the 35th
Infantry of the 25th Division guarded its right flank in the mountains to the north. [42] Craig and Stewart opposed this plan, arguing that the Brigade itself would be exposed to flanking danger on the right, if it made the initial advance alone. [43] After further discussion, it was decided that all three units would attack simultaneously along the routes already designated. However, the 5th RCT was given a preparatory mission of uncovering the Tosan junction before the Brigade began its advance. [44] D-day was scheduled for 7 August. All participating units were to be part of Task Force Kean, so named after the 25th Division commanding general who would exercise overall control.

Craig hurried from the conference to alert the Brigade. In a past military age a general might have sprung into the saddle, but the Brigade commander had discovered a steed that covered more ground. He and Stewart climbed into a HO3S-1 helicopter piloted by Lieutenant Gustave F. Lueddeke of VMO-6, and a few minutes later they landed at Lieutenant Colonel Murray’s CP to brief him on the forthcoming action.
Chapter 6. Action on Hill 342

ON 6 AUGUST 1950 the Brigade was attached to the 25th Infantry Division and ordered forward to Chindong-ni. The area from that village westward toward the Tosan junction was occupied by thinly spread elements of the 5th RCT and the 27th Infantry. While the former took over front line positions preparatory to launching the main attack on the next day, the latter was gradually displacing rearward to go into Eighth Army reserve.[1]

To facilitate the early relief of the 27th Infantry, Lieutenant Colonel Robert D. Taplett’s 3d Battalion, 5th Marines, departed from Changwon at 1040, 6 August, and arrived at Chindong-ni less than 2 hours later. The infantry unit was accompanied by the 1st Battalion, 11th Marines; the 2d Platoon, 75-mm. Recoilless Guns; and the 3d Platoon, Company A Engineers. After assembling in a schoolyard north of the village, 3/5 relieved the 2d Battalion, 27th Infantry, on and around Hill 255.[2]

One and a half miles out of Chindong-ni, the road from Masan takes a sharp turn so that it is running generally north and south before it enters the village. Hill 255 borders the west side of the road, rising from the valley floor just above Chindong-ni and climbing northward to its summit in a series of prominent steps. Its ridgeline is narrow, with the eastern slopes falling steeply to the Masan route while its western wall plunges sharply to the valley and road connecting Chindong-ni and Haman.

Taplett set up his CP, headquarters units, and weapons company along the first step of the hill. Higher up, at the top of the second rise, Captain Joseph C. Fegan deployed Company H in defensive positions facing generally north. Forward, a long narrow plateau stretched for 250 yards before the third step of the ridge rose abruptly to the second highest peak on the hill. Noting the advantages of the commanding ground to his north, Fegan requested permission to move his company forward to that area. Since this would have placed him 500 yards from the nearest 3/5 unit, the request could not be granted.[3]

The battalion commander intended to keep his defenses as tightly knit as possible in order to discharge his mission of blocking the approaches to the Masan-Chindong-ni MSR. Despite vigorous patrolling by 25th Division units in the mountains between the coastal village and Haman, intelligence reported increasing numbers of enemy troops, heavy weapons, and equipment in the area to the north. It appeared that large NKPA forces were slipping through and descending on Chindong-ni to “cut off the windpipe” of Walker’s southern flank.

First Lieutenant Robert D. Bohn, commander of Company G, deployed his 2d and 3d Platoons on Hill 99, to the west and across the valley from 255. He arranged his defenses to block the approaches from the high ground on his north (actually an extension of Hill 99) and from the valley to the west, separating him from massive Hill 342.[4]

On a small knoll at the base of Hill 255 was deployed Company G’s 1st Platoon, commanded by Second Lieutenant John H. Cahill. With the 75-mm. recoilless gun platoon attached, this unit guarded the Haman road 600 yards from Chindong-ni.[5]

On high ground east of the MSR and beyond the village sat the 2d Platoon of Company H, with the mission of defending against infiltration from the direction of the sea and the mountains southeast of the road to Masan.[6]

This completed the infantry deployment. Company H had its three platoons spread over 1,500 yards, while those of Company G ranged at least an equal distance. Due to the lack of a third company, Taplett had no reserve other than a handful of headquarters troops. Thus 3/5 got its taste of things to come in a strange war of
mountains and men.

As the riflemen were digging their hilltop holes with traditional distaste, other supporting elements of the Brigade and 5th Marines began to arrive at Chindong-ni and set up for business. These included the Brigade Reconnaissance Company and a platoon of the regimental 4.2-inch Mortar Company.[7] All Marine units in the area temporarily came under control of 3/5’s Battalion Commander. Taplett was given the added responsibility of handling all area requests for tactical air support.[8]

For the time being, the 3d Battalion itself was under operational control of Colonel John H. Michaelis, USA, commander of the 27th Infantry “Wolfhounds.” Verbal instructions from Major General Kean on 6 August had given the Army officer control of all troops in the Chindong-ni area. When a second Marine battalion arrived in the locale, command would then pass to General Craig.[9]

By 1600, Taplett had reported his command post location and defensive positions to Michaelis. Immediately afterwards he ordered mortars and artillery to lay registration fires on the northern approaches to Chindong-ni.[10] Having left the phantoms of Changwon far behind, the Marines of the reinforced battalion settled down for the night.
Chapter 6. Action on Hill 342
First Platoon Fight

Shortly after midnight, the 3d Battalion received an unexpected message which precipitated the first Marine infantry action of the war. Colonel Michaelis radioed Taplett and passed on a directive from 25th Division, ordering the Marine battalion to commit immediately one reinforced platoon for the defense of Hill 342. He explained that this unit was to relieve a beleaguered Army company being slowly eaten away in a private war of attrition. Taplett informed the regimental commander that he could ill afford to spare 1 of his 6 rifle platoons, but was told in return that General Kean had ordered 342 held at all costs.[11]

Tagged with the ominous sounding name “Yaban-san” by Koreans, this hill resembles a huge molar whose roots rise from the MSR west of Chindong-ni and lead to a tremendous mass about 2,000 yards north of the road. There the ground climbs sharply, culminating in a peak 1,100 feet high. Beyond, a long saddle extends a few thousand yards northwest, connecting 342 with a height of almost 2,000 feet. The latter was a stronghold of NKPA 6th Division elements, making a determined bid to carry 342 and cut the MSR.

Assigned the mission of making the Brigade’s first ground contact was young Lieutenant Cahill of Company G. His 1st Platoon was reinforced with a machinegun squad and SCR-300 operator before he led it from 3/5’s perimeter.

Moving westward on the MSR, the platoon reached Michaelis’ CP, located near the bridges south of Hill 99. Cahill was told that he would be met by a guide at a road junction 700 yards farther down the MSR. From this point the platoon followed a soldier who escorted Cahill to the CP of the 2d Battalion, 5th RCT. This headquarters was situated just north of the road, on the tip of 342’s eastern “root,” 1 of the 2 long ridges leading to the hill itself.

The Marine officer was told to relieve the Army company on the summit and hold the hill with his platoon. Following a quick briefing, Cahill and the guide led the column northward from the CP, skirting the western base of the ridge. A few hundred yards along the way, the guide discovered that he had miscalculated in the darkness. More time was lost while the platoon descended to resume the correct route.

As the men threaded their way along the unseen trail, a few enemy artillery shells burst nearby. The column reached the end of the valley separating the two long spurs of 342, and a volley of rifle fire cracked in the darkness. Two of Cahill’s Marines were painfully wounded.

Since the column was still in friendly territory, the guide advised Cahill not to climb 342 until dawn shed light on the mystery. It was then 0500, 7 August, and the Marine platoon had marched 3 miles from its original position.

Shortly after first light, it was discovered that soldiers of the 2d Battalion, 5th RCT, had fired on the Marines, not realizing that friendly units were moving within the area.

As the sun rose in a cloudless sky, Cahill took the lead. First, he climbed the high ground joining 342 with its eastern spur, then crossed over and continued toward the peak from a southeasterly direction.

Click here to view map

The platoon made good progress at the outset, but the heat became stifling; and all the while the slopes of 342 stretched ahead like a continuous wall. Stumbling, gasping for breath, soaked with perspiration, every Marine reached the point at which he barely managed to drag himself up the steep incline. There were choked curses as men gained a few feet, only to slip and fall back even farther.

Water discipline collapsed as canteens were quickly emptied. Marines began to drop along the slope,
some unconscious, others doubled over and retching. The tactical formation of the platoon became ragged, but Cahill and his NCO’s urged the men upward.

Accompanied by Sergeant Lee Buettner, Cahill set out to contact the Army company commander on the summit and reconnoiter the area. Seventy-five yards from the top, he was fired on from the eastern slopes. Since he was in sight of the Army troops on the crest, it was obvious that the North Korean People’s Army had officially greeted the 1st Provisional Marine Brigade.
Convinced that he was encountering only sniper fire, Cahill ordered Buettner to stay behind and keep the platoon moving up a draw affording cover. Then, ignoring enemy marksmen, the young officer climbed up to the crest and entered a grim little company perimeter under constant rifle and machinegun fire from its front and both flanks.

It was 0830 when the Army company commander greeted Cahill and explained his defenses. It had been customary, he said, to man a broad front during the day and draw back into a tight perimeter at night. But the intense enemy fire of the previous night had not diminished after daybreak, with the result that his men still occupied their night perimeter. The Army officer added that he had returned his mortars to the base of the hill, since they had drawn too much fire to be effective. Deployed around a triangular perimeter conforming to the shape of 347’s peak were the remnants of his three shattered platoons.

While Cahill appraised the situation, his platoon labored up the hill under prodding by Buettner and other NCO’s. Well up the southeastern slope, the column suddenly came under automatic weapons fire from invisible enemy positions. The exhausted Marines set up weapons along the hillside and fired at area targets. Despite the blistering sun and whine of bullets, NCO’s led their fire teams and squads up toward the peak.

When the Marines reached Cahill, he learned that 1 man had been killed and 6 wounded, including Staff Sergeant Robert Robinson, platoon sergeant, and Sergeant Thomas Blackmon, platoon guide. A number of heat casualties were recuperating far down the slope, and one Marine had suffered an emotional collapse. Blackmon, despite a mortal wound, had been so intent on joining his platoon leader at the crest that four weary men were required to carry him down the hillside to safety. Three other able-bodied Marines also had to assist wounded men down the hill.

Of the 52 men who had set out the previous night, only 37, including those recovered from heat sickness, finally reached Cahill. As they assembled on the reverse slope of 342, a group of soldiers on the crest broke under a heavy volume of enemy fire and bolted from the perimeter. The Army company was on the verge of panic until a young Army lieutenant restored order and led the men back to their foxholes.

Cahill and his remaining NCO’s crawled around the perimeter to insert Marines in positions among those of the Army troops. This psychology was sound, for each infantryman, eyeing his Army or Marine neighbor, prided himself on setting a high standard of military conduct. From that time on, every man discharged his responsibility in a most exemplary manner.

Two more Marines had been killed instantly while being led to their positions by Sergeant Jack Macy. These casualties brought the platoon’s total to 3 KIA and 8 WIA.

It is not likely that Cahill’s men were interested enough in historic dates to recall that it was the eighth anniversary of the Marine landing on Guadalcanal in World War II. For at noon, the fight on Hill 342 took on aspects of a siege. Swarms of North Koreans inched upward toward the crest, taking advantage of cover and concealment as they kept a steady stream of rifle and machinegun fire cutting across the hilltop. Despite the visual handicap resulting from the enemy’s use of smokeless powder, the Marines and soldiers returned the fire with determination.

Due to the urgency of the situation on 342, the 2d Battalion, 5th RCT, ordered its company to remain on the crest with Cahill’s platoon. Plans were already underway for a larger Marine force to clear the high ground.
In the meantime Cahill used his initiative to improve the situation. With his SCR-300, he called for Army artillery fire to silence the Communist mortars. When the first shells were fired for registration, he searched the perimeter and located an artillery forward observer. Accurate bursts were laid on likely looking mortar OP’s in enemy territory, yet the Communist tubes continued to fire.

With ammunition and water in critical supply, the Marine officer radioed 3/5’s CP and requested an air drop. Taplett’s Tactical Air Control Party relayed the message to the Brigade Air Section, and an Air Force R4D transport flew over the restricted drop area atop Hill 342. The precious supplies tumbled from the big plane—into enemy territory. A single recovered packet contained carbine cartridges, the one type not needed.

The Brigade Air Section then turned the mission over to VMO-6. Every 5-gallon water can owned by the squadron was donated, and the more maneuverable OY-2’s were able to drop them within the confined perimeter. Unhappily, the containers burst upon striking the ground, so that the parched hill defenders were able to salvage only a few mouthfuls of water apiece.

Sergeant Macy reacted with vigor. With Cahill’s permission, he organized a few volunteers into a patrol to search for water. Descending the perilous southeastern slope under fire, the little group struck out for the village of Taepyong-ni, located along the base of 342’s eastern spur and facing Hill 99 across the valley.

As the afternoon wore on, the Army-Marine defenders clung to their precarious perch, despite swollen tongues and Communist fire. The enemy had succeeded in surrounding the entire peak with a ring of fire. Several more casualties were inflicted on the infantry company, and a Marine machinegunner was killed instantly by a sniper who had worked his way to the south of the perimeter.
Chapter 6. Action on Hill 342
Task Force Kean Stalled

Although the night of 6–7 August had been uneventful for 3/5’s front lines around Chindong-ni, Taplett’s CP near the base of Hill 255 came under sporadic shelling between 0100 and 0400. The first messages from Cahill, received about 0600, caused anxiety over the fate of his platoon.[12]

At 0200 that morning, a long column of trucks had set out from Changwon, carrying Lieutenant Colonel Harold S. Roise’s 2d Battalion, 5th Marines. The head of the convoy reached Chindong-ni about 0500 and entered the truck turn-around in a schoolyard at the base of Hill 255.[13] As 2/5 unloaded, the turn-around became a bottleneck of vehicles, men, and equipment which slowed movement on the MSR itself almost to a standstill. To make matters worse, the heavy traffic gradually pounded the schoolyard into a quagmire, so that trucks bogged down and added to the confusion.

While Roise was assembling his battalion, the entire area came under heavy mortar and artillery fire from the north. The sudden shelling, which caused 2/5’s first battle casualties, brought all traffic on the road from Changwon to an abrupt halt.

Although the Marines of the 2d Battalion were well covered behind Hill 255, bursts from shells striking the trees high on the ridge filled the air with fragments. Before the enemy mortars ceased, 1 Marine had been killed and 11 wounded, including Captain George E. Kittredge, Jr., commander of Company E.[14]

Lieutenant Colonel Murray, whose headquarters was behind Roise’s unit in the convoy, was still north of Chindong-ni when the column slowed almost to a standstill. He radioed 2/5’s commander and told him to keep the trucks moving despite the shelling. Roise replied that the muddy schoolyard, not enemy fire, was the main cause of the delay. Thus Murray received the first of many object lessons in Korean geography. He sat patiently in his jeep, while the column inched into Chindong-ni.[15]

After the regimental commander arrived in Chindong-ni, the 3d Battalion, less Cahill’s platoon, reverted to his control. Because of the battle in progress on Hill 342 and enemy activity to the north of the village perimeter, Murray ordered 2/5 to occupy and defend an expanse of 255 above Company H’s positions. He directed 1/5 (following his headquarters in the column from Changwon) to occupy Hill 99, thus relieving Company G to bolster Taplett’s lines on lower 255.[16]

General Craig arrived at Chindong-ni shortly after 0700, just in time to be warmly greeted by the enemy shelling as he stepped from his helicopter. Since the Brigade attack scheduled for 7 August hinged on the 5th RCT’s success at the Tosan junction, Craig quickly arranged for a telephone line to that unit, so that his CP would be in constant contact.[17]

News from the front was not good. At 0630, after air and artillery preparations, the 5th RCT had jumped off on schedule. Just beyond the line of departure, it came to a sudden halt as a result of increased enemy activity north of the road. Elements of the NKPA 6th Division, paying little attention to the plans of Task Force Kean, had launched an attack of their own above the MSR.

The situation on Hill 342 kept the entire 2d Battalion, 5th RCT, tied down in a fight to hold the Chinju road open. With the help of Cahill’s platoon on the crest, this mission was being accomplished; but the battalion was temporarily lost to its regiment, and the road itself was choked with men and vehicles unable to move.[18]
The Brigade was ordered to provide a battalion for the relief of the Army unit on Yaban-san, so that the 5th RCT could strike harder at the road junction 2 1/2 miles to the west. [19]

Just as 2/5 was ascending Hill 255, Lieutenant Colonel Murray received word from Brigade of the Marine commitment. The 5th Marines commander canceled Roise’s orders and directed him to relieve both Cahill’s platoon and the 2d Battalion, 5th RCT, and to seize the remainder of Hill 342. [20]

At 1120 on 7 August, General Craig received a telephone message from General Kean directing the Brigade commander to assume control of all troops in the Chindong-ni area until further orders. With this overall responsibility, Craig went forward to observe the 5th RCT in action. He ascertained by personal reconnaissance that enemy resistance was light, although few friendly gains were being made because of the scattered and confused nature of the fighting. [21] The MSR between Sangnyong-ni, at the base of Hill 342’s spurs, and the vital Tosan junction was jammed with men, vehicles, and equipment, while infantrymen probed the surrounding high ground in an effort to weed out snipers and infiltrators.

When 2/5 reached the road junction at which Cahill had been met by the Army guide during the night, Lieutenant Colonel Roise ordered Company D to move up the north fork, tracing the base of 342’s eastern spur, and seize both the spur and great hill itself. Company E, now commanded by 1st Lieutenant William E. Sweeney, was to pass behind Sangnyong-ni and seize the west spur. Such a deployment would leave the battalion spread thinly, but Roise’s orders were to protect the wide valley formed by the two long ridges. This could be done only by occupying both spurs and 342 itself. [22]

Outside of Chindong-ni, Major Morgan J. McNeely, 2d Battalion S–3, had picked up Captain John Finn, Jr., CO of Company D, and the two officers drove ahead by jeep to the village of Taepyong-ni at the eastern base of Hill 342. The staff officer informed Finn that Dog Company was to relieve a 5th RCT unit on the high ground above the clump of thatched huts. Both McNeely and an Army guide said that the Marines would meet no organized resistance in their climb. [23]

Having spent a sleepless night on the road from Changwon to Chindong-ni, Finn’s infantrymen were fagged. It was now midafternoon, and the heat began to take its toll of Dog Company.

Just as the leading elements reached Finn at Taepyong-ni—30 minutes after McNeely’s departure—the column came under rifle and machinegun fire from the high ground above the road and from the hamlet of Tokkong-ni across the valley on the right. The Marines thought they were being shot at by Army troops, but the chatter of Communist “burp guns” [24] soon convinced them that they were meeting enemy resistance. [25]

Finn ordered his men into the rice paddies bordering the road. Calling his platoon leaders, he told them that there was no real intelligence, but that the fire from Tokkong-ni would be ignored due to the company’s mission on 342. He assigned routes of ascent to each platoon. The 2d, under Second Lieutenant Wallace J. Reid, would push through Taepyong-ni and on up the hill at its juncture with the spur. On the left, Second Lieutenant Edward T. Emmelman would lead his 3d Platoon to the top of the spur. The 1st Platoon, commanded by Second Lieutenant Arthur A. Oakley, would hold the right flank and ascend the southern slopes of 342 itself. [26]

Company D met scattered opposition. By the time it moved over the crest of the spur, five Marines had been wounded. The sun, however, had been more effective; for twelve men were completely unconscious from the 100° heat, and the rest of the company had neared the point of exhaustion.

Finn ordered his executive officer, First Lieutenant Robert T. Hanifin, Jr., to set up headquarters and the
60-mm. mortars on the high ground directly above Taepyong-ni. It was already early in the evening when Hanifin established a thin perimeter of headquarters personnel to safeguard the CP.[27]

In the meantime, Finn was leading his three rifle platoons up the same southeastern approach to 342’s summit which Cahill’s platoon had scaled 12 hours earlier. The company commander could no longer overlook the combined effects on his men of heat and overexertion. A few hundred yards from the summit, he radioed Roise that Company D was exhausted. During the halt, Lieutenant Oakley climbed to the summit to contact the Army and Marine defenders. He returned just before dark with Cahill and the Army company commander.[28]

In the hurried conference that followed, the Army officer advised Finn against finishing the rugged climb and assured him that his soldiers and Cahill’s platoon could defend the peak through the night. Informed of this by radio, Roise allowed Company D to hold its present position and relieve at dawn.[29]

Earlier in the day, Lieutenant Sweeney had led Company E up the lower tip of 342’s western spur, then along the ridgeline toward the large hill mass. At intervals the company came under long range, ineffectual machinegun fire. But, as in the case of Finn’s unit, the heat and terrain were more damaging than enemy bullets. At dusk, Company E had reached the midway point along the ridge, and there it dug in for the night.
Chapter 6. Action on Hill 342

Enemy Attack at Dawn

Under cover of darkness, Red Korean troops wormed their way around the little perimeter on the summit of Hill 342. Just before dawn the soldiers and Marines were greeted by bursts of short-range rifle and machinegun fire. The defenders returned the fire and hurled grenades down the slopes, but a small force of North Koreans succeeded in crawling close enough to launch an assault against the northeast leg of the triangle. [30]

A fierce hand-to-hand struggle ensued at the point of contact, and the Communists were thrown back down the hill. One of Cahill’s men died of bayonet and gunshot wounds, and another Marine and several soldiers were wounded.[31]

Finn’s men struck out for the summit shortly after daybreak on 8 August. With three platoons abreast along the southern face of 342, Dog Company pushed upward swiftly, brushing aside light resistance. Upon reaching the perimeter, the Marines came under a storm of fire from NK positions which ringed the northern half of the hill.[32]

The relief was effected, nevertheless, and Cahill’s thinned squads descended Hill 342 together with the shattered Army company. The Marine platoon had lost 6 killed and 12 wounded—more than a third of the 52 men who had set out from Chindong-ni.[33] But its determined stand with the beleaguered Army unit had saved the height and frustrated the Communist attempts to establish a bastion overlooking the MSR.

Company D fared no better than its predecessors at consolidating the crest of 342 and clearing upper slopes which were crawling with North Koreans. Finn’s unit took several casualties in the fire fight that accompanied and followed the relief of the original defenders. Two of those killed in action were Second Lieutenants Oakley and Reid. The only surviving platoon leader, Lieutenant Emmelman, received a serious head wound as he was pointing out targets to a Marine machinegunner.[34]

Captain Finn, seeing Reid’s motionless form lying ahead of the company lines, crawled forward to recover the body. Having moved only a short distance with his burden, the company commander himself was struck in the head and shoulder by enemy bullets. Barely conscious and almost blinded by blood, Finn crept back to his lines on his hands and knees.

A corpsman administered first aid and Company D’s first sergeant helped the officer down the steep slope.[35] On the way the pair met Lieutenant Hanifin, who was leading company headquarters and the mortar section to the high ground from their positions of the previous night. Finn informed the executive officer that he was now in command of the company.[36]

Reaching the summit, Hanifin had just enough time to reorganize his defensive positions and emplace the 60-mm. mortars before the Communists launched another attack. Again Marine rifles, machineguns, and grenades scorched the northern slopes. Again the enemy was beaten back, leaving the hillside littered with dead. But Company D’s casualties had mounted meanwhile to 6 killed in action and 25 wounded.[37]

About 1130, as the fire fight slackened, Roise phoned Hanifin from his OP on the eastern spur. The conversation had no sooner begun when the company commander collapsed from heat exhaustion. A veteran NCO and a young officer promptly filled the command vacuum. Company D’s gunnery sergeant, Master Sergeant Harold Reeves, assumed control of the three rifle platoons with the confidence of long experience. Second Lieutenant Leroy K. Wirth, a forward observer of 1/11, took responsibility for all supporting arms, including the planes of MAG–33 circling overhead. The NCO of almost 30 years service and the young officer repeatedly ranged forward of the front lines to spot enemy positions for air strikes and make new appraisals of the situation.
Company D remained steady, and never again did the North Koreans seriously threaten the hilltop.[38]

The 2d Battalion, 24th Infantry, was scheduled to relieve 2/5 on Hill 342 during the afternoon of 8 August; but the Army unit was unable to reach the area for reasons to be explained later. Informed of the change in plans, Roise kept his battalion busy with consolidation of positions and evacuation of casualties.

Company E moved forward a few hundred yards along the western spur of 342 and dug new foxholes. Captain Andrew M. Zimmer reported from regiment, where he had been an assistant S–3, and took command of Company D.[39]

Although the North Koreans continued to harass the “iron triangle” on the crest, there was no more hard fighting. A few additional casualties were taken by Zimmer’s company, most of them occurring while Marines tried to retrieve airdropped supplies which had fallen wide of their mark.[40]

During the fighting on 342, Major Walter Gall, commander of 2/5’s Weapons Company, had dispatched a small patrol to eliminate the enemy machineguns in Tokkong-ni. After a brief fire fight which cost three friendly casualties, the withdrawal of the patrol left the Communists still entrenched in the village. When the Marines returned to Weapons Company lines on the eastern spur, First Lieutenant Ira T. Carr turned his 81-mm. mortars on Tokkong-ni and brought the enemy fire to an end.[41]

The night of 8–9 August was relatively quiet on 342. Obviously weakened by casualties, the enemy gave the Marine positions a wide berth. NKPA harassing fires consisted of periodic bursts from long-range machineguns and antitank guns.[42] There was desultory sniping during the morning of the 9th, but Brigade intelligence reported a gradual withdrawal of the enemy northward.[43]

That afternoon Company D was relieved by an Army unit when 2/5 turned over responsibility for the hill to the 2d Battalion, 24th Infantry. The fight had made veterans out of the men Zimmer led down to the road, but the company paid with 8 dead and 28 wounded.[44]

Documents taken from enemy dead disclosed that the defenders of Hill 342 had been opposed by elements of the 13th and 15th Regiments of the NK 6th Division. Lieutenant Cahill qualified his report of 150 enemy dead as “conservative,”[45] and 2/5 set the total at 400 after its fight.[46] The actual number of fatalities inflicted by Marine-Army infantry and supporting arms probably lies somewhere between these two estimates.

At any rate, the Red Korean commander had committed at least two rifle companies supported by machineguns, mortars and artillery. The force thrown against Yaban-san could be estimated at 500 to 600 troops, and they had failed in their attempt to cut the MSR.[47]
Chapter 7. Advance to Kosong

WHILE 2/5 AND the 1st Platoon of Company G were fighting the enemy and weather on 7 August, Lieutenant Colonel Taplett’s 3d Battalion sat out an ominous calm at Chindong-ni. From their positions on Hills 255 and 99, Captain Fegan and Lieutenant Bohn periodically called for supporting fires to check enemy movement in the northern approaches to the village.

At 1015 Second Lieutenant Lawrence W. Hetrick and his 3d Platoon, Company A Engineers, completed the laying of the first Marine minefield, located across the Haman road a half mile above Chindong-ni.[1]

Lieutenant Colonel Newton’s 1st Battalion reached the village in the afternoon of the 7th and relieved Company G’s two platoons on Hill 99. Bohn took his company back across the valley and deployed on the lower slopes of 255 facing the Haman road. These positions were hit by close-in sniper fire during the night of 7–8 August, and at dawn the Marine infantrymen were startled to discover four NK soldiers emplaced less than 100 yards away in the valley. Both the enemy position and its occupants were quickly destroyed.[2]

Shortly after daybreak on 8 August—while Cahill was being relieved on Yaban-san—the Marines of Company H noted a column of troops climbing Hill 255 from the direction of the Haman road. Believing the newcomers to be ROK soldiers, Fegan’s men watched as the long file reached the high peak beyond the plateau forward of the Marine positions. When the group set up facing Company H, Fegan became skeptical enough to alert his riflemen and machinegunners. His precautions were timely, for the visitors immediately opened fire on the Marines.[3]

This surprise attack had a critical effect on the Task Force Kean sector. In possession of the high ground above 3/5, the North Koreans were able to block the Masan-Chindong-ni stretch of the MSR, leaving most of the American ground forces out on a limb for supply and reinforcement purposes. Thus when the 2d Battalion, 24th Infantry, advanced from Masan to relieve both 3/5 and 2/5 on their respective hills, it was driven off the fire-swept road north of Chindong-ni.[4]

Upon being informed of the enemy’s presence, Taplett ordered Company H to attack and destroy the Communist position. Fegan called his two platoon leaders[5] while the Marine infantrymen in the line exchanged shots with the enemy across the plateau. After a quick briefing, Second Lieutenant John O. Williams led his 1st Platoon to the long tableland.[6]

Echeloned to the right, the skirmish line pushed aggressively over the open area, firing on the enemy as it moved forward. The platoon closed to within 30 yards of the Communist-held peak, but showers of hand grenades and continuous machinegun fire pinned down the attackers. Fegan sent a message forward, directing Williams to work around the enemy’s left flank. Although one fire team succeeded in reaching the rocks below the NK positions, the flanking maneuver failed.
The 3d Platoon had taken several casualties. Marines still in the open area were unable to advance, while those who had attempted the envelopment could only cling to the steep slopes above the MSR. When some of this group were struck by enemy fire, the impact sent them rolling helplessly down the sharp incline.

Convinced that Williams could not carry the peak, Fegan ordered him to pull his platoon back toward the line of departure and reorganize. While the withdrawal was in progress, the company commander ordered the 3d Platoon to pass through the 1st and continue the attack. There was no response to the order.[7]

Fegan realized that the men were momentarily unnerved after witnessing the failure of the first attack. The company commander, therefore, assumed control and personally led the 3d Platoon forward on the plateau. Halfway across the open area, the new skirmish line passed through Williams’ outfit as it was reforming.

The Marines of the 3d Platoon responded with confidence to Fegan’s leadership. They crossed the tableland in a wedge formation with 1 squad at the apex and the other 2 slightly withheld. Air strikes and artillery preparations had little effect against the rocky crag beyond the plateau, so that the final assault was fought to a finish with small arms and grenades.[8]

Staff Sergeant John I. Wheatley, one of the prime movers, fell wounded along with several of his men. Sergeant Edward F. Barrett, shot in the elbow and hip, lay helpless, exposed to enemy fire, until Captain Fegan carried him back to safety.

The 3d Platoon gained the rocky summit and worked its way through the NKPA position, a foxhole at a time, while the enemy resisted to the death. Corporal Melvin James[9] hit the Red Korean left flank with his squad and drove deep into the enemy position. The NKPA right flank was rolled up by a vigorous assault sparked by Technical Sergeant Ray Morgan and Private First Class Donald Terrio[10] as each knocked out a Communist machinegun and its crew.

Having wiped out the main enemy position, the 3d Platoon advanced northward about 200 yards to a gulf where the high ground fell away abruptly. Beyond this depression rose the highest step of the ridgeline’s rugged staircase: Hill 255 with a height of more than 800 feet above the MSR. The three squads held up here to await further orders.

How Company’s fight up to this time had cost the Marines 6 dead and 32 wounded.[11]
A column of NKPA reinforcements bound for Hill 255 was spotted during the action by Company G from its positions facing the Haman road. The enemy platoon struck out across the valley from the high ground north of Hill 99, then attempted to ascend 255 via the same route used by comrades at dawn.

The Marines of Company G and their supporting arms cut loose with a hurricane of fire. And after scattering in panic, the enemy survivors scuttled back to their starting point.[12]

Lieutenant Colonel Murray, upon being informed of the progress made by How Company, directed Taplett to halt the attack and dig in for the night. While Fegan’s men were carrying out this order under NKPA artillery and mortar fire, MAG–33 and the Marine artillery roared into action. The saddle north of How Company’s lines was pounded so mercilessly that the enemy pulled back from Fegan’s immediate front. Throughout the night of 8–9 August, 1/11 and 3/5’s mortar platoon dropped a steel curtain across the battalion front, with the result that no enemy activity was noted.[13]

The systematic reduction of enemy positions on Hill 255 the next morning was a triumph of supporting arms. Marine artillery shells led off at 0825, followed by Marine air which worked the enemy over with the first close-support payload of napalm recorded so far in the Korean conflict. And four minutes before Company H launched its final attack on the hill, airborne TAC reported the objective neutralized.[14]

Fegan’s men scaled the peak against negligible opposition. Two knocked-out machineguns and a few enemy dead were all that remained at the summit.[15]

The plan for eliminating the threat to the MSR called for a Marine advance along Hill 255 to grid line 1350. North of this boundary, the ridge would be cleared by Army troops approaching from Masan.

Company H sighted soldiers of the 24th Infantry at 1125 as they moved southward to the grid line, and the long ridge was considered secure. It had been no light price, however, that 3/5 paid to open the MSR. Casualties on Hill 255 totalled 16 dead and 36 wounded, and since nearly all had been taken by Company H, Fegan’s outfit was reduced by 25 percent.[16]
On the whole, Task Force Kean’s scheduled drive on Chinju and Sachon had not met with much success during the first 48 hours. The only advance was made on the right, where the 35th Infantry seized its first objective and inflicted an estimated 350 casualties on the enemy.[17]

In his capacity as provisional commander of all units along the Masan-Chinju axis, General Craig was directing the Army operations at the front and in the rear areas of the Task Force sector. Thus on 8 August he ordered the 5th RCT to continue its attack and take Tosan, so that his Marines could make progress on the road to Sachon.

After preparatory fires, the Army regiment again pushed forward toward its immediate objective. Enemy resistance was much heavier than on the day before; nevertheless, some gains were made from the starting point near the village of Singi. The attack was also slowed by the narrow MSR carrying the entire traffic load for the Task Force. Heavy fighting above the road on Hills 255 and 342 added to the congestion and confusion on the vital artery.

Lieutenant Colonel Newton’s 1st Battalion, 5th Marines, had been ordered to move forward from Chindong-ni at 0600, 8 August, with the mission of attacking along the south fork of the Tosan junction preparatory to seizing a regimental objective which would be designated later.[18]

Leaving its positions on Hill 99 at the assigned time, the battalion was stalled immediately at the bridges on the MSR below. The road was still clogged with soldiers and Army vehicles, making it impossible for the Marine unit to proceed.[19]

General Craig, who was in the vicinity, told Newton to hold up until the situation at the front became clarified. Company B, commanded by Captain John L. Tobin, was ordered back up on the hill it had just descended; and the battalion waited, three miles from its line of departure.[20]

Finally the word came to move up. While 1/5 worked its way along the crowded road, Newton walked ahead and reached the CP of the 1st Battalion, 5th RCT, located on a hillside between Singi and Oryong. There he learned that the Army unit’s companies were already on the high ground all around the junction and that the rice paddies between the battalion CP and these companies were full of North Koreans. The Army commander considered his subordinate units cut off.[21]

Shortly afterwards, at about 1400, the head of 1/5’s column reached Newton and again came to a halt, a mile and a half from its line of departure.

Arriving on the scene at this time was a dispirited Army staff sergeant, dripping with mud and water. He said that he had just returned from Hill 308, south of the road junction, where his unit was heavily engaged with the enemy. And he added that Communist machineguns covering the wide rice paddy between 308 and the MSR had forced him to crawl almost the whole distance.[22]

Lieutenant Colonel Murray, while driving from Chindong-ni to the front, was stopped on the road by Major General Kean himself. The 25th Division commander directed the Marine officer to arrange for a night relief of the 1st Battalion, 5th RCT. Kean stated that he would inform Brigade headquarters of this change in plans as soon as possible.[23]

It had become a question as to whether Task Force Kean or the NKPA 6th Division controlled Tosan. Newton radioed the 5th Marines commander and asked for enlightenment. Murray, having just finished his conversation with General Kean, ordered the battalion commander to postpone the jumpoff until nightfall.[24]
After withdrawing to the outskirts of Sangnyong-ni, 1/5 went into an assembly area beneath the western spur of Hill 342. There the battalion commander received specific orders to relieve the 1st Battalion, 5th RCT, on positions southwest of Tosan at midnight, 8 August, and secure the troublesome road junction once and for all.[25]

Newton was to have his battalion at the Army CP no later than 2300, when it would be furnished guides to lead the way across the broad rice paddy to Hill 308. As it proved, the Marine unit actually reached the designated rendezvous at 2200. But even though an hour early, Newton discovered that the soldiers on 308 were already withdrawing. Moreover, no guides had been provided.[26]

The Marine battalion continued westward through Singi and stopped on the MSR about a half-mile short of Tosan. Here a narrow dike branched south from the road, and the soldiers were returning along this trail from Hill 308 to the MSR. Since the footpath was pointed out as Newton’s route of approach, he had little choice but to wait until the Army troops made the crossing. This was accomplished shortly after midnight, and the column of Marines was left alone in the night on unfamiliar ground reported to be crawling with enemy.[27]

The promised guides reported for duty at this time. They turned out to be two South Korean civilians. Without further ado, the advance on Sachon was launched when a long single file of skeptical Marines fell in behind two unknown natives whose loyalty had to be accepted on faith.

Following the 1,200-yard trail in the darkness was time-consuming as well as nerve-chilling. A misstep on the narrow, slippery dike usually meant a spill into the muck and filth of the paddy for some hapless infantryman. Not only would he delay all those behind, but he would not be as fragrant as a rose in the nostrils of his comrades when he regained the dike.

Finally the head of the file reached the base of Hill 308, having encountered not a single enemy on the way. As more and more men threaded their way in from the paddy, tactical integrity was slowly regained. Dawn of 9 August was already breaking when the rear of the column completed the crossing.[28]

Daybreak brought a radio message from Murray, directing 1/5 to continue the attack to the southwest immediately and seize Hill 308. With Tobin’s company leading, the battalion ascended the northern slopes in a long column. The climb took the Marines more than 1,000 feet upward and 2,000 yards to the south. Before the summit was reached, the relentless sun and terrain had taken its toll of Newton’s infantrymen. Fortunately, enemy resistance amounted to mere sniping; and by noon, 9 August, the massive terrain feature belonged to the Brigade.[29]

At 1700 that afternoon Craig’s operational control of all troops in the area came to a close. At the end of the 54-hour period of the Marine general’s overall command, the road junction had been cleared, and both Army and Marine columns were making progress toward the objective.
Nearly all the infantry actions of the first 3 days owed a good deal to the support of the 1st Battalion, 11th Marines. Consisting of three 4-gun batteries, Lieutenant Colonel Ransom M. Wood’s outfit had relieved the 8th Field Artillery Battalion at Chindong-ni on the eve of D-day. Since the terrain afforded no suitable alternate areas, the Marine gunners moved into the positions vacated by the Army artillery, partly in the village and partly on the outskirts.

A total of 87 rounds were fired that first night in support of the 5th Marines, with the FO’s reporting good results. Before long, however, enemy counterbattery fires searched out friendly positions in the village. Early the next morning a Marine battery took a direct hit from an NKPA 122-mm. shell. Two men were killed and 8 wounded by a blast which destroyed a 105-mm. howitzer. Thus, reversing the usual rule, the artillery suffered heavier casualties than the infantry at the jumpoff of the Brigade attack.[30]

The gunners needed no further admonitions to dig foxholes, gunpits and ammunition pits. During the confused fighting around Chindong-ni, it was not unusual to have one battery laid on an azimuth generally east, another west, and a third to the north.

“I think that this is one of the most important lessons we learned in fighting infiltrating troops,” commented Wood; “artillery must be able and always prepared to fire in any direction on a moment’s notice.”[31]

From 7 to 9 August, with the battalion displacing forward as the infantry advanced, 89 missions and 1,892 rounds were fired. Targets consisted largely of enemy mortar positions. The terrain offered some knotty problems in firing close support missions, due to steep slopes; but the OY’s of VMO–6 did a good job of spotting.

Fifty ROK policemen were attached to 1/11 at this time to be used as security troops. Wearing bright green uniforms and rubber shoes upon arrival, they became the responsibility of the battalion to feed, equip and train in marksmanship, sanitation and ammunition handling. The rice-eating Koreans turned up their noses at American food for a few days, but soon they could compete with any chow-hounds in the outfit.[32]

Another difficulty was experienced in convincing the newcomers that NKPA prisoners were to be brought in alive. Many personal scores remained to be paid off in war-torn Korea, but eventually the ROK’s learned to control their hatred for the invaders.
As the men of 1/5 were consolidating their hilltop and searching for water to relieve heat prostration cases, Murray radioed Newton to withdraw his unit to the road below and continue the attack to Paedun-ni. The regimental commander was determined to speed up the advance to the south, since intelligence had reported no enemy on the high ground south of Hill 308.\[33\]

With almost half of Companies A and B stricken by heat sickness, Newton had no choice but to leave them in position on the high ground for the time being. He descended the hill to form a tactical column with Headquarters and Weapons Companies and an attached platoon of tanks.

Reaching the low ground northwest of Hill 308, the battalion commander discovered that his Japanese maps, as usual, bore only a slight resemblance to the actual ground.

During the early weeks in Korea, the map situation was a thorn in the side of every tactical commander. Not only were maps of local areas extremely scarce, but the few available were of early Japanese vintage, almost consistently at variance with the terrain. Grid systems were confusing, villages misnamed and misplaced, and roads either not illustrated at all or else plotted inaccurately. Lack of contouring left the conformation and extent of ridges entirely to the imagination of the map reader. These shortcomings were a constant source of concern; for troop leaders often were misled, even to the extent of getting completely lost.

On the ground itself, there is an intersection called Oso-ri some 600 yards south of the Tosan junction. The routes leading both south and west from this crossroads go to Paedun-ni. An unimproved road, the southward passage is more rugged, while the other, being good by Korean standards, follows a smoother course through the town of Taesil-li.

Newton’s map showed only the latter improved road, so he formed his column and headed it toward Taesil-li, a thousand yards west of the intersection.\[34\] Murray’s map showed both roads, but in this case the southern route was erroneously drawn in as the better road. It was thus Murray’s intention that 1/5 use this avenue of approach. And since he had spoken of it as the “improved” road, Newton was misled into choosing the route to Taesil-li.\[35\]

The quickly formed column of tanks and infantry had gone only a few hundred yards when the point stopped at a stretch of road littered with land mines. A call went out for a demolitions team. From his CP near Chindong-ni, Captain George W. King dispatched his 1st Platoon, Able Company Engineers. Arriving at the scene, the Marine troubleshooters discovered the obstacles to be merely American antitank mines, apparently spilled on the road from an Army vehicle.

About this time, Lieutenant Colonel Murray arrived at Oso-ri and informed 1/5’s commander that he was on the wrong road. Newton reasoned that his unit was following the correct route. After comparing the conflicting maps, the regimental commander studied the terrain and directed Newton to pull his column back and take the road to the south. Then Murray returned to Sangnyong-ni, climbed into an observation plane, and was flown over the route to confirm his decision.\[36\]

There was no small amount of confusion as the long column of tanks, infantrymen, and engineers pulled back along the narrow road to the intersection. And it was unfortunate for 1/5 that General Craig reached the area while the milling was at its worst. Unaware of what had taken place earlier, the Brigade commander did not refer to the delay and congestion in the most soothing terms.\[37\]

While the column was being reformed on the southern road, villagers from Taesil-li informed the
Marines that a badly wounded American was lying in the hamlet. Craig’s jeep driver sped to the clump of thatched huts and returned with a soldier who was more dead than alive, having been left behind by retreating NKPA forces. The man was rushed to the rear for medical attention, while Craig stayed forward to supervise the attack. [38]

The long file of Marines and tanks began moving southward along the winding road below Hill 308. Newton had notified his company commanders of the change, so that they could meet him by descending the western slope of the high ground.

About a mile south of the confusing intersection, the point of 1/5’s column rounded a sharp curve. It was greeted by a lone North Korean machinegun hidden in a native hut at the center of the bend. While a Marine brigadier watched with professional satisfaction, a team of infantrymen with a rocket launcher closed on the hut and quickly destroyed the enemy position.

It was late afternoon as the column resumed its march to the south. Covering several hundred more yards without incident, it reached the top of a 400-foot pass where the road knifed between Hills 308 and 190. There Newton was joined by Companies A and B from Objective One. [39] The 1st Battalion was ordered to hold up and take defensive positions astride the pass.

Thus, the drive toward Sachon had finally taken shape, and the Brigade was entering its own zone of responsibility. As darkness fell on 9 August, 1/5 was in position 2 miles south of the Tosan line of departure, and General Craig had already set in motion plans for a night attack.
Chapter 7. Advance to Kosong
Ambush at Taedabok Pass

On 9 August the Brigade commander was convinced that the absence of resistance in 1/5’s path indicated unpreparedness on the part of the enemy. To exploit the advantage, he ordered Murray to execute a night attack and capture Paedun-ni before daylight, 10 August.[40]

At 1600 on 9 August, the Brigade was relieved of mopping up duties in the Chindong-ni area, leaving 2/5 immediately available to the 5th Marines commander. The 3d Battalion was delayed overnight by several hours of security duty until Army units could take over.[41]

Lieutenant Colonel Roise’s battalion, having been relieved on Hill 342, entrucked at Sangnyong-ni in the evening and reached its assembly area near Hill 308 at 2100. Two hours later the unit marched southward on the new MSR to make the night attack on Paedun-ni. Passing through 1/5’s lines at 0115, 10 August, the weary Marines pressed on toward their target against no resistance.

The point of the column included three M–26’s of First Lieutenant William D. Pomeroy’s tank platoon. At 0500, with the advance elements only a short distance from Paedun-ni, the lead tank crashed through a concrete bridge. The badly damaged vehicle proved to be wedged immovably between the two abutments.

The second tank, while attempting to negotiate a narrow bypass next to the bridge, threw a track in the center of the stream and stalled the long column behind. Two hours elapsed before the advance could be resumed. South Korean laborers constructed a bypass for light vehicles next to the bridge, and an engineer tractor-dozer arrived to build a detour for heavy trucks and tanks.

Reaching Paedun-ni at 0800, 2/5 reconnoitered the town and found it clear of enemy. By 0930 the battalion column was reformed and pounding the dusty road south.

Murray decided to shuttle troops by truck from Paedun-ni to Kosong, since the 8-mile stretch was believed to be free of enemy. The heavier vehicles being tied up at the collapsed bridge, some delay resulted in motorizing the first increment of 2/5.

General Craig arrived on the scene by helicopter in mid-morning. Not satisfied with the progress of the advance, he ordered Murray and Roise to march on Kosong with “all speed.” When the infantry column was a short distance out of Paedun-ni, the 5th Marines commander managed to get five 2 1/2-ton trucks forward to help transport the first serial to the target.

A motorized column was formed of 4 lead jeeps carrying a Reconnaissance Company detachment, followed by part of Company D aboard 6 more jeeps and the 5 trucks. Owing to the shortage of vehicles, Captain Zimmer’s first echelon included only the 1st and 2d Platoons, the 60-mm. mortars, an assault squad, and one machinegun section.

Lacking either air or artillery support, the column rolled southward with orders to occupy Kosong and coordinate a defense of the city with its mayor. The remainder of 2/5 continued on foot until more vehicles could be provided.

The road makes a sharp turn 2 1/2 miles southwest of Paedun-ni to climb through Taedabok Pass, a defile about 1,000 yards long. Just beyond, at the village of Pugok, a sharp turn to the left skirts the base of a large hill overlooking the entire length of the pass.

The first jeep of the reconnaissance detachment was almost abreast of Pugok at 1500 when NKPA machineguns opened up from the big hill at the bend. Enemy automatic weapons on the high ground above the
pass raked the vehicles filled with Dog Company men.

As the Marines were taking cover in roadside ditches, a Communist antitank gun opened fire from the large hill and hit one of the jeeps. The reconnaissance troops gradually withdrew from their exposed positions and fell back on Zimmer’s group. After sizing up the situation, the Company D commander ordered his 1st Platoon to seize the high ground on the right side of the road about midway through the pass. No resistance was met, so that the Marines set up their weapons quickly and returned the Communist fire. Meanwhile the 2d Platoon moved up on the right after clearing small enemy groups from the high ground on both sides of the road at the entrance to the defile.

Zimmer had spotted the location of the enemy’s antitank gun, and Marine 60-mm. fire put an end to this nuisance. The effort used up all the mortar ammunition, and the Company D commander decided to wait in position for Brigade supporting arms. Two tanks arrived at 1630, and their 90-mm. guns drove the enemy into hiding.

While Marine tanks and air were working over the hill, 3/5 reached Paedun-ni after being relieved of its final security mission in the Chindong-ni area. Murray ordered Taplett to be prepared to pass through 2/5 and continue the attack.

The 3d Battalion reached the entrance to Taedabok Pass in trucks shortly after the arrival of the 2d Battalion troops who had followed their motorized column on foot. Some confusion resulted on the narrow road after Murray’s arrival while he waited to confer with Taplett. Unable to find Roise, the two officers climbed the high ground on the left. From this vantage point they could see Kosong, 5 miles away. The regimental commander ordered Taplett to pass through 2/5 immediately and continue the attack.

Company G had already crossed the line of departure and was deploying to assault the hill at the road bend when Murray located Roise in Zimmer’s area to the right of the road. The exact location of enemy positions remained in some doubt. In order to clear up the uncertainty, Major McNeely volunteered to lead out a patrol. About 1730, therefore, Roise’s S/3 took off in a jeep with a radio operator and a fire team from Dog Company.

By this time, Taplett had a fairly accurate picture of the situation in mind. From his OP on the high ground to the left of the road, he saw that McNeely was headed for danger. The 3/5 commander radioed Bohn to stop the jeep, but it was too late. McNeely and his men vanished from sight around the bend where the road skirted the large hill, and the Marines heard a furious clatter of machinegun and small arms fire.

The fate of the patrol remained in doubt as Company G moved out to the attack, with First Lieutenant Jack Westerman’s platoon in the lead. Communist fire held up the advance, but Bohn sent Second Lieutenant Edward F. Duncan’s platoon on a sweeping envelopment to the right which outflanked the enemy and drove him from the high ground. Westerman was then able to reach the crest with his platoon. From this position he could see McNeely’s bullet-riddled jeep, but that officer and his five men were stretched out motionless on the ground beneath and behind the vehicle.

Click here to view map showing Paedun-ni & Taedabok Pass
Click here to view map showing Kosong

At great risk, Westerman made a dash to the jeep and brought back McNeely, mortally wounded. Enemy fire prevented further rescues, but it was ascertained that 3 men had been killed outright and 2 severely wounded. These survivors could only continue to take cover behind the wrecked vehicle until 3/5 troops advanced.

When Company G jumped off again, the men were held up by two concealed machineguns at the far end of the road bend. Taplett committed How Company on the left side of the MSR, and Fegan seized the hill opposite Bohn’s position. It was almost dark before the Marines could silence the 2 enemy machineguns around the bend, and at 2015 Murray ordered 3/5 to secure for the night and defend the 2 hills already occupied. On the premise that the enemy had prepared an ambush for rescue parties approaching the wrecked jeep, it was decided to wait until morning to bring back the wounded men.
Chapter 7. Advance to Kosong
The Seizure of Kosong

The night passed quietly except for scattered rifle fire along the 3d Battalion’s 700-yard front. To carry out General Craig’s orders for 11 August, the two rifle companies prepared to continue the attack on Kosong at first light.[42]

The enemy had different plans. At the crack of dawn a small force of North Koreans emerged from the fog and charged recklessly into Company G’s front. There was a furious hand-to-hand clash as the attackers converged on Bohn’s OP in the center of the line. The company commander directed the defense amid grenade explosions, one of which drove a fragment into his shoulder. At his side Staff Sergeant Charles F. Kurtz, Jr., called down effective 60-mm. mortar fire on the Reds while throwing grenades and ducking submachinegun bursts.

The melee ended after a half hour with Company G driving the battered remnants of the NKPA platoon back down the hill. Despite his wound, Bohn stayed with his company and reorganized it for the attack on Kosong. He also had the satisfaction of overseeing the evacuation of the two wounded survivors of McNeely’s ill-fated patrol.

At 0800, the Brigade moved out in a route column, with 3/5 as the advance guard and Company G in the role of advance party. Bohn’s point consisted of Second Lieutenant John D. Counselman’s 3d Platoon, whose leading element, under Corporal Raymond Giaquinto, was on the MSR with flank guards slightly withheld on each side.

The Brigade column moved swiftly. About a mile beyond the line of departure, Giaquinto braked his roadbound unit in the face of doubtful ground ahead. Simultaneously, the flank guards surged forward and wrapped around the suspected area. Then Giaquinto’s force raced down the road, and the 3 prongs of the point converged on an enemy machine-gun emplacement, killing the 5 occupants before they could fire a shot.

With Bohn calling the shots and Giaquinto setting the pace, the point swept aside three more enemy positions along the route. The effective combination of limited frontal attacks and envelopments brought the head of the column to the bridge north of Kosong at 1000. Here Company H passed through on the road and pushed into the town.

Using 1 rifle platoon and 2 tanks, Fegan easily cleared northern Kosong of light resistance. Then he gradually wheeled his force to the right, tracing the road to Sachon. His other two platoons continued southward with the mission of seizing a high hill below Sunam-dong.

General Craig reached Kosong by jeep just as Taplett was setting up his CP in a schoolyard north of the town. A small group of enemy snipers suddenly opened up from positions in and around the schoolhouse, and the Brigade commander observed sniper teams of 3/5’s headquarters spring into action and destroy the North Koreans.

Shortly after Fegan entered Kosong, Bohn swung his company to the southwest from above the town, drove through the western suburbs and launched an attack against Hill 88 below the Sachon road. Approaching the hill, Company G sustained a few casualties while eliminating a stubborn Communist pocket in the low ground on its right flank.

MAG–33 preceded the attack on Hill 88 with a thundering air strike on 100 enemy entrenched along the crest. This attack coupled with a thorough shelling by 1/11, shattered the Reds’ will to fight, and Company G found only evidence of a hasty flight when it reached the summit at 1330.
General Craig ordered Taplett to cancel all further missions around the captured town and attack toward Sachon immediately. Company G was quickly recalled from Hill 88; the high ground above Sunam-dong was ignored, and Fegan assembled his unit at the western edge of Kosong preparatory to leading the attack.

Just as Company H was reforming, a jeep ambulance driven by Corps-man William H. Anderson raced into the area to pick up casualties from Bohn’s earlier skirmish below Hill 88. Passing through Fegan’s troops, the vehicle failed to make the turn southward and sped toward Sachon. Two enemy antitank guns lying in wait west of Kosong blasted the jeep as it rounded a bend, killing Anderson and spilling two passengers out of the wrecked vehicle.

Fegan led two M–26 tanks to the bend, and Technical Sergeant Johnnie C. Cottrell quickly destroyed the North Korean position. Three rounds from his 90-mm. gun wiped out the last NKPA opposition in the area, and the 3d Battalion moved out for the drive on Sachon.
MARINE AIR AND artillery had a field day on 11 August 1950 that the rifle companies will never forget. The occasion was known as “the Kosong Turkey Shoot,” and it was a victory won entirely by supporting arms.

It happened just as 3/5 was about to enter Kosong. As a preliminary, 1/11 was called upon just before noon for preparatory fires. Shells from the 105’s landed in the town, sending up geysers of rubble in the bright sunlight. Then, suddenly, the Marine artillery flushed out a column of enemy vehicles making a frantic dash for safety.

This flight explains the light resistance which the Marine infantry met in Kosong. But the enemy could hardly have chosen a less propitious moment, for he had merely escaped from the frying pan into the fire. Overhead, to his sorrow, was a division of VMF–323 planes from the Badoeng Strait, which the forward TACP had sent on a search and attack mission just beyond the town.[1] Major Lund and his pilots were thus presented with a fabulous target of opportunity—an estimated 100 vehicles of the NKPA 83d Motorcycle Regiment, including jeeps, motorcycles and troop-carrying trucks.[2]
The Corsairs came screaming down in low-level strafing runs the entire length of the column for the purpose of bringing it to a halt. Vehicles crashed into one another or piled up in the ditch while enemy troops scrambled out for cover. The Soviet-made jeeps and motorcycles were now sitting ducks for F4U’s which worked over individual targets with rocket or 20-mm. fire. After the Marine planes had set about 40 vehicles on fire, they were relieved by another flight of VMF–323 machines and Air Force F–51’s which added the finishing touches to the picture of destruction.[3]

Under the circumstances the enemy put up a creditable fight. Lund and his low-flying pilots encountered fierce small arms and automatic weapons fire. Two of the four Corsairs in the first flight were badly damaged and had to try for emergency landings. Lieutenant Doyle Cole ditched into the bay just as General Craig was making a tour of inspection by helicopter; and the Brigade commander operated the hoist which pulled the dripping flier up to safety.

Captain Vivian Moses was not so fortunate. While putting his crippled plane down in enemy territory, he was thrown unconscious from the cockpit and drowned in a rice paddy a few minutes before a VMO–6 helicopter arrived. Only the day before, this gallant Marine pilot had been rescued by helicopter, after being shot down behind the NKPA lines, and flown back unhurt to his carrier. Despite this experience, Captain Moses volunteered for duty on 11 August, when he became the first death casualty of MAG–33.

Several hours later, after securing Kosong and resuming the attack toward Sachon, the Marine ground forces caught up with the scene of chaos left by the F4U’s. Among the twisted and charred vehicles were some that the enemy had abandoned in perfect condition. Tolerant NCO’s relaxed discipline for a moment while their men tried out the motorcycles with sidecars and the sleek, black Soviet jeeps, most of which had gone into the attack practically new. Almost identical in design to American jeeps, these vehicles were found to be powered by familiar Ford-type engines—a throwback to United States Lend Lease to Russia in World War II.

Generals Craig and Cushman surveyed the wreckage from a helicopter next day. This strike, however, was only one of the more dramatic examples of the Brigade air-ground team in action. MAG–33 aircraft were constantly orbiting on station over the front line as the ground forces advanced. Flown by infantry-trained pilots briefed on the local ground situation, the Corsairs were available for employment on short notice. It was a simple and flexible system; and the fact that VMF–214 and VMF–323 were based on the two carriers meant that they could arrive on station with more fuel and ordnance for strikes as compared to Japan-based squadrons.[4]

Overall control of tactical air operations in Korea was exercised by the Fifth Air Force. Marine aviation units, as components of an integrated Fleet Marine Force, operated in support of the Brigade as their highest priority, and in support of other UN forces as a lower priority. After checking in with Fifth AF TACC at the Joint Operations Center (JOC), Marine aviation units came under Marine operational control when supporting Brigade ground forces. When providing tactical air support for other UN forces, Marine air units operated under the Air Force-Army system for tactical air support.

The Brigade control organization included 3 battalion TACP’s and 1 regimental TACP, each consisting of an officer and 6 enlisted men, and each equipped with a radio jeep, portable radios and remoting equipment. MAG–33 provided a Brigade control agency consisting of the Air Support Section of MTACS–2. Other Brigade units associated with control of aircraft were:

1. The Air Section of the Brigade Staff, consisting of the Brigade Air officer and six enlisted men
responsible for planning as well as tactical control and coordination of supporting aircraft;

(2) The Brigade observation section, consisting of the tactical air observer, three gunnery observers, and the OY and rotary-wing aircraft of VMO–6.

Carrier-based Marine aviation units maintained a TAC and one or more flights of aircraft on station during daylight hours. Night heckler and intruder missions of VMF(N)–513 from Itazuke reported to the Fifth AF TACC and were routed by that agency to the Air Support Section (MTACS–2) with the Brigade. During the early Brigade operations, with the Air Force TACC located at Taegu, delays of incoming flights reporting to JOC were caused by overloaded communications nets. An improvement resulted when such flights by-passed JOC and reported directly to the Air Support Section of Brigade. And when JOC moved back to Pusan, improved communications resulted in incoming flights reporting first to JOC again.

The Brigade control agency (Air Support Section) made use of the following communications for the control of tactical air operations:

(1) TAR net connecting battalion TACP’s, the regimental TACP, and the Air Support Section, and monitored by the Brigade Air Section. This was an HF net.

(2) TAD net connecting above-named agencies as well as TAC flights of support aircraft and on occasion the TAO. This was a VHF net of four frequencies used to brief and control aircraft reporting for support missions.

(3) TAO net connecting observation aircraft, the Brigade CP (Air Section) and the Air Support Section. This was an HF net.

(4) An administrative (HF) net connecting the Air Support Section and the carriers Sicily and Badoeng Strait.

The workings of the control organization of the Brigade air-ground team in the Pusan Perimeter have been described as follows in the survey of the Marine Corps Board Study:

“Battalion TACP’s made requests for air support missions direct by TAR net to the Air Support Section. The regimental TACP and Brigade Air Section monitored this net. The Brigade control agency having received a request for a mission, contacted the TAC and the Flight Leader (FL) of the aircraft orbiting on station awaiting a mission. The TAC and the FL were then directed to the vicinity of the TACP from whom the request had originated.

“The TACP controlled the execution of the mission in accordance with the wishes of the battalion commander. The TACP gave the location of the target to the TAC. The latter designated the target to the FL and his flight of supporting aircraft. The unit being supported marked its front lines. The TAC directed the attacking aircraft in making attacks on the target. His directions related to the technique of attacking specific targets with aircraft. Control of the attack was exercised by the ground unit being supported.

“In many instances the TAC or the TAO would locate targets not yet located by ground units. This was often done in response to a request from ground units. Both the TAC and TAO located targets beyond the vision of ground units, and both were capable of, and did, designate these targets to flights of supporting aircraft and directed attacks on such targets, when requested to do so by ground units. Conditions favored delegating control to forward TACP’s beyond convenient VHF range between them and the Brigade (Air Support Section). Brigade attack formations frequently consisted of battalions in column. The forward battalion was free to employ air support at a moment’s notice.”

This was the situation on the afternoon of 11 August 1950 as the 3d Battalion of the 5th Marines attacked toward Sachon, followed by 2/5 in trace. Overseas a flight of VMF–323 Corsairs orbited on station, and OY observers reported the enemy to be pulling back rapidly toward Sachon.

How Company led the Marine attack, with lead tanks employing reconnaissance by fire. At 1800, after the column had covered several miles, a lone enemy machinegun in a valley on the left held up the advance by wounding three Marines. By the time the tanks silenced the weapon with .50-caliber fire, it was decided to halt.
Taplett deployed his battalion on two hills north of the road, and the infantrymen settled down for a quiet night.

The gravel crunchers could thank air and other supporting arms for an impressive demonstration of power that day. There was even the suggestion of an amphibious operation in the Brigade advance, for an LST followed the column and anchored near the fishing village of Tanghong-ni after the securing of Kosong.

This was LST QO119, a supply ship manned by Team No. 1 of Major William L. Batchelor’s Company A, 1st Shore Party Battalion. Team No. 2 set up forward dumps along the MSR as the infantry advanced, while No. 3 unloaded supplies and equipment at the Masan railhead. Shore Party personnel also assisted in salvage operations, which were conducted mainly at Changwon.[5]

LST QO119 was not only the workhorse of normal Shore Party missions; it served also as an improvised hospital ship. For the Medical Section and Company C, 1st Medical Battalion, had an extra responsibility these sweltering days in caring for victims of heat prostration as well as the wounded. Thus it may have set some sort of a record when casualties were evacuated at one time by land, sea and air—motor ambulance, LST and helicopter.
At sundown on 11 August, as Taplett’s battalion dug in for the night on the road to Sachon, the enemy seemed to be disorganized if not actually demoralized. For the first time since the invasion began, a sustained Eighth Army counterattack had not only stopped the Red Korean steamroller but sent it into reverse.

With the Marines a day’s march from Sachon, the Army 5th RCT was running a dead heat on the shorter Chinju route to the north, where opposition had been light the last 2 days. It might even have appeared on the evening of the 11th that the combined operation had turned into a friendly rivalry between two outfits racing toward their final objective by parallel roads. But any such assumption would have been premature, as General Craig and his staff well realized. They looked for further resistance and were not disillusioned. Within the next 48 hours, in fact, Craig’s men were destined to carry out one of the most astonishing operations in the history of the Marine Corps—simultaneous BLT attacks in opposite directions on two fronts 25 miles apart.

There was no hint of any such development at 0630 on the morning of 12 August, when the 1st Battalion of the 5th Marines passed through the 3d Battalion with a mission of seizing Sachon. If anything, the front was too quiet to suit veteran NCO’s, who suspected the enemy of being up to no good. The column moved out behind a 15-man detachment of Recon Company acting as the point under the command of Captain Kenneth J. Houghton. Next came Baker Company with the 1st, 2d, and 3d Platoons in that order. Two Marine tanks were sandwiched in between the 1st and 2d Platoons, and three more M–26’s brought up the rear of Captain Tobin’s company, followed by the main body of the battalion.

No opposition awaited the column. This unnatural calm continued for 4 1/2 hours as the Marines advanced about 11 miles. At noon, with Sachon only 4 miles away, Houghton and the point rounded a bend into the thatched-hut hamlet of Changchon. The first enemy soldiers of the day were sighted when two skulking figures took cover. Several Marines opened fire, and in reply the hills on both sides of the road erupted into flame.

The enemy had obviously planned to allow the entire column to come within range. But the trap was sprung prematurely as NKPA machine-guns blazed away from the high ground in front and on both flanks. Captain Tobin immediately sent the 1st Platoon to the aid of the point. First Lieutenant Hugh C. Schryver led his men forward along the roadside ditches, and at the cost of three casualties they reinforced the thin line of Recon troops returning the enemy’s fire.

Next, the company commander ordered First Lieutenant David S. Taylor’s 2d Platoon to move up behind three Marine tanks. The M–26’s were unable to maneuver off the road because of the danger of bogging down in rice paddies, but as mobile fortresses they added to Marine fire power.

Tobin’s whole company became more or less pinned down when the 3d Platoon and headquarters, farther back on the road, received automatic weapons fire from Hill 250 on the right. Newton immediately requested the battalion air controller, First Lieutenant James W. Smith, to call for a strike in this area. This was the only supporting arm available at the moment, since the mortar and artillery crews were just setting up their weapons in hastily selected positions.

After the Corsairs worked over Hill 250, Tobin ordered Second Lieutenant David R. Cowling’s 3d Platoon to attack the high ground. A rifle platoon and machinegun section had been sent forward from Able Company by the battalion commander, and Newton gave these reinforcements the mission of seizing Hill 301,
also on the right side of the road.

As Cowling’s men were crossing the open rice paddy, the Marine tank guns and mortars added their fires to the air strike. But enough enemy machineguns survived to catch the 3d Platoon in a crossfire which forced it to fall back with 1 man killed and 4 wounded. The Able Company contingent occupied Hill 301 meanwhile without meeting any resistance.

During the course of these actions, the FAC reported to Newton that 2 of the Corsairs overhead had 5 minutes of time left. The battalion commander directed that they search for targets of opportunity along the road leading from Changchon to Sachon. The result was a repetition on a small scale of the Kosong turkey shoot, for the Marine planes surprised a little column of enemy vehicles and personnel. After the Corsairs unloaded their remaining ordnance, the road was strewn with twisted and burning vehicles.

The 3d Platoon fell back on Hill 301 as Newton ordered Captain John R. Stevens to secure the nearby high ground on the right side of the road with the rest of his Able Company troops. This left Hill 250 as the center of enemy resistance on the right. A total of 113 Marine mortar rounds were delivered on these positions, followed by a second air strike. The concentration of fire finally silenced the enemy’s remaining machineguns, and the Baker Company right flank was secured.

The other two Baker Company platoons and Houghton’s men had their hands full meanwhile on the left flank. They kept up a brisk fire fight from the roadside ditches until the Marine artillery took charge of the situation. One enemy position after another was knocked out in this quarter as Newton called for three more air strikes. These preparatory fires enabled the 1st and 2d Platoons to attack on the left after a laborious crossing of an intervening rice paddy.

The Marines proceeded to clean up the remaining NKPA positions methodically. A climax was reached when Lieutenant Taylor spotted an enemy group approaching the crest of Hill 202 from the reverse slope. He sent Technical Sergeant F. J. Lischeski with a squad to prepare a welcome. The veteran NCO coolly formed a line along the ridge and directed his men to wait until the enemy came within 75 feet before opening fire.

It would be hard to find a more striking example of Marine infantry firepower. Of the 39 men in the NKPA group, all were killed outright in a matter of seconds except a single officer. This survivor was so badly wounded that he died on the way to the regimental CP.

The fight had lasted all afternoon, and darkness fell before Company B could complete its movement to the high ground on the left side of the road and set up a perimeter of defense. It was estimated that an enemy company was operating in the area, covering the retreat of sorely battered elements of the NKPA 6th Infantry Division and 83d Motorcycle Regiment.

Marine losses were 3 killed and 13 wounded. After the securing of the high ground to the right, casualties were evacuated by road on the lee side of slowly moving tanks which provided shelter from enemy fire on the left.
Chapter 8. Fight on Two Fronts
Marines Ordered to New Sector

The Marines of 1/5 anticipated that the next day’s advance would take them to Sachon. At midnight on
12 August, however, Lieutenant Colonel Newton received orders from the regimental commander to form the
battalion on the road at 0630 in preparation for a lift by trucks to another sector, where the Marines were to
reinforce Army units.

While Newton’s men were fighting at Changchon, the Brigade commander had come up against a most
unusual command situation. It began late on the morning of the 12th, when General Craig received orders from
CG Task Force Kean, directing him to move a reinforced Marine rifle battalion back to Chindong-ni. General
Kean emphasized that the shift be made without delay. Infiltrating enemy forces had penetrated far back in the
rear to overrun positions of Battery C, 555th (“Triple Nickel”) Field Artillery Battalion and Headquarters and
Able Batteries, 90th Field Artillery Battalion, supporting the 25th Division. The MSR being endangered, Marine
reinforcements were urgently needed for a counterattack.\footnote{7}

At 0800 that morning Craig had set up his CP at Kosong. It was his custom to keep a terse and factual
record of events from day to day, and the following chronological account is derived from entries in the Brigade
commander’s field notebook:

“1130—Received telephonic orders from CG 25th Div. stating that enemy was attacking in force across
our MSR near Chindong-ni. He directed that I send one reinforced battalion to rear at once to give assistance to
24th Infantry engaged in that area and to recapture artillery pieces.

“1200—Proceeded by helicopter to CP 5th Marines to give necessary instructions. Made two landings en
route to gather trucks for troop lift.

“1300—The reinforced 3d Bn., 5th Marines, now on way to Chindong-ni area.

“1330—Sent my G–3, LtCol Stewart, and LtCol Taplett, CO of 3/5, by helicopter to bridge indicated by
CG 25th Div. to reconnoiter and formulate plans prior to arrival of battalion. Marines to operate directly under
25th Division for this action.

“1400—We are out on a limb with only two battalions left and Sachon still to take. Went to leading
elements to check. They were engaged in a heavy fire–fight at an attempted ambush position. Air brought to bear
and helped, plus artillery. Enemy positions taken by 1/5, which dug in on high ground while 2/5 was disposed to
protect rest of Brigade column.

“1730—Returned to Brigade CP at Kosong and received orders to proceed via helicopter to Masan to
confer with CG 25th Division.

“1815—On flight to Masan I detoured to Chindong-ni area to make sure by air observation that 3/5 had
arrived and apparently was not having any trouble.

“1830—Arrived Masan and was directed by General Kean to commence a tactical withdrawal from
Sachon.

“1945—Returned by helicopter to my Kosong CP in early darkness and issued necessary orders.”

The preparations for withdrawal lowered the spirits of Marines who believed that they had broken the
back of enemy resistance in the Sachon area. This reaction may even be noted in the first paragraph of the Brigade
withdrawal order:

“1. GENERAL SITUATION. Following Brigade rapid advance from Chindong-ni to Sachon in which
this Brigade attacked, overcame, and pursued the enemy, the 25th Infantry Division has directed the withdrawal
of this Brigade in order to hold a defensive position and mop up enemy resistance in the zone of action of elements of the 25th Division.”

It would later be known that the basic reason for the Brigade withdrawal was a decision by the Eighth Army command and staff. The enemy had crossed the river Naktong, the last natural barrier of the Pusan Perimeter, and this emergency had caused the Marines to be pulled back in readiness for a counterattack in the Naktong bulge.
Chapter 8. Fight on Two Fronts
Attack of 3/5 to the Rear

The foregoing chronology makes it evident that General Craig could never have handled this situation in an afternoon without helicopter transportation. Jeeps could not have reached so many destinations over narrow, twisting roads choked with traffic; and fixed-wing planes, even the adaptable OY’s, could not have landed wherever the Brigade commander willed. Marine helicopters set a good many precedents in Korea, and the events of 12 August 1950 established the usefulness of these versatile machines for command and staff flights.

Early that afternoon, as Craig had directed, Stewart and Taplett flew back to the Chindong-ni area for reconnaissance and planning prior to the arrival of 3/5. The Brigade commander had been able to give them very little initial information. About 2,000 to 2,500 enemy had infiltrated to the vicinity, according to Army estimates. The two Marine officers were instructed to fly to a bridge over a dry stream bed, where they would be met and briefed by a 25th Division liaison officer awaiting them in a jeep with a red air panel on the hood.[8]

Stewart and Taplett found the bridge, though no jeep was in sight. After landing in the stream bed, they discovered a camouflaged Army light tank; but the officers of the armored company could not offer any enlightenment.

A number of wire lines lay in the roadside ditch, and the Marine officers checked them, one by one. At length, by a process of trial and error, they found a line leading to the 25th Division CP and talked to the G–3. He instructed them to “look the situation over” and decide upon a course of action to eliminate enemy activity in the area and provide security for the remaining artillery unit—a battery of the 159th Field Artillery Battalion which had been attached to the 555th. Then the Marine officers were to report to General Barth, ADC of the 25th Division, upon his arrival in the area to take the overall command.

Ever since the jump-off of 7 August, the operations of Task Force Kean had been distinguished for informality. Oral orders were the rule rather than exception, with unusual latitude of decision being permitted to officers in the field. After their telephone conversation, Stewart and Taplett made a helicopter reconnaissance of the area, followed by a flight back over the MSR to locate 3/5. Upon their return, they encountered Colonel John Daly, USA, CO of the 555th Field Artillery Battalion. Battery C of that unit, he informed them, had been surprised the night before, along with two batteries of the 90th, and completely overrun about 3,000 yards up the stream bed. They were destroyed as a fighting force, though scattered survivors and wounded men remained in the area. Daly briefed the Marine officers as to the location of enemy forces; and they decided to seize two key ridges commanding the MSR, which ran parallel to the stream bed. The troops of 3/5 were just then piling out of the trucks at the debarkation point, and Taplett ordered them to attack without waiting for Barth, since it would soon be dark.

These Marines, contrary to standing operating procedure, had turned their backs on the roar of battle at Changchon early that afternoon and ridden away in the opposite direction. Then, to complete the mystery, they traveled 25 miles to the rear to assault a ridge which was supposedly secured. How Company jumped off with George following in trace. Colonel Daly provided a 15-minute artillery preparation, though he had no orders, and Taplett’s FAC managed to summon a flight of Corsairs with partial loads aboard, including napalm. No one had any idea of the enemy’s strength, and after receiving some fire from the ridge, Captain Fegan picked the locations for an air strike. How Company moved in rapidly afterwards against such light resistance that the Marines seized the first position without a single casualty. Only one casualty was inflicted upon the enemy, who apparently had put up a rearguard fight while withdrawing.
At 1900, when General Barth arrived, he asked when the Marine battalion would be ready to attack.
Taplett replied that he already had one company on the first objective, and the 25th Division ADC congratulated
the Marines on their promptness. He approved Taplett’s course of action and gave his sanction for the seizure of
the rest of the dominating high ground the following morning.
Again the Marines received the most cordial cooperation from the Army. General Barth ordered several
light tanks and three M-44 armored personnel carriers to support the attack at 0700 on 13 August. The same
Army artillery battery was assigned to the operation, and Battery C of the 11th Marines took part after arriving the
night before. As it proved, the infantry needed little assistance to seize the remaining objectives against negligible
resistance. By 1000 the Marine rifle companies were in full possession of the two commanding ridgelines. No
casualties were suffered or inflicted.
Despite the lack of opposition, the enemy had not pulled out of the area. When Lieutenant Colonel
Murray made a helicopter flight to drop a message to survivors of the 555th, his helicopter was ambushed in a
defile by NKPA marksmen concealed on both sides. Only the pilot’s skillful maneuvering got them out safely,
and they were unable to complete their mission.
A plan for the Marines to advance to the west across the valley floor while the Army 5th RCT attacked
rearward to meet them was considered by the 25th Division. Taplett’s battalion would have been accompanied by
2/5, then on the way to the Chindong-ni area. But this scheme of maneuver was canceled, and the 2d Battalion of
the 5th RCT relieved 3/5 on 14 August. By that time, as will be related later, other elements of the Brigade were
on the way to an assembly area at Miryang in preparation for an operation in another sector.
At least the attack by 3/5 enabled elements of the 25th Division to rescue survivors of the artillery
batteries who straggled back. Both Taplett and Stewart believed that enemy numbers in the area had been much
smaller than the original Army estimate of 2,000 to 2,500 men. The 3/5 commander wanted to complete his
mission by attacking to recover the howitzers and other lost equipment while the opportunity still existed. But he
was unable to accomplish this aim because of orders for Brigade withdrawal, and the artillery pieces were never
recaptured. Air strikes were called to destroy them after the relief of the Marine battalion, and the area itself was
abandoned a few days later when 25th Division units fell back before renewed NKPA attacks.
Chapter 8. Fight on Two Fronts

Enemy Dawn Attack at Changchon

On the other Marine front, 25 miles distant, 1/5 had a return engagement before dawn on 13 August with the enemy in the Changchon area. Company commanders had received orders the night before to alert their units at 0400 for the withdrawal. General Craig’s Op Order 10–50 was a complete and well planned field order, despite the need for haste; but the enemy interrupted with a surprise attack launched from concealed positions occupied under cover of darkness.[9]

Baker Company’s defense setup for the night on Hill 202 consisted of the 3d, 1st, and 2d Platoons tied in from left to right in that order. The action began at 0450 with enemy automatic weapons fire. Marine 60-mm. mortar illuminating shells revealed an NKPA infiltration on the right in the area of the 2d Platoon.

This effort soon proved to be a diversionary attack for the purpose of masking the main blow. At 0455 3 enemy flares went up, 2 red and 1 green. They were the signal for an assault on the left flank at the other end of the Baker Company position. The enemy, as a wounded Marine NCO put it afterwards, was “right on top of the 3d Platoon in a few seconds” with grenades and burp guns.[10]

This was one of the occasions when the Marines were painfully reminded that the NKPA 6th Division had been made up originally of veterans of the Chinese civil war, conditioned by experience for the rigors of night fighting. Marine security had not been at fault, yet the enemy had managed to creep forward in uncanny silence to positions within grenade-throwing distance.

In an instant the Marine position was overrun, with the machinegun section being wiped out except for two men. Communication troubles added to the confusion. Platoon radios had been rendered inoperative by mud and water while crossing rice paddies, and telephone wires were believed to have been cut. Two runners were killed during Tobin’s efforts to maintain contact with the hard pressed troops on the left flank. A third runner got through with orders for the remnants of the platoon to fall back within the perimeter of the adjacent 1st Platoon.

The troubles of Baker Company were compounded at this stage when the enemy turned two of the Marines’ own machineguns against them.

During the next hour the fight became a slugging match. When the first gray light of dawn permitted some visibility, Baker Company 3.5" rocket launchers knocked out the two Marine machineguns being fired by the enemy. The left flank was holding well when the 60-mm. mortars ran out of ammunition. To make matters worse, the artillery FO’s radio took destructive hits from machinegun fire just as the enemy changed the direction of his attack. Now his main effort was being channeled up the draw between the 1st and 2d Platoons for the obvious purpose of splitting the company and beating it in detail. The attackers had been bled white by casualties, however, and Tobin’s men had little difficulty in beating off the new assault.
Chapter 8. Fight on Two Fronts
Breaking Off Action

Battalion orders were received through Able Company to disengage at 0630 and pull down from the high ground to the trucking point at Newton’s CP. Tobin was now depending on Company A radios for 4.2” and 81-mm. mortar support which slowed up enemy efforts. As his first move toward breaking off action, he ordered his 3d and 1st Platoons to withdraw into the perimeter of the 2d.[11]

By this time the enemy had fallen back toward the lower levels of Hill 202. Small arms fire had slackened but the Marines still received mortar bursts.

Tobin ordered his executive officer, Captain Francis I. Fenton, to take the wounded across the rice paddies to the road with the 3d Platoon and Headquarters troops. The company commander remained on the hill to cover this movement with the other two platoons. After Fenton got well underway, Tobin ordered the 2d Platoon down to the road. Then, a squad at a time, the remaining Marines disengaged; and the Baker Company commander came off Hill 202 with the last squad at 0815. The entire movement had been accomplished with precision, and a final air strike kept the enemy quiet at the climax.

Considering the fury of the fighting on Hill 202, a Marine casualty list of 12 KIA, 18 WIA, and 8 MIA was not as large as might have been expected. The idea of men missing in action is always disturbing to Marine officers, but it was considered a moral certainty that the eight casualties of this type were killed when the enemy overran the machinegun section on the Baker Company left flank.[12] Before leaving Hill 202, Captain Tobin asked permission to lead an attack for the purpose of recovering the bodies. He believed that he could retake the lost ground in an hour, but his request could not be granted at a time when the battalion was belated in carrying out Brigade withdrawal orders.[13]

It fell to the engineers and armor to cover the rear after the infantry pulled out. Midway between Sachon and Kosong, the MSR is joined by a road from Samchonpo, a minor seaport on the tip of the peninsula. In order to block this approach to the Brigade’s southern flank, General Craig ordered the engineers to mine the road. First Lieutenant Nicholas A. Canzona was assigned to the task with a detachment of his 1st Platoon of Able Company, 1st Engineer Battalion. After laying an extensive field, this officer discovered to his embarrassment that he had erred in arming nearly half of the mines with wrong fuses, so that they were harmless. Apparently the moral effect was enough, however, to keep the enemy at a distance.

Lieutenant Hetrick’s 3d Platoon of the engineer company brought up the Brigade rear on the morning of 13 August to crater roads, lay anti-tank minefields and destroy bridges and culverts. Personnel left behind for such missions had the privilege of riding the rearmost tank to catch up with the column.[14] Thus the withdrawal proceeded systematically and was completed without enemy interference.
Chapter 9. The Battle of the Naktong

THE MOVEMENT OF the Brigade to Miryang was completed by rail, LST and shuttling trucks on 15 August. For the infantry, it meant the first hot meal in Korea, and the bivouac area seemed a cool, green paradise as compared to the sun-scorched hills the men had been climbing under fire this past week. A grove of stately trees provided shade; and thanks to the frugality of peasants who picked up every twig, the grass and moss were like a well-swept carpet. There the troops of the Brigade slept under the stars that night and swam in the nearby Miryang river. It was a veritable reunion for Leathernecks who swapped tales of experiences in the recent combats.

Being Marines, they realized of course that this was merely an interlude between operations. The Brigade had passed under operational control of the 24th Infantry Division upon arrival in the Miryang area. And on the 15th General Craig reported to General Church’s CP to be briefed on the situation in the Naktong Bulge, where the next assault would be launched.

The ability of the Russians to cross the widest rivers in World War II, using only determination and field expedients, constantly amazed Wehrmacht generals with much better equipment. This know-how seemed to have been passed on to the NKPA, judging by the crossings of the Han and Kum Rivers early in the Korean conflict. On 6 August 1950, the Red Koreans gave a repeat performance when they forced a 1,000-man bridgehead across the Naktong river, thus breaching the last natural barrier protecting the lifeline from Pusan to Taegu.

The 24th Infantry Division was unsuccessful in its immediate attempts to dislodge the enemy. Wading through chest-deep water by night, pulling crude rafts loaded with vehicles, heavy weapons and supplies, the North Koreans placed an entire reinforced regiment on the east bank by 8 August. Termite tactics during the next 2 days broadened their foothold until the Naktong Bulge was overrun by most of the NKPA 4th Division.

Consisting of the 5th, 16th, and 18th Infantry Regiments and strongly supported by artillery and armor, the 4th Division was among the most distinguished of the major Communist units. With the 107th Tank Regiment attached at the outset of the invasion, it had breezed through Uijongbu before sharing in the capture of Seoul. On 5 July 1950, the 4th became the first NKPA outfit to tangle with the newly arrived United States Army forces. Task Force Smith delayed it a few hours near Osan, despite the Reds’ great advantage in numbers and armor. Later, after capturing Nonsan and aiding in the reduction of Taejon, the unit was selected to spearhead the assault over the Naktong.
The Pusan Perimeter
Lynn Montross and Nicholas A. Canzona

Chapter 9. The Battle of the Naktong
Task Force Hill Organized

In an effort to plug the hole in the Pusan Perimeter, General Walker attached the 9th Infantry (2d Infantry Division) commanded by Colonel John G. Hill, to the 24th Division. In turn, General Church placed Colonel Hill in control of all units in his southern zone and ordered a counterstroke against the Naktong Bulge.

Task Force Hill attacked on 11 August but lost its momentum in a confused situation which found the enemy attacking at the same time. Reinforced to a strength of three infantry regiments, Hill’s provisional unit again struck out against the bridgehead on 14 and 15 August. After encountering a stone wall of resistance, the task force was ordered to cease the attack and defend the ground it occupied east of the enemy pocket.[3]

This was the situation as outlined to General Craig at the planning conference, and he was also briefed on the topography of the target area. The Naktong Bulge west of Yongsan results from a bend in the river resembling a stubby thumb pointing westward. Bounded on three sides by the stream, with its inland border formed by a long valley, the bulge is an isolated terrain feature—a fortress of mountains topped by Hill 311, the key height.

As the Yongsan road reaches the Bulge from the east, it turns southwest, winds around Hill 311, and stops at the tip of the “thumb” where a ferry links it to the road west of the river.

Guarding the eastern approach to the natural fortress are two hills astride the Yongsan road—Finger Ridge to the north and Hill 207 to the south. The former is set off on the east by a deep gully containing the village of Tugok. Eastward from Hill 207 and directly below Tugok is Obong-ni Ridge—so called because of a village by that name at its eastern base.

Not only had the NKPA 4th Division overrun the Naktong Bulge; it had pushed on along the road to Yongsan, seizing Hill 207, Tugok, and both Finger and Obong-ni Ridges. These latest gains and the Bulge itself were being consolidated by elements of all three regiments.

Although units were somewhat depleted, at least 6 infantry battalions occupied the area, supported by 4 mortar companies, over 100 machineguns, and several artillery pieces. There were 4 or more T34 tanks within the bridgehead, and a signal and engineer company for overall support. As the spoils of earlier victories, particularly the one at Taejon, enemy arms were generously augmented by a number of American carbines and two 105-mm. howitzers.[4]
It was decided by General Church and General Craig at their conference of 15 August that the entire 24th Division, Reinforced, would assault the enemy bridgehead at 0800, 17 August, after strong air and artillery preparations. The 19th and 34th Infantry would converge on the Bulge from the northeast. In the center, the 9th RCT and the Marine Brigade would strike frontally astride the MSR, the former on the north of the road and the latter on the south. The 1st Battalion, 21st Infantry, was to hold blocking positions in the south to protect the left flank of the Brigade.\[5\]

On 15 August, front lines in the center of the zone were on Hill 125 and Observation Hill, both defended by the 9th RCT. A thousand yards to the rear, the 34th Infantry occupied Cloverleaf Hill and adjacent high ground. Before the attack, the Brigade was to relieve the 34th on position so that the Army unit could move to the north for its assigned mission. Then, at H-hour, the Marines would jump off from Observation Hill and seize Obong-ni Ridge—Objective One. Simultaneously, the 9th RCT would drive forward through Tugok and take Finger Ridge, from which it was to support the Brigade’s advance. The 1st Battalion, 11th Marines, would be under operational control of the 24th Division artillery commander, and priority for all supporting fires would go to the Marines.\[6\]

During the planning, General Church emphasized that Cloverleaf Hill must remain occupied and defended until Brigade Objective One was seized. He considered this hill of utmost importance in blocking the MSR to the 24th Division CP and Miryang. This collateral responsibility would tie up a number of Brigade troops and have strong influence on the tactics used against Obong-ni Ridge.\[7\]

Before the conference closed, Church promised Craig that 145 Army trucks would be available the next day to transport the Marines from their Miryang bivouac to an assembly area near the line of departure.\[8\]

At 1900, 15 August, Craig briefed his staff and unit commanders. The next morning the Brigade commander flew by helicopter to Church’s CP and received the actual attack order, which was identical with the planning of the previous day.\[9\]

Later on the 16th, Craig drove to the front to reconnoiter the area marked for the Brigade jump-off. He visited the 9th RCT command post where Colonel Hill informed him that the Army unit was in good condition as it stood by for the great attack.\[10\]
After Craig’s reconnaissance, Lieutenant Colonel Murray arrived at the front to discuss the tactical plan with the 9th RCT Commander. Although Colonel Hill spoke confidently of his outfit’s readiness for the attack, Murray observed that the ranks of soldiers on Observation Hill and Hill 125 were thin and the men obviously wearied by the fighting of the previous 5 days.\[11\]

With this impression in mind, the 5th Marines commander studied the terrain soon to be his regiment’s battleground. Between Observation Hill and Obong-ni Ridge, a 300-yard rice paddy was flanked to the north of the road by the 9th RCT positions on Hill 125. Across the MSR from the northern tip of Obong-ni Ridge was the congested village of Tugok. West of the hamlet and northwest of Brigade Objective One was long, low Finger Ridge, target of Hill’s RCT.\[12\]

Murray quickly concluded from the terrain that both regiments should not attack together and become exposed simultaneously in the low ground ahead. Since Obong-ni Ridge was closer than the Army objective and dominated both Tugok and Finger Ridge, Murray suggested that the 5th Marines jump off alone at 0800, 17 August. If the 9th RCT would support him by fire from Hill 125, he would take Obong-ni Ridge and return the courtesy while the Army unit cleared Tugok and seized its objective. And though offering his plan on a tactical basis, Murray also took into consideration the condition and numbers of Hill’s troops.\[13\]

The 9th RCT commander agreed, and the responsibility of delivering the first punch lay with the 5th Marines.\[14\]

Time and chance were against the Brigade throughout 16 August and the following morning. Banking on the use of 145 Army trucks, Craig and Murray hoped to move quickly on the 16th, in order to have one infantry battalion take over Observation Hill and the other two available for the attack on the 17th. Unfortunately, only 43 trucks were actually provided, with the result that time schedules were thrown off and troops forced to march long distances the night before the attack.\[15\]

At 1900, 16 August, Lieutenant Colonel Taplett’s 3d Battalion entrucked at Miryang and rode to the 5th Marines CP about 3,000 yards behind the front. Dismounting, 3/5 marched to Cloverleaf Hill and relieved the 34th Infantry on position. Control of the area south of the MSR passed to Taplett at 0445, 17 August.\[16\]

The 2d Battalion proceeded on foot to its assembly area near Cloverleaf Hill at 0130 on the 17th, and Lieutenant Colonel Roise’s men got little sleep as they prepared for the jump-off a few hours later. Owing to the shortage of trucks, the 1st Battalion arrived at the forward assembly area several hours later than planned.\[17\]

Overloaded trucks had shuttled Lieutenant Colonel Wood’s artillery battalion forward on 16 August. Although registration fires were completed by evening, the haste of the displacement and the doubtful information at the front left much to be desired from the standpoint of accuracy.\[18\]

While Obong-ni Ridge was known to be heavily defended, it was generally thought that Hill 207—Brigade Objective Two—would be the hard nut to crack. And the potential of Objective Three, towering Hill 311, was by no means minimized in preattack estimates.\[19\] Later events proved these assumptions to be the reverse of reality, but Marine planners could do no better with the meager intelligence then available.

The regimental commander and General Craig concluded that a frontal assault on Obong-ni Ridge with a column of battalions was the only answer to the problems posed by the terrain and situation.

Since the Brigade commander had been specifically charged with the security of the MSR, it was necessary that 3/5 remain in position on Cloverleaf Hill until Objective One was taken. Taplett’s battalion had a
second responsibility in guarding the Brigade’s left (south) flank, because Craig considered the 1st Battalion, 21st Infantry, too far out to provide the required close-in protection.[20]

The Brigade commander, unaware of Murray’s arrangement with Colonel Hill, could not have envisioned an approach to the enemy’s left through the 9th RCT zone. He expected the Army unit to advance side by side with the Brigade and give supporting fire as directed by General Church. On the other hand, an envelopment of the enemy’s right seemed out of the question. Using the southern approach to Obong-ni Ridge would have created a gap of several thousands yards in the center of the critical area, and the low, barren marshland to the left would have impeded the movement of tanks and the employment of the 5th Marines’ integral supporting arms.[21]

Lieutenant Colonel Murray’s reasoning closely paralleled that of his superior. He did not visualize an envelopment from the north because he expected a comparable effect from supporting fire by the 9th RCT. An attempt to flank the North Korean right would have placed the attacking unit far from the power consolidated along the MSR. The enemy situation in the hills and swamps to the south was unknown, and the Marine regimental commander did not relish the thought of one or two of his battalions becoming isolated in that remote area. Then too, the southern peaks on Obong-ni Ridge were considerably higher and more rugged than those nearer the MSR. So it seemed logical to Murray to retain depth and strength by striking frontally, quickly gaining a foothold on the lower, northern reaches of the ridge, then exploiting the penetration rapidly and vigorously.[22]

When asked about his tactical plan by General Craig, he stated that the 5th Marines would attack in a column of battalions, 2/5 seizing Objective One, 1/5 passing through to take Hill 207, and 3/5 completing the reduction of the bulge by following with an assault on Objective Three. [23]

The Brigade commander voiced his concurrence, and the plan was put in motion.[24]
Obong-ni Ridge sprawled across the Marine front like some huge prehistoric reptile. Its blunt head overlooked the MSR below Tugok, and the elongated body stretched to the southeast more than 2,000 yards before losing its identity in a complex of swamps and irregular hill formations. The high, narrow spine was marked by a series of peaks, beginning with Hill 102 at the neck, followed by 109, 117, 143, 147, and 153. There were still other peaks to the southeast, but so small and irregular as to be almost indistinguishable.

A procession of steep spurs, separated from one another by pronounced gullies, ran down from the numbered peaks to the rice paddies far below. At the top of a gully extending down from the saddle between Hills 109 and 117 was a fault caused by erosion of the red clay and shale. Gaping like an ugly wound, the raw blemish inspired one of the ridge’s first names— “Red Slash Hill.” It was also dubbed “No Name Ridge” by some of the newspaper correspondents.

Marine air and artillery were to pound the ridge on 17 August from 0725 to H-hour, 0800, after which MAG–33 would strafe the hill to cover the advancing infantrymen. Brigade artillery fired its preparation as planned; but due either to the hasty registration of the previous day or to error on the part of observers, the shelling was not effective against the enemy on Objective One. It was so inaccurate, in fact, that many officers of 2/5 thought there had been no preparation at all. To make matters worse, air attacks scheduled to begin at 0725 did not materialize until 0740; and the 18 Corsairs assigned to the job had time for only one strike before H-hour.

The two rifle companies of the 2d Battalion jumped off abreast at 0800. On the right was Captain Zimmer’s Company D, emerging into the open from the road cut between Hill 125 and Observation Hill. Zimmer ordered the 2d Platoon into reserve on the southern spur of Hill 125 and established his OP there. The 3d Platoon, commanded by Second Lieutenant Michael J. Shinka, stepped from the road bend below the spur into the rice paddy. Advancing behind this unit were the 1st Platoon and a rocket section, the latter stopping in positions along the road bend to protect the MSR.

Halfway across the rice paddy, Staff Sergeant T. Albert Crowson led his 1st Platoon to the right from behind the 3d, and both units approached the base of the ridge on line. On Shinka’s left was the 2d Platoon of Company E. An eerie silence pervaded the front while the assault platoons crossed the wide open area unmolested.

Providing covering fire from its positions on Hill 125, Technical Sergeant Sidney S. Dickerson’s 2d Platoon was hit by long-range machinegun bursts from Hills 117 and 143 on Obong-ni. Company D’s first two casualties were taken.
While General Craig watched from the road cut, and Lieutenant Colonel Roise from his OP on Observation Hill, Company D’s assault platoons began to ascend the objective. Gradually turning its back on the village of Tugok, Crowson’s unit traced the draw on the right of the spur leading to Hill 102, while Shinka led his 3d Platoon up the gully on the left. The infantrymen were almost halfway up the slope when a battalion of the NKPA 18th Regiment opened fire with dozens of machineguns.

Despite the hail of lead, Shinka and Crowson edged their units upwards. The fire from Hills 117 and 143 finally became so intense, however, that the 3d Platoon was momentarily unable to emerge from its gully. Almost simultaneously, enemy machineguns poured it into the 1st Platoon, pinning that unit down and inflicting heavy casualties.

Again pushing upward despite mounting casualties, the 3d Platoon attempted to assault Hill 109 about 1000. Communist automatic weapons and a shower of hand grenades from the crest sent the thin skirmish line of Marines reeling back down the barren slope.

As the 3d Platoon came under increasing machinegun and mortar fire from Hills 117 and 143, Zimmer decided to commit his reserve. Realizing the apparent futility of pressing the attack up the 3d Platoon’s gully, he ordered Dickerson to attempt an assault through the draw in which the 1st Platoon was pinned down.

The 2d Platoon crossed the rice paddy, following the route used earlier by the 3d. Reaching the draw in which the latter was regrouping after its abortive assault, Dickerson led his men over Hill 102’s spur, attempting to gain the avenue of approach being used by Crowson’s unit. In the process he came under heavy automatic weapons fire from both flanks—Hills 117 and 143 on the left, and the hillside north of Tugok across the MSR.

At this time the company commander spotted North Korean positions above the village and realized why his pinned-down 1st Platoon was taking so many casualties. From their vantage point in the 9th RCT zone, the Communists were firing on the flank and rear of the Marines along the northwest approaches of Objective One. Zimmer requested that 2/5 lay supporting fires on Tugok. When he got no response, his forward observer, Lieutenant Wirth, transferred the mission to 1/11. But the 105’s had scarcely begun firing when they were cut off because the impact area was in the 9th RCT’s zone. The company commander turned his own 60-mm. mortars on the enemy machineguns, only to discover that the target lay beyond effective range.

Zimmer had more success with supporting arms when the enemy posed another threat. Practically all the machinegun fire had been coming from the north and south of Hills 102 and 109, while the enemy on these summits relied on rifles and vast numbers of hand grenades. Then, apparently shaken by the 3d Platoon’s tenacity, the Communists tried to wheel a heavy machinegun into position on the saddle between the northernmost peaks. Twice the mounted weapon was hauled up, and twice pulled back under heavy Marine fire. By this time Zimmer had requested battalion to use a 75-mm. recoilless rifle on the target. When the persistent North Koreans wheeled the machinegun onto the saddle a third time, one round from a Marine 75 obliterated gun and crew.

With only 15 men left in his platoon, Shinka prepared for a second assault on Hill 109. Following an air strike at 1100, the Marines stormed the high ground and overran enemy positions on the crest. Only a squad of North Koreans could show similar determination on the reverse slope, but the enemy’s small-scale counterattack was stopped cold by Company D’s riflemen.

One of the few Marines who reached Obong-ni’s summit during 2/5’s attack and lived to tell the story, Shinka later related the events following his seizure of Hill 109:
“Fire from Hill 143 was gaining in intensity, and they had observation over our position. Fire was also coming from the hill to our front [Hill 207]. I reported the situation to Captain Zimmer. A short time later phosphorus shells were exploding in Hill 143. This slowed the fire but it never did stop.

“My resupply of ammo did not arrive. Running short of ammo and taking casualties, with the shallow enemy slit trenches for cover, I decided to fall back until some of the fire on my left flank could be silenced. I gave the word to withdraw and take all wounded and weapons. About three-quarters of the way down, I had the men set up where cover was available. I had six men who were able to fight.

“I decided to go forward to find out if we left any of our wounded. As I crawled along our former position (on the crest of Hill 109), I came across a wounded Marine between two dead. As I grabbed him under the arms and pulled him from the foxhole, a bullet shattered my chin. Blood ran into my throat and I couldn’t breath. I tossed a grenade at a gook crawling up the slope, didn’t wait for it to explode, turned and reached under the Marine’s arms and dragged him as far as the military crest.

“Another bullet hit my right arm, and the force spun me around. I rolled down the hill for a considerable distance before I could stop myself.

“I walked into my lines and had a battle dressing tied on my face and arm. I learned that the ammo was up and that a relief was contemplated; and then I walked back to 2/5’s aid station where they placed me on a jeep and took me to regimental aid.”

Lieutenant Shinka was later awarded the Bronze Star for this action.
Chapter 9. The Battle of the Naktong
Attack of Company E

At 0800 Lieutenant Sweeney had ordered his 1st and 2d Platoons of Easy Company into the attack from their line of departure on the southern portion of Observation Hill. Although the boundary separating the zones of Companies E and D extended from the left of Hill 109 and down through the red slash, Sweeney centered his advance on the village of Obong-ni, directly below Hills 143 and 147.[29]

The leading platoons encountered nothing more than scattered shots crossing the rice paddy. Before they could gain a foothold on the slope of the objective, however, heavy fire from the village ripped into the skirmish line.

In the center, Second Lieutenant Nickolas A. Arkadis led his 1st Platoon through the hail of bullets and drove through the village to the slopes of the ridge. On the right the 2d Platoon faltered and lost its momentum. Then a number of North Korean machineguns poured in flanking fire from Hills 147 and 153.

Sweeney, from his OP on the southern slope of Observation Hill, tried to get an artillery mission on the two dominating peaks, but his forward observer was unable to contact the rear. Nor could the 4.2 mortar observer be located.

Faced with the necessity of giving his assault elements some protection, the company commander committed 2d Lieutenant Rodger E. Eddy’s 3d Platoon, sending it to the spur on the left of the village. Working its way up the nose which led to Hills 147 and 153, Eddy’s unit was able to concentrate its fire on the enemy-held peaks and relieve pressure on the other two platoons.

With enemy fire gradually increasing from new positions on the lower slopes of the ridge to the south of the village, Sweeney ordered the mortar section and all of his headquarters personnel into the valley to block the southern approach through the rice paddy. Leaving this flank guard in command of his executive officer, First Lieutenant Paul R. Uffelman, the company commander rushed to the base of the objective. Every single man in his unit was now committed.

Sweeney found the 2d Platoon leaderless and disorganized. The 1st had fought its way well up the slope, aided by excellent supporting fire from 2/5’s 81-mm. mortars. As that dogged group of Marines neared the crest, it was stopped when a friendly artillery barrage fell short, searing the skirmish line with white phosphorus.

Late morning found part of the company closing on the crest; but shortly before 1130, the attackers were ordered to pull back in preparation for an air strike by MAG–33. The planes came in quickly, and some of Company E’s men, within 25 yards of the summit, were caught in the strafing.

During the hammering by the Corsairs, the 3d Platoon slipped back 100 yards, leaving the critical left flank open to enemy-infested peaks 147 and 153. This time the hail of enfilade fire from Communist machineguns caught the remnant of Easy Company rifleman exposed on the higher slopes, and the Marine advance crumbled.

By noon on 17 August, the 2d Battalion, 5th Marines was wobbling. In 4 hours of fighting it had lost 23 dead and 119 wounded, practically all of the casualties being taken by the 2 rifle companies. Every officer in the Brigade could lament the lack of a third company in each battalion; for just when 2/5’s assault needed the added punch of a reserve unit, the outcome of battle had to rest on the failing strength of six depleted rifle platoons. The ridge could not be taken.

This was unfortunate, since there was clear evidence that the NKPA 4th Division was weakening. Although not apparent to the men of Companies D and E, their repeated attempts to carry the ridge had torn gaps
in the enemy’s defenses. Bodies, weapons and wreckage were strewn along the entire northern crest.[30]

Marine air and artillery, having settled down after a fumbling start, not only blasted the North Korean lines, but also wrought havoc throughout the entire bridgehead. A large number of enemy mortars and field pieces were knocked out, troop concentrations cut down or scattered while trying to reinforce the front lines, and supply points obliterated. There were definite signs of increasing confusion in the enemy’s rear.[31]

General Craig had become alarmed at the lack of activity in the 9th RCT’s zone, resulting in the enemy being left free to pound the Brigade’s right flank from the Tugok area. When he inquired concerning the Army’s supposed failure to advance on schedule, he first learned of the prebattle agreement reached by Murray and Hill. It was then that he requested the village be taken under fire.

Deeply concerned himself over the situation on the right, particularly since no supporting fire at all had been received from the 9th RCT, Murray tried to contact Hill and request that he commit his regiment. Unable to get the message through immediately, he was forced to leave the matter dangling while directing the conduct of the battle.[32]

About 1300 the 5th Marines commander ordered the 1st Battalion to pass through the 2d and seize Obong-ni Ridge. While Newton moved his unit forward from its assembly area, MAG–33, 1/11 and Able Company tanks laid down devastating fires on the blackened objective.
SHORTLY AFTER 1330, WHILE reporting his situation to the battalion commander, Captain Zimmer was wounded by enemy machinegun fire which ripped into his OP and caused several other casualties. Crawling to the company CP on the reverse slope of the spur, he turned his command over to Lieutenant Hanifin, who went forward. Zimmer then joined the steady stream of casualties returning through the road cut to the battalion aid station.[1]

On the way, he met Captain Tobin leading Company B forward for the attack, and paused long enough to warn him about the enemy guns in Tugok.

Company D, its part in the battle having come to an end, prepared to withdraw to positions on Observation Hill. The long list of wounded for 17 August included the names of Dickerson and Wirth.[2]

Newton established his OP near that of Roise on Observation Hill. The 1st Battalion CP and aid station were set up with those of 2/5 immediately behind the road cut, while farther back Major John W. Russell placed 1/5’s Weapons Company in position.
Tobin deployed his 3d Platoon and machineguns on the forward slopes of Observation Hill to support Company B’s attack. The 1st and 2d Platoons, the latter on the left, crossed the rice paddy and at 1500 passed through Company D on the slopes of the objective. Lieutenant Schryver led his 1st Platoon toward Hill 102 along the same avenue used by Crowson before him, while Lieutenant Taylor moved the 2d Platoon up the gully leading to the saddle between 102 and 109.

On Observation Hill Captain Tobin noted the rapidity of the advance and called his executive officer, Captain Fenton, preparatory to joining the two assault units. While briefing his assistant at the road bend, he was felled by a burst of machinegun fire. Fenton directed the evacuation of the seriously wounded officer, then took command of the company and joined the attackers on the ridge.

By this time both assault platoons had been pinned down, the 1st about two-thirds of the way up the slope, the 2d only half that distance. The latter was taking heavy casualties from Communist guns on Hills 109, 117, and 143, Taylor himself sustaining a mortal wound.

Fenton and his gunnery sergeant, Master Sergeant Edward A. Wright, were stalled with the 2d Platoon. Since Schryver’s unit was also held up, the company commander radioed Observation Hill and committed his 3d Platoon.

Schryver realized that the main obstacle to his advance was the fire hitting his flank from Tugok, and he requested a fire mission from 1/5’s Weapons Company. As 81-mm. mortar shells rained down on the village, the 1st Platoon worked westward to the spur above the MSR and outflanked the NKPA 18th Regiment. A quick assault carried Hill 102 at 1710.

With Schryver’s men driving down from the south and Company B’s machineguns pouring fire on peaks 117 and 143, the 2d Platoon barreled its way up the draw and seized Hill 109 at 1725.
Chapter 10. Obong-ni Ridge
Advance of Company A

Leaving the line of departure from the southern reaches of Observation Hill, the 1st and 2d Platoons of Company A crossed the rice paddy while Marine air and artillery savagely blasted the forward and reverse slopes of the objective. The two assault units, each with a machinegun section attached, passed through Company E at 1500 and scrambled up the scarred hillside. [3]

Sweeney’s battle-worn company withdrew, carrying its dead and wounded back to Observation Hill. The list of casualties included Lieutenant Arkadis, wounded while spearheading the unit’s advance.

As Company A’s assault wave passed the halfway point of ascent, it met only sniping fire from the crest and forward slopes of Obong-ni Ridge. But any delusions that the enemy had quit were soon shattered when the summit suddenly came alive with Communist machineguns.

Intense fire poured down on the attackers, and Marines pitched forward to roll limply down the hillside. First Lieutenant Robert C. Sebilian, leading the 1st Platoon up the draw between Hills 109 and 117, ignored the storm of steel and urged his men forward. Standing fully exposed while pointing out enemy positions to his NCO’s, the young officer was struck by an explosive bullet which shattered his leg. Technical Sergeant Orval F. McMullen took command and resolutely pressed the attack.

The 1st Platoon reached the saddle above the draw just as Company B was taking Hill 109. When McMullen tried to advance southward to 117, he and his men were pinned down by a solid sheet of Communist fire.

On the left, North Korean guns had already cut Second Lieutenant Thomas H. Johnston’s 2d Platoon in half. The pint-sized platoon leader proved to be a giant in courage. He pushed doggedly up the draw between Hills 117 and 143, but casualties bled his skirmish line white and finally brought it to a stop.

Marines watching the battle from Observation Hill saw Company A’s attack bog down, despite the ceaseless pounding of Hills 117 and 143 by Brigade supporting arms. Startled, the observers noted a lone figure who bolted forward from the 2d Platoon’s draw and stubbornly scrambled up the hill. It was Johnston attempting a single-handed assault on the core of enemy resistance.

The astonished onlookers saw him reach the saddle north of Hill 143. That he survived to this point was remarkable enough, yet he continued to push forward. Then, at the base of the blazing peak, the little figure sagged to the ground and lay motionless.

Technical Sergeant Frank J. Lawson immediately took over the platoon, displaying outstanding leadership in his attempt to continue the attack. Communist guns and grenades prevailed, however, and again the line of infantrymen stalled. The 2d Platoon now consisted of a squad.

Captain Stevens radioed Lieutenant Colonel Newton from his OP and requested permission to commit his 3d Platoon, then deployed on Observation Hill as battalion reserve. The request granted, First Lieutenant George C. Fox led the platoon forward into the rice paddy just as a heavy mortar barrage fell in the area. One of Fox’s men was killed outright.

Moving quickly to Obong-ni Ridge and ascending the slope, the 3d Platoon was joined by Lawson and the remnants of Johnston’s outfit. The skirmish line passed the critical halfway point, and again enemy machineguns and grenades opened up.

Twice Fox attempted to develop an assault, failing both times to get his platoon through the curtain of fire above the gully. While Technical Sergeant Stanley G. Millar was reorganizing the skirmish line, the platoon
leader and Private First Class Benjamin C. Simpson of the 2d Platoon made an attempt to reach Johnston.

The pair climbed to a point above the gully from which Simpson could see the fallen officer. Assured now that Johnston was dead, and unable to recover the body because of interlocking machinegun fire across the area, Fox and the rifleman slid down the draw to the 3d Platoon lines.

By this time Stevens had moved to the base of Obong-ni Ridge, but he had lost radio contact with the three units high on the hillside. He could see the combined 2d and 3d Platoons; but the 1st was out of sight, leaving the company commander unaware of a limited success that could have been exploited.

Lynn Montross and Nicholas A. Canzona

Chapter 10. Obong-ni Ridge
Defeat of Enemy Tanks

Shortly after 2/5’s jump-off on 17 August, the M–26’s of the 3d Platoon, Able Company Tanks, moved forward of the road cut and supported the advance by 90-mm. and machinegun fire. The Marine armor, led by Second Lieutenant Granville G. Sweet, concentrated on heavy NKPA weapons along the crest of Objective One and knocked out at least 12 antitank guns and several automatic weapons. In return, 1 M–26 withstood 3 direct hits by enemy mortars, and the 4 vehicles combined were struck by a total of 23 antitank projectiles. Neither tanks nor crews were bothered appreciably, and only one man was slightly wounded.[4]

After the 1st Battalion had passed through 2/5, a section of tanks moved forward on the road and blasted several North Korean positions in Tugok. When Company B seized the northern tip of the objective, Sweet led all his vehicles back to the tank CP, 1,000 yards east of Observation Hill.

At 2000, while still refueling and replenishing ammunition stocks, the tankmen learned that four enemy T–34’s were approaching the Brigade lines on the MSR. The Marine armor was clanking toward the front within a matter of seconds. About 300 yards from the road cut, the tankmen had to jump from their vehicles to remove trucks blocking the MSR. Then, approaching the narrow defile, Sweet ordered his 1st Section to load with 90-mm. armor-piercing shells.

Company B, consolidating its positions on Hills 102 and 109, had first noticed the four NKPA tanks and a column of infantry moving toward its lines at 2000. Corsairs of MAG–33 screamed down immediately, destroying the fourth armored vehicle and dispersing the Red riflemen. The first three tanks came on alone, passed Finger and Obong-ni Ridges, and approached the road bend at Hill 125.

Preparing a reception for the T–34’s were the 1st 75-mm. Recoilless Gun Platoon on Observation Hill, and the rocket section of 1/5’s antitank assault platoon on Hill 125. As the first enemy tank reached the bend, it took a hit in the right track from a 3.5" rocket. Shooting wildly, the black hulk continued until its left track and front armor were blasted by Second Lieutenant Paul R. Fields’ 75’s. The enemy vehicle burst into flame as it wobbled around the curve and came face to face with Technical Sergeant Cecil R. Fullerton’s M–26.

Still aimlessly firing its 85-mm. rifle and machinegun, the T–34 took two quick hits from the Marine tank’s 90-mm. gun and exploded. One North Korean got out of the burning vehicle but was cut down instantly by rifle fire. He crawled beneath the blazing wreckage and died.

The third T–34 raced around the road bend to a stop behind the blazing hulks of the first two. Marine tanks, recoilless rifles, and rockets ripped into it with a thundering salvo. The enemy tank shuddered, then erupted...
in a violent explosion and died.

Thus the Brigade shattered the myth of the T–34 in five flaming minutes. Not only Corsairs and M–26’s, but also every antitank weapon organic to Marine infantry had scored an assist in defeating the Communist armor.

Chapter 10. Obong-ni Ridge
End of the First Day

Throughout 17 August the evacuation of dead and wounded had been a major concern of every Marine, from fire team leaders up to the Brigade commander. Men risked their lives dragging casualties off the blazing slopes of Obong-ni Ridge to relative safety at the base. Litter bearers plodded back and forth across the fire-swept rice paddy, and a steady stream of wounded passed through the 1st and 2d Battalion aid stations behind the road cut. Medical officers of the two battalions, Lieutenants (jg) Bentley G. Nelson and Chester L. Klein, worked tirelessly with their corpsmen.

In the rear, Lieutenant Commander Byron D. Casteel had to commandeer every ambulance in the area—including 16 Army vehicles—to evacuate wounded to and from his 5th Marines aid station. So acute was the shortage of hospital corpsmen that the Brigade’s Malaria and Epidemic Control Unit was used to reinforce the regimental medical staff. Even so, the hospital tents were busy for a straight 18 hours.[5]

The small number of deaths from wounds attested to the speed and effectiveness of helicopter evacuations; for the pilots of VMO–6 were ferrying the more serious casualties from the regimental aid station to the Army’s 8076 Surgical Hospital at Miryang, some 20 miles away.

While medics toiled to save lives, the spiritual needs of casualties were filled by the inspiring labor of the 5th Marines’ naval chaplains, Lieutenant Commander Orlando Ingvolstad, Jr., Lieutenant William G. Tennant, and Lieutenant (jg) Bernard L. Hickey. A familiar figure at the front, frequently exposed to enemy fire as he administered to fallen Marines, was Lieutenant Commander Otto E. Sporrer, beloved chaplain of 1/11.

Two serious obstacles to the various missions behind the front were the dud-infested area east of Observation Hill and a section of collapsed MSR in the river bed occupied by the 5th Marines CP. First Lieutenant Wayne E. Richards and his 2d Platoon, Able Company Engineers, spent most of 17 August at the tedious task of removing unexploded missiles from the forward assembly areas. The engineers’ 1st Platoon had to tear down part of an unoccupied village for material to reinforce the sinking road over which the jeep ambulances and supply trucks were struggling.

As the sun dropped behind Obong-ni Ridge, activity on the MSR continued unabated, although the battle for Objective One had diminished to a crackle of rifle fire and occasional machinegun bursts.

Company A had been unable to take Hills 117 and 143, still bristling with enemy automatic weapons. At 2030, shortly after the smashing victory over North Korean armor, Captain Stevens contacted his 1st Platoon and learned that it was on the saddle between peaks 109 and-117. Although tied in on the right with Company B, the platoon was separated by a 100-yard gap from Stevens’ other two platoons on the slopes to the left.[6]

The company commander called Fox, Lawson, and McMullen together near the base of the ridge to consult them on continuing the attack. All platoon leaders advised against it, since darkness was falling and their units needed rest, food, water, and ammunition. Moreover, the enemy’s bold tank attack had convinced the infantry leaders that a larger counter-stroke by the Communists was imminent, and they wanted time for preparation.[7]

Stevens informed Newton of the situation by radio, and the battalion commander ordered him to discontinue the attack and tie in with Fenton’s unit for the night. It was already dark when the 2d and 3d Platoons shifted to the right from their positions below Hills 117 and 143.

Company B had been busily consolidating its high ground since the seizure of Hills 102 and 109 earlier in the evening. While Fenton’s machineguns dueled with those of the Reds on 117, his 1st and 2d Platoons
deployed defensively on the forward slopes of the two captured peaks, and the 3d went into reserve on the reverse slope.[8]

Company A’s front extended left from the southern part of Hill 109—where the 1st Platoon was linked to Fenton’s unit—to the center of the saddle toward 117. There the line bent down in an arch, formed by the 2d Platoon, to the spur below the enemy-held peak. Able Company’s left was actually perpendicular to the ridgeline, for Fox’s 3d Platoon was deployed up and down Hill 117’s spur.[9]

To complete the Brigade front, Headquarters Company of 1/5 was to have extended across the rice paddy from Observation Hill and tied in with Company A’s left flank. Due to the casualties and workload of the headquarters troops, this connection was never made, with the result that Fox’s platoon remained dangling.[10]

When General Craig returned to his CP near Yongsan on the night of 17 August, he was not unduly concerned about the tactical situation. Although the Brigade had been thinned by heavy casualties, Murray’s disposition in depth across a narrow front gave the Marines the advantages of concentrated strength and firepower. If the enemy attempted his usual night envelopment, both 2/5 and 3/5 could strike back from their reserve positions on Observation and Cloverleaf Hills.[11]

Across the MSR, the 9th RCT had launched its attack earlier in the evening, clearing Tugok and seizing Finger Ridge against negligible resistance. By darkness, the 19th and 34th Regiments were also sitting on their objectives to the north, leaving the 4th NKPA Division clamped in a vice. To the southeast, the 1st Battalion, 21st Infantry, was holding its blocking position with no difficulty.[12]
Late on 17 August, when the attack on Obong-ni Ridge ceased, General Craig sent a message to his subordinate commanders, directing them to “. . . consolidate positions for night, account for location of each individual and be prepared for counterattack; carefully prepare plan of fires for night to include plans for fires within and in rear of positions; wire in where possible in front line elements.”[13]

Long after nightfall, the weary Marines of both front line companies were still digging foxholes and organizing their defenses. While this work continued in spite of sporadic Communist fire from Hill 117, the South Korean laborers were transporting supplies to the ridgeline or carrying casualties back to the rear.

Captain Stevens established Company A’s command post at the top of the draw leading to the saddle between Hills 109 and 117. His 60-mm. mortar section set up its weapons in the gully itself.

Shortly before 2200, the telltale whine and rattle of mortar shells cut through the darkness and the men of Able Company crouched in their holes. The explosions were followed by a shower of fire as white phosphorus enveloped the center of the company area. Almost every man in the gully was painfully wounded, leaving Stevens without a mortar section. The edge of the barrage hit the 3d Platoon’s area, wounding Fox and several of his men. Two riflemen had to be evacuated, but the platoon leader and the others applied first aid and remained in the line.

After this brief flurry the front settled down to an ominous quiet interrupted only occasionally by North Korean guns to the south.

At 0230 on 18 August, the Marines of Company A heard enemy movement on Hill 117. Suddenly there was a hail of bullets from Communist machineguns on the peak, and hand grenades began to roll down into the Marine positions. A North Korean platoon made a few bounds from the high ground and landed almost literally on top of Stevens’ depleted 2d Platoon.

Simultaneously, Company B’s position on Hill 109 was struck hard by two platoons advancing up the draw to the west. Heedless of illuminating shells fired by 1/5’s 81-mm. mortars, the enemy assaulted methodically by alternately throwing small groups of grenadiers and submachinegunners against Marine positions. The NKPA infantrymen were covered by a heavy volume of automatic weapons firing down from Hill 117.

An enemy squad emerged from the gully west of the saddle between peaks 102 and 109, attempting to divert strength from Fenton’s main defensive effort to the south. Failing in this effort, the group fell back to fire harassing shots.

Company A’s 2d Platoon slugged it out with three times its own numbers for a full half hour. This stand was due largely to the courage and leadership of Lawson, who stuck to his guns and refused evacuation, though wounded three times. About 0300, with Marines on the right devoting more attention to the heavier attack against Hill 109, the exhausted survivors of the 2d Platoon were overrun and the Brigade line penetrated.

For some unknown reason, enemy troops did not pour down the eastern slopes after the breakthrough. Only one squad drove through, and it split Company A in half by invading Stevens’ CP, directly behind the 2d Platoon’s lines. The company commander and his headquarters were slowly forced down the draw by the methodical grenade and submachinegun fire from above.

The remainder of the North Korean platoon which had hit Company A remained on the crest for a joint effort with the larger force striking Hill 109. Stevens’ 1st Platoon, with its left flank now exposed on the saddle, gradually fell back and curled around the southern face of 109.

Although Company B’s left front held firm against the two-platoon assault, a few Reds slipped by the
Marine foxholes and charged into Fenton’s CP on Hill 109. Rocket gunners, mortarmen and clerks responded to the challenge and quickly eliminated the attackers.

When Fenton became aware that the saddle south of Hill 109 had been taken, he tightened his left flank by drawing it in to his 3d Platoon’s reverse slope positions. This portion of his defense now took the shape of a football, and successfully withstood pressure from the south.

By 0400 Stevens had temporarily lost control of Company A, although the situation looked worse than it actually was. While the company commander stabilized his center near the bottom of the draw, his executive officer, First Lieutenant Fred F. Eubanks, Jr., made single-handed forays up the gully. He was eventually aided in his private war by the company’s machinegun officer, Second Lieutenant Francis W. Muetzel. After the breakthrough, the latter had been wounded and left for dead in his foxhole behind the 2d Platoon. Upon regaining consciousness, he made his way down the draw, fighting it out with enemy soldiers until he reached the Marine lines. Company A’s 3d Platoon along the spur below Hill 117 enjoyed a seemingly illogical immunity during the counterattack. Although isolated after the penetration and deployed ideally from the enemy’s point of view, Fox’s men had only occasional brushes with Red infantrymen who displayed a remarkable lack of interest. After the platoon leader learned of the situation on his right, he redeployed into an elongated perimeter which included a few survivors of the 2d Platoon.

Lieutenant Colonel Newton, when notified of Company A’s withdrawal on the left front, called down such a tremendous volume of artillery fire on enemy approaches that 1/11 asked him to conserve a few shells for the Brigade attack scheduled for 0700. The battalion commander replied that the Brigade would be fighting to retake Objective One at 0700 if his beleaguered companies did not get maximum supporting fire. While the artillermen continued to pound Obong-ni Ridge, Newton’s 81-mm. mortars, strengthened by 2/5’s entire stock of ammunition, added to the hot metal thrown at the enemy. It can only be conjectured why the NKPA thrust against the Brigade lines never developed above the company level, but Newton’s generosity with high explosives probably did not encourage Communist aspirations.
By dawn of 18 August, the North Korean attackers had spent their strength, leaving Company B in undisputed control of Hills 102 and 109. As if in frustration, enemy machineguns on 117 spat angrily at the Marines while the few surviving Red infantrymen withdrew to their lines.

Stevens prepared at first light to complete the unfinished business of the previous day. Thanks to the heroism of his wounded gunnery sergeant, Technical Sergeant Paul A. Hodge, the company commander had regained contact with Fox before dawn and was able to prepare for an attack. At 0700, after moving forward to the 3d Platoon’s area and clearing with Newton, he ordered Fox to continue the attack and seize Hill 117.

The platoon leader shouted to his men who arose as a body to begin the ascent. When a lone Red machinegun broke the silence on 117, Stevens spotted the weapon immediately and called for an air strike. Within seconds a Marine fighter plane glided over the 3d Platoon and dropped a 500-pound bomb squarely on the enemy position. The response from Marine air had been so prompt that every one of the attackers was knocked off his feet and one of Fox’s automatic riflemen was killed.

While the echoes of the shattering explosion were still reverberating through the morning haze, the thin skirmish line of Marines scrambled up the slope and carried Hill 117. McMullen’s 1st Platoon drove in from 109, and the North Koreans fled in panic from the crest and reverse slope positions. A full company of Reds raced down the western slope, with Stevens’ riflemen and machinegunners firing from the crest to rip into the enemy groups.

Capitalizing on a psychological advantage, Company A wheeled southward to sweep the crest. Fox, using a skirmish line of only 20 men, assaulted Hill 143 and took the peak against light resistance. A quick call to Newton brought Stevens immediate permission for maximum exploitation.

The 3d Platoon attacked Hill 147 vigorously, and though a few Red soldiers fought to the bitter end, the majority again chose to flee. The high ground was taken easily.

As the Marines moved over the crest of 147, they saw 150 enemy troops in formation halfway down the western slope. The withdrawal commenced in an orderly column of fours but the formation broke down quickly under Marine fire and turned into a routed mob.

Fox turned his attention to Hill 153, Obong-ni’s crowning peak, reasoning that it would be the logical place for the enemy’s last-ditch stand. But it was the same old story when the 3d Platoon rushed to the summit—abandoned weapons and equipment, a few scattered dead, and blasted foxholes. There was a variation, however, when a supposed clump of scrub pines arose from the reverse slope and rushed downward in headlong flight. The Leathernecks were reminded of Birnham Wood in Shakespeare’s *Macbeth* as the camouflaged North Koreans disappeared with the agility of mountain goats before Marine marksmen could score more than a few hits.

While the 1st and 2d Platoons consolidated the central peaks, the 3d combed the southern reaches below Hill 153 without incident. The 1st Platoon, Able Company Engineers, patrolled the swampland south of the ridge and secured Fox’s left flank with a minefield extending from the southern crest to the valley below and eastward across the swamp. By midafternoon all of Obong-ni Ridge belonged to the Brigade.
At midnight, 17 August, Lieutenant Colonel Murray had issued 3/5 a warning order for continuing the attack on the 18th. Shortly after dawn, Taplett and his two company commanders, Fegan and Bohn, visually reconnoitered Hill 207—Objective Two—from vantage points north and south of the MSR. Then, while the battalion commander set up his OP on the northern part of Obong-ni Ridge, Companies G and H advanced to an assembly area at the base of the Ridge.[14]

Taplett called down heavy artillery, air, and mortar preparations on Objective Two. Occasionally he shifted fires to blast large groups of enemy fleeing to Hill 207 from Company A’s advance on Obong-ni Ridge. Directly south of Finger Ridge, two large spurs form the northern approach to Hill 207. Company H emerged into the open at 1000 from the MSR between Obong-ni and Finger Ridges and attacked up the eastern spur. Following Fegan’s unit was Company G, which veered to the right and advanced up the western spur. The two infantry units slowly ascended, separated by a deep gully, while the 3d Platoon of Able Company tanks fired overhead and to the flanks from its positions in the valley.

When Fegan’s unit was halfway up the eastern spur, the Marine tankmen saw a platoon of North Koreans attempting to flank the attackers. Machinegun and 90-mm. fire from the M–26’s killed or dispersed the Reds at a range of 300 yards.

As Lieutenant Williams worked How Company’s 1st Platoon close enough for an assault of the summit, several NKPA soldiers rose from their holes and threw down hand grenades. The Marines hit the deck until the missiles exploded, then bounded up and rushed the crest. Unnerved by Williams’ perfect timing, most of the North Koreans fled southward along the ridge. The remainder died in their positions during a brief but bitter fight. Moving up on Fegan’s right, Bohn’s men pushed over the western half of the objective, finding only a handful of enemy who were quickly destroyed. Company G’s assault completed the seizure of Objective Two at 1237.

During the last minutes of the fight on Hill 207, the entire Naktong Bulge suddenly swarmed with panic-stricken remnants of the 4th NKPA Division. What had been a retreat of small forces now became a widespread rout. Enemy troops poured down from Objective Two, some scurrying up the slopes of Hill 311 across the MSR, others making for the Naktong River.

Air, artillery, and mortars were now offered a profusion of targets by an enemy who ordinarily did not reveal himself during daylight hours. MAG–33 plastered the suspected CP of the 18th NKPA Regiment on a peak south of 207, shattering communications equipment and weapons. Other Marine planes alternated strafing runs with 1/11’s continual artillery barrages along the river banks, where enemy troops were gathering by the hundreds.

Victory turned into slaughter when the Brigade supporting arms concentrated on the masses of Communists plunging into the river. All artillery having been turned loose on the river crossings, Taplett used his mortars, machineguns, and the supporting tanks to cut down targets in the valley and on Hills 207 and 311. He requested permission to attack the latter immediately, but was told to remain on Objective Two while the Brigade gave all of its attention to the astounding situation at the river.

At 1530 Companies G and H descended Hill 207. They were met at the bottom by First Lieutenant Pomeroy’s 1st Platoon of tanks and escorted across the valley to the base of Hill 311—Objective Three. In
advance of the infantrymen, MAG–33 scorched the high ground with napalm while artillery, mortars, and 75-mm. recoilless rifles worked over the slopes.

Again Fegan and Bohn moved up companion spurs which converged on their target, the 1,000-foot height. Progress was good until Company H came within 200 yards of the crest. Then a volley of rifle fire from the summit and forward slopes forced the Marines to the ground. Although confronted by only a platoon, Fegan was at a disadvantage. Scrub growth not only concealed the Communist riflemen, but also prevented the use of Company H's machineguns. Maneuver to the right or left was impossible, since the steep draws on either side were well covered by camouflaged enemy positions. Several Marines who tried to advance frontally were cut down by rifle fire.

The enemy platoon’s defense was not based on the usual machinegun fire and grenade throwing. With calm, business-like efficiency, NKPA riflemen kept Company H pinned to the ground, finally wounding Fegan himself as the officer attempted to regain the initiative. After his evacuation, the attack bogged down completely. At 1730, Company G had reached the southern portion of the long, narrow crest by brushing aside light resistance. Turning its attention northward, the company entered into a small-arms duel with the Communist force opposing Fegan’s unit. When supporting arms failed to dislodge the enemy rifleman, Bohn enveloped the troublesome pocket by sending Cahill’s 1st Platoon around to the left (west).

The young platoon leader completed the maneuver just before nightfall and overran the Reds on the northern half of the summit. But the enemy on the forward slopes facing Company H suddenly showed fight. The 1st Platoon, pushed rearward a short distance by the surprise resistance, slugged it out at close quarters.

With darkness closing in and the platoon so far beyond Marines lines, Bohn ordered it to withdraw. Cahill, wounded himself, reported on his return that the platoon had suffered 10 casualties, including 2 killed. Taplett ordered the two companies to deploy defensively in their present positions. Thus, during the quiet night of 18–19 August, Companies G and H faced the enemy pocket at right angles to each other.

Earlier on the 18th Lieutenant (jg) Robert J. Harvey, 3d Battalion surgeon, had the unpleasant task of examining an abandoned Army aid station under the bridge near the tip of Finger Ridge. The improvised hospital had been overrun during Army reverses a week before; and about 30 dead found by the Marines bore mute evidence of the enemy’s brutality in dealing with captured wounded and medical personnel.

At 0610 on the morning of 19 August, 3/5’s 81-mm. mortars prepared the way for the final drive on Objective Three. Following close in the wake of the mortar bursts, Second Lieutenant Thomas P. Lennon led Company H through evacuated enemy positions. He reached the northern part of Hill 311 without meeting any opposition.

This last Brigade objective was secured at 0645, leaving 1/5 atop Obong-ni Ridge, 2/5 on Hill 207 to which it had displaced on the 18th, and 3/5 in possession of the dominating height of the Naktong Bulge. The reduction of the enemy bridgehead cost the Marines 66 dead, 1 missing in action, and 278 wounded.
IT WAS ALL over but the mopping-up operations. Battalion areas were carefully patrolled on 19 August to clear them of NKPA snipers or stragglers. During this process a patrol ranging along the Naktong river discovered three enemy 122-mm. howitzers hidden in a strip of woods on a hill. The pieces had not been touched by Marine air or artillery. What was more surprising, they were emplaced in a column to fire over one another—something new and wonderful that the Marines had never seen before. General Craig concluded that these howitzers had fired the shells which landed on Marine positions to the bitter end.

The next day the Brigade commander took a helicopter to 24th Division Headquarters to confer with General Church. There he was informed that the Marines had been detached from 24th Division operational control to Eighth Army reserve. Church complimented the Brigade warmly on its performance, and letters of commendation were later received both from him and CG EUSAK.

At 1300 on the 21st Craig arrived by helicopter at a new Brigade bivouac area near Masan that was to be recorded in capital letters as the Bean Patch. It was just that—a bean patch large enough to accommodate a brigade. But from this historic spot the Marines were to fight their way around the peninsula during the next 5 months and complete the circuit to their identical starting point.

General Craig arrived along with the Brigade advance elements. After setting up his CP, he reported to General Kean, of the 25th Division, who was in control of the bivouac area. Kean divulged that the situation in his sector had deteriorated. The enemy had made several penetrations, and Brigade assistance might be required in the event of further breakthroughs. As it was, Kean had been authorized by Eighth Army to employ Brigade artillery along with his own; and 1/11 proceeded the next day to the familiar Chindong-ni area in support of 25th Division Infantry.

Orders were received from Eighth Army for the Brigade infantry to be prepared to counterattack in the 25th Division sector as part of its reserve mission. General Craig and Lieutenant Colonel Stewart made a helicopter reconnaissance of the areas of greatest activity, but events proved that the Marine rifle battalions were not needed.
Unit training, including the checking and firing of all weapons, was conducted at the Bean Patch; and Marine patrols were sent out to the rear of the 25th Division to watch for infiltrating forces. Patrols in rugged country were fed hot meals delivered in special containers by the versatile helicopters of VMO–6.

Truckloads of supplies rolled in daily from Pusan, including some of the equipment left behind at the docks when the Brigade landed. But no tentage was available, and the exhausting marches of combat had forced the men to discard everything except fighting tools. In the lack of shelter tents, therefore, the Marines lived in the open at the Bean Patch.

General Craig conferred on 23 August with General Kean and a distinguished visitor, General J. Lawton Collins, Chief of Staff, USA. Collins was keenly interested in Marine methods of knocking out NKPA tanks and requested Craig to prepare a memorandum on the subject.

That evening the entire Brigade attended an outdoor entertainment given on an improvised stage by South Korean girls, who sang and played native instruments which sounded out of tune to Western ears. Translations of the songs were forthcoming, since some of the girls were English-speaking refugees from Seoul University. Afterwards, General Craig addressed the Brigade, paying a high tribute to his Marines for their conduct in battle. NKPA prisoners, he said, had told G–2 interviewers that they earnestly wished to steer clear of “the Americans in yellow leggings.”

Letters from home and beer from Pusan [2] contributed to good Marine morale, even though no liberty was granted to nearby towns. On the 29th an honor guard of 87 Marines received Purple Heart medals at a ceremony attended by President Syngman Rhee, who arrived in a helicopter provided by VMO–6. General Craig had paid an official call on him the day before at Chinhae, being most courteously received. And after the presentation of medals, President Rhee gave a talk to the Marines.

He confided to Craig afterwards that he would like to confer some sort of an award on every man in the Brigade for heroic service in Korea. This was undoubtedly the inception of the Korean Presidential Unit Citation which the Brigade later received from the ROK executive.
General Craig, it may be recalled, had insisted that replacements be sent to the Brigade. Thanks to his determination, a long column of trucks arrived at the Bean Patch with more than 800 Marines just landed at Pusan.

Some of the 5th Marines outfits had been so thinned by combat that an appeal was made for volunteers from supporting units to serve temporarily in rifle companies, with the privilege of returning to their former status after the emergency. The hearty response was a tribute to Marine morale as well as Marine basic training which made every man a potential rifleman. Engineers, shore party troops and headquarters personnel came forward in such numbers that some could not be accepted after the arrival of replacements eased the situation.

No attempt was made at the Bean Patch to form the newcomers into third rifle companies. They were simply used to build up the strength of the present companies and given intensive unit training.

Rumors of an impending Marine amphibious operation had already filtered down to every PFC, and there were wild speculations as to when and where. At least, it could hardly be denied that the Brigade would soon be taking another voyage; for convoys of trucks left the Bean Patch every day laden with heavy supplies and equipment to be unloaded at Pusan.[3]

This was once that lower-echelon “scuttlebutt” came close to the mark. In fact, planning for the Inchon landing had already gone so far that General Craig sent his chief of staff, G–3 and G–4 to Tokyo to confer with staff officers of the 1st Marine Division about the projected operation.[4]

Major General Oliver P. Smith, CG of the 1st Marine Division, had relieved General Erskine early in July when the latter was sent on a secret State Department mission. As the ADC of the Division during the fight for Peleliu in 1944, Smith knew how tough an amphibious operation can become when it encounters unexpected obstacles. He was determined to keep his Division intact with its three infantry regiments, the 1st, 5th, and 7th Marines. And after his arrival in Japan with the advance party, he returned a firm negative to proposals that the 5th Marines and other Brigade troops remain with the Eighth Army.

It would be putting the case mildly to say that this was the eleventh hour. The 1st Marine Division (less the 7th Marines) had landed at Kobe from 28 August to 3 September. And though a typhoon caused a good deal of damage, little time was lost at the gigantic task of unloading mixed-type shipping and combat-loading it into assault-type shipping. The LST’s had to be ready to sail for the target area by 10 September, and the transports by the 12th.

The Marines at the Bean Patch would have been flattered to know that they were the objects of an official tug of war at Tokyo. It was maintained by the EUSAK command and staff that Army morale would be hurt by taking the Brigade away from the Pusan Perimeter at a critical moment. On the other hand, General Smith contended that he needed the Brigade all the more urgently because the 7th Marines,[5] sailing belatedly from San Diego, would not be able to reach Inchon until a week after the proposed D-day of 15 September 1950.

The Marine general was informed that the decision would depend upon the tactical situation in Korea. On 30 August he sent a dispatch to X Corps—the new Army tactical organization activated by CINCFE especially for the Inchon operation—requesting that the Brigade be released from its Army commitments on 1 September. In response, General MacArthur issued an order restoring the unit to the 1st Marine Division on the 4th.[6]

At this point the enemy rudely interrupted by launching an all-out offensive against the Pusan Perimeter on 1 September, and General MacArthur’s order was rescinded. Even though most of the Brigade’s heavy
equipment was at the Pusan docks, waiting for shipping, GHQFEC decided that General Craig’s troops should again be used as “firemen” to extinguish an NKPA conflagration.

Colonel Edward H. Forney, the Marine officer recently named deputy chief of staff of X Corps, suggested to General Smith the possibility of substituting an Army unit, the 32d Infantry of the 7th Infantry Division, for the 5th Marines. Smith demurred on the grounds that these troops had not been trained for amphibious warfare.

On 3 September, with D-day less than 2 weeks away, a conference was held in Tokyo to decide the question once and for all. X Corps was represented by General Wright, the G–3, and General Edward S. Almond, the new commanding general and former chief of staff, GHQFEC. COMNAVFE (Admiral Joy), COMSEVENTHFLT (Admiral Struble) and COMPHIBGRUONE (Admiral Doyle) were the Navy officers present. General Almond opened the discussion by reiterating that the 32d Infantry would be substituted for the 5th Marines. In reply, General Smith mentioned the complications of an amphibious assault landing and urged that the operations plan be amended if the untrained Army regiment were to be employed.

Another solution, offered by Admiral Struble, was baited with reciprocal concessions. He suggested that the Brigade be employed briefly for counterattacks in the Pusan Perimeter, but that meanwhile the 32d or some other 7th Infantry Division regiment be moved from Japan to Korea. There it would become a floating reserve for EUSAK, thus releasing the Brigade units to take their former places in the 1st Marine Division for the Inchon operation. This compromise was finally accepted, and orders were issued for the Brigade to be withdrawn from Eighth Army control at midnight on 5 September.

The first intimations to reach the troops at the Bean Patch were received on the 1st, at 0810, when the Brigade was alerted for a possible move by CG EUSAK to an unknown destination. At 1109 came the warning order for a road lift to the Miryang assembly area. The confirmation followed at 1215, with all units being scheduled to move out at 1330.[7]

The Marines had another date with destiny.
General Craig set up his CP in the Miryang area at 1800 on 1 September. Billeting officers, having gone ahead by helicopter, were prepared to take care of Brigade units as they arrived. Among them was the 1st Battalion of the 11th Marines, which had been returned from 25th Division control to the Brigade.

The news from the front was depressing. Heavy attacks had been received all day along the 2d and 25th Infantry Division fronts. An enemy penetration of 4,000 yards was made at the expense of the 2d Division, with the old familiar Naktong Bulge being occupied again by Red Koreans who had gained a firm foothold on the east bank of the river. This meant that General Craig’s men, now under operational control of the 2d Division, were likely to revisit some scarred parcels of Korean real estate they had hoped never to see again. Major General Lawrence B. Keiser, commanding the 2d Division, informed the Brigade commander that several of his companies had been cut off by enemy advances which pushed his lines back almost to Yongsan. There was a good deal of NKPA infiltration, he added, in his rear.

It had been a full day, and at 2230 that night Craig received orders from the Eighth Army to move the Brigade at first light to a reserve position south of Yongsan and in the rear of the 9th Infantry of the 2d Division.

At 0630, on 2 September, the 2d Battalion of the 5th Marines arrived at its assigned covering position on the road leading to Yongsan. The remainder of the Brigade moved out to assembly positions during the day.

Craig proceeded by helicopter at 0830 to the 2d Infantry Division headquarters for a conference with Keiser to plan the move of the Brigade into his lines. Afterwards, the Marine general devoted the rest of the morning to reconnaissance of the terrain by helicopter. On the way he stopped at Lieutenant Colonel Murray’s CP and learned that the 5th Marines units were well established along the road leading to the front.

The planning conference for the projected counterattack began at 1430 in the 2d Infantry Division CP. General Craig was accompanied by his assistant G–3, Major Frank R. Stewart, Jr., since his regular G–3 had not yet returned from the 1st Marine Division briefing at Tokyo. General Keiser and his staff officers emphasized the gravity of the situation in the 2d Division sector. They wanted General Craig to counterattack that very afternoon on a widely extended front, but he objected on both counts.

As for the time element, he pointed out that the hour was late. Some of his units were not even in their assembly positions, and others were still detraining or in trucks. Smoke and haze had resulted in such low visibility that planes could not operate effectively. Finally, Craig’s TACRON had not arrived and he was out of touch with the aircraft carriers. He did not wish to commit his force piecemeal without air support; and in the end the Army staff officers agreed with him on the advisability of the Marines attacking in the morning.

Next came a discussion as to the nature of the Marine counterattack. Craig cited the risks and disadvantages of advancing on too wide a front. He suggested that the 2d Infantry Division specify the Marine objectives and allow him to attack in such formations as he deemed most effective. Keiser and his staff assented, and the Marine officers hurried back to the Brigade CP.
Glancing at the big picture, there could be no doubt that the enemy was making an all-out effort to smash through the Pusan Perimeter. Late in August it became evident that he was massing troops. The blow fell in the early morning hours of 1 September. The direction of the main attack remained in doubt until that afternoon, when it was revealed as a bid for a breakthrough in the Naktong Bulge which would expose the Pusan-Taegu lifeline.

Despite heavy casualties of the past 2 months, NKPA overall strength was estimated as high as 133,000 men as the result of filling the ranks with hastily trained replacements. Thirteen infantry regiments, 3 security regiments and the remnants of the original 3 armored regiments were believed to be participating in the offensive. [11]

For 2 months the Eighth Army had been purchasing time with space, and the enemy realized that time was now fighting on the side of the United Nations. The first ground force unit sent by a member nation to reinforce United States and ROK troops was the British 27th Infantry Brigade, which landed and took over a sector early in September. But the enemy knew that other UN contingents had been promised.

The reorganized ROK army, moreover, had recovered from its early disasters and was giving a good account of itself in the northern sectors of the Pusan Perimeter. There the 1st, 3d, 6th, 8th, and Capital Divisions had not only maintained their tactical integrity throughout August but even delivered several counterattacks. [12]

The NKPA numerical superiority, in short, could not last much longer. It was now or never if the invaders hoped to batter their way to Pusan, and Pyongyang staked everything on a final offensive.

The brunt fell upon the United States 2d Infantry Division. Troops from four enemy divisions were identified on this sensitive front, well supported by armor and artillery. Within a few hours pressure became so great that EUSAK decided to send the Marine mobile reserve to the aid of the Army troops.

Not only was the terrain familiar to Marines who had fought their way up Obong-ni Ridge, but they were renewing acquaintance with the same enemy outfit. For G–2 reports confirmed that the NKPA 4th Infantry Division was back again at the old stand—or at least such survivors as had emerged with a whole skin from their defeat of 17–18 August in this area.

Perhaps because of the large numbers of new recruits filling the ranks, the retreaded outfit followed in reserve just behind the NKPA 9th Infantry Division as it crossed the Naktong and drove eastward. The 9th was one of the enemy units hastily raised from constabulary forces for purposes of the invasion. Assigned to guard duty at Seoul throughout July and half of August, the troops devoted themselves wholeheartedly to the pleasant mission of forcing South Koreans to “volunteer” as soldiers or laborers against their own people. Thus the division could be considered a fresh and rested outfit, though deficient in training and combat discipline as compared to the older NKPA units.

Troops from the enemy’s 2d and 10th Divisions were also identified on the front of the United States 2d Infantry Division, but the Marines had no contacts with these units.[13]

Chapter 11. Second Naktong
The Marines Jump Off

General Keiser’s operational directive for the 3 September counterattack was half a page in length. As in the case of the first Naktong counter-stroke, the Marine brigade was placed opposite the center of the Bulge, with the mission of driving westward “to restore former 9th Infantry positions.” This time, however, Craig’s force was scheduled to jump off 4 miles east of Observation Hill; for the North Koreans were knocking at the gates of Yongsan.

The Brigade’s line of departure was a long north-south ridgeline about a thousand yards west of Yongsan and directly south of Myong-ni. This high ground was occupied on 2 September by the 9th Infantry. When the Marines passed through the next morning, the Army unit was to swing northward to attack on the Brigade right. Still farther north, the 23d Infantry had orders to hold positions on the right of the 9th and maintain contact with friendly units by patrolling.[14]

On the Brigade’s left, a special task force of the Army’s 72d Tank Battalion and 2d Engineer Battalion was to attack southward from II-li to the Naktong River line below the Bulge. There it would link with the 25th Division’s right.

The fact that the Communists upset the plan by smashing through the 9th Infantry lines on the night of 2–3 September was both bad and good news from the standpoint of the Marines. It was bad because an overextended friendly unit had been shattered by many times its numbers and forced into a disorganized withdrawal. It was good because the enemy was plowing ahead at full steam, obviously unaware that he was shortly due for a blow that would find him off balance and send him reeling.

Low hanging clouds and smoke made for poor visibility on the morning of the 3d when General Craig set out on his customary prebattle reconnaissance by helicopter. He was accompanied by Lieutenant Colonel Stewart, who had just returned from the 1st Marine Division planning conferences at Tokyo.

“We couldn’t see anything but an occasional mountain peak,” Craig recalled at a later date. “After flying around for some time, we had almost decided to return to the CP and complete the tour by jeep. Then Colonel Stewart noticed a hole in the clouds, and we dropped to an altitude where we had a good view of the front.”[15]

What Craig and Stewart saw was a long column of Marines fighting their way toward the line of departure.

Lieutenant Colonel Murray’s plan of attack for the 5th Marines called for the 1st and 2d Battalions to advance westward astride the Yongsan road, with 2/5 on the right. Taplett’s 3d Battalion would initially be in reserve, blocking the southern approaches to Yongsan.[16]

At 0450, 3 September, 2/5 detrucked about 800 yards from Yongsan and marched forward in a route column. Moving into the town a short time later, the Marines received small arms fire from snipers hidden in buildings, ditches and culverts. Most of them were liquidated as the column pushed through to the road junction at the western end of Yongsan by 0630.[17]

At this fork a secondary route branches from the main road through the large village of Myong-ni, about 2,000 yards northwest of Yongsan.

Although still 1,000 yards from the designated line of departure, the 2d Battalion came under moderate fire from its right front. Moreover, dawn had brought indications of considerable activity and confusion ahead of the Marines. Ignoring the fire, Roise went forward about 500 yards to a low hill lying athwart the MSR. There he was jolted by the discovery that the 9th Infantry’s lines had collapsed.[18]
On the right of the road there was no friendly situation worthy of the name. To the left of the MSR, an Army tank unit was parked behind the little hill which Roise had reached, and to the front were 4 of its tanks—2 destroyed and 2 abandoned. Included in the wreckage ahead were 2 burned-out NKPA T–34’s.

Three hundred yards to the west, on the high ground south of the main road, Army troops were retreating from 1/5’s line of departure. The soldiers had buckled under an onslaught by the NKPA 9th Division, which had launched an all-out attack at first light.[19]

Having observed evidence of the confusing situation from their helicopter, Craig and Stewart landed some distance behind Yongsan and proceeded forward by jeep and foot. The Brigade commander located 1/5’s CP south of Yongsan and discovered that the battalion was slightly out of position. During 2/5’s delay in moving through the city, Murray had ordered Newton to swing westward and align his unit for the attack as best he could. Darkness, coupled with confusion caused by the Army’s withdrawal and 2/5’s fight, had caused the 1st Battalion to move south of Chukchon-ni instead of Yongsan, as planned. Craig instructed 1/5’s commander to make a 500-yard correction northward during the actual attack.[20]

Roise was meanwhile taking the situation in hand north of the MSR. At 0645 he called Marine tanks forward to cover the withdrawal of 9th Infantry troops from the high ridge in 1/5’s zone.

Second Lieutenant Robert M. Winter led his platoon of M–26’s into hull defilade next to 2/5’s OP on the low hill and unleashed overhead fire in support of the Army troops. The pursuit by the North Koreans began to lag.

Chapter 11. Second Naktong
Progress of Brigade Attack

Despite enemy artillery fire in the 2d Battalion zone, Companies D and E jumped off from the road junction at 0715 to clear the Yongsan-Myong-ni road and secure the 5th Marines’ right flank. While this move was in progress, the last of the 9th Infantry troops vacated 1/5’s line of departure to the left front. Roise immediately smothered that ridgeline with fire from Marine tanks, artillery, air, mortars, and machineguns.

Despite this blanket of steel, enemy guns from the high ground were able to fire across the MSR at Company E as it cleared a series of hills below Myong-ni. These hills had been designated 2/5’s line of departure the previous day, but now were considered part of the first objective.

At 0800, when Captain Samuel Jaskilka reported that Easy Company had completed its mission, Roise ordered Company D to push through Myong-ni and take the hill just northwest of that village.

By this time the entire Brigade was shifting into high gear. Winter’s tanks on the little hill straddling the MSR were joined by the 1st Platoon, Able Company Engineers. The Army armored unit behind the southern portion of the hill suddenly went into hull defilade and added its firepower to that of the Marine M–26’s. Craig, Snedeker and Stewart crawled to the crest of the hill on the right side of the MSR and studied the front from positions between the Marine tanks and Roise’s OP.

The NKPA 9th Division had been stopped in its tracks when the Brigade’s supporting arms connected. Then the Reds concentrated their fire on the little hill where Craig’s OP was located. Lieutenant Winter was shot through the neck and one of his men wounded while aiding him. Before being evacuated, the painfully wounded tank officer offered General Craig a bottle of whiskey left in his M–26.

Chaplains Sporrer and Hickey were taken under machinegun fire as they walked forward on the MSR toward the hill. “It’s lucky they’re poor shots,” said Sporrer as a second and third burst cracked over his head. The two chaplains arrived just in time to administer to the wounded being carried off the hill by the engineers.

At 0855, the 1st Battalion jumped off from below Chukchon-ni. The attack having been launched too far to the south, Companies A and B had to veer northwest as they advanced toward the enemy-held ridge 1,000 yards away. Fenton’s unit was on the right, gradually closing on the MSR as it moved forward.

To the south, Stevens deployed his 1st, 2d, and 3d Platoons from right to left in that order, the latter being slightly withheld to protect the open left flank.

As the men of 1/5 waded into the knee-deep muck of the rice paddy, they came under long-range small-arms fire from their objective. Newton countered immediately by plastering the ridge with artillery and mortar fire. The advance continued and only a few casualties were taken by the time the companies reached a drainage ditch midway across the rice paddy. Here the long skirmish line paused to check its direction and place the wounded on dikes where they would be seen by corpsmen.

During the advance from the drainage ditch to the base of the ridge, 1/5’s commander frequently called on air, artillery and mortars to blast enemy automatic weapons on the crest and forward slopes of the objective. Company A had the added support of an Army tank destroyer which gave overhead fire from the hill south of Chukchon-ni. On one occasion Marine 75’s joined with the Army weapon to silence Communist guns in a small village at the base of the ridge.

Throughout the rice-paddy crossing, the Marines were constantly meeting Army stragglers, some of
whom had been isolated in enemy territory for as long as three days. Most of the soldiers were wounded, and all were weaponless and near exhaustion.

At 1100 Fenton and Stevens radioed Newton that they were ready for the assault, and the battalion commander immediately showered the objective with 81-mm. mortar fire to smother North Korean machineguns.

Beyond the edge of the rice paddy in Company A’s zone, a sharp step led to the gentle incline at the base of the ridge. After a few yards, the gradual slope gave way to a steep rise which shot up abruptly to the crest of the high hill.

Lieutenant Muetzel’s 2d Platoon held up at the step, using its protection against enemy fire while 1/5’s mortar barrage was falling. During the pause Technical Sergeant McMullen brought the 1st Platoon into position on Muetzel’s right and Lieutenant Fox aligned his 3d Platoon on the left.

As soon as the supporting fire lifted, Muetzel jumped to his feet and shouted the command to assault. Every man in Company A’s skirmish line responded by scrambling up the hillside. The Marines made such a fearful racket that a whole company of alarmed North Koreans suddenly jumped up from concealed foxholes on the forward slope and fled toward the summit.

The panic-stricken Reds were easy targets for Company A’s riflemen and BAR men. Halting on the gentle incline, the Marines carefully took aim and killed most of the enemy soldiers. When the Communist survivors disappeared over the crest, Company A again surged upward and within minutes carried the summit.
Chapter 11. Second Naktong
Assault on Hill 117

The 1st Battalion secured its initial objective about noon on 3 September. Company B’s next target was a continuation of the ridge running parallel to the MSR for 1,000 yards and topped by 4 conspicuous peaks. Able Company’s second objective was a hill stretching across its front beyond a 200-yard valley. This hill was connected to Stevens’ first objective by a narrow razorback ridge on the right which offered a poor route of approach. [22]

The two companies paused on their newly won positions to reorganize, evacuate wounded, and wait for a resupply of ammunition. There they came under heavy fire from the reverse slopes of their first objective and the high ground to the west. Several casualties were taken before Corsairs, requested by Newton, appeared for an air strike. As the Marine fighter planes unloaded their ordnance, large groups of enemy broke. Most of the Reds fled down the northern slopes, crossed the MSR and ascended Hill 117 in 2/5’s zone.

Newton reacted to reports of the rout by throwing heavy artillery fire across the enemy’s avenues of retreat. The hillsides and road were soon littered with bodies and equipment.

While 1/5’s attack on its first objective was in progress, Company D had secured the 5th Marines’ right flank by clearing Myong-ni of moderate resistance and seizing the hill to the northwest of the large village. The new company commander, First Lieutenant H. J. Smith, reported to Roise that he was receiving considerable machinegun and mortar fire from Hill 117. This high ground lay directly across 2/5’s front, stretching northward from the MSR to a point about 500 yards west of Myong-ni.

Smith’s reports, together with the news of the enemy’s withdrawal to Hill 117 from 1/5’s zone, led Roise to order Company D to attack the high ground from the north and cut off the North Korean retreat. Shortly after 1200, Smith’s company jumped off to the southwest from its positions above Myong-ni and fought across the rice paddies circling the objective.

Company E could not advance from the chain of hills won earlier in the day because of enemy troops along the high ridge in Baker Company’s zone south of the MSR. But Jaskilka’s men supported the attack on 117 by fire.

A platoon of 75’s from First Lieutenant Almarion S. Bailey’s AntiTank Company, taking positions on Jaskilka’s right, quickly knocked out an enemy gun on the objective. The Communists answered with 85-mm. fire from a concealed T–34 tank, killing 2 and wounding 7 of the recoilless rifle crews.

Company D gained a foothold on one of Hill 117’s spurs against light resistance. As the unit advanced south toward the crest, however, enemy troops pouring across the MSR from 1/5’s zone had boosted the ranks of the defenders to approximately two battalions. Smith’s company was caught in its isolated position 500 yards from the rest of 2/5 and blasted by North Korean artillery, mortars, and automatic weapons. Casualties mounted at such a staggering rate that the Marines were hard put to retain their foothold on the northern tip of the hill.

While the 2d Battalion was maneuvering and fighting on the right of the road, the 2d Platoon of tanks pushed westward along the MSR from its early morning position 500 yards west of Yongsan. The Brigade armor became heavily engaged with enemy antitank weapons, and several casualties were taken as Marines exposed themselves from unbuttoned M–26’s to spot Communist emplacements. Second Lieutenant John S. Carson, who had taken over the platoon after Winter was wounded, fell before enemy machinegun fire and died instantly.

Going into hull defilade on another low hill overlooking the MSR, the 2d Platoon surprised three T–34 tanks on the road ahead and quickly destroyed them with 90-mm. fire. The tankmen then turned their guns on a
wealth of targets spread across the front: Red antitank weapons, machinegun positions, troop concentrations, and
groups either retreating or attempting to reinforce.

About noon, Second Lieutenant Sweet’s 3d Platoon joined the 2d and added its firepower to the fusillade.
Another T–34 was knocked out when Sweet’s men blasted a thicket suspected of concealing an antitank gun. A
fifth North Korean tank went out of action when it was abandoned by its crew on the left side of the road.

In the afternoon of 3 September, enemy resistance across 1/5’s front weakened proportionately as it grew
stronger in the 2d Battalion zone. Newton launched his attack on Objective Two at 1510, after MAG–33 and 1/11
had softened up the North Korean positions.[23]

Company B drove down the ridgeline paralleling the MSR and in little more than an hour had seized its
part of the objective, a peak directly across the road from Hill 117. During the 1,000-yard advance, Fenton
reported another large group of enemy fleeing to 2/5’s zone. The information was quickly relayed to Roise, who
had ample reason by this time to curse the fortunes of war.

In Company A’s zone, Stevens and his platoon leaders worked out a classic scheme of maneuver for
seizing Hill 91, their part of the battalion objective. McMullen’s 1st Platoon and the company machineguns were
to remain in position as the base of fire, while Muetzel’s 2d Platoon feinted across the 200-yard valley to the
front. Fox’s 3d Platoon, earmarked for the main effort, would then circle to the south and flank the enemy’s right.

Muetzel’s unit jumped off with Company B at 1510, crossed the low ground, and ascended a draw
leading to Hill 91. The Marines miscalculated, however, and climbed too far up the slope, so that they came
within grenade range of the crest and were pinned down by machinegun fire. The platoon was split, with Muetzel
and two squads on the left of the draw and Corporal Raymond E. Stephens and his squad on the right.

During the preparatory artillery barrage, Fox had led his platoon around to the enemy’s right flank,
concealed en route by a rice-paddy bank. Not knowing when the supporting fire would lift, he withheld his squads
from an assault line by a wide safety margin. Thus when the artillery ceased, the North Koreans had time to come
out of their holes and hit the envelopment with small arms fire. Fox was wounded, and command passed to
Technical Sergeant George W. Bolkow who worked the platoon up into the enemy positions.

The 3d Platoon’s assault was sparked by Corporal Virgil W. Henderson and his 3d Squad, who worked to
the rear of a troublesome machinegun position and destroyed it. During the attack Henderson was painfully
wounded in the jaw by a Communist bullet.

Since both forward platoons had SCR 300 radios, Muetzel heard the report that Fox was wounded.
Concluding that the envelopment had failed, the 2d Platoon leader requested and received permission to make a
frontal assault on Hill 91 from his position on the forward slopes. Enemy mortar fire had added to the woes of
Muetzel’s diversionary thrust. And though an OY–2 of VMO–6 had given information leading to the destruction
of the mortar position, the beleaguered platoon leader sought the relative safety of a frontal assault.

Corporal Stephens, acting on his own initiative across the draw, had worked his squad up to the
razorback ridge and around the enemy’s left flank. Thus the hapless North Koreans on Hill 91 were hit by a
“triple envelopment” when Stephens struck from the north, Muetzel from the east and Bolkow from the south.

Company A reported its objective seized at 1630, and Newton ordered Stevens and Fenton to dig in for
the night.

Both Roise and Newton were confronted by serious space factors on the night of 3–4 September. The 2d
Battalion’s front was more than 2,000 yards long and formed a right angle. A gap of 500 yards stretched between
Company D’s precarious position on the northern tip of Hill 117 and Easy Company’s lines below Myong-ni.
This left Smith’s depleted unit isolated and Jaskilka’s right dangling.

The 1st Battalion’s right flank was exposed more than 1,000 yards along the MSR; and its front was
almost a mile in length, with a 200-yard valley separating the two rifle companies. The Brigade Reconnaissance
Company was deployed on high ground far out on Newton’s left flank, but this was hardly ample protection for the many avenues of approach in the south.

Exhibiting his characteristic faith in high explosives, Newton called on the 1st Platoon, Able Company Engineers, to contribute their sundry lethal devices to 1/5’s infantry defense. Beginning at 1800, 3 September, one group of engineers fanned out to the front and right flank of Company B’s lines. Despite fire from Hill 117 and enemy positions to the west, the demolitions men strung out dozens of antipersonnel mines, hand grenades, and blocks of TNT wrapped with 60-penny spikes. Before darkness set in, Baker Company’s forward slopes had the potential of an active volcano.

In Company A’s zone, Technical Sergeant David N. Duncan and Sergeant Bryan K. White led the other half of the engineer platoon in laying a similar field of obstacles. Duncan crowned his handiwork with a 40-pound shaped charge hooked up in a gully with a trip wire.

Staff Sergeant Saweren J. Dennis and his 2d Squad of engineers crept forward at midnight 1,000 yards on the MSR and laid an antitank minefield across the road near the southern tip of Hill 117. On the way Dennis discovered an enemy antitank minefield embedded in the road. Although the engineers had never seen a Russian wooden-box mine before, knowledge gained from the study of intelligence manuals during the Brigade’s sea voyage enabled them to detect, remove, and disarm every mine in the field during darkness. The work was delayed a few minutes when Dennis traced a clanking sound to the roadside ditch and killed a Communist soldier frantically trying to insert a loaded magazine into his submachinegun.

Before the engineers completed their work and retired to 1/5’s lines, Nature added an obstacle of her own to any enemy plans for a counterattack. A rainstorm broke, and the heavy downpour, accompanied by unseasonably icy winds, wrought misery on friend and foe alike for the rest of the night.
Chapter 12. Mission Completed

THE CASUALTIES OF 2/5 for 3 September totaled 18 dead and 77 wounded, most of them being taken by Company D. Lieutenant Colonel Murray ordered the 3d Battalion to pass through the 2d, therefore, and continue the attack on the right of the MSR at 0800 the next morning. The 1st Battalion was to resume its advance south of the MSR, while the Reconnaissance Company far out on the left would move forward to a new blocking position. [1]

Shortly after dawn on the 4th, the 1st Platoon of engineers went forward and removed the mines ahead of 1/5’s positions. Preparatory fires by 1/11 at 0750 routed a group of enemy on the peak on Baker Company’s front, and the Marine riflemen had a field day as the Reds threw away their weapons and pelted westward.

Companies A and B jumped off at 0800 and advanced rapidly over the high ground south of the MSR against negligible resistance. The attackers frequently observed small groups of enemy fleeing in all directions, and many of the Communists were cut down by Brigade air, artillery, and armor. Twelve prisoners were captured before 1/5 reached its half of Brigade Objective One at 1505. This was the high ground south of the MSR at Kang-ni, over 3,000 yards from the line of departure.

Shortly after 0800, 3/5 had launched a two-pronged assault against Hill 117, core of the NKPA 9th Division’s resistance the previous day. Company G advanced through Easy Company’s lines just above the MSR and pushed across the intervening rice paddies. The Marines charged over a small knoll in their path but found the enemy positions unoccupied except for several dead. Bohn quickly led the company to the southern slopes of Hill 117, which was strangely quiet by comparison with the tumult of the previous day. In capturing the southern half of the hill, Company G killed only 15 North Koreans.

Simultaneously with Bohn’s advance, Company H swung wide to the right and passed through the thin ranks of Dog Company on the northern tip of Hill 117. The attackers drove south against negligible resistance and quickly linked with Company G, securing the objective at 0840.

A connecting road runs from Myong-ni to the MSR, tracing the eastern base of Hill 117. Since engineers on the previous night had located the enemy minefield east of the junction on the main road, Taplett moved his headquarters to the MSR via the connecting road. The lead vehicle, a personnel carrier loaded with communications men, struck a Communist mine on the secondary route east of the newly captured objective. The resulting explosion caused 10 casualties.

By noon the engineers had cleared the road of several Russian-type mines identical to those found during the night. The two anti-vehicular minefields were among the first such obstacles encountered by the UN forces in the Korean conflict.

After seizing Hill 117, Companies G and H continued the attack westward by advancing abreast on the high ground north of the MSR. Contact with 1/5 on the left was maintained, but the 9th Infantry on the right soon fell behind and disappeared from sight.

At 1045 Company G ran into machinegun fire coming from the 3/5 area of the Brigade objective, the hill north of Kang-ni. Taplett blasted the hill with Marine air and artillery, and the North Koreans were in full retreat within an hour. MAG–33 and 1/11 rained death on the retreating Reds and continued to pound the hill preparatory to an assault by Company G. Bohn led his troops forward and secured the objective at 1515.

Looking across the stream bed to the north of their new positions, the Marines of George Company spotted enemy infantry escorting a T–34 tank and withdrawing into the 9th Infantry zone. The Communist column was quickly dispersed by machinegun fire.
Marines following up the 3,000-yard advance along the MSR saw a picture of devastation unequalled even by the earlier defeat of the NKPA 4th Division. Hundreds of enemy dead were strewn along the road, hillsides and ridgelines. On the MSR between Hill 117 and Kang-ni lay a long column of North Koreans who had been caught by Marine air and artillery while attempting to reinforce Red lines. The dead leader was a lieutenant colonel whose briefcase contained a lengthy artillery treatise among other less scholarly documents.\[2\]

In addition to knocked-out and abandoned Communist tanks, vehicles, mortars, and antitank guns, the countryside was littered with enough small arms, ammunition, and gear to equip several hundred men. Even the North Korean paymaster had been caught in the sweeping tide of Brigade arms, and Marines distributed a huge quantity of worthless currency among themselves.

Not only did the Marines reap a harvest of enemy materiel; they also recaptured a great quantity of United States Army equipment lost during the Communist drive. American tanks, artillery pieces, mortars, vehicles, small arms, and ammunition and supply dumps were turned over to the 2d Division by the Brigade.

The destruction of the enemy camp left Army and Marine intelligence officers inundated by captured enemy documents. Muster rolls, ledgers, maps, orders, textbooks, and propaganda material were heaped into separate piles.

Late in the afternoon of 4 September, the 9th Infantry moved into positions on the high ground northeast of 3/5. This completed the advance to Phase Line One of the 2d Division’s counterattack plan. The second phase line on G–3 maps was drawn through Hill 125 and Observation Hill, 3,000 yards west of Kang-ni.

When informed that the Brigade had completed the first part of its mission, General Keiser authorized General Craig to advance toward Phase Line Two.

Beyond Kang-ni, the Brigade’s right boundary became the MSR, so that 3/5 could not advance westward from its half of Objective One. Major Charles H. Brush, Murray’s S–3, radioed Newton and passed on orders for the battalion commander to take the next piece of high ground, Cloverleaf Hill, just south of the MSR at Hwayong-ni, about a thousand yards away.

The 1st Battalion struck out through the intervening rice paddy, Company A on the left and Baker Company just below the MSR. Fenton’s unit had hardly begun the advance when it was stopped by heavy machinegun fire coming from the high ground north of Hwayong-ni. Newton then called for an air strike on the ridge and also requested 3/5 to keep it covered with supporting fire during Company B’s attack.

Enemy resistance evaporated with accustomed rapidity, and the Marines reported Cloverleaf Hill secure at 1800. Murray then ordered both front line battalions to establish night defenses and be prepared to continue the attack at 0800, 5 September.

The extent and trace of the Brigade front line on the night of 4–5 September was almost identical to that of 24 hours before. Again Newton’s battalion was in front on the left by a good 1,000 yards, and Companies A and B were stretched across a line almost a mile long, with the left flank wide open.

Separated from both 1/5 on the left and the 9th Infantry on the right, the 3d Battalion established a perimeter defense, even though it was in the center of the counterattack zone.

There was considerable tension and excitement after darkness on 4 September, although the Brigade lines were never seriously threatened. The engineers were busy in 1/5’s zone until after midnight, creeping to the front and flanks to lay mines. The 3d Battalion was shelled heavily throughout the night, and 1/5’s CP took direct hits
killing 1 Marine and wounding 2 others. One of the wounded was Second Lieutenant James R. Young, Newton’s Assistant S–3. The artillery liaison officer, First Lieutenant Joris J. Snyder, was knocked unconscious for several hours, though he received not a scratch from the 120-mm. explosion a few yards away.

At 0230 night-fighter planes of Major Joseph H. Reinburg’s VMF(N)–513 bombed the North Korean mortar position causing most of the damage, and the shelling slackened appreciably. Completing this mission, the Marine pilots dumped general purpose and fragmentation bombs on enemy vehicles and troops in the area.[3]

Companies G and H reported movement forward of their lines before dawn, and 3/5’s 81-mm. mortars quickly illuminated the front, disclosing several small groups of enemy. There was a flurry of fire, but the Reds gave no indication of organizing for an assault. One of the groups, either by error or suicidal folly, stumbled into the area of Taplett’s CP. A listening post of Weapons Company took the intruders under fire, killing an NKPA officer and routing the others.
Marines of the 3d Battalion were startled at daybreak, 5 September, when a company of North Koreans attacked the 9th Infantry’s left flank in full view of 3/5’s positions on the adjacent high ground. George, How, and H & S Companies poured machinegun fire into the mass of Reds at ranges of 600–1,000 yards. Most of the Red attackers were cut down before they could flee into the hills west of the Army lines [4].

Company B, on its high ground south of Hwayong-ni, heard the firing in 3/5’s area at daybreak and steeled itself for a possible counterattack from the right flank. When Newton received word of the abortive attack on the 9th Infantry, he ordered his two rifle companies to prepare to move out at 0800 as planned.

The Marines of Companies A and B were organizing their attack formation on Cloverleaf Hill when two Air Force P–51’s came in for an uncontrolled air strike on the high ground north of Hwayong-ni. Strafing the ridge from north to south, the planes riddled Cloverleaf Hill as they pulled out of their dives. The 2 exposed companies were showered with bullets, and it seemed miraculous that only 1 Marine was wounded.

At 0820, 1/5 jumped off to the west to seize the Brigade’s portion of Phase Line Two—Hill 125 and Observation Hill. Beyond these hills lay Obong-ni Ridge, blocking the path to the Naktong River, third and final phase line of the 2d Division counterattack. Because of its tactical importance and great significance, battle-scarred Obong-ni was designated a special objective, apart from the phase lines.

Half a mile west of Hwayong-ni the MSR makes a right-angle turn to the south, proceeds in that direction for 1,000 yards, then resumes its westward course through the cut between Hill 125 and Observation Hill.

Companies A and B, with the latter on the right, moved rapidly through the rice paddy below the MSR after leaving their line of departure on Cloverleaf Hill. At the road bend mentioned above, the MSR turned across Baker Company’s front. When Fenton’s unit crossed over to the base of the high ground leading to Hill 125, Companies A and B were separated by the MSR as it resumed its westward course. Stevens’ unit started up the long eastern slopes of Observation Hill, while Fenton’s men secured the eastern extension of Hill 125.

Obong-ni Ridge rumbled its first greeting to 1/5 at 0935 when mortars and artillery fired at the Marine attackers from emplacements around the hill. The Reds were answered immediately by 1/11 and Newton’s 81-mm. mortar platoon; and the rifle companies continued the advance to Phase Line Two, securing their objectives at 1100.

Murray ordered 1/5 to hold up until the 9th Infantry tied in on Fenton’s right. Communist automatic weapons on Obong-ni Ridge fired on the Marines sporadically during this interlude.

At 1000, while 1/5 was attacking to the west, the 3d Battalion had swung southward behind Cloverleaf Hill to take positions on the 5th Marines’ left. This was in preparation for Murray’s contemplated assault on Obong-ni Ridge by two battalions. It was planned that Newton’s unit would take the northern half of the long hill and 3/5 the southern portion.

Company G led the 3d Battalion advance through the rice paddy south of Cloverleaf Hill. Artillery and 75-mm. recoilless guns paved the way by raking possible enemy hiding places, enabling the infantrymen to proceed rapidly. Bohn’s destination was Hill 91, a shoe-like projection jutting out from the southern reaches of Obong-ni Ridge. Reaching the base of the high ground, Bohn requested that supporting fires be lifted. Attached tanks, 75’s, and 1/11 immediately shifted their destruction to Obong-ni Ridge.

Company G started up the slopes of Hill 91, while an attached 75-mm. recoilless gun obliterated a wheel-
mounted machinegun and its crew going into position on the crest. The Marines had climbed only a few yards when Bohn was ordered by Taplett at 1230 to withdraw the company to Observation Hill.

Company H, then passing between Hill 91 and Observation Hill on its way to Obong-ni’s eastern approaches, received the same order from the Battalion commander. The assault on the ridge had been canceled, and Murray was concentrating his regiment along the MSR.
Throughout the Brigade advance on 5 September, the Marines were hampered by heavy rain and fog which prevented MAG–33 and VMO–6 from operating effectively. Thus the enemy was offered a rare opportunity to mount a daylight attack.[5]

After Company B received orders to hold up on Hill 125, Fenton ordered his men to dig foxholes along the rain-soaked crest facing Tugok village and Finger Ridge to the west and Obong-ni Ridge to the southwest. The company commander directed the attached 1st Platoon of tanks to remain in the road cut, just to the rear of the famous bend around the forward slopes of Hill 125. Peering through the rain and fog, the Marine tankmen could see the dead, black hulls of the three T–34’s knocked out by the Brigade 2 weeks earlier.

At 1420 the sporadic sniping from the front suddenly increased to the intensity of preparatory fire, and Baker Company was pinned down on its ridgeline positions. The northern tip of Obong-ni Ridge blazed with NKPA machineguns, whose chatter was soon joined by that of automatic weapons concealed in Tugok and at the northern base of Observation Hill. A Communist antitank gun on Finger Ridge added its voice intermittently to the chorus.

Fenton’s radio went dead just as he reported the situation to Newton at his OP on the high ground to the east. As luck would have it, every other radio in the company area was inoperative because of the mud and rain; and Fenton was unable to warn the Marine tanks in the road cut that enemy armor and troops were advancing toward the road bend from the west.

As the Communist vehicles swung into the turn, a company of Red soldiers left the road and assaulted Company B’s positions by advancing up the draw on the Marines’ left front. The intense overhead fire supporting the Red Infantry enabled them to get well up the forward slopes. Meanwhile, a squad of North Koreans advanced up the draw leading from Tugok and harassed Fenton’s right front.

To stop the attack, the Marines were forced to man the crest of Hill 125. Thus exposed to the enemy’s supporting fire, Company B had to pay a heavy price in casualties.

During the advance of the Communist armor, it was determined that the first 2 of the 3 vehicles were T–34 tanks and the last a tracked armored personnel carrier. Fenton immediately deployed his assault squad on the slopes below his left flank to meet the threat on the MSR.

Lieutenant Pomeroy, unaware of the enemy tanks around the bend, advanced his M–26’s so that the machineguns on Obong-ni Ridge could be taken under massed fire. Thus, as the first Marine tank reached the bend, its 90-mm. gun was pointing to the left front, a quarter turn away from the enemy armor.

The lead T–34 fired on the Marine vehicle as soon as it came into view. Before the turret of the M–26 could be turned to take aim, several more 85-mm. projectiles struck; and the Brigade lost its first tank to enemy action. The second M–26 in column tried to squeeze by the first to render assistance, and it too was knocked out by 85-mm. fire in the restricted passageway.

The crews of both Marine tanks managed to get out of their vehicles through the escape hatches. Some of the wounded were aided by the engineer mine-clearance team accompanying the tank column.

Since the road bend was now blocked, the remainder of Pomeroy’s tanks could do nothing but park in the road cut. It was Marine infantrymen who stepped in at this point and blunted the NKPA victory on the MSR.

Company B’s assault squad plastered the lead T–34 with 3.5” rocket fire and stopped it cold. Shortly afterwards, the 1st Battalion’s assault platoon reached the fight scene and went into action with its 3.5’s. In short
order the infantrymen had completed the destruction of the first tank, knocked out the second, and destroyed the enemy personnel carrier.

The historic road bend, as seen through the rain and mist, had become a graveyard of armor. A total of 8 steel monsters were sprawled there in death: 5 T–34’s and 1 armored carrier of the NKPA, and 2 Pershing tanks of the 1st Provisional Marine Brigade.
On Hill 125 the fight reached a climax as Marines exchanged grenades and small-arms fire with the North Koreans slithering up the slopes in the driving rain. Company B had used all of its 60-mm. mortar shells and was running low on grenades and small arms ammunition. Enemy automatic weapons on the ridges to the front were still cutting down the Marine defenders at 1500 when Fenton sent a runner to Newton requesting more ammunition.[6]

The endurance contest was still in progress half an hour later, as the 9th Infantry moved into positions on the high ground north of Hill 125. Having no communications with his own supporting arms, Fenton sent a messenger to the Army unit commander, asking that he place artillery fire on the Marine front.

When Army shells began falling in answer to the request, 1/5’s 81-mm. mortars belatedly got into the fight and worked over the forward slopes of Hill 125 to within 50 yards of Company B’s positions. The heavy supporting fire turned the tide, and enemy pressure slackened considerably.

During the final stage of the enemy’s attack, Company A was being relieved on Observation Hill by 3/5. Stevens told his platoon leaders to leave their grenades and extra ammunition on the hill, since his orders were to withdraw to the rear. While the relief was taking place, however, Company A was ordered to reinforce Fenton’s unit against the enemy’s attack on Hill 125. Muetzel’s 2d Platoon, after recovering its ammunition, was augmented by a machinegun section, mortar squad, and two SCR–300 radios, before the young officer led the unit across the MSR to lend a hand.

When Stevens’ relief by 3/5 was completed, he added the 1st Platoon to Company B’s reinforcements, and himself withdrew to Cloverleaf Hill with the 3d Platoon as ordered.

The reinforcements were fed into Fenton’s line as fast as they reached the summit of Hill 125. By this time every man in Company B had been committed to the forward wall — mortarmen, clerks, signalmen, and all. Lieutenant Howard Blank combined his Able Company mortars with those of the defenders and immediately followed up the artillery and 81-mm. fire which had blunted the attack. These final concentrations of 60-mm. mortar fire on Obong-ni and Finger Ridges and the forward slopes of Hill 125 ended the enemy attack. The surviving Reds withdrew to Tugok.

At 1600, during the dying minutes of the Brigade’s final action in the Pusan Perimeter, Newton was ordered back to the regimental CP for a conference. The executive officer, Major Merlin R. Olson, took over 1/5 from the battalion OP on the ridge east of Hill 125.

The 5th Marines commander had called the leaders of his battalions to brief them on General Craig’s last field directive, which began with the long awaited words:

“THIS MY OPN ORDER 22–50 X COMMENCING AT 2400 5 SEPT BRIG MOVES BY RAIL AND MOTOR TO STAGING AREA PUSAN FOR FURTHER OPERATION AGAINST THE ENEMY X PRIOR TO COMMENCEMENT OF MOVEMENT 5TH MARS WILL STAND RELIEVED BY ELMS OF 2ND INF DIV COMMENCING AT DARKNESS . . . CONCEAL FROM THE ENEMY ACTIVITIES CONNECTED WITH YOUR WITHDRAWAL . . .”

Taplett’s 3d Battalion had sustained 24 casualties from artillery and mortar fire between its occupation of Observation Hill and the time it was relieved by a company of the 23d Infantry shortly after midnight. Plodding rearward through mud and driving rain, 3/5’s long column began its three-and-a-half-mile march to an entrucking point 2,000 yards west of Yongsan.
Following 3/5 were the weary, mud-soaked troops of the 1st Battalion. Having successfully defended Hill 125 at a cost of 2 killed and 23 wounded, Baker Company had filed down to the road after being relieved by another company of the 23d Infantry. Muetzel brought up the rear with Company A’s contingent, and a battalion column was formed at Olson’s check point east of Hill 125.

By dawn of 6 September, the two battalions were loading aboard trucks to follow the rest of the Brigade. Numb by fatigue and icy rain, the bent forms huddled together in the cargo vehicles had no regrets as they bade good-bye to the Pusan perimeter.
Chapter 12. Mission Completed

Brigade Embarkation at Pusan

The movement to Pusan was completed by the morning of 7 September, and the Brigade troops found themselves back at the docks where they had landed a little more than a month before. In fact, the docks were to be their bivouac area during the next 6 days; the men slept in the open and took their meals on board the transports in which they would soon be sailing around the peninsula.

The survivors of the Naktong fights—even the latecomers who had joined the Brigade at the Bean Patch—felt old and worn when they saw the large draft of shiny new Marines just landed as third rifle companies organized with their own NCO’s and platoons. The veterans had forgotten how young and untroubled a Marine could look; how neat and clean he could appear in a recently issued utility jacket.

The new companies were immediately assigned to their battalions. It was another job for officers and NCO’s who had the responsibility of replacing equipment lost in action as well as servicing ordnance, motor transport and other heavy equipment which had been sent from the Bean Patch to Pusan late in August.[7]

General Craig and his staff had their headquarters in one of the Pusan University buildings. There was no opportunity for planning, let alone rehearsals, for the forthcoming amphibious assault at Inchon. Craig and his officers had all they could do to get the Brigade ready for embarkation.

Among the tasks to be accomplished in less than a week, it remained to give some weapons training to the 3,000 troops of the 1st Korean Marine Regiment. This newly raised unit, attached to the Brigade for embarkation, was to make a name for itself within the next year and become the fourth rifle regiment of the 1st Marine Division. But in September 1950 there were great gaps in the training of the KMC’s. The men kept their rifles scrupulously clean, and they could strip an M–1 expertly, but few of them had ever fired a shot.

Marine NCO’s had the hazardous duty of giving the eager and excited KMC’s their first target practice after eight rounds of ammunition for each man had been acquired. No Marine casualties resulted, fortunately, but puffed and bruised cheeks were the rule among Koreans having their first experience with an M–1’s recoil.

There was, of course, no end of “scuttlebutt” going the rounds of the Marines as to their destination. One day the troops were lined up in formation and read a long lecture on the hydrographic aspects of the west coast port of Kunsan. It is to be hoped that this red herring made some impression upon the Koreans who were listening, since Pusan was a headquarters of enemy spies. As for the Marines, most of them concluded that at least Kunsan could be eliminated from the list of possible objectives.

The secret was well kept by Brigade officers in the higher echelons. Two engineer officers, First Lieutenant Ernest P. Skelt and Commissioned Warrant Officer Willard C. Downs, were given the secret mission of constructing wooden scaling ladders for the next operation. This project gave rise to more rumors, but it is safe to say that few men in the ranks knew the answer when the Brigade was deactivated at 0001 on 13 September 1950. The components immediately resumed their old unit designations in the 1st Marine Division and sailed to take part in the amphibious assault on Inchon scheduled for the 15th.[8]
Chapter 12. Mission Completed
Results of Brigade Operations

As the mountains behind Pusan faded from sight, General Craig and his men could reflect that the Brigade’s 67 days of existence had been productive. Altogether, the Marine air-ground team had fought three difficult offensive operations in a month while traveling 380 miles with a third of its organic transportation plus Army vehicles.

Total casualties for the Brigade included 148 KIA, 15 DOW, 9 MIA (seven of whom were later reclassified as KIA after recovery of the bodies) and 730 WIA.[9] It was estimated that the Marines inflicted total casualties of 9,900 killed and wounded on opposing NKPA units. Enemy losses of arms and equipment were on such a scale as to impair the effectiveness of the forces concerned.

In its initial operation, as a component of Task Force Kean, the Brigade had the major part in the first sustained Eighth Army counterattack—the military equivalent of a hard left jab which rocks an opponent back on his heels. General MacArthur, when reporting to the United Nations, asserted that “this attack not only secured the southern approaches to the beachhead, but also showed that the North Korean forces will not hold under attack.”[10]

The Communist drive in this sensitive area came closest of all NKPA thrusts to the vital UN supply port of Pusan. Up to that time the NKPA units spearheading the advance—the 6th Infantry Division and the 83d Motorcycle Regiment—had never suffered a reverse worth mentioning since the outset of the invasion. Then the counterattack by the 1st Provisional Marine Brigade hurled the enemy back 26 miles in 4 days from the Chindong-ni area to Sachon.

It was estimated that the Marine air-ground team killed and wounded 1,900 of the enemy while destroying nearly all the vehicles of an NKPA motorized battalion in addition to infantry armament and equipment. The enemy threat in this critical area was nullified for the time being, and never again became so serious. Marine efforts assisted Army units of Task Force Kean in taking new defensive positions and defending them with fewer troops, thus freeing some elements for employment on other fronts. Finally, the Marines earned more time and space for the building up of Eighth Army forces in preparation for a decisive UN counteroffensive.

The next Brigade operation, the first battle of the Naktong, ranks with the hardest fights of Marine Corps history. The enemy, after showing skill and aggressiveness in breaching the last natural barrier of the Pusan Perimeter, widened his Naktong bridgehead and took strong defensive positions in preparation for an all-out offensive while still maintaining his material superiority.

Only two Eighth Army units were available for a counterattack—the 27th Infantry and the 1st Provisional Marine Brigade. The Army regiment being needed in reserve on the southern front, the “firemen of the Pusan Perimeter” were placed under the operational control of the 24th Infantry Division on the central front. There the Marines had the mission of clearing the enemy from Obong-ni Ridge and two other large hill masses of the Naktong Bulge.

The NKPA 4th Infantry Division had taken maximum advantage of strong defensive terrain in accordance with the precepts taught by Soviet and Chinese Communist military instructors. This enlarged bridgehead was credited by CINCFE with giving the enemy the capability of mounting a serious threat to the main railroad from Pusan to Taegu.

It took a bitter and costly effort on the part of the Brigade, but the result was the most smashing defeat ever given an NKPA major unit up to this time. This reverse turned into a rout and slaughter toward the end as
Marine air, artillery, armor, and mortars inflicted terrible losses. Broken NKPA forces were cut down in flight or while trying to swim the Naktong.

If the Brigade’s first operation may be likened to a hard left jab, the fight in the Naktong Bulge is comparable to a solid right dealing a knockdown blow. The enemy lurched back to his feet, it is true, but the three rifle regiments of the NKPA 4th Infantry Division had to be filled up with hastily trained recruits.

Arms ranging from rifles to howitzers were abandoned as impediments by the routed Communists, so that the rebuilt NKPA 4th Infantry Division needed new armament and equipment of all sorts. General MacArthur’s summary of the action, reported to the UN Security Council on 18 September 1950, stated that “attacks by the United States 24th Division and the Marines eliminated a major penetration of the Naktong defense line on 18 August. Here, the enemy 4th Division was decisively defeated, lost its bridgehead, and was thrown westward across the Naktong River, suffering very heavy losses in both personnel and equipment.”

Never before had a major NKPA unit taken such a staggering defeat. As evidence of recent victories won over United States troops, the 4th Infantry Division had brought captured American machineguns and 105-mm. howitzers into the Naktong Bulge. Among the most important results achieved by the Brigade, therefore, was the hurt done to Red Korean morale.

Not only was the enemy’s Naktong bridgehead liquidated; he also lost heavily in time, which was becoming more valuable to him than space if he hoped to profit from his rapidly dwindling advantage in numbers. Not until 10 days later did the Communists establish another bridgehead in the Naktong Bulge area, and then it was their misfortune to encounter the 1st Provisional Marine Brigade again.

During the early morning hours of 1 September 1950, the enemy made his final effort to smash through to Pusan. Again the 27th Infantry was needed on another front, so that the Marines, as the only other mobile reserve unit, were committed under the operational control of the 2d Infantry Division. The seriousness of the situation in the Naktong Bulge is indicated by the fact that the enemy had enlarged his new bridgehead with a penetration of about 4,000 yards in the sector of the 2d Division. Elements of four enemy divisions had been identified on the central front when the Marines jumped off on the morning of 3 September.

The Brigade’s 3-day fight did not end as decisively as the first battle of the Naktong. That is because it was an unfinished fight. The Marines were pulled out on the night of 5 September, after gains of 2,500 to 3,000 yards that day, and it can only be conjectured what General Craig and his men might have accomplished during the next 48 hours.

As it was, the Brigade had a prominent part in disrupting the enemy’s effort to sever the Pusan-Taegu lifeline. Heavy losses both in personnel and equipment were inflicted on NKPA forces, and the Marines helped to reduce the enemy’s new bridgehead by 8,000 to 10,000 yards.

Not only had the enemy lost the battle; he had lost the war, as it proved, for EUSAK staff officers were even then planning a great UN counterstroke in the Pusan Perimeter. This drive was to be in conjunction with the amphibious assault on Inchon.

The turning point in the UN fortunes of war owed in no small measure to the three counterattacks by the Marines in the Pusan Perimeter. As for the overall effects, it would be hard to improve upon the analysis and evaluation in the Marine Corps Board Study:

“A careful examination of any of these operations in which Marines engaged discloses that a single failure would have a profound effect upon the entire UN effort. . . . On 3 separate occasions the Brigade was attached to the defending UN forces at points of dangerous enemy penetrations and 3 times Marine units spearheaded the counterattacking elements and effectively stopped the enemy’s efforts, seizing the initiative from him, inflicting serious losses upon him, and forcing the abandonment of immediate attempts at decisive penetration.”[11]
No Marine tactical organization of history ever did more than the Brigade to uphold the tradition of the Corps as a force-in-readiness. The transition from activation to embarkation took only 6 days, and it may be recalled that the Brigade became the first United States unit to get into the fight after crossing the Pacific from the American mainland.

Although the components had been hastily thrown together without opportunity for training or rehearsals, there were singularly few instances of tactical fumbling during the early actions. Some of the men had their only weapons familiarization instruction in actual battle, when they fired new arms for the first time. But thanks to the steadying influence of combat-wise company officers and NCO’s, the Marines of the Brigade soon gained competence.

The Brigade command and staff faced unusual problems arising from such factors as emergency situations, hurried planning, oral orders, incomplete intelligence, and lack of adequate maps. There were decisions now and then which officers would not have made if they had been endowed with the wisdom of knowledge after the event. But on the basis of information at the time, the Brigade command and staff need no whitewashing from history. Marine victories, on the other hand, may be attributed in large degree to a high order of leadership and professional ability in the upper echelons as well as on the company and platoon level.

It might have been argued that it was a waste to commit amphibious specialists to the operations of mountain warfare. But Marines were also trained as infantry, and gravel-crunching fighting men were needed to correct an illusion held by many of their countrymen. Atomic bombs, guided missiles, jet planes, and other marvelous new weapons had convinced a large section of the public that the day of push-button warfare was at hand. These Americans sincerely believed that wars could be waged at long distance, and the Marines of the Brigade served their country well by demonstrating that even in the tactical millenium it was necessary to seek out the enemy and close with him. For if there was any outstanding figure of the conflict in Korea, it was some second lieutenant making split-second decisions which meant life or death for a platoon holding a hill position against enemy attack in the darkness.

The three squadrons of MAG–33 provided support which the Brigade reported as “the best close air support in the history of the Marine Corps . . . outstanding in its effectiveness.” Army infantry officers were frankly envious on occasion; and Colonel Paul L. Freeman, USA, commanding the 23d Infantry, commented that “the Marines on our left were a sight to behold. Not only was their equipment superior or equal to ours, but they had squadrons of air in direct support. They used it like artillery. It was ‘Hey, Joe—This is Smitty—Knock the left of that ridge in front of Item Company.’ They had it day and night. It came off nearby carriers, and not from Japan with only 15 minutes of fuel to accomplish mission.”[12]

The UN forces, of course, had complete supremacy in the air. On two occasions the Marines of the Brigade were briefly strafed by NKPA night hecklers making a “scalded-cat” raid. During the interlude at the Bean Patch an enemy plane winged its way under cover of darkness to cut loose with a brief burst of machinegun bullets before disappearing into the night. But United States Air Force planes had virtually destroyed the little NKPA air force during the first few weeks of the war, so that the men of the Brigade were virtually unopposed in the air.

The time interval between a request for Marine air support and the actual delivery varied according to local conditions, but the ground forces seldom had cause for complaint. All-weather Squadron VMF(N)–513,
based at Itazuke, Japan, was prevented by reason of faulty communications and liaison from responding to every request for dawn, dusk or night support during early Brigade operations, but such missions were flown effectively in the Naktong Bulge. Meanwhile, the Corsairs of VMF–214 and VMF–323, orbiting on station and always available for short notice employment, gave fresh proof that the Navy-Marine concept of carrier-based tactical aircraft was sound in practice. Following are the statistics of MAG–33 operations in Korea from 3 August to 14 September 1950:

Click here to view table

Demands on the time of the original 4 helicopters of VMO–6 made it necessary to fly 2 more machines in from Japan. The rotary-wing aircraft had so many “firsts” to their credit in the Pusan Perimeter that a major tactical innovation was obviously in the making. The flights of General Craig, Colonel Snedeker and Lieutenant Colonel Stewart alone were enough to indicate that the helicopter was capable of working a revolution in command and staff procedures.

Altogether, the participation of the 1st Provisional Marine Brigade was an important factor in stopping the NKPA invasion in August 1950 and punishing the invaders so severely that they were ripe for a crushing defeat the following month. The Marines, moreover, did a great deal to restore the national pride of countrymen who had been hurt and bewildered by the outcome of the first month’s operations.

It was humiliating to read on the front page that only 5 years after reaching our greatest military strength of history, United States troops were being pushed around by Asiatic peasants of a Soviet-trained organization calling itself the North Korean People’s Army. Perhaps these Americans did not remember that the decline in our Armed Forces was due to overwhelming popular demands for the disbanding of our victorious armies of 1945. At any rate, the United States paid the penalty of unpreparedness in 1950 when its first ground-force units were beaten by better trained and equipped NKPA troops. Worse yet, correspondents at the front intimated that these defeats were due to the softness of our youth. It was charged that United States troops had been so pampered by motor transport that they could no longer march, let alone fight.

The Marines helped to change all that. The Marines and the better Army units proved that they were more than a match for the enemy when it came to marching as well as fighting. The Marines did their best to restore the pride of Americans who read about the advance to Kosong or the fight on Obong-ni Ridge. The Marines, in short, deserved the pat on the back conveyed in a dispatch to the Brigade on 23 August 1950 from their Commandant, General Clifton B. Cates:

“I AM VERY PROUD OF THE PERFORMANCE OF YOUR AIR-GROUND TEAM. KEEP ON HITTING THEM, FRONT, FLANKS, REAR, AND TOPSIDE! WELL DONE!”
Appendix A. Glossary of Military and Aeronautical Terms

AKA—Attack cargo ship
APA—Attack transport ship
ADC—Assistant Division Commander
BAR—Browning automatic rifle
BLT—Battalion landing team
CCF—Chinese Communist Forces (refers to entire Chinese force employed in Korea)
CG—Commanding general
CINCFE—Commander in Chief, Far East
CincPacFlt—Commander in Chief, Pacific Fleet
CINCUNC—Commander in Chief, United Nations Command
CNO—Chief of Naval Operations
CO—Commanding officer
COMNAGFE—Commander Naval Air Group Far East
COMNAVFE—Commander Navy Far East
COMPHIBGRUONE—Commander Amphibious Group One
COMSEVENTHFLT—Commander Seventh Fleet
COS—Combined Operations Section
CP—Command Post
CSG—Combat Service Group
CTF—Commander Task Force
CVG—Carrier Air Group
DOW—Died of wounds
EUSAK—Eighth United States Army in Korea
FAC—Forward Air Controller
FEAF—Far East Air Force
FECOM—Far East Command
FL—Flight leader
FMF—Fleet Marine Force (Pac = Pacific; Lant = Atlantic)
GHQFEC—General Headquarters, Far East Command
HF—High frequency (radio)
InfDiv—Infantry Division
JCS—Joint Chiefs of Staff
JOC—Joint Operations Center
KIA—Killed in action
KMC—Korean Marine Corps
KVA—Korean Volunteer Army
LST—Landing ship, tank
MAG—Marine Aircraft Group
MCBS—Marine Corps Board Study
MGCIS—Marine Ground Control Intercept Squadron
MIA—Missing in action
MSR—Main supply route
MTACS—Marine Tactical Air Control Squadron
NCO—Noncommissioned officer
NK—North Korea (n)
NKPA—North Korean Peoples Army
OP—Observation post
OY—Light observation plane
POL—Petroleum oil lubricants
POW—Prisoner of war
ProvCasCo—Provisional Casual Company
RCT—Regimental Combat Team
ROK—Republic of Korea
SAC—Supporting Arms Center
SAR—Special Action Report
SecNav—Secretary of the Navy
TAC—Tactical Air Coordinator
TAC X Corps—Tactical Air Command, X Corps
TACC—Tactical Air Control Center
TACP—Tactical Air Control Party
TACRON—Tactical Air Control Squadron
TAD—Tactical Air Direction
TADC—Tactical Air Direction Center
TAO—Tactical Air Observer
TAR—Tactical air request
T/E—Table of equipment
T/O—Table of organization
UN—United Nations
VHF—Very high frequency (radio)
VMF—Marine fighter type aircraft (squadron)
VMF (N)—Marine night fighter type aircraft, all-weather (squadron)
VMO—Marine observation type aircraft (squadron)
VMR—Marine transport type aircraft (squadron)
WIA—Wounded in action
Appendix B. Command and Staff List of the First Provisional Marine Brigade

7 July—13 September 1950

Commanding General: BrigGen Edward A. Craig
Deputy Commander: BrigGen Thomas J. Cushman
Chief of Staff: Col Edward W. Snedeker
G–1: Maj Donald W. Sherman
G–2: LtCol Ellsworth G. Van Orman
G–3: LtCol Joseph L. Stewart
G–4: LtCol Arthur A. Chidester

Special Staff Section
Adjudant: Capt Harold G. Schrier
Supply Officer: Maj James K. Eagan
Air Officer: Maj James N. Cupp
Signal Officer: Maj Elwin M. Stimpson
Air Observer: Capt Edwin L. Rives
Signal Supply Officer: 1stLt Joseph E. Conners
Engineer Supply Officer: Capt William R. Gould
Liaison Officer: LtCol Edward R. Hagenah
Brigade Surgeon: Capt Eugene R. Hering, Jr., USN
Brigade Dental Officer: LtComdr Jack J. Kelly, USN

Headquarters and Service Battalion
(32 officers—183 enlisted men)
Commanding Officer: Maj Richard E. Sullivan
Executive Officer: Capt Samuel Jaskilka (to 18 Aug 50)
CoComdr, Hq Co: 1stLt Nathaniel F. Mann, Jr.

Detachment, 1st Signal Battalion
(4 officers—99 enlisted men)
DetComdr: Capt Earl F. Stanley

Company A, 1st Motor Transport Battalion
(6 officers—112 enlisted men)
Commanding Officer: Capt Arthur W Ecklund

Company C, 1st Medical Battalion
(5 officers—94 enlisted men)
Commanding Officer: Comdr Robert A. Freyling, USN
Company A, 1st Shore Party Battalion
(12 officers—213 enlisted men)
Commanding Officer: Maj William L. Batchelor

Company A, 1st Engineer Battalion
(9 officers—209 enlisted men)
Commanding Officer: Capt George W. King

Detachment, 1st Ordnance Battalion
(5 officers—119 enlisted men)

PRESIDENTIAL UNIT CITATION

The President of the Republic of Korea takes profound pleasure in citing for outstanding and heroic performance of duty on the field of battle during the period 2 August 1950–6 September 1950.

THE FIRST UNITED STATES PROVISIONAL MARINE BRIGADE for the Award of THE PRESIDENTIAL UNIT CITATION

The First United States Provisional Marine Brigade was a vital element in the first major counterattack against the enemy.

In late July and early August 1950, the enemy had swept through the Chulla Provinces and had rapidly approached along the south Korean coast to a point only 35 miles from the vital port of Pusan. Together with the 25th Infantry Division, the First United States Provisional Marine Brigade, from 7 August to 12 August 1950, played a major role in attacking and driving back the enemy.

During the period 17 August to 20 August 1950 in conjunction with the 24th Infantry Division and units of the 2d Infantry Division, the First United States Provisional Marine Brigade attacked a great pocket of enemy forces who had successfully crossed the Naktong River and established a firm beachhead on the eastern bank. The Brigade attacked with such determination and skill as to earn the admiration of all who saw or knew of its battle conduct.

Later, on the night of 31 August–1 September, the enemy again launched an all-out offensive against the United Nations Forces. The First United States Provisional Marine Brigade was in Army reserve at that time. With the 2d Infantry Division, the Brigade again was committed in almost the same area of its earlier action against the Naktong pocket in the neighborhood of Yongsan. Again the gallant Marine forces were instrumental in preventing the enemy from capturing their objective and cutting the north-south lines of communication of the United Nations Forces.

The brilliant performance of duty in combat in Korea of each individual of the First United States Provisional Marine Brigade is in accord with the highest traditions of the military service.

This citation carries with it the right to wear the Presidential Unit Citation Ribbon by each individual of the First United States Provisional Marine Brigade which served in Korea in the stated period.

(Signed) SYNGMAN RHEE

THE SECRETARY OF THE NAVY
WASHINGTON

The President of the United States takes pleasure in presenting the
PRESIDENTIAL UNIT CITATION to the FIRST PROVISIONAL MARINE BRIGADE, REINFORCED for service as set forth in the following CITATION:

“For extraordinary heroism in action against enemy aggressor forces in Korea from 7 August to 7 September 1950. Functioning as a mobile, self-contained, air-ground team, the First Provisional Marine Brigade, Reinforced, rendered invaluable service during the fierce struggle to maintain the foothold established by friendly forces in the Pusan area during the early stages of the Korean conflict. Quickly moving into action as numerically superior enemy forces neared the Naktong River on the central front and penetrated to within 35 miles of Pusan in the southern sector, threatening the integrity of the entire defensive perimeter, this hard-hitting, indomitable team counterattacked serious enemy penetrations at three different points in rapid succession. Undeterred by roadblocks, heavy hostile automatic weapons and highly effective artillery fire, extremely difficult terrain and intense heat, the Brigade met the invaders with relentless determination and, on each crucial occasion, hurled them back in disorderly retreat. By combining sheer resolution and esprit de corps with sound infantry tactics and splendid close air support, the Brigade was largely instrumental in restoring the line of defense, in inflicting thousands of casualties upon the enemy and in seizing large amounts of ammunition, equipment and other supplies. The brilliant record achieved by the unit during the critical early days of the Korean conflict attests to the individual valor and competence of the officers and men and reflects the highest credit upon the First Provisional Marine Brigade, Reinforced, and the United States Naval Service.”

All of the First Provisional Marine Brigade except the First Amphibian Tractor Company participated in operations against enemy aggressor forces in Korea from 7 August to 7 September 1950.

The following reinforcing units of the First Provisional Marine Brigade participated in operations against enemy aggressor forces in Korea from 7 August to 7 September 1950:

Forward Echelon, First Marine Aircraft Wing (less ground personnel)
Marine Air Group Thirty-Three, Reinforced (less ground personnel)
Marine Observation Squadron Six plus Helicopter Section, Headquarters Squadron
Air Support Section of Marine Tactical Air Control Squadron Two
United States Army: Counter Intelligence Corps and Military Intelligence Special Detachment personnel attached to the Headquarters Company, Headquarters and Service Battalion, First Provisional Marine Brigade.

For the President,
(Signed) R. A. ANDERSON
Secretary of the Navy

HEADQUARTERS
EIGHTH UNITED STATES ARMY KOREA (EUSAK)
Office of the Commanding General
APO 301
22 August 1950
Subject: Commendation
Thru: Commanding General, 24th Infantry Division
To: Commanding General, 1st Provisional Marine Brigade

1. It gives me great pleasure to commend you, your officers and men, for the part your organization played in the successful attack which began 17 August 50 against a determined enemy occupying a bridgehead east of the NAKTONG RIVER in the vicinity of KUJIN-SAN and ended only when the bridgehead had been eliminated with great loss of men and equipment to the enemy.

2. Through excellence in leadership and grit and determination in all ranks, your organization helped materially in preventing the enemy from penetrating our lines at a critical time. In so doing it has upheld the fine tradition of the Marines in a glorious manner and by close cooperation has proved unification of the services a success.

3. Please accept my sincere thanks and congratulations. I ask that you convey to your splendid command, the traditional “Well Done.”

WALTON H. WALKER
Lieutenant General, United States Army
Commanding

HEADQUARTERS
24TH INFANTRY DIVISION
APO 24, 28 August 1950
To: Commanding General, 1st Provisional Marine Brigade, APO 25

1. I am pleased and privileged to add my personal commendation to that of the Army Commander. And, on behalf of all officers and enlisted personnel of my command, I desire to express our sincere appreciation for the decisive and valiant offensive actions conducted by your command which predominately contributed to the total destruction of the Naktong pocket.

2. The esprit, aggressiveness and sheer determination continuously displayed by all personnel of the 1st Provisional Marine Brigade in the face of fierce enemy resistance and counteraction has aroused the highest admiration of every member of my command.

JOHN E. CHURCH
Maj Gen, USA
Commanding

HEADQUARTERS
1ST PROVISIONAL MARINE BRIGADE, FMF (REINFORCED)
c/o Fleet Post Office, San Francisco, Calif.
9 Sep 1950
From: The Commanding General
To: All officers and men of the 1st Provisional Marine Brigade, FMF (Reinforced)

Subj: Letter of commendation from the Commanding General, Eighth United States Army in Korea, of 22 August 1950 with first endorsement by the Commanding General, 24th Infantry Division

Encl: (1) Copy of subj ltr and endorsement

1. It is with extreme pride in your accomplishments that I publish to all officers and men of the 1st Provisional Marine Brigade the enclosed copy of a letter from the Commanding General, Eighth United States Army in Korea, and endorsement by the Commanding General, 24th Infantry Division, United States Army, commending the Brigade.

2. The realization that your professional skill, esprit de corps, outstanding bravery, and determination to succeed in all missions has been specifically commended by the Army and Division Commanders under whom the Brigade was serving at the time is indeed a source of gratification to me as it will also be to you.

Foreword

THE INCHON LANDING was a major amphibious operation, planned in record time and executed with skill and precision. Even more, it was an exemplification of the fruits of a bold strategy executed by a competent force. The decision to attack at Inchon involved weakening the line against enemy strength in the Pusan Perimeter in order to strike him in the rear. It involved the conduct of an amphibious attack under most difficult conditions of weather and geography.

The stakes were high and the risk was fully justified. Had it not been for the intervention of the Chinese Communist Army, the offensive generated by the Inchon attack would have resulted in a complete victory for our arms in Korea. A study of the record of this operation will disclose, with arresting clarity, the decisive power that is to be found in highly trained amphibious forces when their strength is applied at the critical place and time.

--Gen. Lemuel C. Shepherd, Jr., USMC, Commandant of the Marine Corps
The Inchon-Seoul Operation
Lynn Montross and Nicholas A. Canzona

Preface

THIS IS THE second volume of a series dealing with United States Marine Operations in Korea during the period 2 August 1950 to 27 July 1953. Volume II presents in detail the operations of the 1st Marine Division and the 1st Marine Aircraft Wing as a part of X Corps, USA, during and immediately following the Inchon Landing on 15 September 1950.

In order to tell a complete story of this historic amphibious operation, the authors have described the mobilization of the Marine Corps reserves to form the components of the Division and Aircraft Wing; the movement to the staging area and the hurried planning for an amphibious landing; the withdrawal of the 1st Provisional Brigade and Marine Air Group 33 from the embattled Pusan Perimeter to amalgamate with the larger force for D-day at Inchon; the seizure of Seoul and its environs, and finally the withdrawal on 7 October to prepare for the Wonsan operation.

Again, this is primarily a Marine Corps story. Activities of other services are presented in sufficient detail only to set this operation in its proper perspective.

Grateful acknowledgment is made for the valuable information furnished by the scores of officers and men consulted by interview or letter and for the assistance provided by the Current History Branch of the Office of the Chief of Military History, Department of the Army.

Maps included herein were prepared by the Reproduction Section, Marine Corps Schools, Quantico, Virginia.

--Maj. Gen. T.A. Wornham, USMC, Assistant Chief of Staff, G-3
The Inchon-Seoul Operation

Chapter 1. The Communist Challenge

NO SPOT ON earth could have seemed farther removed from war’s alarms than Yellowstone Park on the tranquil Sunday afternoon of 25 June 1950. Yet it was here that Lieutenant General Lemuel C. Shepherd, Jr., Commanding General of Fleet Marine Force, Pacific (FMFPac), had his first news of Communist armed aggression in Korea and the resulting threat to world peace.

Appointed to his new command only nine days before, he was motoring from the Marine Corps Schools at Quantico to the West Coast. From Yellowstone Park he advised Admiral Arthur W. Radford, Commander in Chief, U.S. Pacific Fleet, of his readiness to proceed to Hawaii and the Far East. His offer was accepted, and a Marine plane from El Toro transported him from Salt Lake City to San Francisco. There he boarded the first available plane to Pearl Harbor, arriving in the early morning hours of 2 July.[1]

On this date, with the Korean conflict only a week old, the armed forces of the United States were already committed. From the outset the United Nations had viewed the Red Korean invasion of the Republic of Korea as a challenge issued to free nations by World Communism. The so-called North Korean People’s Republic had been set up after World War II as a Communist puppet state, and the army of invasion was both trained and armed by Soviet Russia.

More than half of the troops in the original North Korean People’s Army (NKPA) were veterans of the victorious Chinese Communist forces in the Chinese Civil War. Weapons and equipment, all the way from T–34 tanks to Tokarev pistols, had been made available by the Soviet Union; and Soviet instructors prepared the invading army for its surprise attack of 25 June on the Republic of Korea.[2]

There could have been little doubt as to the outcome. Although the ROK army included eight divisions and a regiment, estimated at some 98,000 men in all, it could not compare with the NKPA establishment of about equal numbers. The difference lay in the purposes for which the two forces had been organized during the joint Soviet-American occupation of Korea after World War II. While Red Army officers created the NKPA as an instrument of aggression, American instructors trained the ROK troops for frontier defense and internal security. They had neither tanks nor combat aircraft, and their heaviest artillery consisted of a few battalions of 105mm howitzers. It was scarcely more than a lightly armed constabulary which crumpled at the first shock of NKPA columns led by Soviet-made tanks and supported by Soviet-made bombing planes. The four ROK divisions deployed along the frontier were routed, and Seoul fell to the invaders on the third day.

The reaction of the United Nations was prompt and decisive. On 27 June the UN Security Council denounced the NKPA attack as a breach of world peace and called upon member nations to aid the Republic of Korea. The United States and 52 other nations approved this resolution, which was opposed only by the Soviet Union and two of its satellites.[3]

As the NKPA tanks entered Seoul, just evacuated by American nationals, President Truman ordered American air and sea forces in the Far East to support the shattered ROK army. With the U.S. Seventh Fleet protecting Formosa, Task Force 77 bombed and bombarded points on the Korean coast. Far East Air Forces (FEAF), consisting of eight and a half combat groups commanded by Lieutenant General George E. Stratemeyer, USAF, flew interdictory strikes meanwhile from bases in Japan against NKPA supply lines.

Within a few days the NKPA air force, consisting of about 100 Yak-type planes, was driven from the skies except for occasional night raids. It would appear that a mountainous peninsula of few good roads would be a favorable area for strategic bombing, since our naval forces were denying the sea lanes to the enemy. Yet the FEAF bombers could not prevent the aggressors from bringing up supplies at night by means of truck, animal,
and human transport. The columns of invasion were doubtless hampered, but they continued to roll on southward in spite of interdictory strikes.

General of the Army Douglas MacArthur, Commander in Chief, Far East (CinCFE), concluded on 29 June, during his first flying visit to the front, “that air and naval action alone could not be decisive, and that nothing short of the intervention of U.S. ground forces could give any assurance of stopping the Communists and of later regaining the lost ground.”[4] Unfortunately, he had only the four understrength divisions of the Eighth U.S. Army at his disposal in the Far East. During the two World Wars the United States had been able to raise and train armies while allies held the line. But no such respite was forthcoming in Korea, and the first U.S. ground forces at the front consisted of a small task force flown from Japan—an incomplete battalion reinforced by a battery of artillery.

The date was 2 July 1950. And on this same Sunday, CinCFE sent a request to Washington for the immediate dispatch of a Marine regimental combat team (RCT) with appropriate air to the Far East.
It is not quite a coincidence that 2 July happened also to be the date of General Shepherd’s arrival at Pearl Harbor. Previous decisions in Washington had made it virtually certain that General MacArthur’s request would be granted, and CG FMFPac was on his way to the Far East to prepare for the reception of the Marine reinforcements.

The first step had been taken on 28 June. General Clifton B. Cates, Commandant of the Marine Corps, conferred at the Pentagon with Admiral Forrest P. Sherman, Chief of Naval Operations. He urged that troops of the Fleet Marine Force be employed, and CNO promptly informed Vice Admiral C. Turner Joy, Commander of Naval Forces, Far East (ComNavFE), that a Marine RCT could be made available if General MacArthur desired it.\[5\]

CinCFE had hoped that an entire Marine division could be sent to the Far East. But after being briefed by Admiral Joy as to the limitations of Marine Corps numbers, he had to content himself with the request for an RCT.

Admiral Sherman acted at once. With the approval of JCS and the President, he ordered Admiral Radford to transport the Marine units across the Pacific. This was the inception of the 1st Provisional Marine Brigade (Reinf.), which was activated on 7 July with three squadrons of Marine Aircraft Group 33 as its air component.\[6\]
While General Shepherd stopped for a few days at Pearl Harbor, the possibility of an Inchon amphibious operation was mentioned officially for the first time at a conference in Tokyo attended by two Marine officers. On 4 July a party given by the American colony was interrupted by a message for Brigadier General William S. Fellers, commanding general of Troop Training Unit, Amphibious Training Command, Pacific Fleet, and Colonel Edward S. Forney, commanding Mobile Training Team Able of that organization. As specialists in amphibious techniques, they were summoned along with Army and Air Force officers to a meeting at Headquarters, FECOM, presided over by General MacArthur’s chief of staff, Major General Edward M. Almond, USA.[7]

The Marine officers were in Japan as a result of General MacArthur’s belief in the efficacy of amphibious tactics. Early in 1950, several months before the outbreak of the Korean conflict, he had foreseen the necessity of recovering lost ground by means of a ship-to-shore assault if an enemy ever won a foothold in the Japanese Islands. His request for amphibious instructors to train U.S. Army troops in Japan had found the Navy and Marine Corps ready with units set up for just such a purpose.[8]

The oldest was the TTU organization of the Phib Tra Pac established originally on 15 August 1943 to prepare Army as well as Navy and Marine forces for amphibious operations. After making a distinguished record in World War II, TTU created a permanent place for itself during the following five years.[9]

A group of TTU officers and enlisted men under the command of Colonel Forney made up Mobile Training Team Able in the spring of 1950. Sailing from San Diego in April, these Marines were accompanied by a second group of amphibious specialists, the ANGLICO (Air and Naval Gunfire Liaison Company) instruction team commanded by Lieutenant Edward B. Williams, USN.[10]

The ANGLICOs, composed of both Navy and Marine Corps personnel, evolved in 1949 to assist Army units lacking the forward air control and naval gunfire control units which are integral in Marine divisions. Growing out of the responsibility of the Marine Corps for the development of those phases of landing force operations pertaining to tactics, techniques, and equipment employed by landing forces, the first company was formed in answer to the request of Lieutenant General Mark W. Clark, USA, for a unit capable of giving an Army division this sort of amphibious fire support. After taking part in the MIKI exercises with the Sixth Army in Hawaii during the autumn of 1949, this ANGLICO split up into instruction teams assigned to various Army units.[11]

Training Team Able and Lieutenant Williams’ ANGLICO team reached Japan just in time to cooperate with a third organization of amphibious specialists, Rear Admiral James H. Doyle’s Amphibious Group (PhibGru) One of the Pacific Fleet. The three teams were given a mission of training one regiment from each of the four Eighth Army divisions in Japan. But the instruction program had only been launched when it was interrupted by the Korean conflict.

PhibGru One and the ANGLICO team were immediately assigned to new duties in connection with the sea lift of Eighth Army troops to Korea. They had just begun this task when orders came for Admiral Doyle and his staff, in the USS Mount McKinley at Sasebo, to proceed by air on 4 July to the conference at Tokyo.[12] There at FECOM Headquarters, they met General Fellers, Colonel Forney, and the Army officers who had been summoned from the Independence Day celebration of the American colony.

At the conference it was made plain that the concept of an Inchon landing had originated with General
MacArthur. Even at this early date, he envisioned not only a ship-to-shore assault on some east or west coast seaport, preferably Inchon, but also a drive inland to cut enemy communications and envelop Seoul. The Joint Strategic Plans and Operations Group (JSPOG) headed by Brigadier General Edwin K. Wright, U.S.A. (FECOM G–3) was then drawing up the outline of such an amphibious attack plan. Code-named Operation BLUE-HEARTS, it called for a landing in the Inchon area by a Marine RCT and an Army assault force in coordination with a frontal attack from the south by the 24th and 25th Divisions. Inchon had been designated the objective area for the amphibious assault, and the date would depend upon the availability of troops for the combined operation.

It would be an understatement to say that the naval and Marine officers were impressed by the boldness of MacArthur’s thinking. At a time when he could send only a battalion-size force to the aid of the shattered ROK army, his mind had soared over obstacles and deficiencies to the concept of an amphibious operation designed to end the war at a stroke.

It was an idea that fired the imagination. But the amphibious specialists of TTU and PhibGru One had been trained to view the risks with a realistic appraisal. Their admiration was tempered by caution, therefore, when they took into account the difficulties.

The end of World War II had found the United States at a peak of military strength never before attained in the Nation’s history. Then, within a year, the popular clamor for the immediate discharge of citizen-soldiers had left the Army with scarcely enough troops for the occupation of strategic areas in the Far East. It took vigorous recruiting to fill the ranks in time of peace, and on 25 June 1950 the U.S. Eighth Army in Japan included the 7th, 24th, and 25th Infantry Divisions and the 1st Cavalry (dismounted) Division. Infantry regiments were limited to two battalions.

In the lack of trained amphibious assault troops, a definite decision could not be reached at the conference of 4 July. But it was proposed by FECOM officers that Major General Hobart H. Gay’s 1st Cavalry Division be employed as the Army assault force of the proposed Inchon operation. PhibGru One and Training Team Able were to give the troops all possible amphibious training, and Colonel Forney was assigned on 5 July as the G–5 (Plans) of the division.

Chapter 1. The Communist Challenge
General Shepherd in Tokyo

The activation of the 1st Provisional Marine Brigade on 7 July freed General Shepherd to continue his trip to the Far East. That evening, accompanied by his G–3, Colonel Victor H. Krulak, he took off from the Pearl Harbor area on the flight to Tokyo.

Upon his arrival, CG FMFPac was acquainted by General Almond with the deteriorating military situation. As a first step toward sending U.S. ground forces to Korea, CinCFE had set up the GHQ Advanced Command Group under the command of Brigadier General John H. Church, USA. After beginning the reorganization of the ROK forces, it was absorbed on 3 July by Headquarters, U.S. Armed Forces in Korea. And with the establishment next day of the Pusan Logistical Command (Brigadier General Crump Garvin, USA), a start was made toward handling the mountains of supplies which would be required.[16]

On 4 July the initial contact of U.S. ground forces with the enemy took place near Osan. The little task force from Major General William F. Dean’s 24th Infantry Division could not attempt anything more ambitious than delaying actions. But preparations were afoot to send the rest of the division to Korea as soon as possible, to be followed by Major General William B. Kean’s 25th Infantry Division.

The first firefights occurred on 5 and 6 July in the vicinity of Osan. It was evident at once that the enemy held a great superiority in arms and equipment. Lieutenant General Walton H. Walker, USA, who had been one of Patton’s favorite subordinates, commented after his first visit to the Korean front that the NKPA units appeared equal to the Germans who were his adversaries in World War II.[17]

Accounts of the early actions in Korea were depressing to FECOM officers.[18] Many plausible excuses may be found for men snatched from occupation duties and rushed piecemeal into action against great material odds. The nation as a whole must share the blame when willing troops are sent to the firing line without adequate preparation, as were the first U.S. units. Eighth Army officers had done their best under the circumstances, but a scarcity of maneuver areas in Japan had restricted training exercises to the battalion and company levels.

Divisions with barely 70 percent of their full complement of troops were armed with worn World War II weapons, some of which proved unserviceable for lack of spare parts and maintenance personnel. Division tank units, equipped with light M–24 tanks because of poor roads and bridges in Japan, operated at a handicap against the enemy’s new Soviet T–34 tanks; and American 2.36-inch rocket launchers knocked out NKPA armor only at fairly close ranges.[19]

At this stage the ground forces were particularly dependent upon air support because of shortages of artillery. But since the mission of the Air Force in Japan had been primarily of a defensive nature, neither the organization nor equipment was available for effective air-ground cooperation on the tactical level. As a consequence, FEAF units had to confine their tactical efforts largely to targets of opportunity, and 24th Infantry units had to do without such support when it was most needed.[20]

Altogether, the so-called “police action” in Korea proved to be one of the toughest assignments ever given to American soldiers.
General Shepherd’s few days in Tokyo were filled with conferences, and history was made on 10 July during the course of a conversation with General MacArthur at FECOM Headquarters.

The commander in chief was not optimistic about the situation at the front. Not only had the NKPA invasion developed into a formidable threat at the end of the first two weeks, but the possibility of Red Chinese or Soviet armed intervention could not be dismissed.

President Truman had named General MacArthur as supreme commander of UN forces after the Security Council passed a resolution on 7 July calling for a unified effort in Korea. General Walker was soon to be appointed to the command of the Eighth Army in Korea (EUSAK), assuming control of all ROK ground forces.

The personnel situation had grown critical. After being completely routed, the ROK troops were now in process of reorganization into five divisions. Meanwhile, the U.S. 25th Infantry Division was being sent to Korea as rapidly as possible; and it had been decided to withdraw the 1st Cavalry Division from consideration as the landing force of the proposed Inchon operation. Not only were these troops lacking in amphibious training, but they were needed as infantry reinforcements. Thus it was planned for the combat-loaded 1st Cavalry Division to make a landing at the East Coast port of Pohang-dong, under the direction of ComPhibGru One and Mobile Training Team Able, before proceeding to the front. This would leave only the 7th Infantry Division in Japan, and it was being stripped of troops to fill out units of the other three.

The outweighed UN forces were still limited to delaying actions. But General MacArthur hoped that space could be traded for time until the arrival of stateside units enabled him to take the offensive. At his urgent request, the 2d Infantry Division and 2d Engineer Special Brigade had been alerted in the United States for immediate movement to the Far East. Port dates commencing on 20 July had been assigned, and General Wright expressed his opinion that these units might be employed along with the recently activated 1st Provisional Marine Brigade to initiate the first UN counterstroke.[21]

The only hope of an early UN decision, General MacArthur told CG FMFPac at their conference of 10 July, lay in the launching of an amphibious assault to cut supply lines in the enemy’s rear. This situation, he added, reminded him of the critical days of World War II in the Pacific, when troops trained in amphibious techniques were urgently needed to make ship-to-shore landings on Japanese-held islands.

In a reminiscent mood, MacArthur recalled the competence shown by the 1st Marine Division while under his control during the New Britain operation of 1943–1944. If only he had this unit in Japan, he said, he would employ it at his first opportunity as his landing force for the Inchon assault.

Shepherd, who had been assistant division commander of the 1st Marine Division during the New Britain landings, immediately suggested that the UN supreme commander make a request that the 1st Marine Division with appropriate Marine air be assigned to him. This possibility had apparently been put aside by MacArthur after being limited to an RCT in his request of 2 July. He asked eagerly if the Marine general believed that the division could be made available for an Inchon landing as early as 15 September. And Shepherd replied that since the unit was under his command, he would take the responsibility for stating that it could be sent to Korea by that date, minus the infantry regiment and other troops of the Brigade.[22]

Thus was history made without pomp or ceremony during the conference at FECOM Headquarters.

The date was 10 July, but it was already D-minus 67 for thousands of American young men. On farms and in offices, in cities and villages from coast to coast, these civilians had no inkling that just 67 days later they
would be fighting their way ashore in a major amphibious operation. For they were Marine reservists, and the 1st Marine Division could not be brought up to full strength without calling them back into uniform.

Shepherd realized, even while assuring MacArthur that the division could be made combat-ready by 15 September, that the activation of the Brigade had left the division with less than the strength of a single RCT. Nearly as many men would be required to bring it up to full strength as were contained at present in the entire Fleet Marine Force.[23] But so great was his confidence in the Marine Corps Reserve that he did not hesitate to take the responsibility.

Nor did MacArthur lose any time at making up his mind. That very day, 10 July, he sent his first request to the Joint Chiefs of Staff for a Marine division.

As the conference ended, Shepherd found the UN supreme commander “enthusiastic” about the prospect of employing again the Marine outfit that had been his reliance seven years before in the New Britain operation. He planned to stabilize the front in Korea as soon as possible, he said, as a prelude to the landing in the NKPA rear which he believed would be decisive.[24]

Chapter 1. The Communist Challenge
America’s Force-in-Readiness

Long before the New Britain landing, Cates and Shepherd had learned from first-hand experience as junior officers how decisive a force-in-readiness can be. The lieutenant from Tennessee and the lieutenant from Virginia took part in June 1918 with the Marines who stopped the Germans by counterattacking at Belleau Wood. In terms of human tonnage, two Marine regiments did not cut much of a figure in the American Expeditionary Force. What counted was the readiness of the Marines and a few outfits of U.S. Army regulars at a time when most of the American divisions had not yet finished training.

More than three decades later, as CMC and CG FMFPac, both Marine generals were firm advocates of the force-in-readiness concept as a basic mission of the Marine Corps. It was a mission that had evolved from practice rather than theory. During the half century since the Spanish-American War, there had been only two years when U.S. Marines were not on combat duty somewhere. It had long been a tradition that the Marines, as transitory naval forces, might land on foreign soil without the implication of hostilities usually associated with invasion. This principle was invoked, along with a liberal interpretation of the Monroe Doctrine, by the State Department from 1906 to 1932 in the Caribbean and Central America. As a means of supervising unstable governments in sensitive strategic areas, Marines were sent to Cuba, Mexico, Haiti, the Dominican Republic, Nicaragua, and China for long periods of occupation.[25]

U.S. Marines were not only web-footed infantry during these overseas operations; they also distinguished themselves as scouts, cannoneers, constabulary, engineers, and horse marines. As modern warfare grew more complex, however, the time came when the Leather-necks could no longer sail on a few hours’ notice as a “gangplank expeditionary force” made up of men detailed from the nearest posts and stations. No longer could such light weapons as machine guns, mortars, and mountain howitzers serve as the only armament necessary for seizing a beachhead.

The Fleet Marine Force evolved in 1933, therefore, to fill the need for a corps of highly-trained amphibious specialists capable of carrying out a major ship-to-shore assault against modern defensive weapons. New landing craft as well as new landing tactics and techniques were developed during the next ten years, and the reputation of the Marine Corps as a force-in-readiness was upheld in the amphibious operations of World War II.

During these three eventful decades of Marine development, General Cates and General Shepherd had participated in all the stages while ascending the ladder of command. Thus in the summer of 1950, they were eminently qualified for leadership in the task of building the 1st Marine Division up to war strength for the amphibious operation which General MacArthur hoped to launch on 15 September.

As a prerequisite, the sanction of Congress and authorization of the President had to be obtained before the Marine Corps Reserve could be mobilized. General MacArthur’s request of 10 July for a Marine division went to the Joint Chiefs of Staff, who referred it to General Cates. The Commandant could only reply that it would be necessary to call out the Reserve, and no action was taken on this first request. It was enough that a beginning had been made, and CMC put his staff to work on the necessary studies and plans.

General Shepherd was meanwhile winding up his visit to Tokyo by conferring with Admirals Joy and Doyle and Generals Almond and Strattemeyer. The Air Force general tentatively confirmed (subject to discussion with his staff) the assignment of Itami Airfield in Japan to Marine air units. He also informed CG FMFPac that he accepted as valid the principle of employing Marine air in support of Marine ground forces.[26]

The air situation in Korea had struck General Shepherd as abounding in paradoxes. He noted that “B-29’s
are employed against tactical targets to the dissatisfaction of all concerned—the Air Force because of misemployment of its planes, and the ground forces because of the results achieved. Carrier aircraft, despite the wealth of close support targets available, were committed against deep and semi-strategic targets. Jet fighters, with little enemy air to engage, have been assigned to close support work despite a fuel restriction which holds them to no more than 15 minutes in the combat zone. Only a very limited number of aircraft adaptable to tactical support missions are available (F–51 and B–26) and there appears to be urgent need for suitable close support aircraft along with competent air-ground liaison units.”[27]

These conclusions had much to do with a Marine policy, dating back to World War II, of insisting whenever possible on Marine close air support for Marine ground forces. Without disparaging other techniques, Marines believed that their own fliers, trained in Marine infantry methods, could provide the most effective tactical air for Marine infantry.

Chapter 1. The Communist Challenge
Planning for the Pohang Landing

While General Shepherd was flying back to Pearl Harbor, a succession of sleepless nights awaited the officers of PhibGru One, the ANGLICO group, and Training Team Able. Upon the shoulders of these amphibious specialists fell the task of drawing up the orders, planning the loading, and mounting out the troops of the 1st Cavalry Division for its landing of 18 July at Pohang-dong.

It was not even certain, when the division commenced loading at Yokohama on 14 July, that Pohang-dong could be held by the ROKs long enough for a landing to be effected. Three reinforced NKPA divisions were making the enemy’s main thrust down the Seoul-Taegon axis. They were opposed only by weary 24th Infantry Division units fighting delaying actions while falling back on Taegon and the line of the river Kum. Along the east coast and the mountains of the central sector, five regrouped and reorganized ROK divisions held as best they could. Two of these units in the center were being relieved by the U.S. 25th Infantry Division, which completed its movement to Korea on the 14th.

As a preliminary step in the Pohang landing, a reconnaissance party of Army, Navy, and Marine officers flew from Tokyo on 11 July into the objective area. They returned two days later with valuable information about the beaches, depths of water, and unloading facilities.

“Because of the extraordinary speed with which the landing at Pohang-dong was conceived, planned, and executed,” said the report of ComPhibGru One, “there was no opportunity for conventional and orderly planning. . . . Since all echelons of the planning force were installed in offices at GHQ in Tokyo, it was possible to employ the quickest and most informal ways of doing business. Telephone conversations and oral directives were used in place of dispatches, letters, and formal orders.”[28]

Lack of amphibious shipping in the area made it a Herculean labor to provide boat servicing gear, general securing gear, debarkation nets, towing bridles, and boat and vehicle slings in less than a week. By 14 July, however, enough shipping to move the four embarkation groups of the division had been assembled at Yokohama—two MSTS transports, two AKAs, six LSUs, and 16 LSTs in addition to LCVPs and LCMs.

The transport group and screen got under way on the 15th for a rendezvous near the objective area on D-day with the tractor group. Naval aircraft of Rear Admiral John M. Hoskins’ carrier group of the Seventh Fleet were on call to provide support; but at 0558 on the 18th, the armada was unopposed as it steamed into Yongil Bay. CTF 90 signaled orders for the carrying out of Plan Baker, calling for a landing against little or no enemy resistance. By midnight the Mount McKinley, Union, Oglethorpe, and Titania had been completely unloaded, and the LSTs had accounted for 60 percent of their cargoes. Altogether, 10,027 troops, 2,022 vehicles, and 2,729 tons of bulk cargo were put ashore on D-day.

The Second Echelon consisted of six LSTs, three APs, and four Japanese freighters, while six LSTs made up the Third Echelon. These ships discharged their cargo from 23 to 29 July, having been delayed by Typhoon GRACE. And on the 30th, ComPhibGru One, as CTF 90, reported that the operation had been completed and no naval units were now at the objective.[29]

Viewed superficially, the uncontested Pohang landing may have seemed a tame affair to stateside newspaper readers. Nevertheless, it was a timely demonstration of Navy and Marine Corps amphibious know-how and Army energy, and it came at a critical moment. The important communications center of Taegon had to be abandoned by 24th Infantry Division units on 20 July, and it was growing apparent that the Eighth Army would be hard-pressed to retain a foothold in Korea until reinforcements from the States could give the United
Nations a material equality. It was a time when every platoon counted, and the fresh regiments of General Gay’s division were rushed to the Yongdong area two days after their landing to relieve weary and battered elements of the 24th Infantry Division.
ON 18 JULY 1950, it was D-minus 59 for the Marine reservists who would hit the beaches at Inchon. These young civilians were doubtless more interested in major league baseball standings at the moment than in hydrographic conditions at the Korean seaport they would assault within two months. Yet the proposed amphibious operation moved a long step closer to reality on the 18th when Major General Oliver P. Smith left Washington under orders to assume command of the 1st Marine Division at Camp Pendleton, California.

A graduate of the University of California in 1916, General Smith had been commissioned a Marine second lieutenant at the age of 24 in the first World War. After serving in Guam during that conflict, he saw duty at sea and in Haiti during the early 1920’s, followed by studies at the Army Infantry School, Fort Benning, Georgia, and duty as an instructor in the Marine Corps Schools at Quantico.

In Paris, while attached administratively to the office of the U.S. Naval Attache, he took the full two-year course at the École Superieure de Guerre, and afterwards he was an instructor for three more years at the Marine Corps Schools. He had an extensive experience of hard-fought amphibious operations during World War II as a regimental commander in the Talasea, New Britain, landing, as ADC of the 1st Marine Division at Peleliu, and as deputy chief of staff of the U.S. Tenth Army on Okinawa. Returning with the rank of brigadier, he became Commandant of the Marine Corps Schools; and after putting up a second star, the tall, slender, white-haired general served as Assistant Commandant at Marine Corps Headquarters in Washington.

At the outset of the Korean conflict, Major General Graves B. Erskine had commanded the 1st Marine Division. Following his assignment to a secret State Department mission in southeast Asia, General Smith was named as his relief.

The division had meanwhile been reduced to 3,386 officers and men as compared to a strength of 7,789 on 30 June 1950. It had been stripped of its principal operating elements to build up the 1st Provisional Marine Brigade, which numbered about 5,000 officers and men when it sailed from San Diego to the Far East on 14 July under the command of Brigadier General Edward A. Craig. [1]

At El Toro, the near-by Marine Corps Air Station, it was the same story. The 1st Marine Aircraft Wing, with a total strength of 4,004 officers and men on 30 June, provided most of the 1,548 officers and men of Marine Aircraft Group 33, the air component of the Brigade, commanded by Brigadier General Thomas J. Cushman, who was also deputy Brigade commander. [2]

Chapter 2. The Minute Men of 1950
Expansion to Full Peace Strength

General Smith had known before his arrival at Pendleton that his first task would be the building up of the 1st Marine Division to full peace strength. As early as 12 July, a dispatch from CNO had warned CinCPacFlt that this expansion would take place, including the elements of the Brigade.[3] And on 15 July General Shepherd directed Brigadier General Harry B. Liversedge, temporary CG 1st Marine Division, to extend the work day and work week while intensifying training and making preparations to expand.[4]

The 15th was also the date of General MacArthur’s second request for a war-strength Marine division with its own air for employment in his proposed Inchon amphibious assault. General Shepherd advised CMC that same day as to the composition of cadres to facilitate the rapid expansion of the 1st Marine Division.[5]

Already it was becoming apparent that this build-up would allow little time for training. Fortunate it was, therefore, that the Division and the 1st Marine Aircraft Wing had participated in an intensive training program during recent months. Following are the principal exercises:

Oct 1949: Air lift field exercise involving movement of a reinforced battalion and air command to San Nicholas Island, Calif. One Marine aircraft group carrier-embarked for participation in Operation MIKI with Sixth Army in Hawaii.

Nov 1949: Field exercise involving a reinforced regiment and supporting aircraft.

Dec 1949: Combined field exercise—a simulated amphibious assault extending over a period of seven days— involving all principal elements of the Division and Wing.

Jan 1950: Participation by elements of Division in Operation MICOWEX 50, stressing the use of the transport submarine and helicopter in amphibious operations.

Feb 1950: Field exercise involving a reinforced regiment with supporting air.

Mar 1950: Land plane and seaplane air-lift exercise involving seizure of San Nicholas Island by a reinforced battalion and a Marine air command.

May 1950: Participation by a majority of Division and Wing elements in DEMON III, an amphibious demonstration for students of Command and General Staff College, Fort Leavenworth. Participation by Wing in two-week major advanced base field exercise, with intensive training in close support.

Jun 1950: Continuation of training in lesser air-ground problems, field exercises and command post exercises.[6]

Counterparts of nearly all of these exercises might have been found in the training program for the 2d Marine Division and 2d Marine Aircraft Wing on the North Carolina coast. Operation CAMID at Little Creek, Va., was similar to DEMON III. All principal FMFLant elements participated in Operation CROSSOVER at Camp Lejeune, North Carolina, in the spring of 1950, and a Marine aircraft group was embarked aboard a carrier in the Mediterranean. Other elements of the Wing took part in PORTREX, an Army-Navy amphibious exercise in the Caribbean, and in SWARMER, an Army-Air Force airborne exercise in North Carolina. Units of both the Division and the Wing were represented in the annual Amphibious Command Post Exercise at Lejeune; and throughout the winter and spring a succession of smaller ground, air, and air-ground exercises emphasized close support and amphibious landings.

Posts and stations were meanwhile conducting annual weapons qualification firing tests and individual
training as required by USMC General Order No. 10. This program was designed to maintain the basic military proficiency of men not serving with the Fleet Marine Force. It is significant, however, that a large proportion of them had reported to such duty directly from FMF units, in accordance with the rotation policy.

The program for the Organized Reserve included both armory and active duty summer training. Air and ground units of reservists were “adopted” during their summer training by similar units of the Fleet Marine Force, which supervised the exercises and provided instructors. By the summer of 1950, a large proportion of the reservists had progressed beyond basic training into advanced individual and unit training, so that they could be classed as “nearly combat ready” at the time of the 1st Marine Division expansion.[7]
Mobilization of Marine Corps Reserve

Shortcomings in quantity rather than quality of Marine personnel made expansion a problem on 19 July 1950, when General MacArthur sent his third request to the Pentagon for a Marine division with appropriate air. Again the Joint Chiefs referred the matter to General Cates, who was prepared with two plans worked out in detail by his staff—Plan ABLE, providing third rifle companies and replacements for the Brigade; and Plan BAKER, designed to bring the 1st Marine Division up to full war strength by calling reservists to active duty.

These plans were based on the personnel statistics of 30 June 1950. The grand total of 74,279 Marines on active duty at that time (97 per cent of authorized strength) was distributed as follows:

- Operating Forces—engaged directly in carrying out assigned missions and tasks = 40,364
- Supporting Establishment—comprising trained administrative and supply personnel = 24,552
- Special Assignment—including all personnel serving with organizations outside the regular establishment = 3,871
- Non-Available—made up of personnel hospitalized, confined, or en route = 5,492

TOTAL = 74,279

A breakdown of the Operating Forces reveals that the Fleet Marine Force numbered 27,703 men, the security detachments included 11,087, and 1,574 Marines were afloat. Of the 11,853 in FMFPac, 7,779 were in the 1st Marine Division, and 3,733 in the 1st Marine Aircraft Wing. The 15,803 Marines in FMFLant included 8,973 in the 2d Marine Division and 5,297 in the 2d Marine Aircraft Wing.[8]

These figures make it evident that the 1st Marine Division could not be brought up to war strength of about 25,000 troops without drawing upon the 33,527 (77 per cent of authorized strength) in the ground forces of the Organized Reserve, and the 6,341 (94 per cent of authorized strength) in the aviation forces. The ground personnel were distributed among these units:

- Twenty-one infantry battalions; 16 rifle companies; seven 105mm howitzer battalions; five 155mm howitzer battalions; one 155mm gun battalion; two 40mm gun batteries; two tank battalions; three amphibian tractor battalions; one amphibian truck company; one signal company (supplementary); six signal companies; one engineer battalion; 15 women’s reserve platoons.
- Aviation units consisted of 30 Marine fighter squadrons (VMF) and 12 Marine ground control intercept squadrons (MGCI).

The Organized Reserve was exceeded as a reservoir of potential man power by the Volunteer Marine Corps Reserve, which had a total of 90,044 men and women on 30 June 1950. This total included 2,267 volunteer reservists on continuous active duty with the regular establishment, about 5,000 training in some 200 volunteer training units, and 1,316 in the Fleet Reserve.

Altogether, the strength of all Marine reserve components (less volunteer reservists on active duty) amounted to a total of 128,959, or nearly double the number of Marines in the regular establishment.[9]

Behind every Marine regular, figuratively speaking, stood two reservists who were ready to step forward and fill the gaps in the ranks. Thus it was scarcely far-fetched when some inspired public information officer coined the phrase “Minute Men of 1950” for these recent civilians who made it possible for the 1st Marine Division to hit the beaches at Inchon.

Events moved swiftly on 19 July. Only a few hours after the receipt of CinCFE’s third request, the mobilization of the Marine Corps Reserve was authorized by President Truman with the sanction of Congress. Headquarters Marine Corps, on the hill overlooking the Pentagon, was ablaze with lights that summer night; and
decisions were made which enabled four important steps to be taken next day:

(1) a warning to Reserve District directors that the Organized Reserve would soon be ordered to active duty;

(2) notification to commanding generals to expect some 21,000 Organized Reservists shortly at Marine Barracks, Camp Pendleton, and about 5,800 at Marine Barracks, Camp Lejeune;

(3) orders issued by CMC, with the approval of CNO, to discontinue the practice of discharging reservists at their own request;

(4) the first reservists—22 units with a total strength of 4,830 men—ordered to active duty with a delay of ten days.\[10\]

The Joint Chiefs of Staff were still not convinced that a Marine force could be embarked to meet General MacArthur’s deadline of 10 September without stripping FMFLant units to a dangerous extent. On the advice of Admiral Sherman, they informed CinCFE on 20 July that a Marine division could not be sent before November or even December.

General Shepherd had a great deal to do with shaping the ultimate decision. On the 20th, when CNO conferred with Admiral Radford on the question of a Marine division, the Commander of the Pacific Fleet in his turn asked the opinion of the Marine general. General Shepherd replied that a Marine amphibious striking force could be raised for the proposed Inchon landing without seriously weakening the Fleet Marine Force as a whole. This striking force, he predicted, would prove to be “the key of achievement of a timely and economical decision for our arms.”\[11\]

The Marine general’s statement was one of the main factors in causing the Joint Chiefs to advise MacArthur on the 22d that they were reconsidering their stand. During the next 48 hours, as dispatches sped back and forth across the Pacific, a compromise was reached. CinCFE was promised his Marine division in time for his target date—but it was to be a division minus one RCT. In other words, the infantry regiment of the Brigade would be supplemented by another RCT and supporting troops with appropriate Marine air. But the Joint Chiefs were adamant in their decision that MacArthur must wait until autumn or even winter for his third RCT.

These preliminaries cleared the way so that General MacArthur’s request was finally approved by JCS on 25 July, the day when General Smith took over command of the 1st Marine Division. The Marine Corps was directed to build the division (less one RCT) up to full war strength, and a date of departure of 10–15 August for the Far East was set.

A 50 percent reduction in Marine security forces within the continental limits of the United States was authorized by CNO on that same date. This meant that an additional 3,630 regulars would be enabled to report for service with the 1st Marine Division.

On the morning of the 26th a courier from Washington arrived at Camp Pendleton with a communication for General Smith indicating that the expanded 1st Marine Division would be composed of four types of personnel: (1) Brigade units, to be combined with the Division upon arrival in the Far East; (2) units of the 2d Marine Division, to be ordered to Camp Pendleton to augment elements of the 1st; (3) regular personnel to be called in from posts and stations; and (4) final deficiencies to be filled by men from the Marine Corps Reserve who met minimum combat experience requirements.\[12\]

Congress passed legislation on 27 July authorizing the President to extend for one year all enlistments in the armed forces, both regular and reserve, which were due to expire before 9 July 1951. This gave the assurance of a stable body of troops.

On the 31st, with the first reservists arriving at Camp Pendleton and the first contingents leaving Camp Lejeune for the West Coast, the Joint Chiefs of Staff directed CNO to expand the 2d Marine Division to war strength while increasing the number of Marine tactical air squadrons from 16 to 18.\[13\] Obviously, the 1st and 2d Divisions could not be built up simultaneously without serious delays, and priority must be given to the 1st. It
was equally obvious, moreover, that this expansion must be largely accomplished during the first week of August if the troops were to be made ready for embarkation between the 10th and 15th.
Chapter 2. The Minute Men of 1950

The Influx at Camp Pendleton

The first build-up troops to reach Camp Pendleton were three Organized Reserve units which arrived on 31 July—the 13th Infantry Company, of Los Angeles; the 12th Amphibian Tractor Company, of San Francisco; and the 3d Engineer Company, of Phoenix, Arizona. This was the beginning of an inundation which kept the camp keyed to a 24-hour day and a 7-day week. A torrent of troops poured into the vast military reservation by bus, train, and plane at all hours of the day and night. Confusion seemed to reign from the tawny California hills to the blue Pacific; and yet this seeming chaos was under the control of veteran officers and NCOs who had mounted out before. Accommodations for the newcomers were not de luxe, but men were being processed, assigned, fed, and equipped as rapidly as they arrived. The tramp of feet could be heard all night long as details of troops drew clothing and equipment or reported for medical examinations.

A total of 13,703 Marines reached Camp Pendleton during this busy week. Counting the personnel already on hand, troops of four categories were represented:

- Officers and men remaining in 1st Marine Division at Camp Pendleton after dispatch of the Brigade = 3,459
- Officers and men reporting from posts and stations up to 4 August = 3,630
- Officers and men reporting from the 2d Marine Division from 3 to 6 August = 7,182
- Officers and men selected as combat-ready out of the total of about 10,000 reservists reporting by 7 August = 2,891

TOTAL = 17,162

The expansion took place in two phases. First, of course, came the bringing of the 1st Marine Division (less one RCT) up to war strength, including augmentation personnel and supplies for the units of the Brigade. Next, the organization of a third reinforced infantry regiment, the 7th Marines, was directed by a letter from CMC to CG 1st Marine Division on 4 August.[14]

Headquarters Marine Corps naturally foresaw the necessity for replacement and rotation troops. The importance of the Reserve in this long-range expansion program may be seen by glancing ahead at the statistics of the next few months. Units of these recent civilians continued to report at such a rate that by 11 September 1950 the Organized Reserve (Ground) had in effect ceased to exist! In other words, all acceptable personnel had already reported for active duty, and the total of 33,528 officers and men represented a 90.02 percentage of availability.

The record of the Volunteer Reserve proved to be equally good after it was ordered to active duty on 15 August 1950. During the next seven and a half months, down to 31 March 1951, the Volunteer Reserve furnished 51,942 of the 84,821 reservists on active duty. As to the quality of these troops, about 99 per cent of the officers and 77.5 per cent of the enlisted were veterans of World War II.[15]

Many of the first reservists to report at Camp Pendleton made unusual sacrifices. Although they had the privilege of being discharged at their own request as late as 18 July 1950, the unexpectedness of the Korean conflict worked hardships in some instances. Reservists with several dependents or just establishing themselves in a business or profession had to settle their affairs hurriedly. There was little applause when the Minute Men of 1950 departed from home communities which were on a basis of business and pleasure as usual. The Korean conflict was still regarded as a “police action” which would be ended shortly. Nobody dreamed that within its first year it would become the fourth largest military effort of our nation’s history.

The Marine Corps was as lenient as could reasonably be expected when it came to granting delays and
deferments. On 1 August a board of eight officers at Marine Corps Headquarters initiated daily meetings to
consider such requests emanating from the various Reserve districts. Two weeks later the Commandant gave
Reserve District directors the authority to grant delays for periods up to six months after judging each case on its
individual merits. But even after every concession had been made that could be reconciled with the national
interest, it was a wrench for hundreds of reservists to make the sudden plunge from civil into military life.

There were instances of men seeking deferment by using political influence or pleading physical
disability. But such cases were rare as compared to the great majority who reported promptly and declared
themselves combat-ready.

In the selection of reservists for the division, two categories were recognized—combat-ready and
noncombat-ready. The first applied to men whose records proved that they had been members of the Organized
Reserve for two years and had attended one summer camp and 72 drills or two summer camps and 32 drills.
Veterans of more than 90 days’ service in the Marine Corps also qualified. All other reservists were classified as
noncombat-ready.

When lost or incomplete records complicated the equation, a reservist’s own opinion could not be
accepted as proof of his fitness for combat. This ruling had to be made because so many men were found to have
more spunk than training. Officers of a reservist’s unit were questioned before a decision was reached, and any
man feeling the need of further training could be removed without prejudice from immediate consideration for
combat.

Standards were so strictly observed that only about half of the reservists qualified as being combat-ready.
This group broke down into the 15 per cent accepted for the 1st Marine Division and the 35 per cent assigned to
posts and stations to relieve regulars who joined the division. The remaining 50 per cent consisted of men placed
in the noncombat-ready or recruit class. [16]

The emergency found the Organized Aviation Reserve with 30 VMF and 12 GCI squadrons generally up
to peacetime strength. Of the 1,588 officers, about 95 per cent were combat-experienced, and only about 10 per
cent of the enlisted men stood in need of basic training. It was a comparatively simple task, therefore, to comply
with the order of 23 July calling for six VMF and three GCI squadrons to report to El Toro. Their mission was to
build up to war strength the units of the 1st MAW which had been stripped to mount out MAG–33.

On 3 August the remaining nine GCI squadrons of the Organized Aviation Reserve were ordered to El
Toro. [17] By this time the buildup was so well in hand that Major General Field Harris, commanding the 1st
Marine Aircraft Wing, conferred with General Smith about aviation shipping for the embarkation.

This veteran Marine pilot, a native of Kentucky, had been commissioned a second lieutenant in 1917
after graduating from the U.S. Naval Academy. Three years of service with Marine ground forces in Cuba and the
Philippines were followed by Headquarters duty at Washington and flight training at Pensacola. Designated a
naval aviator in 1929, he held various Marine air commands before participating as colonel and brigadier general
in the Guadalcanal, Northern Solomons, and Green Island air operations of World War II. On his return, he was
appointed Assistant Commandant (Air) and Director of Aviation.

In the autumn of 1946, after Operation CROSSROADS had given a glimpse into the tactical future,
Generals Shepherd, Harris, and Smith were named as a Special Board “to orient the effort of the Marine Corps
away from the last war and toward the next.” The result was recommendations leading to experiments with rotary
wing aircraft as a means of tactical dispersion in amphibious operations against an enemy employing atomic
weapons. Thus the Marine Corps worked out new helicopter combat techniques which were soon to create tactical
history with the Brigade and Division in Korea. [18]
It is a curious circumstance that not until 8 August did General Smith himself have his first information as to the Inchon landing. The basic directive of 25 July had merely specified that the main body of the Division would embark from San Diego, prepared for combat. The commanding general did not learn even unofficially about the time and the place of the proposed operation until he was told by General Fellers. While reporting at Camp Pendleton on his return from Japan, the TTU commander gave General Smith an informal account of the conference which took place on 4 July at FECOM Headquarters in Tokyo. [19]

On the following day, 9 August, the Division issued Operation Order No. 1–50, which provided for the movement of the Division (less the Brigade and one RCT) to the Far East to report upon arrival to CinCFE for operational control. Embarkation was to be carried out in accordance with Embarkation Plan No. 1–50 of 6 August.

By this date, 17,162 Marines in Camp Pendleton were eligible for reassignment to the 1st Marine Division. There was no time, of course, for much training. On 2 August the Division issued Training Bulletin No. 36–50 as a general guide providing for some rudiments of individual and small-unit instruction. But about all that could be accomplished was conditioning training and test firing of weapons. As a result, many of the weapons issued directly to units were found to be defective, having been in storage since 1945. [20]

The war news from Korea at this time lent an atmosphere of grim realism to preparations at Camp Pendleton. On 2 August the 1st Provisional Marine Brigade had landed at Pusan, the day following the debarkation of two U.S. Army units, the skeletonized 2d Infantry Division and the 5th RCT. The original destination of the Marines had been Japan, but during the voyage the military situation deteriorated so rapidly that on 25 July a landing in Korea was ordered by CinCFE.

Following the capture of Taejon on 20 July, the Red Korean columns of invasion speeded up their “end run” around the Eighth Army’s open left flank. Driving eastward as well as southward, the enemy made such progress during the next ten days that on 31 July the UN forces were pushed back into a chain of defensive positions in southeast Korea. This was the Pusan Perimeter, which must be held if the vital line of communications from the supply port to Taegu was to be maintained.

The Marines jumped off east of Masan on 7 August with the Army 5th RCT and elements of the 25th Infantry Division in the first sustained counterattack mounted by UN forces. General Craig had control of Army as well as Marine units during the most critical period of the initial two days, and carrier-based MAG–33 squadrons provided tactical air support. Enemy resistance was so shattered by the 9th that the Red Korean machine of invasion went into reverse for the first time.

From the 9th to the 13th, when they were relieved, parallel columns of Army and Marine assault troops drove from Chindong-ni nearly to Chinju, a distance of about 40 miles by the seacoast route. It was only a local setback for the enemy, to be sure, but it had a heartening effect for tired UN forces which had known only delaying actions so far.

It also added to the problems of staff officers at Camp Pendleton and Pearl Harbor, since replacements must be sent to the Brigade. With this in mind, the Commandant had begun the organization of the 1st Replacement Draft of approximately 800 men on the date of Brigade activation. These troops, however, were absorbed into the 1st Marine Division when it expanded to war strength, as was a second draft (also designated
the 1st Replacement Draft) of 3,000 men.[21]

On 3 August the 1st Marine Division was directed by FMFPac to send 10 officers and 290 enlisted men to the Brigade by airlift. This draft was to be ready to move from Camp Pendleton by MATS planes on 9 August, but not until five days later did it finally proceed to San Francisco by rail and fly to Japan.

On the 23d another draft of 10 officers and 300 enlisted men from Marine posts in Hawaii and Guam was sent by air to Japan, these troops being replaced by the same number of noncombat-ready Marines airlifted from Camp Pendleton. This process was twice repeated early in September, when two more drafts totaling 20 officers and 590 men flew to Japan to provide replacements and third companies for the 5th Marines of the Brigade.[22]

Logistics offered as many problems as personnel at Camp Pendleton, since both the Brigade and Division units had been on peace tables of organization and equipment. The 30–day replenishment stock, held in readiness for such an emergency, was also based on peace strength tables. Thus it was found that the specification of “requirements” was best determined in most instances by making out requisitions based on the difference between T/E for peace and war.

Narrow time limits did not permit the assembly of supplies and equipment delivered at Camp Pendleton under the relentless pressure of urgent deadlines. FMFLant air and ground units arriving from Camp Lejeune brought their own organization equipment, which was staged through the Recruit Depot at San Diego. Much of the heavy equipment from the Barstow, California, Annex, Depot of Supplies, was delivered dockside and loaded without further inspection. Not until arrival at Kobe, Japan, were such items as the LVTs finally given a mechanical checkup.[23]

Ammunition was delivered from the depots to the Naval Station, San Diego, for loading. The following units of fire were specified by Division Embarkation Plan 1–50:

(1) 3 UF in hands of 1st Marines, LVT, tank, and artillery units; 1 UF in hands of all other units;
(2) 2 UF in hands of 1st Ordnance Bn for the 1st Marines, LVT, tank, and artillery units;
(3) 4 UF in the hands of the 1st Ordnance Bn for other units.[24]

Even after all items of initial supply had been assembled, the problem was by no means solved. Since the Division and Wing would be operating under Army and Air Force control, it became necessary to establish a long-range policy for resupply. The best answer seemed to be the procedure adopted by the Brigade, providing that the Army and Air Force furnish all supplies not peculiar to the Marine Corps. The latter would be provided by Marine or Navy agencies automatically in 30–day increments, with 120 days of resupply allotted to ground units and 90 days to air units. Thereafter, supply was to be requisitioned as needed. And in the lack of a service command as such, the G–4 section of FMFPac was committed to the task of preparing and submitting resupply requisitions for items in this category.[25]

Five hundred civilians were employed to help with the reconditioning of motor transport and other heavy equipment which had been “in mothballs” at Barstow since the end of World War II. Such items had to be put through the shops in many instances and restored to operating condition before delivery. The enormous supply depot in the California desert erupted with activity as trains of flatcars and long columns of motor trucks were routed to San Diego.

The actual loading and embarkation were conducted almost according to schedule in spite of such handicaps as inadequate dock facilities, the reception of supplies and equipment from a variety of sources, a shortage of stevedores, and piecemeal assignments of shipping. Only 54 stevedore crews were available out of the 90 requested, and commercial ships were necessary to supplement naval shipping. Nevertheless, the loading began on 8 August and was completed by the 22d. The following 19 ships were employed to mount out the main body of the 1st Marine Division:

LST 845; LSM 419; two APAs, the USS Noble and USS President Jackson; five APs, the USNS General Buckner, USNS General Weigel, USS Marine Phoenix, USNS General Meigs and USS General Butner;
and ten AKs, the SS Dolly Thurman, SS Green Bay Victory, SS Noonday, SS African Patriot, SS Twin Falls Victory, SS Southwind, SS American Press, SS American Victory, SS Alma Victory, and SS Belgian Victory.[26]

Generals Shepherd and Cates arrived for the main embarkation on the 13th and 14th respectively, accompanied by Major General Franklin A. Hart and Brigadier General Edwin A. Pollock. While these general officers were being acquainted with the progress made so far, the AKA Titania blew out two boilers after being about 20 percent loaded. Since the repairs would require about ten days, a commercial freighter was provided as a last-minute replacement.
Chapter 2. The Minute Men of 1950
Build-up of 7th Marine Regiment

One of the purposes of General Shepherd’s visit was to discuss with General Cates the problems of organizing and embarking the 7th Marines (Reinf.). The activation of this unit had been directed on 10 August 1950, when an officer of the G–1 Section, Headquarters FMFPac, delivered orders to Camp Pendleton. This was the result of a change of mind on the part of the Joint Chiefs of Staff. After reconsideration, they decided that it would be feasible to raise a third RCT much sooner than had at first seemed possible, though not in time for MacArthur’s assault landing. Arrival in Japan about 20 September seemed to be the earliest date that could be managed.

Of the 17,162 eligible Marines at Camp Pendleton at that time, the regulars in excess of those required to mount out between the 10th and 15th were placed in the rear echelon of the division as a cadre for the third infantry regiment. The following troops were made available to draw upon for the formation of the 7th Marines:

- Officers and men from 2d Marine Division = 1,822
- Officers and men of 3d Bn, 6th Marines in the Mediterranean = 735
- Officers and men of Marine Corps Reserve selected as combat-ready = 1,972
- Officers and men of rear echelon of Division, and from posts and stations = 1,109

TOTAL = 5,638

Colonel Homer L. Litzenberg was designated as commanding officer on the date of activation, 17 August 1950. The Chief of Naval Operations directed the regiment to embark for the Far East not later than 3 September. These components were included in the build-up:

- 3d Battalion, 11th Marines; Company D, 1st Tank Battalion; Company D, 1st Engineer Battalion;
- Company C, 1st Shore Party Battalion (including two Shore Party communication teams from Signal Com-party, Signal Battalion); Company D, 1st Motor Transport Battalion; Company E, 1st Medical Battalion.

Forming the nucleus of the regiment, the 6th Marines, at peace strength and less two battalions, arrived from Camp Lejeune on 16 August. The 3d Battalion of this FMFLant regiment, then stationed afloat in the Mediterranean, was ordered to proceed through the Suez Canal to become part of the 7th Marines upon arrival in Japan.

While the other elements were being absorbed at Camp Pendleton, a conference attended by General Smith, Major General Alfred H. Noble, and Colonel Litzenberg was held to discuss rear echelon personnel and the formation of RCT–7. The following troops were found to be available to take care of casualties and retain custody of such division supplies and equipment as had not yet been embarked:

- Marine Corps: 224 officers, 1,029 enlisted
- Navy: 11 officers, 35 enlisted

Not included in these figures were 197 noneffective enlisted personnel, a rocket battery, a motor transport company, and the organizational rear echelon of eight officers and 28 men. It was decided that General Noble, as FMFPac representative, would examine MOSs, to determine how many men would be transferred to the 7th Marines or retained for FMF units to be activated later. The need was also foreseen for rear echelon working parties to relieve personnel of units mounting out.
Although the 1st Marine Division had enough problems at Camp Pendleton to keep a full war-strength staff busy, several of the key members were in Korea with the Brigade. The complete Division staff was never integrated until after the landing at Inchon. On 7 August, however, a dispatch from CinCFE requested that the “Commanding General, 1st Marine Division, and planning group capable of developing Division embarkation and landing plans be airlifted” to the Far East.[31]

General Smith decided that this flight could best be made in two echelons. The first, which took off for Japan at 1400 on 16 August 1950, included a group of 12 officers and six enlisted men selected to initiate planning:

G-2: Col B. T. Holcomb, Jr., and TSgt W. O’Grady
Asst. G-2: Maj J. G. Babashanian and Cpl J. N. Lareau
G-3: Col A. L. Bowser, Jr., and Sgt G. O. Davis, Jr.
Asst. G-3: LtCol F. R. Moore
Asst. G-4: LtCol C. T. Hodges
Shore Pty. Off.: Maj J. G. Dibble
Signal Off.: LtCol A. Creal and Cpl L. Shefchik
Asst. G-1: LtCol B. D. Godbold
Fire Sup. Coord.: LtCol D. E. Reeve and SSgt P. Richardson
Naval Gunfire Off.: LtCol L. S. Fraser
Air Off.: Capt W. F. Jacobs

General Smith stayed at Camp Pendleton for two more days until he was assured that the main body of the Division had sailed. Then he accompanied the second echelon of planners which departed by air at 1410 on 18 August:

CG: MajGen O. P. Smith
C/S: Col G. A. Williams and Cpl C. V. Irwin
Aide to CG: Capt M. J. Sexton and PFC W. D. Grove
G-1: Col H. S. Walseth and Cpl W. P. Minette
Asst. Signal Off.: Capt A. J. Gunther and MSgt F. J. Stumpges
G-4: Col F. M. McAlister
Engineer Off.: Maj E. P. Moses, Jr.
Embark Off.: Maj J. M. Rouse
Amtrac Off.: Maj A. J. Barrett
Ordnance Off.: Maj L. O. Williams[32]

The departure of the commanding general coincided with the closing of the Division CP at Camp Pendleton. There were still several thousand Marines of the rear echelon left under the control of General Noble in the sprawling installation, but the brown California hills looked down upon a scene of strange and brooding quiet as compared to the activity of the past three weeks.

It was D-minus 28 for the men of the 1st Marine Division.
THE SCARS OF WAR heal rapidly. From the air General Smith could see jungle covering the battlefields of Guam. Iwo Jima looked as untouched as if it had never been the scene of Marine casualties exceeding the losses of the Union army at Gettysburg. Even fire-blasted Tokyo had recovered to a surprising extent from the terrible bombings of 1945.

Now, five years later, the United States had entered upon a new military effort. As the Marine general landed at Haneda Airfield on the afternoon of 22 August 1950, he was met by Admiral Doyle and driven to the Mount McKinley, tied up at the dock in Tokyo harbor. And though assigned to the cabin reserved for the landing force commander, CG 1st MarDiv found it an ironical circumstance that he did not yet know the prospective D-day and H-hour of the landing.[1]

He had not long to wait for such data. The advance section of the Marine planning group being already aboard the Mount McKinley, he was quickly informed by Colonel Bowser, the G–3 of the incomplete Division staff. D-day at Inchon had been tentatively set for 15 September, and the landing must be made during the high tide of late afternoon. It meant assaulting a port of 250,000 prewar population over the mud flats and seawalls, with little opportunity to consolidate positions before nighfall. Nor would there be time for training and rehearsals, since the troops would reach Japan barely in time to unload and reload in amphibious shipping before proceeding to the objective area.

General Smith learned further that a new command structure, to be known as X Corps, was being hastily erected by FECOM especially for the operation. No announcement had been made of a project still classified as Top Secret, but it was known to the planning group that General Almond would command a corps not yet activated. The 1st Marine Division would be under his control as the landing force.

Admiral Doyle, an old hand at amphibious warfare, was not happy about Inchon when he considered the naval aspects. Initiated at Guadalcanal and Tulagi in 1942, he had taken part in some rugged ship-to-shore assaults of World War II. Afterwards, as Commander of Amphibious Shipping for the Pacific Fleet, he had made a career of it. And Admiral Doyle considered Inchon a hard nut to crack. He refused to admit that any amphibious operation was impossible as long as the United States Navy remained afloat, but he did maintain that Inchon bristled with risks.

In twenty minutes that Tuesday afternoon General Smith heard enough to convince him that the forthcoming assault would take a great deal of doing. But there was no time for discussion. For at 1730, just two hours after stepping from his plane, he had an appointment with the commander in chief.
Arriving on the minute at the Dai Ichi building, General Smith reported to FECOM Headquarters. He was met by an aide, who escorted him to General Almond’s office. On the way down echoing corridors, he responded at frequent intervals to the salutes of sentries who presented arms with fixed bayonets.[2] The offices of CinCFE and his chief of staff were connected by an imposing conference room with paneled walls and pillars along one side. General Smith had an opportunity to survey his surroundings at leisure before General Almond appeared. The new X Corps commander explained that his chief had a habit of taking a long afternoon break and would arrive later.

Of medium height and stocky build, Almond gave the impression at the age of 58 of a buoyant temperament and restless energy. A native Virginian and graduate of the Virginia Military Institute, he had been an ETO division commander in World War II. After joining MacArthur’s staff, he became one of the most loyal officers of a group noted for devotion to their famous chief.

Almond greeted the reserved, white-haired Marine general cordially. He launched at once into the topic of the Inchon operation, expressing the utmost confidence in the ability of the UN forces to prevail.

It was the initial contact of the two men. Mutual respect was not lacking, but differences in temperament made it inevitable that these generals would not always see eye to eye. History teaches that this is by no means a deplorable situation when kept within reasonable bounds. Character can be as decisive a factor as logistics, and some of the greatest victories of the ages have been won by colleagues who did not agree at times. Friction, in fact, is more likely to sharpen than to blunt military intellects; and Smith’s precision had potentialities of being a good counterpoise for Almond’s energy.

While they were discussing the tactical problems, the commander in chief returned to his office. He summoned his chief of staff for a brief conference, then requested that Smith be presented.

MacArthur shook hands warmly, grasping the Marine general’s elbow with his left hand. Without the celebrated “scrambled eggs” cap, he looked his 70 years in moments of fatigue, but the old fire and dash were not lacking. The very simplicity of his attire—shirtsleeves and open collar—made a dramatic contrast to the military pomp and ceremony surrounding him in this former Japanese commercial building, one of the few earthquake-proof and air-conditioned structures in Tokyo.

In a cigarette-smoking age, both MacArthur and Smith preferred the calm comfort of a pipe. The commander in chief lit up and puffed reflectively a moment. Then he leaned back in his chair and gave his concept of the Inchon operation. But it was more than a concept in the usual military sense; it was a vision of a victory potent enough to end the Korean conflict at a stroke. And it was more than confidence which upheld him; it was a supreme and almost mystical faith that he could not fail.

He granted, of course, that there were difficulties and risks. Evidently Almond had mentioned Smith’s reservations, for he proceeded to reassure the Marine general. His voice full of feeling, he expressed his deep conviction that the war could be won in a month at Inchon, and that the 1st Marine Division could win it. The enemy, he explained, had committed nearly all of his troops in the Pusan Perimeter. Thus the Marines would not be heavily opposed when they stormed ashore at Inchon and drove inland to cut the main NKPA line of communications at Seoul.

MacArthur said he knew that the Marines had high standards, having commanded them in the New Britain operations of the last war. He realized that the Marines strove for perfection, and the Inchon landing was
bound to be somewhat helter-skelter by the very nature of things. But there was no doubt, he affirmed, that the victory soon to be gained by the 1st Marine Division would make 15 September 1950 a glorious date in American history.

His voice was charged with fervor as it rose and fell eloquently. Once General Smith made a move as if to depart, but the commander in chief motioned him back to his chair. At last he brought the conversation to a close by standing suddenly, grasping the Marine general’s hand, and bidding him a cordial good-bye.
Chapter 3. Operation Plan CHROMITE
Conferences in Tokyo

It was sometimes an awkward situation for Navy and Marine officers in general, and Admiral Doyle and General Smith in particular. In many respects they appeared doubters and pessimists in contrast to FECOM staff officers who reflected General MacArthur’s shining confidence. But as amphibious specialists, carrying a heavy load of responsibility for the landing, they had to give serious thought to the risks at Inchon.

This was brought home forcibly to the Marine general on the morning of the 23d, when he attended a meeting conducted by Major General Clark L. Ruffner, Chief of Staff of the future X Corps. Although the conference proceeded according to the usual form, General Smith felt that it departed at times from the realism which he considered an essential of sound amphibious planning. It was announced, for instance, that after taking Inchon, the 1st Marine Division was to cross the Hah and attack Seoul, although X Corps had neither equipment nor materiel for bridging the sizeable river.[3]

A review of the background disclosed that after CinCFE decided on 10 July not to use the 1st Cavalry Division as his landing force, he briefly considered two other Army outfits. The 2d Infantry Division, commanded by Major General Lawrence B. Keiser, was then under orders to embark from the West Coast. Some of the personnel had been given amphibious training by an ANGLICO instruction team and had taken part in Operation MIKI, but the division as a whole was much understrength. The same difficulty led to the elimination of Major General David G. Barr’s 7th Infantry Division in Japan, which had supplied troops to units at the front until only a cadre remained.

The assurance on 25 July of a war-strength Marine division took care of the who question. Next came the problems of when and where an amphibious assault could be best mounted. JANIS (Joint Army and Navy Intelligence Studies) reports indicated that the east coast of Korea, though of lesser importance in military respects, offered such hydrographic advantages as unusually moderate tides and a general absence of shoals. In forbidding contrast, the shallow west coast waters could be navigated at most points only by means of narrow channels winding through the mud flats.[4]

Of all the west coast seaports, Inchon was probably the least desirable objective when considered strictly from the viewpoint of hydrographic conditions. From first to last, however, Inchon was Douglas MacArthur’s choice. FECOM staff officers ventured to suggest two alternatives, Wonsan on the east coast and Kunsan on the west coast, but the commander in chief replied that neither was close enough to the enemy’s main line of communications to suit his purposes. He would settle for nothing less than Inchon.

So much for the place. As to the time, the choice was even more limited. The tidal range varied from an average spring tide5 height of 23 feet to an occasional maximum of 33 feet. Landing craft required a tide of 25 feet to navigate the mud flats of the harbor, and the LSTs must have 29 feet. Only during a few days in the middle of September and October were those depths provided by spring tides of the next 12 weeks. MacArthur rejected an October date as being too late in the season, so that 15 September became D-day by virtue of elimination.

A late afternoon H-hour was also a choice of necessity. Islands, reefs, and shoals restricted the approach to the outer harbor, and currents ranging from three to six knots multiplied the chances of confusion. This meant that daylight landings were necessary for all but small groups.

Much of the inner harbor was a vast swamp at low water, penetrated by a single dredged channel 12 to 13 feet deep.[6] The duration of spring tides above the prescribed minimum depth averaged about three hours, and during this interval the maximum in troops and supplies must be put ashore. Every minute counted, since initial
landing forces could not be reinforced or supplied until the next high water period.

Time and tide seemed to have combined forces to protect Inchon from seaborne foes. As if such natural obstacles were not enough, the target area provided others. Two islands, Wolmi-do and Sowolmi-do, located in a commanding position between the inner and outer harbors, were linked to each other and to Inchon by a causeway. In advance of intelligence reports, it must be assumed that rocky, wooded Wolmi-do would be honeycombed with hidden emplacements for enough guns to create a serious menace for the landing craft.

This critical terrain feature must somehow be reduced as a preliminary to the main landing during the high tide of late afternoon. Inchon being situated on a hilly promontory, the “beaches” were mere narrow strips of urban waterfront, protected by seawalls too high for ramps to be dropped at any stage of the tide. Once past these barriers, the troops would have about two hours of daylight in which to secure an Oriental city with a population comparable to that of Omaha.

But the amphibious assault was only the first phase of the operation as conceived by CinCFE. After taking Inchon the landing force had the task of driving some 16 miles inland, without loss of momentum, to assault Korea’s largest airfield before crossing a tidal river to assault Korea’s largest city.

And even this ambitious undertaking was not the whole show. For a joint operation was to be carried out meanwhile by Eighth Army forces thrusting northward from the Pusan Perimeter to form a junction with the units of the Inchon-Seoul drive. This double-barreled assault, it was believed, would shatter North Korean resistance and put an end to the war.
The time, the place, the landing force, the main objectives—these essentials of the proposed Inchon-Seoul operation had been pretty well settled, at least to General MacArthur’s satisfaction, by the first week of August. But even though he had his assault troops, there was as yet no headquarters organization.

Admiral Sherman urged early in August that the commander in chief call upon General Shepherd and the facilities of the FMFPac organization at Pearl Harbor. Since there was so little time left before D-day—only a fraction of the time usually allotted to the planning phase of a major ship to shore assault—he felt that amphibious know-how and experience were required. He proposed, therefore, that steps be taken to obtain the approval of Admiral Radford, who had jurisdiction over FMFPac.

The need for a headquarters organization was discussed on 7 August by the Joint Strategic Plans and Operations Group (JSPOG) of FECOM. Brigadier General Wright, G–3 of FECOM, received a memorandum from the other members of the staff recommending that the gap be filled in one of two ways—either by putting into effect Admiral Sherman’s plan, or by sponsoring the organization of a provisional corps headquarters. General Wright favored the first course of action, as did Brigadier General Doyle G. Hickey, FECOM deputy chief of staff. Ultimately, however, the FECOM chief of staff decided in favor of the latter command arrangement.[7]
The questions of when and where and who had been answered to some extent. But as late as 23 August, a good many variations of opinion existed as to how the amphibious assault was to be accomplished.

The natural obstacles of the Inchon harbor area were so disturbing that Doyle suggested an alternative to MacArthur and Almond. Since the purpose of the landing was to drive inland and cut the enemy’s communications, urged ComPhibGru One, why not select a west coast objective with fewer hydrographic difficulties? He proposed the Posung-Myon area, about 30 miles south of Inchon on the west coast, where better approach channels and beaches were believed to be available in a more lightly populated locality. A landing at this point, Doyle contended, would not be attended by the risks and restrictions of Inchon, yet after securing a beachhead the troops would be in position to strike inland at the enemy’s main line of rail and highway communications in the vicinity of Osan.[8]

Smith was favorably impressed. He brought up the subject on 23 August, when he and Barr had a meeting with Almond. The X Corps commander did not concur, though conceding that Posung-Myon had possibilities as an area for a subsidiary landing in connection with the Inchon assault. Nor was Doyle able to obtain MacArthur’s consent to the alternate objective.

It was the Marine general’s third conference of the day. From the X Corps meeting he had gone directly to the regular conference at GHQ, and thence to the talk with Almond and Barr. He came away from all three meetings with the conviction that CinCFE and his staff were not to be swerved by his objections. It was definitely to be Inchon on 15 September, and Smith instructed his planning group to proceed accordingly.

Doyle made a last attempt at 1730 that afternoon to present a comprehensive picture of the risks and difficulties inherent at Inchon. This final conference on the subject of a west coast landing was attended by some of the nation’s highest ranking officers—General J. Lawton Collins, Army Chief of Staff; Admiral Forrest P. Sherman, Chief of Naval Operations; General Shepherd, CG FMFPac; Lieutenant General Idwal H. Edwards, U.S. Air Force; as well as other high-ranking staff officers who had flown out from Washington. It was no secret in Tokyo military circles that the Joint Chiefs of Staff were present for the purpose of studying General MacArthur’s plans for the Inchon landing. It was also generally known that doubts and misgivings had been expressed at various times when the project was discussed at the Pentagon. General Collins stated candidly at a later date that the purpose of his Tokyo visit was “... to find out exactly what the plans were. Frankly, we were somewhat in the dark, and as it was a matter of great concern, we went out to discuss it with General MacArthur. We suggested certain alternate possibilities and places. . . .”[9]

Admirals Joy and Doyle also attended the meeting, and FECOM was represented by Generals Almond, Ruffner, and Wright. The conference room on the sixth floor of the Dai Ichi building proved too small for the audience, and members of the PhibGru One team had to wait their turn in Almond’s adjoining office. One by one, at eight-minute intervals, Doyle’s officers took turns at being presented to MacArthur, who listened gravely while puffing at his pipe. The following amphibious specialists were heard:

Cdr Edmund S. L. Marshall, USN: Navigation
Lt Charles R. Barron, USN: Aerology
LtCol William E. Benedict, USMC: Military Aspects
LCdr Jack L. Lowentrout, USN: Beach Study
LCdr M. Ted Jacobs, Jr., USN: Seabees Pontoon Causeway Plans
LCdr Clyde E. Allmon, USN: Ship to Shore Plans
LCdr Arlie G. Capps, USN; Gunfire Support
Cdr Theophilus H. Moore, USN: Air Support

The officers spoke of the natural obstacles. They asserted that it would be the peak of optimism to hope for a strategic surprise at Inchon, for the enemy also knew that only a few days each autumn month offered a tidal range sufficient to float the landing craft and supply ships over the mud flats of the harbor.

They contended that even a tactical surprise was out of the question, since Wolmi-do must be neutralized before landings could be made on the mainland. Otherwise, the vulnerable column of landing craft would be exposed to a slaughter from the flanking fire of the island’s guns.

The Navy group pointed out further that it must also be assumed that the enemy would not neglect a good opportunity to sow both moored and magnetic mines in the channels the shipping must take. And to cap all the other natural and man-made risks, there was danger at the height of the typhoon season that Nature would intervene and scatter the amphibious armada during its approach to the objective area.

The presentation lasted for nearly an hour and a half. At the conclusion, Admiral Doyle summed up by giving his opinion. “The best I can say,” he told the commander in chief, “is that Inchon is not impossible.”

General MacArthur heard the amphibious specialists to a finish without his imperturbability being shaken. Even the onlookers who could not partake of his perfect faith were impressed. There was something magnificent about this old warrior in shirtsleeves and open collar, calmly smoking his pipe while hearing his plan dissected. Daring and optimism are supposed to be the exclusive prerogatives of youth, yet this smiling septuagenarian was not only the oldest officer at the conference, he was also the most confident and assured! After the PhibGru One presentation ended, he took 45 minutes for his comments. Speaking with eloquence, he declared that the natural obstacles and practical difficulties of the proposed Inchon operation were more than balanced in the strategic scale by the psychological advantages of a bold stroke. About 90 percent of the NKPA forces were fighting in the Pusan Perimeter. A combined offensive by X Corps and the Eighth Army would have the effect of placing the enemy between the hammer and anvil.

Referring to the Kunsan landing favored by General Collins and Admiral Sherman, CinCFE asserted that this objective was too far south for a fatal blow to be dealt the invaders. He cited a historical precept in Wolfe’s victory at Quebec, made possible by audacity in overcoming natural obstacles that the enemy regarded as insurmountable. He recalled the amphibious victories he himself had won in the Southwest Pacific, with the Navy and sometimes the Marine Corps sharing in the glory. And he ended on a dramatic note with a single, prophetic sentence spoken in a tense voice:

“We shall land at Inchon and I shall crush them!”[11]

As the officers filed out into the noisy, teeming Tokyo street, most of them felt certain that the last word had been said. It was still possible, of course, for the Joint Chiefs to overrule CinCFE; and it was not likely that all of their doubts had been laid to rest. Nevertheless, the Navy and Marine planners proceeded on the basis that a final decision had been reached that August afternoon.
Before his arrival at Tokyo, General Shepherd had paid a flying visit to the headquarters of the Brigade in Korea immediately after the Marines stormed and seized Obong-ni Ridge. Just as General Craig’s men had taken part from 7 to 13 August in the first sustained UN counterattack, so this Army and Marine effort a week later became the first rout of a major NKPA unit. After putting up a fierce struggle to hold their bridgehead on the east bank of the river Naktong, the veteran troops of the NKPA 4th Division were shattered by repeated Marine attacks. Carrier-borne Corsairs of MAG–33 had a turkey shoot at the expense of panic stricken enemy soldiers who abandoned their arms in a wild flight. Some of the fugitives were shot down while trying to swim the river.

Despite this encouraging little victory, it was still nip and tuck on the central front of the Pusan Perimeter. With the U.S. 2d Infantry Division and 5th RCT now in line, the Eighth Army strategy of trading space for time had resulted in whittling down the enemy’s material superiority. But the invaders still held the material advantage, and there were signs that they would soon launch an all-out effort to smash through to Pusan.
General Shepherd, after being informed as to the Tokyo conferences, accompanied General Smith on the morning of 24 August to a meeting with Admirals Sherman, Radford, Joy, and Doyle. It was generally agreed that not enough weight had been given to amphibious considerations in the final decision to attack at Inchon. Navy opinion held that one more attempt should be made to propose another landing point with fewer hydrographic objections. The area south of Inchon had been investigated by Navy UDT and Marine amphibious scouts of the Reconnaissance Company, 1st Marine Division, who had sailed to the Far East with the Brigade. As a preliminary, this group had embarked on the USS *Horace A. Bass* (APD–124) and gone ashore undetected to stage several raids during the period 12–16 August on the enemy’s main line of communications along the west coast. Three tunnels and two railway bridges were destroyed without the loss of a man.[12]

Next the raiders successfully carried out a survey and reconnaissance of available landing beaches during the period 22–25 August in the Posung-Myon area. Their findings impressed General Shepherd so much that before his departure from Tokyo he called on CinCFE to make a last plea for reconsideration of the landing area. General MacArthur, however, remained firm in his preference for Inchon.[13]

The meeting of the admirals and Marine generals on the 24th broke up with a general agreement that the decision as to Inchon on 15 September must be accepted as the basis for final planning. That same afternoon General Smith instructed his planning group to begin work on a scheme of maneuver.

Modern amphibious tactics were in their infancy during World War I when an appalling object lesson seemed to have been left by the Allied disaster at Gallipoli in 1915–16. Brilliant in strategic conception, this major amphibious operation might have knocked Turkey out of the war and opened the unlocked back door of Austria and Germany. Unfortunately, the execution fell short; and the failure was too often charged to amphibious warfare itself rather than a wholesale violation of its basic principles.

In 1920 the new Marine Corps Schools at Quantico became the center of Marine amphibious study and research. Marine units participated in fleet problems at Panama and Culebra during the post-war years; and in 1927 the Joint Board of the Army and Navy (fore-runner of JCS) stated in a directive that the Marine Corps had the mission of “special preparation in the conduct of landing operations.”[14]

During the early 1920s the writings of a brilliant Marine officer, Major Earl H. Ellis, had a tremendous influence on current amphibious thought. Predicting that Japan would strike first in the Pacific and win initial successes, he drew up a strategic plan for assaults on Japanese-mandated islands which was approved by Major General John A. Lejeune, Commandant of the Marine Corps. Later known as Operation Plan No. 712, this Top Secret document helped to shape the ORANGE plans adopted by the Joint Board of the Army and Navy for offensive operations against Japan if it came to war.

After making good progress in the early 1920s, with landing exercises being held annually, the Marine amphibious program bogged down from 1927 to 1932 because of the necessity of sending expeditionary forces to China and Nicaragua. The turning point came in 1933, a memorable date in the evolution of modern amphibious warfare. It was then that Major General John H. Russell, Assistant Commandant of the Marine Corps, urged that a staff be set up at Quantico to plan for the organization of a mobile Marine striking force. This force, under the Commandant, and fully prepared for service with the fleet, was to be in readiness for tactical employment subject to the orders of the Commander in Chief, U.S. Navy. General Russell further proposed that the old name “Expeditionary Force” be discontinued and “Fleet Marine Force” adopted as a name better expressing this
mission. [15]

After the acceptance of these recommendations, the Commandant ordered classes discontinued at the
Marine Corps Schools and a concerted effort applied to the preparation of a new amphibious manual. Both the
Army and Navy had treated some of the procedures in existing manuals, but it remained for the Marine Corps in
1934 to put out the first complete work of the sort. Known as the Tentative Manual on Landing Operations, it
became either directly or indirectly the guide for exercises and maneuvers of the Navy and Marine Corps down to
World War II.

Most of its suggested procedures were endorsed with revisions in the Navy’s Fleet Training Publication
167, published in 1938. This work in its turn became the model three years later for the Army’s first basic field
manual for landing operations. [16]

Training exercises were held every year, usually at Culebra or Vieques in the Caribbean and San
Clemente Island off San Diego. At the suggestion of the Fleet Marine Force, the Navy purchased Bloodsworth
Island in Chesapeake Bay as the first amphibious gunfire range used for that purpose alone.

Schools were set up to train Army and Navy as well as Marine officers as specialists in fire control
parties. Air support was closely integrated with naval gunfire, shore artillery, and troop movements. Technology
came to the aid of tactics when the Fleet Marine Force encouraged and supervised the designing of strange new
amphibious craft and vehicles. Concepts were actually based in several instances on landing craft not yet
developed and the confidence of the Marine Corps in American inventiveness proved to be justified.

Thus the Nation entered World War II with a system of offensive tactics which opened Europe, Africa,
and the islands of the Pacific to American invasion without incurring a single major defeat. Not only was the
United States ahead of the enemy in the development of amphibious operations but the Axis Powers never found
the key to an adequate defense. In an often quoted summary, the British military critic and historian, Major
General J. F. C. Fuller, has asserted that these techniques were “in all probability . . . the most far-reaching tactical
innovation of the war.” [17]

During the next few years the Marine Corps was twice officially given the major responsibility for
American amphibious tactics. The National Security Act of 1947 made it the function of the Corps “to provide
fleet marine forces of combined arms, together with supporting air components, for service with the fleet in the
seizure and defense of advanced naval bases and for the conduct of such land operations as may be essential to the
prosecution of a naval campaign.” [18]

At the so-called Key West Conference the following spring (March 11–14, 1948), the Secretary of
Defense and Joint Chiefs of Staff restated the Marine Corps’ mission to include that of developing “in
coordination with the Army, the Navy, and the Air Force, the tactics, technique, and equipment employed by
landing forces in amphibious operations. The Marine Corps shall have primary interest in the development of
those landing force tactics, techniques, and equipment which are of common interest to the Army and the Marine
Corps.” [19]

During these post-war years, the Marine Corps was grappling with the new amphibious problems posed
by atomic weapons. It was fitting, therefore, that the three men who formed the Special Board for this research—
Generals Shepherd, Harris, and Smith—should have been at the forefront in 1950 when the Marine Corps faced
its next amphibious test. As veterans of World War II operations, they could recall the scramble for the beaches of
Bougainville, the fight for Bloody Nose on Peleliu, the off-the-cuff landing on Oroku Peninsula in Okinawa.
There had been some tense moments in those battles, but never had Marine generals contemplated an objective
which held more potentialities for trouble than the harbor area at Inchon.
Chapter 4. The Planning Phase

THE CHAMPION GLOBE-TROTTERS of the 1st Marine Division were the men of the 3d Battalion, 7th Marines. Before returning to their homes from Korea, these military tourists would have traveled entirely around the world by various forms of land, water, and air transportation.

The unit was originally an element of the 6th Marines, FMFLant, serving afloat with the Sixth Fleet in the Mediterranean. On 12 August 1950 the CP aboard the USS Yellowstone at Suda Bay, Crete, received a message from CNO ordering the battalion to the Far East. Lieutenant Colonel Frederick R. Dowsett, deputy commander, noted that the dispatch had bypassed such channels as CMC and the Sixth Fleet. This irregularity, he learned later, was explained by the urgency of an order which had been framed by Admiral Sherman while General Cates was present. It directed that the APA Bexar arrive on 14 August at Suda Bay and depart two days later with the troops.

The rub was that these Marines were dispersed on various ships all over the Mediterranean. Given the rush job of picking up the scattered elements of the battalion was the USS Leyte, which was due to return to Norfolk for refitting afterwards and thence to the Far East via the Panama Canal. Not only did the carrier complete its assignment before the deadline, but the Bexar also arrived at Suda Bay on the evening of the 14th. Both ships had hardly dropped anchor when the LCVPs and LCMs were shuttling troops and cargo to the transport and the AKA Montague, which was to accompany it to the Far East.

On the 16th the two vessels departed according to schedule by way of Port Said and the Suez Canal. Security regulations were rigidly enforced, with only one stop being made when the vessels anchored at Ceylon for six hours to take on fuel. Marine officers were figuratively as well as literally at sea, since they had no idea of the specific mission awaiting the battalion in the Far East. Unaware of plans for the Inchon landing, they envisioned the troops being employed as the ship-based raiding party of some American task force.

Meanwhile their future teammates of the 7th Marines were preparing to embark from San Diego. Colonel Litzenberg and his officers had made a good start at Camp Pendleton even before the activation date of 17 August 1950. In order to build up from cadres of former 6th Marines’ troops, this regiment received the largest proportion of combat-ready reservists of any major unit in the 1st Marine Division—about 50 per cent, counting the augmentation personnel to bring 3/6 up to war strength when it would be taken into the outfit in Japan.

CNO had set 3 September as the date of embarkation. But Headquarters, FMFPac, prepared the embarkation plans while the regimental staff solved problems of organization and equipment so effectively that the 7th Marines sailed on the 1st, thus beating the deadline by two days.

Orders came to El Toro on 16 August for the overseas movement of the remaining elements of the 1st MAW. Units affected were Wing Headquarters Squadron 1 and MAG–12, comprising Headquarters Squadron 12, Service Squadron 12, VMF–312, VMF–212, VMF(N)–542, and the rear echelon of VMF(N)–513.

V MF–312 and the rear echelon of VMF(N)–513 were loaded on the USS Sitkoh Bay with their aircraft and sailed on 24 August. Three days later VMF–212 and VMF(N)–542 embarked on the USS Cape Esperance, and the USNS General Morton weighed anchor with the remaining components on 1 September. This completed the overseas movement of the 1st MAW, since General Harris and his staff had departed from El Toro by air for Japan the day before.

Chapter 4. The Planning Phase
Working Around the Clock

The first echelon of the 1st Marine Division planning group had its preliminary briefing on 19 August, and the tractor elements of the Attack Force were scheduled to sail for the objective area on 9 September. This left an interval of 20 days for most of the Inchon planning—probably the shortest period ever allotted to a major amphibious assault.

Less than one-fourth of the officers and men of the 1st Marine Division staff were on the Mount McKinley when planning commenced. At that time the distribution of the staff was as follows:

The Marine planners aboard the Mount McKinley were short on elbow room as well as personnel, time, and equipment. Although it was an advantage to have the planning groups of the Attack Force and Landing Force together, the ship did not provide enough space for both without crowding. Moreover, the already undermanned Marine contingent had to be further reduced late in August by sending several officers to Kobe to meet incoming units. Thus the G–2 section, to cite one example, consisted of only two officers, one of whom was detached on this duty for a week.

“The issuance of and adherence to a planning schedule was utterly impossible,” commented the 1st Marine Division report. “Only by a virtual ‘around the clock’ working day, concurrent . . . planning by Attack Force (ComPhibGru One) and Landing Force (1st MarDiv), willing teamwork by both, and especially the amphibious ‘know-how’ of key staff members gained by long experience, was it possible to complete and issue . . . plans and orders for a most difficult . . . landing operation. The time-space factor denied any coordinated orientation, prohibited even the most elementary rehearsal, made it difficult to distribute orders, and gave subordinate units very little time for formulation and distribution of their plans.”

Command relationships during the embarkation and assault phases were as follows:

All the top commanders were concentrated in Tokyo with the arrival of Admiral Struble on 25 August. This facilitated the planning and allowed important decisions to be worked out in conferences between the principal commanders.

Planning was based mainly on studies made by ComPhibGru One as prospective Attack Force Commander. It was conducted entirely on a concurrent basis by the Attack Force and Landing Force groups aboard the Mount McKinley. No step was taken by either without the full knowledge and consent of the other.
The Inchon-Seoul Operation

Chapter 4. The Planning Phase
X Corps Scheme of Maneuver

Army planning had been initiated by the Joint Strategic Plans and Operations Group until 16 August, when the “Special Planning Staff” was set up at GHQ to issue directives for Operation Plan CHROMITE. Published on 12 August as CinCFE Operation Plan No. 100–B, it was based on these assumptions:

(a) that the North Korean ground advance would be stopped in time to permit the build-up of our forces in South Korea;
(b) that our forces in South Korea would be built up to the capability of mounting effective offensive operations against NKPA forces opposing them;
(c) that we retain air and naval supremacy in the area of operation;
(d) that the NKPA ground forces would not receive major reinforcements from the USSR or Red China;
(e) that there would be no major change in the basic disposition of the NKPA forces.[9]

It was understood from the beginning that the Special Plans Staff, headed by General Ruffner, would be the nucleus of the future X Corps staff. In order to have the benefit of specialized amphibious knowledge, ten Marine and two Navy officers of TTU Mobile Training Team Able were assigned on 19 August:

Col H. A. Forney: Deputy Chief of Staff
LtCol J. Tabor: Asst Coordinator, FSCC
LtCol C. E. Warren: Asst G–4
Maj J. N. McLaughlin: Asst G–3
Maj J. F. Warner: Asst G–3
Maj C. P. Weiland: Air Officer, FSCC
Maj V. H. Vogel: Asst G–4
Capt H. S. Coppedge: Asst G–2
Capt T. A. Manion: Asst Signal Officer, FSCC
Capt V. J. Robinson: Target Info Officer
Lt L. N. Lay, USN: Asst Surgeon
Lt W. A. Sheltren, USN: Asst NGF Officer, FSCC[10]

These officers did not begin their new assignment in time to contribute to the preliminary X Corps overall scheme of maneuver. The main provisions, as communicated to General Smith at General Ruffner’s briefing conference of 23 August, were as follows:

1. The 1st Marine Division, as the landing force, was to seize the urban area of Inchon (line A–A); to capture a beachhead (line B–B); to advance as rapidly as possible and seize Kimpo Airfield (line C–C); to clear out the south bank of the Han River (line D–D); to cross the river, seize Seoul and secure the commanding ground to the north (E–E); and, finally, to fortify and occupy this line with reduced forces until relieved (apparently by the 3d Infantry Division, still in the United States), whereupon the Division was to recross the Han and seize a line (F–F) about 25 miles southeast of Seoul.

2. The 7th Infantry Division was to land behind the Marines and advance on their right flank to seize the commanding ground south of Seoul and the south bank of the river (line D–D); to continue the advance to phase line (E–E); and to conduct a reconnaissance in force to the south (line F–F). There, on the line from Suwon to Kyongan-ni, the 7th Infantry Division and 1st Marine Division would form the strategic anvil as Eighth Army forces advanced from the Pusan Perimeter in the role of hammer.
(3) The 1st Marine Aircraft Wing was to furnish air support, air direction, and air warning for the Corps with units operating from Kimpo Airfield. It was also to be prepared to operate a control center ashore on order. [11]

The Special Plans Staff gave General Smith a study explaining the purposes of these maneuvers. “The B–B line in this study appeared to be a suitable beachhead line,” he commented, “and we decided to concentrate our efforts on plans for its seizure. Subsequent operations would be reserved for later consideration.”[12]

Chapter 4. The Planning Phase
Intelligence Planning for Inchon

Good planning, of course, depended on accurate intelligence. All possible information about the objective area had been gathered by the staff of PhibGru One before the arrival of the 1st Marine Division planners. Air Force planes had taken hundreds of photographs at every stage of the tide. Hydrographic reports and navigation charts had been studied. Army and Navy men familiar with Inchon during the American occupation after World War II were interrogated as well as NKPA prisoners captured by the Eighth Army.

Although a great deal of useful data was compiled, some disturbing questions remained. How high were the sea walls of Inchon? Were the mud flats suitable for landing either troops or vehicles at low tide? Approximately how many NKPA guns were hidden on Wolmi-do? These were some of the intelligence gaps which must be filled before an effective plan could be drawn up for an assault landing.

PhibGru One made its material available to the G–2 Section of the 1st Marine Division, and the two staffs worked together on the Mount McKinley in close cooperation. Attached were the 163d Military Intelligence Service Detachment (MISD) and the 441st Counter Intelligence Corps (CIC) Team. Both of these units had been furnished by FECOM and consisted of Army commissioned and enlisted personnel as well as native Koreans serving in liaison, interpretation, and translation capacities.

Even when a question could not be answered conclusively, it was up to the G–2 sections of the Attack Force and Landing Force to arrive at a conclusion for planning purposes. For instance, it was never satisfactorily determined from available sources—JANIS publications, strategic engineering studies, Naval Attaché reports, and photographic interpretation reports—whether LVTs would be able to traverse the mud flats of the Inchon harbor area. And since there remained some doubt, planning proceeded on the assumption that the answer was negative. This proved to be the correct as well as the prudent decision, later developments revealed.

Another G–2 planning problem concerned the effect that the height of the sea walls would have upon the landing. Photographs at hourly stages of the tide made it appear that the masonry was too high for the dropping of ramps at any time. As a solution, G–2 officers hit upon a device reminiscent of the storming of castles during the Middle Ages. Scaling ladders were recommended with the suggestion that they be built of aluminum with hooks at one end to be attached to the masonry. Construction was started at Kobe, but the order could be only partially filled before D-day, and wooden ladders were built as substitutes.

It is hardly necessary to point out the importance of estimates as to the numbers and defensive capabilities of the enemy. Yet the G–2 sections on the Mount McKinley were up against a peculiar situation cited in the 1st Marine Division report:

“Our accumulated knowledge of the enemy’s military tactics, prior to our landing at Inchon on 15 September 1950, consisted almost in its entirety of knowledge about the enemy’s offense. . . . With but few exceptions, UN forces were forced to take a defensive stand and denied the opportunity to study large scale enemy defensive tactics from actual combat. Thus it was that our assault landing was made with relatively little prior knowledge regarding the enemy’s probable reaction to a large-scale offensive of this nature, particularly when it involved the penetration into the very heart of his newly acquired domain”[13]

Photographic coverage showed the Inchon harbor area to be honey-combed with gun positions and other defensive installations. On the other hand, daily aerial observation indicated that most of them were not occupied.

G–2 conclusions during the planning phase often had to be based on such conflicting evidence, even though the penalties of faulty interpretation might be drastic. But after being viewed with due suspicion, signs of
negative enemy activity were finally accepted as valid in estimates of light to moderate NKPA resistance.

“Sadly lacking as was information on the objective area,” commented the Division G–2 report, “more so was that on the enemy in the area.” Early in September, however, the Attack Force and Landing Force concurred in the initial X Corps estimate of 1,500 to 2,500 NKPA troops in the immediate area, consisting largely of newly raised personnel.[14]

Radio reports of first-hand observations in the objective area, though coming too late for initial planning purposes, confirmed some of the G–2 estimates. This dangerous mission was undertaken by Lieutenant Eugene F. Clark, a naval officer on General MacArthur’s JSPOG staff. U.S. and British Marines provided an escort on 1 September when the British destroyer *Charity* brought him from Sasebo to a point along the coast where the South Korean patrol vessel PC 703 waited to land him at Yonghung-do, an island about 15 miles southwest of Inchon.[15]

Clark went ashore with a small arsenal of firearms, grenades and ammunition, as well as 30 cases of C rations and 200 pounds of rice. He quickly made allies of the 400 friendly Korean inhabitants of the island and organized his own private little “army” of about 150 youths from 14 to 18 years old. These “troops” were posted about Yonghung-do for security, since the near-by island, Taebu-do, was occupied by 400 NKPA soldiers within wading distance at low tide.

The naval officer had no illusions as to what his fate might be in the event of capture. Day and night, he kept a grenade within reach, since he did not intend to be taken alive. When the long expected enemy attack from Taebu-do materialized, he commandeered a “one-lung” South Korean motor sampan and fought it out with the NKPA motor sampan escorting boats filled with soldiers. The enemy began the strange “naval” battle with a few badly aimed rounds from a 37mm tank gun. Clark and his crew of three friendly Koreans finished it with a long burst from a .50 caliber machine gun. After sinking the NKPA motor sampan, he destroyed another boat with 18 soldiers aboard and captured three prisoners for questioning.

One night the intrepid lieutenant rowed a dinghy to the Inchon sea wall. When the tide went out, he tested the mire by wading in it up to his waist. This experience led to the sending of a radio report, “Inchon not suitable for landing either troops or vehicles across the mud.”

Korean youths, posing as fishermen, brought intelligence which Clark included in his daily radio messages. One of these spies made an effort to count the guns on Wolmi-do and describe the locations. Others took measurements of the Inchon sea wall and penetrated as far inland as Seoul to report numbers and positions of NKPA troops.

Clark declined all offers to evacuate him. As the climax of his exploit, he managed to restore the usefulness of the lighthouse on Palmi Island which the enemy had put out of commission. This structure, the former entrance beacon for Inchon by way of Flying Fish channel, served him as a refuge when he had to leave Yonghung-do hurriedly just ahead of NKPA troops who landed in force and butchered 50 civilians of both sexes. Clark, who received a Silver Star, stuck it out on Palmi until midnight of 14 September, when he turned on the beacon light to guide the amphibious task force.

Chapter 4. The Planning Phase
The Landing Force Plan

The decisions behind the Landing Force Plan—1st Marine Division OpnO 2–50—obviously had to be made without benefit of Lieutenant Clark’s reports, since the publication date was 4 September 1950.\[16\] It is to the credit of these conclusions, therefore, that so few of them had to be corrected in the light of first-hand evidence from the objective area.

Although CG X Corps was the assigned Expeditionary Troops Commander, planning on the Corps level was concerned almost entirely with the exploitation phase following the seizure of the beachhead. All Landing Force planning was done on the Mount McKinley by the Division in close coordination with PhibGru One.

The first consideration, as viewed by the Navy planners, was that the tides, currents, and tortuous channels of Inchon made necessary a four-hour daylight approach to the transport area. This meant that 1130, at low tide, was the earliest hour of arrival; and not until about 1700 would the next high tide provide enough water for an assault landing.

On 15 September a maximum high tide of 31 feet could be expected at 1919. Evening twilight came at 1909. It was estimated initially that 23 feet of water would take the LCVPs and LVTs over the mud flats, but that 29 feet were necessary for the beaching of the LSTs.

In view of these conditions, PhibGru One planners concluded that 1700 was the best time for landing the LCVPs and LVTs, and it was decided to beach the LSTs at about 1900. Simultaneous landings of troops on Wolmi-do and the mainland were contemplated.

This was the point of departure for Division planners. They maintained that Wolmi-do was the key terrain feature, and that it should be secured first in a separate landing. The logical course, according to the Marines, would be to utilize the morning high tide for the seizure of this island commanding the waterfront. The enemy would be given the whole day in which to prepare for the attack on the mainland; but the Landing Force could also utilize this period for cleaning up Wolmi-do and moving in supporting artillery.

It was typical of the harmony prevailing between the two planning groups on the Mount McKinley that PhibGru One immediately accepted the concept of a double-barreled attack. The rub was that a night approach would be necessary to assault Wolmi-do at 0600 on the morning high tide, and the Navy doubted the feasibility of a movement of the slow-moving and unmaneuverable APAs, AKAs, and LSTs through winding, mud-lined channels in the darkness.

At length a compromise was reached with the decision to employ DD, APD, and LSD types primarily, which were more maneuverable in addition to being equipped with radar navigational instruments.\[17\]

The morning landing on Wolmi-do was to be made with a single battalion of the 5th Marines, to be designated by the Brigade. On the mainland the remaining two battalions would land with the evening high tide on RED Beach, just north of the causeway connecting the island with the city, while two battalions of the 11th Marines landed in support on Wolmi-do. Meanwhile the 1st Marines was to hit BLUE Beach, southeast of the urban area. And after driving rapidly inland to consolidate their positions before nightfall, the two Marine regiments were to make a junction in the morning and seize the beachhead while the 17th ROK Regiment (later replaced by 1st KMC Regiment) mopped up the city streets.

Marine G–4 planners suggested one of the most daring of all the calculated risks. This was the decision to use LCVPs for the RED Beach landings because their comparative speed would clear the landing area for the beaching of eight LSTs—all that could be crammed into the narrow confines of this strip of urban waterfront.
Each was to be loaded with ammunition, rations, water, and fuel. Obviously these Navy workhorses, nicknamed “large slow targets”, would be easy marks for NKPA shore guns, but this was a chance that had to be taken if the assault troops were to be adequately supplied.

There was not time, of course, to unload and retract the ships during the period of evening high tide. They must be unloaded during the night and taken out on the morning tide.

Since it was not considered feasible to land LSTs on BLUE Beach, that area would not be developed beyond the needs of the immediate assault. For this purpose, 16 preloaded LVTs were to be used as floating dumps until the 1st Marines could link up with the other regiment.

These were the essentials of the Landing Force plan. H-hour was ultimately determined from a study of late photographs which brought about a slight change in estimates. Since a tide of 25 feet (two feet higher than the initial estimate) appeared to be necessary for the LCVPs and LVTs to reach the sea wall, H-hour was set at 1730 instead of 1700. The completed Landing Force plan provided for these steps:

1. BLT–3 of RCT–5 to land on Beach GREEN at L-hour on D-day and seize Wolmi-do.
2. RCT–5 (- BLT–3) to land on Beach RED at H-hour, seize Objective O-A, effect a juncture with RCT–1, and prepare for further operations to the east in coordination with RCT–1 to seize the FBHL.
3. RCT–1, to land on Beach BLUE, with two battalions in assault, seize Objective O–1, and prepare for further operations to the east in coordination with RCT–5 to seize the FBHL.
4. 11th Marines (- 3d Bn) (96th F. A. Bn, USA, attached) to land 1st and 2d Bns on Beach GREEN at H-hour, occupy positions on Wolmi-do and support seizure of the beachhead with priority of fires to RCT–1. Remainder of artillery to land on call.
5. ROK Marines, initially in Division reserve, to land over Beach RED on call and conduct operations to occupy the city of Inchon in coordination with RCT–5.
6. 1st Tank Bn (-) (Reinf.) to be prepared to land on order one company in LSU on Beach GREEN, remainder of battalion on order on beaches to be designated.
7. 1st Engr Bn (-) to land on Beach RED or in harbor on order, assume control of detached companies on order, and support seizure of beachhead as directed. Priority to opening and maintaining MSR along southern edge of the city to RCT–1 zone of action.
8. 1st Shore Party Bn (-) to land on order on Beach RED or in harbor and assume control of shore party activities on Beaches RED and GREEN.
9. 1st Amph Trac Bn to transport and land elements of RCT–1 on Beach BLUE and continue support of RCT–1 until released.
10. 2d Engr Spl Brig, USA (Reinf.) to furnish ships platoons and augment Division shore party as requested. After landing and when directed, to assume operational control of Division shore party and responsibility for control of all port operations. To provide logistical support of 1st MarDiv.
The old recipe for rabbit stew began, “First, catch your rabbit.” And while the Landing Force plan was being formulated, General Smith had no assurance for a few days that he could count on having the whole of his landing force available.

General Almond informed the Marine general on 23 August that the release of the 1st Provisional Marine Brigade for participation in the Inchon landing would depend on the military situation. He seemed doubtful and added that the withdrawal of the Marines would be bad for Eighth Army morale.

The Attack Force and Landing Force began their planning, however, on the basis of Brigade availability. It had been the intention of CinCFE to employ a full Marine division, but an embarkation date of 1 September would not permit the 7th Marines to arrive in time. This left the 1st Marines as the only RCT of the Landing Force unless the 5th Marines and other Brigade units could be released.

On 30 August, Smith brought up the issue again in a dispatch to X Corps, whereupon CinCFE issued an order making the Brigade troops available to the Division on 4 September.

This might have settled the issue if the enemy had not launched an all-out offensive on 1 September to smash through the Pusan Perimeter. Although the Brigade had already sent heavy equipment to Pusan for embarkation, the Marines were rushed up to the front on 2 September as a mobile reserve. That same day the order for their release was revoked.

There could be no doubt about the gravity of the military situation. Thirteen NKPA divisions were making a final effort, and the Marines were needed in the Naktong Bulge sector, where the Korean Reds were attempting to cut the Pusan-Taegu lifeline.

On the other hand, time was also running out for the Inchon planners. Colonel Forney, the new deputy chief of staff for X Corps, informed Smith on 2 September that Almond planned to use the 32d Infantry of the 7th Infantry Division if the 7th Marines could not arrive in time for the Inchon landing. Recently, the cadres of this Army division had been brought up to strength with 8,000 South Koreans. The remaining 12,000 U.S. troops had received no adequate amphibious training, though instructors from Training Team Able had made a start with some of the units.

This turn of affairs resulted in a meeting in General Almond’s office. The Navy was represented by Admirals Joy, Struble, and Doyle; the Army by Generals Almond, Ruffner, and Wright; and the Marines by General Smith.

Wright opened the discussion by stating that Walker needed the Brigade troops urgently as a mobile reserve to hold the line in the current NKPA offensive. Almond conceded that the question of Brigade availability must be decided on a basis of Eighth Army requirements and tactical considerations. But if the 5th Marines could not be released, he reiterated his decision to substitute the 32d Infantry for the Inchon operation.

Admiral Joy declared that the success of the Inchon assault depended on the employment of Marines trained in amphibious techniques; and he called upon Smith for his opinion. The Marine general said that a hastily instructed unit could not be expected to take the place of a combat-experienced regiment in the Landing Force, and that last-minute substitutions of this sort could not be made in complicated ship-to-shore landings without courting trouble. He added that it would be necessary in such an event to land in column on one beach instead of two, with the 1st Marines in advance of the 32d Infantry. These comments had the support of Doyle, who agreed that the availability of the 5th Marines might mean the difference between success and failure at Inchon.
At this point Admiral Struble commented that the issue boiled down to the need for a mobile Eighth Army reserve. He suggested as a compromise that a regiment of the 7th Infantry Division be embarked and moved to Pusan as a floating reserve to be landed in an emergency as a substitute for the 5th Marines. This solution was accepted. Almond called up Eighth Army Headquarters immediately, and within an hour Wright telephoned to inform Smith that the Brigade would be relieved at midnight on 5 September.[18]

As it turned out, the 17th Infantry of the 7th Infantry Division was embarked and transferred to Pusan to substitute for the 5th Marines, with Marine officers of Training Team Able assisting in the outloading. After the amphibious assault, the regiment landed administratively at Inchon to rejoin its parent unit.
At a conference on 1 September called by Admiral Struble and attended by Admirals Richard W. Ruble, John M. Higgins, and Sir William G. Andrewes (RN) in addition to Generals Ruffner and Smith, it was tentatively agreed that the cruisers would begin the bombardment on the morning of D-minus 1, and the destroyers that afternoon after a napalm air strike had been conducted against Wolmi-do on D-minus 4.

At another naval gunfire conference two days later, the napalm strike was delayed until D-minus 3. On 8 September, when Admiral Struble held his final meeting, PhibGru One and the 1st Marine Division agreed on the scope and timing of naval gunfire support. It was decided, therefore, that the bombardment would commence on D-minus 2 and be repeated if necessary on D-minus 1.

During the following week, plans were worked out in detail. The beachhead was divided into 52 target areas, including two on Wolmi-do and one on Sowolmi-do. In the channel to the west and southwest of the port, imaginary lines marked off three fire support areas for the ships, numbered in order from south to north.

On D-day the four cruisers would stand in from 13,000 to 15,000 yards offshore in Fire Support Area I, while the destroyers in FSAs II and III manned stations 800 to 6,000 yards from the beach. The three LSMRs would first support the Wolmi-do landing from close-in positions to the north and west of the island. Later, for H-hour, one of the rocket ships was to remain northward to soften up RED Beach, and the other two would displace to the vicinity of BLUE Beach.

From L-minus 45 to L-minus 2, the cruisers and destroyers would dump a total of 2,845 shells on Inchon and its outlying island, each ship concentrating on specifically assigned target areas. From L-minus 15 to L-minus 2, each of the three LSMRs would saturate Wolmi-do with 1,000 5-inch rockets. Most of the ships were to cease fire two minutes before the landing on GREEN Beach, when Marine planes strafed possible enemy positions for final shock effect. Four of the destroyers would continue to pound Inchon targets with 55 shells during the short air attack.

Another intricate piece in the mosaic of destruction was the mission assigned to one LSMR for the period immediately preceding and following the landing of 3/5. The lone rocket ship would lumber parallel to Wolmi-do’s shoreline, across the front of the advancing first wave, and pour 40mm shells into the beach area. Clearing the route of approach to GREEN Beach just in time for the landing craft to speed by, the LSMR was to continue southward along the coast and direct its heavy automatic fire at the slopes in advance of the attacking troops.

Once Wolmi-do was secured, the full fury of the support ships would rain down on targets in the Inchon area. From H-minus 180 to H-minus 5, the cruisers and destroyers were scheduled to blast their assigned targets with a total of 2,875 shells. Chiming in at H-minus 25 with 2,000 rockets apiece, the LSMRs would pulverize RED and BLUE Beaches until five minutes before the landings by the two Marine regiments. At that time, all ships must cease fire to clear the way for strafing Corsairs and Navy Skyraiders.

The meticulous planning left nothing to chance, even with the assumption that a foothold would be successfully established by darkness. During the night of D-day, the cruisers would expend an additional 250 shells on interdictory missions, and the destroyers were authorized to fire a total of 300 5-inch rounds on call from the infantry. To help thwart any possible enemy ambitions at dawn of D-plus 1, the cruisers would be prepared to unload 300 shells for interdiction and call fires, while the destroyers stood poised with the same number of high-explosive missiles plus 300 illuminating shells.
Other details of the elaborate plan dealt with the coordination of naval gunfire, air, artillery, mortars, and rockets. At certain times, for example, Marine and Navy gunners could fire only below a maximum trajectory of 1100 feet, so that planes, whose minimum altitude was set at 1500 feet, could pass safely over Inchon during strikes on adjacent areas. During those periods when close support Corsairs were scheduled to descend on beachhead targets, all other heavy weapons would fire completely clear of broad circles defining strike areas for the air missions.

More tables and instructions in the formidable appendixes of Admiral Doyle’s operation order assigned shore fire control parties their ships and radio frequencies, ships their battery missions and ammunition allowances, and a host of other tasks and responsibilities.
Chapter 4. The Planning Phase
Air Support for Inchon

Air support, of course, was closely related to naval gunfire planning. After the arrival of CG 1st MAW and his staff at Tokyo on 3 September, part of the group proceeded at once to Itami Air Force Base while General Harris and selected staff members remained at Tokyo for planning conferences.

Air support planning for Inchon was based on the decision that the sky over the objective area was to be divided between the organic air units of JTF–7 and X Corps.

JTF–7 counted on its fast carrier task force, TF–77, to gain air supremacy and furnish deep support and interdiction strikes. Close support for the landing was to be provided by the two squadrons of TG–90.5, on board the CVEs Sicily and Badoeng Strait, which had been the main air components of MAG–33 in support of the 1st Marine Provisional Brigade. In addition, the Attack Force commander could also call upon the aircraft of TF–77 for close support.

Organic air support for X Corps was to be the mission of the Tactical Air Control set up under the operational control of the corps commander and the direct command of General Cushman. The inspiration for this organization came from Marine officers on the staff of X Corps. Their suggestions were accepted by General Almond, who used his authority as FECOM chief of staff to put the idea into effect.

MAG–33 was designated by General Harris from the Forward Echelon, 1st MAW, to serve as TAC X Corps, with VMFs 212 and 312 in addition to VMF(N)–542 and the rear echelon of VMF(N)–513. These units were not to be assigned, however, until X Corps assumed control of operations in the objective area, whereupon they would be based at Kimpo Airfield. Meanwhile, they remained under the administrative control of ComNavFE and MAG–12, with headquarters at the Itami AFB in Japan. The two Marine carrier-based squadrons and the forward echelon of VMF(N)–513, having come out to Korea in August as units of MAG–33, continued to be assigned temporarily to that group for administrative purposes.[22]

TAC X Corps was activated on 8 September, just six days before its components landed in Japan. 1st MAW planners designated the Air Support Section of MTACS–2, which had controlled air support for the Brigade, to continue in that capacity for the Landing Force and later for the entire X Corps. Arrangements were made with the Combat Cargo Command, FEAF, to airlift aviation fuel and ammunition from Japan to Kimpo Airfield, after its capture, until such supplies could be transported by sea.

Marine air units were also affected, of course, by the planning which the 1st Marine Division air and naval gunfire representatives of the Fire Support Coordination Center had already accomplished. Working aboard the Mount McKinley in conjunction with their opposite numbers of PhibGru One, the FSCC group had been busy since its arrival in Japan on 18 August. Planning was conducted with the CO 11th Marines after the artillery regiment landed in Japan, and the resulting decisions coordinated with air and naval gunfire plans.

The 1st MAW completed its planning on 9 September. General Cushman was designated Tactical Air Commander, X Corps, on that date and departed for the objective area the next day with the air elements scheduled to proceed by ship.
On 30 August, ComNavFE issued his Operation Plan 108–50, assigning to JTF–7, of which X Corps was a part, the mission of seizing by amphibious assault a beachhead at Inchon.

X Corps OpnO No. 1 was dated on the 28th, though not received by Division until the 30th. By that time, Division planning had made so much progress that Embarkation Order 1–50 was issued on the last day of the month, followed on 4 September by the final draft of Division OpnO 2-50. Operations orders of JTF–7 and TF–90 were issued concurrently.

This meant that the assault RCTs, contrary to amphibious doctrine, were to receive rigid landing plans drawn up completely by the Division. Lack of time caused this variation from usual procedure, but General Smith had confidence in the ability of his troops to overcome the handicap. “Under the circumstances,” he asserted, “adoption of such methods was justified by the common background and training of all elements and individuals in amphibious doctrine, procedures, tactics, and techniques.”[1]

The most that could be done was to summon Brigade staff officers from Korea for a conference. Colonel Edward D. Snedeker (Chief of Staff), Captain Eugene R. Hering, Jr., USN (Brigade Surgeon), Lieutenant Colonel Arthur A. Chidester (G–4), and Major Donald W. Sherman (G–1) arrived on board the Mount McKinley for a conference on 28 August and the following day. The Brigade G-3, Lieutenant Colonel Joseph L. Stewart, reported as liaison officer on the 31st. When he returned to the front, the 5th Marines was attacking, and he discussed landing schedules with Lieutenant Colonel Raymond L. Murray while the regimental commander directed the action.

“This,” remarked General Smith, “was hardly in accordance with accepted procedure for planning amphibious operations.”[2]

The recommendation of Brigade staff officers that the 3d Battalion, 5th Marines, be designated for the assault on Wolmi-do was accepted by Division planners. Colonel Snedeker also proposed that the 1st Korean Marine Corps (KMC) Regiment of nearly 3,000 men be substituted for the 17th ROK Regiment, which he said was committed in the Pusan Perimeter and might not be available. The change was approved by GHQ on 3 September, with the Eighth Army being directed to provide weapons for the newcomers.

This was the beginning of a relationship that would find the KMCs serving with distinction alongside the men of the 1st Marine Division and eventually becoming a fourth infantry regiment of the Division. Activated in 1949 by the Republic of Korea, the unit took part in anti-guerrilla operations until the NKPA invasion. After the outbreak of hostilities, the KMCs fought creditably in UN delaying actions in southwest Korea. The turning point came when they were attached to the 1st Marine Division and sent to Pusan for test-firing of their new weapons before embarking for Inchon. Immediately the Koreans commenced to model themselves after U.S. Marines so assiduously as to win respect for their spirit and rugged fighting qualities.[3] They were quick to learn, despite the language handicap, and showed aptitude in mechanical respects.
The main body of the 1st Marine Division troops landed at Kobe from 29 August to 3 September. Marine officers sent in advance to that seaport had found the authorities there “very cooperative” and brought back to Tokyo a billeting plan which General Smith approved. Since the facilities in and about Kobe were limited, two large APs were designated as barracks ships, thus making available a Marine labor pool at the docks.

At best, every hour was needed for the tremendous task of transferring cargo from merchant type shipping into assault shipping.[4] There was cause for anxiety, therefore, when a telephone message informed the command of the 1st Marine Division on 3 September that Typhoon JANE had struck Kobe with winds of 74 miles per hour. First reports had it that the Marine Phoenix was on the bottom with all of the Division’s signal gear. Several ships were said to have broken their moorings and gone adrift; the docks were reported under 4 feet of water, and loose cargo on the piers had been inundated by breakers.

Later accounts proved to be less alarming. The Marine Phoenix, having merely developed a bad list as a result of shifting cargo, was soon righted. Nor was the other damage as serious as had at first been supposed. But 24 hours were lost from the tight reloading schedule while Typhoon JANE kicked up her heels, and time was one commodity that could not be replaced. All operations at Kobe had to be speeded up to pay for this delay.

On 4 September the Mount McKinley set sail for Kobe, arriving at 1445 the next day to be welcomed by an Army band at the pier. The soothing powers of music were needed by Marine officers who learned that fire had broken out in the hold of the Noonday as she belatedly approached Kobe. This “Jonah” had taken so long to load at San Diego that she lagged behind the others, and now large quantities of much-needed Marine clothing were apparently ruined by water when the fire was extinguished. Once again the Army came to the rescue with wholehearted cooperation by taking the water-soaked boxes to a reclamation depot where the garments were dried, repackaged and sent back to the docks in time for loading out on the originally scheduled ships.

Only the most basic troop training could be conducted at Kobe to supplement the individual and amphibious instruction the men had received on shipboard. At this time, moreover, an order from the Secretary of the Navy made it necessary to reduce the size of the landing force by withdrawing about 500 Marines who had not yet reached their 18th birthday. They were transferred to the 1st Armored Amphibian Tractor Battalion, which was to be left behind at Kobe when the Division embarked for Inchon.

This unit had been organized at Camp Pendleton in accordance with a directive from the Commandant. It was found necessary, however, to transfer most of its combat-ready men to the 1st Tank Battalion in order to bring that outfit up to full strength. The tank battalion was given priority because its vehicles would be used throughout the operation while the armored amphibians might be employed only occasionally. As a consequence, the 1st Armored Amphibian Tractor Battalion left San Diego with new personnel lacking in the skills to make it fully combat ready.

Lieutenant Colonel Francis H. Cooper, the commanding officer, recommended at Kobe that the unit be withheld from action until drivers, gunners, and maintenance crews could be properly trained. General Smith and his staff concurred, having learned that a trained Army unit, Company A of the 56th Amphibian Tractor Battalion, could be made available. Orders were given for Cooper’s battalion to remain at Kobe, therefore, with the 17-year-old Marines attached.

Several other U.S. Army units were to take part along with the Marines—the 96th Field Artillery Battalion, the 2d Engineer Special Brigade, the 73d Engineer (c) Battalion, the 73d Tank Battalion, the 50th
Engineer Port Construction Company, and the 65th Ordnance and Ammunition Company. These units comprised a total of about 2,750 troops.

Plans called for the commanding officer of the 2d Engineer Special Brigade to head a logistical task organization which also included several Marine units—the 1st Shore Party Battalion, the 1st Combat Service Group, and the 7th Motor Transport Battalion. The Shore Party troops were to initiate unloading at the objective, whereupon the over-all control would pass to the 2d Engineer Special Brigade, on order, to insure continuity of development of unloading facilities.[5]

Division service units, in accordance with current directives, were to carry the 30-day replenishment of spare parts appropriate to the unit concerned. Although the Combat Service Group had neither spare parts nor supplies, it was to have custody of both after the landing. Thus the units would be freed immediately to move away from the beach in support of the Division as it drove toward Kimpo and Seoul.[6]

At Kobe the men of the 1st Marine Division were required to leave the full clothing bags they had brought from San Diego and embark for Inchon with field transport packs containing only the most essential items. This meant that some 25,000 sea bags must be stored at the Japanese port in such a way that future casualties and rotation drafts could reclaim their personal effects without delay. As a reminder of the grim task ahead, provisions must be also made to return to proper custody the effects of deceased personnel.
Chapter 5. Embarkation and Assault
Plan to Seize Kimpo Airfield

Intelligence reports on the eve of embarkation did not depart from earlier estimates of a maximum of 2,500 NKPA troops in the objective area. From 400 to 500 were believed to be garrisoning Wolmi-do, 500 defending Kimpo, and the balance stationed in and about Inchon.[7] Despite the estimates of low to moderate enemy resistance, however, General Smith differed with the command of X Corps when a commando-type raid on Kimpo was proposed.

The question came up on 8 September at a conference held at Kobe on the Mount McKinley and attended by Generals Hickey and Smith, Admiral Doyle and Colonel Louis B. Ely, USA. Ely commanded the newly formed X Corps Special Operations Company composed of 124 U.S. Army troops briefly trained by TTU instructors in demolitions, individual combat and ship-to-shore movements in rubber boats.[8] General Almond’s plan called for this company, reinforced by Marines, to embark at Kobe on 10 September in a British frigate and transfer to a South Korean picket boat. Upon arrival at the objective area on D-day, the raiders were to paddle three miles in rubber boats to the north of the Attack Force, land under cover of darkness, and move inland for a surprise attack on Kimpo at dawn.

General Almond felt it necessary to seize the airfield at the earliest possible moment. Surprise, he felt, would reduce the risks. General Smith pointed out, however, that Colonel Ely’s men would have to row their rubber boats against a strong tide and cross a wide expanse of mud flats on foot. His radios could only reach four miles, and his presence in the 1st Marine Division’s zone of action would restrict the use of naval gunfire and air support. Finally, said the Marine general, it was not certain that the raiders could hold the airfield even if they took it.[9]

This conference did not settle the issue. Colonel Williams, the Division chief of staff, was requested in a telephone call followed by a dispatch from the G–1 Section of GHQ to turn over 100 specially qualified Marines to Ely’s company. Smith sent a dispatch requesting reconsideration. He cited the battle casualties of the Brigade, which had not been replaced, and the 500 under-age Marines to be left behind at Kobe. As a final objection, many of his best qualified men had already embarked on the LSTs.

General Shepherd sent a dispatch supporting the 1st Marine Division commander, and the order from GHQ was recalled.[10]

Another proposal by General Almond to speed up the drive inland from the beachhead was relayed to General Smith aboard the Mount McKinley on 9 September by Brigadier General Henry I. Hodes, ADC of the 7th Infantry Division. This was a plan to land a battalion of the 32d Infantry on GREEN Beach, Wolmi-do, with a mission of racing across the causeway on the late afternoon of D-day and moving rapidly down the road to seize the high ground south of Seoul, more than 20 miles inland. The 1st Marine Division was requested to furnish five tanks in support of the enterprise tentatively scheduled to take place while two battalions of Marine artillery were landing on Wolmi-do and two Marine rifle regiments were landing on the Inchon beaches.

This idea struck Smith as being extremely optimistic. Without going into the tactical objections, he decided that the scheme was logistically impracticable.[11]

Chapter 5. Embarkation and Assault
Shipping Assigned to Marines

The embarkation at Kobe was not completed without some confusion. Much of the equipment was in its original containers and had never been checked or identified. Large quantities of Class I, III, and V supplies, distributed throughout the incoming shipping, had to be reassembled and reassigned for the outloading. In the lack of suitable storage areas near the piers, Classes III and V were off-loaded into Japanese barges and held in floating storage until they could be reloaded into assault shipping.[12]

Inter-pier transfer of cargo was avoided whenever possible byberthing incoming shipping so that units could load directly into assault shipping. Unfortunately, this could not be done in some instances, since the LST landing was outside but adjacent to the pier area.

Facilities for the embarkation of the Brigade at Pusan were satisfactory, with pier space for three APAs and one AKA at one pier and an LSD at another. All of the assigned LSTs could beach simultaneously along the sea wall.

Only Marine amphibious experience enabled the Division to complete its tremendous task at Kobe in spite of the time lost as a result of Typhoon JANE. The shipping tentatively assigned by X Corps consisted of one AGC, six APAs, eight AKAs, three LSDs, one LSM, three APDs, 12 LSUs, and 47 LSTs. This last figure included 17 Navy-manned and 30 SCAJAP (Japanese-manned) LSTs. The troop list of approximately 29,000 men was broken down by the Division into the following six embarkation groups with their assigned shipping:

ABLE: Division Troops--1 AGC; 1st CSG--2 APAs, 5 AKAs, 9 LSTs, 1 LSM, and 3 LSUs (towed to objective area by tugs

BAKER: 1st Marine (Reinf)--1 APA; 1st Amtrac Bn--12 LSTs

CHARLIE: 5th Marines (Reinf)--3 APAs; 73d Tank Bn, USA--12 LSTs, 3 APDs, and 1 LSD with 3 LSUs

DOG: 11th Marines--1 AKA and 6 LSTs

EASY: 1st Tank Bn--2 LSDs with 3 LSUs each and 4 LSTs (later increased to 6)

FOX: 2d Engr Spec Brig, USA--1 AKA; 96th FA Bn, USA--4 LSTs

Four of these groups were to embark from Kobe while CHARLIE mounted out from Pusan and FOX from Yokohama, Yokosuka, and Camp McGill in Japan.[13] The main body of the Division’s third rifle regiment, the 7th Marines, was scheduled to land in Japan on 17 September. Colonel Litzenberg, the commanding officer, arrived at Itami Airfield on the 6th, having flown from Camp Pendleton ahead of his troops to make arrangements.
Command relationships during the assault and embarkation phase were as follows: 

The movement of JTF–7 to the objective area was planned in the most exacting detail, owing to the dispersion of the ships to begin with, the need for secrecy, and the limited time. Another complication entered the picture at the last minute, when a second typhoon loomed on the Pacific horizon with considerably more menace than its exotic name would imply.

Navy meteorologists had been plotting the movement of Typhoon KEZIA since the first signs of turbulence near the Marianas Islands on 6 September. Generating winds of 100 miles per hour three days later, the typhoon was churning a steady course toward the East China Sea and Tsushima Strait, where it was expected to hit on 12 or 13 September. The timing could not have been worse as far as Admiral Doyle and General Smith were concerned. KEZIA threatened to strike the ships of the task force during the last stages of embarkation and the first phase of the approach to Inchon. And any serious disruption of the Navy’s delicate timetable would place the 15 September deadline hopelessly beyond reach.

With the carriers, cruisers, and destroyers scheduled to be in the Yellow Sea, beyond the path of the storm, Admiral Doyle’s amphibious vessels were the most imperiled elements. The Attack Force Commander planned to move his ships to the objective area in six increments, three of them loading in Japan, one in Pusan, and two at both places simultaneously. Because of the last two, certain rendezvous areas were designated so that fragments of a group could converge at sea to form the whole. Obviously, then, the mathematics of navigation was a dominant factor. Success hinged on coordination in terms of hours, not weeks or days.

Each of the six increments had its own time schedule for an independent voyage. The route to Inchon was marked off on maps by a chain of check points, the most significant of which bore the code names ARKANSAS, IOWA, and CALIFORNIA. The first two, lying in the East China Sea off the southwestern tip of Korea, formed the junction of the sea lanes from Japan and Pusan. Consequently, there was no alternative to their remaining fixed in the direct path of the oncoming typhoon. Point CALIFORNIA was important in that it marked the end of the open sea phase and the beginning of the treacherous offshore approach to Inchon via Flying Fish and East channels.[14]
Movement Group was to pass through Point ARKANSAS on the 14th, joining the *Cavalier, Pickaway, Henrico*, and *Seminole* from Pusan.

All ship movements took place on schedule until the morning of 11 September, when angry ocean swells off the coast of Japan marked the approach of KEZIA. Winds at the center of the typhoon were estimated at 125 miles per hour, but Admiral Doyle based his decisions on the assumption that the storm would curve off to the north instead of colliding with the invasion armada in full force. He was taking a calculated risk, therefore, when he ordered the Transport Movement Group at Kobe to weigh anchor on the 11th, a day ahead of schedule, and proceed to the objective area. The LSTs, already on their way, were now out of danger; and Doyle believed that advancing the sailing date would enable the AKAs and APAs to escape the worst of the typhoon.

The *Mount McKinley*, with Doyle, Smith, and their staffs aboard, departed Kobe at 1030 on the 11th. As the ship rolled and pitched in heavy seas, the Attack Force Commander remarked that KEZIA was one of the worst storms he had ever encountered.[15]

This was also the opinion of Captain Cameron Briggs, USN, then fighting it out with KEZIA in an effort to reach Sasebo with the carrier *Boxer* and its 96 planes plus 14 extra aircraft taken aboard at Pearl Harbor. It was necessary to launch these spares and land them on Okinawa before he could finally make port on the 12th and prepare to mount out two days later for Inchon.[16]

On 12 September the *Mount McKinley* overtook the AKAs and APAs. They had reversed course, apparently on the assumption that they could not get around the typhoon. If Doyle had not ordered the heaving vessels to circle about and follow the flagship through the storm, their chances for meeting the 15 September deadline at Inchon would have vanished like the wind-whipped spray.[17]

There was no joy in the troop compartments as the transports plowed through mountains of water. But Doyle was winning his gamble that the typhoon would slowly veer off to the north, and starting the Transport Group a day early proved to be a sound decision. Thanks to the admiral’s judgment and resolution, every ship weathered the storm and approached Point ARKANSAS on schedule.

After rounding Kyushu on 12 September, the *Mount McKinley* docked at Sasebo that evening to pick up General MacArthur with his party of GHQ and X Corps officers. The proper ship for this purpose was Admiral Struble’s flagship, the USS *Rochester*. But CinCFE preferred the *Mount McKinley* despite the fact that an AGC was designed for the staffs of an Attack Force and Landing Force and had no accommodations suited to a party including seven general officers. The ship was warped in by two tugs and CinCFE came aboard. General Shepherd had previously been assigned by General MacArthur to his staff for temporary duty as amphibious adviser and personal liaison officer to the 1st Marine Division. The Marine general was accompanied by Colonel V. H. Krulak, G–3 of FMFPac, and his personal aide, Major J. B. Ord.

In less than an hour the *Mount McKinley* was back on the high seas, straining through the darkness toward Korea.[18]

All elements of the Attack Force completed the last leg of the voyage without incident on 14 September. Headquarters of the 2d Battalion, 1st Marines, rode the only cripple, an LST partially incapacitated by an engine breakdown. Fortunately, an ocean-going tug was on hand to tow the ailing vessel at eight knots—sufficient speed to get her to the objective area on time.

The Yellow Sea was quiet as the columns of ships closed on Point CALIFORNIA and Korea’s coastline. Nothing was taken for granted, and the approach was carefully screened to the very end by Admiral Andrewes’ fast Blockade and Covering Force.

Chapter 5. Embarkation and Assault
Air and Naval Bombardments

The softening up of Wolmi-do had begun on 10 September, when the Marine fliers of TG–95.5 made napalm attacks designed to burn off the trees screening NKPA artillery. Six planes of VMF–323 and eight planes of VMF–214 took off from the CVEs at 0600 and scorched the eastern side of the island. The next flight of 14 planes found it necessary to orbit for a few minutes until the smoke cleared sufficiently for them to continue the work of destruction.

Lieutenant Clark’s reports had led G–2 officers to believe that enemy defensive installations on Wolmi-do were more formidable than had at first been supposed. As if in support of this conclusion, the Marine fliers of the second strike were greeted with small-caliber anti-aircraft fire both from the island and mainland. A third attack, launched from the decks of the Sicily and Badoeng Strait shortly before noon, left the hump-backed island in flames from one shore to another.

After the CVEs returned to Sasebo for replenishment the next day, the carrier-based Navy planes of TF–77 worked over both Wolmi-do and Inchon on 12 and 13 September. It was now the turn of the destroyers, and Admiral Higgins had planned a bold venture. Instead of risking collision or grounding in a night approach, he decided to forego the advantages of surprise and attack in broad daylight. And instead of avoiding NKPA fire, he intended to goad the enemy into retaliations which would reveal the positions of NKPA guns on Wolmi-do.

The hazards of the operation were increased by the fact that a ROK PC boat had discovered an NKPA craft laying mines on the morning of the 10th. This confirmed Admiral Struble’s opinion that the Inchon area offered the enemy excellent opportunities for this form of warfare. Not only would the muddy waters make detection difficult, but crippled ships would block the narrow channel.

It was not a pleasant prospect. And the outlook became darker on the morning of 13 September when four mines were spotted in Flying Fish Channel. The U.S. cruisers Toledo and Rochester and the British cruisers Kenya and Jamaica had dropped off in support as the six destroyers carried out their mission. Pausing only to detonate the mines with 40mm rounds, the cans moved up within 800 yards of Wolmi-do to fire down the enemy’s throat while the four cruisers poured in 6- and 8-inch salvoes and the planes of TF–77 made bombing runs.[19]

It had been long since the Navy issued the historic order “Prepare to repel boarders!” But Admiral Higgins did not overlook the possibility of NKPA infantry swarming out over the mud flats to attack a disabled and grounded destroyer. And though he did not issue pikes and cutlasses, the crews of the Gurke, Henderson, Swanson, Collett, De Haven, and Mansfield were armed with grenades and Tommy guns for action at close quarters.

The enemy endured half an hour of punishment before obliging Higgins by opening up with the shore guns of Wolmi-do. The Gurke and DeHaven took hits, and five NKPA shells found the Collett. The total damage was insignificant, however, and the casualties amounted to one man killed and eight wounded. These results cost the enemy dearly when the cruisers and destroyers silenced the NKPA guns shortly after they revealed their positions.

On the return trip the destroyers found eight more mines and exploded them. This proved to be all, for the enemy had neglected an opportunity to make the waters around Inchon dangerous for the attack force. The next morning, when the destroyers paid another visit to Wolmi-do, the shore guns appeared to have been effectually silenced. The DDs fired more than 1,700 5-inch shells and drew only a few scattered shots in reply.
Meanwhile, the Marine planes of VMFs -214 and -323, having returned from Sasebo, cooperated by spotting for the cruisers and launching napalm strikes before and after the bombardment.

On the evening of 14 September, after five days of continual pounding, Wolmi-do was a blasted piece of real estate as the Marines of 3/5 prepared to hit GREEN Beach in the morning.
The pre-dawn stillness of the Yellow Sea was shattered as the Corsairs of VMFs–214 and –323 flashed up from the decks of the Sicily and Badoeng Strait. To the west the planes of Task Force 77 were assembling in attack formations above the Valley Forge, Philippine Sea, and Boxer. Squadron after squadron droned eastward through the blackness, and the first aircraft began orbiting over the objective area at 0454.[20]

Two hours earlier, Advance Attack Group 90.1, under Captain Norman W. Sears, USN, had glided into the entrance of Flying Fish channel. Led by the Mansfield, the column of 19 ships snaked through the treacherous passage while captains and navigators sweated over radar scopes. Lieutenant Clark’s handiwork provided a welcome relief midway along the route, when the glimmering beacon on Palmi-do guided the vessels past one of the more dangerous points in the channel. Minutes after air cover began to form over Inchon, the ships eased into the narrows west of Wolmi-do and sought assigned battle stations. Training their big guns on the port city were the cruisers Toledo, Rochester, Kenya, and Jamaica, comprising one of the three Fire Support Units under Admiral Higgins. Other support vessels scattered throughout the waters of the objective area were the destroyers Collet, Gurke, Henderson, Mansfield, De Haven, Swenson, and Southerland; and this array of fire power was further supplemented by the three bristling rocket ships, LSMR’s 401, 403, and 404.[21]

The control ship, Mount McKinley, its flag bridge crowded with star-studded commanders, steamed into the narrows just before dawn. No sooner had the gray shoreline become outlined in the morning haze than the 6- and 8-inch guns of the cruisers belched sheets of orange flame in the direction of Inchon; and at 0545, the initial explosions rocked the city and reverberated throughout the channel. There was a deafening crescendo as the destroyers hammered Wolmi-do with their 5-inch guns. Radio Hill, its seaward side already burnt and blackened from previous bombardments, was almost hidden by smoke when Marine planes streaked down at 0600 to smother the island with tons of rockets and bombs.[22]

Captain Sears, reporting to the Mount McKinley, confirmed L-hour at 0630. To this end, Lieutenant Colonel Robert D. Taplett’s landing force was boated by 0600, and the LCUPs and LSUs rendezvoused while Marine air continued to soften up the target.[23]

Air attacks ceased at 0615, but Wolmi-do enjoyed only a momentary respite before the most unnerving blow of all. In strange contrast to the sleek men-o’-war and nimble aircraft, three squat LSMRs closed on the island from the north, a few hundred yards offshore. Phalanxes of rockets arose from the decks of the clumsy ships, arched steeply, and crashed down. One of the rocket ships, taking a southerly course, passed GREEN Beach and dumped salvo after salvo along the slopes and crest of Radio Hill.

When the LSMR cleared North Point of Wolmi-do, seven LCVPs darted across the line of departure and sped shoreward with 3/5’s first wave.[24] Rockets and 40mm shells were still ripping the southern half of the island when one platoon of Company G and three Platoons of Company H stormed GREEN Beach at 0633. Two minutes later, the second wave of landing craft ground to a halt on the sand, bringing the remainder of both assault companies.

The Marines were confronted by a scene of devastation almost devoid of enemy resistance. Only a few scattered shots greeted the assault force as it punched inland. The failure of UDT men to clear away all of the wrecked small craft cluttering the beach had left 3/5 a landing strip less than fifty yards wide. Consequently, each wave had to contract like an accordion, and there was considerable crowding during the first crucial minutes of the landing. But even at this stage, the potent Marine air arm offered a final measure of protection to the
infantrymen splashing ashore. Pilots swung their F4Us fifty yards ahead of the assault troops and hosed the routes of advance with machine-gun bullets.

Click here to view map

After a brief pause for reorganization at the beach, First Lieutenant Robert D. Bohn’s Company G wheeled to the right and drove up the northern slopes of Radio Hill, Objective 1-A. Only half-hearted resistance was met along the way, most of the scattered and numb North Koreans preferring to surrender rather than face the inevitable. At 0655, Sergeant Alvin E. Smith, guide of the 3d Platoon, secured the American flag to a shell-torn tree on the crest.

At this point General MacArthur rose from the swivel chair in which he had been viewing the operation on the flag bridge of the Mount McKinley. “That’s it,” he said. “Let’s get a cup of coffee.”

Meanwhile, the Wolmi-do assault continued as Captain Patrick E. Wildman, after detaching a small force from Company H to clear rubble-strewn North Point, attacked across Wolmi-do toward the Inchon causeway with the rest of his unit. How Company’s mission was to seize Objective 2-B, which included the eastern nose of Radio Hill and the shoreline industrial area facing Inchon.

At 0646, the three LSUs comprising the third wave squeezed into the narrow beach and disgorged the armored detachment of Company A, 1st Tank Battalion, under Second Lieutenant Granville G. Sweet. Ten tanks were landed in all—six M-26s, one flame-thrower, two dozers, and one retriever. The big vehicles crunched inland a short distance to await calls from the infantry.

Lieutenant Colonel Taplett ordered his free boat to the beach at 0650. Fifteen minutes later, he radioed the Mount McKinley and Fort Marion that his assault companies were advancing on schedule.

It was ironic that 3/5’s reserve company should encounter the angriest hornets’ nest on Wolmi-do. Landing in the fourth wave at 0659, Captain Robert A. McMullen’s Company I moved through North Point in trace of the How Company detachment which supposedly had cleared the area. Suddenly a flurry of hand grenades clattered on the rubble, and the surprised Marines scattered for cover. Regaining their composure after the explosions, the infantrymen determined the source of trouble to be a by-passed string of enemy emplacements dug into a low cliff at the shoreline facing Inchon. There appeared to be about a platoon of North Koreans, who would rise from their holes intermittently, fling grenades inland, then disappear from sight.

Item Company’s interpreter crawled toward the cliff during a lull, bellowing to the Reds that their predicament was hopeless and exhorting them to surrender. When the Communists responded to this advice by throwing more grenades, McMullen signalled Sweet’s tanks into action. The M-26s and Marine riflemen took covering positions, while the dozer tank, directed by McMullen himself, rumbled into the troublesome pocket and systematically sealed the die-hard Reds in their holes.

Another bit of drama unfolded before the reserve troops when they closed on the causeway terminus in the wake of How Company’s advance. From one of many caves drifted noises indicating the presence of several occupants, hitherto unnoticed. While riflemen covered the entrance, a Marine tank drove forward and fired two rounds into the interior.

Muffled explosions shook the area, and billows of black smoke streaked with flame rolled out of the cave. Wide-eyed, as though watching ghosts emerge, the Marines of Company I saw thirty enemy soldiers stagger out of the blazing recess and throw up their hands.

Less than an hour after landing, 3/5 controlled half of Wolmi-do. Company H, having cleared the causeway terminus, was pivoting southward to clean out the ruins of the industrial area. Engineers, close on the heels of the infantry, advanced 25 yards out on the pavement leading to Inchon and laid an antitank mine field. George Company had advanced about 400 yards and was clearing the northern crest of Radio Hill. Action up to this point is best summed up in Taplett’s message to the Mount McKinley at 0745:

“Captured 45 prisoners. Meeting light resistance.”
Nor did the situation change as Company G occupied the dominating peak of Radio Hill, some 105 meters high. The enemy lacked the will to fight, despite the fact that he had sufficient weapons and a formidable defensive complex from which to fire them. Frightened, dejected Red soldiers continued to surrender singly or in small groups, and Taplett exulted over the amazingly light casualties sustained by his battalion.

Since Company H found the going slow in the shambles of the industrial area, the battalion commander ordered Lieutenant Bohn to seize the whole of Radio Hill. Accordingly, George Company troops rushed across the ridgeline to the eastern spur. This done, Bohn dispatched a force to clear the western reaches of the high ground. By 0800, Radio Hill became the property of the 1st Marine Division, and with the prize went control of the island and Inchon Harbor.

When the news of 3/5’s success blared from the loudspeaker on the flag bridge of the Mount McKinley, the commander in chief, wearing his famous leather jacket and braided campaign cap, withdrew to his cabin and penned a spirited message to Vice Admiral Struble aboard the Rochester:

“The Navy and Marines have never shone more brightly than this morning.

“MACARTHUR”

Consolidation of Wolmi-do required the reduction of an enemy outpost on Sowolmi-do, the small lighthouse station connected to the southwestern tip of the island by a causeway 750 yards long and 12 yards wide. An islet of about 500 square yards, Sowolmi-do was topped by a low hill with the navigational beacon on the summit. Before bothering with this tiny, isolated target, Taplett put his larger house in order.

By previous plan, the three rifle companies of 3/5 took up defensive positions generally facing Inchon. Item Company occupied North Point, Wildman’s unit the slopes above the industrial area, and Company G the crest of Radio Hill. While the battalion dug in, mopping-up operations throughout the island continued to net more prisoners and reveal the extent of North Korean fortifications. Radio Hill was ringed by mutually supporting trenches and emplacements, all of which had brought only a negligible return on the Reds’ investment in time and labor. Parked on the western nose of the ridge were two intact 76mm antitank guns that could have wrought havoc on landing waves approaching GREEN Beach. Fortunately, these weapons had been exposed to the 40mm fire of the LSMR covering the beach assault, and their crews had lacked the stomach to man them.

More antitank guns were scattered around the terminus of the causeway leading to Inchon, leaving some question as to whether they had been rushed to the defense of the island or were marked for displacement to the city.

North Point, once a luxurious resort, was honeycombed with caves used both for storage and for bomb shelters. The swimming pool, one of the few structures still recognizable after the bombardment, was converted by the Marines into a prisoner-of-war stockade.

More than 300 cast-iron antipersonnel mines were found attached to the barbed wire entanglement stretched along the west coast at the base of Radio Hill. The explosives were removed and disarmed by Technical Sergeant Edwin L. Knox and his detachment from Company A, 1st Engineer Battalion. Though the North Koreans had been helpful in placing these mines in so obvious a location, they had, oddly enough, failed to employ similar obstacles on the beaches, roads, and paths around the island.

Prior to the midmorning advance on Sowolmi-do, total casualties for the 3d Battalion were 14 wounded—an incredibly small price for a critical terrain feature commanding the approaches to Korea’s major west coast port. Evacuation plans so carefully laid out by the 1st Medical Battalion worked smoothly. In the early phase of the operation, LCVPs returning from GREEN Beach delivered Marine casualties to the Fort Marion, whose normal medical complement had been augmented by a special surgical team. Men with particularly bad wounds were transferred to the Mount McKinley after being administered first aid. As the battle developed, navy medical corpsmen of 3/5 established a collecting point on a small pier which could be reached by ambulance boats even during low water.
Shortly before 1000, Taplett ordered Company G to seize Sowolmi-do. Bohn in turn assigned the mission to one infantry squad reinforced with machine guns and a section of tanks, all under the control of Second Lieutenant John D. Counselman, leader of George Company’s 3d Platoon. Although the islet was by no means an objective of formidable proportions, the attackers eyed their route of approach over the long strip with misgivings. Their skepticism was not unfounded, for they neared the entrance to the causeway only to be stopped cold by heavy rifle and machine-gun fire from the other end. A platoon of North Koreans, almost literally at the end of a rope, preferred to fight it out.

Taplett ordered the tank-infantry team to hold up while he radioed a mission to Marine air. A few minutes later, Corsairs of VMF-214 nosed down and scorched the objective with napalm.

Sweet’s tanks, preceded by an engineer mine-clearance team and followed by the column of infantrymen, rumbled onto the rock bed tracing the seaward edge of the causeway. As the task force filed across the exposed route, 81mm shells from 3/5’s mortar platoon rattled overhead and tore into the Communist emplacements. Enemy fire was reduced to a light patter, and the observers on Radio Hill breathed a sigh of relief when the attackers gained the far end of the causeway at 1048.

Covered by tank fire, the Marine infantry quickly fanned out and closed with the defenders. There was a sharp outburst of small-arms racket, interspersed with the clatter of machine guns; then a few scattered volleys and the main fight was over at 1115. Mopping up with grenades and a flame thrower continued for almost another hour, owing to the number of caves and the determination of a few Red soldiers.

Nineteen North Koreans surrendered and 17 were killed, including some hapless warriors who tried to swim to the mainland. Despite the size of the islet, eight Reds succeeded in hiding out from the attackers; and General Craig, after landing on Wolmi-do with the ADC group in the evening, observed the fugitives escape to the mainland.[25]
Three Marines were wounded on Sowolmi-do, bringing 3/5’s total casualties for the day to 17 WIA. In return, Taplett’s battalion could count 136 prisoners and 108 enemy dead. Since interrogation of captives established the original number of Red defenders at 400, it could be concluded that some 150 more Communist fatalities lay entombed in sealed emplacements and caves throughout the island.

The Wolmi-do garrison was part of a 2,000-man force committed to the defense of Inchon by NKPA headquarters in Seoul. Represented were elements of the 226th Marine Regiment, to which two companies of the 2d Battalion, 918th Coast Artillery Regiment were attached with their Soviet-manufactured 76mm guns. The spiritless resistance encountered by 3/5 was the natural reaction of green troops to the awesome power of modern combined arms; for the North Korean marines and their artillerymen were largely recent conscripts with sketchy training and no experience. It remained to be seen how the other 1,600 Red troops would respond to the later assaults on RED and BLUE Beaches.

Mopping-up operations on the island were completed by noon, and with the support ships standing silent in the narrows, an oppressive quiet settled on the objective area. Gradually the phenomenal tide rolled back from its morning high of more than 30 feet. By 1300 the waters had receded, leaving 3/5 perched on an island in a sea of mud. For the next several hours Taplett and his men were on their own, speculating whether an enemy force might suddenly rush out of Inchon’s dead streets in an attempt to cross the mud flats, or whether a Red tank column would abruptly streak from the city and make for the causeway.

Nothing happened. The air of unreality caused by the stillness of the Oriental seaport weighed down on the nerves of the entire attack force. As the afternoon wore on, the Marines detected movement here and there, but the distant figures were identified as civilians more often than not. Captain McMullen, studying the RED Beach area from his OP on North Point, reported possible enemy “field pieces” on Cemetery Hill. What he actually sighted were the tubes of the mortar company of the 226th NK Marine Regiment, as will be shown later.

At Taplett’s OP on Radio Hill, the Shore Fire Control Party Officer, Second Lieutenant Joseph R. Wayerski, searched Inchon intently through his binoculars. On one occasion he called down naval gunfire on small groups of people stirring in the inner tidal basin area to his right front, but when further observation revealed the figures to be civilians raiding a pile of rice, the Marine officer promptly cancelled the mission. Wayerski’s lone tactical target of importance was a section of trench on Observatory Hill in which he once spotted about 20 enemy soldiers on the move. He smothered the earthworks with 30 5-inch shells from the Mansfield, and what North Koreans remained chose other avenues from that point on.

Taplett and others of his headquarters picked out enemy gun emplacements right at the waterfront near the Inchon dry dock. After the report went out to the Mount McKinley, red pencils throughout the task force circled the locale on maps for special attention during the pre-H-Hour bombardment.

Thus, the 3d Battalion enjoyed an almost uneventful interlude during its isolation. An occasional mortar round or long-range machine gun burst was the feeble reminder that Inchon still remained in enemy hands.

While the infantry lollled in relative ease and safety, service and support elements, attached to 3/5 for the landing, set the stage at GREEN Beach for the logistical follow-up so vital to amphibious operations. First Lieutenant Melvin K. Green’s team from Shore Party Group A, having unloaded its LSUs in record time, established dumps for ammunition, rations, and other field necessities. Personnel of the Ordnance Battalion, Combat Service Group, and Service Battalion engaged in backbreaking toil to alleviate the headaches of a harried
beachmaster. Signalmen scurried about, setting up their equipment and creating the familiar maze of wire. The reconnaissance detachment of the 11th Marines probed around the island’s desolation in search of battery positions for the howitzers scheduled to roll ashore on the evening tide.

The narrow strip of sand on North Point would have appeared crowded and hopelessly confused to the inexperienced eye, but old hands knew that order would gradually emerge, as if by magic, from the “early rush hour”—that necessary evil inherent in all assault landings.
THE CONCEPT OF the amphibious envelopment of the North Korean Peoples Army, together with the actual assault on Inchon by United States Marines, constituted heresy to that school of wishful thinkers which sprang to life as World War II faded in the first brilliant flashes of the Atomic Age. Widely accepted and noisily proclaimed was the belief, perhaps sincere, perhaps convenient, that the nuclear and aeronautical sciences had relegated armies, navies, and man himself to insignificant positions in the waging of war. The massing of ships and field forces, it was argued, was a thing of the past; for the next war, if humanity dared risk another, would be decided in weeks or even days with the power unleashed by electronic and mechanical devices—many of which in 1950 were still in rudimentary stages on drawing boards.

This was the controversial “push-button” theory of war which left the peace-loving nations of the world unprepared in 1950 for violent aggression by the tough little peasant army of North Korea, supported by some 100 tanks and a few hundred artillery pieces. And to the premature acceptance of this theory by a large section of the American public may be attributed many of the major shortcomings of the Inchon assault, as it unfolded in the evening of 15 September. That the operation succeeded despite these shortcomings and the myriad natural handicaps amounts almost to a tactical miracle.

In the words of General Smith, “... half of the problem was in getting to Inchon at all.”[1] The tremendous obstacles overcome in solving that “half of the problem” have already been treated at length; and it remains now, in the short space of a chapter, to show how the other half became history.
The Inchon-Seoul Operation
Lynn Montross and Nicholas A. Canzona

Chapter 6. Hitting the Beaches
The Assault Plan

Aboard the *Henrico* and *Cavalier* in the Inchon narrows on 15 September were the 1st and 2d Battalions, 5th Marines, yanked out of the Pusan Perimeter ten days earlier. Having had no time for a rehearsal and only a few days for planning on the basis of admittedly sketchy intelligence, these two units would scale the sea wall of RED Beach and plunge into the dense waterfront area of the sprawling seaport.

The mission of the 5th Marines (less 3/5 on Wolmi-do) was to seize the O-A Line, a 3,000-yard arc encompassing Cemetery Hill on the left (north), Observatory Hill in the center, and thence extending the last 1,000 yards through a maze of buildings and streets to terminate at the inner tidal basin. Each battalion would land in a column of companies, Lieutenant Colonel George R. Newton’s 1st, on the left, seizing Cemetery Hill and the northern half of Observatory Hill; while Lieutenant Colonel Harold S. Roise’s 2d secured the remainder of the latter, the hill of the British Consulate, and the inner tidal basin.[2]

Landing nearly three miles southeast of the 5th Marines, the 1st Regiment would seize BLUE Beach, a north-south strip fronting a suburban industrial area. BLUE Beach One, on the left, was 500 yards wide, flanked on the north by the rock revetment of a salt evaporator that jutted into the water at a sharp angle to the shoreline. A wide drainage ditch, about which little was known besides the fact that it existed, formed the south boundary. Just inland a dirt road—the sole exit from the beach—skirted the north end of a steep knoll that ran the whole width of the landing site. There being no revetment at the waterline, Marine planners hoped that amphibian tractors could crawl ashore with the assault troops.[3]

BLUE Beach Two, connected to One by the drainage ditch, also extended 500 yards. Like RED Beach it was fronted by a rock sea wall. On the right half, the wall retained one side of a narrow ramp that jutted southward like a long index finger. Behind the ramp lay a cove, its shoreline at a right angle to the sea wall. During the assault, Marines would scale the waterfront of BLUE Two from LVTs, while the cove around the corner on the right, unofficially dubbed “BLUE Beach Three,” was investigated as a possible supplementary landing site.[4]

Preceded by a wave of LVT(A)s of Company A (Reinf), 56th Amphibian Tractor Battalion, USA, the 2d and 3d Battalions, 1st Marines, would land abreast on BLUE One and Two respectively. With two companies initially in the assault, each of the infantry battalions was to drive forward and secure its portion of the O–1 Line. This four-mile arc bent inland as far as 3,000 yards to include four main objectives, assigned as follows:

2d Battalion (BLUE One)

ABLE: A critical road junction about 1,000 yards northeast of the beach.

DOG: Hill 117, 3,000 yards northeast of the beach, commanding Inchon’s back door and the highway leading to Seoul, 22 miles away.

3d Battalion (BLUE Two)

CHARLIE: The seaward tip of Hill 233, a long east-west ridge beginning 1,500 yards southeast of the beach and blocking off the stubby Munhang Peninsula, which projected southward.

BAKER: A small cape, topped by Hill 94, to the right of Objective Charlie and flanking BLUE Beach.[5]

While a question may arise as to the choice of landing the 5th Marines in the very heart of Inchon, it must be remembered that immediate seizure of the port facilities was vital to the success of the operation. Hitting the beaches at only two-thirds infantry strength, the 1st Marine Division could not swell to the overwhelming
proportions of an invasion force. A modern harbor for rapid build-up and exploitation by X Corps figured inherently in MacArthur’s strategy.

If RED Beach thus constituted the critical objective, then the selection of BLUE Beach for a supporting landing followed in logical sequence. Once on the O–1 Line, the 1st Marines would flank the single overland approach to the peninsular seaport, thereby presenting the NKPA garrison with the grim alternatives of early flight, capitulation, or strangulation. Without this leverage on Inchon’s flank and rear, the 5th Regiment could easily be swallowed up by two square miles of dense urban area.

Four assault battalions would have two hours of daylight in which to bridge the gap between planning and reality. From overhead and behind they could expect a preponderance of heavy fire support, but ahead lay enemy and hydrographic situations still clouded by question marks.
Chapter 6. Hitting the Beaches
Beginning the Ship-to-Shore Movement

As the early afternoon of 15 September wore on, the continued silence of Inchon beckoned temptingly to Lieutenant Colonel Taplett on Wolmi-do. Having studied the city over a prolonged period without detecting any significant evidence of Communist defensive capability, he radioed Division headquarters for permission to move a strong tank-infantry force across the causeway. The battalion commander believed that 3/5 could launch either an effective reconnaissance in force or an actual assault on RED Beach. Although his estimate of the enemy potential was shortly borne out, the degree of risk in Taplett’s bold plan drew a firm “negative” from the Mount McKinley.

Busy with last-minute details aboard the command ship, General Smith at noon had radioed General Craig instructions to land on Wolmi-do on the evening tide and set up an advance echelon of the division command post with the ADC group. Smith did not desire to land the remainder of his headquarters until D–plus 1, when there would be more room for dispersion within the expanding beachhead.

The Landing Force Commander could look down from the flag bridge at 1400 and note the first signs of activity on the water. A few special landing craft were beating the forthcoming traffic rush as they sped toward the various ships to which they were assigned as command boats.

At the same time, the central control vessel, Diachenko (APD 123), edged forward to its key station 3,000 yards southwest of the BLUE Beach line of departure. Lieutenant Commander Allmon checked the set and drift of the current and radioed his observations to Admiral Doyle. Estimated at three and a half knots, the run of current was heavier than expected. After receiving the Senior Control Officer’s report, the Attack Force Commander confirmed 1730 as H-Hour.

The confirmation went out to the entire Joint Task Force at 1430, and Admiral Higgins’ fire support ships immediately commenced the final bombardment of Inchon. His four cruisers and six destroyers poured shells into the seaport for the next three hours, smashing every landmark of tactical importance and starting fires that blazed across the whole waterfront.

Under the calculating eyes of tactical air observers and coordinators in F4Us droning high above the objective area, VMFs–323 and -214 and three squadrons of Navy Skyraiders alternately blasted Inchon, integrating their strikes with naval gunfire from H-minus 180 minutes onward. Simultaneously, Fast Carrier Task Force 77 kept another 12 planes in the air continuously for deep support missions designed to freeze all enemy activity within a radius of 25 miles.

As if enough obstacles did not confront the landing force already, rain squalls began drifting past Inchon during the bombardment. Gradually the storm clouds merged with the thick smoke boiling up from the city, and heavy overcasts settled over large areas, particularly in the vicinity of BLUE Beach.

Assault troops of the 5th Marines scrambled down cargo nets on the Henrico and Cavalier to fill landing craft splashing into the water from booms and davits. Nearly 200 LCVPs and 70 LCMs soon were joined by 12 LSUs and 18 LVT(A)s, 164 LVTs, and 85 DUKWs disgorged from the yawning wells of the LSTs, wherein the Marines of the 1st Regiment had made ready for battle.

Guided by Lieutenant Commander Ralph H. Schneeloch, USNR, the Horace A. Bass, RED Beach control vessel, slowly steamed toward the line of departure, a long file of assault craft trailing behind like a brood of ducklings. Lieutenant Theodore B. Clark, USN, ordered the Wantuck to the head of the boat lane to BLUE Beach, and PCEC 896, under Lieutenant Reuben W. Berry, USN, took station off Wolmi-do to regulate the waves
scheduled for the administrative landing on GREEN Beach.\[11\]

At 1645, the 18 Army LVT(A)s comprising the first wave of the 1st Marines crossed the line of departure and headed for BLUE Beach. Crawling at four knots, the armored vehicles had three quarters of an hour to cover the 5,500 yards to the target. The LCVPs, capable of twice the speed of the amphibian tractors, left the inner transport area near the Diachenko’s station for the five-mile trip northward to the RED and GREEN boat lanes.\[12\]

The roar of the fire support ships increased in volume during the approach of the landing craft until, at 1705 (H-minus 25), Admiral Higgins signaled the LSMRs into action. At once the cruisers and destroyers fell silent. Again missiles soared from the squat rocket ships in high arcs that sent them plunging into the RED and BLUE landing areas. Upwards of 6,000 rockets detonated in the seaport during the next twenty minutes, further numbing the defenders but at the same time increasing the density and volume of the overcast.\[13\]
The critical moment of every amphibious assault was now at hand—the moment when intelligence and planning would be put to the test of actuality. On the bridge of the Mount McKinley high-ranking Army, Navy, and Marine Corps officers gathered again about General MacArthur, seated in a swivel chair. They listened for the second time that day as the loud speaker gave a blow-by-blow account of developments reported by aerial observers.

Everything that air attacks and naval gunfire could do to soften up the target had been done, yet no one could be sure just what sort of opposition the troops would encounter on RED and BLUE Beaches. It might be as fainthearted as that brushed aside by 3/5 on Wolmi-do; or it might be that another Tarawa awaited on those cramped strips of urban waterfront lying between the mud flats of the harbor and the dark, crooked streets of the Asiatic town and environs. The enemy had been given ample time in which to prepare for a defense of the mainland.

Even the possibility of undetected mines or surprise NKPA air attacks at the last minute had not been overlooked. Although the Attack Force continued to exercise control from the TADC on the Mount McKinley of all aircraft operating in its assigned area, an alternate control agency had been installed on the USS George Clymer, utilizing an emergency hookup and a control unit attached to TAC, X Corps. All nets were manned and communications set up to permit a rapid shift of control to General Cushman in case of disaster.

With H-hour only minutes away, the sky above the objective was murky and the wind whipped rain as well as stinging spray into the faces of the Marines in the assault waves. Only the Marine and Navy flyers upstairs could see the panorama of the waterborne attack—the cruisers and destroyers standing silent in the background, LSMR rocket flashes stabbing the false twilight ashore, the landing craft trailing pale wakes behind them like the tails of comets. The pilots observed the LCVPs to the left of Wolmi-do fan out at the line of departure and touch the sea wall of RED Beach minutes later. To the right of the little island, however, they saw the leading waves of the 1st Marines disappear in a blanket of gloom. For while the smoke and moisture-laden air had obscured parts of the 5th Marines’ zone of action ashore, it had completely blotted out BLUE Beach and half the length of the 1st Regiment’s boat lanes. Because of this development and other factors which posed special problems for the 1st Marines, the narrative will treat each landing separately, beginning with that of the 5th Regiment on the left.

Eight LCVPs had crossed the line of departure at H-minus 8 and sped toward RED Beach with the first wave of the 5th Marines. Starting from the left, boats numbered one through four carried parts of two assault Platoons of Company A, 1st Battalion, whose mission was to seize Cemetery Hill and anchor the regimental left. In boats five through eight were troops of Company E, 2d Battalion, whose task included clearing the right flank of the beach and taking the hill of the British Consulate.[15]

From Wolmi-do 3/5’s machine guns, mortars, and supporting M-26s cut loose with a hail of bullets and high explosive to cover the landing. Technical Sergeant Knox lead an engineer team forward to clear the causeway, in order that the detachment of Able Company Tanks could advance to the mainland after the initial assault waves hit the beach.

As the landing craft passed the midway point of the 2,200-yard boat lane, the heaving LSMRs ceased firing, so that Lieutenant Colonel Walter E. Lischeid and Major Arnold A. Lund could lead in VMFs–214 and –323 for final strikes on both RED and BLUE Beaches. Navy Skyraiders joined in at the request of Captain John R. Stevens, commander of Company A; and the FAC of 1/5, First Lieutenant James W. Smith, controlled their
strafing passes as the first wave came within 30 yards of the sea wall.[16]

Although the tide was racing in fast, the wall still projected about four feet above the ramps of the landing craft. The Marines readied their scaling ladders. On the right the boats of Company E touched the revetment at 1731. Up went the ladders as the assault troops hurled grenades over the wall. Following the explosions, the Marines from the four boats scrambled to the top of the barrier one by one. The ladders slipped and swayed as the LCVPs bobbed next to the wall. But they served their purpose, and in short order every man of Second Lieutenant Edwin A. Deptula’s 1st Platoon was on the beach.

There were no casualties from the few stray bullets cracking through the air. Filtering through smoke and wreckage, the platoon moved inland to cover the landing of the second and third waves, carrying the remainder of Easy Company.

On the north of RED Beach, three of the four LCVPs with the leading elements of Company A bumped the sea wall at 1733. Boat number one, carrying Technical Sergeant Orval F. McMullen and half of his 1st Platoon, was delayed offshore by an engine failure. The remainder of the 1st, under the platoon guide, Sergeant Charles D. Allen, scaled the wall from boat number two in the face of heavy fire from the north flank and from submachine guns in a bunker directly ahead. Several Marines were cut down immediately, the others being unable to advance more than a few yards inland.

Boat number three, with Second Lieutenant Francis W. Muetzel and a squad of his 2d Platoon, touched a breach in the sea wall under the muzzle of an enemy machine gun protruding from a pillbox. The weapon did not fire as the Marines scrambled through the gap and onto the beach. A second squad and a 3.5-inch rocket section joined from boat number four. Gunfire crackled far off on the left, barely audible amid the road of fighter planes strafing fifty yards ahead. Muetzel and his men jumped into a long trench which paralleled the sea wall a few feet away. It was empty. Two Marines threw grenades into the silent pillbox, and the six bloody North Koreans who emerged in the wake of the hollow explosions were left under guard of a Marine rifleman.

Just beyond the beach loomed Cemetery Hill, its seaward side an almost vertical bluff. To avoid getting trapped if the enemy opened up from the high ground, Muetzel attacked toward his objective, the Asahi Brewery, without waiting for the remainder of his men in the tardy second wave. The skirmish line raced across the narrow beach, ignoring padlocked buildings and flaming wreckage. Passing to the south of Cemetery Hill, the 2d Platoon entered the built-up area of the city and marched unopposed up a street to the brewery.

On the left of Company A’s zone, the beached half of the 1st Platoon made no progress against the flanking fire and the Communist bunker to the front. The 3d Platoon, under First Lieutenant Baldomero Lopez, landed in the second wave, and McMullen finally got ashore with the other half of the 1st. Both units crowded into the restricted foothold and casualties mounted rapidly. Enemy guns had felled Lopez as he climbed ashore and moved against the bunker with a grenade. Unable to throw the armed missile because of his wound, the young officer was killed when he smothered the explosion with his body to protect his men. Two Marines attacked the emplacement with flame throwers. They were shot down and their valuable assault weapons put out of action.

The situation on the left was at its worst when Captain Stevens landed in Muetzel’s zone at H-plus 5. Learning of Lopez’ death and unable to contact McMullen, he ordered his executive officer, First Lieutenant Fred F. Eubanks, Jr., to “take over on the left and get them organized and moving.”[17] Time was of the essence, since Cemetery Hill, objective of the 1st Platoon, yet remained in enemy hands. Succeeding waves would be landing hundreds of Marines in the shadow of the cliff within the next half hour. Stevens also radioed Muetzel, whose small force had just reached the brewery without suffering a casualty, and ordered the 2d Platoon back to the beach to help out.

Muetzel immediately formed his unit in column and struck out on the return trip to the waterfront. Nearing Cemetery Hill again, he noted that the southern slope of the vital objective was an excellent route of approach to the top. In planning Company A’s part of the operation, Stevens had once told him that the 2d
Platoon could expect to help seize the high ground if the job proved too rough for the 1st alone.[18] With a creditable display of judgment and initiative, Muetzel launched an assault on the key to RED Beach.

The Marines moved rapidly up the incline, flushing out about a dozen Red soldiers who surrendered meekly. Gaining the summit, they drove forward and saw the entire crest suddenly come alive with infantry-crewmen of the 226th NKPA Regiment’s mortar company. Spiritless and dazed from the pounding by air and naval gunfire, the North Koreans to a man threw down their weapons, filed quietly from trenches and bunkers, and marched to the base of the hill where a small detachment kept them under guard. Hardly a shot had been fired by the 2d Platoon, still without a single casualty, and the capture of Cemetery Hill had required about ten minutes.

During the attack on the high ground, Eubanks had taken the situation in hand on the left of the beach. He first bested the bunker’s occupants in a grenade duel, then ordered the emplacement fired by a flame thrower. Just as Muetzel prepared to dispatch assistance from the top of Cemetery Hill, the 1st and 3d Platoons broke out of the pocket, drove inland to the edge of the city, and made physical contact with the 2d.

At 1755, Stevens fired an amber star cluster signifying that Cemetery Hill was secured for the 5th Marines. The half-hour fight in the north corner of RED Beach had cost Company A eight killed and 28 wounded.
After landing in 2/5’s first wave, the 1st Platoon of Company E pushed inland 100 yards to the railroad tracks against no resistance whatsoever. Captain Samuel Jaskilka was ashore with the rest of the Company by H-plus 10, and reorganization took place quickly near the Nippon Flour Company buildings, just south of the beach. Deptula’s platoon then moved unopposed down the railroad tracks and seized the British Consulate, Regimental Objective C, at 1845. Simultaneously, another platoon cleared the built-up area across the tracks on the lower slopes of Observatory Hill. These rapid accomplishments secured the 5th Marines’ right flank, giving an added measure of protection to 22 more waves of landing craft and LSTs scheduled for RED Beach.

Still in enemy hands, however, was Observatory Hill, reaching well over 200 feet above the center of the regimental zone to buttress the arc of the O–A Line. Company C of the 1st Battalion, landing in the fourth and fifth waves shortly before 1800, was to take Objective A, northern half of the critical terrain feature. To Dog Company of 2/5 was charged the southern half, designated Objective B.

That the attack did not go off as planned stemmed from a series of mishaps which began as far out as the line of departure. Despite the fact that Lieutenant Commander Schneeloch was using standard control procedures from the Bass, including radio contact with the beach, there was a mixing of waves starting with number four.[19] This development reflected the lack of a rehearsal in the hurried preparations for the operation, and the end result was that parts of Companies C and D, both in the second assault echelon, landed over the wrong beaches.[20] After landing, Charlie Company had the added disadvantage of being without its company commander for a crucial 12 minutes. Captain Poul F. Pedersen was delayed when the fifth-wave commander, who shared his boat, decided to tow a stalled LCVP left behind by the preceding formation.[21] When he finally reached his company, the job of reorganization was much more difficult than it would have been had he arrived at the beach on schedule. With troops pouring over the sea wall from succeeding waves, what had begun as intermingling at the point of overlap in the center of the landing area had grown to temporary congestion and confusion.

Click here to view map
Out in the channel, the first of eight LSTs[22] heralded the climax of the ship-to-shore movement at 1830 by crossing the line of departure and heading for the sea wall. Prior to the approach, ships’ officers had spotted the close fighting on the north flank of RED Beach as they peered through binoculars from their respective bridges. Later, noting the growing knot of Marines in the center of the waterfront area, they concluded that the assault troops could not advance inland. This impression was strengthened by an abrupt procession of gun flashes on Observatory Hill where, owing to the delay in the attack by Companies C and D, a handful of enemy soldiers had recovered from shock sufficiently to set up machine guns. A few North Korean mortar crews in the city also came to life and manned their weapons.

LST 859, leading the pack, came under mortar and machine-gun fire as it waddled toward its berth about 1835. Gun crews on the ship reacted by opening up with 40mm and 20mm cannon, spraying Cemetery and Observatory Hills and the right flank of the beach. Next in the column of ships, LSTs 975 and 857 likewise commenced firing after taking hits from mortars and machine guns. Enemy automatic weapons touched off a fire near ammunition trucks on LST 914, trailing fourth, but sailors and Marines quickly brought the blaze under control. Guns on the latter ship remained silent as a result of dispatch orders received by the captain after leaving the line of departure.[23]

Lieutenant Muetzel and his platoon were chased by LST fire from the crest of Cemetery Hill to the slope facing Inchon—where they came under fire from a Red machine gun in a building on Observatory Hill. Fortunately, a 40mm shell from one of the LSTs crashed into the building and obliterated the enemy position. There were no casualties in Muetzel’s outfit, but Lieutenant Colonel Roise’s 2d Battalion did not fare as luckily from the misdirected shooting by the American ships. Weapons and H&S Companies of 2/5 had landed about 1830 and were just proceeding inland when LST fire seared their ranks, killing one Marine and wounding 23 others. “If it hadn’t been for the thick walls of the Nippon Flour Company,” remarked Roise later, “the casualties might have been worse.”[24]

All eight of the supply vessels were intact in their berths by 1900. Guns fell silent as soon as the LSTs touched the sea wall and contact was established with the infantry.

On the beach, meanwhile, Second Lieutenant Byron L. Magness had reorganized his 2d Platoon of Company C and, on his own initiative, attacked Observatory Hill. Second Lieutenant Max A. Merritt’s 60mm mortar section followed closely behind, but the rest of the company remained fragmented in the landing area. Sparked by Technical Sergeant Max Stein, who was wounded while personally accounting for a North Korean machine gun, the provisional force advanced rapidly in the gathering darkness and at 1845 seized the saddle between Objectives A and B on Observatory Hill. This was just about the time when the LSTs stopped firing.[25]

Since their single flare misfired and they were not able to raise Lieutenant Pedersen by radio, Magness and Merritt were unable to inform the beach of their success. In the meantime, Company B, 1/5’s reserve, had landed in the 2d Battalion zone, the waves having swerved to that area to avoid small-arms fire peppering their assigned approach on the left. Captain Francis I. Fenton, Jr., led the unit through a mixed group on the waterfront to an assembly area near the base of Cemetery Hill. When he discussed the beach situation by radio with the battalion commander, Lieutenant Colonel Newton ordered him to take over Charlie Company’s mission and assault the northern half of Observatory Hill.[26]
Chapter 6. Hitting the Beaches

Fighting on Observatory Hill

Darkness had fallen when Company B drove up the slopes of Objective A in a two-pronged attack. Six Marines were wounded in brief skirmishes with North Korean die-hards along the way. Gaining the summit at 2000, Fenton deployed three platoons on line, making contact with the Magness-Merritt force dug in on the saddle to the right. With Objective A seized and Able Company deployed on top and to the flanks of Cemetery Hill, Newton radioed the 5th Marines at 2240 that 1/5’s segment of the O-A Line was secured.[27]

In the right of the 5th Marines’ zone, the 2d Battalion had also been making gains, despite the handicaps of mixed boat waves, LST fire, poor visibility, and, finally, enemy action.[28] It will be recalled that Company E suffered no casualties in landing and clearing the waterfront as far south as Objective C, the British Consulate. Next to hit the beach was First Lieutenant H. J. Smith’s Company D, part of which went ashore in 1/5’s zone. Assembling later near the base of Observatory Hill, the unit prepared to carry out its mission of seizing Objective B, the southern half of the big ridge.

Although 2d Battalion overlays show that Easy Company bore no responsibility for the crest of Observatory Hill, Smith’s men somehow got the impression that part of Jaskilka’s force was already on the summit. Its tactics based on this misunderstanding, Company D formed a simple route column, with Second Lieutenant Ray Heck’s 1st Platoon leading the way, and marched up a street to the top of the hill. The vanguard troops cleared the first peak in the company zone without opposition and continued along the road to the second, expecting to meet men of Company E. They were greeted, however, by machine-gun fire from an enemy squad entrenched to the right of the street.

The Marines tumbled into positions on the left. Grenades and small-arms fire flew back and forth across the road during a brisk exchange that lasted about 15 minutes. One of Heck’s men was killed and three others wounded. The company corpsmen was hit but refused evacuation until he had first administered to the other casualties and seen them off to safety. Company D’s executive officer, First Lieutenant Michael J. Dunbar, went forward with Lieutenant Colonel Roise, the battalion commander, and was wounded by a ricochet.

The enemy troops were driven off just as darkness closed in, leaving the Marines to grope for night defensive positions on unfamiliar ground. Eventually Lieutenant Smith formed a line with all three rifle platoons deployed on the forward slopes of Objective B. Out of battalion reserve came Second Lieutenant Harry J. Nolan’s platoon of Company F to bridge the gap between Company D and the Magness-Merritt positions in 1/5’s zone on the left.

With Cemetery and Observatory Hills secured, the only portion of the O-A Line not yet under control was the extreme right, anchored on the inner tidal basin. Since the night was pitch black, Roise felt apprehensive about sending troops any farther into the city. In answer to a query, Lieutenant Colonel Murray, whose regimental headquarters had landed at 1830 and set up near the terminus of the Wolmi-do causeway, emphasized to Roise that where the O-A Line could not actually be defended from a suitable tactical standpoint, it must at least be outposted. The battalion commander forthwith dispatched a two-squad patrol from Fox Company to the tidal basin, and the small force returned from the 1,000-yard prowl into the city at 2300, having seen no sign of the enemy. Roise reacted by committing Company F, less its platoon on Observatory Hill, to a defensive perimeter on the right flank. Shortly after midnight, Captain Uel D. Peters deployed the company next to the tidal basin as ordered; and the 5th Marines’ O-A Line, though not manned in entirety, came as close to tactical reality as the tangled black depths of the seaport would allow.
Chapter 6. Hitting the Beaches
1st Marines on BLUE Beach

As mentioned earlier, the overcast resulting from rain squalls and smoke had completely blotted out BLUE Beach by H-hour, 1730. This fact in itself would have sufficed to upset a precise landing procedure; but at this point in the narrative, it is timely to review some of the other problems which had beset the 1st Marines since the inception of the plan for the Inchon assault.[29]

In the short space of weeks, the regiment had been brought up to war strength by the rapid convergence on Camp Pendleton of Marines—in units or as individuals, both regular and reserve—from all over the United States; it had embarked at San Diego and crossed the Pacific; and it had reloaded and embarked from Japan for a combat operation designed to quench a major conflagration. There had been time for only the sketchiest training above the company level. The new 1st Marines had never operated tactically as a regiment, nor had it ever been concentrated in one place as an organizational entity up until the time it hit BLUE Beach.

During the planning phase in Kobe, battalions had to combat-load their LSTs according to an X factor, while awaiting the prescribed tactical plans that would be handed down from higher echelon at the last minute. Intelligence on the enemy and beach conditions was practically non-existent; and the speculative studies and inadequate photos available could be kept only a few hours before being passed on to the next unit in line.

Whenever Marines are given a difficult assignment, the United States Navy invariably draws its own full measure of handicaps. A typical example of the problems confronting naval planners was this case, cited by Major Edwin H. Simmons, of 3/1:

“I was aboard LST 802, which was carrying H&S Company and elements of Weapons Company. The ship had just been recovered from the island trade. Her captain had been flown out to Sasebo from the States, given a pick-up crew and two weeks to condition the ship and crew for an amphibious landing. Despite his best efforts, the 802 had three major breakdowns and had to drop out of convoy several times. At one point it appeared as though the battalion command group would have to be taken off the 802 if they were to get to Inchon in time.”

In connection with BLUE Beach itself, officers of the 1st Marines had only a vague impression of offshore conditions and the accessibility of the landing site. As already noted, the current in the channel was underestimated, and so little was known about the consistency of the mud flats that each landing craft contained planking for emergency use by the assault troops.

The sole exit from BLUE One was the dirt road already mentioned. On aerial photos the drainage ditch separating BLUE One and Two appeared to be some kind of a road over which tractors could crawl ashore. No one was certain, and “BLUE Beach Three,” the cove on the right, was ruled out as a possible landing area early in the planning. At the last minute, however, recent aerial photos and studies led to the conclusion that both the inlet and the ramp at the southern tip of BLUE Two might be good approaches after all. Acting on this information while en route to the target area, Lieutenant Colonel Thomas L. Ridge, commanding officer of 3/1, decided to explore personally the right flank with his executive officer at the outset of the assault. If the ramp, BLUE Three, or both were accessible to LVTs, Ridge would divert later assault echelons on a “follow me” basis.

Thus vital questions were to remain unanswered until the officers and men of the 1st Marines got their first look at BLUE Beach. It was keenly disappointing, therefore, when they stared from the line of departure on the afternoon of 15 September and saw, instead of the distant shoreline, a murky wall rolling seaward from the blazing waterfront.

As noted previously, the line of departure was 5,500 yards—3.2 miles—from the beach, a distance
requiring 45-minute trips for the slow-moving LVT waves. The ship-to-shore movement got off to a bad start owing to the current, which scattered some of the landing formations during the rendezvous phase. Other obstacles entered the picture in rapid succession, one of them best described by Lieutenant Clark, BLUE Beach Control Officer:

“At about H-50, while press boats and the initial waves of LVT(A) and LVT were milling around the BLUE Beach control vessel[Wantuck], mortar fire was received in the immediate vicinity. This created some confusion until a destroyer spun around on her anchor and silenced the battery. This was the beginning of the end of the well-planned ship-to-shore movement for BLUE Beach.”[30]

Other shortcomings that took on special significance because of the overcast were the lack of compasses and radios in the amphibian tractors and the inexperience of many of the crews. The first wave, consisting of the Army LVT(A)s, was escorted shoreward from the line of departure by Navy guide boats, manned by UDT crews who possessed both the compasses and seamanship necessary to pierce the smoke screen and find the distant beach on time.[31] Wave number two, only a minute behind and close enough to benefit by the expert guidance, did not fare too badly. The ragged formation of number three, however, indicated mounting difficulties at the line of departure. From a study of numerous accounts, the experience of Major Simmons appears to have been typical:

“Wave 5 cleared the 802 about 1630. We had been told that a wave guide would pick us up and lead us to the line of departure. . . . Time was passing and we were feeling desperate when we came alongside what was apparently the central control vessel. I asked the bridge for instructions. A naval officer with a bull horn pointed out the direction of BLUE Two, but nothing could be seen in that direction except mustard-colored haze and black smoke. We were on our way, and our path crossed that of another wave. I asked if they were headed for BLUE Two. Their wave commander answered, "Hell no, we’re the 2d Battalion headed for BLUE One." We then veered off to the right. I broke out my map, but the LVT driver had no compass. . . . With no confidence in its accuracy within a steel hull, I got out my lensatic compass and made a best guess as to the azimuth of our approach line.”[32]

The nine LVT(A)s leading off for Lieutenant Colonel Alan Sutter’s 2d Battalion thrashed through the gloom and crawled ashore on BLUE One at 1730, on schedule. Meeting no opposition at the beach, they rumbled northward to the road skirting the knoll in order to penetrate the interior. The exit was blocked by an earth slide resulting from the naval bombardment of the high ground, and the column of amphibious vehicles ground to a halt.

At H-plus 1, most of the eleven LVTs of the second wave crunched ashore with elements of two assault companies. The remainder, with troops of Fox Company embarked, had grounded in mud about 300 yards offshore. The Marines had to wade to the beach, and they lost several pieces of communications gear in potholes en route. Company D, on the left, was to have remained aboard the tractors for the drive inland, while the troops of Company F debarked at the beach, cleared the knoll, and continued overland on foot. The latter scheme of maneuver unfolded as planned, and the Marines encountered no resistance when they swept to the top of the high ground. Dog Company, meanwhile, had also dismounted because of the blocked road.

The third wave groped ashore through the smoke at H-plus 4, bringing the remainder of both assault companies and raising the total strength on BLUE One to 30 tractors and over 600 men. Noting that the beach was getting crowded, Lieutenant Colonel Sutter ordered his free tractor to pull alongside the revetment of the evaporator on the left. When his battalion headquarters had debarked on the wall, he turned his attention seaward that he might signal the succeeding three waves, carrying the rest of 2/1, to do likewise. He looked and waited in vain, however, for the LVT formations did not materialize out of the offshore haze.

Meanwhile, Companies D and F reorganized quickly to continue the attack. Looking inland from the knoll, officers and NCOs could catch glimpses of the unfamiliar terrain only between billows of smoke. Several landmarks loomed ahead that were not marked on the inaccurate tactical maps. Many others that had been
recorded were ablaze, and the numerous fires would make direct compass marches difficult. Moreover, since the enemy situation inland was open to conjecture, dispersed tactical formations would add to the problem of controlling the Marine advance.

Despite these disadvantages, Sutter pressed the attack. Easy Company in battalion reserve, together with part of Weapons and H&S, had not landed, nor had all of the vital signal equipment for supporting arms. But further waiting and delay was out of the question, since only about an hour of daylight remained.

Company D struck out for Regimental Objective ABLE, the junction on the left flank 1,000 yards away, and Company F drove northeast in the direction of Objective DOG, Hill 117. It was almost dark when the last of the 600 troops plunged forward into the unknown, leaving LVT crews behind to open the road with picks and shovels.
The Inchon-Seoul Operation
Lynn Montross and Nicholas A. Canzona

Chapter 6. Hitting the Beaches
Ending the Ship-to-Shore Movement

The nine LVT(A)s comprising 3/1’s first wave had closed on the sea wall of BLUE Beach Two shortly after H-hour. Nosing their vehicles toward the drainage ditch on the left, the drivers apparently eyed the muck and conformation of the restricted passageway with some skepticism, for they backed off and exchanged fire with scattered enemy soldiers shooting from just beyond the waterfront.

Wave number two passed through the Army tractors and bumped the sea wall ten minutes late with the leading elements of Companies G and I, the former on the left. Since the landing echelons had intermingled in the cloudy boat lane, some LVTs of the third wave arrived with those of the second. This accounted for Lieutenant Colonel Ridge’s tractor reaching the beach one increment ahead of schedule. The battalion commander and his executive officer, Major Reginald R. Myers, immediately swung their separate vehicles around to the right flank, Ridge heading toward the ramp while the other officer continued around the corner in the direction of BLUE Three.

On the left of BLUE Two, meanwhile, the amphibians carrying Captain George C. Westover’s Company G formed a column and crawled into the drainage ditch. Troops of First Lieutenant Joseph R. Fisher’s Item Company simultaneously scrambled up their aluminum ladders and deployed just beyond the sea wall in the face of moderate small arms fire. As had been anticipated, some of the metal scaling devices bent and buckled under the strain, delaying troop debarkation from the landing craft crowding the revetment. Assault elements of Captain Lester G. Harmon’s Company C, 1st Engineer Battalion, reached the beach and anchored cargo nets over the wall to speed up the landing.

The lead tractor in George Company’s column bellied down in the mud of the drainage ditch, blocking five other LVTs behind. Westover ordered his troops to dismount and move forward along a road near the beach. After a brief period of reorganization, Company G fanned out for the drive inland, its mission being to block a lowland corridor and secondary access road leading to BLUE Beach out of the east.

Just about the time Westover’s LVTs bogged down in the ditch on the left, the tractors transporting Ridge and Myers crawled ashore over the ramp and BLUE Beach Three respectively, setting a precept for the mounting number of landing craft lying off BLUE Two. A heavy volume of traffic was thus diverted to the cove, and the appreciable gain in time far outweighed the intermingling which developed by landing troops at a right angle to those scaling the sea wall.

Click here to view map

In recalling the situation ashore as of 1800 (H-plus30), Colonel Lewis B. Puller, the regimental commander, later observed:

“I personally landed on BLUE Beach with the 3d wave. My reason for doing so was, exactly, that there was a strong possibility of confusion and disorganization under the circumstances: namely, the unavoidable necessity of landing the regiment without a rehearsal, without even a CPX . . . The reorganization of the assault battalions was accomplished with remarkable speed and effectiveness. I recall being, at the time, extremely gratified that my prior concern in this connection was not warranted.”

Despite the initial delays at the ditch and sea wall, Companies G and I cleared the beach rapidly. Of the few casualties taken during the first 30 minutes ashore, most were caused by an enemy machine gun in a tower about 500 yards inland. LVT fire silenced the weapon, and the Marine infantry plunged forward through a labyrinth of blazing buildings and smoke-filled streets. On the left, George Company groped almost straight ahead...
toward the lowland corridor as Item veered sharply southward to attack Objective CHARLIE, the seaward tip of Hill 233.

While the assault units fought inland, the gathering darkness created one more formidable handicap for the last wave serials leaving the line of departure far out in the channel. The four Navy guide boats, mentioned earlier as having escorted the first wave, were exactly 28 short of the number prescribed by amphibious doctrine for a landing of the Inchon assault’s magnitude.[38] For this reason the guide boats took station on either side of the boat lanes after the initial run, since it was manifestly impossible for them to help out in any other way. The limited visibility, however, just about negated their worth as stationary markers, owing to the fact that some landing craft formations were losing their direction even before they entered the boat lanes.

In describing the situation as it developed at the line of departure Lieutenant Clark later commented:

“The BLUE Beach Control Officer was unable to contact LVT wave commanders or wave guide officers by radio at any time during the initial assault. The control officer was aware that waves or groups of LVTs and boats were landing at the wrong places but was helpless to prevent it without communications. As a last resort, Casualty and Salvage landing craft were dispatched to assist the initial wave guides (members of UDT 1) in rounding up vehicles and leading or directing them to BLUE Beach.”[39]

Since current and smoke fought relentlessly against tractors seaward of the line of departure, not all of the vehicles could find the control ship. If they did, it was next to impossible to come in close enough to get instructions shouted from the bridge. Thus many wave commanders, amtrac officers, and infantry leaders gave orders to head shoreward on their own initiative. They went in with waves and fragments of waves, displaying the kind of leadership that made the operation an overwhelming success in spite of the obstacles. This was the case with the three waves of 2/1 that failed to arrive at BLUE One. They found their way ashore, some of the LVTs landing on BLUE Two, others diverted to BLUE Three; but the important thing was that they got there.[40]

The most serious error of the day, again offset by initiative and decision, involved Lieutenant Colonel Jack Hawkins’ 1st Battalion, landing in regimental reserve.[41] About H-hour, Puller radioed Hawkins and ordered him to cross the line of departure with LCVP waves 21 through 25, carrying the whole of 1/1. Had the approach to the beach gone smoothly, the battalion would have begun landing at approximately H-plus 45 (1815). Because of conditions in the channel and boat lanes, as already described, a searchlight on the control ship now beamed the supposed course to the beach. Actually, the whole area had become so clouded that the light was mistakenly pointed toward the outer tidal basin, some 45 degrees off course to the northeast.

Moving in the designated direction, the first two of the reserve waves reached the sea wall of the basin; and the Marines, believing they were at the revetment of BLUE Two, began debarking. Hawkins, following in the third wave (wave number 23), caught the error as his boat passed within sight of two outlying islands between the basin and the salt evaporator jutting out from the left of BLUE One. About the same time, Lieutenant Colonel Robert W. Rickert, executive officer of the 1st Marines, noticed some of the errant landing craft from his free boat between the line of departure and BLUE One. He intercepted a group of the LCVPs and reoriented them.

In the meantime, Hawkins cruised the length of the basin wall and shouted instructions to the troops of the first two waves. Most of Company B had already debarked and a few of the empty boats had left for the channel. Able Company, having just begun to land, promptly reembarked in its LCVPs. In short order, the battalion reformed at sea and headed toward BLUE Two. Owing to the lack of boats, one platoon of Baker Company remained on the tidal basin all night. Hiking to rejoin the company on the mainland next morning, this platoon rounded up an impressive bag of prisoners.

Upon reaching BLUE Two in darkness, Hawkins found Company C, which had avoided the detour owing to the sixth sense of a boat coxswain, organizing and setting up local security. The battalion commander led most of 1/1 forward to a night assembly area along the railroad tracks, half a mile inland. Major David W. Bridges, battalion S–3, was left behind to organize late-comers as they arrived from the tidal basin.
The Inchon-Seoul Operation

Lynn Montross and Nicholas A. Canzona

Chapter 6. Hitting the Beaches
Seizure of the O–1 Line

The tactical situation ashore had meanwhile begun to crystallize for the 1st Marines. In the 2d Battalion zone, Dog Company occupied Objective A, the road intersection, at 2000. Two hours later, Fox Company reported that it occupied enough of Objective D, Hill 117, so that it could cover the Inchon-Seoul highway with fire.

The attack from the beach had cost Sutter’s unit one KIA and 19 WIA as compared to enemy losses of 15 prisoners and an estimated 50 dead.

On the right of the regimental zone, Ridge’s 3d Battalion was also making good progress against light resistance. Item Company reported at 1900 that it was on Objective C, the western nose of Hill 233. Half an hour later, George company began deploying in blocking positions across the corridor and road at the center of the O–1 Line. This movement was completed about 2030.[42]

The 1st Platoon of How Company passed seaward of Item at 2030 and pressed a night attack against a company of North Koreans on objective B, the small cape topped by Hill 94. After a token resistance, the Reds abandoned their well-prepared entrenchments, leaving 30 dead and wounded to be counted by the Marines.

How Company (less 1st and 2d Platoons) covered the low ground between George and Item, finally occupying a blocking position about 400 yards behind the O–1 Line.

With the seizure of Hill 94, the critical portions of the O–1 Line were secured. There was, however, a good deal of activity within the perimeter for several more hours. Major Bridges of 1/1 collected about 100 late-comers at BLUE Three and led them forward in search of the battalion assembly area. Composed of men from H&S, Able and Baker Companies, the little force not only missed its destination but made one of the deepest penetrations of the day, finally halting on a hill to the left of George Company’s front lines.

Shortly after Bridges set up a defensive position for the night, his position was invaded by an Easy Company contingent in search of the 2d Battalion. Reoriented to some degree, the visitors reached Dog Company’s intersection much later. The 2d Battalion CP had meanwhile intercepted a group from Major Whitman S. Bartley’s Weapons Company at the trail junction selected in the darkness for the initial battalion CP. At one or the other of these points, the misdirected portions of Sutter’s battalion were directed to their parent units. All personnel were present or accounted for before dawn.[43]

Two other troop movements completed the tactical mosaic of the 1st Marines. The 2d Platoon of How Company was to pass through Item’s lines on Objective C at 2330 and outpost the summit of Hill 233, some 2,000 yards farther along the ridge and beyond the regimental front. After setting out on schedule, the small unit covered about half of its rugged journey upon reaching Hill 180, an intermediate height. With most of the night gone and his troops wearied by the climb, the platoon leader radioed for permission to halt and his request was granted.

Another venture into the unknown was made by an even smaller unit. Second Lieutenant Bruce F. Cunliffe’s 60mm section of Fox Company had somehow mingled with 3d Battalion troops during the drive inland. When he led his men through the darkness in search of 2/1, the section ranged forward of friendly lines and into unexplored territory near Hill 117.

The surprise was mutual when these Marines stumbled into a small NKPA patrol. But a brief fire fight in the darkness was enough for the Red soldiers, who took to their heels and left three dead. Cunliffe’s force, which had no casualties, spent the rest of the night in uneventful isolation.
OF ALL THE calculated risks taken at Inchon, perhaps the most daring was the decision to ground eight LSTs abreast on RED Beach immediately after the assault troops landed. The Navy workhorses were vulnerable enough at best, and on this narrow strip of waterfront they were lined up so close to one another that shots fired by a blindfolded enemy could scarcely have missed.

Not all the NKPA shells and bullets did miss, for that matter. But fortune as usual blessed the bold, and such enemy rounds as found their targets did not touch off tons of napalm, gasoline, and ammunition.

Only with reluctance had the planners accepted the risk of landing thin-skinned supply vessels before the immediate battle area was secured. But Inchon was not a typical amphibious operation. The tremendous tidal range created an unprecedented situation; and if vital supplies were not landed on the evening high tide, the assault troops must pass a precarious first night without adequate quantities of ammunition, water, and gasoline.

Dusk had fallen, with visibility further reduced by smoke and rain squalls, when the vessels wallowed into RED Beach. The reconnaissance element of Shore Party Group Able had gone ahead with the assault troops to erect landing guides during the last moments of daylight. While the men were working under fire, one of the beach markers was riddled by enemy machine guns as it was being erected.

The H&S Company of Lieutenant Colonel Henry P. Crowe’s 1st Shore Party Battalion came in with the first of the LSTs, and other elements of Groups Able and Baker followed in short order. Each of the eight vessels brought a cargo consisting of 50 tons of ammunition, 30 tons of rations, 15 tons of water, and five tons of fuel. These special loads were in addition to the normal cargo of engineer and shore party equipment and combat vehicles. Every LST was limited to 500 short tons, however, in order to insure that it could be beached without trouble.[1]

The last of the LCMs had not yet unloaded and retracted on RED Beach when the first of the LSTs appeared slightly ahead of schedule. Naval officers managed to hold the LSTs back until the beach had cleared, and the eight vessels made a successful landing in spite of treacherous currents combined with low visibility. Two of them grounded momentarily on the mud flats but butted their way through to the beach. And though the sea wall temporarily prevented several vessels from lowering bow ramps effectively, the LSTs at each end of the line were able to discharge cargo over their ramps.[2]

Bulldozers were first on the beach. They moved along the sea wall under enemy fire, pushing down sections of masonry which interfered with unloading operations.

LST 973 had no more than grated ashore when a Red Korean mortar shell exploded among the drums of motor fuel. Gasoline flooded the main deck and leaked down to the crew quarters through holes made by shell fragments. Orders were given to cut off electric motors and enforce all possible precautions, and the vessel miraculously escaped a conflagration even though it took further hits from enemy machine-gun fire.[3]

LST 857 ran into a ROK PC boat while heading in toward the beach, but no harm was done to either vessel. Hits from NKPA mortar and machine-gun fire punctured eight drums of gasoline without any of them bursting into flame. This was one of the LSTs which fired back at enemy gun flashes. During the exchange a sailor was killed and another knocked unconscious when an enemy projectile damaged one of the LST’s gun mounts.

LST 859, which had a sailor wounded by enemy mortar fragments, hit RED Beach with all guns blazing away. When the vessel beached, it was immediately boarded by Marines who helped themselves to ammunition while shouting to sailors in the well deck to stop firing. The same message was slammed home more
authoritatively when First Lieutenant William J. Peter, Jr., appeared on deck, as directed by Lieutenant Colonel Newton, and demanded that the LST’s guns cease at once. [4]

This put an end to the bombardment of shore positions. “No LSTs fired after my ship beached,” commented Lieutenant Trumond E. Houston, USN, commander of LST 799 at the extreme left of the line. “Earlier LSTs beaching had opened fire on targets unknown to me, but my command had received very firm orders not to open fire due to the danger of firing into our own forces.” [5]

As dusk shaded into darkness, the Marines on and around Cemetery Hill extended their lines into the city. Even at the climax of the military drama there was an unexpected note of comedy—assault troops were to discover shortly that among the ammunition brought by the LSTs, some useless .22 caliber cartridges testified to the haste of departure from Camp Pendleton. [6] There was enough M-1 ammunition, however, so that the enemy had no cause to complain of being neglected by the Marines.
It was absolutely essential that the LSTs unload in time to retract on the morning high tide and allow other cargo vessels to take their places. This meant an all-night job for the 1st Shore Party Battalion, which was to initiate unloading on both beaches for the organization composed also of the 1st Combat Service Group, the 7th Motor Transport Battalion, and the U.S. Army 2d Engineer Special Brigade, with the latter in control.

The vehicles came off the LSTs first—about 450 of them, all told—and darkness had fallen when the unloading of cargo got into full swing. Congestion on the 650-foot strip of beach did not permit normal location and employment of dumps. It was catch-as-catch-can for the shore party troops and engineers, with the cargo being off-loaded and stockpiled wherever space could be found. Later, as the tactical situation improved, designated dumps were established.

The men went about their work under the floodlights, heedless of scattered enemy small-arms fire which continued throughout the night. At a glance the unloading presented a scene of noisy chaos, yet everything was so well under control by midnight that the accomplishment of the mission within prescribed time limits was assured.

In the morning the eight LSTs were retracted according to schedule as a like number approached the beach to discharge cargo. Two of them grounded in the mud flats too far out for unloading, but the supply problem was already so well solved that this setback was not serious.

On BLUE Beach it was not the intention to develop the area beyond the needs of the initial assault, so that a comparatively small shore party element was required. Only such equipment as could be carried by hand was taken ashore in the LCVPs and LVTs.

The reconnaissance element of Shore Party Group B (——) had landed with the assault troops, followed by the rest of the group at 1930. Provisions for the use of pre-loaded LVTs having been made in the assault phase supply plan, the shore party troops set out flanking lights to mark the entire BLUE area as a single beach. This was in preparation for the arrival of the 24 LVTs bringing pre-loaded supplies to sustain the attack in the morning. Ten of these vehicles were so delayed by adverse currents that a receding tide left them high and dry. Officers of the 1st Marines decided that the supplies were not critical enough to warrant unloading by hand over the mud flats, and the job was postponed until the LVTs could be floated in on the morning high tide. While they were discharging on BLUE–3, the LCVPs came in with other gear which was unloaded and stored in the regimental dump.

Prison stockades were set up on both beaches the first night. The LSTs continued to unload most of the Division supplies on RED Beach in spite of treacherous currents, the tidal range and the mistakes made by Japanese crews. BLUE Beach was closed on D-plus 1, having served its purpose, and the shore party personnel transferred to GREEN Beach, where facilities for unloading LSTs had been improved. Supplies landed there could be trucked across the causeway, and on D-plus 2 the shore party troops on RED Beach were also relieved and sent to Wolmi-do.

The 2d Engineer Special Brigade retained control of all logistical operations in the Inchon port area on 17 September as vessels began to discharge at Pier No. 2, designated as YELLOW Beach. There were assurances by this time that the engineers would soon have the tidal basin partially operative, thus adding materially to the capacity of the harbor.[7]

The 1st Combat Service Group remained in control of consolidated dumps. This organization was the storage agency for all X Corps supplies with the exception of ammunition and engineering materials, both of
which were handled by Army personnel. Owing to the shortage of trucks, the 7th Motor Transport Battalion was held in the port area under control of the engineer brigade.

The lack of enough motor trucks for port operations was alleviated by the restoration of rail transportation much sooner than had been expected. Although the planners did not count on this factor before D-plus 30, the 2d Engineer Special Brigade rounded up Korean crews and speeded up the tremendous task of putting the Inchon-Seoul line back in working order. As early as D-plus 1 a switch engine and six cars were operating in the Inchon yards. Three days later the first train, carrying 1,200 Marines, was dispatched over the 5-mile run from Inchon to Ascom City. As the ground forces advanced, the engineers followed close behind the front with rail transportation which handled a total of 350,000 rations, 315,000 gallons of fuel, 1,260 tons of ammunition, and 10,000 troops before the Division was relieved.
Casualties of the Landing Force on D-day amounted to 20 KIA, 1 DOW, 1 MIA, and 174 WIA in addition to 14 of non-battle classification. Medical officers regarded the operation as a landmark because of the four Navy surgical teams, each composed of three doctors and ten corpsmen, which went in behind the assault troops on the LSTs. Similar teams had been employed in the later operations of World War II, but Inchon had the distinction of being the first amphibious assault in which carefully planned medical techniques were integrated with military operations.

The surgical teams had been drilled and rehearsed in Japan for their tasks. Patients requiring immediate surgery on the night of D-day were evacuated to LST(H) 898, where an improvised operating room had been installed. During the assault phase, 42 military and 32 civilian casualties were treated instead of the 300 which had been expected. Such an unqualified success was achieved that the teams were recalled to Japan afterwards to act as instructors. Within a year the numbers of Navy surgical teams had grown to a total of 22 on standby duty in the Far East.[8]

Captain Eugene R. Hering, (MC) USN, had served in the Pusan Perimeter as the Brigade Surgeon. From a study of maps and intelligence reports, he tentatively selected a site for the Division hospital on the eastern outskirts of Inchon.

The 1st Medical Battalion, commanded by Commander Howard B. Johnson, (MC) USN, consisted of an H&S Company and five letter companies. Able and Baker were hospital companies, while Charlie, Dog, and Easy functioned as collecting and clearing companies. The last was organized for attachment to the 7th Marines when that regiment landed at Inchon.

Medical planning necessarily had to be hurried. In view of the unusual landing conditions at Inchon, it was decided to revert the clearing platoons, normally attached to infantry regiments, to Division control when they reached the transport area.

Three casualty teams, each consisting of a medical officer and six hospital corpsmen—one team from Able Company, and two from Baker—landed from separate LSTs on D-day with a mission of caring for initial casualties. Supporting collection sections of Charlie and Dog Companies landed with the assault troops of the two rifle regiments.

The reconnaissance group and the two hospital companies arrived on D-plus 1, followed by the H&S Company with equipment for the hospital set up in a schoolhouse. It was opened at 1500 on D-plus 2, with 47 casualties being received the first day.

These were the forerunners of a total of 5,516 patients to be treated by the 1st Medical Battalion for all causes during the entire Inchon-Seoul operation. Most of them were WIA cases, but such ailments as acute appendicitis, hernia, piles, and sprains are also recorded.

Of the 2,484 surgical patients, only nine died after reaching the first aid station, and among them were six deaths following major surgery. The proportion of patients surviving after evacuation, therefore, reached the figure of 99.43 per cent. This meant that the chances were about 199 to 1 that a wounded Marine would live.

Chapter 7. Securing the Beachhead
Artillery and Tank Operations

The planners, anticipating the need of artillery support for the assault on the mainland, had hoped that DUKWs could land two battalions of Colonel James H. Brower’s 11th Marines on GREEN Beach for this mission. There was some reason to believe that these vehicles could cross the mud flats at low tide, thus enabling the 105s to get in position on Wolmi-do and registered before the Inchon landing. In the end, however, it was decided that this plan was not feasible, and the 1st and 2d Battalions of the artillery regiment landed on the evening tide while the rifle regiments were hitting the beaches at Inchon. A delay of an hour and a half occurred as a result of the confused maneuvering of ships in the inner harbor. It was not until 2150, therefore, that the 1st and 2d Battalions were prepared to deliver massed fires in support of the 5th and 1st Marines respectively.[9] Fortunately, the lack of this support at H-hour had not been a grave handicap in view of the light resistance encountered on the beaches.

Low visibility and lack of targets limited the fires to a few rounds the first night. Next day the artillery landing was completed when 4/11 went ashore on RED Beach, followed on D-plus 2 by the 96th Field Artillery Battalion, USA. Plans for the drive inland called for 1/11 and 2/11 to fire in direct support of RCT–5 and RCT–1 respectively. Support was to be provided by 4/11 for RCT–5 and by the Army battalion for RCT–1.[10]

The problems of tank support for the Inchon operation had given the planners many a headache. BLUE Beach was dismissed from consideration because of the mud flats, and the possibilities at RED Beach were not encouraging. GREEN Beach offered the best prospects for landing tanks, though it was recognized that they would be stranded if the enemy destroyed the causeway connecting Wolmi-do with the mainland.

The consequences of the hasty embarkation from Camp Pendleton had borne down heavily upon the 1st Tank Battalion, commanded by Lieutenant Colonel Harry T. Milne. Crews trained with the M–4A3 (Sherman) and 105mm howitzer were suddenly equipped with the M–26 (Pershing) and its 90mm gun. With the exception of Company A, which saw action with the Brigade, few of the men had had any experience either at driving or firing the new tanks. The flame tank platoon of Headquarters Company had received some training at Barstow, but most of the personnel of Baker, Charlie, and Dog Companies were limited to shipboard instruction.

The men of the Company A platoon which landed on GREEN Beach in support of 3/5 were veterans of several fights with NKPA tanks and infantry in the Pusan Perimeter. In the evening of D-day they supported the landing on RED Beach and moved across the causeway to the mainland at dusk. There they joined the other two platoons of Able Company and the flame tank platoon, which landed with the LSTs in support of the 5th Marines.

At 1700 on D-day a reconnaissance team went ashore on Wolmi-do to prepare for the landing of B Company, which took place late the following afternoon. YELLOW Beach, in the inner harbor, was operative for the landing of Company C on 18 September, and Company D was to arrive later with the 7th Marines.[11]
Chapter 7. Securing the Beachhead

The Inchon-Seoul Operation

Chapter 7. Securing the Beachhead
The Attack on D-plus 1

The night of 15–16 September passed quietly for both of the infantry regiments. At 2000 on D-day the 3d Battalion crossed over the causeway from Wolmi-do to rejoin RCT–5. The most dramatic action on either regimental front was an episode in the Cemetery Hill area. Two Marines mistakenly wandered out in front of the high ground and were cut down by enemy fire from a cave at the base of the hill, just below the lines of Company A, 5th Marines. Repeated attempts to reach the fallen men were thwarted by submachine gun fire from the recess, until a ROK interpreter, threatening the use of tanks, persuaded the occupants to surrender. As a squad of North Koreans filed out in submission, troops from Able Company rushed forward to get their two comrades. One of the Marines was already dead; the other lay mortally wounded. [12]

In the middle of the night, the 1st and 5th Marines received General Smith’s OpnO 3–50, directing them to attack after dawn. Murray’s regiment, by previous plan, would march through the southern part of Inchon, leaving the heart of the seaport to be cleared by the KMC. About three miles inland, the 5th Marines would reach the O–2 Line coming abreast of Puller’s front of the night before. (Thus, the O–1 and O–2 Lines were one and the same in the 1st Marines zone). Tied in along the Inchon-Seoul Highway at Hill 117, the two regiments would drive eastward to the O–3 Line, approximately five miles inland. This last arc was the goal specified in Smith’s attack order. [13]

Murray’s tactical plan was dictated by the simple necessity of getting out of Inchon as quickly as possible. The 5th Marines would therefore attack in a column of battalions, with Roise’s 2d in the lead, followed by the 1st and 3d in that order. Two hills, located north of the highway on the outskirts of the city, were designated Regimental Objectives D and E. In taking this high ground, 2/5 would automatically control the 5th Marines’ segment of the O–2 Line and seal off the Inchon Peninsula in conjunction with the 1st Marines. This would leave a secure pocket for the great ship-to-shore build-up commencing on the morning tide.

Following a brief orientation at dawn, Captain Jaskilka led Company E forward from the British Consulate. Unopposed, the column passed the inner tidal basin, where Fox Company fell in behind. In the meantime, Company D left its positions atop Observatory Hill and brought up the rear of the battalion formation. Inchon’s streets were strangely quiet during 2/5’s advance. Frightened civilians peeped from windows and alleyways, but the enemy was nowhere to be found. The sprawling seaport seemed dead.

Inconsistencies of the Oriental enemy were exposed in a striking contrast of scenes at 0700. Nearing the edge of the city, Easy Company was preparing to veer off the road and attack Objective D. The troops were encountering no resistance whatsoever, and it was obvious that the North Koreans had abandoned Inchon in haste during the night. Only five miles away, however, six T–34 tanks were rumbling along the highway in broad daylight, headed toward the seaport without infantry escort.

An eight-plane strike of VMF–214 intercepted the enemy armor at the village of Kansong-ni. As the Corsairs swept down on the first pass, one of the tanks was enveloped in flaming napalm. Another was disabled when a rocket hit blew off its tracks. A third was left seemingly helpless on the road, squatting in a pool of motor fuel which poured out of its wounds. [14]

Marines of 2/1 watched the show with enthusiasm from the top of Hill 117, less than two miles away. The joy of victory went flat, however, when one of the planes failed to pull out of its dive. Captain William F. Simpson, the pilot, was killed as the F4U crashed beside the highway. [15]

A second flight of VMF–214 descended on Kansong-ni with a vengeance. Rocket fire destroyed one T–
34, and a direct bomb hit knocked another off the road. It will be shown shortly that these two tanks must have been the same pair that were severely damaged by napalm and rockets during the first strike. When panicky NKPA crewmen fled to nearby thatched huts for concealment, the dwellings were promptly razed by napalm. Marine pilots, assuming incorrectly that all six tanks lay dead beneath the pall of smoke and flame, turned their attention to other targets in the area. They bombed an enemy jeep and weapons carrier standing in the open, then strafed two other motor vehicles which had been cleverly camouflaged.[16]

It would soon become more apparent why Red leaders in Seoul had sacrificed precious armor in a clearly hopeless thrust against the swelling beachhead. Communications were destroyed, so that NKPA defense forces fought or fled as isolated units. Adequate reserves were not at hand initially, with the result that stop-gap detachments were fed piecemeal into battle, only to be flattened by the Marine steamroller. In short, the North Koreans lost control. And when they attempted to regain it, time had run out.

While Marine air hammered the enemy’s armored column, the 2d Battalion, 5th Marines, deployed outside Inchon. Having made sight contact with Lieutenant Colonel Sutter’s troops on Hill 117 at 0730, Captain Jaskilka led Easy Company off the road and toward Objective D the left. Fox Company continued along the pavement several hundred more yards, then also veered northward in the direction of Objective E. Neither company met opposition, and both were atop their respective hills at 0930.[17]

Meanwhile, Company D had advanced eastward on the highway with a platoon of Able Company tanks. There was the occasional whine of a sniper’s bullet overhead as the column moved rapidly to its junction with the 1st Marines. At 0900, while Easy and Fox Companies were climbing their objectives, Dog made contact with 2/1 at Hill 117.[18]

It was its opposite of the 1st Marines that Dog Company of 2/5 met at Hill 117. Fox Company of 2/1 had been clearing the eastern reaches of the big ridge since 0615, and Easy was to spend all morning and afternoon securing high ground and a village about a mile off on the right flank. When the attack along the highway resumed shortly after 0900, Company D of the 5th Marines and a platoon of A/Tanks took the lead. Fox and Dog Companies of 2/1 followed in trace and on the right as the formation advanced rapidly against nothing heavier than sniper fire. By 1100, elements of both battalions were deployed at Sogam-ni, just a few hundred yards short of smoking Kansong-ni. Since the former hamlet bordered the O–3 Line, the Marines held up to await further orders.[19]

To the south of the highway, the 1st Battalion, 1st Marines, reorganized in the center of Puller’s zone and moved forward as regimental reserve. Simultaneously, the 3d Battalion began its sweep of the Munhang Peninsula, Companies G and I attacking generally southward from Hill 233. Since the broad front was studded with high ground and villages, Lieutenant Colonel Ridge relied on LVT transport whenever possible to regain momentum lost to hill-climbing and searching. Resistance on the peninsula proved negligible, although once again the capture of prisoners and materiel revealed enemy potential unused. Among the weapons abandoned by the North Koreans were quantities of rifles and machine guns, a battery of Russian-made 120mm mortars, and four coastal guns, the latter pointing menacingly toward the ships of the Attack Force anchored in the channel.[20]

Although 1/1 and 3/1 did not reach their portion of the objective until later in the day, Division Headquarters realized by mid-morning that enemy resistance as far out as the O–3 Line could be discounted. Now that the tremendous obstacles of the actual landing had been overcome, the tactical advantage of the moment swung from the Red commander at Seoul to General Smith. Owing to the conformation of the Inchon and Munhang Peninsulas, which were linked together inland like Siamese twins, the O–3 Line formed a front three miles long with both flanks bounded by water. A glance at the map will show the beachhead thus set off as an ideal foothold. To North Koreans thinking in terms of counterattack, the vacuum rapidly being filled by the Landing Force was a defensible bottleneck. To the Marines, on the other hand, it was the gateway to freedom of
maneuver for an overland offensive.
The Inchon-Seoul Operation

Chapter 7. Securing the Beachhead  
Advance to the Force Beachhead Line

Opening the gate was the subject of General Smith’s OpnO 4–50, issued by dispatch at 1045, D-plus 1. He directed Puller and Murray to continue the attack from the O–3 Line, seized the Force Beachhead Line (FBHL), and thereby conclude the assault phase of the amphibious operation. The order also marked off a new Tactical Bomb Line,[21] behind which Marine Air was forbidden to strike without ground coordination.

Roughly the shape of a right angle, the FBHL corresponded to X Corps Phase Line BB. Like the O–3 arc, it was anchored on the sea at both ends. The east-west leg of the angle, five miles long, lay above and almost parallel to the Inchon-Seoul Highway. The north-south leg, about seven miles inland, added a third projection, the Namdong Peninsula, to the beachhead. Encompassing the built-up centers of Ascom City and Mahang-ri on the main road, the apex of the FBHL pointed northeast toward Kimpo Airfield like an arrowhead.

The Inchon-Seoul Highway remained the boundary between the 1st and 5th Marines. Lieutenant Colonel Murray’s order went out to the latter before noon, directing a two-pronged assault. The 2d Battalion would jump off from the O–3 Line and trace the course of the highway, clearing the hills and villages on the left. Simultaneously, the 3d was to swing sharply northward from behind 2/5 and attack high ground overlooking the east-west leg of the FBHL. The 1st Battalion would remain in regimental reserve.[22]

There were a number of reasons why Colonel Puller’s scheme of maneuver was more complex. Not only was the 1st Marines’ front much wider and the terrain more difficult, but the rapid advance had left troops units scattered throughout a zone of action some 15 square miles in area. There was considerable shuffling to be done before the regiment could deploy along the highway for the drive to the east.

The 2d Battalion would continue along the MSR, clearing the high ground on the right and coordinating with 2/5 on the left. To the south, the 1st Battalion would move up on the right of the 2d as quickly as the rugged terrain allowed. The 3d, after clearing the Munhang Peninsula, was to pass into regimental reserve subsequent to being relieved on the right flank by the Reconnaissance Company. Swinging around a sharp cove of salt pans and mud flats, the latter unit would patrol the Namdong Peninsula to secure the Division right.[23]

At 1335, the 5th Marines attacked against minor resistance on the north of the highway. Moving into Kansong-ni, the vanguard of 2/5 and its tank escort approached a sharp bend where the road veered northward for about a mile to avoid two large hills. Around the curve were the enemy tanks believed to have been knocked out by VMF-214 earlier in the day.

A section of Marine armor turned left off the pavement just short of the bend. The two M–26s crawled to the top of a knoll from which they could cover the infantry, as the latter advanced around the corner. Looking down from their vantage point, the tank crews saw three intact T–34s parked in column on the highway, about 300 yards beyond the turn. Hatches on the Communist vehicles were buttoned, with the 85mm guns leveled at the road bend.[24]

The M–26s opened up immediately. Twenty rounds of 90mm armor-piercing (AP) ammunition crashed into the enemy armor. There was no return fire, probably because the Red crews had not time to elevate and traverse their manually-operated guns. In the space of a few minutes, each of the T–34s exploded and burst into flame. The crews did not escape.[25]

The Marine attack rolled past the blazing hulks. Nearby were two other wrecked T–34s, obviously the victims of the air attack. If the pilots of VMF–214 had attacked a total of six enemy tanks, one of the vehicles...
must have escaped before the ground troops reached the scene.[26]

Tracing the north-south stretch of highway that led to Ascom City, Dog Company of RCT–5 marched a thousand yards beyond the bend and ascended a high hill on the west side of the road. Company F swung out to the left, crossed the railroad tracks running parallel to the highway, and seized the high ground adjacent to that held by Company D. Both assault units encountered only sniping, but it was early evening before the two hills and surrounding low ground had been searched thoroughly.[27]

Lieutenant Colonel Roise ordered 2/5 to dig in for the night. He was about 3,000 yards short of the highway’s intersection with the FBHL, but his battalion held the commanding ground. Companies D and F defended the approach to Ascom City, which sprawled out on the low ground just forward of their positions. Company E, in reserve, set up a perimeter in the battalion rear.[28]

Lieutenant Sweet’s five M–26s, which had supported the day-long advance from RED Beach, were relieved at dusk by the 1st Platoon of Able Company tanks. In addition to their score of three T-34s, Sweet’s veterans of the Pusan Perimeter had captured an impressive tally of enemy materiel: three NKPA trucks, two 76mm AT guns, two 122mm mortars, and a pair of Russian-manufactured jeeps.[29]

During 2/5’s attack along the MSR, the 3d Battalion, 5th Marines was occupied with the hills overlooking that portion of the FBHL to the northwest. Lieutenant Colonel Taplett had launched his drive at 1330 with Companies G and I in the assault and H in reserve. On the left, George Company seized its high-ground objective at 1440, while Item took an extra hour to clear adjacent Hill 137. There were no Marine casualties during a rapid advance that netted 12 enemy prisoners.[30]

Patrols from 3/5 ranged westward to the sea, and eastward to the edge of Ascom City, where Item Company troops discovered an enemy ammunition dump and vehicle park. Location of these undefended prizes was promptly reported to the 5th Marines CP.[31]

South of the Inchon-Seoul Highway, the 1st Marines attacked from the O–3 Line at 1600. Sutter’s 2d Battalion drove forward on the right of the MSR and passed below Kansong-ni without incident. Continuing a thousand yards farther, Company D scaled the rugged slopes of Hill 186, cleared the summit, and dug in. Fox Company climbed the same high ground shortly afterwards and went into position on the left of Dog and overlooking the highway. Thus 2/1’s front for the night was across the road and slightly to the rear of the high ground positions occupied by Company D of 2/5. Easy Company returned from its independent mission on the right flank and set up a reserve position in the vicinity of Kansong-ni, just rearward of Sutter’s CP at the base of Hill 186.[32]

The enemy attitude in the 2d Battalion’s zone gradually had developed from occasional sniping early in the day to a pattern of definite light resistance as the Marines surged over Hill 186. Though most of the North Koreans fled after firing a few rounds, their token efforts cost the battalion four killed and 10 wounded. These figures are noteworthy in view of the fact that total losses for the whole Division on D-plus 1 were four KIA and 21 WIA.[33]

Sutter’s troops exacted a comparatively stiff price from the Reds in return, for it was estimated that 120 of the enemy were killed or wounded. Moreover, the Marines captured more than 30 prisoners, 70 rifles, 10 machine guns, and an ordnance dump loaded with small-arms ammunition.[34]

Elsewhere on the 1st Marines front there was considerably more hiking than combat. The 3d Battalion completed its sweep of the Munhang Peninsula about 1600 and assembled at the southern tip of the O–3 Line to await relief by the Reconnaissance Company.[35] In the course of rounding up NKPA prisoners and abandoned weapons, 3/1 had encountered a group of Korean villagers, headed by their schoolmaster, who called themselves the Young People’s Anti-Communist Resistance League. They had armed themselves with Russian rifles and light machine guns left behind by enemy troops fleeing inland.[36]

In the center of Puller’s zone, the 1st Battalion had moved rapidly to fill the gap between the 2d and 3d.
Attacking into the vacuum left by the retreating enemy, Hawkins’ unit drove two mountainous miles beyond the O–3 Line, finally stopping for the night on high ground about 2,500 yards south of 2/1’s positions on Hill 186. The break in the regimental front was protected when 3/1 shifted northward and formed a reserve perimeter to the rear of the lines, after being relieved on the right at 1700 by Captain Kenneth J. Houghton’s Reconnaissance Company. Assuming responsibility for the Division’s southern flank, the Recon troops set up a night defense at the base of the Namdong Peninsula with their front linked to that of 1/1 on the left.[37]

Chapter 7. Securing the Beachhead
Displacement Ashore of Division CP

The establishment of a Division CP on shore was delayed by the necessity of utilizing every minute of the limited periods of high tide for the movement of troops, supplies, and equipment. General Smith decided on D-day that it would not be advisable to displace his CP ashore until General Craig and the ADC group (former headquarters of 1st ProvMarBrig) were able to set up adequate communications. With this object in mind, the ADC group landed on the evening high tide of D-day to locate an advance echelon on Wolmi-do.

Not much could be done that evening. And in the morning Craig informed CG 1st MarDiv that the island was too crowded. He reported that he and Lieutenant Colonel Stewart had discovered a likely spot on the southeast outskirts of Inchon and recommended that the CP be moved without delay.[38] General Smith approved and the move started at once.

Meanwhile, a good deal of military housekeeping had been accomplished in the Inchon port area. Lieutenant Colonel John H. Partridge’s 1st Engineer Battalion was given the task of making a survey of beach exit roads with a view to opening up an MSR between RED and BLUE Beaches.

After elements of Company A hit GREEN Beach, the remaining troops of the battalion had landed on the two beaches and assisted short party units at unloading water, ammunition, and rations. This work was so well along by the morning of D-plus 1 that the engineers opened up the MSR between the two beaches and assigned personnel for improvement and maintenance. A water point was established at the north end of RED Beach with 31 distillation units, and 125,000 gallons were issued during the next six days.[39]

The new Division CP on the outskirts of Inchon was ready by the afternoon of D-plus 1, and General Smith said goodbye to General MacArthur on the bridge of the Mount McKinley. The commander in chief wished him well and enjoined him to take Kimpo Airfield at the first opportunity.[40]

The Marine general landed at YELLOW Beach at 1730. Upon arrival at the CP, he sent a dispatch to Admiral Doyle, informing him that he was assuming responsibility for the conduct of operations ashore at 1800 on 16 September. Thus ended the amphibious assault phase, almost exactly 24 hours after the first wave of Marines set foot on RED Beach.
ON SUNDAY MORNING, D-plus 2, General Smith was directed as Landing Force Commander to re-establish civil government in Inchon. Although parts of the Korean seaport had been burned or battered into rubble, thousands of refugees were returning to the ruins of their homes after having fled during the bombardments. The KMC Regiment, operating under the control of RCT–5, had been given the task of screening the remaining inhabitants for their loyalty. No fault could have been found with the thoroughness of these Korean allies who were perhaps inclined to be too zealous when they suspected subversion.

General Smith concluded that the best procedure was to find loyal Korean officials and uphold their authority. He consulted Rear Admiral Sohn Won Yil, the ROK Chief of Naval Operations, and learned that the former mayor of Inchon had fled during the original NKPA invasion and never returned. Admiral Sohn vouched for the loyalty of one of the political prisoners, Pyo Yang Moon, who had been the losing candidate for the mayoralty in the last election. The Marine general decided to install him as Inchon’s chief executive and issued a proclamation to that effect in Korean as well as English.

Induction ceremonies were held on the morning of 18 September on the portico of the city hall, a once imposing edifice which bore the scars of war. About 700 prominent citizens attended as the Marine interpreter led in singing the Korean national anthem. After the proclamation had been read in both languages, General Smith made a few remarks and the new mayor responded. A ROK Marine guard of honor officiated, and Admiral Sohn brought the occasion to a close with a brief address.

Steps were taken immediately to bury the civilian dead, to care for the orphans, to distribute food and clothing to the distressed, and to establish a civilian hospital and police force.[1]
Dispatches received from the Pusan Perimeter revealed that the Eighth Army had jumped off according to schedule on the 16th in its joint offensive. Although gains were negligible the first day, this effort was pinning down NKPA troops who might otherwise have reinforced the defenders of Kimpo and Seoul.

Several other operations had been mounted on both coasts as diversions to keep the enemy guessing as to where the lightning would strike. Kunsan, it may be recalled, had been briefly considered by X Corps planners as an alternate amphibious objective. Early in September this west coast seaport was selected as the chief target of feints during the preparations for the Inchon landing. General Stratemeyer’s Fifth Air Force bombers initiated strikes on rail and highway communications within a 30-mile radius. That same day a hit-and-run amphibious raid on Kunsan was planned at Admiral Joy’s headquarters in Tokyo. As a result, Colonel Ely sailed with his company on the British frigate *Whitesand Bay* and raided the Kunsan waterfront on the night of 12 September. Three casualties were incurred from enemy machine-gun fire.

The Seventh Fleet added to the deception by singling out Kunsan for carrier air strikes and naval gunfire bombardments to give the impression of softening up an objective for amphibious assault. Chinnampo, the seaport of Pyongyang, also appeared to be threatened when it was bombarded by a British task force.

On the east coast the USS *Missouri*, just arrived from the United States, poured 16-inch shells into Samchok on 14 September while a Navy helicopter did the spotting. The cruiser *Helena* and three U.S. destroyers added their metal to the bombardment.[2]

D-day at Inchon was the date of a landing of ROK guerrillas behind the NKPA lines at Changsa-dong, a coastal town about midway between Yongdok and Pohang-dong. After the ROK merchant marine LST struck submerged rocks and grounded, it was used as an improvised fortress by the guerrillas, who retreated from the NKPA forces when their ammunition ran short. The only two Americans, an Army lieutenant and sergeant, radioed for help; and the cruiser *Helena* provided naval gunfire for the Navy relief expedition which took off the survivors.

How much these diversions on both Korean coasts may have contributed to a surprise at Inchon is a moot question. It might even be argued that the enemy was not surprised, since an intercepted NKPA radio message warned Pyongyang on 13 September that United Nations vessels were approaching Inchon and planes bombing Wolmi-do. The senders deduced that an amphibious landing was forthcoming and assured NKPA Headquarters that defensive units were being stationed where they would repulse the UN forces.[3]

This would make it appear doubtful that a surprise had been achieved. But it is the opinion of Admiral Struble that “the actual results in the Inchon-Seoul area clearly indicate surprise . . . . While the message was apparently sent, and was a good report, there is no evidence that the enemy headquarters accepted the report. It is possible that a later report that the enemy bombarding ships were retreating from Inchon may have confused the issue. In any event, only a short time was available to take advantage of strong defensive positions and certainly not enough time to mine the harbor.” [4]

An excellent analysis of the outcome is to be found in Admiral Doyle’s official report. After paying tribute to the pre-D-day bombardments by the cruisers and destroyers, plus the air strikes by planes of TF–77 and TG–90.5, he concluded that “the assault itself was successful only through the perfect teamwork that existed between the participating Naval and Marine elements. The successful accomplishment of the assault on Inchon demanded that an incredible number of individual and coordinated tasks be performed precisely as planned. Only
the United States Marines, through their many years of specialized training in amphibious warfare, in conjunction with the Navy, had the requisite know-how to formulate the plans within the limited time available and execute those plans flawlessly without additional training or rehearsal.”[5]
Dispatches were received on D-plus 2 at the new Division CP to the effect that the 7th Marines was preparing to embark that day from Kobe and land at Inchon on 21 September.

The 3d Battalion of this regiment, it may be recalled, had originally been a unit of the 6th Marines on FMFLant duty with the Sixth Fleet in the Mediterranean. Upon being ordered to the Far East, the unit sailed from Crete to Japan by way of the Suez Canal and Indian Ocean. Lieutenant Colonel Dowsett, the battalion commander, did not know throughout the voyage what specific mission awaited his men.

They later met at Kobe their new regimental commander, Colonel Litzenberg, who had flown to Japan ahead of the other two battalions sailing from San Diego. He informed Dowsett that his battalion was now a part of the 7th Marines and named him executive officer of the regiment. Major Maurice E. Roach succeeded to the command of the newly designated 3/7.

A formidable task awaited the 7th Marines in Japan. The officers of the staff, not having served with the Division before, were unfamiliar with references and terms in directives dealing with the Inchon landing. Problems of integrating the regiment into the operations of the division were solved only by intensive application. A reshuffling of the regiment had to be accomplished meanwhile before embarking for Inchon. The purpose was to spread the hundreds of reservists throughout the three battalions instead of having them concentrated in several companies.[6]

It took some remarkable adjustments to get the regiment ready for embarkation from Kobe only 17 days after sailing from San Diego. But it meant that the 7th Marines would get into the fight at least a week sooner than Division planners had anticipated.

Chapter 8. On to Kimpo  
Destruction of NKPA Tank Column

The amphibious assault phase was left behind on D-plus 2 when the 1st and 5th Marines jumped off from the western outskirts of Ascom City to initiate their drive inland. With the exploitation phase coming next, command relationships would be as follows: Click here to view table

The night of 16-17 September had been quiet all along the Division front. It was so quiet, in fact, that the troops of 2/5 paid no particular heed to a truck which drove through their lines on the Inchon-Seoul Highway about midnight. Not until the vehicle penetrated a few hundred yards into Marine territory was it stopped by curious tank crews of Able/Tanks’ 1st Platoon, whose M–26s were deployed across the road in deep anti-mechanized defense. The startled occupants of the stray truck turned out to be an NKPA officer and four enlisted men, but they were no more surprised than the Marines who stepped out of the darkness and took them prisoner. [7]

Apparently, neither the tank crews nor anybody else in the area attached any special importance to the strange truck incident. In a few hours, however, an epic of smoke, flame, and twisted steel would attest to the significance of this scrap of evidence. The fact of the matter was that the Red leaders in Seoul did not know the exact location of the 1st Marine Division.

It will be recalled that Dog Company of 2/5 occupied a hill on the west side of the highway as the attack on D-plus 1 ground to a halt. About 200 yards beyond the company front was a large knoll that nosed into the center of Ascom City. Observing that the highway turned sharply to the east and passed through a cut at the base of the knoll, Lieutenant H. J. Smith decided to outpost the natural roadblock in strength. At dusk, therefore, he dispatched the 2d Platoon, under Second Lieutenant Lee R. Howard, to man the advance position along with machine-gun and rocket-launcher attachments. [8]

As the first rays of dawn creased the sky on 17 September, Howard and his troops were entrenched in a compact perimeter atop the knoll. Several hundred yards to the rear, the 1st Platoon of A/Tanks was augmented in its blocking position by 3.5-inch rocket launchers of 2/5 and the 75mm recoiless rifles of the 5th Marines. Just across the road from this formidable array were more 75s and 3.5s of the 1st Marines, emplaced with Fox Company of 2/1 on Hill 186. [9]

Records of the 5th Marines describe this bristling gauntlet as “. . . a temporary defensive position in depth . . .” It was more like a giant torpedo.

Sometime before daybreak, a North Korean column formed on the Inchon-Seoul Highway a few miles east of Ascom City. [10] In the van were six sleek T–34s of the 42d NKPA Mechanized Regiment. Perched atop the tanks and strung out for about a hundred yards were 200 Red infantrymen, comprising a mixed representation of the 18th NKPA Division in Seoul. The enemy force was on its way to block the advance of the 1st Marine Division along the highway.

It was obvious that the Communist soldiers had little or no knowledge of the situation ahead. For as they neared Ascom City at the crack of dawn, some were still sitting comfortably on the tanks and eating breakfast. Others laughed and jabbered as they trailed along the road.

Lieutenant Howard saw them approaching his Dog Company outpost on the knoll. He reported to Smith, who passed the word to Roise at 2/5’s CP, first one tank, then three, and finally six. Roise took the information with the proverbial grain of salt, supposing it to be a delusion of youth and inexperience. Just as quickly as that
impression formed in his mind, it was shattered by the first reverberations of the battle.

The attitude of the enemy soldiers as they neared his outpost convinced Howard that they were unaware of the proximity of Marine lines. He let the head of the column slip by on the road below, therefore, until the tanks began to round the bend leading to Dog Company’s MLR. Then the platoon leader shouted the order, and his men opened up with machine guns, rifles, and BARs.[11]

The Red infantry went down under the hail of lead like wheat under the sickle. Soldiers on the tanks were knocked to the road, where many were ground under as the big vehicles lurched and roared crazily in reaction to the surprise.

Corporal Okey J. Douglas moved part way down the knoll and closed on the lead T–34 with his 2.36-inch rocket launcher. A few well-placed rounds, fired calmly at a range of 75 yards, killed the armored vehicle on the spot. Continuing the single-handed assault, Douglas damaged tank number 2 just as the main Marine position exploded into action.

Under attack by the outpost, the cripple and the four unharmed T–34s had continued around the road bend, some of them spilling off the curve in an attempt to deploy in the adjacent rice paddy. All five were taken under fire by First Lieutenant William D. Pomeroy’s M–26s, about 600 yards away. Within five minutes, the Marine 90mm guns threw 45 rounds of AP at the enemy armor.

Recoilless rifles of Second Lieutenant Charles M. Jones’ platoon (5th Marines AT Co) added their hot metal at a range of 500 yards, and the 75s with the 1st Marines across the road also erupted. Simultaneously, Second Lieutenant James E. Harrell ordered the 3.5-inch rocket launchers of 2/5’s assault platoon into action.

The T–34’s didn’t have a chance. All of them exploded under the heavy fusilade; and when the smoke cleared, they were heaps of burning wreckage. Scattered around the dead tanks and along the road were the bodies of 200 Red infantrymen. So rapid and complete was the enemy’s destruction that only one Marine casualty—slightly wounded—resulted from the fight.

It was only natural that conflicting claims would arise among the participants in the short, violent clash. To Pomeroy’s tank crews, it appeared that the M–26s accounted for the five T–34s with little or no assistance from infantry arms. This was a reasonable conclusion on their part, owing to the limited visibility from the buttoned vehicles and the fact that their 90mm guns unquestionably wrought the greatest destruction on the NKPA machines. Since so many weapons were firing simultaneously from various other positions, however, and since the T–34s were wrecked so completely, kills and partial kills were also claimed by the recoilless rifles of both regiments. Moreover, the 3.5-inch rocket gunners of 2/5 and 2/1 believed that some of their rounds found the mark in the midst of the furor. It is known, for instance, that Private First Class Walter C. Monegan, Jr., rocket man in the assault squad of Fox Company, 1st Marines, closed on the enemy vehicles after they had rounded the bend and fired his weapon at point-blank ranges.
The acrid odor of high explosives still lingered in the fresh morning air as a column of jeeps came slowly around the bend from the rear. General MacArthur was making his first visit to the front. With him and Admiral Struble were Generals Almond, Shepherd, Smith, Ruffner, Hodes, Wright, and a group of X Corps staff officers. Several jeeps filled with newspaper correspondents and photographers followed close behind the military cortege. Grumpy Marines of RCT–5, their eyes dazzled by the glitter of starry insignia, gazed in wonder at this sudden revelation of the pomp and circumstance of war. The generals and admirals in their turn were equally impressed by the destruction these Marines had wrought—the warm corpses beside the road, the blazing heaps of twisted metal that had been T–34 tanks only a few minutes before.

The Marine driver parked the leading jeep on a culvert and General MacArthur leaped down to survey the spectacle. Instantly he was surrounded by cameramen snapping pictures which would soon appear on stateside front pages. All America was rejoicing at the turning tide in Korea after the humiliating weeks of delaying operations.

Early that morning CinCFE had been met by General Smith at YELLOW Beach and welcomed to the 1st Marine Division CP, a Quonset hut with a dirt floor. There the commander in chief was briefed by the Division G–2 and G–3 on the military situation.

The second stop was at the 1st Marines CP. CinCFE informed Colonel Puller and Admiral Sohn that he was awarding each of them a Silver Star. Reaching into the pocket of his leather jacket, he discovered that he had no medals with him.

“Make a note of that,” he enjoined an aide as the correspondents busily scribbled on their pads.

Next, the route of the procession led to the zone of RCT–5 and the scene of the Marine tank ambush. It was not exactly a happy occasion for General Smith, who felt a heavy responsibility for the lives and welfare of the 1st Marine Division’s distinguished guests. Not only was the commander in chief indifferent to danger, but the Marine general had similar cause to worry about others making the tour of inspection. For instance, there was Frank Lowe, a 66-year-old retired National Guard major general visiting Korea as President Truman’s personal observer. Astonishingly hardy for his age, this admirer of the Marines took personal risks which gave concern to Smith. Another source of anxiety was the attractive correspondent of a New York newspaper, Marguerite Higgins, who had hit RED Beach on the heels of the Landing Force.

Both she and Lowe were on hand when the column of jeeps stopped to survey the results of the tank ambush. Smith scanned the landscape with apprehension, devoutly hoping that some hidden foeman would not choose this moment to obliterate several visiting generals with a well-aimed mortar round. It was with relief that he departed with MacArthur for a visit to the CP of the 5th Marines. And it was just as well that he did not learn until later what happened shortly after his departure. First Lieutenant George C. McNaughton’s platoon, hearing a suspicious noise, had flushed seven armed NKPA soldiers out of a culvert—the culvert on which General MacArthur’s jeep had been parked! A few rifle shots persuaded them to surrender as the only survivors of the enemy expedition.

The caravan of distinguished visitors proceeded meanwhile to the CP of the 5th Marines, raising a cloud of dust that could be seen for miles. Lieutenant Colonel Murray and General Craig were next to be awarded Silver Stars by General MacArthur. His tour of inspection ended with a look at the Marine stockade in Inchon, where
671 NKPA prisoners were held, and a survey of the defenses of Wolmi-do.

When the Marine general returned to his CP, he found Major General James M. Gavin, USA, waiting to make a detailed study of Marine close air support and the weapons employed. The day ended with Ruffner and Hodes conferring with Smith on plans for the employment of the 32d Infantry, due to land the next day as the first unit of the 7th Infantry Division to go ashore. Plans were made for the Army unit to assume responsibility at 1200 on 19 September for the zone of action on RCT–1’s right flank. [14]
On the evening of D-plus 1, General Smith had issued OpnO 5–50, directing the 1st and 5th Marines to attack toward Corps Phase Line CC the next morning. The actual jump-off on 17 September was delayed about an hour by the intrusion of the ill-fated Red tank column.

Both in scope and in shape, Phase Line CC was an enlargement of the FBHL. Beginning on the coast above Inchon and running parallel to the Inchon-Seoul Highway, the line extended inland about eight miles to bend around Kimpo Airfield. It then ran southward, intersecting the highway two miles east of Sosa and finally terminating at an inlet not far from the Namdong Peninsula.

The 5th Marines’ tactical plan was of necessity an ambitious one, since approximately two-thirds of the Division’s projected 19-mile frontage lay in Murray’s zone. On the left, an attached KMC battalion would attack northward to the phase line, taking high ground Objectives One, Two, and Three en route. Roise’s 2d Battalion was to advance in the center on a northeasterly course, which included Objectives ABLE, BAKER, and CHARLIE, the latter being Kimpo itself. Newton’s 1st Battalion would follow the 2d initially, then take over the regimental right and seize Objectives EASY and FOX, two sprawling hills just beyond the phase line.

The 3d KMC Battalion passed through 2/5’s lines at 0700 for the purpose of clearing the western outskirts of Ascom City before driving toward its numbered objectives to the north. That the initial mission was accomplished only with considerable difficulty and assistance will be shown later. Afterwards the Korean Marines made rapid progress, as they advanced over flatlands almost devoid of enemy resistance.

Lieutenant Colonel Roise launched 2/5’s attack at 0900. Company E led the long route column eastward on the Inchon-Seoul Highway through the carnage left by the defeat of the Red tank thrust. Having marched about a mile, the vanguard of the battalion turned left on a secondary road that traced the eastern edge of Ascom City.

This expansive urban area would prove to be a thorn in the side of the 5th Marines for the next 24 hours. Originally a large Korean village called Taejong-ni, Ascom City became the site of a huge service command of the United States Army during the occupation of South Korea after World War II. The few acres of small buildings and thatched huts had grown into almost two square miles of residential, industrial, and storage area. Caves, large warehouses, hundreds of other buildings, and a complex network of streets made it an ideal hiding place for fragments of a broken enemy, as the Marines were shortly to learn.

Marching northward through the outskirts, Easy Company of 2/5 was repeatedly held up by small pockets of resistance among the dwellings on both sides of the road. Captain Jaskilka’s veteran infantry reduced the enemy positions methodically, but the whole morning was used up in the process. Simultaneously with the main advance, the 2d Platoon of Fox Company marched through the heart of Ascom City and screened 2/5’s left flank. Second Lieutenant Tilton A. Anderson, the platoon leader, reported everything quiet in his zone, although his men did not have time to check all of the side streets and blocks of buildings.

Having cleared the eastern fringe of the city by noon, Roise looked in vain for the branch road shown on his map as leading to Objective Able and Baker, some four miles distant. The chart was inaccurate, and only a time-consuming reconnaissance could locate the correct route. It was already 1400 by the time Company E led off on the hike.

While 2/5 was having its troubles in the eastern outskirts, Lieutenant Colonel Taplett’s 3d Battalion
stepped in to help the Korean Marines on the other side of Ascom City. In regimental reserve, 3/5 was scheduled to occupy a series of assembly areas throughout the day, moving forward by bounds behind the assault elements. The morning displacement, into the western edge of Ascom City, took place before the KMC attack had cleared the suburb as planned. Using his initiative, Taplett committed his battalion against moderate resistance that was holding up the South Koreans.[19]

Company G went into action and knocked out a Communist machine-gun emplacement in the city. Next, a George Company patrol attacked a strong enemy force deployed among the buildings. The North Koreans fled after a hot fight, leaving behind 18 dead at a cost of three wounded to the Marines. Item and How Companies also spread out through the maze of streets, and there were several more skirmishes before the “assembly area” was secured. The Korean Marines then passed through and attacked to the north, as mentioned earlier.[20]

The 1st Platoon of A/Tanks, having silenced other enemy positions in the city, made contact with 3/5 at 1500. Leaving the built-up area, Lieutenant Pomeroy led his M–26s in search of 2/5, in order to support that unit’s drive on Kimpo. His armor was escorted by Lieutenant Anderson’s rifle platoon, which had just completed its independent mission in Ascom City without incident. Finding a road to the northeast proved as much of a headache to Pomeroy as it had to Roise, particularly since his big vehicles could not use the same route over which 2/5’s infantry column had advanced an hour earlier.[21]

Extending his quest northward, the tank platoon leader found a road that not only paralleled the infantry’s path but also led to within a few hundred yards of Kimpo, now about five miles distant. The M–26s proceeded approximately a mile on the new route and were stopped by a damaged bridge. First Lieutenant Wayne E. Richards rounded up a party of Korean natives to help his 2d Platoon of A/Engineers repair the span. During the layover, Pomeroy’s force was beefed up by another platoon of M–26s, brought forward by Captain Gearl M. English, the company commander, and by a long column of rolling stock from 2/5’s headquarters.[22]

Meanwhile, the leading elements of Roise’s infantry reached the foot of Objectives Able and Baker, two large hills about 4,000 yards due south of Kimpo. There being no evidence of the enemy in the area, the battalion commander did not waste time by committing whole rifle companies to the high ground. At 1600, Lieutenant Deputa’s 1st Platoon of Easy Company ascended Objective Baker, while the rest of the battalion waited on the road below. The hill was laced with vacant entrenchments, and once on the summit, Deputa further observed that objective Able was unoccupied. Moreover, he reported by radio that it appeared to be clear sailing over the low ground leading to the airfield.[23]

Acting on this information, Roise promptly launched his attack on Kimpo, one of the major tactical objectives of the Inchon-Seoul operation. A left face by the roadbound column put the troops of 2/5 on line for the assault. Easy and Dog Companies, the latter on the left, advanced rapidly against only desultory sniper fire.

Captain English’s tanks arrived propitiously, entering far out to the left front of the attacking infantry. At a point 1,000 yards south of the airfield, the M–26s came under moderate small-arms fire. Lieutenant Anderson’s rifle platoon dismounted and engaged the small force of North Koreans, knocking out one automatic weapon with grenades. The Marine armor put down the remaining resistance with seven rounds of 90mm High Explosive (HE) followed by a thorough hosing with bow machine-gun fire.[24]

Just as this action subsided, Company D of 2/5 swept through the area, picked up a platoon of tanks, and continued toward the airfield. The other platoon of armor swung to the right to support Easy Company’s attack. By 1800, the Marines were on the southern tip of Kimpo’s main runway. Aside from sporadic long range fire from the east, there was no opposition worthy of note.[25]
Over a mile long and three-quarters of a mile wide, Korea’s principal airdrome was no mean target to secure. Scattered around the field were more than half a dozen villages, and the runways themselves were lined by scores of plane revetments and emplacements. It was already dusk when Roise ordered his two assault companies to take the objective “with all speed,” but by nightfall the infantry and tanks had cleared only the southern portion of the runway. [26]

Rather than stretch a single defensive line to the point of diminishing returns, the battalion commander deployed his three rifle companies in separate perimeters, each one a tightly knit strong point. Easy Company dug in on the east of the main runway and Dog on the west. Company F deployed to the south of the airfield, paying particular attention to the main road and a pair of intersections that tied in secondary routes. In a central perimeter was 2/5’s CP, and Able Company Tanks took up positions in Company D’s area. Just before dark, Lieutenant Deptula’s platoon had raced northward to outpost the village of Soryu-li, several hundred yards beyond Company E’s lines. [27]

While 2/5 was investing the southern reaches of Kimpo, Lieutenant Colonel Newton’s 1st Battalion, 5th Marines, pressed the attack on the regimental right. Encountering no resistance, Company A occupied the southern portion of Objective Easy at 1900. Company B ascended the northern half of the high ground without incident later in the evening. With Charlie Company on another hill to the west, 1/5 settled down for the night some 1,500 yards southeast of the 2d Battalion’s lines. Two miles to the rear, 3/5 deployed in regimental reserve around a critical road junction midway between Kimpo and Ascom City. [28]

During the afternoon of 17 September, as the assault elements of the 5th Marines rolled forward over a relatively quiet front, regimental headquarters suddenly found itself in the center of an angry hornets’ nest. Lieutenant Colonel Murray’s CP had just displaced to the north of the railroad station in Ascom City, when Commissioned Warrant Officer Bill E. Parrish walked across the tracks to reconnoiter a site for his ordnance dump. Gaining the summit of a small knoll, the officer and his NCO assistants were met by a heavy fusilade from the orchard and rice paddy beyond. Parrish was killed instantly and two of his men seriously wounded. [29]

Cries of help brought First Lieutenant Nicholas A. Canzona’s 1st Platoon of A/Engineers, which had just arrived at Murray’s CP. In a brief clash around the orchard, the engineers killed ten enemy diehards. South Korean police swept through the adjoining rice paddy and came up with seven prisoners.

About the same time, Major James D. Jordan’s party arrived in the area to select a position for Battery A of 1/11. Again small-arms fire crackled. Two of Jordan’s NCOs, Technical Sergeants Kenneth C. Boston and Donald Comiskey, plowed through the hail of lead and killed four more North Koreans. [30]

North of the railroad, still another Marine was killed and one more wounded not far from Murray’s headquarters. For obvious reasons a tight perimeter of engineers and H&S Company troops was drawn around the CP during the night. Nevertheless, a Red officer stumbled through the line in the darkness and seriously wounded Second Lieutenant Lawrence Hetrick of A/Engineers.

At dawn on 18 September the regimental commander and his staff were awakened by the chatter of an enemy submachine gun a few yards from the CP. Holed up in a grain field with one Communist rifleman, the officer who had shot Hetrick fought fanatically against a whole platoon of engineers. Another Marine was wounded before the suicidal stand was crushed by grenades and rifle fire.

There were no regrets when Murray’s headquarters took leave of Ascom City and displaced to Kimpo.

Chapter 8. On to Kimpo  
Enemy Counterattack at Kimpo

The air at Kimpo was charged with tension during the night of 17-18 September. Troops of 2/5, manning perimeters which had been laid out on unfamiliar ground during darkness, had every reason to believe that the North Koreans would not give up the airfield without a fight.

But there were troubles enough in the North Korean camp, where confusion and panic seemed to be the order of the day. Intelligence on the enemy garrison in the Kimpo area presents a scrambled picture so characteristic of the Communist organization throughout the Inchon-Seoul operation. It appears that elements of the NKPA 1st Air Force Division were charged with the operation of the airfield. Under the command of 40-year-old Chinese-trained Brigadier General Wan Yong, the division was comprised of the following units or, more often than not, mere fragments thereof:

Division Headquarters
- 1st Co, Engineer Bn, Fighters Regt
- 3d Co, Engineer Bn, Fighters Regt
- 3d Plat, Gunners Co
- 2d Co, 1st Bn, 1st Regt
- 2d Bn, 1st Regt
- Finance Co, 3d Technical Bn
- Supply Co

The Kimpo force was augmented by a motley mixture of poorly trained troops from the 226th and 107th NKPA Regiments and the separate 877th Air Force Unit. In the face of the Marine advance, Colonel Han Choi Han, commander of the 107th had fled across the Han River, leaving the remnants of his regiment to an obvious fate. Major Kung Chan So, leader of the 877th AF Unit, was killed in action on 17 September. Of the 400 men originally assigned to this organization, only five remained in combat by 18 September.

Crowded into undesirable terrain between the airfield and the Han River, the Red troops were demoralized and bewildered by the rapid advance of the 5th Marines. Only the fanaticism of a few officers and NCOs prevented the complete collapse that would have resulted from the lack of tangible assistance from the North Korean leaders in Seoul. And it was no boost to sagging morale that white clothing had been issued by the Supply Company, so that the Red soldiers could quickly change to the traditional Korean garb when defeat was imminent, and dissolve in the local populace.

In the counterattack against the airfield, which was designed to uproot a full-strength Marine battalion backed by tanks and other heavy fire support, the celebrated night tactics of the Communists fizzled completely. With only a few hundred men at most, the rest having slipped away to safer parts, the North Koreans further reduced their strength by trying to develop three widely separated attacks. That they launched these assaults with only rifles and submachine guns serves to make the story more incredible.

The first move was in company strength against Lieutenant Deptula’s isolated platoon outpost in Soryu-li, far to the north of Easy Company lines. Deployed on both sides of a road junction in the village, the Marines heard the enemy column approaching about 0300. Deptula held fire until the Red vanguard marched into the center of his position. Sergeant Richard L. Martson then jumped to his feet, bellowed “United States Marines!” and opened up with his carbine on full automatic. A sheet of rifle and BAR fire poured into the column from the roadsides, and a dozen North Koreans went down in a heap. The remainder fled.
The Communist commander rallied his soldiers for three more thrusts against the Marine platoon. In between the attacks, his gravel-voiced exhortations ground the air. The will to fight was lacking, however, and each time, the attackers barely brushed the Marine position before darting back into the night.

A T-34 tank was finally brought up to buttress another North Korean assault. Without AT weapons to stop the armored vehicle rumbling down the road toward his platoon, Deptula retracted southward in the direction of 2/5’s main positions. The outpost had suffered only one KIA and one WIA in blunting the four attacks. It was not pursued during the withdrawal.

Deptula’s platoon gained Company E’s lines at 0500, just before the perimeter received enemy small-arms fire from the west. Captain Jaskilka, supposing it to be coming inadvertently from Dog Company, forbade his men to reply. He stood up and yelled, “Hey! Cease fire, you guys, this is Easy Company!” Fortunately, the enemy’s aim must have been disturbed by the spectacle of a Marine officer giving orders, for Jaskilka escaped without a scratch after discovering his mistake. This enemy force proved to number about two squads, and just at that moment the main NKPA force hit from the east. Easy Company was thus engaged on two fronts, with Jones’ recoilless gun platoon taking on the attack from the west while the 2d Platoon bore the brunt of the assault from the east.[33]

Click here to view map

The 2d Battalion’s southernmost position, manned by Company F, had been active throughout the night. Lieutenant Harrell’s assault platoon together with Richards’ engineer outfit was entrenched around an overpass within the southeastern arc of the company perimeter. In the first hours of 18 September, a North Korean lieutenant and his five-man demolition team tried to reach the bridge in an apparent attempt to destroy it. Sergeant Ray D. Kearl opposed the intruders single-handedly, killing the Red officer and three of his men, and driving the remaining pair back into the night. Before daybreak, another enemy patrol approached on the road and was annihilated.

It proved that these and other scattered incidents were the prelude to the third and final attack against the airfield, which was launched from the south at dawn. This last maneuver by the Reds, however, was checked even before it began, for the 1st Battalion, 5th Marines, spotted the attackers moving across its front toward Kimpo. Baker Company took the North Koreans under fire immediately, and the battalion commander called down heavy mortar and artillery concentrations.

Most of the Communist column was disorganized and dispersed before it could reach 2/5’s southern defenses. The lone platoon that did connect with Company F’s perimeter engaged the Marines at the overpass. Harrell’s troops and the engineers poured small-arms fire and white phosphorus rockets into the attackers. Staff Sergeant Robert J. Kikta, defying enemy bullets as he moved among his men shouting encouragement, fell mortally wounded. Sergeant David R. DeArmond, normally a bulldozer operator for A/Engineers, was killed behind his machine gun.

After the short, bitter clash, the surviving North Koreans retreated through the rice paddies and hills leading to the Han River. Companies E and F, supported by A/Tanks, fanned out from their perimeters and mopped up. In 1/5’s zone, Lieutenant Colonel Newton committed Charlie Company against the withdrawing enemy and inflicted more casualties.

Kimpo and the surrounding villages were secured by 1000, 18 September. Half an hour later, Lieutenant Colonel Roise ordered Company D, supported by tanks, recoilless rifles, and heavy machine guns, to seize Regimental Objective Dog—Hill 131, which dominated the banks of the Han River north of the airfield. Advancing under cover of naval gunfire, the Marines occupied the high ground unopposed at 1145.[34]

In the 24 hours since leaving Ascom City, the 2d Battalion, 5th Marines, had suffered four KIA and 19 WIA in driving over nine miles of hills and rice paddies.[35] The rapid advance cost the North Koreans 100 dead in 2/5’s zone, ten prisoners, and one of the finest airdromes in the Far East.
The Inchon-Seoul Operation

Chapter 9. Marine Air Support

AT 1000 ON the morning of 18 September an HO3S–1 helicopter became the first American aircraft to land on Kimpo Airfield since June. Mopping up operations had scarcely been completed, following the enemy counterattack, when Captain Victor A. Armstrong of VMO–6 made a vertical approach with General Shepherd and Colonel Krulak as passengers. They were greeted by General Craig, the ADC, who had just arrived in a jeep. The field was in surprisingly good shape, considering the fighting it had seen within the last few hours. As evidence that the enemy had been surprised, one Russian-built fighter of the Yak III type and two Stormovik type aircraft were found “relatively undamaged” and turned over to Air Force Intelligence.\[1\] Several other Yaks and Stormoviks had been destroyed by the enemy.

On the return trip, Armstrong was requested by his passengers to fly them across the Han for a preview of the outskirts of Seoul. Except for scattered small-arms fire, the helicopter was allowed to proceed without being molested by the enemy. There were few signs of extensive NKPA preparations to be seen at this time.\[2\]
The Inchon-Seoul Operation

Chapter 9. Marine Air Support  
Helicopters and OYs in Support

VMO–6, the composite observation squadron commanded by Major Vincent J. Gottschalk, had already made a name for itself in the Pusan Perimeter actions. Consisting of eight HO3S–1 helicopters and an equal number of OY planes, this former Brigade unit came under the operational control of the 1st Marine Division and the administrative and logistical control of MAG–33. During the Inchon assault, VMO–6 was based on SCAJAP LST QO79 in the harbor except for an Oy attached to each of the two CVEs.

The first of a long sequence of helicopter rescue missions during the Inchon-Seoul operation took place on D-plus 1 when First Lieutenant Max N. Nebergall picked up a Navy pilot who had ditched in Inchon harbor. Flights carried out by other aircraft were reported as three reconnaissance, two artillery spot, three beach reconnaissance, and one utility.[3]

VMO–6 displaced ashore the next day to an airstrip improvised near the Division CP by the Marine engineers. This was the beginning of liaison, utility, reconnaissance, evacuation, and rescue flights on a dawn-to-dark basis.

Division air and naval gunfire representatives of the Fire Support Coordination Center followed VMO–6 ashore on the 16th. During the planning phase they had worked with their opposite numbers of PhibGru One and with the 11th Marines after the Division landed at Kobe. Although some of the officers and men embarked for Inchon in the Mount McKinley, the materiel and 90 percent of the personnel arrived in the President Jackson. At 1400 on D-plus 2 the FSCC became operational after all elements and their equipment reported to the Division CP. Responsibility for the coordination of supporting arms ashore was assumed at 0630 on 16 September for air, at 1500 on the 17th for artillery, and at 1800 on the 18th for naval gunfire.[4]

The rapid advance of Marine ground forces during the first three days meant that Major Robert L. Schreier’s 1st Signal Battalion had a job on its hands. The main body reached the objective area on board the President Jackson, and the first units ashore were the battalion and regimental ANGLICO teams, most of which had embarked in LSTs. When the ADC group displaced from Wolmi-do to Inchon, radio facilities were maintained without a hitch.

Radio and message center facilities met all requirements during the night of 16–17 September. Teletype (through radio carrier) was initiated between the Division CP and Corps, afloat on the Mount McKinley. And by the morning of D-plus 2, such progress had been made that wire communication was established not only with both advancing infantry regiments but also with most of the battalions.[5]

Enemy resistance was so ineffectual from 16 to 18 September that the Marine infantry regiments were able to advance without much flank protection. The three battalions of the 11th Marines did more displacing than firing in their efforts to keep pace, and men and vehicles of the Signal Battalion were kept busy at laying wire.

Security was provided for the left, or northern, Division flank by the attack of the KMC Regiment (less the 2d Battalion, left behind for police duties in Inchon) under the control of the 5th Marines. Attached to the regiment for possible use in calling down naval gunfire were two Shore Fire Control Parties. Objectives on Corps Phase Line CC were reached without much difficulty after the initial KMC setbacks described in the previous chapter.[6]
There had been little or no urgent need for close air support until 18 September, when RCT–1 met stubborn opposition in the Sosa area. Thus the capture of Kimpo in comparatively good condition was a timely boon, since it meant that land-based Marine tactical air support could be initiated as soon as Captain George W. King’s Able Company Engineers made the field operative with temporary repairs.

This was the conclusion of Generals Harris and Cushman, commanding the 1st MAW and TAC X Corps, when they visited Kimpo by helicopter on the afternoon of the 18th. They advised CG X Corps accordingly, and that evening he ordered the deployment of MAG–33 to the captured airfield with its headquarters and service squadrons.

The tactical squadrons figured in an administrative switch that has sometimes puzzled chroniclers of Marine air operations. By order of General Harris, the following reassignments were directed to take effect on 21 September 1950:

From MAG–33 to MAG-12—VMF–214, VMF–323, and VMF (N)–513;

From MAG–12 to MAG-33—VMF–212, VMF–312, and VMF (N)–542.[7]

Both MGCIS–1 and MTACS–2 were already ashore at Inchon under the operational control of the 1st Marine Division. Aircraft and flight echelons of the tactical squadrons were to be flown to Kimpo on the 19th from Itazuke and Itami airfields in Japan, with the remaining elements following by surface shipping. Thus MAG–33 would consist of these units:

HqSq-33: 74 officers, 177 enlisted, 251 total
SMS-33: 29 officers, 538 enlisted, 567 total
VMF-212: 32 officers, 154 enlisted, 186 total
VMF-312: 53 officers, 221 enlisted, 274 total
VMF(N)-542: 54 officers, 291 enlisted, 345 total
MTACS-2: 34 officers, 190 enlisted, 224 total
MGCIS-1: 19 officers, 185 enlisted, 204 total
TOTAL: 295 officers, 1,756 enlisted, 2,051 total[8]

VMFs–214 and 323 would continue to operate from the carriers Sicily and Badoeng Strait, with the night-fighters, VMF(N)–513 being based as usual at Itazuke AFB in Japan. The only difference was that a scratch of the pen had transferred these units from MAG–33 to MAG–12. It was their responsibility to support the advancing ground forces during the critical period while the other three tactical squadrons were making the move from Japan to Kimpo.

Control of tactical air support had passed from the TADC on the Mount McKinley to the Air Support Section of MTACS–2 on D-plus 2, after the Landing Force Commander signified his readiness to assume it. Calls for close air support were increasing as the enemy recovered from the first shock of invasion. On the 18th and 19th, the three fighter squadrons of MAG–12 flew a total of nearly 50 close support sorties controlled by the Air Support Section of MTACS–2. Napalm, 20mm ammunition, rockets, and 500-pound bombs were used to blast NKPA troop concentrations in the zone of the 1st Marines.[9]

Logistical as well as tactical and administrative problems had to be solved. During the planning phase, it may be recalled, Colonel Kenneth H. Weir (C/S TAC X corps) had learned that X corps would not have enough trucks to support air operations at Kimpo by transporting aviation gasoline and aircraft munitions from Inchon. As
a solution, arrangements were made to accept the offer of FEAF Combat Cargo Command to provide logistical support; and these totals in tonnage were flown in from Japan during the first week:

18 Sep.: 16 tons ammo, 8 tons avgas, 0 tons oil
19 Sep.: 73 tons ammo, 28 tons avgas, 5 tons oil
20 Sep.: 151 tons ammo, 86 tons avgas, 0 tons oil
21 Sep.: 219 tons ammo, 88 tons avgas, 11 tons oil
22 Sep.: 268 tons ammo, 153 tons avgas, 5 tons oil
23 Sep.: 139 tons ammo, 80 tons avgas, 0 tons oil
24 Sep.: 118 tons ammo, 81 tons avgas, 16 tons oil

This proved to be the largest total for a single week during the Inchon-Seoul operation. In addition, about 1,025 tons of POL and 425 tons of ammunition were trucked from Inchon to Kimpo during the entire period, and the forward echelon of VMR–152 flew in spare parts and items of urgently needed equipment.

Headquarters of the 1st MAW remained at Itami AFB in Japan, though General Harris made frequent trips to Kimpo. The chief task of the Wing during the Kimpo air operations was furnishing administrative and logistical support to TAC X Corps and MAG–33.

TAC X Corps set up its headquarters at Kimpo Airfield on 19 September, followed by MTACS–2, MGCIS–1, and VMO–6. The first fighter squadron of MAG–33 to arrive at the new base was VMF(N)–542. Lieutenant Colonel Max J. Volcansek, Jr., the commanding officer, and five pilots landed their F7F-3Ns at 1830 on the 19th after a flight from Itami AFB. This was the baptism of fire for a majority of the squadron’s pilots. Numbering 54 officers and 274 enlisted men when it left El Toro, VMF(N)–542 had only 20 trained night fighter pilots. The remainder were volunteer reservists qualified by “a good experience level and a desire to become night fighters.”

The squadron claimed the distinction of flying the first Marine combat mission from Kimpo at 0735 on the 20th when four of the F7F–3N aircraft destroyed two enemy locomotives after expending some 3,000 rounds of 20mm ammunition. The Corsairs of Lieutenant Colonel Richard W. Wyczawski’s VMF–212 and two aircraft of Lieutenant Colonel J. Frank Cole’s VMF–312 also landed at Kimpo on the 19th and got into action the following day. Conditions were primitive at the outset. In the lack of refueling facilities, the first strikes had to be flown on fuel remaining in the aircraft, and bombs were loaded by hand.

It had been an achievement to have two tactical squadrons of MAG–33 in action less than 48 hours after the reconnaissance landing by Generals Harris and Cushman. This accomplishment owed a great deal to the care shown by the 5th Marines to keep damage at a minimum. Lieutenant General George E. Stratemeyer, CG FEAF, expressed his appreciation of this factor in a letter to General Smith:

“I want to take this opportunity of expressing my admiration and gratification for the manner in which elements of your Division recently captured Kimpo Airfield and so secured it as to make it available for use by Far East Air Forces and Marine Corps aircraft in the shortest possible time.”
General MacArthur had intended the Eighth Army to be the hammer and X Corps the anvil of a great joint operation. During the first few days, however, it sometimes appeared as if these roles were reversed. On 18 September, after a penetration of 16 miles on the X Corps front, the attacking forces in the Pusan Perimeter had just begun to inch ahead against desperate NKPA resistance. In some sectors, indeed, the enemy not only put up a stubborn defense but counterattacked vigorously.

The Eighth Army now consisted of the U.S. I Corps (IX Corps did not become operational until 23 September) and the ROK I and II Corps. General Walker’s command was already on the way to becoming the most cosmopolitan army in which Americans have ever served. Contingents of British ground forces had reached the front; and before the end of the year, 40 countries of the United Nations would have offered assistance, either military or economic, to the fight against Communism.

Most of this aid had not yet materialized on 16 September, but the Eighth Army had overcome its disadvantage in numbers of trained troops, thanks to NKPA losses, when it jumped off all along the line in southeast Korea. In the north the 1st Cavalry Division, 24th Infantry Division, ROK 1st Division, and British 27th Brigade launched a determined attack along the Taegu-Waegwon axis to win a bridgehead across the Naktong. It was nip-and-tuck for the first three days, and not until the 19th did the UN forces fight their way across the river against the last-ditch opposition of the 1st, 3rd, 10th, and 13th NKPA Divisions.[14]

Still farther north, the enemy relinquished little ground until the 18th. On that date the ROK 3rd Division recaptured the east coast port of Pohang-dong, which the invaders had taken in their drive during the first week of September.

In the south, the U.S. 2nd and 25th Infantry Divisions and attached ROK units were held up for three days by the NKPA 6th and 7th Divisions. The deadlock lasted until 19 September, when the enemy fell back in the Masan area along the southern coast.[15]

Major Joseph H. Reinburg’s VMF(N)–513, operating out of its Itazuke base, played a conspicuous role in the first days of Walker’s offensive. Although specialists in night-fighting, the Marine pilots flew 15 daylight close support missions for Army units from 17 to 19 September. Enemy troops, tanks, vehicles, and artillery were scored during every strike, as the planes ranged the entire extent of the Pusan Perimeter.[16]
So much progress had been made by this date on the X Corps front that General Smith displaced the 1st Marine Division CP from the eastern outskirts of Inchon to Oeoso-ri, about a mile and a half southeast of Kimpo Airfield. This forward location was selected by General Craig with a view to preliminary Division planning for the crossing of the Han, which would entail a reshuffling of units.

Oeoso-ri having been an American housing area during the post-World War II occupation, duplex houses and Quonset huts were available. General Smith arrived by helicopter on the afternoon of the 19th, and the new CP opened at 1645. During the next few days the area was treated to intermittent artillery fire, apparently from a single well-hidden gun somewhere in the Seoul area. It was an embarrassment to Marine artillery officers, who were never able to locate the offending weapon, but no great harm was done.

By this time General Smith could look forward to the arrival of more units at the front. On D-day the strength of X Corps on paper had been 69,450 ground force troops. In addition to the 1st Marine Division and 7th Infantry Division, there were such major units as the 93d and 96th Field Artillery Battalions, the 73d Tank Battalion, 56th Amphibian Tank and Tractor Battalion, the 2d Engineer Combat Group. In GHQ UNC Reserve were the 3d Infantry Division and the 187th Airborne RCT.\[17\]

The 3d Division had not sailed for the Far East in time to take part in the Inchon-Seoul operation. The 187th Airborne RCT, due to land at Inchon on 23 September, had been the answer to General MacArthur’s requests in July for paratroops to land behind the enemy’s lines in conjunction with the amphibious assault planned as Operation BLUEHEARTS. Although the Joint Chiefs of Staff decided against flying an airborne RCT to Japan at the time, the 11th Airborne Division was later directed to organize and train such a unit for service in the Far East. On account of the large proportion of new troops filling out a skeleton unit, General Collins stipulated that the 187th was not to be committed for an airdrop before 29 September. It was decided, therefore, that the RCT would be given an initial mission of protecting the left flank of the 1st Marine Division.
Chapter 9. Marine Air Support
Advance of RCT-1 to Sosa

Preliminary planning for the crossing of the river Han began as soon as the Division staff settled down in the new CP. The reshuffling of various units had to wait, however, until both Marine regiments took their assigned objectives of 18 and 19 September. Throughout the 17th, while Murray’s regiment drove northeastward toward Kimpo, the 1st Marines had continued the attack from Ascom City along the Inchon-Seoul Highway. As mentioned previously, Monegan’s rocket launcher and the 75mm recoilless rifles, emplaced in 2/1’s positions on Hill 186, helped smash the North Korean tank-infantry column at dawn. It appeared that a second enemy force was supposed to have closed on Marine lines by taking a parallel course through the hills south of the highway. The Red infantry, in about company strength, was spotted moving along the high ground toward Company D’s front on Hill 186. Fox Company dispersed the column with mortar fire and then notified Dog to be on the alert. [18]

Though the North Koreans were stopped cold, they did not flee with the usual rapidity. Their base of operations seemed to be Hill 208, a land mass that began near Mahang-ri on the highway and spread southward across most of the 2d Battalion front. Lieutenant Colonel Sutter’s attack plan committed Easy Company on the left of the road, Fox on the right, and Dog in the high ground to the south. No sooner had the companies jumped off than they became involved in scattered, stubborn fighting with Red soldiers on and around Hill 208. [19]

Howitzers of the 11th Marines raked the high ground ahead of the attackers, and Sutter’s troops measured off slow but steady progress. In the low ground bordering the highway, enemy troops had taken cover in the fields on both sides of a road block about 500 yards from Mahang-ri. Second Lieutenant Robert C. Hanlon’s 2d Platoon of Easy Company was pinned down by fire from three sides. Second Lieutenants Johnny L. Carter and George E. McAlee started forward with reinforcements, but McAlee was wounded by several bullets. After summoning a corpsman, Carter got through to Hanlon, and they called for 3.5-inch rockets and 75mm recoilless fire on huts sheltering enemy soldiers. The two officers then led an advance which took the platoon to a small hill on the right of the road block, where the other two platoons moved up abreast. About 20 NKPA troops were estimated to have been killed. [20]

At noon, Companies F and D had secured Hill 208 overlooking the FBHL, but it remained for E to break into Mahang-ri on the highway. By this time 3/1 had entered the fight with an armored column. Company G, led by First Lieutenant Robert L. Gover’s 1st Platoon of Baker Company Tanks, punched down the road in an attempt to pierce the screen of Red resistance with the rest of 3/1 in column close behind. The M–26 crews spotted an 85mm gun protruding from a thatched hut and destroyed the camouflaged T–34 before it could fire a shot. An infantry platoon riding the Marine tanks was forced to dismount at Mahang-ri and deploy, while the armor fired from the road at numerous targets of opportunity. The village was finally secured shortly before 1600, and small bands of enemy were seen darting eastward to take up new positions along the highway. [21]

The advance to Mahang-ri and the FBHL had carried the 1st Marines 3,000 yards from its starting point at Ascom City. As the attack continued late in the afternoon, the next objective was Corps Phase Line CC, whose boundaries were defined in the previous chapter. Midway between Mahang-ri and the phase line was the town of Sosa, and it was from this locale that North Korean soldiers were pouring westward to delay the Marine advance on the highway.

Since the 5th Marines had veered to the northeast to attack Kimpo, its boundary with the 1st had moved
well to the left of the highway. Henceforth, Puller’s regiment would have to go it alone on the main road. This was the case as the 2d and 3d Battalions butted against enemy delaying forces between Ascom City and Mahang-ri, and the isolation became more pronounced as they attacked toward Sosa late on the 17th.

Sutter’s unit advanced on the left of the highway with Companies E and F in assault. George Company of 3/1, transported in LVTs and followed by the rest of the battalion, moved along the road behind the 2d Platoon, Baker Company Tanks. There is a defile halfway between Mahang-ri and Sosa, and at this spot the North Koreans chose to make a determined stand. Second Lieutenant Bryan J. Cummings nosed his lead M–26 into the pass, while infantry moved to the shoulders on either side against light opposition. Suddenly the troops and lone tank were hit from the front by a heavy volume of small-arms, anti-tank, and mortar fire. [22]

The Marine infantry was thrown back by the intensity of the outburst, the most severe they had yet encountered. As luck would have it, the engine of Cummings’ tank went dead at this inopportune moment, and the big vehicle stalled. Remembering that infantry had been riding on top of his M–26, the platoon leader opened the hatch to make a quick check. He yanked a lone rifleman inside and buttoned up just as Red soldiers scrambled down the embankment.

Fumes from the 90mm gun choked the Marines in the vehicle as they listened to the clamor of North Koreans on the hull. The infantryman who had been pulled to safety by Cummings suddenly went berserk and had to be knocked out. Then the officer was forced to choose between two evils: either his crew must succumb to the acrid fumes or take its chances on opening the pistol port for ventilation. He opened the port. A grenade bounced inside, and the ear-shattering explosion within the steel enclosure wounded Cummings, the rifleman, and one of the tank gunners. At this moment the semi-conscious Marines resigned themselves to the worst. [23]

Help was on the way, however, and it was timed to the split second. Just as the grenade exploded, Sergeant Marion C. Altalère’s M–26 moved to the mouth of the defile and “scratched the back” of the beleaguered vehicle with bow machine-gun fire. Riddled Red soldiers were swept from the top of Cummings’ tank and piled up alongside. Within a few minutes, a VMF–214 flight appeared over the pass, and the planes peeled off to bomb, rocket, and strafe the high ground. [24]

As the tide of battle swept past, Cummings and his men opened the hatch, coughing and choking, and drank in long breaths of fresh air. It took them a moment to realize that they were back again in the land of the living after one of the closest calls that Marines have ever experienced.

Company G of 3/1 fought back on the right of the MSR and gained the high ground above the pass. Simultaneously, Staff Sergeant Arthur J. MacDonald led the second section of Cummings’ tank platoon into the defile, and the M–26s laid down heavy 90mm and machine-gun fire on the crescent of North Korean emplacements ahead. A total of six enemy AT guns was destroyed, but not before the weapons had knocked a track off Cummings’ vehicle and damaged two others to a lesser extent. [25]

The 2d Battalion drove to the top of the high ground on the left of the road, and the Marines enjoyed a small-scale “turkey shoot” as the North Koreans pulled out and pelted toward Sosa. While the assault units consolidated their holdings, the remainder of the 2d and 3d Battalions moved into the area around the defile and dug in for the night.

The 1st Marines’ attack along the highway had netted 4,800 yards. Despite repeated clashes in the course of the day, 2/1 lost only one killed and 28 wounded, and Company G of the 3d Battalion suffered six WIA. Enemy losses included 250 killed and wounded, 70 prisoners, one T–34 tank, several AT guns, and large quantities of small arms and ammunition. [26]

Action on the Division’s southern flank involved little more than hill climbing and foot races for the 1st Battalion, 1st Marines, and the Division Reconnaissance Company. After jumping off in the morning of D-plus 2, Lieutenant Colonel Hawkins’ infantry fanned out through a maze of twisting valleys and ridges. The battalion encountered only light resistance, which invariably evaporated under pressure, and by dark the assault elements
had gained 4,000 yards. Hawkins then deployed his troops for night defense on the high ground south of 3/1’s positions overlooking the highway defile.[27]

On the right of the 1st Battalion, Captain Houghton’s Reconnaissance Company reached the tip of the Namdong Peninsula. The Recon troops spent two days, the 17th and 18th, patrolling this spacious tactical vacuum. A number of dispirited prisoners were collected and caches of arms and munitions uncovered. One of the more significant discoveries was a small arsenal in which Russian-type wooden box mines were being manufactured and stored in quantity. First encountered by Able Company engineers in the Pusan Perimeter, these crude but effective explosives would become serious obstacles to the Marine advance in the days ahead.[28]

The night of 17–18 September passed quietly for the 1st Marines. During the hours of darkness, Ridge requested intermittent naval gunfire to interdict Sosa and Hill 123, where he believed enemy defenses to be located. Jump-off fires were also planned for the morning in addition to air strikes. Captain P. W. Brock’s HMS *Kenya* poured in more than 300 6-inch rounds with good results. “Our Royal Navy ally not only supported the battalion to the maximum of its naval gunfire desires,” said Ridge, “but volunteered to render more than was requested.”[29]

Shortly after first light on D-plus 3, the 2d Battalion attacked along the highway with Easy Company on the left of the road and Dog on the right. Premature air bursts from an artillery preparation resulted in two KIA and three WIA among the troops of Company E.[30]

Ridge’s 3d Battalion boarded a column of LVTs, DUKWs, and jeeps, then rumbled down the highway through 2/1’s assault companies. In striking contrast to the previous day’s advance, there was a conspicuous absence of NKPA infantry along the way. The Marines brushed aside light opposition, including an antitank roadblock at Sosa’s outskirts, and captured the town at noon. Covered by Baker Company Tanks, 2/1 moved into defensive positions on the right side of the railroad about a mile beyond the built-up area, and the 3d Battalion deployed on Hill 123 just across the tracks.[31]

On the Division’s right, 1/1 gained another 4,000 yards in the course of 18 September. In its third consecutive day of attack, the battalion had yet to encounter anything more formidable than steep hills and vapid enemy bands. Hawkins built his night defenses along a mountainous two-mile front south of 2/1’s position overlooking the highway.

Chapter 9. Marine Air Support

Reports of Enemy Build-up

There was little activity in the 5th Marines’ zone of action during the 1st Regiment’s drive on Sosa. After helping 2/5 smash the dawn counterattack at Kimpo, Company C, 1st Battalion, attacked Objective Fox under cover of an artillery preparation. Lieutenant Pedersen’s unit seized the high ground against light opposition at 0930, while the remainder of 1/5 remained entrenched at Objective Easy, captured the previous day.[32]

Murray’s CP displaced to Kimpo at 1245 on the 18th, and the regiment spent the rest of the day patrolling from its positions which ringed the airfield. On the 5th Marines’ left, the 3d Battalion of the KMC was joined by 1/KMC in searching out the base of the Kumpo Peninsula. A new security force was added to the Division sector when the 17th ROK Regiment landed at Inchon and fanned out to comb the troublesome area between Ascom City and the sea.[33]

The General Situation Map gives the disposition of friendly and suspected enemy elements as of late afternoon on 18 September. This date is particularly important in that the Marine division, regimental, and battalion headquarters were swamped by a torrent of intelligence which indicated for the first time the future patterns of organized NKPA resistance.

Beginning on the left of the broad arc of the 1st Marine Division’s front, repeated reports told of enemy concentrations north and south of the Han River in the area of the Kumpo Peninsula.[34] Upwards of 1,000 troops were sighted by natives and air observers, and it was believed that the North Koreans were organizing for an attempt against Kimpo. A strike by four Navy Skyraiders caught part of the Red force exposed on both banks of the Han northeast of the airfield. After killing an estimated 50 of the enemy and dispersing the remainder, the Navy pilots reported the area “still active.”

Marine Air in turn warned of a build-up of Communist troops and equipment in the vicinity of Haengju and Hill 125, directly across the Han from 2/5’s position north of Kimpo. East of the airfield, the enemy was withdrawing from the 5th Marines’ zone toward Yong dungpo, using the Hill 118 area as an intermediate rallying point. Moreover, interrogation of two NKPA officers captured near Kimpo disclosed that a Communist regiment was already committed to the defense of Yongdungpo. Since this large industrial suburb of Seoul rambled across the 1st Marines’ path to the Han, Colonel Puller knew well in advance that trouble lay ahead of his regiment.

Further evidence that storm clouds were gathering over the highway came from a number of sources in Sosa. Informants were almost unanimous in their predictions that the approaches to Yongdungpo would be sown liberally with land mines.

VMF–214, which provided effective close air support for the 1st Marines’ attack through Sosa, reported destroying huge enemy stock-piles hidden in and around buildings on the sand spit between Yongdungpo and Seoul. The squadron also sighted six enemy tanks far beyond Marine lines and killed two of them with direct napalm hits. Its sister unit, VMF–323, likewise scoured the Division front and radioed similar findings to Tactical Air Control.

Other reports from scattered sources placed approximately 3,000 North Koreans in Seoul— with more on the way. Air spotters noted heavy traffic south from the 38th Parallel and north from the Suwon area. Tanks, troops, and vehicles from the latter not only were heading for the capital but also were veering off toward Yongdungpo and the Division right flank.

Thus, the Marines faced the possibility of major interference from: (1) the Kumpo Peninsula; (2) the Haengju locale on the north bank of the Han; (3) the area around Hill 118 between Kimpo Airfield and
Strange enough for an enemy who was at his best with the artful dodge, only the two flank threats failed to measure up to expectations.

The North Koreans gave a preview of the changing picture on the afternoon of 18 September when, at 1415, the first shells of a sustained mortar barrage crashed into 3/1’s positions on Hill 123. During the next hour, 120mm eruptions traced accurate paths back and forth along the ridge, and 30 Marines were cut down by the whirring fragments. Moving through the explosions with near-miraculous immunity, the 3d Battalion’s senior medical officer, Lieutenant Robert J. Fleischaker, (MC) USN, remained fully exposed to the barrage while administering to the wounded. “He never thought of his own safety when men needed his services,” commented Lieutenant Colonel Ridge.[35]

South of the highway, enemy gunners ranged in on 2/1’s lines at 1800, adding 14 more Marines to the casualty rolls. Lieutenant Colonel Sutter and his S–3, Captain Gildo S. Codispoti, narrowly escaped injury when two mortar rounds hit the battalion CP. The explosions wounded Captain Albert L. Williams, commander of Company E, and Warrant Officer Bartley D. Kent, the battalion supply officer.[36]
Late in the afternoon of the 18th, both Corps and Division issued orders within a period of two hours for crossing the Han. In OpnO 6-50, the Commanding General of the 1st Marine Division directed RCT–5 to seize crossing sites along the south bank the next day and be prepared to cross on order while RCT–1 continued its attack along the highway toward Yongdungpo.

Much more territory was taken in by X Corps Operational Instructions No. 1, which ordered the 1st Marine Division to reconnoiter the river on the 19th and cross the next day. Then, after enveloping enemy positions on the north bank in the vicinity of Seoul, the Marines were to seize and secure both the city and the high ground to the north.

Since the Corps did not concern itself much with ways and means, General Smith asked for a conference at 0930 the next morning with General Almond. He informed the X Corps commander that he and his staff had already given considerable thought to the question of a crossing site. A preliminary Marine study had disclosed that three abandoned ferry crossings met military requirements: one downstream from Kimpo Airfield; one at Yongdungpo in the zone of the 1st Marines; and one opposite Kimpo near the village of Haengju. The first was too far from Seoul, and the second too near; but the Haengju site seemed to satisfy all conditions, subject to General Craig’s verification by helicopter reconnaissance.[37]

Next to be discussed was the problem of bridging material. The X Corps engineer officer, Lieutenant Colonel Edward L. Rowny, reported that Corps had no material other than that brought by the 1st Engineer Battalion of the Marines. Fortunately, that unit’s commanding officer, Lieutenant Colonel Partridge, was prepared to meet the emergency. Although he did not have enough floating bridge material to span such a wide stream, he reported to General Smith that he could have one 50-ton raft in operation to support the assault of troops crossing in LVTs, and another shortly afterwards. These rafts would take the tanks and vehicles across, and Partridge added that later his engineers might be able to put together an actual bridge by combining floating and Bailey components.[38]

The two Marine regiments had been in effect the infantry of X Corps up to this time. But Almond promised the Marine general that the 32d Infantry of the 7th Infantry Division would be moved up on the right flank of RCT-1. This Army unit, it may be recalled, had made an administrative landing at Inchon on the 18th and gone into an assembly area under 1st Marine Division control. The other two regiments of the 7th Division were the 31st Infantry, due to arrive on the 20th, and the 17th Infantry, still attached to the Eighth Army.

The X Corps commander lost no time at ordering the 32d to move up on the right, after reverting to the control of the 7th Division, to relieve the 1st Battalion, 1st Marines. This was the first of a series of maneuvers carried out on the 19th in preparation for the river crossing. On the left, the 2d Battalion of the KMCs advanced against negligible opposition to occupy the high ground south of the Han and provide flank protection for the crossing.

A more intricate maneuver was carried out when 1st Battalion of the 5th Marines was relieved west of Yongdungpo by its opposite of RCT–1, which had sideslipped to the left after the 32d Infantry moved up in protection of the regiment’s right flank. This shift was not accomplished without some fighting, the account of which belongs in a forthcoming chapter dealing with the battle for Yongdungpo.

Another preliminary step was taken on the 19th when the 1st Amphibian Tractor Battalion was relieved of its mission of supporting the 1st Marines. All LVTs were withdrawn as the unit displaced by motor march to...
the vicinity of Kimpo Airfield, a distance of about 18 miles.[39]

The 1st Shore Party Battalion was also concerned in planning for the river crossing. On the 19th this unit reverted to Division control and displaced to the vicinity of Oeso-ri. Meanwhile, a reconnaissance detail reported to the CP of the 5th Marines with a mission of selecting DUKW, LVT, and ferry sites. The shore party battalion was also to have the responsibility of establishing evacuation stations and supply dumps on both banks after the crossing while exerting LVT and DUKW traffic control.[40]

Except for the 1st Battalion, the 5th Marines had no trouble on the 19th while advancing to its assigned positions on the south bank of the Han. All objectives were occupied against little or no opposition, placing the regiment in position for the crossing.
The CP OF the 5th Marines had a holiday atmosphere during the afternoon of 19 September. An already large group of newspaper and magazine correspondents had been reinforced by new arrivals flown in from Tokyo to report the crossing of the Han. The gathering might have been mistaken for a journalistic convention, and Lieutenant Colonel Murray and his regimental planners could scarcely make themselves heard. Finally it became necessary to request the gentlemen of the press to leave, so that the battalion and company commanders could be summoned for briefing and orders.

The CP was located in a basement room of the Kimpo Airfield administration building. Coleman lanterns lighted the scene as Murray gave a brief talk to his officers, seated about him on boxes and bedrolls. There had been little time for planning, said the regimental commander, but he was confident of success. General Craig, who made a helicopter reconnaissance of the river and roads leading to Seoul, had recommended the old ferry crossing to Haengju. The river was about 400 yards wide at this site, which was about a mile from the Kaesong-Seoul railroad and main highway to Seoul. Hill 125, as the principal terrain feature, was an isolated knob rising nearly 500 feet and located on the right of the landing point. To the left was the village of Haengju, bordered by dikes and rice paddies.

Regimental planning, said Murray, had been conducted in compliance with 1st MarDiv OpnO 7-50, issued at 1430 that afternoon. The 5th Marines was directed to cross the Han in the vicinity of Haengju, seize Hill 125 and advance southeast along the railroad to the high ground dominating the Seoul highway. The units attached for the operation were the 2d Battalion, KMC Regiment, the Division Reconnaissance Company, Company A of the 1st Tank Battalion, and Company A of the 56th Amphibian Tractor Battalion, USA. In addition, the 11th Marines had been directed to give priority in artillery fires to the 5th Marines, while the 1st Engineer Battalion, 1st Shore Party Battalion and 1st Amphibian Tractor Battalion were in direct support.
Major William C. Esterline, the S–2 of the 5th Marines admitted that intelligence as to conditions on the north bank left much to be desired. He mentioned the reports of an enemy build-up on the other side of the river, and he added that a POW had told of enemy mining activities along the road to Haengju. But in spite of these warning notes, his listeners got the impression that 5th Marines’ planning was based on assumptions of light resistance.

Major Charles H. Brush, Jr., the S–3, announced the hastily formulated regimental plan. Houghton’s Recon Company was to lead the advance by sending a swimming team across shortly after nightfall. If the swimmers found the other bank clear of the enemy, they were to signal for the rest of the men to follow in LVTs. Recon Company then had the mission of seizing a bridgehead consisting roughly of the triangle formed by Hills 95, 125, and 51. After securing these objectives, about 1,500 yards apart, Recon was to defend until Taplett’s 3d Battalion crossed at 0400, with Bohn’s and McMullen’s companies in assault and Wildman’s in reserve. While they passed through Recon and attacked toward Seoul, Roise’s 2d Battalion would follow in column two hours later, with Newton’s 1st Battalion remaining in reserve and crossing on order as the KMC battalion protected the regiment’s left flank. Tanks and vehicles would be ferried across on 50-ton floating bridge sections.[1]

No alternate plan was provided. After the briefing ended at 1700, Houghton and Lieutenant Colonel Lawrence C. Hays, Jr., executive officer of RCT–5, climbed a hill on the south bank and inspected the old ferry crossing and the opposite shore. They saw no enemy activity. Houghton was so optimistic that he asked permission to swim across at dusk but Murray denied the request.[2]

The swimming team consisted of Houghton, Second Lieutenant Dana M. Cashion, and ten enlisted men, accompanied by two Navy reserve officers, Lieutenant Horace Underwood and Ensign John Seigle. The first went along as interpreter, and the other as public information officer with a tape recorder. General Lowe had asked permission to cross in the LVTs; and when the Division commander refused, the 66-year old observer showed a card signed by President Truman, requesting that he be allowed to go anywhere. Even this passport did not sway General Smith, who decided that Lowe must wait to accompany the reserve battalion.[3]

It was a dark and moonless night when the swimmers trudged through the muddy grain fields to the river bank, carrying two small rubber boats in which to tow the arms and equipment. After checking the current and making allowances for drift, they stripped to their skivvies and slipped into the tepid water shortly after 2000. Only two or three sets of rubber fins were available, but speed was not expected of men using a slow breast stroke to avoid making noise or ripples. These precautions became all the more necessary after a Marine shell or aerial bomb set fire to a native house on the far bank and the flames cast a lurid glow over the water. Apparently the swimmers had not been observed when they scrambled ashore, dripping, about 2040. They encountered two Koreans at the water’s edge and overpowered them without much difficulty. Lieutenant Underwood questioned the captives in their native tongue and reported that they were escaping from Seoul.[4]

Houghton ordered Lieutenant Cashion and four enlisted men out on patrol duty with a mission of reconnoitering Hill 125 and the Haengju area. The Recon commander remained at the beach, where Gunnery Sergeant Ernest L. DeFazio and the other members of the swimming team guarded the prisoners and prowled the immediate area without encountering enemy. There were so few signs of NKPA activity that Houghton decided even before the return of Cashion’s patrol to give the signal for the rest of the company to cross. And it was when...
the LVTs revved up on the south bank, shattering the night’s stillness, that hell broke loose. [5]
The Inchon-Seoul Operation
Lynn Montross and Nicholas A. Canzona

Chapter 10. Crossing the Han
Marine LVTs Grounded in Mud

The men in the amtracs had the problem of advancing five miles by road from Kimpo to an embarkation site they had never seen, crossing a river in the darkness, and seizing three objectives on a basis of map reconnaissance. First Lieutenant Ralph B. Crossman, executive officer of Recon Company, had received oral orders without an overlay or an opportunity to take notes during the briefing at the Fifth Marines CP. His first message by SCR–300 from Houghton came about 2000, warning that the swimming team was taking to the water. This was the signal for the amtracs to start their road trip. They were on the way when Houghton prematurely radioed the familiar words:

“The Marines have landed and the situation is well in hand.”[6]

An hour later the Recon commander came in again with a message that no enemy had been encountered. He directed his executive officer to cross in LVTs with the three platoons of Recon Company and the attached platoon of Company A, 1st Engineer Battalion, which had a mission of mining road blocks after the objectives were secured.

Crossman acknowledged this message but replied that he could not reach the river bank for nearly an hour. He had assigned the three objectives to his platoon commanders, directing that they take their orders from Houghton upon reaching the other bank. SCR–300 communications were frequently blurred, however, or blasted off the air altogether by the more powerful radios of the tractors. Thus the possibilities for confusion were multiplied as the nine amtracs proceeded in column to the embarkation point, clanking and revving up thunderously in preparation for the crossing.[7]

The embarkation area was so cramped that Crossman had found it necessary to send the LVTs across the river in column, with First Lieutenant Francis R. Kraince’s 1st Platoon in the lead, followed by Second Lieutenant Philip D. Shutler’s 2d Platoon and the 3d commanded by Second Lieutenant Charles Puckett. Kraince was to seize Hill 125 while Shutler attacked Hill 51 and Puckett went up against Hill 95.

The three platoons were accompanied by a 4.2-inch mortar forward observer team, two 105mm FO teams from the 11th Marines, and a squad of engineers. Communications on the SCR–300 net were so badly jammed, however, that Houghton and Crossman were figuratively as well as literally in the dark on opposite sides of the river. Crossman’s final messages from Kraince and Shutler reported that four of their amtracs had drifted from the course and grounded in the mud. He ordered both officers to extricate themselves while Puckett, who had not yet left the south bank, covered them with fire. Just then DeFazio radioed that Houghton and his team were planning to swim to the LVTs. This was the last word from the north bank received by Crossman, who lost all radio contact afterwards with anyone except the 5th Marines.[9]

At the height of the pandemonium on the north bank, the two Korean prisoners attempted to escape. Both were killed by Marines of the swimming team.[10]

Houghton’s first thought had been to swim out and guide the LVTs to the north bank. But the enemy had
shown such unexpected resistance as to justify the withdrawal of the swimming team. The rubber boats and excess equipment were hidden along the shore and some of the weapons thrown in the river to prevent capture. Then the swimmers started their return trip through water churned by mortar shells, chiefly Marine 4.2-inch bursts falling short. One of these projectiles exploded so near to Houghton as to knock him out momentarily, and he was assisted to a grounded LVT by Corporal James Morgan. The Recon commander suffered a sprained back and double vision from the concussion, and two men of the team were slightly wounded. DeFazio led the remaining swimmers to the south bank.

There he learned that all the amtracs had returned except the four reported grounded. Most of the Recon troops on these stranded vehicles had chosen to swim or wade back to the south bank. These stragglers were collected on the northern tip of Hill 131 by Captain John F. Paul and Corporal James P. Harney of the amtracs and shuttled to Kimpo as fast as they returned.

DeFazio took care of his casualties, then set out with eight men in search of Houghton. It was low tide by this time, but wading through the mud proved to be more tiring than swimming. After finding Houghton in a dazed condition on one of the grounded LVTs, the sergeant agreed with Kraince and Shutler that the approach of dawn made it necessary to abandon the two amtracs which were still stuck. They returned on the two that the officers had succeeded in extricating. Thus at daybreak the swimming expedition ended in the CP of the 5th Marines, with DeFazio reporting to Murray and Brush after seeing his commanding officer on the way to a field hospital.

The crews and troops on the LVTs retained a confused impression of the night’s events. Master Sergeant Edwin L. Knox, who crossed with the engineers in the second amtrac, could not understand why the column withdrew. The vehicles were dispersed in every direction after some became stuck, and it was on his LVT that Captain Houghton received first aid.

It was not officially established who gave the order for the return of the LVTs when they neared the north bank, if indeed such an order was ever given. But all participants agreed that it was for the best. Events had proved that too much dependence was placed in assumptions of little or no resistance, despite G–2 warnings of an enemy build-up in the Haengju area. And even if Recon Company had landed, the task of taking three hills in a night attack without previous reconnaissance would probably have been too much for a unit of 126 men against an enemy estimated by Houghton at a battalion.
At dawn on the 20th the command and staff of the 5th Marines rebounded from this preliminary reverse with vigor and firmness. General Craig, the ADC, summed up the viewpoint of Murray and his officers when he commented:

“The eyes of the world were upon us. It would have looked bad for the Marines, of all people, to reach a river and not be able to cross.” [15]

It was decided at 0430 that the 3d Battalion would make a daylight assault crossing just two hours later. The revised plan called for LVTs to cross at the Haengju site in waves of two to six vehicles. Troop units would be organized into boat teams, and the plan provided for a 15-minute artillery preparation by the 1st and 4th Battalions of the 11th Marines.[16]

Many of the Marine shells fell short, so that little benefit was derived from the barrage by the assault troops. On the other hand, enemy fire from Hill 125 was only too well placed. About 200 hits were taken by the first wave of amtracs from 14.5mm antitank projectiles and small caliber high explosive shells as well as machine-gun bullets. The armor plate prevented any infantry losses, and only four casualties were suffered by the crews.

Battalion objectives, according to the revised plan, were designated ABLE, BAKER, and CHARLIE—Hills 125, 51, and 95. Captain McMullen’s Item Company landed at 0650 in the first wave, followed by How and George. While discharging troops, the LVTs were exposed to more machine-gun and antitank fire, resulting in several infantry casualties.[17]

Item Company, it may be recalled, consisted of newcomers who had arrived at Pusan to make up third infantry companies just before the Brigade embarked for Inchon. Barring a few World War II men, these troops had known no combat experience before they hit GREEN Beach at Wolmi-do. They acquitted themselves like veterans in the Han crossing, however, as platoon leaders organized them under fire after they piled out of the amtracs.

The only covering fires at first were provided by the 50-caliber machine guns of First Lieutenant Stanley H. Carpenter’s platoon of amtracs, which had taken the first wave across. Then four Corsairs of VMF–214 struck the enemy on Hill 125 while Captain Joseph N. Irick of the amtracs led four of his vehicles eastward to a position where they could direct 50 caliber fire on the NKPA positions.

Item Company’s plan of attack called for a two-pronged assault on Hill 125 (Objective ABLE) from the northwest by First Lieutenant William F. Sparks’ 3d Platoon on the right, attacking up the main spur paralleling the river, while First Lieutenant Elmer G. Peterson’s 2d Platoon attacked on the left after riding a few hundred yards inland on LVTs. Second Lieutenant Roy E. Krieger’s 1st Platoon was to remain on call in reserve.

Item Company had it hot and heavy from the beginning. The two assault platoons overcame such difficulties as bogged-down amtracs, intermingled units, and bullet-swept open areas before getting in position to return the Communist fire. The first phase ended on a plateau about halfway up the hill when enemy machine guns cut down most of the mortar section before the Marines could gain a foothold.

At this point it became necessary for the 3d Platoon to fall back and redeploy. Contact had been lost momentarily with Peterson’s men; but after he appeared on the left, McMullen called up his reserve unit to pass through the 3d Platoon. Sparks having been wounded, First Lieutenant Wallace Williamson took command of his men, now reinforced by an engineer squad and troops from company headquarters. The revamped 3d Platoon was
sent out to envelop the enemy left while Krieger hit the center and Peterson worked his way around the NKPA right.

This time the plateau was carried in a single rush. But casualties had reduced the company to the point where another reorganization was necessary before attacking the military crest. Although Captain McMullen had been wounded, he remained in action to lead the final assault.

The 1st and 3d Platoons were clawing their way upward when Peterson radioed from the left that he could see enemy soldiers in flight from the peak to the low ground north of the hill mass. One of the VMF–214 Corsairs also reported Communists streaming down the eastern slopes with Marine planes in hot pursuit. Thanks to their efforts, not many Korean Reds were left on the crest when the panting Marines arrived to finish the job. More lucrative targets were presented by the foes racing down the eastern slopes. Marine rifles and BARs cut down many of these fugitives when they attempted to change into civilian clothes to avoid capture.

It was estimated that the enemy had 200 killed on Objective ABLE. The other two battalion objectives offered little or no resistance to troops who rode in column from the beaches on LVTs—How Company to seize Hill 95, and George Company attacking Hill 51. Thus at a total cost of 43 casualties—most of them in Item Company—the 3d Battalion had secured its three objectives by 0940.

Among the other results of the successful assault crossing was the salvaging of the two grounded LVTs, both of which had been in the enemy’s field of fire. The equipment left on the north bank by the swimming team was also recovered, and PFC Ledet showed up unharmed. After being assigned to an observation post, he had inadvertently been left behind as missing in action when the Reds opened fire. But he kept his head throughout his lonely night’s vigil and was able to give a good report of enemy numbers and activities.

At 1000 on the 20th the first wave of amtracs crossed the river with troops of 2/5. This battalion had orders to remain in the LVTs while passing through 3/5 and continuing the attack. The scheme of maneuver called for a sharp turn to the right at Hill 51, and the next objectives, DOG and EASY, consisted of the high ground on either side of the Kaesong-Seoul Railroad about three miles east of Haengju.

Company A of the 56th Amphibian Tractor Battalion, USA, was to follow with the 2d Battalion of the KMC regiment in DUKWs. These troops had a mission of providing security for the rear of the 5th Marines.

The 1st Battalion of that regiment was alerted to be ready to cross the Han at 1330 and move into an assembly area near Hill 95, prepared to continue the attack toward Seoul.

Once the plan has been told, it would be repetitive to describe a performance which put it into effect without incident. At 1400 the regimental CP displaced across the river to the vicinity of Sojong, about two miles northeast of the Haengju crossing site. Fifteen minutes later the 2d Battalion reported that it had secured Objectives DOG and EASY. Troops of that unit had ridden the LVTs as far as Sojong, where they encountered a swamp and a bridge too small for anything larger than a jeep. The infantry proceeded on foot while a few LVTs and a platoon of tanks crossed over a railroad bridge. About 30 prisoners, believed to be the remnants of enemy forces on Hill 125, were taken on Objective EASY. They were hiding in a cave and surrendered after a couple of warning rounds fired by a platoon of the Army amtrac troops supporting the battalion. Company D dug in on Objective EASY and Company E on Objective DOG while Company F covered the gap between.[18]

The 3d Battalion went into an assembly area a mile north of Hill 95. And after 1/5 moved a company to Hill 125 to secure the landing area for the night, the 1st Marine Division had a firm bridgehead on the north bank of the Han.
General Shepherd and Admiral Struble witnessed the crossing from a vantage point on the south bank, where they had a good view of the fight for Hill 125.[19] Both accompanied General MacArthur that afternoon, when he made a final tour of the front before his departure for Tokyo.

The caravan of jeep-borne officers and reporters stopped first at the crossing area, then proceeded to the zone of the 1st Marines, where the battle for Yongdungpo was going on full blast. General MacArthur got out of his jeep and continued on foot along rice paddies where Marines were still flushing out snipers. This meant a period of anxiety for General Smith which lasted until the responsibility for the safety of the commander-in-chief passed to General Barr in the zone of the 7th Infantry Division.

On the afternoon of the 21st the Marine general saw MacArthur off at Kimpo on his plane for Tokyo. Never had the old warrior worn his famous “scrambled egg” cap with more verve. Barely a week had gone by since the Marines scrambled ashore on RED and BLUE Beaches, yet most of the major objectives had already been taken—Inchon, Kimpo, Yongdungpo, the north bank of the Han, and the approaches to Seoul. In the Pusan Perimeter meanwhile, the Eighth Army had been hitting the enemy hard in its joint offensive.

This was the score on D-plus 7. But perhaps the famous septuagenarian recalled with pardonable complacency that as late as D-minus 7, the Joint Chiefs of Staff had reiterated doubts of the Inchon landing which they had expressed on several previous occasions. MacArthur was warned that if the operation failed, the entire United Nations cause in Korea might be plunged into serious difficulties. The commander in chief replied with superb assurance, “I and all of my commanders and staff officers, without exception, are enthusiastic and confident of the success of the enveloping operation.”[20]

Such confidence could not be withstood. But it was not until 8 September 1950 that the Joint Chiefs of Staff finally acquiesced in an operation they had never entirely approved—an operation scheduled to take place in just one week.

It may be that Douglas MacArthur was recalling this exchange of views as he stood in the sunlight of Kimpo Airfield, his eyes flashing and his chin outthrust. There is no tonic like victory, and he looked 20 years younger than his actual years as he decorated General Smith with a Silver Star just before the plane took off.

“To the gallant commander of a gallant division!” said the commander in chief by way of citation.
The Inchon-Seoul Operation

Chapter 10. Crossing the Han  
Supporting Arms of Bridgehead

Even success did not alter the conviction of Navy and Marine amphibious specialists that risks had been assumed in the Inchon landing which might have resulted in disaster. It was taking no credit away from General MacArthur for his unshakeable faith in victory to conclude that fortune had smiled in some instances when a frown would have been costly.

The teamwork of Marine supporting arms was never shown to better effect than in the establishment of a bridgehead over the Han. Lieutenant Colonel Partridge’s engineers, of course, were on the job from the beginning. It was up to them to get the tanks across the river as soon as possible, in case the infantry needed the support of armor. Approaches and ferry landings had to be constructed for this purpose; and just six hours after the initial infantry crossing, the engineers had their first six-float M4A2 raft in operation. It had taken them four hours to build.[21]

The 2d Platoon of Able Company, 1st Tank Battalion, crossed the river at 1410 on 20 September and moved up in support of 3/5. The 1st Platoon followed at 1600 and the 3d Platoon late that afternoon, after the engineers completed a second raft.

When the KMCs attempted to cross in DUKWs, the clumsy vehicles bogged down several yards from the river on the south bank. Partridge suggested to the KMC commander that his troops build a makeshift corduroy approach off the main route which Marine engineers were constructing to the embarkation point. The Korean officer agreed with Partridge that this was a sensible solution and soon had his men gathering logs.

Neither of them dreamed that they had stirred up an international incident which called for a decision on the division level. American policy makers had felt it necessary to lean backwards to avoid giving Communist propagandists any excuse to charge us with recruiting Koreans for “slave labor.” It was an extremely sensitive subject, and Partridge was astonished at the repercussions. At last General Craig visited the ferry site and ruled that it was a closed incident after finding all explanations satisfactory. It was further decided—for mechanical rather than political reasons—to take the KMCs across in amtracs rather than waste any more time on DUKWs.[22]

On the night of the 20th, Partridge and Colonel McAlister, the Division G–4, interviewed a captured NKPA engineer major at Kimpo Airfield. The prisoner informed them that the bombed highway bridge between Yongdungpo and Seoul had been damaged beyond repair with the means at hand. This agreed with the conclusions of the Marine officers on the basis of aerial observation. Prospects for a span over the Han seemed dim as Partridge was leaving McAlister’s quarters. That very evening, however, Lieutenant Colonel Rowny, chief of the X Corps engineers, telephoned to announce that materials for a floating bridge unit had been accumulated by the Army in Japan and would be flown to Korea shortly. Up to this time, with rafts the only solution, the Marine engineers had supplied all the materials. But Rowny announced that Corps would assume the responsibility after the arrival of enough materials for a floating bridge unit.[23]

Military operations could not wait a week or ten days for the new span, and the Marine ferry plus amtracs and DUKWs[24] had to nourish the assault on Seoul. With this end in view, the 1st Shore Party Battalion reverted to Division control on the 19th and displaced from Inchon to Oeoso-ri. By nightfall the entire battalion was bivouacked in this area.

On the 20th, after establishing a forward CP at Kimpo Airfield, the shore party troops of Baker Company moved up to the Han in support of the 5th Marines, followed by two teams from Able Company. Evacuation
stations and supply dumps were set up on both banks. Other shore party missions were maintaining LVT and DUKW traffic control, providing guides for the amtracs, posting security at the crossing sites on both banks, and effecting unit distribution of supplies upon request by the DUKWs and LVTs.

Control of the ferry site, known as BAKER Ferry, became the responsibility of Baker Company of the 1st Shore Party Battalion. Teams 1 and 2 were employed on the south bank, and Team 3 plus headquarters troops on the other shore. Traffic control was of the utmost importance, since ferry operation had to be limited to periods of low tide, and during idle intervals a long line of vehicles accumulated. Most of them were trucks containing cargo to be reloaded in LVTs and taken across the river. The shore party men had the duty of keeping the traffic flowing as smoothly as possible, both on land and water, and special regulations were enforced to prevent the LVTs from colliding with the ferries. With the establishment of a third ferry, the problem of supplying the troops across the river was pretty well solved.[25]
A military ceremony was held on 21 September when the commanding general of X Corps established his CP in Inchon and assumed command at 1700 of all forces ashore. It was stated in some reports that command had been transferred from the commander of JTF–7 to the commander of X Corps. But officers familiar with amphibious doctrine pointed out that at no time prior to landing did CG X Corps relinquish command; and only through him did the commander of JTF–7 exercise command.[26]

The date was also significant for the 1st Marine Division in that its third rifle regiment, the 7th Marines, landed at Inchon with Major Francis F. Parry’s 3d Battalion of the 11th Marines attached. Before the ships reached the inner harbor, Colonel Litzenberg went ashore and reported at the Division CP. Informing General Smith that troop units in the convoy had been vertically loaded for maximum flexibility, he asked what troops the Division commander desired to have unloaded first.

“An infantry battalion,” said General Smith.

“And what next?”

“Another infantry battalion,” said the commanding general.

Colonel Litzenberg began unloading at once, and by 2200 his CP had opened at Wonjong-ni, two miles south of Kimpo Airfield, while H&S Company and the 3d Battalion (Major Maurice E. Roach) occupied near-by assembly areas. The 2d Battalion (Lieutenant Colonel Thornton M. Hinkle) had reached an assembly area at Hill 131, a mile north of Kimpo, by 0100 on 22 September with a mission of providing security for the airfield and a river crossing site. The 1st Battalion (Lieutenant Colonel Raymond G. Davis) was given the duty of unloading the ships of the convoy.[27]

It appeared for a few hours on 21 September that the enemy might be planning to retake Kimpo Airfield. At 0730 a report came to the 3d Battalion, KMC Regiment, warning of an attempted NKPA crossing of the Han in the area about seven miles northwest of the field. Air strikes were called immediately with the result of dispersing the enemy. At 1310, however, an estimated two NKPA battalions were reported in front of KMC positions by the air liaison officer attached to the battalion. All units in the Kimpo area were alerted to the possibility of attack. The CO of the 1st Shore Party Battalion was designated as coordinator of defensive forces consisting of his unit, and elements of the 1st Engineer Battalion, 1st Tank Battalion, 1st Ordnance Battalion, and 1st Amphibian Tractor Battalion. Army troops of the 56th Amphibian Tractor Battalion were also ordered to Kimpo.

With an NKPA attack threatening, some concern was felt about an enemy Yak type aircraft—fueled, armed, and ready for flight—which had been discovered in a revetment on the edge of the airfield by First Lieutenant Edward E. Collins of the Ordnance Battalion and later of the 5th Marines. The plane was hastily disarmed and painted with U.S. markings, so that it could be flown to Japan in case the enemy overran Kimpo. [28]

Although the NKPA threat did not materialize, there could be no doubt of an enemy build-up within striking distance. And it was on this sensitive left flank that the support of naval gunfire was most effective.

As early as 19 September the 1st and 5th Marines had advanced beyond the range of the light cruisers and destroyers. The battleship Missouri was made available the next day, but targets in Seoul proved to be too distant for her maximum range, and no further efforts were made to call upon the battleship’s 16-inch rifles. In the Kimpo area, however, naval gunfire was at its best, and a total of 535 8-inch shells were fired from 21 to 24
September by the Toledo and Rochester. These fires were requested by Lieutenant Wayerski in support of patrol actions by the 3d KMC Battalion. One of the KMC attacks wiped out a company-size pocket of Red Korean resistance in the vicinity of Chongdong—about three miles northwest of the airfield on the south bank of the Han—with a loss to the enemy of 40 counted dead and some 150 prisoners.[29]

After the Han crossing, the 1st Marine Division found itself in the position of advancing astride an unbridged tidal river with the northern flank wide open. Generals Smith and Craig depended on VMO–6 helicopters for their visits to the 5th Marines front. Those rotary-winged aircraft were in increasing demand for evacuating serious casualties; and the commanding general directed that such missions be given priority over command and liaison flights. This meant that Smith and Craig were occasionally “bumped.” In such instances they crossed the river by LVT or waited until their helicopter could return.

At the time of the Han crossing, the general plan of the 1st Marine Division had been for RCT–5 to clear the north bank and open up crossing sites for RCT–1 in the Yongdungpo area. That regiment would then cross to seize South Mountain, just north of the crossing site, thus forming an enclave in Seoul proper. Further objectives were to be seized by RCT–1 to the north and east while the KMC Regiment passed through RCT–5 to attack the center of the city. Here a political motive entered the picture, since it was desired to have Koreans take a prominent part in the liberation of the former ROK capital. To the north, on the left flank of the Division, it was planned for RCT–7 to seize objectives to protect the flank and cut off the escape of the enemy. Meanwhile, RCT–5 would revert to Division reserve as soon as the tactical situation made it possible.

So much for the plan. Before it could be put into execution, stiffening NKPA resistance made it necessary to consider revisions.[30] Not only was the hilly terrain northwest of Seoul well suited to defensive operations, but it had been a training area as far back as the Japanese overlordship, with fields of fire accurately charted. Moreover, it had become evident by the 21st that the enemy was about to exchange a strategy of delaying operations for one of defending to the last ditch. The 1st Marines had already experienced the new NKPA spirit at Yongdungpo, and on the 21st the 5th Marines contented itself with limited advances for the purpose of seizing high ground from which to launch the assault on Seoul.

The attack on the 21st was launched astride the railroad by the 3d Battalion to the north and the 1st Battalion between the railroad and the river. After passing through the 2d Battalion, Taplett’s men seized three hills and by dusk were digging in on Hill 216, about six miles east of Hill 125 and the ferry landing site.

The 1st Battalion had meanwhile advanced to Hill 96, about 3,000 yards southeast of yesterday’s Objective DOG, now occupied by the 2d Battalion in reserve. Further gains of some 2,500 yards to the southeast took the battalion to Hill 68, between the railroad and river, which was seized and held for the night.

Enemy resistance ranged from light to moderate in both battalion zones. Between them, the 1st Battalion of the KMCs moved up to Hill 104, just north of the railroad and south of Sachon Creek.[31]

This was the situation across the river at nightfall on the 21st. The 5th Marines was in position to grapple with the enemy for possession of Seoul. Hill 104, in the center of the 5th Marines front, was only 5,000 yards west of the Government Palace in the northwest section of the city. Less than three miles, yet officers and men alike realized that they would have to fight for every inch of the way. If anyone had any doubts, he had only to watch the flashes of gunfire stabbing the night sky to the southeast, and he had only to listen to the unremitting roar of gunfire. For at Yongdungpo the 1st Marines had been slugging it out with the enemy for the last three days in a battle for the rambling industrial suburb.
The Inchon-Seoul Operation
Lynn Montross and Nicholas A. Canzona

Chapter 11. The Fight for Yongdungpo

IF YONGDUNGPO is lost, Seoul also will fall.” This was the warning note sounded during the conferences of the Red Korean military leaders in Seoul. So important did they consider the industrial suburb that a regiment of the 18th NKPA Division was assigned to the defense of the built-up area on the south bank of the Han.[1]

Slogans of this sort were a favorite form of Communist inspirational literature, and they may have served to buck up the defenders. From the tactical standpoint, however, the quoted catch phrase was illogical. Yongdungpo was untenable. Squatting on the low ground at the confluence of the Kalchon and Han Rivers, the town was an isolated landmark of only symbolic significance. It was separated from Seoul by two miles of sand and water, and the only connecting links, the old railroad and highway bridges, had long since been destroyed. Thus, what had once been a vital communications hub south of the Han was now a veritable dead end.

While the Reds in Seoul were able to ferry troops and materiel across the exposed river and sand spit by night, they could not hope by this primitive method to meet the logistical requirements of a regimental garrison confronted by a modern juggernaut of combined arms. Nevertheless, the North Koreans chose to make a fight of it, and in addition to the hundreds of troops in Yongdungpo, they sent over considerable artillery and armor that could have been put to better use in the defensible terrain around Seoul.
Chapter 11. The Fight for Yongdungpo
Three Hills Taken by 1/5

Hill 118 was the principal terrain feature between Kimpo Airfield and Yongdungpo, the dominating peak being about three miles from the former and two from the latter. Giant spurs from the main ridge extended northward toward the Han and eastward to the bed of the Kalchon, beyond which lay Yongdungpo. At the end of one easterly projection were the twin caps, Hills 80 and 85. Paralleling the Han River, a modern highway led from Kimpo, passed north of Hill 118, skirted 80 and 85, then bridged the Kalchon to enter Yongdungpo from the northwest.

It will be recalled that the 1st Battalion, 5th Marines, occupied high ground generally east of Kimpo Airfield at the close of 18 September. During the night, Lieutenant Colonel Murray ordered the unit to seize Hills 80 and 85 the next day. To gain these gates to Yongdungpo, it would be necessary to take Hill 118; and the battalion commander, Lieutenant Colonel Newton, formulated his plan accordingly. Company B would leave its positions on old Objective EASY at dawn and envelop Hill 118 from the south. Company C would attack frontally from Objective FOX, assist the enveloping force by taking one of 118’s spurs, then continue eastward to seize 80 and 85. Company A was to remain behind an Objective EASY for the purpose of guarding the approaches to the airfield.

At dawn of 19 September, Company C atop Objective FOX was greeted by a hail of mortar and small-arms fire. Under this shield part of a 500-man enemy force attacked the Marine position from the east, while the remainder attempted to move along the Yongdungpo-Kimpo Highway, obviously bent on reaching the airfield. Other large NKPA concentrations were spotted at the base of Hill 118.

Charlie Company’s organic weapons roared into action along with the battalion 81s. While the Marine fire cut swaths through the exposed enemy ranks, Baker Company lunged forward to envelop Hill 118 according to plan. Air and artillery paved the way so effectively that Captain Fenton’s unit gained the commanding peak about 1100 without suffering a casualty. This left the North Korean attackers, who had been contained by Charlie Company, trapped between Objective Fox and Hill 118. After losses of 300 dead and 100 prisoners, the Red Force broke into a few small bands that fled across the highway to the fields and villages bordering the Han. Company C’s casualties in stopping the attack and moving forward to its spur on Hill 118 were two killed and six wounded.

First Lieutenant Pedersen led Company C along the highway toward Hills 80 and 85 at 1430. Owing to the press of time, the area between the road and the Han River was not cleared, with the result that small bands of
enemy were left free to roam the fields and make their presence felt later. The 3d Platoon, under Second Lieutenant Harold L. Dawe, Jr., peeled off the column and attacked Hill 80 shortly after 1500. Following at an interval of 500 yards, Second Lieutenant Robert H. Corbet’s 1st Platoon continued along the pavement toward Hill 85. A platoon of A/Tanks supported the two-pronged assault along with Charlie Company’s mortars and machine guns, and by 1650 the two heights were secured. In the wake of the air strike called down by Fenton, the attacking infantry had encountered practically no opposition.

Yongdungpo, bristling with Communist armament, rumbled its challenge from the low ground 500 yards east of Hill 85. Taken under heavy fire by artillery, mortars, and small arms, Company C was forced to dig in on the reverse slopes of its high ground, there to await the expected counterattack after nightfall.
As noted previously, the 2d and 3d Battalions, 1st Marines, spent the night of 18–19 September astride the Inchon-Seoul Highway a mile east of Sosa. The 1st Battalion, deployed over a broad front in the hills south of the road, was to be relieved in the morning by the 32d Infantry, so that Colonel Puller could shift his regiment to the left. Since the relief did not take place as early as expected, Puller ordered his 2d and 3d Battalions to attack at 1030, leaving 1/1 in position to await replacement by the Army unit.\[5\]

On the left of the highway, 3/1 jumped off from Hill 123 with Companies H and I in the assault. The battalion’s mission was to clear a rambling ridge complex that extended more than three miles before stopping short of Hill 118. Assigned as a final objective was the terminal height, Lookout Hill, facing western Yongdungpo across the wide bottomland of the Kalchon.\[6\]

Considering the formidable cross-compartment approach, the assault companies led by the battalion S–3, Major Joseph D. Trompeter, made good progress against enemy resistance described as “light but stubborn.” At a cost of two killed and 15 wounded, the Marines combed the vertical wilderness and seized Lookout Hill late in the evening. The attack was almost too successful, for the battalion was now out on a limb. The closest friendly forces were on Hill 118, several hundred yards to the north, and along the Inchon-Seoul Highway, about a mile to the south, as will be shown.\[7\]

The 2d Battalion could boast comparable success along the highway in the course of 19 September, but gains were made under far different circumstances. Spearheaded by Charlie Company Tanks commanded by Captain Richard M. Taylor, the battalion had advanced only 500 yards in the morning when the lead M–26 was enveloped in a violent explosion. With one track and two road wheels destroyed, the steel monster settled into the crater left by the detonation of a wooden box mine.\[8\]

Simultaneously, the infantrymen of Company F came under heavy small-arms fire from Hill 72 to the right front. In an attempt to sight in on the enemy positions, other tanks tried to bypass the mine field in the highway, only to discover that explosives were concealed in both road shoulders as well. Howitzers of the 11th Marines registered on Hill 72, and during the ensuing bombardment a VMF–214 flight appeared overhead to lend further assistance.\[9\]

Despite his generous use of supporting arms, Lieutenant Colonel Sutter was forced to commit all three rifle companies to the fight. Tank gunners tried to detonate mines embedded in the road with machine-gun fire, but without success.\[10\] It remained for First Lieutenant George A. Babe’s 2d Platoon, Charlie Company Engineers, to remove the obstacles under fire. Darting forward on the bullet-swept highway, the engineers placed “snowball” charges of C–3 on the wooden boxes, then took cover while the mines exploded.\[11\]

After 2/1 had driven the enemy from the area with the assistance of Marine air and artillery, the job of clearing the 250-yard mine field proceeded under less hair-raising conditions. To get the armor back into the fight as soon as possible, Babe ignored the explosives embedded in the highway shoulders. Word was passed back to this effect, but several jeeps and trucks were lost later when drivers failed to heed the warning.\[12\]

While the tanks remained on the sideline, Companies D and F punched about a mile down the highway against continuing resistance, which gradually solidified at Hill 146. Like 72, this ridge was on the right side of the road, in the 32d Infantry’s zone of action. Since the Army unit had yet to enter the picture, the Marine flank was becoming more and more exposed with each forward bound by 2/1.\[13\]

Sutter had no choice but to commit troops beyond his zone. Not only were the Reds entrenched on Hill
146 with machine guns and field pieces, but they had blocked the highway with trees and other encumbrances. Thus, while Fox Company seized a knoll on the left, Dog Company invaded Army territory and battled its way to the top of Hill 146’s western spur. VMF–214 plastered the peak itself, and the 11th Marines shelled enemy positions across the whole battalion front. [14]

It was 1300 when the mine field to the rear was finally cleared, enabling Charlie Company Tanks to move forward in an attempt to overtake Sutter’s infantry. Within sight of the fighting around Hill 146, the armor ground to a halt before the roadblock of trees, rice bags, and other debris. [15] A dozer tank rumbled ahead, smashed through the first obstruction, then went up in a cloud of smoke. Under the litter on the road lay a second mine field, 75 yards long. [16]

Again the tank men watched from behind as engineers cleared the highway and 2/1 drove forward out of sight. By 1730, the Marine infantry had completely smashed the main enemy concentration on the highway. When the surviving Reds fled, they exhibited the same determination that had characterized their stand throughout the day. Weapons and equipment were strewn along the road, and the Marines captured a truck loaded with mines as further evidence of the hasty retreat. [17]

Sutter ordered 2/1 to hold up at 1900 and dig in astride the highway. The 4,800-yard advance had cost the Marine unit four killed and 18 wounded, against 350 casualties and five prisoners for the North Koreans. Since all written and personal accounts agree that 19 September amounted to almost one continuous fire fight for the 2d Battalion, the amazing contrast in friendly-enemy loss figures must be attributed to the sound employment of Marine supporting arms. [18]

As mentioned earlier, 2/1’s positions for the night were a mile southeast of the 3d Battalion on Lookout Hill. Company E entrenched on high ground to the left of the highway—4,000 yards from Yongdungpo—while D and F manned a long, low hill on the right. Because the latter height ran parallel to the road, the line formed by Dog and Fox was at a right angle to that held by Easy. Sutter’s choice of this L-shaped defense would shortly prove to be an extremely wise one.
The right flank of the 1st Marines was bare. Not until 1200, 19 September, did the 32d Infantry begin relieving 1/1 in its old positions southeast of Sosa. Liaison between the Marine and Army units at this time was weak. Apparently many of the Marines were unaware that General Barr’s OpnO No. 2,[19] for the 7th Infantry Division did not call for a jump-off by the 32d until 0630 on the 20th. At that time the Army regiment would attack a series of objectives which included Hill 146 and other high ground above the road.[20] Thus, the schedules north and south of the highway were running one day apart, and it would take the enemy himself to straighten the line when he slammed the gates of Yongdungpo.

Meanwhile, the 1st Battalion, 1st Marines, entrucked below Sosa for its circuitous journey from the right flank of the regiment to the left, where it was to relieve the 1st Battalion, 5th Marines, on Hills 118, 80, and 85. The 11-mile trip via Sosa and Wonjong-ni was uneventful, except that the troops had to dismount at the latter village and proceed on foot over the primitive road. With the first increment to arrive at Wonjong-ni, Captain Robert H. Barrow, commanding Company A of 1/1, set a rugged pace to get his troops on top of Hill 118 before dark. Relieving Company B of 1/5, he expected Charlie Company to pass through and replace its opposite of the 5th Marines on Hills 80 and 85.

It was dusk, and Companies B and C were still on the move when Hawkins of 1/1 met Newton of 1/5. They briefly discussed the lay of the land, the latter’s tactical disposition, and the requirement that 1/5 assemble at Kimpo within a matter of hours to prepare for the river-crossing next day. Time, space, and terrain factors were too great, Hawkins concluded, for his battalion to assume all positions then occupied by the other. To facilitate the rest of the relief, which now would take place in darkness, he ordered Charlie Company to occupy Hill 118 with Able and directed Baker to dig in on a southern extension of the big ridge.[21]

Having relieved Fenton on Hill 118 before nightfall, Barrow enjoyed the opportunity to reconnoiter 1/5’s area and to realize the tactical significance of Hills 80 and 85. When it became apparent that Company C would not arrive before dark, he radioed the battalion S–3 for permission to move his company to the twin peaks immediately, explaining that Charlie Company of 1/5 could remain in position no later than 2100. Since Hawkins had already decided against taking over too much unfamiliar ground after daylight, Major Bridges turned down the request. Thus, at 2100, with no relief in sight, the 5th Marines’ unit withdrew from the two heights as ordered. Company C of 1/1 reached Hill 118 at 2200 and went into position with Barrow’s outfit for the night. Unknown to the enemy, Hills 80 and 85 had become a no-man’s-land.[22]

While the battalions of the 1st Marines settled down for the night in a three-mile arc facing western Yongdungpo, the North Korean commander within the town organized part of his garrison for two separate thrusts against the closing vise. In one case he would win by default; in the other he would see more of his limited resources go down the drain.

Just before dawn of 20 September, the Marines on Hill 118 were alerted by a furious clatter of small arms and automatic weapons far out to the east. Daylight disclosed that the enemy was “assaulting” Hills 80 and 85. When the North Koreans finally discovered that their objectives were unoccupied, they abruptly ceased firing, surged over both crests, and entrenched in about company strength. An attempt was made to extend the counterattack to Hill 118, but Companies A and C, backed by a flight of VMF–323, threw the Reds back with ease.[23]

During the early morning blackness which found the enemy filling the vacuum on Hills 80 and 85, a
stronger North Korean force—estimated at a battalion—marched out of Yongdungpo toward 2/1’s positions astride the Inchon-Seoul Highway. In the van of the Red column were five T–34 tanks preceded, oddly enough, by a truck loaded with ammunition. Other vehicles, laden with less sensitive supplies, were safely interspersed among the infantry in the long file.

It will be remembered that Companies D and F, the latter in the fore, occupied high ground positions parallel to and south of the highway. Farther back, Easy Company’s line tied in at a right angle and extended to the north of the road. The troops of Fox Company, tense with anticipation in their advance deployment, heard the first distant sounds of clanking armor and racing engines sometime before 0400. The noise grew steadily louder until, at 0430, the shadows of the ammunition truck and T–34s passed beneath the Marine defenses and continued along the road toward Easy Company’s lines. At the latter, Private Oliver O’Neil, Jr., rose from behind his machine gun and shouted a challenge to the truck, which by this time was well out in front of the enemy tanks. O’Neil was cut down by automatic fire in answer, and pandemonium broke out on the highway.

Obviously the North Koreans had stumbled into it again, just as they had done at Ascom City. Two T–34s stopped short of Easy Company’s front and opened up wildly. Companies D and F in turn exploded with machine guns, small arms, grenades, and mortars against the flank of the enemy column, while E fought to deny further passage along the road. Under the hail of fire from above, the Red soldiers milled about in panic and were slaughtered. Some flung themselves into roadside ditches, where the crowding only increased the odds of destruction. Others sought escape by scrambling up the slopes—into the very muzzles of Dog and Fox Company weapons.

The T–34s began to lurch back and forth like trapped animals. Owing either to mines laid by Marine engineers or a grenade thrown from above, the ammunition truck exploded in a brilliant spectacle of pyrotechnics. In the midst of the furor, Private First Class Monegan moved across the hillside from Company F’s front with his rocket launcher. Observing his progress against the backdrop of flames from the truck, his comrades either held or shifted their fire to protect him.

Monegan closed on the lead tank and wrecked it with one 3.5-inch projectile. Approaching the second T–34 under intense fire, he paused and took aim with imperturbability. Again his rocket connected with a roar, and the black hulk on the road turned into a blazing furnace. Silhouetted against the hillside, the Marine leveled his weapon at a third armored vehicle just as it was pivoting around to retreat. But at this moment an enemy machine gun found the mark, and Monegan—killer of tanks—fell dead.

Although the North Korean attack was thus smashed at the outset, fighting along the highway continued until daylight. In addition to the two T–34s destroyed, another was captured intact with its crew. The 11th Marines closed the “back door” of the highway with a curtain of high explosive, thereby sealing the fate of the Red battalion.

Dawn of 20 September revealed a scene of utter ruin across the Marine front. The highway was littered with burnt NKPA trucks, tanks, and equipment. Heaped on the road, in ditches, and along hillsides were 300 enemy dead.
The Inchon-Seoul Operation  
Lynn Montross and Nicholas A. Canzona  

Chapter 11. The Fight for Yongdungpo  
Recapture of Hills 80 and 85

For the most part, fighting around Yongdungpo on 20 September was a contest of the giants. Supporting arms of both sides exchanged heavy blows, and the 1st Marines reported with business-like frankness that it was “...leveling the southern part of Yongdungpo, which is infested with enemy.” North Korean mortars, tanks, and field pieces pumped hundreds of rounds out of positions in the center of town and the eastern outskirts. Marine planes and howitzers replied by smothering Red concentrations and emplacements with literally thousands of missiles of all types.

The 4th Battalion, 11th Marines, commanded by Major William McReynolds, fired 28 concentrations in the course of the day; and Lieutenant Colonel Merritt Adelman’s 2d Battalion expended 1,656 rounds in 21 missions. It was the precision firing of these two units which had supported 2/1 so effectively during the pre-dawn counterattack.[26]

Battery C, 1st 4.5-inch Rocket Battalion, FMF, moved to advance positions in the morning to increase the pressure on the Yongdungpo garrison. Land counterpart of the LSMRs which rocked the Inchon waterfront on D-day, this unit had seen little action to date, owing to the lack of M48 fuses for its missiles. Banking on substitute detonating devices (M51 for 105mm and 155mm Howitzer shells), First Lieutenant Eugene A. Bushe ordered his gunners to fire a test salvo of 24 rockets. No visible effect being noticeable from his OP, the battery commander then called for a full ripple of 144—enough high explosive to flatten a good portion of the town. Again the big missiles plowed into the target area with a dull thud, and Bushe withdrew his battery to the rear. The M48 fuses did not arrive until 28 September, with the result that the potent Marine rocket artillery was sidelined until the closing days of the operation.[27]

Colonel Puller’s tactics during the bombardment on 20 September were designed to align the 1st Marines for the actual assault of Yongdungpo, planned for the next day. It was necessary to occupy in strength all the final approaches to the town, so that the full weight of the regiment could be brought to bear against the defending garrison. From left to right, therefore, the schedule of operations on the 20th was as follows: (1) 1st Battalion to seize Hills 80 and 85; (2) 3d Battalion to remain in position on Lookout Hill; and (3) 2d Battalion to advance to the first of two highway bridges which spanned branches of the Kalchon just outside of Yongdungpo. These limited attacks would also provide time for the 32d Infantry to catch up on the right. The day’s mission for the Army unit was to attack over a six-mile front and secure, among other objectives, towering Tongdok Mountain south of the MSR and two miles from Yongdungpo.[28]

Shortly after first light, Lieutenant Colonel Hawkins reached the crest of Hill 118 and established his OP. He was in time to see Able and Charlie Companies repulse disconnected Red elements moving on the Marine lines from Hills 80 and 85. While the battalion commander issued his order for the attack, Major William L. Bates, Jr., commander of 1/1’s Weapons Company, set up his “supporting arms center” to cover the impending assault.[29]

Hawkins gave Company C the mission of taking Hills 80 and 85.[30] Deciding on a southerly approach, the company commander Captain Robert P. Wray ordered his 2d Platoon to lead off by clearing a village sprawled across the route to the lower peak. Second Lieutenant John N. Guild moved out at the head of the skirmishers and led them over 500 yards of intervening low ground. Nearing a knoll which topped the clump of thatched huts, the platoon came under heavy small-arms fire and was stalled.

Wray immediately committed the rest of his company in a two-pronged attack which wrapped around the
flanks of Guild’s line and smashed through the North Korean resistance. After a hot fire fight, the surviving Reds fled to Hill 80, and Company C occupied the village and knoll by early afternoon. The executive officer, First Lieutenant James M. McGee, led a six-man patrol eastward to clean out a small nest of holdouts, while Wray reorganized the company for the assault on the twin caps.

Charlie Company’s tactics in advancing on the enemy’s southern flank were ideal from the standpoint of Weapons and Able Companies, which supported the attack from Hill 118. The two units could actually witness the progress of the assault troops across the 1st Battalion’s front, so that mortars and machine guns at the base of fire had only to shift gradually leftward to support the Marine advance.

Late in the afternoon, Wray launched a double envelopment of Hill 80. Second Lieutenant Henry A. Commiskey led his 3d Platoon around to the right, and Second Lieutenant William A. Craven’s 1st swung through the low ground on the left. A few huts concealing snipers were demolished by 3.5-inch rockets, but otherwise the Marines met little resistance as they moved over the crest of the objective early in the evening. With the first signs of darkness already in the sky, Wray lost no time in preparing for his third double envelopment of the day.

The remnants of the North Korean company were entrenched on the crest and forward slopes (facing the Marine attack) of Hill 85, obviously intent on making a determined stand. Anticipating Charlie Company’s tactics, the Red leader had bent back both flanks to prevent encroachments on the sides or rear. Thus, though both Marine assault platoons swung out to stab at the enemy flanks, the Communist disposition actually relegated each maneuver to a separate frontal attack.

Craven’s platoon and Charlie Company machine guns, under First Lieutenant Francis B. Carlon, covered the attackers from a base of fire on the northern slopes of Hill 80. Moving aggressively through a hail of bullets, the 2d Platoon on the left crossed the low ground and drove up the western incline of the objective. Almost to the top, Guild was grievously wounded by a machine-gun burst.

Click here to view map

On the right, Lieutenant Commiskey paved the way in the face of heavy resistance. Nearing the crest of Hill 85, the officer abruptly bounded ahead of his platoon and went over the top. He jumped into a machine-gun emplacement and was dispatching the last of five occupants when his lead skirmishers caught up with him. He ran forward again to clean out another North Korean position in a single-handed attack. By this time, the Reds on the eastern side of the hill had had enough. Those who still had hides to save pelted down the northern slopes in the direction of the mouth of the Kalchon River, where the stream was spanned by the now damaged bridge.

Guild’s platoon, inspired by its leader who remained in action despite a mortal wound, gained the summit shortly after Commiskey’s unit. Captain Wray, following closely behind, later described his meeting with Guild on the slope as follows:

“He stayed on his feet and turned toward where I was climbing 20 yards behind him. He dropped at my feet and made every effort to remain conscious long enough to tell me how his squads were attacking and pleading with me to keep them attacking. I called for a corpsman; he tried to refuse, saying that he had a wounded man who needed one more than he did.”

Lieutenant Guild died shortly afterwards.
During the morning phase of Charlie Company’s attack, Hawkins and the others on Hill 118 were racked by frustration of a type seldom experienced by Marines in the history of the Corps. It will be recalled that the ground between the Kimpo-Yongdungpo Highway and the Han River was not cleared in the course of 1/5’s attack on Hills 80 and 85 on 19 September. Since the 5th Marines’ unit had withdrawn to cross the Han at Haengju, and since Charlie Company of 1/1 had chosen a southern route in recapturing the twin heights, enemy bands in hiding along the river bank were unmolested. The potential danger in the area was not realized, however, until too late.

From Kimpo came a “weasel” of the 1st Signal Battalion, the crew calmly stringing wire into the 1st Marines’ zone as the vehicle rattled along the highway. Just short of the Kalchon bridge, the little tractor struck a mine and was ambushed by a party of North Koreans. The power-packed Marine infantry on Hill 118, less than a thousand yards away, watched helplessly as the communications men were either killed or captured. No sooner had the Reds disappeared into the brush with two prisoners than a Marine truck, belonging to A/Engineers, cruised down the highway with four unsuspecting passengers. Captain Barrow ordered his troops to fire over the vehicle, hoping that the driver would hear the bullets in the air and turn back. But the truck continued on into the ambush, where it was stopped by an enemy fusilade.[31]

The engineers piled out and plunged into a rice paddy in an attempt to escape. Three of them made it. The fourth, Private First Class Clayton O. Edwards, was tracked down and captured. Although the Marine was out of ammunition and already wounded, one heroic warrior of the NKPA stepped forward and bayoneted him in the shoulder after he had surrendered. Edwards later escaped from a POW train fleeing before the UN drive into North Korea.

Not long after these incidents, Captain Richard F. Bland led Baker Company of 1/1 through the area and secured Hill 55 and the nearby villages on the bank of the Han. The North Koreans pulled out and crossed the Kalchon to join the Yongdungpo garrison.

With fighting going on to the right and left, 3/1 sat quietly on Lookout Hill during 20 September without suffering a casualty. An occasional break in the orange and black pall over Yongdungpo allowed the Marines a glimpse of the wrecked railroad and highway spans which once had bridged the Han to Seoul.

The ROK capital was still a long way off for the 1st Marines; and the 2d Battalion, now on the regimental right and in its sixth straight day of the assault, was more concerned with the immediate foreground. After smashing the Red attack in the morning of the 20th, Sutter’s unit jumped off at 0645 against scattered resistance along the Inchon-Seoul Highway. The assault elements reached the bridge spanning the western branch of the Kalchon at 1230, and the battalion commander immediately ordered engineers to inspect the long concrete structure. It was reported to be in good enough condition to support M–26 tanks for the attack on Yongdungpo the next day.[32]

While the battalion dug in on the west side of the stream, the Marines eyed the 2,000-yard stretch of highway leading ahead to a second span, bridging the Kalchon’s eastern branch at the very edge of the blazing town. A high ridge on the right of the road—technically in the 32d Infantry’s zone of action—was a beehive of North Korean activity. Anticipating the effect of this commanding position on his attack the following day, Sutter contacted Lieutenant Colonel Charles M. Mount, USA, commanding the 2d Battalion of the 32d, for permission to shell the height. The Army officer approved the request at 1300, but more than seven hours elapsed before the necessary clearance filtered through 7th Division, X Corps, and 1st Marine Division to reach the 11th Marines.
When the howitzers finally opened up, darkness prevented effective observed fire from being delivered on the enemy strong point.[33]

Out of sight and earshot of 2/1 during 20 September, Colonel Charles E. Beauchamp’s 32d Regiment, in its first day of actual combat, paid with seven killed and 36 wounded in taking Tongdok Mountain and part of “Copper Mine Hill.” Using the Inchon-Anyang road as an MSR, the Army unit lost three tanks in a field of over 150 wooden box mines. Beauchamp himself narrowly escaped death or serious injury when his jeep struck one of the explosives, killing the driver and wounding a radio operator. By nightfall, the 32d was deployed far out on the right of the Marines on the Inchon-Seoul Highway; and the 31st Infantry, having landed at Inchon earlier in the day, went into position even farther southward.[34]
Chapter 11. The Fight for Yongdungpo

Assault of Yongdungpo

There was no infantry action during the night of 20–21 September. Both sides were steeling themselves for the ordeal each knew would commence at dawn. The Red commander in Yongdungpo threw up formidable earthworks to block the approach over the Kalchon from Hills 80 and 85 in the northwest; and he concentrated a strong force between the two tributaries in the southwest. That edge of town facing due west, though most defensible, he left unguarded, with the result that a single Marine rifle company would hasten his demise.

Marine artillery thundered all night long, and the glare from flaming Yongdungpo rolled back the darkness in an ever broadening arc. Shortly after dawn, the Marines of Company B, 1st Battalion, threaded across the wreckage of the Kalchon bridge under cover of machine-gun, mortar, and tank fire from Hill 85. Reaching the eastern bank, the attackers swept over a knoll over-looking the Han on the left, which the North Koreans had left undefended. The assault inched forward toward the town, first through sporadic small arms resistance, then into a deadly cross-fire from several automatic weapons.[35]

Baker Company was now confronted by two dikes which the Reds had converted into a main line of resistance. One of the barriers paralleled the Han River north of Yongdungpo; the other ran the entire length of the western edge of town. Where they met to form a point facing the Kalchon bridge and the Marine advance, a reinforced company of North Koreans was deployed across each levee in strong, mutually supporting positions.

Captain Bland chose wisely in directing his attack against the northern dike alone. By this decision he not only kept his left flank and rear protected by the Han, but also maintained local superiority in numbers over the Reds immediately confronting him. Grinding slowly forward with heavy casualties, Company B rolled up the length of enemy entrenchments on the levee and pushed eastward 2,000 yards by afternoon. The Marines then formed a line with their backs to the Han and shot it out with the Communists on the second dike at a range of 500 yards. At this point the attack stalled, and the fight settled down to one of attrition. Casualties on both sides mounted rapidly under the ceaseless exchange of machine-gun, mortar, and tank fire.[36]

Part of Bland’s difficulty owed to the random deployment of all opposing forces at this time, as indicated on the charts of the 11th Marines. Noting that Company B’s positions were along the Han north of Yongdungpo, the artillerymen expressed reluctance to fire on the enemy-held dike to the “rear” in answer to Lieutenant Colonel Hawkins’ repeated requests from his OP on Hill 85. It was a matter of the howitzers pointing generally north toward Seoul, while Bland’s outfit, at the moment, was trying to head south. The misunderstanding was finally cleared up late in the afternoon, and Marine air joined the artillery in pounding the southern barrier. The Reds held stubbornly under the battering, and at darkness Hawkins sent Charlie and Weapons Companies across the bridge to form a perimeter with Baker for the night.[37]

The narrative will now switch to the action in the 2d Battalion zone, leaving the separate attack of Company A to be taken up in detail later.

Sutter’s unit jumped off at 0630 on the 21st with Companies D and E in the assault. The infantry crossed the first bridge without incident, then fanned out to move on the second. It was no surprise when the North Koreans on the intermediate ridge to the right of the highway suddenly threw heavy fire across the Marine front, but it was disconcerting to Sutter that his calls for artillery fire met with the same delay as on the previous day. He therefore shelled the high ground with attached 4.2-inch mortars on his own initiative, before ordering Companies E and F to attack the enemy bastion.[38]

Meanwhile, Captain Welby Cronk led Company D forward on the left of the highway against a strongly
defended dike fronting the Kalchon’s western branch. Progress was slow and casualties severe, but the Marines closed to within 100 yards of the barrier by noon. There they dug in and slugged it out, while the 2d and 3d Platoons of Charlie Company tanks alternated in ripping the Communist trenches with 90mm, delayed-action shells.

Heavy fighting continued on the right side of the road until evening. Companies E and F fought part way up the slopes of the ridge and suffered heavily during the close exchange with the Reds on the crest. Since the enemy was still in control of most of the high ground at dusk, Sutter ordered the assault units to withdraw into 2/1’s zone and dig in with Dog Company. VMF–214 covered the hot disengagement—one of the most difficult of all tactics—under a masterful job of forward air controlling by First Lieutenant Norman Vining, Sutter’s FAC. After bombing and rocketing from 75 to 100 yards beyond the Marine front, the Corsairs closed to within 30 yards for strafing runs to shield the retreating line of infantry. [39] Click here to view map

The seventh straight day in the assault had cost the 2d Battalion 11 killed and 74 wounded, bringing its total casualties since D-Day to 28 KIA and 226 WIA. Partially because of these crippling statistics, Colonel Puller, at 1530 on the 21st, had committed 3/1 to the relief of the battle-weary outfit. The reserve battalion swung northeast from Lookout Hill to flank the enemy dike positions facing Company D from the eastern tributary. Crossing the Kalchon against light resistance, the attackers ran into trouble at the fortified levees fronting southwestern Yongdongpo.

After heavy machine guns of 3/1 bested a battery of Communist automatic weapons, Companies G and I, the latter on the right, attacked astride the stream branch. Progress was slow, but at a cost of 11 killed and 18 wounded, the Marines rolled up the heavily defended dike and reached the bridge entering the city. Darkness fell with the 3d Battalion entrenching to the north of the 2d, both units along the left side of the Inchon-Seoul Highway. [40]

To the south of the 1st Marines, the 32d Infantry met with considerable success during its attack over a mountainous nine-mile front. The 1st Battalion on the right mopped up Copper Mine Hill, then seized the high ground around Anyang against “light sniper fire.” In the left of the Army zone and adjacent to the Marines, 2/32 took its objective south of Yongdungpo against light-to-moderate resistance. Thus, at a cost of two KIA, 28 WIA, and one MIA, the regiment succeeded in cutting the railroad and highway leading from Suwon to Seoul via Anyang and Yongdungpo. Difficulties in Marine-Army liaison and coordination throughout 21 September stemmed from the fact that neither realized the size of the gap between them. The map will show that the 32d’s route of advance was planned to miss Yongdungpo by two miles, not even coming close to the NKPA strong point which gave the 2d Battalion, 1st Marines, so much trouble. [41]
With the coming of night on 21 September, there was grave apprehension in the 1st Marines over the fate of one rifle company. In the course of the day, the Reds had staved off major penetrations by two Marine battalions in the southwest and the better part of another in the northwest. Incredibly enough, one Marine unit of some 200 men had swept through the space in between and cleared the very heart of Yongdungpo; so that when darkness fell, the isolated force was anchored in the rear of the enemy, a good mile and a half beyond the closest friendly units.

Company A of the 1st Battalion had jumped off from below Hill 80 on the morning of the 21st, after Baker Company was slowed by the dike positions east of the Kalchon bridge. In committing the unit to an attack through a mile of open rice paddies, Lieutenant Colonel Hawkins was gambling with high stakes for surprise. Captain Barrow employed the classic approach-march formation. Forward on the left was Second Lieutenant John J. Swords’ 3d Platoon; on the right front was the 2d, under Second Lieutenant Donald R. Jones. To the left rear was First Lieutenant William A. McClelland’s 1st Platoon, with the dual mission of company reserve and flank guard. In the right rear were the 60mm mortars, a section of heavy machine guns of Weapons Company, and the assault squad. Light machine gun sections were attached to each rifle platoon, so that they could be employed to the front or flanks on a moment’s notice. Barrow’s six-foot, four-inch frame loomed between the two assault platoons.

To say that these Marines were tense and expectant as they plodded across the broad, flat expanse would be an understatement. Far off on the left and right, small arms crackled continuously at the bridge entrances to Yongdungpo. Marine planes were swooping down in the distance, the hollow eruptions of their ordnance adding to the incessant rumbling of artillery and mortars.

Almost hidden from view by the high grain stalks, Company A swept through the rice paddies against no opposition whatever. Its advance was rapid until the 3d Platoon was slowed by muck which marked the beginning of the Kalchon’s bed. Heads craned eagerly to the front and flanks as progress dropped to a snail’s pace for several minutes.

The crucial moment seemed certainly at hand when the assault line stepped forward from the concealment of the rice and waded into the stream, completely exposed to the wide bank and parallel dike beyond. Still, not an enemy shot was fired. Dripping mud and water, the green-clad figures in the van surged ashore and over the dike. The rest of the men followed, unbelieving, close behind.

Retaining the same tactical formation, ready to engage in any or all directions, Company A marched into Yongdungpo. The first buildings were 100 yards ahead of the levee. Barrow channeled his advance astride the main east-west street. Although buildings and dwellings were many, the layout was not dense; and the Marines were able to keep their ranks open and enjoy good all-around observation.

The place seemed empty and dead. By noon Able Company was several hundred yards within the town, its careful search of buildings and side streets having failed to uncover a flicker of enemy resistance. Barrow could tell from the din far out on either flank that he was well ahead (eastward) of Baker Company and the 2d Battalion. He radioed for instructions, and Hawkins told him to keep going.

Halfway through town, Barrow noted on his map that the Inchon-Seoul Highway was now converging on his right, so that it would meet the company’s attack route just east of Yongdungpo. Because of the furious clatter along the stretch of highway out of sight on the southwest (2/1’s fight), he ordered the reserve platoon to shift
from the left side to the right. No sooner had McClelland completed the move than his men spotted an enemy column advancing down the highway in the direction of 2/1’s front. The Reds were chanting a spirited military air when the 3d Platoon opened up and cut the formation to ribbons.

Simultaneously, the two lead platoons began firing on individuals and small groups in the streets of eastern Yongdungpo. Astonished at the sight of a large Marine force in the very heart of their bastion, most of the North Koreans took to their heels. But there were other Reds “in the rear with the gear” who obviously did not recognize the attackers. After glancing curiously from distant streets, they went calmly about their business.

Swords’ 3d Platoon barreled through town on the left of the street and broke into the open. A dike topped by a road lay across the Marine front, and the platoon leader led his men into a hasty defense on top. From this position they could cover the vast sand spit with its airfield and approaches to Seoul. Looking north, they observed a large body of enemy soldiers withdrawing from Baker Company’s zone onto the spit. Light machine guns took the North Koreans under fire immediately, and the section of heavies sent forward by Barrow joined in shortly afterwards. Caught by surprise in the open, the Red outfit suffered heavy casualties before the survivors could fan out and disappear.

The rest of Company A moved up on the right of the 3d Platoon, occupying more of the dike and the junction with the Inchon-Seoul Highway. It was at this point that Company A—if it could hold the ground—had an opportunity to deal the Yongdungpo garrison a mortal blow. For the road junction turned out to be the enemy’s supply center.

Across the intersection lay what appeared at first glance to be a huge coal pile. Actually it was a camouflaged mountain of ammunition. During a fire fight with a small group of North Koreans taking cover behind the explosives, one Marine set off the dump with a grenade. The whole countryside shook with the detonation, and the great cloud of smoke that shot into the air marked Able Company’s isolated position for the rest of the 1st Marines on the outskirts of town.

While part of the unit dug in on the dike, the remainder inspected and cleared the area around the intersection. A five-story building on the near corner was jammed with captured U.S. Army medical supplies, field equipment, ammunition, and enemy ordnance. The Marines could not use the heavy caliber ammo but they did help themselves to blood plasma for their wounded.

Throughout the afternoon, the Reds made repeated attempts to regain the vital area by throwing small assault parties against Able Company from the south. Each attack was smashed, and darkness found the Marines firmly entrenched on the dike, hoping only that their limited supply of ammunition would last throughout the night. A weak SCR300 battery prevented further communications with the battalion CP.
Yongdungpo Secured

If the Marine Corps Schools ever enlarges its varied curriculum to include “The Defense of a Dike,” Captain Barrow’s tactical disposition on the night of 21–22 September 1950 can be taken as a unique precedent. Able Company’s commander chose to defend a 100-yard stretch of the levee just north of the intersection. Here the macadam road ran about 25 feet above ground level, and the incline on either side sloped gently. The Marines staggered their foxholes alongside, some high on the slope, others low. Machine guns and BARs were emplaced along the shoulders at the top, so that automatic fire could be directed in volume in any direction. Since all of their ammunition had been fired during the afternoon counterattacks, the 60mm mortar crews laid aside their tubes and went into the line as infantry.\[43\]

Company A’s perimeter for the night thus had the shape of a long sausage, with the 3d Platoon in an arc at the northern end, the 1st defending the west side, and the 2d in position on the east. From their foxholes on the top and sides of the levee, the Marines commanded the sand spit, the road on the dike, Yongdungpo’s eastern exits, and the vital intersection with the Inchon-Seoul Highway.

Fortunately, they had dug their holes deep. At dusk came the telltale rattling, revving, and clanking from the direction of 2/1’s front; and five unescorted T–34s loomed on the Inchon-Seoul Highway, headed toward the intersection. They turned left just short of the crossroads and proceeded in column along a street that paralleled Company A’s dike.

The Marines on the levee crouched low in their holes. Cruising majestically like a file of battleships, the tank column cut loose with a hail of machine-gun fire and salvoes of 85mm shells at a range of 30 yards. Able Company’s rocket gunners, whose total experience with the 3.5-inch launcher was limited to the firing of a few practice rounds, popped up from their holes and let fly. One of the tanks exploded in a convulsion of flame and smoke, its turret twisted askew as though some giant hand had torn the steel cap from the body.

The other four tanks continued to the end of the perimeter, then reversed course past the Marine line a second time, pumping a steady stream of steel into the western slope of the dike. Reaching their starting point at the Inchon-Seoul Highway, they turned back and made another round trip, with Marine rocket fire damaging two more vehicles and sending them limping off the field. The remaining pair, upon completing the second circuit, again reversed course and made a final pass—the fifth—on the Marine lines. Clearing the perimeter, they rumbled into town and disappeared.

Fantastic as it may seem, Company A sustained a single casualty, a concussion case, during the half hour of sustained heavy caliber pounding at pistol ranges. Tremendous muzzle velocity had embedded the 85mm, armor-piercing shells deep in the slope of the dike in the split second before each explosion; and Marine foxholes proved to be sufficient protection against the raking machine-gun fire.

Between 1900 and 2100 it was relatively quiet. McClelland’s platoon, facing town, killed a few Reds attempting to remove stores from the five-story building. Then the long expected report reached Barrow by sound-power telephone: Swords’ platoon, manning the northern arc of the perimeter, could hear a large enemy force approaching its front.

The counterattack hit shortly after 2100. Transmitting a running account of the sharp fire fight by phone, Swords assured his company commander that he was “having no trouble.” After 15 minutes of failure, the Reds withdrew for a breather. They struck in the same place half an hour later and were thrown back again, despite any
inspiration derived from a display of multi-colored flares and wild cries of “banzai.”

By midnight, the 3d Platoon had withstood five such onslaughts, each appearing to be in about company strength. Before the last attack, a captive Red officer escaped from Company A’s POW “compound” east of the dike and ran northward into the blackness, shouting repeatedly, according to Barrow’s ROK interpreter, “Don’t attack any more! They’re too strong for you!”

Apparently his advice was heeded, much to the relief of the Marines, whose ammunition supply was becoming dangerously low. At midnight, following the enemy’s fifth unsuccessful attempt against Swords’ position, the fight for Yongdungpo came to an end for the 1st Marines. There was scattered firing throughout the night, but the North Koreans, denied access to their vital supplies, quickly withered on the vine.

At dawn, Company A counted 275 dead and 50 automatic weapons around its perimeter, principally in front of the 3d Platoon. The four T–34 tanks which had withdrawn into town were found abandoned.

The 1st and 3d Battalions attacked at 0800 against negligible resistance and converged on the isolated unit, making the historic link-up in short order. The enemy was gone, except for the hundreds of dead that littered the borders of the city. He had left behind practically all of his heavy armament, equipment, and supplies.

Continuing the advance on the 22d, the 1st Marines surged eastward beyond Yongdungpo, then spent the remainder of the day reorganizing and patrolling. On the 23d, the regiment moved almost unopposed to the bank of the Han, 3/1 seizing Hill 108 which dominated the battered bridges. Late that night Puller received orders to effect the river-crossing early next morning.
DURING THE NIGHT of 21–22 September an NKPA shell crashed through the roof of the native house serving as CP of the 5th Marines northwest of Seoul. The explosion wounded Lieutenant Colonel Hays so severely that the regimental executive officer required immediate evacuation. Lieutenant Colonel Murray, who escaped with a slight cut, directed that the CP be moved to a cave on the reverse slope of a hill.

Thus did the enemy serve notice that henceforward the battle for the northwest approaches to Seoul would be furiously contested. Yongdungpo had been taken by the 1st Marines only after a grim, three-day struggle in which the Korean Reds made their first real stand as distinguished from delaying operations. And now it was the turn of the 5th Marines to meet opposition such as that regiment had not encountered since D-day.

Two new NKPA units had much to do with the sudden stiffening of resistance. One was the 78th Independent Regiment, commanded by Colonel Pak Han Lin. This unit, numbering about 2,000 recruits in July, was organized into three battalions of infantry supported by medical, motorcycle, weapons, reconnaissance, mortar and 76mm gun companies, and an engineer platoon.

Another recent arrival which won the respect of the Marines for rugged fighting qualities was the 25th Brigade of 4,000 to 5,000 troops. Commanded by Major General Wol Ki Chan, who had reportedly studied in Russia in 1947, the unit was made up of four heavy weapons battalions and an infantry battalion in addition to engineer, 120mm mortar, heavy artillery, and brigade artillery battalions.[1]

It was literally a fight to the death for these two NKPA outfits, which were all but wiped out of existence by the Marines of RCT-5 during the battle for Seoul. But while they lasted, the 78th Regiment and 25th Brigade put up a determined and at times desperate resistance in hill country well adapted to defense.
The Inchon-Seoul Operation
Lynn Montross and Nicholas A. Canzona

Chapter 12. Main Line of Resistance
Three Hills Designated 105

The grapple for the northwest approaches to Seoul began in deadly earnest at 0700 on the morning of 22 September. From north to south, the three assault battalions of the reinforced 5th Marines were the 3d on the left, the 1st KMC in the center, and the 1st on the right. They were jumping off from the high ground about three miles southeast of Haengju along a line bounded by Hill 216 on the north, 104 in the center, and 68 on the south.

Misunderstandings in regard to routes and unit boundaries were made inevitable by maps disagreeing as to place names and heights of ridges. Added to the confusion was the fact that each battalion zone had a Hill 105 as one of its final objectives. (Staff officers played safe by designating them 105–N, 105–C, and 105–S to indicate north, central and south.)

Ahead of the Marines lay a hill complex which constituted a great natural bastion of interlocking heights and fields of fire. Spurs and defiles leading from one ridge to another enabled NKPA troops to move up in concealment and launch counterattacks in the most unexpected quarters.

Casualties of the next three days were the heaviest for a comparable period that RCT–5 had suffered in Korea. Added to previous totals, it meant that 17 of the original 18 platoon leaders were killed or wounded in a 50-day period, and five of the six company commanders who landed with the Brigade.[2]

Grim as the outlook was, the Marines of the 2d Battalion enjoyed a sideshow on the eve of battle when Sergeant James I. Higgins and a companion made a prize of an enemy locomotive. Knowing nothing about operating it, they found a simple but effective solution by firing up and opening throttles or depressing levers until the gauges were at the halfway mark. This policy of moderation led to success. The locomotive took off with ponderous docility, and Higgins managed to bring it to a safe stop near the regimental CP. His exploit was not applauded, however, by supply officers taking alarm from the dense clouds pouring out of the smokestack. They did not relish the idea of providing enemy artillery with a target marker, visible for miles, in an area full of exposed Marine ammunition. As a result of their anxiety, Higgins was promptly invited to keep rolling until he reached the rear.[3]

The 2d Battalion remained in reserve while the 1st KMC Battalion jumped off in the center from Hill 104. Heavy resistance was met immediately. In fact, NKPA detachments infiltrated all the way to Hill 104 itself, though it had been secured by 3/5 the previous afternoon. They poured small-arms fire into KMCs already taking a pounding from mortar and artillery fire, and the battalion was held up until the high ground to the front could be cleared by artillery and air strikes.[4]

On the left, 3/5 also ran into trouble after deceptively easy progress at first. At 0700 all three companies jumped off from Hill 216, secured by Item Company the day before. The new objective, as directed by 5th Marines’ Operations Order 24-50, was Hill 296.

This height was reported by How Company as taken at 0945. It was not realized at the time that Hill 296 was actually the bastion of the Red Korean defense complex northwest of Seoul if its three southern spurs were considered. Attached to the main land mass like the roots of an ulcerated molar were Hills 56, 88, and 105–N, with 105–C, 72, and 105–S describing an arc to the southward. Nearly all of these positions would have to be reduced before the road could be opened to Seoul.

Only long-range small-arms fire from Hill 338 was encountered by How Company at the outset, but enemy pressure steadily increased from the southern spurs of 296. An NKPA counterattack in estimated company strength was repulsed with heavy enemy losses, including some 40 prisoners, by Marine riflemen supported by
tanks. Communist pressure was soon renewed, however, with How Company receiving heavy small-arms, automatic, AT, and mortar fire.

Patrols from the other two companies, ranging to the northeast of Hill 216 in the early afternoon, met determined opposition. A reinforced rifle platoon of Item Company encountered an NKPA force, in estimated company strength, defending the village of Nokpon-ni. During the ensuing fight the Marines lost two men killed and 11 wounded. Action was broken off at dusk, when the 3d Battalion received oral orders to defend against an enemy infiltrating from the south, southeast, and northeast in attempts to regain lost ground.

The fight for Hill 296 had only begun.[5]

South of the railroad, 1/5 had about 2,000 yards to cover to its objective, Hill 105–S. The battalion plan of maneuver called for Baker Company to deliver fire support while Able passed through Charlie and advanced to the base of the hill. Meanwhile, Charlie was to envelop the objective from the right. When the three Able platoons moved into position, they were pinned down by enemy automatic fire from the forward slope of 105–S. First Lieutenant Joseph A. Schimmenti of 3/A and his men had a grim reminder of American reverses earlier in the war when they found a 50–caliber machine gun and ammunition of U.S. manufacture which the enemy had abandoned.[6]

Schimmenti was severely wounded and First Lieutenant Nathaniel F. Mann, Jr., killed before Able Company won a foothold on the lower slopes of 105–S. It took until 1500 for Charlie Company, supported by a machine gun section, to complete its wide swing and close in on the right of the enemy’s positions. Baker Company passed through Able meanwhile and attacked the forward slopes. At 1720, after an intense mortar, air, and artillery preparation, the 1st Battalion needed only 15 minutes in which to secure the objective. The three companies had taken losses of 12 killed and 31 wounded during the day.[7]

Close air support was provided for RCT–5 by the MAG–33 squadrons which had begun tactical operations at Kimpo on the 20th. Although they were still in process of moving to the airfield from Japanese bases, VMF–212 and VMF(N)–542 flew strikes in support of all three assault battalions. Of the two carrier-based squadrons, VMF–323 almost doubled its usual number of daily missions on 22 September.[8] Click here to view map

Just before nightfall, Lieutenant Colonel Murray directed 1/5 to pull back to Hill 68 with one company while holding Hill 105–S with the other two. This shift was made necessary by the fact that the KMCs had been compelled to withdraw to Hill 104, their starting point. As a consequence, the center of the line was more than 1,000 yards in the rear of the battalions on the right and left. The company on Hill 68 was to provide covering fires in the morning, therefore, when the KMC battalion would renew its attack in an effort to regain lost ground.
On D-plus 8 the 1st Marine Division had its third rifle regiment in line for the first time. OpnO 9–50, issued at 1200 on 23 September, directed the 7th Marines (less 2d Battalion) to cross the Han into a zone of action in the rear of the 5th Marines.

In response to verbal instructions and a fragmentary warning order the day before, the regimental headquarters and 3d Battalion crossed late on the morning of the 23d. Colonel Litzenberg set up his CP on the north bank at 1710, and his men had their first contact with the enemy the following morning. A 3d Battalion patrol ranging to the north of the battalion zone of action encountered an estimated 200 NKPA troops, and Marine air and artillery supported a successful attack.[9]

Division orders called for the relief of 2/7 on the 24th in the area northwest of Kimpo by the 2d Battalion of the 187th Airborne RCT, USA. The Marine unit was directed to cross the Han that afternoon, followed by the 1st Battalion, which had completed unloading at Inchon.

It had been decided by the Division command and staff to give the 7th Marines time for shaking down instead of committing the newcomers immediately to the attack on Seoul. The regiment was assigned a series of five objectives along a ridgeline extending from the ferry crossing at Haengju on a gentle arc to a point north of the city. Protecting the north flank and rear of the 5th Marines was a primary mission, and Colonel Litzenberg was also directed to prevent the escape of the enemy to the northward.[10]
On the morning of the 23d the 1st KMC Battalion was directed to attack from Hill 104 at 0700 to straighten out the line. The 1st and 3d Battalions of the 5th Marines were to remain in position and assist the advance by fire.

Heavy and immediate resistance was encountered from NKPA troops dug in on Hill 56. Although the KMCs made a valiant effort, they were soon stopped cold. Only slight gains resulted at an excessive cost in casualties from artillery, mortar, and automatic weapons fire.[11]

Lieutenant Colonel Roise moved his CP forward at 1300 to the western base of Hill 104. While his 2d Battalion assembled under cover of that height, he conferred with Lieutenant Colonel Murray after receiving orders to pass through the KMCs and continue the attack on Hill 56. Both officers realized the advantages of swinging around to hit the enemy from the left after approaching along the low ground. But it was already midafternoon and this movement could not be completed before darkness. The only alternative was a line-buck in the center if Hill 56 was to be taken that day. And since the line had to be stabilized and the KMCs pulled back in reserve to give the regimental defense some depth, Murray and Roise agreed that the situation called for a frontal assault without delay.[12]

At this stage the Marine officers did not realize that Hill 56 was part of the enemy’s main line of resistance. It seemed logical to them that he would make his final stand on the next ridgeline, crowned with Hills 105–C and 105–N. As for the repulses suffered by the KMCs, it was a logical assumption that their inexperience had been a contributing factor. In view of these circumstances, a brief artillery preparation and the support of a platoon of tanks seemed sufficient when Companies D and F attacked and E contributed fires from the eastern slopes of Hill 104.[13]

Captain Peters’ Fox Company was to lead off on the right, south of the railroad, and seize the portion of the objective below the railroad tunnel. From this high ground, his men could then support First Lieutenant H. J. Smith’s Dog Company, moving forward under cover of a sunken road, to assault Hill 56 north of the tunnel. About 1,000 yards of rice paddies had to be crossed at the outset, and the expected support of the tanks in this low ground failed to materialize. The leading M–26 bogged down in a wide ditch which prevented the advance of the other four. One of them remained in the paddies to give supporting fires while three took a new route along the railroad tracks. Fox Company received increasingly heavy casualties meanwhile on the way across the low ground.

Peters ordered Second Lieutenant S. E. Sansing’s mortar section forward, but the officer reported afterwards that his radio did not pick up the message. This left the three assault platoons without 60mm support as they climbed the lower slopes of Hill 56 and became heavily engaged with NKPA troops just below the railway tunnel.[14]

Apparently the Reds so overrated the weight of Company F’s assault that they lost the topographical peak of Hill 56 by default. Whether their timely withdrawal from Dog Company’s initial objective was meant to be permanent is not known, for they might have been caught flatfooted while shifting troops against Fox. Nevertheless, Company D emerged from the sunken road in a column of platoons and moved onto the high ground in its zone against negligible opposition.

Lieutenant Heck’s 1st Platoon, according to plan, then pivoted leftward to spearhead the attack on the final objective, Smith’s Ridge—named by the men after their company commander. Halfway into the connecting
saddle, the Marines were caught in the open by a heavy burst of fire from a large knoll on the southern tip of the wooded ridge. Heck fell mortally wounded, and his senior NCO, Staff Sergeant T. Albert Crowson, went down with a shattered leg. In the space of a few minutes, more than half of the exposed platoon became casualties.[15]

Startled by the intensity of enemy reaction from this unexpected quarter, Smith personally retrieved the battered 1st Platoon, while the 2d and 3d were clearing the northeastern slopes of Hill 56. Then, owing to the lateness of the hour, he deployed Company D defensively on that high ground for the night. There was no contact with Fox Company or any other friendly unit. This fact, coupled with the evidence of strong enemy positions on Smith’s Ridge, led the company commander to reconsider carefully his plans for the postponed attack.[16]

Fox Company had meanwhile been heavily engaged along the eastern slopes of Hill 56 in the vicinity of the railway tunnel. Peters ordered Lieutenant Anderson to lead his 2d Platoon against the strong NKPA positions just beyond the tunnel. Only 27 men were left to fight it out at close quarters with an entrenched enemy estimated by the platoon leader at company strength. The Communist force was wiped out in exchanges of small-arms fire and grenades at murderous ranges, but the effort took a frightful toll of the 1st Platoon in KIA and WIA casualties. Only seven able-bodied men were left when Peters ordered a withdrawal to the company position south of the tunnel.[17]

All of Anderson’s wounded and most of his dead were brought back, and he combined his remnants with the survivors of Lieutenant Nolan’s 2d Platoon. A gap of about 50 yards separated their position from First Lieutenant Albert F. Belbusti’s isolated 3d Platoon as Fox Company dug in for the night.[18]

No fault could be found with the over-all plan of attack, providing as it did for each assault company to seize ground from which it could support the advance of the other. But as darkness approached, it became evident that the 2d Battalion had bargained for more North Korean real estate than it could handle. The two isolated companies had no choice but to cling desperately to their scorched holdings while organizing to meet an expected NKPA counterattack.

Although the other two battalions of the 5th Marines had defensive missions on 23 September, enemy threats and encroachments kept them occupied. On Hill 296, in the zone of 3/5, Weapons Company took a good deal of satisfaction in firing a captured NKPA howitzer to break up hostile troop concentrations in the vicinity of Nokpon-ni. How Company remained in contact with the enemy all day, supported by 50-caliber and 90mm fires from Marine tanks.[19]

It was in the How Company zone that Taplett’s men first made the acquaintance of “Fireproof Phil.” This was the name applied to a gigantic NKPA officer, towering head and shoulders over his troops, who exposed himself with contempt for Marine bullets. Not only his burly build but his light complexion gave some of the Marines the conviction that he was Russian. At any rate, Fireproof Phil was both fearless and lucky. Machine gun bullets and mortar rounds seemed to bounce off his frame. Finally, the tanks paid the honor of making him the special target of 90mm ammunition, and still Fireproof Phil always had the benefit of a minor miracle at the last moment.[20]

Combat leadership by enemy officers and NCOs was outstanding in the operations north of Seoul. On Hill 105–S the 1st Battalion came under pressure all day on 23 September. Movement was impossible for the men of Baker and Charlie Companies, and supplies of water, food, and ammunition had to wait for darkness. Enemy smoke pots created a haze restricting air activities, but it did not prevent a timely strike flown by Lieutenant Colonel Lischeid and five planes of VMF–214 to break up a threatened enemy counterattack on Hill 105–S. This was one of six close support missions completed on the 23d by that squadron in the zone of RCT–5.[21]

Why the enemy did not launch a counterattack that night against the hard-hit assault companies of the 2d Battalion is one of the mysteries of the war. But the weary Marines on the slope of Hill 56 attributed their respite to effective and unremitting artillery support. All night long the howitzers of the 11th Marines lit up the night sky
like heat lightning in the rear and crashed like thunder in front as they scourged the NKPA positions.
The Inchon-Seoul Operation
Lynn Montross and Nicholas A. Canzona

Chapter 12. Main Line of Resistance
Modified Plan of Corps Attack

Up to this time the Corps plan of attack had called for the 1st Marines to clear the south bank of the Han and cross in the vicinity of Yongdungpo to join the 5th Marines in an assault on Seoul from the west and southwest. In view of the location of the boundary between the 1st Marines and the 7th Infantry Division, this meant that the Army troops would not participate in the attack on the city.

General Almond had already made it plain in conversations with General Smith that it was highly desirable to take Seoul by 25 September as GHQ wished to announce the liberation just three months to the day after the NKPA invasion.

The subject came up again during a conference at Corps Headquarters on 23 September. Almond proposed that Smith send RCT–1 around to attack Seoul from the southeast while RCT–5 continued its assault from the northwest. This plan struck the Corps commander as promising to maneuver the enemy out of the city sooner than the attack as formerly conceived.

Smith replied that the NKPA forces defending Seoul had proved to be much stronger than had been expected. He said he was convinced that the enemy would put up a fight from street to street regardless of any flanking maneuvers. The Marine general added that the fierce opposition met by RCT–5 had demonstrated that the western approaches to Seoul were too much for one regiment to handle, and he urged that no change be made in the original plan of crossing RCT–1 northwest of Yongdungpo to aid the attack. This plan, Smith asserted, would offer the advantage of keeping the 1st Marine Division together; for when the 1st and 5th Marines had penetrated well into the city, the 7th Marines could be brought around from the northwest to deliver the coup de grace.[22]

Differences between commanders are not remarkable, and it is noteworthy that Corps and Division usually managed in the Inchon-Seoul operation to reach an acceptable solution. Such was the case when General Almond reconsidered on the 23d and agreed to allow the 1st Marines to cross northwest of Yongdungpo, as originally planned, and take part in a two-regiment attack on Seoul from the west and southwest. In place of the 1st Marines, the 32d Regiment of the 7th Infantry Division was to cross the Han and enter Seoul from the southeast. Amphibian tractors for the operation would be furnished by the 1st Marine Division.

Revised 1st Marine Division plans called for RCT–1 to take position on the right flank of RCT–5 after the crossing, then pivot to the northeast and continue the attack through the heart of the city. RCT–7 (less one battalion in Division reserve) would have the mission of advancing across the northern approaches to protect the left flank and prevent the enemy from escaping while RCT–5 sliced through the western edge of the built-up area. Thus the burden of capturing Seoul fell chiefly upon Colonel Puller’s regiment.
Chapter 12. Main Line of Resistance
Climax of the Marine Assault

As the eastern sky turned gray on the Saturday morning of 24 September, the men on the firing line northwest of Seoul knew that the time had come. They knew with the instinct of battle-wise troops that supporting arms had done all they could. Now it was up to the infantry to come to grips with the enemy. Supporting arms could only sue for victory and it was up to the infantry to collect.

The two companies of 2/5 were still clinging by their eyelashes to the scarred slopes of Hill 56. All three of the Company F platoon leaders, Nolan, Anderson, and Belbusti were carrying on in spite of wounds. Corporal Welden D. Harris, who had killed three Red Koreans in hand-to-hand combat the day before, refused to be evacuated after a second wound.[23]

The survivors of Captain Peters’ outfit could not say too much in praise of the support given continuously throughout the night by Captain Arnold C. Hofstetter’s Baker Battery of the 11th Marines. There were indications that several incipient NKPA counterattacks had been broken up during the night by the bombardment.

In the Dog Company zone the night had been relatively uneventful except for sniping, though the enemy could be heard digging new positions and bringing up ammunition.

The regimental scheme of maneuver, as outlined in OpnO 26–50, called for the 2d Battalion to continue the attack, with Hill 105–N as a final objective. This meant going up against practically the entire Hill 296 defense system, since Smith’s Ridge and all of Hill 88 also remained to be seized. An estimated 2,500 enemy troops, well supported by automatic weapons, mortars, and artillery were defending every foot of defensible ground in front of the two thinned companies of 2/5.

It was intended that 3/5 should assist by attacking down the principal eastern spur of 296 to outflank the enemy and contribute supporting fires. Taplett’s men were to be relieved in gradual stages on Hills 216 and 296 by elements of the 1st Battalion. As a preliminary, Newton was to send out a patrol to secure a portion of the river bank on the right flank of Hill 105–S in preparation for the crossing of the Han by the 1st Marines that morning. The reserve company of 1/5 would then commence the relief of the 3d Battalion while the 1st Battalion of the KMC Regiment remained in an assembly area in the rear of the 5th Marines and elements of the 7th Marines protected the left flank. Units of 1/5 were to continue to defend 105–S—seized and held at a total cost of 27 KIA and 72 WIA—until the crossing of the 1st Marines and the relief of 3/5 had been completed.[24]

Two small enemy counterattacks were repulsed without much trouble by elements of 3/5 on Hill 296 before dawn. Company H remained in contact with the enemy on the eastern slopes until 1550, when Company G moved around the right flank and a coordinated attack was launched against moderate NKPA artillery, mortar, and AT fires. Relief of Item Company and other 3/5 troops remaining on Hill 216 was completed by the 1st Battalion at 2000. Casualties of the 3d Battalion for the day were five killed and 33 wounded.[25]

The movements of these two battalions were subsidiary to the main attack launched by 2/5 on 24 September. H-hour at 0630 was preceded by a 20-minute artillery preparation and an air strike by VMF–323 planes. Lieutenant Colonel Roise planned to bring up Easy Company from reserve on Hill 104 and push it forward between Dog and Fox while those companies completed the seizure of Hill 56 and cleared the heavily wooded spur to the north known as Smith’s Ridge, linking up with the main land mass of Hill 296. Easy Company would then take the lead in a battalion attack aimed at Hills 88 and 105–N as the final objectives.

Fox Company jumped off on the eastern slope of Hill 56. Nolan having been evacuated, Anderson led
what was left of the 2d and 3d Platoons—a total of some 20 riflemen. Belbusti commanded about the same
number in the combined assault on the heavily defended finger of high ground east of the tunnel. Counting
machine gunners, mortar-men, and troops bringing up ammunition, Fox Company had been reduced to fewer than
90 effectives, including wounded men refusing evacuation.

Corsairs of VMF–323 swooped down to drop 500-pound bombs less than a hundred yards in front of the
attackers. Thanks to such close air support, Fox Company soon seized high ground which enabled the men to gain
fire superiority. At this point they took cover to make use of their advantage in an exchange of small-arms
and automatic fire.

Dog Company, with two platoons still almost at full strength, had at least a dozen walking wounded who
elected to keep on fighting. Ground mist and smoke from burning huts made for low visibility when the men
jumped off in a column of platoons. The enemy opened up from Smith’s Ridge as the Marines came within close
range, pinning them down for two hours by concentrated and accurate artillery, mortar, AT, and automatic fire.
One of the Marine tanks moving up the road in support was disabled by a mine and another became inoperative
after a direct hit by an NKPA mortar shell on the motor hatch.
The large knob across the sunken road from Hill 56 remained to be taken before Dog Company completed its mission by advancing northward to clear the enemy from the wooded spine of Smith’s Ridge. After the attack stalled with heavy casualties Lieutenant H. J. Smith ordered every available man into line, including personnel of company headquarters. Two Marine machine guns were kept in action at a cost of repeated casualties as First Lieutenant Karle Seydel made five consecutive trips under fire to bring up ammunition.

At some points the opposing forces were within long grenade-throwing distance. In these exchanges the Marines had a pronounced advantage because of stronger arms and the control developed by baseball.

Both sides attempted without success to break the deadlock by sending out detachments for flanking movements. Sergeant Robert Smith of McNaughton’s platoon led a squad in a wide end sweep to the north, only to meet such fierce NKPA opposition that Smith and eight of his men were killed, including a corpsman. Only three wounded Marines ever got back.[28]

At 1000 the company commander sent the first of three messages to inform the battalion CP of his situation and request reinforcements. Roise could only reply that Easy Company, his reserve unit, was irrevocably committed to the attack on the final objectives. During the course of the battle the battalion commander himself was wounded by a mortar fragment but returned to the CP after having his arm dressed.[29]

When Second Lieutenant George Grimes’ 60mm mortar section ran out of ammunition, the survivors fought as riflemen. Two platoon leaders, McNaughton and Lieutenant Howard, were wounded but continued in action.

About 1030, as the smoke and mist cleared, the howitzers of the 11th Marines and the 81mm mortars of 2/5 poured it into the enemy positions along the wooded ridge. The men on the firing line had another welcome assist when four Corsairs of VMF–323 roared in to make passes with bombs, rockets, and napalm.

Lieutenant Smith had 44 effectives left as he alerted his men for the assault. McNaughton, Seydel, Grimes, and First Lieutenant Karl Wirth were the other officers still on their feet. Platoons, sections, and squads had ceased to exist as units when the 44 men of Dog Company moved out of their foxholes and swarmed over the high ground that had held them up for more than two hours.

First impressions under more normal circumstances would have been shocking, for the position held more enemy dead and dying than the Marines had ever seen before in Korea. The entire area was honey-combed with foxholes, trenches, and bunkers, which had become the graves of Red Koreans cut down by Marine air and artillery. There they had died at their posts, crowded together so closely that every shell, bomb, or rocket had caused frightful carnage. The dead outnumbered the living, in fact, for the men of Dog Company met unexpectedly weak resistance from the few NKPA effectives who trusted to their weapons instead of their feet.[30]

Lieutenant Smith paused to regroup in a skirmish line for the final attack to clear the remainder of the ridge. Again the Marines seemed to prevail by sheer moral ascendancy as the assault went forward by leaps and bounds. But the victory was bought at the cost of the company commander’s life, for Smith was killed at the head of his men.

Only five additional casualties were taken in this phase, but Marines dropped from exhaustion until McNaughton, as acting commander, had just 26 able-bodied men left at the finish. They were greeted by the strange spectacle of three enemy officers exhorting about 150 Red Koreans to retreat. No second invitation was
needed, and the Marines had a “turkey shoot” at the expense of foemen scurrying down the eastern and northern slopes in the direction of Seoul.[31]

Seydel was the only officer left unwounded when Dog Company notified the Battalion CP at 1300 that objectives had been secured. Fox Company reported about two hours later that it also had seized all assigned ground and was digging in after a mopping-up period.[32]

Casualties had not been heavy on the east side of the ridge as compared to the day before. The Company F attack consisted of two prolonged fire fights in which the Marines seized better positions and made good use of their advantage. After reaching the objective, they took cover and proceeded systematically to cut the enemy down to size with the support of VMF–214 planes. Captain Peters then sent both platoons forward to eliminate an NKPA force firing on them from a distance. Anderson’s men passed through a small built-up area and took cover behind a stone wall on the enemy’s flank. Opening fire on Communists about 300 yards away in an open field, they made short work of the opposition.[33]

Second Lieutenant Wiley J. Grigsby, the machine gun platoon leader, was killed in the day’s final Fox Company attack. Anderson’s composite platoon had three men killed and three wounded. Among the casualties was Corporal Harris, who received a mortal wound after twice refusing evacuation. He was posthumously awarded the Navy Cross.[34]

The attack of Easy Company on Hill 105–N was delayed until after the other two companies took their objectives. At 1500, after moving up from battalion reserve, Jaskilka’s men ran into heavy enemy mortar and automatic fire soon after passing Hill 56. Two tanks of the 1st Platoon, Company B, 1st Tank Battalion were knocked out, one by an AT mine and the other by a direct hit of a mortar shell. The remaining three tanks could not have continued in action except for the efforts of Staff Sergeant Stanley B. McPherson of Company A, 1st Engineer Battalion, who went ahead and cleared a path through the enemy mine field. By some miracle he survived the hail of NKPA fire unhurt, and the tanks went on to destroy two enemy AT guns and several machine gun emplacements.

The main enemy stronghold appeared to be Hill 72, a conical height located between Hills 105–N and 105–C and enfilading both of them. Not enough daylight remained on 24 September to mount an assault on this position, and the effort was put off until the following morning.[35]

Marine air had a busy day. Lieutenant Colonel Lischeid’s VMF–214, repeating the pattern of the day before, launched strikes of five aircraft every two hours in support of 2/5 attacks northwest of Seoul—a total of six missions. Not only was the city a flak-trap, but Marine pilots were flying Corsairs from which the armor around the air-cooler system had been removed by order of BuAer as a peacetime economy measure and never restored. As a consequence, NKPA small-arms fire was likely to hit the oil lines and send a machine down in flames.[36]

A 1st MAW record for combat sorties flown in a day by a single squadron was set on the 24th by VMF–212 with 12 flights and 46 sorties. Close support missions were about equally represented along with search and attack.[37]

Nightfall of this eventful day found 2/5 in possession of ground containing the most enemy dead in a small area ever seen in the Inchon-Seoul operation. Lieutenant Colonel Roise estimated that 1,500 NKPA bodies were left on Hill 56 and Smith’s Ridge, and the command of the 1st Marine Division put the figure at 1,750 enemy killed in the Hill 296 defenses.[38]

Survivors of Dog Company agreed that in spite of such frightful losses, the Red Koreans had enough able-bodied men left at the finish to make mincemeat of the 26 attackers who took Smith’s Ridge. But this Marine effort seemed to break the heart of enemy resistance in the Hill 296 defense complex, thus giving fresh proof of Napoleon’s famous dictum, “The moral is to the material in war as three to one.”
The battle for Seoul entered its final stage on the 24th with the river crossing of the 1st Marines. At first light a site about 2,000 yards southwest of Hill 105–S was cleared by Charlie Company of the 1st Engineer Battalion. Extensive mine-clearing operations at the crossing site area caused delays, and it was 0800 when reconnaissance and assault elements of 2/1 embarked in the LVTs of Company A, 1st Amphibian Tractor Battalion. Sutter’s troops completed their crossing at 0945 against scattered and ineffectual fire, and made contact that afternoon on the north bank with elements of Company C, 5th Marines. [39]

For lack of a ferry, the 1st Marines had no tank support at the crossing site. Plans had been made to send Baker Company, 1st Tank Battalion, around by the Haengju ferry to join the infantry north of the river. As it worked out, however, the armor was delayed by a fight on the north bank which will be discussed in the next chapter.

Hill 79, about 4,000 yards from the crossing site, had been assigned to the 1st Marines by Division OpnO 10–50 as an objective. The 2d Battalion began a rapid advance toward this point after moving into position on the north bank abreast of the 5th Marines on a 1,500-yard front.

The 1st Battalion and Regimental Headquarters were next to cross. Puller ordered Hawkins and his men to drive eastward along the river and pass through the 2d Battalion. Since that unit was rapidly advancing at the time, one of the 1/1 staff officers looked dubious.

“You’ll just have to advance a little faster,” explained the veteran regimental commander. [40]

This proved to be a practical even if not exactly a school solution. On the march the 1st Battalion had the same experience as the 2d when small-arms and automatic fire came from Hill 105–S, supposedly secured by 1/5. Again the enemy was demonstrating his ability to hide out behind the Marine lines and make the most of his nuisance value. The 2d Battalion had two men killed and nine wounded by harassing fires, and the 1st suffered four casualties while passing through at 1300 to continue the attack.

Effective Marine artillery and 4.2-inch mortar fire supported the advance. After drawing out of range of Hill 105–S, Hawkins and his men encountered long-range small-arms fire, and roads into the city were mined. Hill 79 was located in the southwest section of Seoul itself, commanding a good view of the railroad marshaling yards and industrial area. After seizing the objective at 1500, the men celebrated by raising an American flag, thus precipitating a friendly race with the 5th Marines in exuberant ceremonies of this sort.

At 1515 the 3d Battalion was relieved by the Division of its mission of defending Hill 108, south of the wrecked Han bridges, and reverted to regimental control for a river crossing completed at 2000. On the north bank Ridge’s outfit was thought to have pulled the last fangs of enemy resistance on Hill 105–S after his men in their turn came under fire from hidden opponents. Since this height dominated the new regimental CP, Company I was given the mission of outposting the height. A small but lively fire fight took place at dusk, and the Marines bagged ten prisoners at a cost of one man killed and two wounded. [41]

The 3d Battalion went into an assembly area near the crossing site for the night. Hawkins set up a perimeter defense on the objective, and the 2d Battalion occupied positions about 2,000 yards in the rear. A few probing attacks were received from enemy patrols on Hill 79, but Marine artillery and 4.2-inch mortars made short work of these attempts.
ON THE MORNING of 25 September 1950, with RCT–1 across the river, the 1st Marine Division was in a position for the first time since D-day to launch an attack of all three regiments abreast.

This was but one of the portents indicating that the days of the North Korean People’s Army were numbered. Exactly three months had passed since the invasion of the Republic of Korea, and now the forces of the Communist puppet state were reeling under blows from two directions. While X Corps pounded inland to seize the NKPA main communications hub, the Eighth Army had smashed through the Pusan Perimeter and was driving northward to place the enemy between two fires.

The big break in South Korea came on 23 September. Up to that time, the NKPA 5th, 8th, 12th, and 15th Divisions had put up a stubborn resistance on the northern front of the Pusan Perimeter against six ROK divisions. Then the enemy crumpled and the ROKs began an advance (see map in end papers) that would take them 70 miles during the ensuing week.[1]

It was much the same story along the Kumchon-Taejon axis of the central front. There the U.S. I Corps, comprising the U.S. 24th Infantry and 1st Cavalry Divisions, the 1st ROK Division, and the British 27th Brigade, drove a deep salient into the line of the 1st, 3d, 13th, 10th, and 2d NKPA Divisions. UN gains of 35 miles were made from the 22d to the 25th.

In the south the U.S. 2d and 25th Divisions had hurled the NKPA 6th, 4th, 9th, and 7th Divisions back from the vicinity of Masan to the Chinju area. This gain of about 15 miles from 21 to 23 September was only a prelude as the two U.S. divisions pressed their advantage against a retreating enemy.[2]

The ultimate purpose of the joint Eighth Army and X Corps offensive must already have been made alarmingly apparent to NKPA generals. Not only was the Eighth Army salient along the Kumchon-Taejon axis being extended northwest, but a X Corps regiment was driving southeast toward a junction. This was the 31st Infantry of the 7th Infantry Division, which had been given the mission of following in the trace of the 32d, then wheeling southward toward the Suwon area to meet the elements of the 1st Cavalry Division spearheading the Eighth Army advance. Thus was the drawstring being rapidly pulled on the remnants of the invading NKPA army, soon to have its main routes of escape cut off by UN forces.
Chapter 13. Seoul as a Battlefield
Two More River Crossings

After nearly a week of commanding a division in combat on both sides of an unbridged tidal river, Generals Smith and Craig now had a consolidated front north of the Han, with RCT–1 on the right, RCT–5 in the center, and RCT–7 on the left. The 11th Marines was in position on the south bank. The 1st, 3d, and 4th Battalions lined up northwest of Yongdungpo, while the 2d Battalion and the U.S. Army 96th Field Artillery emplaced to the east of that shattered suburb.[3]

Two more river crossings took place on 25 September. First, the 32d Infantry of the 7th Infantry Division moved to the north bank in accordance with the revised Corps plan. The Marine 1st Amphibian Tractor Battalion (less Company B) and the Army’s Company A, 56th Amphibian Tractor Battalion had to make a 25-mile round trip that night to bring the troops to an embarkation point about 5,000 yards east of the railroad bridge at Yongdungpo. Scattered enemy small-arms and artillery fire was received during the crossing, resulting in a few casualties among crews and soldiers. The LVTs took the troops about 200 yards inland, where they advanced on foot to their objectives on South Mountain without encountering any opposition other than long-range harassing fires.[4]

Later that same day the 17th ROK Regiment, under the control of the 7th Infantry Division, crossed in the LVTs. It was hoped by United Nations leaders that this unit, known as the Seoul Regiment, could take part in the liberation of the ROK capital. Apparently the second river crossing of the day alarmed the enemy, for it drew mortar and artillery fire in greater volume and accuracy than had been encountered before.

The support given to the two crossings by the 1st Amphibian Tractor Battalion was commended by General Barr in a letter to General Smith. “Despite long hours, loss of sleep, maintenance difficulties, and exposure to fire,” said the commanding general of the 7th Infantry Division, “the personnel of your battalion performed so magnificently that I have nothing but praise to offer. If at any time in the future elements of this Division are called upon to cross a river, it is my sincere wish that they may be supported by the 1st Amphibian Tractor Battalion.”[5]

From South Mountain the troops of the 32d Infantry looked down upon the city. They could not enter as yet because of the danger of interfering with the fires of the 1st and 5th Marines. But the 32d and the ROK unit were assigned a zone of action by Corps for an advance on the right of the Marines when the time came for a concerted effort.
The Inchon-Seoul Operation

Chapter 13. Seoul as a Battlefield
Division Attack of 25 September

At 0700 on the 25th the 1st Marine Division launched the final phase of its attack on Seoul. The following objectives were assigned by Division OpnO 11–50:

RCT–1, with the 2d KMC Battalion attached, was to seize the part of Seoul within its zone of action and Objective ABLE, consisting of the high ground beyond the northeastern outskirts and about six miles from the jump-off positions. The zone of action, ranging from a mile to a mile and a half wide, carried the attack through the heart of the city, with South Mountain on the right and Ducksoo Palace on the left. Mopping-up operations were assigned to the KMCs, who would revert to their own regimental control afterwards.

RCT–5, with the Division Reconnaissance Company and 1st KMC Battalion attached, was to seize that part of Seoul within its zone of action and Objective BAKER, comprising the high ground overlooking the Seoul-Uijongbu road six miles from the line of departure. About a mile and a half wide, this zone included the northwest section of the city and the Government Palace, though the regiment would be operating in open country after an advance of about two miles. The KMCs were to be used for mopping up after RCT–5.

RCT–7 had the mission of protecting the left flank of the Division and seizing Objective CHARLIE—the high ground astride the Seoul-Kaesong road about six miles northwest of the center of Seoul in the vicinity of Chonsong-ni.

The KMC Regiment (less the 1st and 2d Battalions) was designated the division reserve. It was to be prepared to resume control of detached battalions and occupy Seoul.

The 3d Battalion, 187th Airborne RCT, with Special Operations Company attached, was to continue under operational control of the 1st Marine Division and protect the Corps left flank west and south of the river Hah.[6]

Following the artillery and air preparation, 3/5 and 2/5 jumped off abreast from left to right in an attack on the remaining defenses of the Hill 296 complex. Roise’s objective was Hill 105–N. He was to be supported by fires from Taplett’s men, attacking down the slopes of Hill 296 in an advance that would eventually pinch out the 2d Battalion, which would go into reserve. The 1st Battalion had completed its relief of 3d Battalion elements on Hills 216 and 296, thus placing it in position to move up on the left of the 3d.[7]

During the air strikes, VMF–214 had its second pilot fatality in two days when Lieutenant Colonel Lischeid was shot down in flames over the western edge of the city. His death brought to light a curious train of circumstances. It was recalled that the squadron had lost its first pilot on D-plus 2 when enemy fire killed Captain Simpson in plane No. 17. Two days later, while inspecting the new No. 17 on the flight deck of the Sicily, Technical Sergeant George C. Underwood received a mortal wound from an accidental discharge of the guns. Major Robert Floeck was flying this Corsair when he met his death on 23 September, but the machine was saved. And it was in plane No. 17 that the squadron commander crashed on the 25th. This was enough for Captain John H. Thach of the Sicily, and he issued an order banning the number forever on the carrier.[8]

Within two hours of Lischeid’s death, two other squadron commanders were shot down, Lieutenant Colonel Wyczawski of VMF–212 and Lieutenant Colonel Volcansek of VMF(N)–542. Both escaped with moderate injuries, but in the space of a few minutes Volcansek had pressed his luck within a hair’s breadth of the point of no return. Wounded, his plane badly damaged by enemy fire from Seoul, the squadron commander stubbornly led his flight in two more passes on Red positions. Approaching Kimpo, he was forced to keep the battered F7F–3N at almost 200 knots—twice the landing speed—to prevent its stalling.
There was no alternative but to bail out. When he jettisoned the canopy, his altimeter needle wavered around the 1,000-foot mark. Slipstreams from the twin engines pinned him to the cockpit as the plane continued losing altitude. In desperation he kicked violently at the stick with both feet. The aircraft lurched downward and Volcansek was thrown clear, the big tail of the machine missing him by inches as both plummeted earthward. A few seconds after the officer’s chute opened and broke the fall, his feet touched earth a few miles northwest of Kimpo. Within 45 minutes he was aboard a helicopter rattling back to the airfield.

It was the last day for the Sicily and VMF–214 in the Inchon-Seoul operation. That evening the CVE left the area for maintenance work, and the Badoeng Strait took over with VMF–323.

Easy Company led the attack of 2/5 on the 25th, with Dog on the left and Fox in reserve. The advance was supported by a platoon of tanks as well as fires from 3/5 on Hill 296. An effective artillery preparation aided the advance, but Captain Jaskilka’s men were enfiladed by enemy mortar and automatic fire from Hill 72. Lieutenant Deptula’s platoon led the assault and seized this position by 1335 after suffering heavily along the way. Lieutenant Seydel commanded the remnants of Dog Company which jumped off from Smith’s Ridge and took Hill 88 at 1320.

While Fox Company moved up to occupy Hill 72, an airstrike was called on Hill 105–N at 1310, and the artillery bombardment began 15 minutes later in preparation for the final assault by Easy Company. Second Lieutenants James W. Epley and Samuel L. Eddy, Jr., led the advance with their platoons, and Hill 105–N was reported as secured at 1545.

The 2d Battalion, with the exception of Deptula’s platoon had met moderate opposition as compared with the last two days. It was in the zone of the 3d that the enemy put up his most stubborn resistance on 25 September. George and How Companies, the latter on the exposed left flank, led the attack on the remaining NKPA positions along the two southeastern spurs of Hill 296. Initial progress was slow, the attackers being harassed by long range fires from Hill 338 on the left and 105–N on the right. Lieutenant Colonel Murray directed the battalion to hold up until the situation around 105–N clarified. Resuming the attack against mounting resistance on the left, at 1435, the two companies reached their objectives two hours later and made contact with 2/5 on the right.

Since 105–N capped the terminus of the lower of 3/5’s two spurs, the whole length of the 1,000-yard projection was tagged with that number. This fact accounts for both Roise and Taplett reporting that they were in possession of the height. Actually, 2/5 was on 105–N, and George Company of 3/5 held an unnumbered peak to the north on the same ridge.

Company H, in moving down the huge spur on the open left flank, had taken heavy casualties before reaching its objective, an intermediate peak. Just as Item Company was passing through to continue the attack at about 1700, the Marines were hit hard by a force of 200 Reds, who advanced under cover of accurate supporting fire. The close-in fire fight raged until after nightfall, and both depleted companies were hard-pressed to hold their own. Weakened by the loss of 100 dead, the enemy finally withdrew, thereby allowing Item Company to take over the front line while How reverted to battalion reserve.

Thus, the 3d Battalion was now in position to pinch out the 2d on the morrow and to trace Item Company’s spur into the very heart of Seoul. In preparation for the assault of Hill 338, Newton’s 1st Battalion had shifted to the regimental left, where, with the Division Recon Company and the 1st KMC Battalion, it blocked the precipitous approaches to 216 and 296.

In the zone of the 7th Marines, the 2d Battalion had jumped off at 0630 and occupied Objective CHARLIE at 1215 without meeting resistance. Patrols of the 1st Battalion devoted the day to reconnoitering the area between RCT–7 and RCT–5, maintaining contact with both. The 3d Battalion was employed defensively along roads and trails in an arc around the ferry crossing site at Haengju.
Chapter 13. Seoul as a Battlefield
Tank Victory on Hill 105-S

In preparation for the attack of the 1st Marines, the 3d Battalion moved forward before daybreak in a column of companies. Passing eastward through the 2d Battalion, Ridge’s men began a sharp wheel to the north. The 1st Battalion, on Hill 79, withdrew slightly, pivoting on its left flank in order to reorient its direction of attack and tie in with the 3d Battalion on the left.

Thus did RCT–1 carry out the Corps plan of maneuver on the morning of the 25th by making a 90-degree change of direction, after advancing eastward to Hill 79, and driving straight northward toward the heart of Seoul. It was necessary to jump off without tank support, however, since the assigned armor had been delayed by a fight on the way.

The 2d and 3d Platoons of Captain Bruce F. Williams’ Baker Company, 1st Tank Battalion, had crossed the river at the Haengju ferry on the 24th. Reports of enemy mines along the railroad leading into Seoul caused Lieutenant Babe’s 2d Platoon of Company C Engineers to be attached to the tanks. And since the column was to pass through the zone of the 2d Battalion, 5th Marines, a depleted infantry platoon of Company F was attached under the command of Staff Sergeant Arthur Farrington.

Owing to the shift of 1/5, a gap existed at this time between the zones of the 1st and 5th Marines; and the little task force entered this area with the infantry at the point and the engineers sandwiched between the tanks—a total of some 50 men supporting the armor. About half of the gap between the regiments had been safely traversed when the head of the column received a few scattered shots from the slope of Hill 105–S.

After being supposedly secured by 1/5, with a final mopping up by 3/1, this troublesome position now erupted into enemy small-arms fire that could only have come from at least a company-size pocket of resistance. Lieutenant Babe was severely wounded before he could carry out his plan of sending Farrington’s platoon around to envelop the left flank of the NKPA troops entrenched on the slope. After Technical Sergeant Pasquale Paolino took command of the engineers, his men and the infantry platoon were so badly outnumbered that Captain Williams considered pulling them inside the tanks and withdrawing. Then it occurred to him to send a flamethrower tank, escorted by Staff Sergeant Altaire’s M–26, around the enemy’s left flank by way of a primitive trail leading southward from the railway tracks.[15]

This maneuver had a spectacular success. The flame tank moved into a position enabling it to sear the length of the NKPA trenches with bursts of napalm. When the terrified Red Koreans fled down the slope, they became targets for the machine guns of Lieutenant Cummings’ platoon of tanks.

Sergeants Paolino and Farrington had meanwhile been organizing an infantry and engineer base of small-arms fire from men taking cover along the railroad embankment and the lower slopes of the hill. The engineer NCO noticed that enemy grenades were being lobbed from three thatched huts below the NKPA trenches on the left flank. Closer inspection revealed the mouth of a cave, concealed by the third house and extending back into Hill 105–S.

Paolino, after getting Williams’ permission to direct tank fire, banged on the hull of Cummings’ M–26 and indicated the huts and mouth of the cave as targets. A few 90mm rounds destroyed the huts; but before Cummings could fire into the cave, eight or ten NKPA soldiers came out with upraised hands. When they were allowed to surrender unharmed, the example had an amazing effect as a seemingly endless file of enemy troops poured out of the cave. Altogether, 131 prisoners were taken, in addition to an estimated 150 killed, on a hill first reported secured two days before. Apparently the undiscovered cave had provided a refuge for nearly 300 Red
Koreans.

Among the captives, as the Marines discovered later were two women in uniform who had evidently been armed. Because of the NKPA reputation for treachery, it was considered necessary to search them; but they were treated with respect and provided with garments more appropriate to their sex. In spite of the consideration shown them, the incident resulted in sensational articles in stateside publications after the women reached the rear and claimed mistreatment on the grounds that they were nurses.

Two wounded engineers and an infantry casualty were the price of the Marine success after a surprise encounter had been turned to the disadvantage of the enemy. Since the NKPA prisoners were more than double the numbers of the engineers and infantry, they were placed between two M–26s when the column resumed the march.

It was 1200 when Cummings reported to Colonel Puller at the intersection of the railroad and a boulevard with street car tracks leading into the heart of the city. The tanks took the lead, joining 3/1 in its fighting advance up both sides of the north–south boulevard. Enemy mines knocked out two of the M-26s, one of them being Cummings’ tank, but both were retrieved in spite of heavy NKPA fire.

Successive road blocks consisting of earth-filled rice bags were stubbornly defended by enemy infantry supported by NKPA automatic, AT, and mortar fire from the roof tops. The Marines pressed forward methodically and by evening the 3d Battalion had penetrated about 2,000 yards into the city to occupy positions astride the streetcar line and on the western slopes of Hill 97. The 1st Battalion, on the high ground to the right, had advanced about 2,000 yards when both assault units tied in for the night with defensive positions on Hill 82. The 2d Battalion, as regimental reserve, deployed in the rear of the 1st to protect the right flank and rear.[16]
The Inchon-Seoul Operation

Chapter 13. Seoul as a Battlefield
Night Attack Ordered by Corps

The battle for Seoul took a sudden and unexpected new turn at 2009 on the night of 25 September 1950 when the following X Corps flash (plain) message was received at the CP of the 1st Marine Division:

“Info addressee (X Corps TacAir Commander) reports enemy fleeing city of Seoul on road north of Uijongbu. . . He TacAir] is conducting heavy air attack and will continue same. You will push attack now to the limit of your objectives in order to insure maximum destruction of enemy forces. Signed Almond.”[17]

The Division G–3 immediately called the Corps G–3 for corroboration. Colonel Bowser questioned the ability of night air observation to determine whether the movement out of the city consisted of urban refugees or enemy troops. He was informed, however, that the intention of Corps was for the attack to begin at once.

General Smith then called the X Corps chief of staff for confirmation, pointing out the inadvisability of attacking at night in an unfamiliar Oriental city of the size and complexity of Seoul, particularly as there was no indication of the enemy fleeing from the Division front. But General Ruffner replied that General Almond himself had dictated the message and it was to be executed without delay.[18]

General Smith gave the attack order to the commanding officers of the 1st and 5th Marines, directing them to coordinate their efforts and confine them to avenues of advance which could be identified at night. His order was receipted by the 1st Marines at 2205 and the 5th Marines at 2215 just a few hours after the NKPA counterattack hit the 3d Battalion of Murray’s regiment.

While the two rifle regiments made preparations to jump off, the order was relayed to the 7th and 11th Marines. Colonel Puller coordinated hastily with the 5th Marines and supporting arms for an attack scheduled to begin at 0145 on 26 September, following a 15-minute artillery preparation.[19]

At 0138, deciding that the preparation was inadequate, he notified the assault battalions to “stand fast, preparatory fires to be repeated.” A new jump-off time of 0200 was set, but at 0153 a dramatic interruption came in the form of a flash message from the 3d Battalion of the 1st Marines. Lieutenant Colonel Ridge reported that a heavy enemy attack, supported by tanks and self-propelled guns, was moving down the main avenue leading from the center of the city to the southwest in the zone of the 1st Marines.[20]

It was the enemy’s misfortune that 3/1 had sent out a patrol of eight Marines and three natives under Corporal Charles E. Collins to make contact with a similar patrol from the 5th Marines. But at 0130 the clamor of a fire fight about 400 yards in front of 3/1 was followed by the return of members of the patrol who gave the alarm. Corporal Collins was still missing when Major Simmons heard the sound of tracked vehicles and was warned that two enemy tanks were approaching the George Company roadblock defended by heavy machine guns, 3.5-inch rocket launchers and 75mm recoilless guns.[21]

These weapons accounted for the destruction of one enemy tank and the hasty retreat of the other. The Division attack scheduled for 0200 was indefinitely postponed, of course, until 3/1, astride the principal avenue of approach, could deal with a large-scale enemy counter-attack launched by an estimated battalion of infantry and about 12 tanks supported by self-propelled guns and mortars. A terrific concentration of Marine artillery was called down upon an NKPA effort that reached its peak about 0230. High-angle Marine howitzer and 81mm mortar fire almost literally blasted the attacking column out of existence, and enemy infantry action was negligible afterwards.[22]

At 0315 the artillery liaison officer informed Puller that the three battalions of the 11th Marines must cease barrage fire at the penalty of burning out the tubes of their howitzers. During the comparative lull the T–34s
continued to attack at intervals until daybreak, and the last two tanks were killed at 0630. [23] About that time Corporal Collins returned safely after having been given up as dead. Exposed to friendly as well as enemy fire all night, he had made his way back through enemy-held areas in a disguise of Korean civilian garments.

POW interrogation and examination of the ground revealed that seven enemy tanks and two self-propelled guns were destroyed or disabled by Marine mines, rockets, mortars, or artillery. An estimated 475 to 500 infantry of the NKPA 25th Brigade had been killed and many more wounded, and the Marines took 83 prisoners at a relatively light cost in casualties. [24]

At 0500, as 3/1’s fight in the city was tapering off, another Red force of battalion strength hit the 2d Battalion, 32d Infantry, on South Mountain. A section of the Army unit’s front was overrun, but a counter-attack restored the line by 0700. Finally driven from the ridge, the North Koreans left behind 394 dead and 174 prisoners, according to the regimental report. [25]
On the morning of 26 September it may have occurred to some of the Marines that yesterday’s announcement by X Corps of the capture of Seoul was a bit premature. The lines of the Division remained where they were the night before, with only the difference that hundreds of enemy dead gave testimony of a busy night. Division OpnO 12–50, issued at 1230 on the 26th, directed a continuation of the attack on Seoul, the principal change from the last order being the commitment of the 7th Marines. This regiment, augmented by the Division Recon Company and 5th KMC battalion, was given the mission of pinching out the 5th Marines about 1200 yards beyond the Government Palace and attacking abreast of the 1st Marines toward the northeast. In the 7th’s zone of advance north of the city lay Objectives DOG (northern half of Hill 338), EASY (Hill 342), FOX (Hill 133), GEORGE (Hill 343), and BAKER (Hill 171)—as rugged an order of terrain as any outfit could be served. Puller’s regiment, with the 2d KMC Battalion attached, would drive northward from Hills 97 and 82 in lower Seoul, clear the center of the city, then wheel to the right to take Objective ABLE, Hill 133 in the northeastern outskirts.

The 5th Marines, with the 1st KMC Battalion attached, was to support Litzenberg’s attack until being pinched out, whereupon it had orders to assemble in Division reserve and relieve elements of the 7th Marines. The KMC Regiment was still under orders to resume control of its detached battalions for the occupation of Seoul. The 3d Battalion, however, was detached from the 1st Marine Division and ordered to report to the 3d Battalion, 187th Airborne RCT, for operational control in Kumpo Peninsula operations. Responsibility for the security of Kimpo Airfield now rested upon X Corps.[26]

Thus, the Marine front prior to the assault formed a semicircle extending from the Kaesong Highway in the northwest to Hill 82 in the south, and the concave side faced Seoul like a giant scythe poised to mow down the last remnants of NKPA resistance.

Colonel Litzenberg dispatched Dog Company of the 7th Marines southwest along the Kaesong Highway at 0630 on 26 September. The mission of the unit was to approach Seoul and make contact with the 5th Marines on the right. In the van of the column was the company machine gun officer, First Lieutenant William F. Goggin. For a while it seemed as though this untried unit was reaping the laurels earned by its battle-weary relatives of the 1st and 5th Marines, since hundreds of Koreans lined the highway to welcome the “victors” with resounding cheers.[27]

Progress was marked off rapidly in the absence of enemy resistance. The Marines passed through Hoengjoe-ri, and by 0900 the great slopes of Hill 296 loomed up on the right and those of 338 on the left. Tracing the road through the narrow valley between, the company approached the Sodaemun Prison at the northwest corner of Seoul. Suddenly the column came under machine-gun fire from a high tower about 400 yards down the road. The initial burst caused several casualties, including Lieutenant Goggin, and the Marines quickly deployed on both sides of the road. Several more enemy machine-guns and rifles opened up from hillside positions only a hundred yards away. Since the throngs of well-wishers along the highway had prevented the use of flank guards, Company D was caught flatfooted in the low ground by the hail of lead.

After a few minutes, other Red weapons began firing from the lower slopes of Hills 296 and 338, directly to the flanks, and encirclement seemed imminent. Dog Company’s commander, Captain Richard R. Breen,
reacted by ordering the 2d Platoon to attack the high ground around the prison. Simultaneously, First Lieutenant Paul P. Sartwell set up two 60mm mortars on the road and silenced one of the North Korean emplacements. Directing his crews from an exposed position, the young officer was wounded three times before finally being put out of action.

First Lieutenant Edward H. Seeburger closed on the prison with his 2d Platoon, while First Lieutenant Paul V. Mullaney’s 1st ascended the slopes of Hill 338 on the left. The 3d, under First Lieutenant James D. Hammond, Jr., remained in position along the road. When the assault platoons were stopped on the high ground by stiffening resistance, Company D settled down in an elongated perimeter for a battle of survival. There was no artillery support, but Marine air assisted by pounding the crescent of Red positions.

The S–3 of the 7th Marines, Major Raymond V. Fridrich, radioed Captain Breen and asked about the situation. Though now wounded himself, Breen stated that he could hold his ground. A small tank-infantry column was dispatched from regiment to reach the beleaguered force with ammunition and supplies. By this time, however, the Reds had set up in the rear of Dog Company, and the relief force was turned back.

Faced with the bleak fact that it was now surrounded, Company D withdrew 1000 yards to a defensible road cut between Hills 296 and 338. The Marines completed the move with their wounded and dead at 1600. After being resupplied by air drop in their tight perimeter, they prepared grimly for an all-night stand.

Elsewhere in the 7th Marines’ zone, 26 September would be remembered as much for exhausting marches and climbs as for enemy contacts. In the morning the 1st Battalion, under Lieutenant Colonel Davis, had taken over flank responsibility far to the northeast along the Kaesong highway, thereby relieving the 2d (less Company D) and 3d for the advance on Seoul. The 2d Battalion then moved out in trace of Dog Company, but according to plan veered leftward into the hills at Hoengjeoe-ri, one mile short of the ambush. While 2/7 reconnoitered the high ground above the village, Major Roach’s 3d Battalion completed an eight-and-a-half-mile forced march to gain an assembly area in preparation for the assault of northern Hill 338.

At 1400 Fox and Easy Companies of 2/7 attacked eastward from the height above Hoengjeoe-ri to seize Hill 343. After an advance of 1000 yards, they were stopped cold by heavy fire from the direction of Hill 338 to the south. Lieutenant Colonel Hinkle ordered 2/7 to dig in short of the objective, since any further progress would only make his right more vulnerable to the enemy guns on the flank.

Captain Thomas E. Cooney led Company G of 3/7 through Hoengjeoe-ri about 1700, circled the northern half of Hill 338, then launched a two-platoon assault on the crest. His Marines gained the north summit against no opposition, but Company H, led by Captain Nicholas L. Shields, was taken under fire in a draw to the right and held up on the slopes for the night.[28]
Chapter 13. Seoul as a Battlefield

Last Fight on Hill 296

While the 7th Marines were fighting uphill on 26 September, the 3d Battalion, 5th Marines, punched downward in a bitter contest to clear the last NKPA resistance from the Hill 296 complex. The attack was launched early in the morning after preparatory fires by artillery and 81mm mortars. Item Company on the left was to sweep the remainder of the giant spur which descended into the very heart of Seoul. George, upon jumping off from the ridge above Hill 105–N, would clear the low ground on Item’s right.

Dissatisfied with the accuracy of the preparatory barrages, and underestimating the enemy’s strength and determination, Captain McMullen called off supporting arms and based the success of his two-platoon assault on organic company weapons alone. No sooner had the Marines lunged downhill than great gaps were torn in the skirmish line by fire from swarms of North Koreans on the lower slopes. Both assault platoon leaders were wounded before an intermediate knoll was taken, and McMullen was forced to commit his reserve to bolster the hard-hit 3d Platoon on the right.

Continuing the attack under the personal leadership of its commander, the entire company waded into a maze of entrenchments manned by 200 enemy soldiers. In the close-in fighting that followed, the Reds were driven from their emplacements to seek cover farther down the spur. The depleted ranks of Item Company ground to a halt.

There followed a brief calm—abruptly shattered when the North Koreans rallied and counterattacked uphill against the company center. A wild melee enveloped the ridgeline, and the tactical situation gradually became a blur. Just as it seemed the Marines’ hold on the lower spur would be pried loose, Lieutenant Williamson plowed into the tumult at the head of a small supply party. Ammunition distributed in the heat of the fighting tipped the scales in favor of the Marines, but not before McMullen was carried from the field as a result of his seventh battle wound in two wars.

The heavy fighting finally eased toward the close of the day. Although the last organized defenses of the enemy were smashed, Company I was too badly battered to seize the tip of the spur before nightfall. Abreast on the right, First Lieutenant Charles D. Mize led Company G into defensive positions after a day of inching forward against stubborn opposition in the low ground. [29]

Other units of the 5th Marines experienced little action during 3/5’s day-long engagement. While the 2d Battalion mopped up in its zone south of the 3d, the 1st KMC Battalion moved into position between the latter and the Reconnaissance Company, now manning the topographical peak of Hill 296 in the northwest. To the rear of 3/5, the 1st Battalion enjoyed a quiet interlude in regimental reserve.
Early in the morning of 26 September, the 2d Battalion, 1st Marines, moved out of reserve to pass through the 3d on the streetcar line and continue the attack northward into the center of Seoul. On the right of Puller’s zone, 1/1 prepared to descend Hill 82 and clear the main railroad station and adjoining slopes of South Mountain, where increasing enemy activity had been noted below the positions of the 32d Infantry.[30]

Sutter’s unit completed the passage of lines at 0900 and attacked along the boulevard with Fox and Easy Companies in the assault. Leading the advance up the street were the tanks of Baker Company, Cummings’ M–26 in the van. The young officer’s machine had proceeded only a few yards when it struck an American M6 mine, overlooked by Marine engineers while they were removing their hasty field of the previous night. Not only did the explosion wreck the tank, but it also caused several casualties among the infantry on either side.

The attack edged forward in the second day of the “Battle of the Barricades.” Every 200–300 yards, fanatical Red detachments manned rice-bag barriers about eight feet high and five feet thick, stretching the whole width of the street. It fell to the M–26s to smash the emplacements and silence the NKPA antitank guns behind each one. Marine tank action in turn hinged on mine clearance by supporting engineers, who looked to flanking infantry for covering fire. Thus was a system of three-party teamwork developed and perfected during the roar of battle.

Aiding the Communists behind the barricades were other North Koreans who fired their rifles and submachine guns from roof tops, windows, and side streets. The Marine infantry, therefore, had to defend in every direction as it attacked to the front. Intense heat from burning buildings along the street added to the handicaps, and the constant discovery of South Korean civilians, including women and children, huddled in the rubble further strained the taut nerves of men who looked for trouble from every quarter.

It was a dirty, frustrating fight every yard of the way, perhaps best described by Puller himself, who reported that “progress was agonizingly slow.” A principal deterrent to speed was the fact that all supporting tanks simultaneously expended their ammunition and fuel, so that all had to return to the rear for replenishment at the same time. During their absences from the fight, the infantry understandably chose to await their return rather than pay heavily in casualties by assaulting barricades with small arms alone.

At one point in the street battle, an enemy soldier darted from behind a building and charged a flame tank advancing behind two lead M–26s. Ignoring the Marine infantrymen, who gaped in disbelief, the North Korean hurled a huge satchel charge over the engine compartment of the armored vehicle, then escaped unharmed as the explosion rocked the area. The flame tank was wrecked, but the crew escaped serious injury with the assistance of supporting infantry. Apparently a suicide squad of NKPA demolitions men had been assigned the mission of destroying Marine armor in this fashion, for several other Red soldiers tried single-handed assaults shortly afterwards. The riflemen of 2/1 were alert for the later attempts, however, and the enemy fanatics were cut down before inflicting further damage.

The crucial period in the 2d Battalion’s day-long fire fight came as Captain Goodwin C. Groff’s Fox Company approached a street junction below Hill 97. It had been planned that this unit would advance through the intersection and continue along the streetcar line, while Company E, moving behind in column, veered off on the right branch. Enemy resistance against Fox’s advance proved so fierce that Captain Norman R. Stanford by-passed the fork and threw Easy Company’s weight in support of the other unit. The North Korean strong point crumbled under the two-company onslaught, but not before Stanford and several others were added to the casualty
By dark, 2/1 had measured off a hard-won gain of 1200 yards. Lieutenant Colonel Sutter ordered the battalion into defensive positions astride the boulevard a scant 100 yards from the tip of the ridge spur which was costing Item Company, 5th Marines, so dearly.

In the right half of Puller’s zone on 26 September, the 1st Battalion stamped out a hornets’ nest around the main railroad station, nestled at the foot of South Mountain. Charlie Company had led off the early morning attack in the wake of a preparation by air, artillery, and mortars. After descending Hill 82 in a column of platoons, the company formed on line along a stream paralleling the rail yard. Then, at a signal from Captain Wray, the platoons crossed over, wheeled to the north, and advanced up the tracks by leaps and bounds.

Though the over-all intensity of enemy resistance in this quarter could be termed only moderate, the random deployment of the Reds among buildings and train cars made the going slow and costly for the Marines. After clearing out the yard, the attackers converged on the station house itself and drove the last North Koreans from the building during a sharp exchange. The interior of the bullet-pocked structure produced only a handful of enemy dead, but in one corner were heaped the bodies of several South Korean women and children. It was obvious that the latter had been gunned by Communist executioners, since their sheltered location within the building was ample protection against the small arms of the advancing Marines.

By darkness, Company C was in undisputed control of the railroad terminal, a patrol led by Lieutenant Carlon having mopped up the fringe area. To the right, Company A had secured the park promontory on the northwestern tip of South Mountain in conjunction with Baker Company’s drive which included the nose jutting out below.

East of the 1st Marines, the 32d Infantry’s zone was the scene of considerable activity throughout 26 September. After the 2d Battalion repulsed the enemy’s pre-dawn counterattack, the 3d jumped off at 0800 from positions a mile and a half east of South Mountain. Its objective, Hill 106, lay more than 3000 yards away, just south of the highway leading eastward out of Seoul. Approaching the base of the ridge, Company L surprised and destroyed a strong NKPA position, while Company I swept up the objective itself against light opposition.

Reaching the summit, the company commander called an air strike on an enemy column marching out of Seoul on the highway. As the planes broke up the Red formation, Company L, reinforced with tanks and additional infantry, drove down the road to mop up and block the escape route.

In the day-long attack, 3/32 and its supporting armament accounted for 500 enemy dead, five tanks, 45 vehicles, three artillery pieces, and two ammunition dumps, according to regimental reports. The remainder of the 32d, now augmented by the 2d Battalion, 17th Infantry, in addition to the 17th ROK, saw spots of heavy fighting during the mop-up and consolidation on and around South Mountain. Casualties for the 32d, as reported on 26 September, were six KIA, 92 WIA, and three MIA. Most of those reported the following day—32 KIA, 33 WIA, and nine MIA—could also be traced to action on the 26th.

Thus the Army regiment, having been impressively blooded in its eight days of action, could lay claim to clearing both South Mountain and that 15 per cent of Seoul’s built-up area east of the great height.

In the course of the day, the 1st Marines had made patrol contact with the 5th Marines in the left rear and with Army elements atop South Mountain on the right flank. Prospects for the morrow appeared much brighter at Division and Corps levels, where there must have existed some apprehension over the complicated maneuvering which had denied the attackers a solid front until they were in the heart of the sprawling capital.
The twenty-seventh of September dawned as the day of reckoning. Applicable to the tactical situation in Seoul was the old law of physics, that two bodies cannot occupy the same space at the same time. With X Corps troops pouring into the city and environs to share them with the Communist garrison, it was axiomatic that one side or the other would shortly have to go.

Oddly enough, despite the electrified atmosphere, the night of 26–27 September had passed quietly, even for Dog Company, 7th Marines, isolated in the road cut between Hills 296 and 338. At dawn a tank-infantry team supported by engineers of Company D, 1st Engineer Battalion, advanced down the Kaesong Highway against negligible resistance and escorted the beleaguered rifle company back to the 7th Marines CP at Hoengieo-ri.

While the anticlimatical “rescue” was taking place, the 3d Battalion jumped off in the attack, supported by fire from the 2d on the left, to clear the northern reaches of Hill 338. How Company pressed forward up the draw on George’s right but was stalled by heavy fire which suddenly erupted on the slopes above. The 3d Platoon, under Second Lieutenant Paul E. Denny, broke through in its zone, only to be recalled by Shields when the rest of the company failed to regain the lost momentum. Captain Richard H. Sengewald’s Item Company, en route to take positions on the left of George, paused to assist Shields’ outfit for a short time. After further attempts by Company H to gain the summit were unsuccessful, Sengewald led his unit to the north and attacked the right flank of the NKPA elements scattered indiscriminately over the remote humps of Hill 338. The situation on the northern half of the towering objective did not change appreciably in the course of the day.

Colonel Litzenberg developed further pressure against the enemy’s right by ordering 2/7 to continue the attack against Hill 343 in mid-morning. On the right of the battalion zone, Captain Walter D. Phillips, Jr., led Company E forward in the face of stubborn enemy resistance from the crest. Owing to steady North Korean fire and the rugged terrain, gains were measured off by the yard, both for Phillips’ unit and for Captain Elmer J. Zorn’s Fox Company on the left. By nightfall, nevertheless, the Marines had mastered the situation to the extent that Company E sat firmly entrenched atop Hill 343—2500 yards from its starting point.

More force was applied to Litzenberg’s flanking lever north of Seoul when Company G was withdrawn from its ridgeline on Hill 338 and ordered to attack eastward to seize Hill 342, which loomed above the capital building in the northern tip of Seoul. Circling through the low ground north of Hill 338, the company passed safely through an extensive minefield that had been conveniently marked off by friendly South Koreans. As the Marines approached the base of their objective and came under heavy sniper fire, Captain Cooney ordered the 1st Platoon, under Second Lieutenant Arthur R. Mooney, to set up a base of fire on intermediate high ground in order to support an assault by the 2d and 3d.

The plan backfired, for the 1st Platoon became engaged in a hot fire fight as it moved toward the designated position. The two assault units fared no better when, without the expected covering fire, they were hit by a hail of lead on the lower slopes of Hill 342. Several officers and NCOs were killed or wounded within a matter of minutes, and the scattered fighting that continued until nightfall brought about no significant change in the local situation.

Thus, the day ended on Litzenberg’s “Seoul Front” with the 7th Marines in control of Hill 343 but sharing parts of 338 and 342 with the NKPA. The story would not be complete, however, without a brief visit to the regiment’s “Haengju Front,” several miles to the west, which had crackled with activity during the early
afternoon. About 1200, a company of North Koreans emerged from the northern hills and attacked toward the old ferry crossing at Hill 125. On the way the Reds had the misfortune to stumble into Captain David W. Banks’ Able Company of 1/7, manning a blocking position at Ryokoku. (See map of Han River crossing). To avoid the danger of infiltration in the bustling bridgehead, Lieutenant Colonel Davis promptly committed Company C, under Captain Richard F. Delamar, III.

Despite their disadvantages in numbers and fire power, the dogged Reds extended the fight sufficiently to involve even a platoon of Captain Myron E. Wilcox’s Baker Company. After a prolonged clatter, the engagement ended almost as abruptly as it had begun; and the immediate result was that all Communist troops above the ferry site withdrew to Kaesong.

The 7th Marines claimed 375 enemy killed and 34 taken prisoner in the fighting which ranged its vast front from 23 to 27 September. The spoils of war included the strangely unbalanced assortment of four machine guns, six rifles and 600 bayonets.

While the 2d and 3d Battalions of Litzenberg’s regiment struggled among the massive ridges north of Seoul on the 27th, the 1st and 5th Marines struck at the vital nerve center of the ROK capital. The regimental attacks through the center of the city began as separate thrusts in the morning, but as the day wore on they took on aspects of a coordinated foot race. It could even be said, finally, that the battle became a flag-raising contest between the two Marine units, as the last NKPA resistance died in heaps of rubble and torn rice bags.

At 0645, the 3d Battalion, 5th Marines, jumped off to clear the tip of Hill 296’s troublesome eastern spur. For the first time in longer than they cared to remember, the infantrymen were greeted not by a sheet of small-arms and machine-gun fire, but by occasional, erratic pops from the rifles of dispirited snipers. Groping through the smoke and haze boiling up from the shattered city, Companies G and I swept the high ground by 0730 and—at long last—slowly filtered through the first streets of western Seoul. In short order they were encountering the expected barricades and minefields. There was a hint of stiffening opposition, but it quickly dissolved as the riflemen, backed by supporting tanks and engineers, ground forward relentlessly.[37]

By 0930, George Company made contact with the 1st Marines on the right.[38] Less than an hour later, after wheeling northward 3/5 controlled Middle School and adjacent high ground—the springboard for the assault on the capital building 1000 yards away. At 1200, Lieutenant Colonel Taplett ordered Companies G and I to continue the attack, guiding on the two Red flags which whipped the wind defiantly on both sides of the great dome ahead. Meanwhile, the 1st Battalion moved up behind and prepared to advance on the left of the 3d. Its mission in the final assault was to seize the craggy peak of Hill 338, which reared upward on the left of the capital building like a grim fortress.[39]

On the right of the 5th Regiment, the 2d Battalion, 1st Marines had smashed through another series of rice-bag barriers on the boulevard and at 1057, the United States colors unfurled above the French Consulate. A furious fight exploded around the city’s main intersection, where the principal streetcar lines crossed to form an X not far from Middle School. Company D, spearheading 2/1’s drive, waded into the fray with determination. Lieutenant Cummings, who by this time appeared to have a remarkable affinity for heavy trouble, again lost his tank to enemy mines, but not before he had knocked out two Russian 76mm self-propelled guns emplaced in the middle of the intersection. Staff Sergeant MacDonald’s M–26 obliterated an NKPA truck with two 90mm rounds when the vehicle tried to escape with a howitzer and its crew.[40]

The afternoon of 27 September was a time of climax as the 1st Marine Division front surged forward of Middle School and the central intersection. Though beaten and faltering, the North Koreans still managed to fight stubbornly here and there; but their over-all deployment no longer bore any semblance of tactical integrity.

By early afternoon the Reds facing the 5th Marines broke and fled. Troops of 3/5 poured into the government compound, their final objective, and secured it at 1508. The North Korean flags were struck, and in their place rose the United States colors. Somewhat awed by the historic import of their accomplishment, young
Marine riflemen wonderingly probed the spacious halls and chambers of the huge building that shortly would be reoccupied by the government of the Korean Republic.[41]

On the left of the 3d Battalion, Company A of 1/5 had launched its attack on Hill 338 at 1300 in the wake of devastating preparations by air, artillery, and mortars. Second Lieutenant Nicholas M. Trapnell led off with the 1st Platoon, which seized an intermediate piece of high ground against moderate resistance. The 2d Platoon, under Second Lieutenant Edward E. Collins, then drove forward on the left of the ancient wall leading to the crest of the objective; but the attack was stopped by heavy mortar and small-arms fire. Marine air thundered down to rake the target with machine guns and rockets. The ground troops followed up with heavy concentrations of 60mm and 81mm mortars. Moving closely behind the supporting fire, the 1st Platoon overran a knob situated below the dominating peak. The 2d Platoon then resumed its advance on the left of the wall, and the 3d, under Technical Sergeant George W. Bolkow, took the lead on the right. It was the latter unit that smashed through the last resistance and secured the cliffs at the summit of Hill 338 at 1850.[42]

While the 5th Marines completed its final mission in Seoul, 2/1 on the right continued along the streetcar line which curved below the government buildings to run eastward to the far edge of the city. Since the 7th Marines had been slowed in the hills north of the capital, the expected tie-in on the left flank did not occur, and Puller’s troops had to go it alone through the dense maze of streets in eastern Seoul. At 1530 infantrymen of 2/1 raised the American flag over the Russian Consulate, just to the right of the curve in the boulevard. Seven minutes later the flag also waved above the United States Consulate, about 350 yards farther off on the flank.[43]

To the right of 2/1, the 1st Battalion was making good progress after a slow start against stiff opposition. Charlie Company had been held up at the outset in the neighborhood of the railroad station, but supporting tanks, including flame throwers, had paved the way by blasting and burning a formidable nest of NKPA automatic weapons and AT guns. One armored vehicle was disabled by a mine and another by antitank fire before the Marines finally broke through. As the battalion pivoted eastward in accordance with the general plan, both Charlie Company and Able on the right hammered through the usual barricades and suicide detachments.[44]

The 32d Infantry and elements of the 17th enjoyed a relatively quiet day on and around South Mountain, for these units had only to hold firm in their positions until the 1st Marines could complete its wheeling movement and come abreast, facing east.[45]

Shortly before 1630, 2/1 was pounding eastward through a stretch of the streetcar line south of the government compound. Fire poured into the ranks of Dog Company from three sides, and Marines sweltered in the heat of burning buildings that offered dubious protection. Corsairs screamed down to plaster enemy positions only a block ahead of the foremost infantry. Immediately after each pass by the gull-winged planes, Second Lieutenant Carl B. Thompson, Jr., led his 1st Platoon in the assault with covering fire provided by supporting tanks.[46]

There was a final surge up the street by the green-clad riflemen and BAR-men, and then it was all over. At 1630 enemy resistance across the 1st Regiment’s front abruptly collapsed, with the result that the Battle of Seoul came to an end. Snipers and bypassed pockets remained to be mopped up by the Marines, KMC units, and South Korean Police; but the NKPA had clearly quit the fight and abandoned the city. The 1st and 2d Battalions of the 1st Marines marched rapidly through desultory sniper fire to the eastern part of town, where they dug in for the night.[47]
AS RAPIDLY as the advance of the troops permitted, preparations were made for the restoration of civil
government to Seoul. A group of former city officials had arrived by plane from Pusan; and on 26 September,
Mayor Lee opened a temporary office in Yongdungpo. The police chief, construction engineer, and the health and
welfare officials also resumed their old duties.

Collecting points were set up for handling the civilian wounded. The following statistics, comprising the
patients treated for all causes by the 1st Medical Battalion of the 1st Marine Division, show that Korean civilians
were second in numbers only to the Marines themselves:

- U.S. Marine: 2,811
- Korean civilian: 1,908
- U.S. Army: 358
- KMC and ROK: 322
- U.S. Navy: 78
- POW: 39

The problem of food for a city with a pre-war population of a million and a half was met during the
advance when stores of rice and other supplies were turned over to Seoul officials by the Marines. Medical
supplies found in the city were redistributed for use in Seoul and Inchon hospitals as well as the hospital
established at Yongdungpo by Captain Hering, the Division Surgeon, expressly for the treatment of civilian
wounded.

A shipment of some 50 tons of rice through X Corps, plus large amounts located in Seoul by the Marines,
enabled the officials to take over without critical food shortages. On the 28th, Mayor Lee moved into the city hall
at Seoul and acted immediately to re-establish police authority, clear destroyed areas and provide for the
restoration of such public utilities as water and electricity. These prompt measures did much to ease the
hardships of thousands of returning refugees.
The 5th Marines passed an uneventful day on 28 September, having taken its assigned objectives and been pinched out by the 1st Marines on the right and the 7th Marines on the left, as planned. An assembly area was established in the vicinity of the Women’s University, and though the regiment sent out patrols, no enemy were encountered.[3]

The 7th Marines put in a busy day at seizing objectives which consisted of the high ground north of Seoul on both sides of the main highway from the capital to Uijongbu. Opposition was light to moderate, with the stiffest resistance occurring in areas which indicated that the enemy intended to put up a fight to protect his escape route to Uijongbu. Seventy-five tons of American-made dynamite and explosives, captured by the 7th Marines, were believed to have been originally supplied to the ROK forces before the war and abandoned during the NKPA invasion. Total advances for the day ranged from 1,500 yards in the zone of the 3d Battalion to 2,600 yards in the zone of the 2d Battalion.

When the 1st Marines jumped off at 0645 on the 28th, the 1st and 2d Battalions were in assault. The 3d Battalion remained in an assembly area in the rear and continued mopping up along with the 2d KMC Battalion. Although organized resistance in the city had been broken, the 1st Battalion met stubborn resistance from enemy groups and encountered many mines. The 2d Battalion, on the left, made headway against light opposition. These attacks cleared the remainder of Seoul and took the assault battalions to Hill 133 (Objective ABLE) commanding the city on the northeast.[5]

General Smith visited the CPs of all three regiments on the 28th by helicopter. He found Colonel Puller at the Ducksoo Palace, near the intersection of the streetcar lines. Colonel Litzenberg’s CP was located a short distance to the west, and Lieutenant Colonel Murray had established his headquarters in the Women’s University on the northwest outskirts of the city.

Later that day Generals Smith and Craig displaced the Division CP from Oeoso-ri to a barracks area in Seoul, southwest of South Mountain. The two Marine generals took over a former infirmary, but they decided that the mortuary slab was too depressing and had that fixture removed.[6]

Chapter 14. The Drive to Uijongbu
Liberation Ceremonies at Seoul

Planning for impressive liberation ceremonies at Seoul had begun while the street fighting was at its height. The 1st Marine Division was requested by Corps to furnish two honor guards and a band. Musical instruments having been left behind in Japan, air shipment was prescribed.[7]

General MacArthur had hoped to hold the liberation ceremony at Seoul on 25 September, just three months to the day after the launching of the NKPA invasion. The enemy, however, was not co-operative with respect to this date; and even on the morning of the 29th, three NKPA counterattacks were repulsed on the outskirts of the city. As it proved, General MacArthur vetoed plans for a ceremony with band music. “I will personally conduct the proceedings without being introduced,” said his message to X Corps, and he specified that there be no honor guard.[8]

Two pre-dawn counterattacks on the 2d Battalion, 1st Marines, were not auspicious beginnings for the day of the liberation exercises. The first occurred at 0445 on 29 September, when the OP, located on a spur projecting forward of the MLR and defended by a rifle platoon, was infiltrated by an estimated 70 to 100 NKPA troops. A second enemy attack hit the left flank of the battalion shortly afterwards. Both attempts were repulsed with total losses of 48 to the Communists, and the Marines had casualties of 4 KIA and 28 WIA, most of them resulting from hand grenades.[9]

Another assault, launched by the enemy at 0600 in the zone of action of the 7th Marines, was repulsed without trouble. Most of the fighting on 29 September was done by this regiment, which pushed forward to gain all the rest of its objectives before nightfall.

At dawn, in preparation for the liberation ceremony, Marine guards were unobtrusively stationed along the route of approach from the new floating bridge to the Government Palace. This duty fell chiefly on 3/1, with elements of the 5th Marines being responsible for security in the western part of the city.

General MacArthur and President Syngman Rhee drove directly to the Palace after separate arrivals at Kimpo Airfield. The guests included Korean dignitaries and United Nations officials in addition to high-ranking representatives of military organizations.

The commander in chief opened the ceremony with a moving five-minute address ending with the Lord’s Prayer. The rumble of artillery could be heard at times, and some of the guests glanced up apprehensively at the shattered skylight overhead.

“Occasional falls of glass from the dome and drifting smoke and ashes were part of the scene,” commented a Marine officer. “Unheeded noise of rifle shots punctuated the talks. Grim Marines from Puller’s regiment surrounded the seated audience. . . . The youth of the guards was offset by the tall, gray-haired figures of Generals Smith and Barr at the front of the audience. They were patently the men who had borne precisely and capably the load of decision.”[10]

With the 1st Marine Division still responsible for security, it was a relief to General Smith when the distinguished visitors departed unharmed. Not all the mines had been removed from the streets as yet, and it was suspected that snipers might still be lurking in the ruins.[11]
Chapter 14. The Drive to Uijongbu
Crumbling of NKPA Resistance

Although more hard fighting lay ahead in the Inchon-Seoul operation, X Corps alerted its major units on 29 September to the possibility of a new amphibious landing on the east coast of Korea. This was one of the earliest announcements of the planning which led to the Wonsan landing and the advance to the Chosin Reservoir, but the history of those events belongs in the next volume of this series.

The new operation was suggested by the rapid disintegration of the main body of the NKPA invasion forces. In a single day, 26 September, elements of the 1st Cavalry Division had advanced more than 100 miles; and a total of about 23,600 prisoners were taken by the Eighth Army before the end of the month. Enemy resistance was still encountered, to be sure, and sometimes it was of a desperate nature as Red Korean troops fought to escape encirclement. But all hope and heart had gone out of the Communist cause. One Eighth Army column sliced across the peninsula to Kunsan while other spearheads drove northward and ROK units pushed up the east coast nearly to Samchok. NKPA opposition was crumbling everywhere as demoralized invasion troops threw away their weapons and changed to civilian clothes in the hope of making their way to North Korea through the ever tightening Eighth Army cordon.[12]

The X Corps troops in the Seoul area had enough on their hands to finish the old operation before starting a new one. 1st Marine Division OpnO 13–50, issued at 2000 on 29 September, provided for the securing of the captured city by these means:

1. a continuation of the attack to the east;
2. the conduct of reconnaissances in force to the north and northwest;
3. the relief of elements of the 7th Infantry Division north of the river Han;
4. the seizure of prescribed blocking positions.[13]

The Division plan of maneuver called for the three Marine rifle regiments to take blocking positions forming a rough semi-circle defending Seoul from three sides—the 5th Marines to the northwest, the 7th Marines to the north, and the 1st Marines to the northeast. Responsibility for the area north of the Han river and west of the Pukhan River had passed to the 1st Marine Division, and at 1500 on 30 September the following missions were assigned by OpnO 14–50:

“RCT–1—To protect the right flank of the Division and be prepared to assemble in Division reserve by battalions for a motor lift. Blocking positions, as assigned by OpnO 13–50, consisted of high ground from two to five miles northeast of Seoul.

“RCT–5—To continue reconnaissance in force with minimum of a reinforced battalion to Suyuhyon and establish a blocking position; to protect the left flank of the Division; and to be prepared to provide a reinforced rifle company for Task Force Kumpo, on order. These attachments to be made: 1st Battalion, 11th Marines, and one battery of 50th AAA Battalion, USA; Company A, 1st Tank Battalion; Company A, 1st Engineer Battalion; and a company from the 1st Motor Transport Battalion.

“RCT–7—To advance rapidly and seize blocking positions in the vicinity of Uijongbu. These attachments to be made: 3d Battalion, 11th Marines, and one battery of 50th AAA Battalion, USA; Company D, 1st Tank Battalion; and one company of the KMC Regiment.

“The KMC Regiment (less the 1st and 3d Battalions and one company of the 5th Battalion, with a detachment of ANGLICO attached) was meanwhile to advance to the east and seize blocking positions at the junctiton of the Han and Pukhan rivers where the road leading northeast from Seoul reaches that point. The 1st
KMC Battalion had been attached to the 7th Infantry Division, and the 3d Battalion was operating on the Kumpo Peninsula.

“Task Force Kumpo, when activated on Division order, was to consist of the 3d KMC Battalion and Battery C, 50th AAA Battalion, USA, plus a 5th Marines rifle company and a tank detachment, if required. As it proved, however, X Corps held responsibility for the defense of this area until 2 October, when the 187th Airborne RCT was relieved by Task Force Kumpo.”[14]

Two more small fire fights awaited the 5th Marines in carrying out the missions assigned by Division OpnO 14–50. At 1030 on 1 October, while patrolling the extensive area of regimental responsibility, a detachment of 2/5 made contact with an NKPA force estimated at 150 to 200 men. Air strikes and mortar fire soon took the fight out of the enemy, who left 30 dead behind.

At 0600 on 1 October the 3d Battalion, reinforced with a battery of artillery and a platoon of tanks and engineers, moved out toward Suyuhyon. Charlie Company of 1/5 followed in trace to protect the battalion rear and provide security for returning motor transport.

Two road blocks were cleared before the battalion tied in for the night on high ground just short of the objective. Then, at 0230 the next morning, the enemy struck in estimated company strength. The attempt was repulsed by machine-gun fire, and 67 Red Korean bodies were found at daybreak in the attack area. At 0700 the column resumed the march to Suyuhyon, which was occupied without further incident.[15]

The 1st Marines found little difficulty in carrying out all missions assigned by Division OpnO 14–50. In fact, the regiment had only a few minor patrol actions after taking blocking positions northeast of Seoul.

Colonel Litzenberg’s men were now making the main effort of the 1st Marine Division. Preparations for the drive to Uijongbu began with every indication that the enemy was bent upon flight. A patrol from the 3d Battalion found 30 Korean bodies beside a wall, including several women and a child, whose hands had been bound behind them before they were shot. The victims, according to a POW, were members of the families of ROK soldiers.[16]

Positions had been consolidated by the late afternoon of 30 September in readiness for the jump-off in the morning. The 7th Marines might well have been called Task Force Litzenberg at this stage for it was reinforced by Major Parry’s 3d Battalion of the 11th Marines, Captain Lester T. Chase’s Company D of the 1st Tank Battalion, Captain Byron C. Turner’s Company D of the 1st Engineer Battalion, and Captain Kim’s Company C of the 5th KMC Battalion.

The drive to the new objective began at 0630 on 1 October in a column of battalions. Air reconnaissance had made it appear likely that any NKPA resistance would probably take advantage of a tactical bottleneck, about halfway to Uijongbu, where steep and rocky ridges overlooked a narrow defile through which the road passed. Colonel Litzenberg and his staff decided to maneuver by sending the 1st Battalion to make a broad feint to cover the entry of the 3d Battalion into the defile with tank support while the 2d Battalion followed in reserve.

Lieutenant Colonel Davis secured his preliminary objectives, then swiftly spread out on both sides of the defile for his feint. Unfortunately, Major Roach was delayed by an enemy mine field, which brought the 3d Battalion and the tanks to a halt while the engineers cleared the way. Davis’ simulated attack had meanwhile disclosed that the enemy was entrenched in depth along the high ground on each side of the defile. Both Marine battalions took heavy NKPA artillery and mortar fire before halting for the night.[17]

Click here to view map

At least the day’s attacks had unmasked the enemy’s positions and exposed them to savage attacks by the Corsairs of VMF–312. RCT–7 continued the attack at 0630 on the 2d, with Roach on the left of the road and Davis on the right. About halfway through the defile the 3d Battalion was pinned down by a concentration of NKPA artillery, mortar, and small-arms fire. Again the tanks were held up while the engineers cleared away
mines, working in a hail of bullets. The tanks of the 1st Platoon repaid the favor by closing in on two huts sheltering NKPA troops and killing an estimated 35. Here an attached dozer tank, without blade, had a freakish accident when two men in the turret were wounded by enemy fire down a 105mm gun tube while the breech was open.

The 1st Battalion managed to cross the stream east of the defile and seize the high ground just beyond. But the day ended with gains of only 300 yards in the defile.

Roach’s men returned to the attack in the morning, supported by the tanks of the 2d Platoon. Again VMF–312 flew one close air support sortie after another. Major Charles E. McLean was hit by enemy AA fire but crash-landed his plane in friendly territory. First Lieutenant Robert O. Crocker was killed in action shortly after being brought down by NKPA small-arms fire.

VMF–312 fliers intercepted an enemy convoy and First Lieutenant Franklin Stratton reported the destruction of seven out of eight trucks. The tanks also gave the infantry helpful support, firing 167 90mm rounds during the day and an estimated 20,000 machine gun rounds at enemy troops along the ridge.

While 1/7 cleared the high ground on the east side of the road and 3/7 on the west side, Colonel Litzenberg directed Major Webb D. Sawyer [18] to pass between them with 2/7 and drive directly along the highway. Progress was satisfactory from the start. When Sawyer’s men began to overrun abandoned NKPA artillery pieces and supply dumps, they pounded ahead with the realization that enemy resistance was broken.

At five that afternoon the 2d Battalion entered the ruins of Uijongbu, evacuated by the enemy. The last large-scale fight of the Inchon-Seoul operation had ended in a smashing victory for the Division’s youngest regiment.

Identifications showed that the Marines had been opposed by three battalions of the 31st Regiment of the 31st NKPA Division. Elements of the 17th and Seoul Divisions and of an artillery battalion were also encountered. These troops had been supported by 13 tanks, of which four were killed by Marine air attacks and two captured in a damaged condition by 2/7 after the others escaped.

The three-mile advance of RCT–7 on 3 October had resulted in the cutting of lateral communications to the east and west of Uijongbu and the securing of an important blocking position on the X Corps final phase line. Losses of 13 killed and 111 wounded were suffered by the regiment in the three-day fight.
Chapter 14. The Drive to Uijongbu

Last Days of Inchon-Seoul Operation

The climax of the battle was witnessed by General Cates, who visited the front on 3 October, accompanied by Major Generals Edwin A. Pollock and Clayton C. Jerome. After being briefed at the Division CP by the G–1, G–2, G–3, and G–4, the Commandant inspected the positions of RCT–1 and RCT–5 by helicopter before taking a jeep tour along the road to Uijongbu to watch Colonel Litzenberg’s men slug their way forward into the battered town.[19]

That evening the fighting virtually came to an end, for the 1st Marine Division had a total of only seven casualties during the last four days of the Inchon-Seoul operation. The rifle regiments had only to maintain their blocking positions while patrolling to front and flank.

Operations on the Kumpo Peninsula, which had been sputtering intermittently ever since the occupation of the airfield, also drew to a close.[20] Responsibility for the area having passed from Corps back to Division on 2 October, elements of the 187th Airborne RCT were relieved by Task Force Kumpo, consisting of the 3d KMC Battalion, a detachment from the 1st Signal Battalion, and Battery C of the 50th AAA Battalion, USA.

Naval gunfire had found its greatest mission of the exploitation phase in support of the widely assorted units which protected the left flank of X Corps at various times. The 187th, being short on artillery, had relied on the naval gunfire and spot teams commanded by Lieutenant (jg) Leo D. McMillan, USN, and First Lieutenant J. E. Dolan, of the 2d Battalion, 7th Marines. These officers and their men remained with Task Force Kumpo after it relieved the 187th, but patrols reported no enemy contacts after 2 October. The chief activity on the peninsula was listening to the baseball games of the World Series, which came in clearly over the radios of the naval gunfire teams.[21]

As directed on 5 October by OpnO 15–50, the last to be issued by the Division in the Inchon-Seoul Operation, the major Marine units were scheduled to close into staging areas in Inchon as follows:

5th Marines: 1800 on 5 October
11th Marines: 1700 on 6 October
1st Marines: Prior to darkness, 6 October
7th Marines: Midafternoon, 7 October
KMC Regiment: Prior to darkness, 7 October

An impressive ceremony was held on the 6th, when the cemetery established by the Marines on the outskirts of Inchon was taken over by the United Nations. After an invocation by Chaplain R. M. Schwyhart of the 1st Marine Division, General Almond made a few remarks and laid a wreath on the grave of an unknown soldier. Then General Smith, General Barr, and Colonel Lee performed the same ceremony over Marine, Army, and ROK graves. Volleys were fired, taps were sounded, and the dedication ended with the national anthems of the United States and Korea.[22]

There could be no doubt, as the Marines prepared to mount out for a new amphibious operation, that the NKPA invaders had been knocked out of the war by the combined X Corps and Eighth Army offensives. The Red Korean retreat had become a rout, and Marine staff officers considered it doubtful whether the enemy could hold the east coast port of Wonsan long enough to defend it against the proposed new Marine assault landing.[23]

It was apparent, in fact, that only the active intervention of Red China or the Soviet Union could save the North Korean People’s Republic from imminent collapse. At this time, however, it did not seem likely that any such attempt would be made.
And so it was that one of the most remarkable amphibious operations in Marine Corps annals came uneventfully to an end on 7 October 1950. Early in the morning the Division CP displaced from Seoul to a housing area just north of Ascom City. At 0935, in accordance with X Corps OpnO 5, General Smith reported to Admiral Doyle, ComPhib-Gru One, for duty as commander of the landing force for the proposed Wonsan assault. And at 1200 the Inchon-Seoul operation passed into history when the last troops of the 7th Marines were relieved in the Uijongbu area by elements of the Eighth Army.
At this stage the men of the 1st Marine Division and 1st Marine Aircraft Wing were still too close to the operation to see it clearly in detail. If there was any one overwhelming impression they all had in common, it was a sense of the speed with which events had raced toward a climax.

This was by no means an illusion. Hundreds of Marine reservists had watched baseball games or enjoyed picnics with their families on the Fourth of July, never dreaming that shortly after Labor Day they would be scrambling out of landing boats to assault a flaming Asiatic seaport on the other side of the earth!

Speed was an essential if the assault landing were to be completed on the prescribed D-day. But there was no place for the proverbial haste that leads to waste. It had to be the speed of precision—an acceleration of men and events made possible by the amphibious know-how of a Navy-Marine Corps team that had worked together throughout the Pacific operations of World War II.

Sometimes this acceleration was so unobtrusive as to pass almost unnoticed. Shipping does not grow on trees, particularly the enormous amounts of shipping required for a major amphibious operation. Yet the U.S. Navy made it appear a simple and routine matter to assemble from all the seven seas an invasion fleet made up of craft ranging from cruisers to rowboats.

The Marines, as the Landing Force, worked hand-in-hand with the Attack Force commanded by Rear Admiral James H. Doyle, who had no superior in the world of 1950 as an amphibious specialist. From preliminary planning to final execution, Doyle and his staff officers of PhibGru One supplied a precision which had much to do with the success of an operation holding so many potentialities of disaster.

Looking back, some of the Marine participants could hardly recall a full night’s sleep from 25 July 1950, the date of the order directing that the 1st Marine Division be brought up to full war strength, until 7 October 1950, when the operation came to a victorious end. From the mobilization at Camp Pendleton to the street fighting in Seoul, it was often necessary to utilize the hours of darkness ordinarily devoted to rest. At Kobe, for instance, there were so few copies of the plans for the Inchon landing that they were circulated on a 24-hour schedule for study by Marine officers who took turns.

The acceleration of the 1st Marine Division in 64 days from a peace-time basis to the capture of Seoul has been summarized as follows:

(a) Expansion from a reduced peace strength (less the 1st Provisional Marine Brigade) to a reinforced war strength, less one RCT, was completed in a period of approximately 15 days.

(b) Administrative sea lift and movement of over 15,000 personnel, organic equipment, and partial resupply from San Diego to the Far East Command commenced in less than three weeks after expansion was ordered.

(c) Debarkation and unloading from administrative shipping, and re-embarkation and reloading at Kobe, Japan for the assault landing at Inchon were done in a period averaging about seven days per unit, two days of which were lost due to a heavy typhoon in the Kobe area.

(d) Completed planning and the issuance of the complete operation order for the amphibious landing at Inchon were accomplished 17 days after the receipt of the initial directive.

(e) The 1st Provisional Marine Brigade was disengaged from active combat with the enemy on the South Korean front at midnight on 5 September, moved to Pusan, and unloaded in combat shipping in less than 7 days.
“(f) A successful assault landing was executed at Inchon, Korea, on 15 September under some of the most adverse landing conditions in the history of amphibious operations.

“(g) The Force Beachhead Line approximately six miles from landing beaches was seized within 24 hours after the main landing on Beaches RED and BLUE.

“(h) Kimpo Airfield, a primary objective of the operation in the 1st Marine Division’s zone of action, was captured 50 hours and 35 minutes after H-Hour, D-Day.

“(i) The first assault crossing of the Han River (400 yards wide at the crossing site) was executed by RCT–5, employing LVTs, DUKWs, and pontoon ferries, less than five days after landing at Inchon.

“(j) The remainder of the Division crossed the Han River without bridging, and after intense fighting completed the seizure of Seoul 12 days after landing at Inchon.

“(k) The effectiveness of the Marine air-ground team and close air support doctrine were reaffirmed with outstanding success.

“(l) The ability of Marine units to participate in extended land operations, provided additional transportation requirements are met during the emergency, was demonstrated in the Inchon-Seoul operation.”[24]

In any such summary, it is understood that credit for the accomplishments of the 1st Marine Division was shared by the 1st Marine Aircraft Wing. Two more days of fighting remained for the squadrons at Kimpo after the relief of the ground forces, since Marine air operations cover the period from 7 September to 9 October 1950. Altogether, 2,774 combat sorties were flown by the five Marine squadrons during this 33-day period, most of them in close support of infantry units. Following are the totals:

VMF–214: 16 days in action, 484 combat sorties
VMF–323: 22 days in action, 784 combat sorties
VMF–212: 19 days in action, 607 combat sorties
VMF–312: 10 days in action, 288 combat sorties
VMF(N)–542: 19 days in action, 573 combat sorties
TOTAL: 2,774 combat sorties[25]

“No enemy air operations of any significance were encountered,” stated the TAC X Corps report. “Some enemy antiaircraft fire from light to moderate was encountered. Most of this AA fire was of small caliber.”

Eleven Marine planes (not counting VMO–6 aircraft) were shot down by NKPA ground forces. Six pilots and a crewman were killed in action and two pilots wounded.

As an example of the types of missions, the 326 combat sorties flown by VMF–322 fell into these categories: close air support, 163; reconnaissance, 99; rescue cover, 18; deep support, 17; helicopter escort, 8; photo escort, 6; combat air patrol, 6; tactical air control, 4; leaflet, 2; R4D escort, 2; message drop, 2. In addition, the squadron was credited with 151 noncombat sorties.

There could be no question that Marine close air support had won the esteem of Army infantry units. Generals Harris and Cushman were the recipients of many spontaneous comments of appreciation from individuals as well as formal endorsements. (See Appendix L for the record.)

On the other hand, the Marines had cause to be grateful for the deep support and interdiction strikes provided by the Naval fast carrier planes of JTF–7 in combination with the Fifth Air Force, which was committed primarily to the support of the Eighth Army in South Korea. During the first two weeks of September, JTF–7 had responsibility for the gradual isolation of the Inchon target area by means of air operations conducted as far as 150 miles north of the objective and 100 miles to the south.

The air defense of our forces at sea and in the Inchon area, and the air interdiction operations of the first five or six days of the landing—these were carried out largely by Naval air effort under Commander JTF–7. Mutual assistance between JTF–7 and the Fifth Air Force was provided for, with coordination being achieved by the delineation of areas for each.[26]
VMO–6, under the control of the 1st Marine Division and administration control of MAG–33, completed a total of 643 helicopter and OY flights in 515 hours. Of the 139 seriously wounded men evacuated by helicopter from the firing line, a large proportion owed their lives to the speed and ease with which they were transported to the hospital. The helicopters also were credited with twelve rescue missions of friendly pilots shot down behind the enemy lines.[27]

In the long run, of course, it took the co-ordinated efforts of ground, air, and sea forces to win the final victory in one of the most unusual and difficult amphibious operations of all time. And though this book is limited to an account of Marine activities primarily, the Marines who took part would be first to acknowledge how much the final victory owed to the efforts of other ground forces—the U.S. Army units, the KMC Regiment, and the ROK contingents.

Many of these units, like the Marines, had been handicapped by a hasty build-up which allowed little or no time for special training and rehearsals. No greater feat of organization was recorded in 1950 than the creation of a new 7th Infantry Division from the bare bones of the old in only a few weeks. The Marines saw more of the 32d Infantry than General Barr’s other units, for it was this regiment which protected the right flank during critical periods of the advance on Seoul while elements of the 187th Airborne RCT were responsible for the security of the left flank.

The Army artillery units, amphibian tractor troops, and AAA companies also deserve their full share of credit for the victory. And though the Marines were not often in contact with the ROKs, they realized how much these allies had contributed, often under the most adverse circumstances.

Naturally, the Marines felt a special interest in the KMC Regiment, which they had trained and equipped. The KMCs repaid this feeling by the valor with which they fought in every phase of the operation from the mopping up of Inchon to the battle for Seoul.

The Inchon landing and its exploitation have been made the subject of a study by officers of the Marine Corps Schools at Quantico, who summed up the over-all effects as follows:

“(a) The amphibious envelopment at Inchon produced a decisive threat to the North Korean forces which led directly to the rapid disintegration of their front on the Pusan Perimeter. The 1st Marine Division was the landing force in this amphibious envelopment.

“(b) It completed the dislocation of the enemy’s entire logistical system by the capture of Seoul, which, together with the combat action of other UN forces, shattered the enemy in all of South Korea, causing the complete rout of the North Korean forces. The 1st Marine Division played a principal role in the capture of Seoul.

“(c) The successful completion of the campaign made available to UN forces the port facilities of Inchon and the extensive Seoul communications complex for carrying offensive action into North Korea.

“(d) By the direct action of the 1st Marine Division, the enemy’s potential was reduced by the capture of 4,692 POWs, by inflicting 13,666 casualties on the enemy, by destroying 44 tanks, and by destroying or capturing much other material.”[28]

In view of such far-reaching results, total casualties for the 1st Marine Division of 366 KIA, 49 DOW, 6 MIA, and 2,029 WIA cannot be considered excessive for an operation fraught with so many calculated risks. No man’s life was given in vain, for the Communist challenge to the free nations was met in Korea and the aggressors beaten so decisively that the world would soon have had peace except for the intervention of Red China.
The Inchon-Seoul Operation
Lynn Montross and Nicholas A. Canzona

Chapter 14. The Drive to Uijongbu
MacArthur’s Report to United Nations

Again it is worthy of emphasis that the victory was not won by any one nation or any one branch of the military service. As far as this country is concerned, the Inchon-Seoul operation was conducted jointly by the United States Army, Navy, Air Force, and Marine Corps. General Douglas MacArthur was spokesman for all of them late in September 1950, in these extracts from the Sixth Report of the Commander in Chief, United Nations Command, to the Security Council of the United Nations:

“Events of the past two weeks have been decisive. The strategic concepts designed to win the war are rapidly proving their soundness through aggressive application by our ground, sea, and air forces.

“The seizure of the heart of the enemy’s distributing system in the Seoul area has completely dislocated his logistical supply to his forces in South Korea and has quickly resulted in their disintegration. Caught between our northern and southern forces, both of which are completely self-sustaining because of our absolute air and naval supremacy, the enemy is thoroughly shattered through disruption of his logistical support and our combined combat activities.

“The obstacles to this wide envelopment were not only the enemy opposition, but also the natural obstacles of poor beaches fronted by miles of mud flats, a narrow channel and an extraordinary tidal range of over 29 feet. The success demonstrated a complete mastery of the technique of amphibious warfare, clockwork coordination, and cooperation between the units and services participating. There was nothing noteworthy about the North Korean opposition, but there could have been. The potential was there. The North Koreans were proceeding with the construction of coastal fortifications, dug-in tanks and guns of all calibers, beach defenses and mining operations. Had this development been delayed for as much as a month, the enemy would have been ready and the assault, if possible, would have been more costly to United Nations forces.”

At no time, not even when the United Nations forces were fighting with their backs to the wall at Pusan, did the commander in chief ever have any doubts as to the outcome. It was fitting, therefore, that he should have summed up the results of the combined Eighth Army and X Corps offensives in this conclusion written after the securing of Seoul:

“A successful frontal attack and envelopment has completely changed the tide of battle in South Korea. The backbone of the North Korean army has been broken and their scattered forces are being liquidated or driven north with material losses in equipment and men captured.”
Appendix A. Glossary of Technical Terms and Abbreviations

AAA(AW)Bn—Antiaircraft Artillery (Automatic Weapons) Battalion (USA)
AD—Destroyer Tender
AE—Ammunition Ship
AerialDelPlat—Aerial Delivery Platoon
AF—Air Force; Store Ship
AGC—Amphibious Force Flagship
AH—Hospital Ship
AK—Cargo Ship
AKA—Assault Cargo Ship
AKL—Cargo Ship—Light
AKS—Stores Issue Ship
AM—Minesweeper
AmphTracBn—Amphibious Tractor Battalion
AmphTrkBn—Amphibious Truck Battalion
AMS—Auxiliary Motor Minesweeper
ANGLICO—Air and Naval Gunfire Liaison Company
AO—Oiler
AOG—Gasoline Tanker
AP—Transport
APA—Assault Transport
APD—High Speed Transport
ARG—Repair Ship—Internal Combustion Engines
ARH—Repair Ship—Heavy Hull Damage
ARL—Repair Ship—Landing Craft
ArmdAmphBn—Armored Amphibian Battalion
ARS—Salvage Vessel
AT—Antitank
ATF—Ocean Tug—Fleet
AV—Seaplane Tender
AVP—Seaplane Tender, Small
Bchmstr Unit—Beachmaster Unit
BLT—Battalion Landing Team
Bn—Battalion
CA—Heavy Cruiser

CG—Commanding General

CICDet—Counter-Intelligence Corps Detachment (USA)

CinCFE—Commander in Chief, Far East

CinCPacFlt—Commander in Chief, Pacific Fleet

CL—Light Cruiser

CMC—Commandant of the Marine Corps

CNO—Chief of Naval Operations

CO—Commanding Officer

Co—Company

ComAirSupGrp—Commander Air Support Group

ComCarDiv—Commander Carrier Division

ComNavFE—Commander Navy Far East

ComPhibGruOne—Commander Amphibious Group One

CP—Command Post

C/S—Chief of Staff

CSG—Combat Service Group

CTF—Commander Task Force

CV—Aircraft Carrier

CVE—Aircraft Carrier—Escort

CVL—Aircraft Carrier—Light

DD—Destroyer

DDE—Escort Destroyer

DDR—Radar Picket Destroyer

DOW—Died of wounds

DUKW—Amphibious Truck

Emb Off—Embarkation Officer

EngrBn—Engineer Battalion

EngrPortConstCo—Engineer Port Construction Company (USA)

EngrSpecBrig—Engineer Special Brigade (USA)

ETO—European Theater of Operations

EUSAK—Eighth United States Army in Korea

FABn—Field Artillery Battalion (USA)

FAC—Forward Air Controller

FBHL—Force Beachhead Line

FEAF—Far East Air Force

FECOM—Far East Command

F4U—Vought “Corsair” Fighter
FMF—Fleet Marine Force (Pac-Pacific; Lant-Atlantic)
FO—Forward Observer
FSA—Fire Support Area
FSCC—Fire Support Coordination Center
F7F-3—Grumman “Tigercat” Night Fighter
Fum & Bath Plat—Fumigation and Bath Platoon
GCI—Ground Control Intercept
GHQ—General Headquarters
H & S Co—Headquarters and Service Company
HO3S-1—Sikorsky Helicopter
HqBn—Headquarters Battalion
HqCo—Headquarters Company
HqSq—Headquarters Squadron
InfDiv—Infantry Division (USA)
interv—Interview
JANIS—Joint Army-Navy Intelligence Studies
JCS—Joint Chiefs of Staff
JSPOG—Joint Strategic Planning and Operations Group
JTF—Joint Task Force
KIA—Killed in Action
KMC—Korean Marine Corps
LCM—Landing Craft, Mechanized
LCVP—Landing Craft, Vehicle and Personnel
LSD—Landing Ship, Dock
LSM—Landing Ship, Medium
LSMR—Landing Ship, Medium-Rocket
LST—Landing Ship, Tank

VMF—Marine fighter type aircraft (squadron)
VMF (N)—Marine night fighter type aircraft, all-weather (squadron)
VMO—Marine observation type aircraft (squadron)
VMR—Marine transport type aircraft (squadron)
WIA—Wounded in action
WP—White phosphorous
YMS—Motor Minesweeper
YTB—Harbor Tug, Big
YW—District Barge, Water (self-propelled)
Appendix C. Task Organization of Marine Division for Inchon Landing

In order to present a concise picture of the Task Organization of the 1st Marine Division (Reinf), FMF, for the period of 1 August-7 October 1950, task organizations are presented for the following five conditions:

(1) Completion of mobilization of the Division (less 1st Provisional Marine Brigade and RCT-7) at Camp Pendleton, Oceanside, California, 12 August.

(2) Organization for landing at INCHON, KOREA, 15 September.

(3) RCT-7 task organization on arrival INCHON, KOREA, 21 September.

(4) Intermediate temporary attachments and detachments during the period 15 September-7 October.

(5) Completion of INCHON-KIMPO-SEOUL operation on 7 October.

The detailed Task Organizations are as follows:

(1) Completion of Mobilization on WAR “K” series T/O, 12 August.

1st Marine Division, (Reinf) FMF

For attached Army units and 5th Marines (Reinf)

Individual Assault Type C: 5 days
   (Combat Unit Loaded: 5 days)

Operational Type B: 25 days
   (Unit Loaded: 25 days)

PX Accessories Pack: 30 days
   (Combat Unit Loaded: 5 days)
   (Unit Loaded: 10 days)
   (Convoy Loaded: 15 days)

For 1st Marine Division (Reinf) (Less Army elements and 5th Marines [Reinf]): 5 days

Operational Type B (Convoy Loaded)

Food Packet, Individual Assault 1A1: 2 days
   (In hands of individuals: 1 day)

Individual Combat, Type C: 10 days
   (Combat Unit Loaded: 5 days)
   (Unit Loaded: 5 days)

PX Accessories Pack: 30 days
   (Combat Unit Loaded: 5 days)
   (Unit Loaded: 10 days)
   (Convoy Loaded: 15 days)

Small Detachment 5 in 1 Type: 5 days
   (Unit Loaded: 5 days)

Individual Combat Type C
   (Convoy Loaded-Corps Reserve: 150,000 Rations)
   (In hands of 1st Serv Bn)

(2) Water

(a) All water containers filled, not less than 5 gallons per man combat loaded; 5 gallons per man to be unit loaded.

(b) Assault Elements: 2 filled canteens per individual.

(c) Others: 1 filled canteen.
b. Class II
(1) Essential Class II items as determined by unit commanders. Vehicles to be loaded on priority basis within available space.
(2) Initial (less chemical warfare) in hands of units.
(3) Chemical warfare in hands of 1st Serv Bn.
(4) 30 day replenishment in hands of appropriate service units.
(5) All distillation units to have high priority for unloading.
(6) No special services gear to be lifted in assault shipping.
(7) Tentage: not to exceed 10% of T/E allowance.
(8) Other Class II in accordance AdOrder 2-50.

c. Class III
(1) Vehicle tanks 3/4 full. Jeeps-1 filled expeditionary can (5 gal); all other vehicles: 2 filled cans (5 gal each).
(2) Replenishment: 30 days
   Assault units:
      (Combat Unit Load: 15 days)
      (Unit Load: 15 days)
   Other Units:
      (Combat Unit Load: 5 days)
      (Unit Load: 25 days)

d. Class IV
(1) In accordance with AdOrder 2-50.
e. Class V—5 units of fire
(1) Assault Units
   (Combat Unit Load: 2 U/F)
   (Unit Load: 3 U/F)
(2) Other than Assault Units
   (Combat Unit Load: 1 U/F)
   (Unit Load: 4 U/F)
(3) Flame thrower fuel: 15 U/F
   (Combat Unit Load: 5 U/F)
   (Unit Load: 10 U/F)

13-50, 29 Sep 50 (2000): Continuation of the attack to the east to secure Seoul and conduct a reconnaissance in force to the northwest prepared to relieve elements of the 7th Infantry Division north of the Han River. Seizure of prescribed Corps blocking positions
14-50, 30 Sep 50 (1500): Continuation of the attack and prescription of blocking positions to be occupied by the Division
15-50, 5 Oct 50: Movement of the Division to staging area in the vicinity of Inchon in anticipation of the move in assault shipping to Wonsan
The following messages, of a commendatory nature, were transmitted to the 1st Marine Division by the X Corps upon completion of the Inchon-Seoul Campaign.

*From CG, X Corps to CG, 1st Marine Division under date of 28 September 1950*

“On this date the X Corps attained one of its distinct objectives—the securing of the city of Seoul. In recognition of the heroic efforts of the officers and men of the 1st Marine Division I extend my deepest thanks and my continuing admiration for a task well done.” Signed Edward M. Almond, Major General, United States Army, Commanding.

*From the President to General MacArthur*

“I know that I speak for the entire American people when I send you my warmest congratulations on the victory which has been achieved under your leadership in Korea. Few operations in military history can match either the delaying action where you traded space for time in which to build up your forces, or the brilliant maneuver which has now resulted in the liberation of Seoul. I am particularly impressed by the splendid cooperation of our Army, Navy, and Air Force. I wish you would extend my thanks and congratulations to the commanders of those services—Lieutenant General Walton H. Walker, Vice Admiral Charles T. Joy and Lieutenant General George E. Stratemeyer. The unification of our arms established by you and by them has set a shining example. My thanks and the thanks of the people of all the free nations go out to your gallant forces—soldiers, sailors, Marines and airmen—from the United States and the other countries fighting for freedom under the United Nations Banner. I salute you all, and say to all of you from all of us at home, ‘well and nobly done.’ ” Signed Harry S. Truman.

*From the Joint Chiefs of Staff to General MacArthur*

“The Joint Chiefs of Staff are proud of the great successes you have achieved. We realize that they would have been impossible without brilliant and audacious leadership and without the full coordination and the fighting spirit of all forces and all arms. From the sudden initiation of hostilities you have exploited to the utmost all capabilities and opportunities. Your transition from defensive to offensive operations was magnificently planned, timed, and executed. You have given new inspiration to the freedom-loving peoples of the world. We remain completely confident that the great task entrusted to you by the United Nations will be carried to a successful conclusion.”

*From CG, X Corps to all units of the X Corps under date of 2 October 1950*

“It is desired that this message be disseminated to all members of your command. The achievements of
the U. N. forces comprising the X Corps should be a pride and inspiration to all who participated in the recent operations so successfully concluded and which resulted in the liberation of Seoul, the capital city of Korea. Your efforts have greatly contributed in freeing the Republic of Korea of the forces of Communism that threatened to enslave her people. Koreans may now take their rightful place among the freedom-loving people of the world. History will long remember the feat of arms that you, through your untiring efforts and superb valor have accomplished. I am proud of the units comprising the X Corps. Each of you should be proud of the unit in which you serve, the nation it represents, and your part in this military operation. I am confident that the tasks that are before us will be accomplished with the same splendid cooperation, leadership, and determination that you have so recently displayed.”

Signed Major General Edward M. Almond, Commanding General, X Corps.

---

Division Commander’s Message to the 1st Marine Division upon Completion of the Inchon-Seoul Campaign

On 8 October 1950, the Division Commander issued Division Memorandum No. 192-50, quoted below, in recognition of the accomplishments of the 1st Marine Division during the Inchon-Seoul Campaign:

“1. Upon completion of the campaign in the Inchon-Seoul area of Korea I desire to express my appreciation and admiration of the superb manner in which all hands have cooperated in bringing to a successful conclusion a very difficult operation.

“2. From the time the decision was made to bring the Division to war strength and to commit it in Korea until the city of Seoul was captured, urgency has been the order of the day. Urgency has been necessary because tidal conditions dictated that a landing at Inchon be made on September 15th. For the Division this meant that its elements in the United States had to be brought to war strength immediately, had to be re-equipped and, in the absence of amphibious shipping, had to be loaded on such other ships as could hurriedly be made available. Upon arrival in Kobe, Japan, there was the pressing necessity of reloading in minimum time in amphibious shipping, with the disruption caused by a destructive typhoon. Elements of the Division comprising the First Provisional Marine Brigade were not released from combat in South Korea until midnight of September 5th and between that date and September 12th were required to move to Pusan, re-equip and mount out.

“3. It is now history that the First Marine Division did meet its commitments, did land at Inchon on September 15th under conditions which required the maximum of coordination, aggressive action, and devotion to duty; went on to capture the Kimpo airfield three days after landing, to effect a difficult amphibious crossing of the Han River, and to liberate the city of Seoul by driving the North Korean invaders far beyond its limits.

“4. I fully appreciate, and I am sure the American people now fully appreciate and realize, that only well-trained and determined troops, completely devoted to duty, could have accomplished what the First Marine Division did in Korea. You have established your place in history. The memory of those who made the supreme sacrifice in the accomplishment of this mission will forever remain an inspiration to all Marines.”

Subject: Marine Air Support
To: Commandant, United States Marine Corps, Washington 25, D. C.
Thru: Commanding General, 7th Infantry Division, APO 7.

1. In my capacity as Division Artillery Commander and Fire Support Coordinator of the Seventh Infantry Division I have been able to observe closely the most effective system of close air support currently used by the Marines. During the period 19 September to 20 December 1950, close air support of this division was furnished almost exclusively by the First Marine Air Wing.

2. In an effort to parallel as nearly as possible the Marine system of controlling close support air this division had attached to it the Far East Detachment, ANGLICO, FMF, Atlantic. This detachment was augmented by nine (9) Tactical Air Control Parties, Fifth U. S. Air Force, trained in the Marine system of control by the ANGLICO detachment. This enabled the placement of Tactical Air Control Parties with each infantry battalion. Such placement proved to be ideal and gave the battalion commander a means of controlling and coordinating the close air support he received.

3. It is worthy to note that in 57 days of combat 1024 sorties were flown by Marine Aircraft in close support of the division without a single casualty among our own troops due to friendly air action. This record I attribute to the fact that adequate control was available with front line units. In many instances Marine planes were bombing and strafing within 200 yards of our front lines.

4. I wish to express my appreciation for the superior cooperation of Captain Charles E. Crew, 023897, USMC, Far East Detachment, ANGLICO, FMF, Atlantic and his enlisted assistants during the period 19 September 1950 to 20 December 1950. In his capacity as Marine Air Liaison Officer to the Seventh Infantry Division Captain Crew functioned as a member of the division team with a common objective. The excellent air support received by this division was due in no small part to the enthusiastic manner in which Captain Crew performed. Unfortunately, I was not able to observe the work of the other two Marine Forward Air Controllers attached to the division. Reports indicate that they performed equally as well.

5. Again, allow me to reemphasize my appreciation for the outstanding air support received by this division. The Marine system of control, in my estimation, approaches the ideal and I firmly believe that a similar system should be adopted as standard for Army Divisions.

[2nd Endorsement]
Headquarters, X Corps, APO 909, 16 January 1951
To: Commanding General, Eighth United States Army, APO 301

1. The effective close air support rendered by the 1st Marine Air Wing through the Forward Air Controllers with the 7th Infantry Division greatly aided in the successful accomplishment of X Corps operations. The actions of the personnel concerned are worthy of commendation, and I wish to add my appreciation for their assistance.

2. Further, I wish to emphasize the statements of General Kiefer in paragraph 5, basic letter, in which he endorses the Marine system of Tactical Air Control. It has proved itself on every occasion.

THE SECRETARY OF THE NAVY
WASHINGTON

The President of the United States takes pleasure in presenting the PRESIDENTIAL UNIT CITATION to the

FIRST MARINE DIVISION, REINFORCED

for service as set forth in the following CITATION:

“For extraordinary heroism in action against enemy aggressor forces in Korea from 15 September to 11 October 1950. In the face of a determined enemy and against almost insurmountable obstacles, including disadvantageous tidal and beach conditions on the western coast of Korea, the First Marine Division, Reinforced, rapidly and successfully effected the amphibious seizure of Inch’on in an operation without parallel in the history of amphibious warfare. Fully aware that the precarious situation of friendly ground forces fighting desperately against the continued heavy pressure of a numerically superior hostile force necessitated the planning and execution of this extremely hazardous operation within a period of less than thirty days, and cognizant of the military importance of its assigned target, the Division moved quickly into action and, on 15 September, by executing three well-coordinated attacks over highly treacherous beach approaches defended by resolute enemy troops, captured the island of Wolmi-do, the city of Inch’on and Kimp’o Airfield, and rendered invaluable assistance in the capture of Seoul. As a result of its aggressive attack, the Division drove the hostile forces in hasty retreat over thirty miles in the ensuing ten days, completely severed vital hostile communication and supply lines and greatly relieved enemy pressure on other friendly ground units, thereby permitting these units to break out from their Pusan beachhead and contributing materially to the total destruction of hostile ground forces in southern Korea. The havoc and destruction wrought on an enemy flushed with previous victories and the vast accomplishments in turning the tide of battle from a weakening defensive to a vigorous offensive action reflect the highest credit upon the officers and men of the First Marine Division, Reinforced, and the United States Naval Service.”

The following reinforcing units of the First Marine Division participated in operations against enemy aggressor forces in Korea from 15 September to 11 October 1950:

_Fleet Marine Force Units and Detachments:_ Radio Relay Platoon, 1st Signal Operations Company; Battery C, 1st 4.5 Inch Rocket Battalion; 1st Amphibian Truck Company; 1st Amphibian Tractor Battalion (less Company “D”); 1st Combat Service Group, Service Command; 1st Fumigation and Bath Platoon; 1st Aerial Delivery Platoon; 7th Motor Transport Battalion, Service Command; 1st Armored Amphibian Battalion; Detachment Marine Tactical Air Control Squadron Two; Team #1, First Provisional Historical Platoon; Marine Observation Squadron Six; Marine Aircraft Group Thirty-Three, Reinforced, including Headquarters Squadron Thirty-Three, Marine Service Squadron Thirty-Three, Marine Ground Control Intercept Squadron One, Marine
Fighter Squadron Two Hundred Twelve, Marine Fighter Squadron Two Hundred Fourteen, Marine Fighter Squadron Three Hundred Twelve, Marine Fighter Squadron Three Hundred Twenty-Three, Marine Night Fighter Squadron Five Hundred Thirteen, and Marine Night Fighter Squadron Five Hundred Forty-Two.

United States Navy Units: Naval Beach Group One.

United States Army Units: Detachment 205th Signal Repair Company; Detachment 4th Signal Battalion; 163rd Military Intelligence Service Detachment; Company “A” Reinforced, 56th Amphibian Tractor Battalion; 96th Field Artillery Battalion; 441st Counter-Intelligence Corps Detachment; 2nd Engineer Special Brigade; 73rd Engineer (C) Battalion; 50th Engineer Port Construction Company; 65th Ordnance Ammunition Company; 32nd Regimental Combat Team; Special Operations Company; 3rd Battalion, 187th Airborne Regimental Combat Team; and the 50th Antiaircraft Artillery Air Warning Battalion.

For the President,

FOREWORD

THE BREAKOUT of the 1st Marine Division from the Chosin Reservoir area will long be remembered as one of the inspiring epics of our history. It is also worthy of consideration as a campaign in the best tradition of American military annals.

The ability of the Marines to fight their way through twelve Chinese divisions over a 78-mile mountain road in sub-zero weather cannot be explained by courage and endurance alone. It also owed to the high degree of professional forethought and skill as well as the “uncommon valor” expected of all Marines.

A great deal of initiative was required of unit commanders, and tactics had to be improvised at times on the spur of the moment to meet unusual circumstances. But in the main, the victory was gained by firm discipline and adherence to time-tested military principles. Allowing for differences in arms, indeed, the Marines of 1950 used much the same fundamental tactics as those employed on mountain roads by Xenophon and his immortal Ten Thousand when they cut their way through Asiatic hordes to the Black Sea in the year 401 B.C.

When the danger was greatest, the 1st Marine Division might have accepted an opportunity for air evacuation of troops after the destruction of weapons and supplies to keep them from falling into the enemy’s hands. But there was never a moment’s hesitation. The decision of the commander and the determination of all hands to come out fighting with all essential equipment were in keeping with the highest traditions of the United States Marine Corps.

--Gen. R. McC. Pate, USMC, Commandant of the Marine Corps
The Chosin Reservoir Campaign

Lynn Montross and Nicholas A. Canzona

Preface

This is the third in a series of five volumes dealing with the operations of the United States Marine Corps in Korea during the period 2 August 1950 to 27 July 1953. Volume III presents in detail the operations of the 1st Marine Division and 1st Marine Aircraft Wing as a part of X Corps, USA, in the Chosin Reservoir campaign.

The time covered in this book extends from the administrative landing at Wonsan on 26 October 1950 to the Hungnam evacuation which ended on Christmas Eve. The record would not be complete, however, without reference to preceding high-level strategic decisions in Washington and Tokyo which placed the Marines in northeast Korea and governed their employment.

Credit is due the U.S. Army and Navy for support on land and sea, and the U.S. Navy and Air Force for support in the air. But since this is primarily a Marine Corps history, the activities of other services are described here only in sufficient detail to show Marine operations in their proper perspective.

The ideal of the authors has been to relate the epic of the Chosin Reservoir breakout from the viewpoint of the man in the foxhole as well as the senior officer at the command post. Grateful acknowledgment is made to the 142 Marine officers and men who gave so generously of their time by contributing 338 narratives, letters, and interviews. In many instances this material was so detailed that some could not be used, because of space limitations. But all will go into the permanent Marine archives for the benefit of future historians.

Thanks are also extended to the Army, Navy, and Air Force, as well as Marine officers, who offered valuable comments and criticisms after reading the preliminary drafts of chapters. Without this assistance no accurate and detailed account could have been written.

The maps contained in this volume, as in the previous ones, have been prepared by the Reproduction Section, Marine Corps Schools, Quantico, Virginia. The advice of officers of the Current History Branch of the Office of the Chief of Military History, Department of the Army, has also been of aid in the preparation of these pages.

--Maj. Gen. E. W. Snedeker, USMC, Assistant Chief of Staff, G-3
IT IS A LESSON of history that questions of how to use a victory can be as difficult as problems of how to win one. This truism was brought home forcibly to the attention of the United Nations (UN) heads, both political and military, during the last week of September 1950. Already, with the fighting still in progress, it had become evident that the UN armies were crushing the forces of Communism in Korea, as represented by the remnants of the North Korean People’s Army (NKPA).

Only a month before, such a result would have seemed a faint and unrealistic hope. Late in August the hard-pressed Eighth U.S. Army in Korea (EUSAK) was defending that southeast corner of the peninsula known as the Pusan Perimeter.

“Nothing fails like success,” runs a cynical French proverb, and the truth of this adage was demonstrated militarily when the dangerously over-extended NKPA forces paid the penalty of their tenuous supply line on 15 September 1950. That was the date of the X Corps amphibious assault at Inchon, with the 1st Marine Division as landing force spearheading the advance on Seoul.

X Corps was the strategic anvil of a combined operation as the Eighth Army jumped off next day to hammer its way out of the Pusan Perimeter and pound northward toward Seoul. When elements of the two UN forces met just south of the Republic of Korea (ROK) capital on 26 September, the routed NKPA remnants were left only the hope of escaping northward across the 38th parallel.[1]

The bold strategic plan leading up to this victory—one of the most decisive ever won by U.S. land, sea and air forces—was largely the concept of General of the Army Douglas MacArthur, USA, who was Commander in Chief of the United Nations Command (CinCUNC) as well as U.S. Commander in Chief in the Far East (CinCFE). It was singularly appropriate, therefore, that he should have returned the political control of the battle-scarred ROK capital to President Syngman Rhee on 29 September. Marine officers who witnessed the ceremony have never forgotten the moving spectacle of the American general and the fiery Korean patriot, both past their 70th birthdays, as they stood together under the shell-shattered skylight of the Government Palace.[2]
“Where do we go from here?” would hardly have been an oversimplified summary of the questions confronting UN leaders when it became apparent that the NKPA forces were defeated. In order to appraise the situation, it is necessary to take a glance at preceding events.

As early as 19 July, the dynamic ROK leader had made it plain that he did not propose to accept the pre-invasion status quo. He served notice that his forces would unify Korea by driving to the Manchurian border. Since the Communists had violated the 38th Parallel, the aged Rhee declared, this imaginary demarcation between North and South no longer existed. He pointed out that the sole purpose of the line in the first place had been to divide Soviet and American occupation zones after World War II, in order to facilitate the Japanese surrender and pave the way for a democratic Korean government.

In May 1948, such a government had come about in South Korea by popular elections, sponsored and supervised by the UN. These elections had been scheduled for all Korea but were prohibited by the Russians in their zone. The Communists not only ignored the National Assembly in Seoul, but also arranged their own version of a governing body in Pyongyang two months later. The so-called North Korean People’s Republic thus became another of the Communist puppet states set up by the USSR.

That the United Nations did not recognize the North Korean state in no way altered its very real status as a politico-military fact. For obvious reasons, then, all UN decisions relating to the Communist state had to take into account the possibility of reactions by Soviet Russia and Red China, which shared Korea’s northern boundary.

At the outbreak of the conflict on 25 June 1950, the UN Security Council had, by a vote of 9–0, called for an immediate end to the fighting and the withdrawal of all NKPA forces to the 38th Parallel. This appeal having gone unheeded, the Council on 27 June recommended “... that the Members of the United Nations furnish such assistance to the Republic of Korea as may be necessary to repel the armed attack and to restore international peace and security in the area.” It was the latter authorization, supplemented by another resolution on 7 July, that led to military commitments by the United States and to the appointment of General MacArthur as over-all UN Commander.

These early UN actions constituted adequate guidance in Korea until the Inchon landing and EUSAK’s counteroffensive turned the tide. With the NKPA in full retreat, however, and UN Forces rapidly approaching the 38th Parallel, the situation demanded re-evaluation, including supplemental instructions to the military commander. The question arose as to whether the North Koreans should be allowed sanctuary beyond the parallel, possibly enabling them to reorganize for new aggression. It will be recalled that Syngman Rhee had already expressed his thoughts forcibly in this connection on 19 July; and the ROK Army translated thoughts into action on 1 October by crossing the border.

The UN, in its 7 July resolution, having authorized the United States to form a unified military force and appoint a supreme commander in Korea, it fell upon the Administration of President Harry S. Truman to translate this dictum into workaday reality. Aiding the Chief Executive and his Cabinet in this delicate task with its far-reaching implications were the Joint U.S. Chiefs of Staff (JCS). The Army member, General J. Lawton Collins, also functioned as Executive Agent of JCS for the United Nations Command in Korea, thus keeping intact the usual chain of command from the Army Chief of Staff to General MacArthur, who now served both the U.S. and
Late in August, two of the Joint Chiefs, General Collins and Admiral Forrest P. Sherman, USN, had flown to Japan to discuss the forthcoming Inchon landing with General MacArthur. In the course of the talks, it was agreed that CinCUNC’s objective should be the destruction of the North Korean forces, and that ground operations should be extended beyond the 38th Parallel to achieve this goal. The agreement took the form of a recommendation, placed before Secretary of Defense Louis Johnson on 7 September.[6]

A week later, JCS informed MacArthur that President Truman had approved certain “conclusions” relating to the Korean conflict, but that these were not yet to be construed as final decisions. Among other things, the Chief Executive accepted the reasoning that UN Forces had a legal basis for engaging the NKPA north of the Parallel. MacArthur would plan operations accordingly, JCS directed, but would carry them out only after being granted explicit permission.[7]

The historic authorization, based on recommendations of the National Security Council to President Truman, reached General Headquarters (GHQ), Tokyo, in a message dispatched by JCS on 27 September:

“Your military objective is the destruction of the North Korean Armed Forces. In attaining this objective you are authorized to conduct military operations, including amphibious and airborne landings or ground operations north of the 38th Parallel in Korea, provided that at the time of such operations there has been no entry into North Korea by major Soviet or Chinese Communist Forces, no announcement of intended entry, nor a threat to counter our operations militarily in North Korea. . . .”

The lengthy message abounded in paragraphs of caution, reflecting the desire of both the UN and the United States to avoid a general war. Not discounting the possibility of intervention by Russia or Red China, JCS carefully outlined MacArthur’s courses of action for several theoretical situations. Moreover, he was informed that certain broad restrictions applied regardless of developments:

“. . . under no circumstances, however, will your forces cross the Manchurian or USSR borders of Korea and, as a matter of policy, no non-Korean Ground Forces will be used in the northeast provinces bordering the Soviet Union or in the area along the Manchurian border. Furthermore, support of your operations north or south of the 38th parallel will not include Air or Naval action against Manchuria or against USSR territory. . . .”[8]

Thus MacArthur had the green light, although the signal was shaded by various qualifications. On 29 September, the new Secretary of Defense, George C. Marshall, told him in a message, “. . . We want you to feel unhampered tactically and strategically to proceed north of 38th parallel. . . .”[9]
Chapter 1. Problems of Victory
Surrender Message to NKPA Forces

Meanwhile, a step was taken by the U.S. Government on 27 September in the hope that hostilities might end without much further loss or risk for either side. By dispatch, JCS authorized MacArthur to announce, at his discretion, a suggested surrender message to the NKPA. [10] Framed by the U.S. State Department, the message was broadcast on 1 October and went as follows:

“To: The Commander-in-chief, North Korean Forces. The early and total defeat and complete destruction of your Armed Forces and war making potential is now inevitable. In order that the decision of the United Nations may be carried out with a minimum of further loss of life and destruction of property, I, as the United Nations Commander-in-Chief, call up on you and the forces under your command, in whatever part of Korea situated, forthwith to lay down your arms and cease hostilities under such military supervision as I may direct and I call upon you at once to liberate all United Nations prisoners of war and civilian internees under your control and to make adequate provision for their protection, care, maintenance, and immediate transportation to such places as I indicate.

“North Korean forces, including prisoners of war in the hands of the United Nations Command, will continue to be given the care indicated by civilized custom and practice and permitted to return to their homes as soon as practicable.

“I shall anticipate your early decision upon this opportunity to avoid the further useless shedding of blood and destruction of property.”[11]

The surrender broadcast evoked no direct reply from Kim Il Sung, Premier of North Korea and Commander in Chief of the NKPA. Instead, the reaction of the Communist bloc came ominously from another quarter. Two days after MacArthur’s proclamation, Red China’s Foreign Minister Chou En-Lai informed K. M. Panikkar, the Indian Ambassador in Peiping, that China would intervene in the event UN forces crossed the 38th Parallel. He added, however, that such action would not be forthcoming if only ROK troops entered North Korea. [12]

It will be recalled that the JCS authorization of 27 September permitted operations north of the Parallel”. . . provided that at the time of such operations there has been no entry into North Korea by major Soviet or Chinese Communist Forces, no announcement of intended entry, nor a threat to counter our operations militarily in North Korea. . . .”[13] In view of the last two provisos, MacArthur’s plans for crossing the border could conceivably have been cancelled after Chou’s announcement. But optimism over the course of the war ran high among the United Nations at this time, and CinCUNC shortly received supplemental authority from both the UN and JCS—the one establishing legal grounds for an incursion into North Korea, the other reaffirming military concurrence at the summit. In a resolution adopted on 7 October, the United Nations directed that

“All appropriate steps be taken to ensure conditions of stability throughout Korea and all constituent acts be taken . . . for the establishment of a unified, independent and democratic Government in the Sovereign State of Korea. . . .”[14]

Since the enemy had ignored his surrender ultimatum, MacArthur could attend to the UN objectives only by occupying North Korea militarily and imposing his will. JCS, therefore, on 9 October amplified its early instructions to the Commander in Chief as follows:

“Hereafter, in the event of open or covert employment anywhere in Korea of major Chinese Communist units, without prior announcement, you should continue the action as long as, in your judgment, action by forces
now under your control offers a reasonable chance of success. In any case you will obtain authorization from Washington prior to taking any military actions against objectives in Chinese territory.”[15]
The Chosin Reservoir Campaign
Lynn Montross and Nicholas A. Canzona

Chapter 1. Problems of Victory
MacArthur’s Strategy of Celerity

Anticipating his authority for crossing the 38th Parallel, CinCUNC on 26 September had directed his Joint Special Plans and Operations Group (JSPOG) to develop a plan for operations north of the border. He stipulated that Eighth Army should make the main effort in either the west or the east, and that however this was resolved, there should be an amphibious envelopment on the opposite coast—at Chinnampo, Wonsan, or elsewhere.[16] Despite recommendations of key staff members, MacArthur did not place X Corps under EUSAK command for the forthcoming campaign but retained General Almond’s unit as a separate tactical entity under GHQ.[17]

JSPOG, headed by Brigadier General Edwin K. Wright, MacArthur’s G-3, rapidly fitted an earlier staff study into the framework of CinCUNC’S directive. And the following day, 27 September, a proposed Operation Plan (OpnPlan) 9–50 was laid before the commander in chief.[18] This detailed scheme of action evolved from two basic assumptions: (1) that the bulk of the NKPA had already been destroyed; and (2) that neither the USSR nor Red China would intervene, covertly or openly.

Eighth Army, according to plan, would attack across the 38th Parallel, directing its main effort in the west, along the axis Kaesong-Sariwon-Pyongyang (see Map 1). JSPOG designated the latter city—capital of the People’s Democratic Republic of Korea—as final objective of the first phase. Further, it recommended that EUSAK’S drive begin in mid-October, to be followed within a week by a X Corps amphibious landing at Wonsan on the east coast. After establishing a beachhead, Almond’s force would attack 125 road miles westward through the Pyongyang-Wonsan corridor and link up with General Walker’s army, thereby trapping North Korean elements falling back from the south.[19]

JSPOG suggested that both commands should then advance north to the line Chongju–Kunuri–Yongwon–Hamhung–Hungnam, ranging roughly from 50 to 100 miles below the Manchurian border. Only ROK elements would proceed beyond the restraining line, in keeping with the spirit and letter of the 27 September dispatch from JCS.[20]

Major General Doyle O. Hickey, acting as CinCUNC’S chief of staff during General Almond’s tour in the field, approved the JSPOG draft of 28 September. It thereby became OpnPlan 9–50 officially. MacArthur forwarded a summary to JCS the same day, closing his message with this reassurance:

“There is no indication at present of entry into North Korea by major Soviet or Chinese Communist Forces.”[21]

Within three days, he received word from the Joint Chiefs that they approved his plan.[22] On 2 October it became the official operation order for the attack.[23]
Chapter 1. Problems of Victory
Logistical Problems of Advance

On 29 September, the day before he received the JCS endorsement of his plan, General MacArthur arrived in Seoul to officiate at the ceremony restoring control of South Korea to the legal ROK government. During the visit, he met with the principals named in the Task Organization of OpnPlan 9–50:

- Eighth U.S. Army: LtGen Walton H. Walker, USA
- Naval Forces Far East: VAdm C. Turner Joy, USN
- Far East Air Forces (FEAF): LtGen George E. Stratemeyer, USAF
- X Corps: MajGen Edward M. Almond, USA

Missing from the top-level conference, Major General Walter L. Weible, USA, of the Japan Logistical Command, probably was already aware of things to come.[24]

MacArthur outlined his concept of operations in North Korea to those present. He set 20 October as D-Day for the Wonsan amphibious assault by the 1st Marine Division, which, with all X Corps troops, would embark for the operation from Inchon. The 7th Infantry Division, also a part of X Corps, would motor 200 miles to Pusan and there load out for an administrative landing behind the Marines.[25]

Initial overland routing of the 7th Division was made necessary by problems arising out of Inchon’s limited port facilities. General MacArthur gave EUSAK the logistic responsibility for all UN Forces in Korea, including X Corps. To carry out this charge, General Walker could rely on only two harbors, Pusan and Inchon. There were no other ports in South Korea capable of supporting large-scale military operations. Meeting the tight Wonsan schedule would require that X Corps have immediate priority over the whole of Inchon’s capacity, even with the 7th Division being shunted off on Pusan. And it still remained for Walker to mount and sustain Eighth Army’s general offensive before the Wonsan landing!

In the light of logistical considerations, then, Wonsan had more than mere tactical significance as the objective of X Corps. Its seizure would open up the principal east-coast port of Korea, together with vital new road and rail junctions. But while MacArthur had decided on an amphibious assault by a separate tactical unit as the proper stroke, there existed a school of dissenters among his closest advisers. Generals Hickey and Wright had recommended that X Corps be incorporated into EUSAK at the close of the Inchon-Seoul Operation. Major General George L. Eberle, MacArthur’s G–4, held that supplying X Corps in North Korea would be simpler if that unit were a part of Eight Army. And General Almond himself, while hardly a dissenter, had expected his corps to be placed under General Walker’s command after the Seoul fighting.[26]
Logistical problems were magnified by the tight embarkation schedule laid out for the amphibious force. In submitting its proposed plan for North Korean operations to General MacArthur on 27 September, JSPOG had listed the following “bare minimum time requirements:”

For assembling assault shipping: 6 days
For planning: 4 days
For loading: 6 days
For sailing to Wonsan: 4 days

Thus it was estimated that the 1st Marine Division could assault Wonsan 10 days after receiving the order to load out of Inchon, provided that shipping had already been assembled and planning accomplished concurrently.[27]

Following CinCUNC’S meeting in the capitol building on the 29th, General Almond called a conference of division commanders and staff members at his X Corps Headquarters in Ascom City, near Inchon. MacArthur’s strategy was outlined to the assembled officers, so that planning could commence on the division level. Almond set 15 October as D-Day for the Wonsan landing. He based this target date on the assumption that Eighth Army would pass through and relieve X Corps on 3 October, the date on which the necessary shipping was to begin arriving at Inchon.[28]

On 29 September, the 1st Marine Division was still committed tactically above Seoul, two regiments blocking and one attacking. If the first vessels began arriving at Inchon on 3 October, the assault shipping would not be completely assembled until the 8th, according to the JSPOG estimate. Four days would be required to get to the objective, leaving two days, instead of the planned six, for outloading the landing force. Neither Major General Oliver P. Smith, Commanding General (CG) 1stMarDiv, nor his staff regarded this as a realistic schedule.[29]

The Marine officers came away from the conference without knowledge of the types and numbers of ships that would be made available to the division. And since they had no maps of the objective area and no intelligence data whatever, it was manifestly impossible to lay firm plans along either administrative or tactical lines.[30]

Vice Admiral Joy, Commander Naval Forces Far East (ComNavFE), issued his instructions on 1 October in connection with the forthcoming operations. To Vice Admiral Arthur D. Struble’s Joint Task Force 7 (JTF-7), which had carried out the Inchon attack, he gave these missions:

1. To maintain a naval blockade of Korea’s East coast south of Chongjin.
2. To furnish naval gunfire and air support to Eighth Army as directed.
3. To conduct pre-D-Day naval operations for the Wonsan landing as required.
4. To load and transport X Corps to Wonsan, providing cover and support en route.
5. To seize by amphibious assault, occupy, and defend a beachhead in the Wonsan area on D-Day.
6. To provide naval gunfire, air, and initial logistical support to X Corps at Wonsan until relieved.”[31]

Admiral Joy’s directive also warned: “The strong probability exists that the ports and possible landing beaches under control of the North Koreans have been recently mined. The sighting of new mines floating in the area indicates that mines are being seeded along the coast.”[32]

Chapter 1. Problems of Victory
X Corps Relieved at Seoul

The related events, decisions, and plans of September 1950 had unfolded with startling rapidity. Before the scattered UN forces could shift from one phase of operations to another, a transitional gap developed during the early days of October. Orders might flow forth in abundance, but not until MacArthur’s land, sea and air forces wound up one campaign could they begin another. Thus, from the standpoint of Marine operations, the first week of October is more a story of the Inchon-Seoul action than of preparations for the Wonsan landing.

On 2 October, when Eighth Army commenced the relief of X Corps, General Almond ordered the 7th Infantry Division to begin displacing to Pusan by motor and rail.[33] There was as yet no such respite for the 1st Marine Division, which on the same day lost 16 killed in action (KIA) and 81 wounded (WIA). Practically all of the casualties were taken by the 7th Regiment, then approaching Uijongbu on the heels of the enemy.[34]

Despite the limited planning data in the hands of the 1st Marine Division, General Smith’s staff put a cautious foot forward on 3 October.[35] Word of the pending Wonsan operation went out by message to all subordinate units, with a tentative task organization indicating the formation of three Regimental Combat Teams (RCTs).

The 1st and 7th Marines were earmarked to launch the amphibious attack. Each would plan on the basis of employing two battalions in the assault. These battalions were to embark on LSTs and hit the beach in LVTs. All tactical units were to combat-load out of Inchon. And although still uninformed as to available shipping, the Marine planners named likely embarkation groups and listed tentative arrangements for loading tanks and amphibious vehicles.[36]

The following day saw the publication of X Corps OpnO 4, specifying subordinate unit missions. The 7th Infantry Division, together with the 92d and 96th Field Artillery (FA) Battalions, was instructed to mount out of Pusan and to land at Wonsan on order (see Map 2). These tasks were assigned to the 1st Marine Division:

“1. Report immediately to the Attack Force Commander (Commander, Amphibious Group One) of the Seventh Fleet as the landing force for the Wonsan attack.

“2. Seize and secure X Corps base of operations at Wonsan, protect the Wonsan Airfield, and continue such operations ashore as assigned.

“3. Furnish logistic support for all forces ashore until relieved by Corps Shore Party.”[37]

As Almond’s order went out for distribution on 4 October, EUSAK’s 1st Cavalry Division, bound for Kaesong, passed through the 5th Marines northwest of Seoul. Simultaneously, the II ROK Corps began assembling along the road to Uijongbu, captured by the 7th Marines the previous day.[38]

After 20 days in the line, the weary battalions of the 5th Marines retired on 5 October across the Han River to an assembly area at Inchon. They were followed on the 6th by the 1st Regiment, and on the next day by the 7th Marines. The withdrawal of the latter unit completed the relief of X Corps, and General Almond’s command officially re-reverted to GHQ Reserve.[39]

October 7th also marked the displacement of the 1st Marine Division command post (CP) to Inchon, where planning and reality had finally merged to the extent that preparations for Wonsan could begin in earnest. Two days earlier, Vice Admiral Struble had re-created JTF–7 out of his Seventh Fleet; and by publication of his OpnO 16–50 on the same date, 5 October, he set in motion the operational elements involved in the projected amphibious envelopment. His new task organization, almost identical to that which had carried out the Inchon Operation with historic dispatch, was as follows:
TF95 (Advance Force): RAdm Allen E. Smith
TG 95.2 (Covering & Support): RAdm Charles C. Hartman
TG 95.6 (Minesweeping): Capt Richard T. Spofford
TF 90 (Attack Force): RAdm James H. Doyle
TF 79 (Logistical Support Force): Capt Bernard L. Austin
TF 77 (Fast Carrier Force): RAdm Edward C. Ewen
TG 96.8 (Escort Carrier Group): RAdm Richard W. Ruble
TG 96.2 (Patrol & Reconnaissance): RAdm George R. Henderson
TG 70.1 (Flagship Group): Capt Irving T. Duke

Struble, who had directed the Inchon assault from the bridge of the USS Rochester, would now fly his flag in the recently arrived USS Missouri, the sole American battleship in commission at this early stage of the Korean war. [40]
Chapter 1. Problems of Victory
Joint Planning for Wonsan Landing

The Seventh Fleet directive of 5 October dispatched both the Fast Carrier and the Patrol and Reconnaissance Forces of JTF-7 on the usual search and attack missions preliminary to an amphibious assault. Task force 77, consisting of the carriers Boxer, Leyte, Philippine Sea and Valley Forge, escorted by a light cruiser and 24 destroyers, was under orders to direct 50 per cent of the preparatory air effort against the local defenses of Wonsan. Simultaneously, the Advance Force, with its cruisers destroyers and mine sweeping units, would close in to shell the target and wrest control of the offshore waters from the enemy.[41]

Topographic and hydrographic studies made available to the Attack and Landing Forces showed Wonsan to be a far more accessible target than Inchon (see Map 3). Nestling in the southwestern corner of Yonghung Bay, 80 miles above the 38th Parallel, the seaport offers one of the best natural harbors in Korea. A vast anchorage lies sheltered in the lee of Kalma Peninsula which, finger-like, juts northward from a bend in the coastline. Tides range from seven to 14 inches, fog is rare, and currents are weak. Docks can accommodate vessels drawing from 12 to 25 feet, and depths in the bay run from 10 fathoms in the outer anchorage to 15 feet just offshore.[42]

Beaches around Wonsan are of moderate gradient, and the floor at water’s edge consists of hard-packed sand. Though slightly wet landings might be expected, amphibious craft could easily negotiate any of the several desirable approaches. The coastal plain, ranging from 100 yards to two miles in depth, provides an acceptable lodgment area, but the seaward wall of the Taebaek mountain range renders inland egress difficult from the military standpoint.

In 1940, the population of Wonsan included 69,115 Koreans and 10,205 Japanese, the latter subsequently being repatriated to their homeland after World War II. Under the Japanese program of industrialization, the city had become Korea’s petroleum refining center. The construction of port facilities, railways, and roads kept pace with the appearance of cracking plants, supporting industries, and huge storage areas.

Two airfields served the locale in 1950. One of these, situated on the coast about five miles north of the seaport, was of minor importance. The other, known as Wonsan Airfield, on Kalma Peninsula across the harbor, ranked high as a military prize. Spacious and accessible, it was an excellent base from which to project air coverage over all of Korea and the Sea of Japan. The Japanese first developed the field as an air adjunct to the naval base at Wonsan; but after World War II, a North Korean aviation unit moved in and used it until July 1950. Thereafter, with the skies dominated by the UN air arm, Wonsan Airfield temporarily lost all military significance. Its vacant runways, barracks, and dispersal areas were given only passing attention in the UN strategic bombing pattern, although the nearby industrial complex was demolished.

In addition to being situated on an excellent harbor, Wonsan is the eastern terminus of the Seoul-Wonsan corridor, the best of the few natural routes across the mountainous nation. This 115-mile road and rail passageway, once considered as a possible overland approach for X Corps, separates the northern and southern divisions of the Taebaek range, which rises precipitously from Korea’s east coast to heights of 5000 feet. Railroads and highways, primitive by western standards, also trace the seaward base of the Taebaek Mountains to connect Wonsan with Hamhung in the north and Pusan far to the south. Still another road and railway leads to Pyongyang, 100 miles across the narrow neck of the peninsula in the western piedmont.

The climate along Korea’s northeast coast is comparable to that of the lower Great Lakes region in the United States. Mean summer temperatures range between 80 and 88 degrees, although highs of 103 degrees have
been recorded. Winter readings drop as low as –7 degrees, but the season is usually temperate with winds of low velocity. Despite light snowfalls and moderate icing, the period from October through March is best suited to military operations, for the heavy rains of spring and summer create difficulties on the gravel-topped roads.

Although members of Admiral Doyle’s Amphibious Group One (PhibGruOne) staff met with planners of the 1st Marine Division at Inchon early in October, it soon became apparent that the projected D-Day of 15 October could not be realized. Maps and intelligence data necessary for planning did not reach the Attack Force-Landing Force team until 6 October. The relief of X Corps by EUSAK was completed, not on 3 October as General Almond had anticipated, but on the 7th.

Moreover, the first transport vessels to reach Inchon ran behind schedule, and they had not been pre-loaded with a ten-day level of Class I, II, and V supplies, as was promised. Planning and outloading consequently started late and from scratch, with the result that D-Day — was moved progressively back to a tentative date of 20 October.”[43]
ON 6 OCTOBER 1950, after the arrival of the initial assault shipping at Inchon, General Smith ordered the 1st Marine Division to commence embarkation on the 8th. Similar instructions were issued by X Corps the following day.[1] Thus, the first troops and equipment were to be loaded even before the G–2 Section of the Landing Force could begin evaluating the enemy situation at the objective, since it was not until 8 October that the intelligence planners received X Corps’ OpnO 4, published four days earlier. Summing up the outlook at the time, G–2 later reported:

“Inasmuch as subordinate units of the Division were scheduled to embark aboard ship some time prior to 15 October 1950, it was immediately obvious that preliminary intelligence planning, with its attendant problems of collection, processing, and distribution of information, and the procurement and distribution of graphic aids, would be both limited and sketchy . . . Fortunately . . . the section [G–2] had been previously alerted on the projected operation, and while elements of the Division were yet engaged with the enemy at Uijongbu, had requested reproductions of some 100 copies of pertinent extracts of the JANIS (75) of Korea. Thus it was . . . that subordinate units would not be wholly unprepared for the coming operation.”[2]

General Smith’s OpnO 16–50, published on 10 October, climaxed the accelerated planning at Inchon. Worked out jointly by the staffs of PhibGruOne and the 1st Marine Division, this directive covered the Wonsan attack in detail and pinpointed subordinate unit responsibilities.

Kalma Peninsula was chosen as the point of assault, with two beaches, YELLOW and BLUE, marked off on the eastern shore. Ten high-ground objectives described the semicircular arc of the beachhead, which focused on Wonsan and fanned out as far as five miles inland. The 1st and 7th Marines were to hit YELLOW and BLUE Beaches, respectively and drive inland to their assigned objectives. The 5th, upon being ordered ashore, would assemble west of Wonsan, prepared for further operations. Two battalions of the 11th Marines were to land on call in direct support of the assault units, and the remainder of the artillery would initially function in general support.

Other subordinate units drew the usual assignments. The Reconnaissance Company, after landing on order, was to screen the Division’s left flank by occupying specified objectives. Attached to the 1st and 7th Regiments respectively, the 5th and 3d Korean Marine Corps (KMC) Battalions would also go ashore on call.[3]
Chapter 2. The Wonsan Landing  
ROK Army Captures Wonsan

At 0815, 10 October, coincidentally with the publication of 1stMarDiv OpnO 16–50, troops of I ROK Corps, advancing rapidly up the east coast of Korea, entered Wonsan. By evening of the next day, the ROK 3d and Capital Divisions were mopping up minor resistance in the city and guarding the airfield on Kalma Peninsula. [4]

Overland seizure of the 1st Marine Division’s amphibious objective did not come as a surprise either at GHQ in Tokyo or at General Smith’s CP aboard the Mount McKinley in Inchon Harbor. General MacArthur had, in fact, prepared for this eventuality by considering an alternate assault landing at Hungnam, another major seaport, about 50 air miles north of Wonsan. On 8 October, therefore, the JSPOG completed a modified version of CinCFE OpnPlan 9–50. Eighth Army’s mission—the capture of Pyongyang—remained unchanged in this draft, but X Corps would now land “... in the vicinity of Hungnam in order to cut the lines of communications north of Wonsan and envelop the North Korean forces in that area.”

Although the choice of a new objective seemed logical on the basis of the ROK Army’s accomplishment, certain logistical obstacles at once loomed in the path of the alternate plan. Not unaware of the most imposing of these, JSPOG commented:

“The harbor at Wonsan cannot accommodate at docks the large vessels lifting the 7th Division. Since most of the amphibious type boats are carried on ships lifting the 1st Marine Division, the plans for off-loading the 7th Division will have to be revised.” [5]

But the plans for off-loading the 7th Division could not be revised. If the Army unit was to land within a reasonable length of time, it would have to go in on the heels of the 1st Marine Division, using the same landing craft. If the ship-to-shore movement took place at Hungnam, the 7th Division would be ill-disposed for beginning its overland drive to Pyongyang as planned; for it would have to backtrack by land almost all the way to Wonsan. On the other hand, if the Army division landed at Wonsan while the Marines assaulted Hungnam, the Navy would be handicapped not only by the lack of landing craft but also by the problem of sweeping mines from both harbors simultaneously.

From the standpoint of Admiral Joy in Japan and Admiral Doyle in Korea, there was insufficient time for planning a new tactical deployment of X Corps at this late date. And the time-space handicap would be compounded by serious shortages of mine sweepers and intelligence information. Joy was unsuccessful on 8 October in his first attempt to dissuade MacArthur from the new idea. On the 9th, unofficial word of the pending change reached General Smith at Inchon, just as his staff wound up work on the draft for the Wonsan assault. ComNavFE persisted in his arguments with the commander in chief, however, with the final result that on 10 October the original plan for landing the whole X Corps at Wonsan was ordered into effect. [6] Coming events were to uphold the Navy viewpoint; for while the Wonsan landing itself was delayed several days by enemy mines, it was 15 November before the first ships safely entered the harbor at Hungnam. [7]
On 11 October, the day after he opened his CP on the Mount McKinley, General Smith learned that the Hungnam plan had been dropped. The 1st Marine Division continued loading out in accordance with X Corps OpnO 4, even though its objective had already been captured.\[8\]

During the period 4–10 October, Admiral Doyle had assembled at Inchon an assortment of Navy amphibious vessels, ships of the Military Sea Transport Service (MSTS), and Japanese-manned LSTs (SCAJAP). With the arrival of Transport Squadron One on 8 October, the total shipping assigned to the landing force consisted of one AGC, eight APAs, two APs, 10 AKAs, five LSDs, 36 LSTs, three LSU, one LSM, and six commercial cargo vessels (“Victory” and C-2 types).\[10\]

Loading a reinforced division, several thousand Corps troops and thousands of tons of supplies and equipment proved to be an aggravating job under the circumstances. Pressure on the attack and landing forces for an early D-Day only magnified the shortcomings of Inchon as a port. Limited facilities and unusual tide conditions held dock activity to a series of feverish bursts. Moreover, many ships not part of the amphibious force had to be accommodated since they were delivering vital materiel. The assigned shipping itself was inadequate, according to the Division G–4 and “considerable quantities” of vehicles had to be left behind. Much of the trucking that could be taken was temporarily diverted to help transport the 7th Infantry Division to Pusan; and although unavailable for port operations when needed, it returned at the last minute to disrupt out-loading of the Shore Party’s heavy beach equipment.\[11\] Out of conditions and developments such as these grew the necessity for postponing D-Day from 15 October, the date initially set by General Almond, to the 20th.

For purposes of expediting embarkation and economizing on shipping space, X Corps directed the 1st Marine Division to out-load with less than the usual amount of supplies carried by a landing force.\[12\] Resupply shipping would be so scheduled as to deliver adequate stocks of Class I, II, III, and IV consumables “. . . prior to the time they would be needed,” even though when “they would be needed” was anybody’s guess at this stage of the war.\[13\]

In anticipation of a rapid advance to the west (which did not materialize), Division G–4 not only assigned 16 pre-loaded trucks and trailers to each RCT, but also earmarked three truck companies and more trailers as a mobile logistical reserve. These supply trains would stay on the heels of the attacking regiments in order to maintain ammunition dumps as far forward as possible in a fast-moving situation.\[14\]

On 8 October, ComNavFE directed Admiral Doyle and General Smith to effect his OpnPlan 113–50.\[15\] Coincidentally, the first contingents of the 5th Marines boarded the Bayfield (1/5), George Clymer (2/5), and Bexar (3/5). Three days later, on the 11th, Lieutenant Colonel Raymond L. Murray, commander of the reserve regiment, opened his CP in the Bayfield, and his unit completed embarkation.\[16\]

Although reserve and administrative elements of the 1st and 7th Marines loaded earlier, the four assault battalions of these regiments could not begin embarkation until 13 October, owing to the fact that the LSTs had been used for shuttle service around Inchon Harbor. General Smith opened his CP in the Mount McKinley at 1200 on the 11th.\[17\] The last of the landing ships were loaded by high tide on the morning of the 15th, and later that day all of them sailed for the objective. By evening of the 16th, most of the transports were on the way, but the Mount McKinley and Bayfield did not depart until the next day.\[18\]

Broken down into seven embarkation groups, the landing force and X Corps troops leaving Inchon comprised a grand total of 1902 officers and 28,287 men. Of this number, 1461 officers and 23,938 men were on
the rolls of the 1st Marine Division, the breakdown being as follows:
Marine officers: 1119
Marine enlisted: 20,597
Navy officers: 153
Navy enlisted: 1002
U.S. Army & KMC officers attached: 189
U.S. Army & KMC enlisted attached: 2339

Even in the last stages of loading and during the actual departure, new orders had continued to flow out of higher headquarters. It will be recalled that General Smith issued his OpnO 16-50 for the Wonsan assault on 10 October. An alternate plan, to be executed on signal, went out to subordinate units the same day, providing for an administrative landing by the Division on RED Beach, north of Wonsan, instead of Kalma Peninsula.

As a result of discussions during a X Corps staff conference on 13 October, a party headed by General Almond flew to Wonsan the next day. The purpose of his visit was to reconnoiter the objective and to explain his latest operational directive to the I ROK Corps commander, who would come under his control. This new order, published on the 14th, called for an administrative landing by X Corps and a rapid advance westward along the Wonsan—Pyongyang axis to a juncture with EUSAK. Assigned to the 1st Marine Division was an objective northeast of Pyongyang, the Red capital.

It was this tactical scheme, then, that prevailed as the Marines departed Inchon from 15 to 17 October and the 7th Infantry Division prepared to embark from Pusan. General Smith, of course, placed into effect his alternate order for a landing RED Beach. While there may be a note of humor in the fact that on 15 October ComPhibGruOne issued his OpnO 16–50 for the “assault landing” at Wonsan, it must be remembered that the ship-to-shore movement would remain essentially the same from the Navy’s standpoint, regardless of the swift march of events ashore.
Chapter 2. The Wonsan Landing
Two Weeks of Mine Sweeping

Mine sweeping for the Wonsan landing commenced on 8 October, when Task Group 95.6, commanded by Captain Spofford, began assembling for the mission of clearing a path ahead of the 250-ship armada bringing the 1st Marine Division and other units of X Corps. It had been known for a month that the waters of the east coast were dangerous for navigation. The first mine was discovered off Chinnampo on the west coast on 7 September, and four days later Admiral Joy ordered the United Nations Blocking and Escort Force to stay on the safe side of the 100-fathom line along the east coast. But it was not until 26 and 28 September that more definite information was acquired the hard way when the U.S. destroyer *Brush* and the ROK mine sweeper *YMS 905* were damaged by east coast mines.[25]

On the 28th ComNavFE issued his OpnO 17–50 covering operations of mine sweepers in Korean waters. The herculean task awaiting the 12 available American vessels of this type may be judged by the fact that more than a hundred had been employed off Okinawa in World War II.

Although the exact date remained unknown, it was a safe assumption that North Korean mining activities, beginning in late July or early August, were speeded by the Inchon landing, which aroused the enemy to the peril of further amphibious operations. Russian instructors had trained Korean Reds at Wonsan and Chinnampo in the employment of Soviet-manufactured mines. Sampans, junks, and wooden coastal barges were used to sow a field of about 2000 in the harbor and approaches to Wonsan.[26]

Captain Spofford’s TG 95.6 commenced its sweep off Wonsan on 10 October after a sortie from Sasebo. Unfortunately, the three large fleet sweepers, *Pledge*, *Pirate*, and *Incredible*, were not well adapted to the shallow sweeping necessary at Wonsan. More dependence could be placed in the seven small wooden-hulled U.S. motor mine sweepers *Redhead*, *Mocking Bird*, *Osprey*, *Chatterer*, *Merganser*, *Kite*, and *Partridge*, which were rugged even though low-powered. Spofford’s two big high-speed sweepers, *Doyle* and *Endicott*, had their limitations for this type of operation; and the nine Japanese and three ROK sweepers lacked some of the essential gear.[27]

The U.S. destroyers *Collett*, *Swenson*, *Maddox*, and *Thomas* were in the Wonsan area as well as the cruiser *Rochester*. On the 9th the *Rochester*’s helicopter sighted 61 mines in a reconnaissance, and the next day the observer found them too numerous to count. In spite of these grim indications, rapid progress the first day led to predictions of a brief operation. By late afternoon a 3000-yard channel had been cleared from the 100-fathom curve to the 30-fathom line. But hopes were dashed at this point by the discovery of five additional lines of mines.[28]

On 12 and 13 October the naval guns of TG 95.2 bombarded Tanchon and Songjin on the northeast coast. While the USS *Missouri* treated the marshaling yards of Tanchon to 163 16 inches rounds, the cruisers *Helena*, *Worcester*, and *Ceylon* fired at bridges, shore batteries, and tunnels in the Chongjin area.[29]

Spofford tried to save time on the morning of the 12th by countermining as 39 planes from the carriers *Leyte Gulf* and *Philippine Sea* dropped 50 tons of bombs. It was found, however, that even the explosion of a 1000-pound bomb would not set off nearby mines by concussion.[30] According to Admiral Struble, “The results of this operation simply bore out our experience in World War II, but were tried out on the long chance that they might be effective in the current situation.”[31]

The 12th was a black day for the sweeping squadron. For the steel sweepers *Pledge* and *Pirate* both were blown up by mines that afternoon and sank with a total of 13 killed and 87 wounded. Rescue of the survivors was handicapped by fire from enemy shore batteries.[32]
While the blast of a half-ton bomb had not been powerful enough, Spofford reasoned that depth charges might start a chain reaction in which mines would detonate mines. But a precision drop by naval planes met with no success, and there was nothing left but a return to the slow, weary, and dangerous work of methodical sweeping.[33]

The flying boats, Mariniers and Sunderlands, were called upon to assist by conducting systematic aerial searches for moored and drifting mines, which they destroyed by .50 caliber machine-gun fire. Soon an effective new technique was developed as the seaplanes carried overlays of Hydrographic Office charts to be marked with the locations of all mines sighted. These charts were dropped to the sweepers and were of considerable assistance in pinpointing literally hundreds of mines.[34]

On the 18th one of the Japanese sweepers, the JMS–14, hit a mine and went down. In spite of this loss, the end seemed in sight. No attempt was being made to clear all the mines; but with a lane swept into the harbor, it remained only to check the immediate area of the landing beaches. So hopeful did the outlook appear that it was more disillusioning when the ROK YMS 516 disintegrated on 19 October after a terrific explosion in the supposedly cleared lane. Thus was TG 95.6 rudely introduced to the fact that the sweepers had to deal with magnetic mines in addition to the other types. The mechanism could be set to allow as many as 12 ships to pass over the mine before it exploded. This meant, of course, that the sweepers must make at least 13 passes over any given area before it could be considered safe.[35]

The Mount McKinley having arrived off Wonsan that same day, Admiral Doyle and General Almond, with six members of the X Corps staff, went by boat to the battleship Missouri for a conference with Admiral Struble. CJTF–7 asserted that he would not authorize the administrative landing until the magnetic mines were cleared from the shipping lane—a task which he estimated would take three more days. This announcement led to General Almond’s decision to fly ashore in the Missouri’s helicopter on the 20th and establish his CP in Wonsan. [36] So rapidly had the situation changed, it was hard to remember that this date had once been set as D-Day when the Marine landing force would fight for a beachhead.
Chapter 2. The Wonsan Landing

Operation Yo-Yo

Shortly after 1700 on the afternoon of 19 October, a rumor swept through the 250 ships of the Tractor and Transport Groups. “War’s over!” shouted the excited Marines. “They’re taking us back to Pusan for embarkation to the States.”

Rumor seemed to have the support of fact on this occasion, for compass readings left no doubt that the armada had indeed executed a maritime “about face” to head southward. What the men on the transports did not know was that the reversal of direction had been ordered for purely military reasons as a result of the conference that day on the Missouri.

It was puzzling enough to the troops the following morning when the ships resumed their original course. But this was nothing as compared to their bewilderment late that afternoon as the Tractor and Transport Groups turned southward again.

Every twelve hours, in accordance with the directive of CJTF–7, the fleet was to reverse course, steaming back and forth off the eastern coast of Korea until the last of the magnetic mines could be cleared from the lane in preparation for an administrative landing at Wonsan.\[37\]

Marines have always been ready with a derisive phrase, and “Operation Yo-Yo” was coined to express their disgust with this interlude of concentrated monotony. Never did time die a harder death, and never did the grumblers have so much to grouse about. Letters to wives and sweethearts took on more bulk daily, and paper-backed murder mysteries were worn to tatters by bored readers.

On the 22d, at CJTF–7’s regular daily meeting, Admirals Struble and Doyle conferred in the destroyer Rowan with Admiral Smith and Captain Spofford. It was agreed that the sweeping could not be completed until the 24th or 25th, which meant that Operation Yo-Yo might last a week.\[38\]

The situation had its serious aspects on LSTs and transports which were not prepared for a voyage around Korea taking nearly as long as a crossing of the Pacific. Food supplies ran low as gastro-enteritis and dysentery swept through the crowded transports in spite of strict medical precautions. The MSTS transport Marine Phoenix alone had a sick list of 750 during the epidemic. A case of smallpox was discovered on the Bayfield, and all crewmen as well as passengers were vaccinated that same day.\[39\]

On the 23d, as the Mount McKinley proceeded into the inner harbor at Wonsan, there could be no doubt that the final mine sweeping would be completed by the 25th. Operation Yo-Yo came to an end, therefore, when Admiral Doyle directed the amphibious fleet to arrive on the 25th, prepared for an administrative landing. The order of entry called for the Transport Group to take the lead, followed by the vessels of the Tractor Group.\[40\]

On the morning of the 25th, Admirals Struble and Doyle held a final conference with General Almond and Captain Spofford. By this time they had decided to land the Marines over YELLOW and BLUE Beaches on Kalma Peninsula, as originally conceived in 1stMarDiv OpnO 16–50. The inner harbor of Wonsan would remain closed until completely clear of mines, and then it would be developed as a supply base.\[41\]
Chapter 2. The Wonsan Landing

Marine Air First at Objective

The sense of frustration which oppressed the Marine ground forces during Operation Yo-Yo would have been increased if they had realized that the air maintenance crews had beaten them to Wonsan by a margin of twelve days. Even more humiliating to the landing force troops, Bob Hope and Marilyn Maxwell were flown to the objective area. On the evening of the 24th they put on a USO show spiced with quips at the expense of the disgruntled Leathernecks in the transports.

Planning for Marine air operations in northeast Korea had been modified from day to day to keep pace with the rapidly changing strategic situation. On 11 October, when ROK forces secured Wonsan, preparations for air support of an assault landing were abandoned. Two days later Major General Field Harris, CG 1st Marine Aircraft Wing and Tactical Air Command X Corps (TAC X Corps), flew to Wonsan. After inspecting the airfield he decided to begin operations without delay.[42]

These developments, of course, were accompanied by amendments to the original plan which had assigned Marine Fighter Squadrons (VMFs)–214 and –323 the air support role in the naval task force, with Marine Aircraft Group (MAG)–12 to be landed as soon as the field at Wonsan was secured.

In response to changing conditions, VMF-312 aircraft flew from Kimpo to Wonsan on the 14th, and R5Ds lifted 210 personnel of the advance echelons of Headquarters Squadron (Hedron)–12, Service Squadron (SMS)–12, and Marine All-Weather Fighter Squadron (VMF(N))–513. Two LSTs sailed from Kobe with equipment of MAG-12, and Combat Cargo Command aircraft of Far East Air Force began flying in aviation gasoline. Bombs and rockets were flown to Wonsan by the planes of VMF(N)–513.[43]

On the 16th, VMFs–214 and –323 departed Sasebo for station off Wonsan in the CVE’s Sicily and Badoeng Strait. From the following day until the 27th these two fighter squadrons were to provide air cover for the mine sweeping operations off Wonsan and the ensuing 1st Marine Division administrative landing.[44]

TAC X Corps OpnO 2-50, issued on 15 October, had contemplated the opening of the port at Wonsan and arrival of the surface echelon within three days. Until then the two squadrons at Wonsan airfield were to be dependent on airlift for all supplies.

The unforeseen ten-day delay in clearing a lane through the mine field made it difficult to maintain flight operations. Fuel was pumped by hand from 55-gallon drums which had been rolled along the ground about a mile from the dump to the flight line. Muscle also had to substitute for machinery in ordnance sections which had only one jeep and eight bomb trailers for moving ammunition.[45]

Despite such difficulties, air operations from the new field were speeded up when General Almond landed to establish the X Corps CP at Wonsan on the 20th, after taking control of I ROK Corps. Armed reconnaissance sorties were flown regularly and attacks made on retreating bodies of NKPA troops. On the 24th a VMF–312 flight surprised a column of about 800 Korean Reds near Kojo, 39 miles southeast of Wonsan, and scattered it with heavy losses.

There were administrative as well as operational problems to be solved. If an assault landing had been carried out at Wonsan, the provision for air support would have been planned in a manner similar to that of Inchon. But the change to an administrative landing caused the 1st MAW to be placed under the control of the Far East Air Forces. This was in accordance with a CinCFE directive to the effect that when both FEAF and Naval air were assigned missions in Korea, coordination control would be exercised by CG FEAF. He had in turn delegated that control north of the 38th parallel, including close-support operations of carrier-borne planes, to CG Fifth Air
An effort was made at first by MAG–12 officers to comply with Fifth AF procedures, which required the schedule for any given day’s strikes to be submitted to that headquarters by 1800 the previous day. Obviously, the distance separating X Corps in Wonsan from Fifth Air Force Headquarters in Seoul made it virtually impossible to get clearance in time. This issue was speedily settled by a conference in which Major General Earle E. Partridge, USAF, CG Fifth Air Force, gave General Harris oral permission to plan and execute supporting missions for X Corps in northeast Korea while awaiting clearance from the Fifth AF.

His decision was made on the basis of a liberal interpretation of the authority of CG 1st MAW to take action “in emergencies.” In practice, the arrangement worked out smoothly during this preliminary period, and on 12 November CG Fifth Air Force confirmed his oral agreement with a written directive.

Direction of air operations in support of X Corps was exercised by MAG–12 for the 1st MAW from 15 October to 9 November. Night operations did not begin until late in October for lack of runway lights at Wonsan, so that VMF(N)–513 flew daytime missions along with VMF–312. The two carrier-based squadrons conducted operations in a similar manner. Aircraft reported at designated times to specified Tactical Air Control Parties (TACPS) for operations directed by a daily Fifth AF order, some of them in response to previously submitted requests of ground units for air support.

Major Vincent J. Gottschalk’s Marine Observation Squadron (VMO)–6 was under the operational control of the 1st Marine Division, though it was under the administrative direction of MAG–12. Two helicopter pilots, Captain Wallace D. Blatt and First Lieutenant Chester C. Ward, flew from Kimpo to Wonsan on 23 October. The rest of the squadron had proceeded by LST. A flight echelon of helicopters, commanded by Captain Victor A. Armstrong, VMO–6 executive officer, remained temporarily at Kimpo at the request of the Fifth Air Force to evacuate casualties of the 187th Airborne RCT in the Sukchon area.[46]
From all that has gone before, it might be expected that UN strategy and tactics, after frequent modification, had finally been decided upon by mid-October 1950. This was not the case, and a brief recapitulation of events in western and central Korea is now necessary in order to set the scene for the sweeping changes that followed.

General Walker’s Eighth Army, as mentioned earlier, had deployed along the 38th Parallel after relieving X Corps above Seoul on 7 October. Two days later, armored elements of the 1st Cavalry Division crossed the boundary to spearhead the U.S. I Corps drive on Sariwon and Pyongyang. The former city was secured on 17 October with the help of the 27th Commonwealth Brigade, while the 24th Infantry Division moved up the west coast on the left of the Kaesong-Sariwon-Pyongyang axis. The 1st Cavalry Division continued the attack toward Pyongyang on the 18th, entering the Red capital with the 1st ROK Division the next day. Pyongyang was secured on 21 October, and elements of the 1st Cavalry Division also occupied the undefended port city of Chinnampo, 35 miles to the southwest.

A vertical envelopment on 20 October had come as a dramatic supplement to the attack on Pyongyang. The 187th Airborne RCT parachuted successfully into the Sukchon-Sunchon area, about 30 miles north of the city, thereby cutting the two principal NKPA escape routes to Manchuria. After watching the drop from his plane, General MacArthur stopped off at Pyongyang and declared that the surprise stroke had closed the trap on the enemy. At his Tokyo headquarters the next day, he predicted that the war would end shortly.

In mountainous central Korea on the right flank of I US Corps, the 6th ROK Division had been leading the rapid advance of South Korean forces under EUSAK. With Hwachon captured on 8 October, the division went on to take the vital hubs of Chorwon on the 10th and Kumhwa on the 11th. It made contact with ROK Capitol Division elements from Wonsan the following day. During the next 24 hours, the 6th Division advanced 20 miles, and the 7th and 8th ROK Divisions fanned out to exploit the deepening penetration. On 14 October the 6th closed on Yangdok, about midway between Wonsan and Pyongyang.

Thereafter the ROK forces in the center of the peninsula began veering northwest, so that by 22 October, the day after Pyongyang fell to I Corps, the vanguard 6th Division was bearing down on Kunu-ri, about 45 air miles to the north of the capital.

From the foregoing, it is obvious that a trans-peninsular drive by X Corps was no longer necessary after mid-October. In fact, both in Washington and in Tokyo the attitude prevailed that the Korean war was nearing an end. President Truman had deemed a meeting of minds appropriate at this time, and he flew to Wake Island for a conference with General MacArthur on 15 October.

Various aspects of American policy in the Far East were discussed at the meeting, but the Korean situation ranked high on the agenda. When asked by President Truman about the chances of Russian or Chinese interference in the war, General MacArthur replied, “Very little.” His conclusion agreed with that held by many in high government circles, although officials in both Washington and Tokyo realized that the possibility of Communist intervention could not be dismissed entirely.

MacArthur stated that about 300,000 Chinese troops were stationed in Manchuria, of whom from 100,000 to 125,000 had been deployed along the Yalu River boundary with Korea. He estimated that only 50,000 to 60,000 of these troops could get across the river. If they attempted to move on Pyongyang, he said, they would be “slaughtered,” owing to the proximity of UN air bases.
The commander in chief added that Russia had no troops immediately available for a thrust into the peninsula. It would take six weeks for a Soviet division to assemble at the border, and by that time winter would have set in. And while Russia had a fairly good air force in Siberia and Manchuria, tactical support of Chinese ground troops would be difficult to control. “I believe Russian air would bomb the Chinese as often as they would bomb us,” MacArthur remarked.\[53\]

Part of the conference dealt with the rehabilitation of Korea and the eventual departure of UN troops after the fighting had ceased. MacArthur expressed his belief that organized resistance would end by Thanksgiving (23 November). He hoped to withdraw EUSAK to Japan by Christmas, leaving X Corps, reconstituted with the 2d and 3d U.S. Infantry Divisions and other UN detachments, as a security force until peace and order were fully restored. All present seemed to agree that elections should be held early to achieve stability in the re-united country, and that the ROK Army must be made tough enough to deter the Chinese Communists from any aggressive moves.

The conference ended on a note of general optimism. President Truman pinned a Distinguished Service Medal on the commander in chief (his fifth), and the latter boarded his plane and departed shortly after the meeting.

Once back in Tokyo, MacArthur issued on 17 October a new order that would become effective if Pyongyang fell before X Corps landed at Wonsan (as was the case four days later). This draft established parallel zones of action for EUSAK and X Corps in North Korea, with the Taebaek Range as the dividing line. The restraining line for UN Forces was advanced as much as 60 miles to a lateral drawn through Chongsanjangsi-Koingdong-Pyongwon-Toksil-li-Pungsan-Songjin (see Map 1). ROK Forces, of course, would still drive all the way to the borders of Manchuria and the USSR.\[54\]

On 24 October, just as the 1st Marine Division was preparing to land at Wonsan, General MacArthur did away with the restraining line altogether. The original restriction on the advance of UN elements, he told his subordinate commanders, was based on the possibility of enemy capitulation. Since there appeared to be no prospect of a formal surrender, he now authorized Generals Walker and Almond to use whatever of their ground forces were necessary to secure all of North Korea. And he enjoined them “... to drive forward with all speed and with full utilization of all their force.”\[55\]

The commander in chief received a message from JCS the next day, telling him that they considered his new order “not in consonance” with their 27 September authorization, which had stipulated a policy of using only ROK ground forces in the provinces bordering Russia and Manchuria. The matter had caused some concern in Washington, the Joint Chiefs said, and they wanted to know MacArthur’s reasons for making the decision.\[56\]

In reply they were informed that the commander in chief’s decision was a “matter of military necessity,” since the ROK Army lacked both the strength and the seasoned commanders required for securing North Korea. MacArthur added that the 27 September authorization had “... merely enunciated the [restraining line] provision as a matter of policy,” and had admitted the possibility of JCS instructions being modified in accordance with developments. He stated further that he possessed the authority to so modify from Secretary of Defense Marshall himself, who had told him “... to feel unhampered tactically and strategically...” Assuring the Joint Chiefs that he understood the reasons for their apprehension, he warned that “... tactical hazards might even result from other action than that which I have directed.”\[57\]

And there the matter rested.
It was at a X Corps staff meeting on 18 October that General Almond disclosed MacArthur’s plan for parallel zones of action and the new Chongsanjansi-Songjin restraining line in North Korea. Upon establishing his CP at Wonsan two days later, he accordingly assumed command of all UN and ROK forces north of the 39° 10’ parallel and east of the Taebaek Range.[58]

By this time the ROK Capitol Division was occupying Hamhung, Hungnam, and nearby Yonpo Airfield, all of which had been captured on 17 October during the swift drive northward.[59] The ROK 3d Division had one regiment at Wonsan, another at Kojo, and the third en route to Hamhung. [60]

On the 21st, General Almond requested CJTF-7 to land one battalion of Marines at Kojo immediately, for the purpose of relieving the ROK regiment defending that locale. He contended that Navy LSTs could beach there safely, since SCAJAP ships had already done so. Learning of the proposed landing, Admiral Doyle argued against it and Admiral Struble forbade it on the ground that the military requirement did not justify the risk incident to negotiating unswept waters. Thus the landing was called off, although the Marines had not heard the last of Kojo.[61]

On 22 October, General Smith issued a new plan based on the proposed X Corps deployment as far north as the Chongsanjangsi-Songjin line. The 1st Marine Division would now occupy the southern part of the extended corps zone, with each regiment responsible for the security of its assigned sector.[62] But again planning went for naught when, two days later, General Almond received MacArthur’s order to disregard the restraining line and use whatever forces necessary to drive rapidly to the Manchurian and Soviet borders. On 25 October, therefore, X Corps directed the 1st Marine Division to concentrate one RCT in the Hamhung area and to relieve elements of the I ROK Corps at the Chosin and Fusen Reservoirs. South Korean troops had already begun their advance on these vital power centers, some 50 to 60 air miles north of Hamhung.[63]

It was also on the 25th that the 1st Marine Division finally began its administrative landing at Wonsan—as anticlimactic a landing as Marines have ever made. Five LSTs loaded with Engineer, Shore Party, and Combat Service Group elements beached on Kalma Peninsula in the evening. Since the approaches had not been declared clear until late afternoon, the main ship-to-shore movement was delayed until the next day. Thus, 26 October actually became D-Day—or ‘Doyle Day,’ as it was referred to by an impatient General Almond.[64]

At first light on the 26th, landing craft clustered around the transport vessels in the swept channel as troops spilled down debarkation nets. The first of 39 scheduled waves were shortly on the way, with amphibious craft of every description churning the water.[65] LSUs began disgorging armor of the 1st Tank Battalion at 0730, and the big machines, fitted with deep-water fording adapters, thrashed through the surf and onto the loose sand. [66] Simultaneously, swarms of vehicles of the 1st Amphibian Tractor Battalion crawled ashore shuttling troops and cargo.[67]

At 0900, LSTs landed the 1st and 3d Battalions of the 1st Marines on YELLOW Beach, while Colonel Lewis B. Puller’s regimental headquarters splashed ashore out of landing craft dispatched from the Noble. The reserve battalion, 2/1, remained on board ship until the 28th. By 1700, the 3d Battalion was in position for the night and the 1st was well on the way to Kojo for a special mission. In the midst of the landing, Colonel Puller received a message from General Smith congratulating him on his being selected for promotion to brigadier general.[68]

Troops of the 7th Marines marched ashore on BLUE Beach without incident and the assembled
battalions moved to assigned areas north of Wonsan. At 1300, Colonel Homer L. Litzenberg opened his regimental CP at St. Benedict’s Abbey, which had been gutted by the retreating Communists. [69]

Advance parties of the 5th Marines began landing over both beaches at 0800. Priority was given to unloading the reserve unit’s cargo, and the majority of troops remained on board transports for the night. Most of the regiment debarked the next day and assembled about three miles northwest of Wonsan, where Lieutenant Colonel Murray established his CP at 1800. [70]

Only the 2d Battalion and several reconnaissance parties of the 11th Marines landed on the 26th. The remainder of the artillery regiment went ashore the next day and bivouacked at the coastal town of Munpyong-ni, five miles above Wonsan. Colonel James H. Brower, the regimental commander, detached 2/11 to the 1st Marines at 1715 on 27 October, but the other battalions “... remained in a mobile state awaiting further orders.” [71]

The Wonsan landing, though tactically insignificant at the moment, was a major logistical undertaking to such units as the 1st Engineer Battalion (Lieutenant Colonel John H. Partridge), the 1st Shore Party Battalion (Lieutenant Colonel Henry P. Crowe), and the 1st Combat Service Group (Colonel John H. Cook, Jr.).

Representatives from these and other support and service units had flown to the objective area several days before the Division’s arrival. After completing an inspection of Wonsan, the Shore Party detachment employed 500 North Korean POWs and 210 civilians to improve landing sites and beach exits. This work continued 24 hours a day for nine days, until the vanguard LSTs grated ashore on Kalma Peninsula in the evening of 25 October. [72] At this point, Shore Party Group C (Major George A. Smith) assumed responsibility for YELLOW Beach in the north, and Group B (Major Henry Brzezinski) took over BLUE Beach.

With the arrival of the first waves of LSTs, LSUs, LVTs, and landing craft in the morning, there began a routine of unremitting toil that would abate only after all of X Corps had landed weeks later. Because of the shallow offshore gradient, many amphibious craft could not reach the beach with their heavy cargoes, and the Shore Party troops had to construct ramps which projected 30 feet into the water. These improvised piers were made of rice bags filled with sand, with the result that their maintenance required considerable effort in men and heavy equipment. A pontoon causeway constructed on 27 October lessened the difficulties connected with getting troops ashore, but other problems persisted.

One of these had to do with a sandbar that stretched across the boat lanes about 50 yards from the coast. Heavier craft frequently grounded here, and while some could be towed ashore by tractor dozers (TD–18s) and LVTs, others had to be unloaded in the water by cranes operating off the ramps and from barges.

Once men and supplies finally reached dry land, there was the difficulty of transporting them inland over the loose sand and around the sprawling dunes of the peninsular beaches. Trucks and trailers often bogged down to such depths that they had to be uprooted and towed by LVTs or dozers. This tied up the overworked tracked vehicles when they were badly needed elsewhere.

The Combat Service Group established its Class I, III, and V dumps according to plan on 26 October, but Class II and IV supplies arrived on the beach “... in a completely mixed condition,” owing to the haste of the out-loading at Inchon. From D-Day onward, from 1500 to 2000 Korean civilians were hired daily to help segregate and issue supplies.

Upon the completion of mine sweeping in the inner harbor, the intact port facilities of Wonsan became operative on 2 November. During the next nine days, the Combat Service Group dispatched by rail to Hamhung 3900 tons of ammunition alone. On 9 November, the group was attached to X Corps for operational control, thereafter assuming specific responsibility for such varied tasks as: operation of all port facilities; unloading all X Corps elements; transporting all equipment and supplies to inland dumps and supply points; casualty evacuation; maintenance of an airhead at Wonsan Airfield; providing local security; traffic control in the port and its environs; and providing field maintenance for all units in the Wonsan area.

The magnitude of the logistical operation can be imagined from a survey of statistics mentioned in Shore
Party reports. By 31 October, when the 1st Marine Division’s landing was completed, a total of 24 cargo vessels, 36 LSTs, and one LSM had been unloaded. Bulk cargo in the order of 18,402 tons had moved across the beaches along with 30,189 personnel and 4731 vehicles. During the same period, 2534 troops were out-loaded with 70 vehicles and 4323 POWs. And in November, as the MAG–12 elements and the rest of X Corps poured ashore, the total of ships handled soared to 76 cargo and 52 LSTs, adding 30,928 personnel, 51,270 tons of supplies, and 7113 vehicles to the short-lived buildup in Northeast Korea.
IT WAS PERHAPS inevitable after the NKPA collapse that an end-of-the-war atmosphere should prevail. This attitude was found in the CP as well as the foxhole. General MacArthur, while witnessing the Eighth Army paratroop landings north of the captured enemy capital, was quoted by the newspapers as saying:

“The war is very definitely coming to an end shortly. With the closing of that trap there should be an end to organized resistance.”[1]

As another straw in the wind, General Smith had received a dispatch from ComNavFE on 21 October which stated that on the conclusion of hostilities it was his intention to recommend to CinCFE that the 1st Marine Division be returned to the United States, less an RCT to be stationed in Japan.[2]

On the 24th the Marine commander learned that X Corps had received a document, for planning purposes only, providing that the Corps commander would become commander of the occupation forces. These were to consist of a single American division, probably the 3d Infantry Division, while the remainder of the Eighth Army returned to Japan.[3]

Such indications seemed less reassuring after an incident which occurred at Wonsan on the evening of D-day. Two Marines, gathering firewood on the beach, had been blown to pieces by a booby trap. They were the only casualties from enemy action in the Wonsan landing.[4]

As early as 24 October the Marine division CP aboard the Mount McKinley had been advised of an ancillary mission. Immediately following the landing one battalion was to be sent 39 miles south of Wonsan to the small seaport of Kojo. There it was to protect a supply dump of the ROK I Corps.[5]

X Corps issued OI 13 on the 25th but General Smith did not receive his copy until two days later. Corps orders now assigned the Marine division a zone of action more than 300 road miles from north to south and 50 road miles in width. The missions prescribed for the Marines were those of an occupation rather than a fighting force:

“(1) To land on beaches in the vicinity of Wonsan.
“(2) To relieve all elements of I ROK Corps in Kojo and zone.
“(3) To protect the Wonsan-Kojo-Majon-ni area, employing not less than one RCT, and patrolling all roads to the west in zone.
“(4) To advance rapidly in zone to the Korean northern border.
“(5) To be prepared to land one Battalion Landing Team (BLT) in the Chongjin area rapidly on order.
“(6) To assist the 101st Engineer Group (C) (ROK) in the repair of the Yonghung-Hamhung railroad, employing not less than one engineer company.”[6]

The 1st Marine Division in turn assigned these tasks to the following units in OpnO 18–50, issued at 0800 on the 28th but communicated orally to most of the designated commanding officers during the preceding 48 hours:

“(1) RCT–1 to relieve elements of I ROK Corps in Wonsan-Kojo-Majon-ni zone, establish necessary road blocks to prevent movement into the area, patrol roads, and destroy enemy in zone. RCT–1 to maintain one reinforced battalion at Kojo until further orders.
“(2) RCT–7 to relieve elements of I ROK Corps along the Hamhung-Chosin Reservoir road, advance rapidly to the northern tip of the reservoir and Changjin, prepared for further advance to the northern border of Korea, and to destroy enemy in zone.
“(3) RCT–5 to move to an assigned zone behind RCT–7, relieve elements of I ROK Corps in the vicinity...
of Fusen Reservoir, establish necessary road blocks to prevent movement into the area, patrol the roads and destroy the enemy.

“(4) BLT1/5 to be activated on order. Upon activation to report to the designated commander for operational control and landing in the vicinity of Chongjin.

“(5) The 11th Marines, reinforced and less detachments, from an assembly area in the vicinity of Hamhung, to be prepared for operating in the zone of any RCT.”[7]

Two of the objectives mentioned in these orders, Chongjin and the northern border of Korea, were more than 300 road miles north of Wonsan. With the exception of the main coastal route, most of the roads in the 1st Marine Division zone were mere mountain trails, unfit for tanks or heavy vehicles.

OpnO 18–50 was modified the next day to provide for attaching the 1st Battalion, KMC Regiment, to the 5th Marines, and the 5th KMC Battalion to the 1st Marines. The security of the Munchon and Yong-hung areas (13 and 32 miles north of Wonsan respectively) was assigned for the time being to the 5th Marines, reinforced by Company A of the 1st Tank Battalion.

On the 27th General Smith moved from the Mount McKinley at 1000 to the new Division CP, a mile north of Wonsan. An old Russian barracks, it was too small and badly in need of repairs. The building occupied by the 1st Marine Air Wing was in even worse shape, but carpenters were soon busy at boarding up windows and doors blown out by bombs.[8]
Chapter 3. First Blood at Kojo

1/1 Sent to Kojo

A holiday spirit prevailed among the men of the 1st Battalion, 1st Marines, as they entrained on the morning of 26 October 1950 at a railhead near the Wonsan airfield. Physical activity was a treat after the monotony and confinement of Operation Yo-Yo, and 1/1 had been selected for the Kojo mission. Immediately after the landing on YELLOW Beach at 0900 that morning, preparations were made for departure by rail of the rifle companies at noon. Supplies and reinforcing units were scheduled to follow on the 27th on a second train and a convoy consisting of 1/1 and Motor Transport Battalion vehicles; Battery F, 2d Battalion, 11th Marines; 1st Platoon, Company C, 1st Engineer Battalion; and a detachment of Company D, 1st Medical Battalion.[9]

At 1330 a wheezing Korean engine manned by a Korean crew pulled out of Wonsan with the rifle companies riding in gondola cars. It was a bright blue day, with a hint of frost in the air; and not a sign of enemy resistance appeared along the 39-mile route, though several tunnels might have been utilized for a guerrilla attack.

Upon their arrival late that afternoon, Kojo proved to be the most attractive town the men had seen in Korea—an almost undamaged small seaport flanked by the white beaches and sparkling blue waters of the bay. There remained for the Marines the task of relieving ROK units and protecting an area consisting of a coastal plain about 5000 yards in diameter which stretched from the bay to a semicircle of hills ranging from 150 to 600 feet in height (see Map 4). The ROK officers assured the battalion commander, Lieutenant Colonel Jack Hawkins, that his men would find their duty at Kojo a tame assignment. They admitted that small bands of escaping NKPA soldiers had sometimes raided the villages for rice, but added that ROK patrols had scoured the hills without meeting any organized resistance.

The night passed uneventfully for the battalion in a perimeter northwest of Kojo while the ROKs occupied outposts along the southern fringe of the coast plain. In the morning the Marines found the rice paddies glazed with the first ice of the autumn. After completing the relief of the 2d Battalion of the 22d ROK Regiment at 1200, they watched with amusement that afternoon as the Koreans crowded into the gondola cars with their women, children, dogs, and chickens for the ride back to Wonsan. When it seemed that the train could not hold another human being, a ROK officer barked out an order and everyone squeezed farther back with audible sighs and grunts. At last, as a grand climax, the officer shouted a final command and the entire trainload of Koreans sat down simultaneously, like collapsing dominoes.

It was an ironical circumstance that the ROKs on the overcrowded train took with them the remnants of the supply dump that 1/1 was assigned to guard. However important this dump may have been in its heyday, it had apparently been consumed by the ROKs to the point where only a few drums of fuel oil remained along with other odds and ends.

That afternoon the train and truck convoys arrived without incident, bringing supplies and all reinforcing units except the artillery. And though the Marines at Kojo did not neglect security precautions, they had seen nothing during their first 24 hours to hint that an organized enemy was about to launch a surprise attack.
Chapter 3. First Blood at Kojo

Marine Positions in Kojo Area

Lieutenant Colonel Hawkins faced a problem in selecting positions for his battalion. “Mindful of my mission—to protect the supply dump until removed—I had to dispose the battalion in a way designated to accomplish this end [he commented]. The supply dump was located at the railroad station in the flat ground south of Kojo—a point difficult to defend, since it was on low ground and could be approached by the enemy from any direction. I considered the most likely direction of enemy approach to be from the south along the coastal road or through the valley leading toward Kojo from the southwest. Therefore, I decided to place Company B in outpost positions to cover these approaches. . . . The remainder of the battalion would be deployed on the hill massif west of Kojo, prepared to defend the area or counterattack if necessary to prevent loss of the supplies at the railroad station. I did not consider this disposition ideal by any means from the standpoint of defensive strength, but it appeared to be the best possible disposition in the complex terrain to protect the supply dump. . . . Also, I did not have reason to expect an organized attack by large enemy forces. In the event such a contingency should occur, it was planned that Company B, the outpost, would withdraw to the main battle position.”[10]

Click here to view map

Captain Wesley B. Noren’s Baker Company positions were about two miles south and southwest of Kojo across an expanse of rice paddies. From east to west the company held three isolated points of high ground: 1st Platoon (First Lieutenant George S. Belli), reinforced by one section of light machine guns and one 3.2” rocket launcher squad, on the east slope of Hill 109; 3d Platoon (Master Sergeant Matthew D. Monk) and Company Headquarters, reinforced by one section of heavy machine guns, one section of light machine guns, a 75mm recoilless rifle, one squad of 3.5” rocket launchers and a flame thrower, on high ground to the west and south of the 1st Platoon; 2d Platoon (First Lieutenant George G. Chambers), reinforced by one section of 81mm mortars, one section of light machine guns, a 75mm recoilless rifle and one squad of 3.2” rocket launchers, on Hill 185.

The remainder of 1/1 occupied positions west of Kojo. Captain Robert P. Wray’s Charlie Company held a continuous line of foxholes in the hills that rose from the rice paddies a mile and a half north of Baker Company’s positions. From west to east were First Lieutenant Francis B. Conlon’s 2d Platoon, First Lieutenant William A. Craven’s 1st and Second Lieutenant Henry A. Commiskey’s 3d. About 250 yards to the east were two platoons of Captain Robert H. Barrow’s Able Company. On the slopes north of Barrow stood Colonel Hawkins’ CP and the tubes of First Lieutenant Edward E. Kaufer’s 4.2” Mortar Platoon. Captain Barrow’s third platoon occupied the topographical crest of Hill 117.[11]

While the Marines organized their positions during the afternoon of 27 October, a column of refugees “almost as long as the eye could see” appeared in the valley southwest of Kojo headed for the seaport. Colonel Hawkins estimated that there were 2000 to 3000 people in the column. Since he did not have the time to examine all the refugees before darkness, Hawkins had them herded into the peninsula northeast of Kojo for the night.[12]

After a quiet afternoon on the 27th, the first hint of enemy opposition came at 1600 when a wire team was fired upon in the vicinity of Hill 185. Two hours later a truck and a jeep borrowed from the S—3, Major David W. Bridges, received fire from the high ground west of Hill 109. Both were abandoned after the truck broke down, and a Baker Company patrol had a brief fire fight at 1900 when it recovered the vehicles.[13]

These first indications of Red Korean activity in the Kojo area were attributed to the forays of guerrilla
bands. Not until after the battle did the Marines learn from POW interrogations that the enemy consisted of an estimated 1000 to 1200 men of the 10th Regiment, 5th NKPA Division. This regiment, commanded by Colonel Cho Il Kwon, former director of the Communist Party at Wonsan, was believed to have its CP in the large village of Tongchon, about two miles south of the Baker Company outposts. Other units of the NKPA division, which was credited with a total strength of 7000 to 8000 men, occupied areas farther to the south.[14]

After the Red Korean collapse, the 2d, 5th, and 10th NKPA Divisions had maintained their organization, though much depleted in strength by casualties. Withdrawing to the Wonsan area, they kept to the secondary roads and raided the villages for food. It is a tribute to Communist discipline that the outfits had not lost their cohesion at a time when their cause seemed to be collapsing. But the 5th NKPA Division was one of the units made up almost entirely of Koreans who had served in the Chinese Civil War, and its officers were fanatically dedicated to Communist principles.[15]

Only well trained and led troops could have launched the attacks which hit both ends of the Baker Company’s chain of outposts simultaneously about 2200, after the first few hours of darkness had passed in comparative quiet punctuated by occasional shots. Normal security measures were taken on a cold night with a 50 per cent watch—one rifleman remaining on the alert in the two-man foxholes while the other burrowed for warmth into a partially closed sleeping bag. The 81mm and 60mm mortars were registered on the hills just beyond the 2d and 3d platoons.[16]

These two units came under attack shortly before First Lieutenant Carlon’s position at the extreme west of Charlie Company’s line was assailed. In each instance the enemy infiltrated within grenade throwing distance before his presence was detected. Past contacts with American soldiers had given the Red Koreans some knowledge of the language, and for purposes of deception the NKPA assault troops shouted phrases in broken English:

“Come this way! . . . Don’t shoot! We’re friends.”[17]

Chapter 3. First Blood at Kojo
The All-Night Fight of Baker Company

The surprise was devastating, particularly in the Baker Company zone. On the eastern slope of Hill 109 the 1st Platoon had no inkling until men yelled warnings from the foxholes just as the enemy grenades exploded and Red Koreans in estimated strength of two platoons overran the position. Seven Marines were killed before they could get out of their sleeping bags, and others lost contact in the darkness.

The 3d Platoon and Company CP were attacked from three points to the south and southeast. Marine 60mm mortars fired within 50 yards of the front line while the 81s laid down a barrage directly forward of the position. After a brief and bitter struggle, Communists believed to number three platoons were repulsed.

In the Charlie’ Company zone, Lieutenant Carlon’s position was hardest hit. The North Koreans closed within ten feet before they were noticed. During the confused fighting which followed, the enemy won a brief foothold. An estimated 20 Marines were cut off but got back safely the next morning.

After recovering from the initial surprise the Charlie Company outposts repulsed all further attacks. Wray’s men lost 6 killed and 16 wounded during the night’s encounters but could count 92 Korean bodies the next morning.

At 2215 the 3d Platoon of Baker Company had a second attack at the same points as the first one. The Red Koreans appeared to Captain Noren to be exceptionally well disciplined and controlled in spite of heavy casualties inflicted on them by combination of mortar, machine-gun and small-arms fire, and grenades.[18]

The plight of Belli’s platoon was first made known when 2/B on Hill 185 received a message to the effect that 1/B had withdrawn from Hill 109 with 30 men missing. The retirement was made possible by the brave stand of Sergeant Clayton Roberts, who covered the movement with a light machine gun until he was surrounded and killed.

The 3d Platoon beat off another attack meanwhile as the enemy closed in from the left rear as well as the front. With machine-gun fire coming from both directions, Noren informed the battalion CP at 2350 that his position was untenable and asked permission to withdraw. His request being granted, he directed Lieutenant Chambers to pull back from Hill 185, covering the withdrawal of 3/B with 81mm fire.

The intersection of the dike and railway track was designated as the meeting place for the three Baker Company platoons. Noren covered the rear of the 3/B withdrawal while his executive officer, First Lieutenant Chester B. Farmer, took charge of the point. Opposite Hill 109 they encountered Staff Sergeant Robert Fisher and five men whom Belli had directed to remain at the dike and pick up stragglers while the rest of 1/B continued to pull back.

Fisher reported that the attack on Hill 109 had been conducted with skill and discipline. Whistles and red and green flares were used for signaling by Communists who cut off a listening post and overran a squad on the right flank. The assault force numbered 160, according to POW testimony.

The methodical, position-by-position withdrawal of the three Baker Company platoons was conducted so skilfully that remarkably few casualties resulted. Noren lost all contact for a short time when enemy fire severed the antenna on his last operative SCR–300. At about 0215 Chambers’ platoon was last to reach the meeting place, having beaten off several attacks during its withdrawal from Hill 185. With another large-scale enemy assault threatening, Noren organized a 360° defense on both sides of the railway track just south of the village of Chonchon-ni. One Marine was killed and six wounded by enemy fire received from the west as well as east.

Fox Battery of the 11th Marines had arrived in the Kojo area about midnight and set up its guns on the
beach northeast of the town at about 0200.[19] Baker Company had no radio in operation, however, until parts of two damaged SCR—300’s were combined into one to restore communication. Contact was made with the 4.2” mortars, which registered about 0300, directed by Captain Noren, and broke up the NKPA attack. The 81mm mortars made it hot for the enemy in Chonchon-ni, and at 0330 the Communists apparently disengaged to withdraw east of the railway track and northward toward Kojo. Marine artillery had registered by 0400, but all was quiet in the area the rest of the night.

Although a few NKPA mortar shells were received, enemy equipment appeared to be limited for the most part to automatic weapons, small arms, and grenades. There were indications that Korean civilians had been used in several instances as human shields for an attacking force.[20]

The NKPA withdrawal to Kojo led to the Marine speculation that the Communists meant to make enforced recruits of some of the hapless residents allotted a refuge in the peninsula north of the town. As it proved, they were not harmed by the NKPA troops. The last enemy effort, just before dawn, was an attack in platoon strength on Second Lieutenant John J. Swords’ Able Company platoon by Reds who had infiltrated through Kojo. A brief fight ensued on Hill 117 as the Marines beat off the assault at the cost of one man killed and two wounded.

Baker Company elements had meanwhile resumed their withdrawal along the railway track north of Chonchon. All was quiet at first light when Noren began the task of evacuating his wounded in ponchos through rice paddies which were knee-deep in mud and water under a thin skin of ice. Marines came out from the Able Company positions to lend a hand.

The evacuation had nearly been completed when about 200 enemy troops suddenly moved out from Kojo in a westerly direction across the rice paddies. Whether they meant to interfere with the evacuation or merely to escape was never made clear. For the Marines of Able and Baker Companies as well as the gunners of Fox Battery opened up in broad daylight and found lucrative targets. An estimated 75 Communists were killed and wounded before the rest scurried out of range into the hills west of the coastal plain.

Some contact was maintained with the enemy until 1000 by elements of Charlie Company, then the action was gradually broken off as the planes of VMF(N)–513 came in low with close support.[21] Although the strikes by air were largely uncontrolled because of poor radio communications between the Forward Air Controller (FAC) and the planes, they were very helpful to the Marines on the ground.[22]

Chapter 3. First Blood at Kojo
2/1 Ordered to Kojo

The radio message bringing the first news of the Kojo fight was sent by 1/1 at 0418 on the 28th. Owing
to transmission difficulty, it was picked up by the 7th Marines, relayed to the 1st Marines at 0700, and telephoned
to the 1st Marine Division.[23] It stated briefly that the battalion had been under attack since 1700 by an
estimated 1000 enemy and had suffered a large number of casualties. Helicopters were requested for air
evacuation and an LSTH for water evacuation of the wounded. Air support was required, the message continued,
adding that the destroyer in direct support of the battalion had not yet arrived on station.

At 0830 an officer from 1/1 reported in to 1st Marines CP with a further account. He reported a platoon
of B Company cut off and estimated 150 casualties.[24]

A third report from 1/1 reached the CP of the 1st Marine Division as an intercepted radio message at
1238 on the 28th while General Almond was conferring with General Smith. Sent from Kojo at 1000, the message
said:

“Received determined attack from South North and West from sunset to sunrise by large enemy force.
Estimated from 1000 to 1200. One company still heavily engaged. Civilian reports indicate possibility 3000
enemy this immediate area. Have suffered 9 KIA, 39 WIA, 34 MIA [Missing in Action] probably dead. Two
positions overrun during night. If this position is to be held a regiment is required. Enemy now to South North and
West of us but believe road to North is still open. Harbor is in our hands and ROK LST has been here. Shall we
hold here or withdraw to North? ROK supply dump . . . removed. Request immediate instructions. Send all
available helicopters for wounded. Suggest send instructions by both radio and helicopters.”[25]

The Corps and Division commanders agreed immediately that Kojo should be held, since a large-scale
NKPA attack appeared to be in the making. Another factor in this decision was the ROK supply dump. Nobody at
the Division CP seemed to know as yet that it had been removed, but General Smith directed his G–3 to issue the
necessary orders to send Colonel Puller, CO of the 1st Marines, and a battalion of reinforcements to Kojo. Within
five minutes Colonel Alpha L. Bowser, 1stMarDiv G–3, telephoned Corps to request that a train be assembled on
the Wonsan siding immediately for a battalion lift.[26]

Brigadier General Edward A. Craig, ADC of the 1st Marine Division, was on his way to a conference at
the 1st Marines CP when he met General Almond and Colonel Puller, and the three compared notes from their
jeeps. Craig informed them that action toward the providing of transportation had already been initiated by
Division. A request had later been made for a second destroyer to provide gunfire support (the first having already
arrived) and an LST for casualty evacuation. Another LST had been requested for the purpose of sending tanks
to Kojo, since the road and bridges would not bear the weight of armor.

The possibility of a major engagement taking place at Kojo seemed to be confirmed by two later reports
1/1 sent at 1415 and 1840. The first relayed prisoner of war statements to the effect that an estimated 7000 men of
the NKPA 5th Division were located at Tongchon.[27] The second, a radio message, read:

“Reinforcement train has not arrived as of 1800. NK prisoners revealed large enemy force plans attack
over position tonight. Recommend LVTs with LSTs stand by at daylight in case of emergency evacuation
necessary. In view of large numbers of troops facing us as previously reported and fact enemy on all sides except
seaward, consider situation critical. Request higher authority visit.”[28]

By that time Colonel Puller and the troops were on the way. Making up a train and loading it with a
reinforced battalion and extra supplies in three and a half hours had been something of an administrative feat,
particularly when the battalion was just coming off landing craft. Yet Lieutenant Colonel Allan Sutter’s 2/1 and the Regimental Command Group pulled out for Kojo at 1630 and a second train followed two hours later.[29]

Upon arrival at 2230, CO 1stMar learned that there had been no major enemy contact since 1000. Lieutenant Colonel Hawkins had contracted his unit that afternoon to his main position along the high ground forming a semicircle around Hill 117. The 2d Battalion and supporting arms having tied in with the 1st for the night, Colonel Puller concluded that no further cause for alarm existed. And since the battery positions at Kojo were limited, he radioed General Smith that more artillery would not be needed.[30]

Seventeen Marines previously listed as MIA by 1/1 had returned unhurt to their units on the 28th after being cut off during the confusion of the night’s fighting. Marine air had all but obliterated Tongchon that afternoon while the U.S. destroyers *Hank* and *English* were bombarding Kojo.

The request for water as well as air evacuation of serious casualties had resulted in immediate action. Within an hour after receiving the message, CTF–90 had the transport *Wantuck* on the way with a surgical team, and VMO–6 sent five helicopters which flew 17 wounded men to a hospital ship at Wonsan on the 29th.[31]

Ten tanks of Company C, 1st Tank Battalion, were loaded in LST 883 at Wonsan on the 28th, but the ship was delayed by running aground. Upon arrival at Kojo the next day, it again became necessary for the LST to be pulled off the bar by a tug. By this time the military situation was so well in hand that the tanks were taken back to Wonsan without being unloaded.[32]
Responsibility for the security of the Wonsan area having been assigned to the 1st Marines, something of an administrative problem was created on the 28th by the order sending 2/1 to reinforce 1/1 at Kojo. For the 3d Battalion of the regiment had departed that same day to relieve a ROK unit at Majon-ni, 28 miles west of Wonsan. Since this left no troops to patrol roads in the Wonsan area and maintain blocking positions at Anbyon, the 2d Battalion, 5th Marines, and 5th KMC Battalion were attached to the 1st Marines for those missions.

Also available to the 1st Marines for such security duties as guarding the Wonsan airfield and harbor area were the 1st Shore Party Battalion, 1st Amphibian Tractor Battalion, and Company B of the 1st Armored Amphibian Tractor Battalion.[33]

By the morning of the 29th, moreover, it had already become apparent that one or both of the battalions in the Kojo area could soon be spared. When General Craig arrived by helicopter, he found the situation well in hand.[34]

About 60 percent of the seaport had been destroyed by air strikes and the guns of the destroyers when a patrol consisting of Dog and Fox Companies combed the ruins on the morning of the 29th without finding any evidences of enemy occupation. Meanwhile an Easy Company patrol ranged to the west of the coastal plain with equally negative results.[35]

Captain George B. Farish of VMO–6 was making a reconnaissance flight when he discerned the word HELP spelled out in rice straw near a straw-stack a mile northeast of Tongchon. A Marine crawled out from concealment, and the pilot landed his helicopter to pick up PFC William H. Meister, who had been hiding since losing touch with his unit during the enemy night attack on Hill 109. This was the first of four such rescues completed by Farish that day.[36]

On the afternoon of the 29th, Captain Noren led a patrol along the railway track south of Kojo and retraced the route of his fighting withdrawal in the darkness. In the vicinity of Hill 109, where Lieutenant Belli’s platoon had been surprised, he found 12 Marine bodies. None had been despoiled by the enemy of arms or equipment.

Pushing farther south, Noren encountered sniper fire from the ruins of Tongchon, destroyed by Marine air, and called for more strikes. The Corsairs flushed out a group of 20 enemy troops, 16 of whom were cut down by the machine guns of the Baker Company patrol.[37]

By the 29th, when General Almond made a trip of inspection to Kojo, it was possible to revise the original Marine casualty list as the MIA casualties were reduced. The final count was 23 KIA, 47 WIA and four MIA.[38]

Twenty-four wounded Marines were evacuated to Wonsan that day by APD. LST 883, when it returned to Wonsan with the tanks, took the bodies of 19 Marines and 17 prisoners.

Enemy losses, in addition to 83 POW, were estimated at 250 KIA and an unknown number of WIA on the basis of more than 165 bodies found by Marine patrols. Curiously enough, the Communists had shown little interest in the equipment which fell into their hands, and two Marine 75mm recoilless rifles, rendered inoperative, were recovered with their carts and ammunition in the vicinity of Chonchon-ni. Almost all abandoned equipment was found in usable condition.[39]
Each of the Marine rifle companies set up outposts in front of its zone. Morning and afternoon patrolling, with air on station, went on during the last two days of October with negative results. Harassing and interdiction fires were also continued until 1/1 departed.

LST 973 arrived off Kojo at 1430, 31 October, and disembarked the 5th Battalion of the KMC Regiment. Lieutenant Colonel Hawkins’ battalion, accompanied by Colonel Puller, left Kojo at 0700 the next morning on the return trip of the LST. The ship docked at Wonsan at 1230 on 2 November. That afternoon 1/1 relieved elements of the 1st Tank Battalion at the roadblock near Katsuma, four miles southeast of Wonsan.

Lieutenant General Lemuel C. Shepherd, Jr., CG FMFPac, who was acting in an informal capacity as amphibious adviser to General MacArthur, inspected 2/1 at Kojo by helicopter on 31 October. Having arrived at Wonsan that day with Colonel Victor H. Krulak, his G–3, he conferred at X Corps Headquarters with Admiral Struble and Generals Almond and Smith.[40]

Among the other subjects of discussion was the news that Chinese Communist Forces (CCF) prisoners had been taken in the area north of Hamhung by ROK units which were soon to be relieved by the 7th Marines. Several clashes with organized Chinese forces during the last days of October had also been reported by elements of the 1st Cavalry Division of the Eighth Army in western Korea.

The 7th Marines had been given the mission of spearheading the Marine advance to the northern border of Korea as directed in Corps orders. After parkas and other cold weather clothing had been issued from the beach dumps at Wonsan, the regiment completed the movement to Hamhung by motor convoy from 29 to 31 October. By this time the Corps drive to the Yalu was shifting into second gear, with the 1 ROK Corps far in advance along the coastal highway. Two U.S. Army units were soon to be involved. The 7th Infantry Division, which landed at Iwon from 29 October to 8 November, had Corps orders to push on toward the border; and it was planned that the 3d Infantry Division, due to land its first units on the 8th at Wonsan, would relieve 1st Marines units south of Hamhung.[41]

Corps orders of 2 November called for 2/1 to return to Wonsan immediately. The southern boundary of X Corps was to be moved 70 miles farther south, effective on the departure of the battalion from Kojo. In order to cover the new zone, the KMC regiment had already been detached from the 1st Marine Division and given responsibility for the Corps zone south of the 39th Parallel. The relief of the 2d Battalion of the 5th Marines was completed by KMC elements that same day at Anbyon, eight miles southeast of Wonsan, thus freeing that unit for a motor lift northward to rejoin its regiment.[42]

Lieutenant Colonel Sutter’s 2/1 and the artillery battery departed Kojo the following day. A small train and a truck convoy sent from Wonsan were used chiefly for the transport of supplies, and most of the troops traveled by shanks’ mare. The column was on the way when the report came that the rail line had been blown up at Anbyon by guerrillas. The battalion halted there and set up a perimeter for the night which included both the train and truck convoys. At 0730 in the morning the convoys moved out again for Wonsan. Delayed slightly by another rail break, Sutter completed the movement at noon.[43]

The track-blowing incident gave evidence that the Marines must deal with a third type of enemy. In addition to the NKPA remnants, and the forces of Red China, it now appeared that account must be taken of thousands of uprooted Koreans prowling in small bands for food and loot—the flotsam of a cruel civil war. Called guerrillas by courtesy, they were actually outlaws and banditti, loyal to no cause. And by virtue of their very
furtiveness, they were capable of doing a great deal of mischief to organized forces.
Chapter 4. Majon-ni and Ambush Alley

FROM A DISTANCE the Y-shaped mountain valley, encircled by peaks and crossed by two swift, clear streams, might have been taken for a scene in the Alps. This impression was borne out by the village of Majon-ni, which nestled close to the earth, as seen from afar, with the tranquil and untroubled air of a Swiss hamlet.

On closer inspection, however, such first impressions could only prove to be illusory. The most prominent building in the Korean village was a new schoolhouse with the onion-shaped dome of Russian architecture. An incongruous and pretentious structure for such a small peasant community, it had been erected not so much for the instruction of children as the indoctrination of adults in Communist principles.

Majon-ni, in short, had been for five years a hotbed of forced culture in the doctrines of the Communist puppet state set up in northern Korea after World War II by the occupation forces of Soviet Russia. And it was here that the 3d Battalion of the 1st Marines arrived on 28 October 1950. Relief of elements of the 26th ROK Regiment at 1600 enabled those troops to return to Wonsan in the vehicles which had brought 3/1.[1]

The Marines had been assigned the mission of “setting up a defensive position at Majon-ni, destroying enemy forces, and denying them the use of this road net.” In addition, the unit was “to patrol roads to the north, south, and west, and keep the road open between Majon-ni and Wonsan.”[2]

This last directive was soon modified by oral instructions relieving the battalion from the responsibility of keeping open the Wonsan-Majon-ni road. The reason for the change was apparent when the troops of 3/1 covered the 28-mile route by motor lift in two echelons on the afternoon of the 28th. After leaving the seaport and alluvial plain, the shelf-like road twists precariously through a 3000-foot pass. This stretch abounds in hairpin turns and deep gorges which are ideal for setting a tactical trap, and the route was soon to be known to the troops as Ambush Alley. Although traversable by tanks, it offered too much danger from road-blocks and landslides to permit the dispatch of the iron elephants.[3]

The strategic importance of the Majon-ni area derived from its position at the headwaters of the river Imjin and the junction of roads leading east to Wonsan, south to Seoul, and west to Pyongyang. They were being traveled extensively at this time by NKPA troops escaping northward in civilian clothes after the collapse of the Red Korean military effort.

It was natural that the 1st Marine Division, with a zone of more than 15,000 square miles to control, should be ordered to occupy such an important road junction and potential assembly area as Majon-ni.[4] Thus the Marines of Lieutenant Colonel Thomas L. Ridge’s reinforced battalion were sent as a blocking and screening force.
The Chosin Reservoir Campaign

Chapter 4. Majon-ni and Ambush Alley
Marine Units Tied In for Defense

In addition to H&S, Weapons, and the three rifle companies, the task organization consisted on 28 October of Battery D of the 2d Battalion, 11th Marines, the 3d Platoon of Company C, 1st Engineer Battalion, and detachments from ANGLICO, 1st Signal Battalion; Company D, 1st Medical Battalion; and H&S Company, 1st Marines.[5]

The battalion commander and his S-3, Major Joseph D. Trompeter, decided after a survey of the terrain that the commanding ground was too far from the village and too rugged for company outposts. The logical solution seemed to be a battalion perimeter combined with daytime company OPs and vigorous patrolling of the three main roads. In order to tie in all units of a perimeter 3770 yards in circumference, it was necessary to create provisional platoons of such H&S, artillery and engineer troops as could be spared from their regular duties. Even so, the defense was spread thin in places.

The schoolhouse was the obvious place for the battalion CP. Communication within the perimeter was by telephone, with wires laid from the CP to artillery and mortar positions as well as company and platoon CPs. Radio communication was established with the regiment and the division but due to the terrain remained irregular at best.

First Lieutenant Leroy M. Duffy and his engineers were assigned the task of constructing on OY strip on the east side of the perimeter which was completed on 2 November. A parallel cliff made it necessary to land lanes at a dangerous angle, but no better site could be had in this steep-sided valley.

Click here to view map

Topography also limited Captain Andrew J. Strohmenger’s cannoneers, who were almost literally “firing out of a barrel.” Close-in support was out of the question in the bowl-like valley ringed with peaks, but the six howitzers were emplaced so that they could be swung to fire on any avenue of approach, especially toward the three roads leading into Majon-ni.[6]

No difficulty was found in deciding on a water point, for tests established the purity of the water from both branches of the Imjin flowing through the perimeter. Lieutenant Duffy explained that he added chlorine only because the Marines were accustomed to the flavor.
The Marine mission had its political as well as military side. Major Edwin H. Simmons, CO of Weapons Company, was given the responsibility for defending the three road blocks of the perimeter with Weapons Company personnel. At each of them he stationed a heavy machine gun section and a 3.5" rocket launcher section. These barriers were also ports of entry where all Korean transients were searched for weapons. When a group of 20 to 30 accumulated, they were escorted under guard to the prison stockade, just across the road from the battalion CP.[7]

There they were “processed” by the Civil Affairs Section, consisting of 12 Marine enlisted men under the command of First Lieutenant Donald M. Holmes and Master Sergeant Marian M. Stocks, known facetiously as the mayor and sheriff respectively of Majon-ni. Their decisions were based largely on the findings of the 181st Counter Intelligence Corps (CIC) team and the battalion S–2, Second Lieutenant Frederick W. Hopkins. The CIC specialists proved to be indispensable by contributing daily intelligence based on civilian as well as POW interrogations.

As might be supposed, the question of whether a transient was an escaping NKPA soldier or a harmless peasant might have perplexed Solomon himself. But the Marines came up with a simple off-the-cuff solution. Time did not permit a lengthy screening, and each Korean was given a brief examination with the aid of interpreters. If his head was still close-cropped in the NKPA manner, if his neck showed a tanned V-line recently left by a uniform, if his feet bore the tell-tale callouses left by military footgear—if he could not pass these three tests, the transient was sent to the prison stockade as a fugitive Red Korean soldier. Now that Chinese Communist troops had been encountered both on the X Corps and Eighth Army fronts, it was all the more important that battlewise NKPA elements should be prevented from joining their new allies if Red China intervened.

Some of the prisoners were admittedly NKPA veterans, weary of the war and ready to give up voluntarily. Manifestations of this spirit caused Lieutenant Colonel Ridge to send a radio request for an air drop of surrender leaflets.

The first full day’s operations, on 29 October, resulted in 24 prisoners being taken. But this was a trickle as compared to the torrent which would follow until an average daily rate of 82 was maintained during the 17 days of the operations.
The Chosin Reservoir Campaign
Lynn Montross and Nicholas A. Canzona

Chapter 4. Majon-ni and Ambush Alley
Roads Patrolled by Rifle Companies

Each of the rifle companies was given the mission of sending out daily motorized or foot patrols while
manning, as required, company OPs. The three roads were assigned as follows:
George Company (Captain Carl L. Sitter), the road to Wonsan;
How Company (Captain Clarence E. Corley, Jr.) the road to Seoul;
Item Company (First Lieutenant Joseph R. Fisher), the road to Pyongyang.[8]

All patrols reported negative results throughout the first four days. Nevertheless, a system of artillery and
81mm mortar harassing and interdiction fires on suspected Red Korean assembly areas was put into effect. Major
Simmons was designated the Supporting Arms Coordinator (SAC), and OYs were used for artillery spotting and
to call air strikes when planes were on station.[9]

The battalion commander emphasized to his officers the necessity for maintaining as good relations with
the inhabitants as security would permit. Strict troop discipline was to be maintained at all times, and the villagers
were allowed their own mayor and council along with such laws or customs as did not conflict with the Marine
mission.[10] A policy of justice and fairness had its reward when the inhabitants warned the CIC team of an
impending attack by organized NKPA troops.

POW interrogations and reports by civilians identified the enemy unit as the 15th NKPA Division,
including the 45th, 48th, and 50th regiments, commanded by Major General Pak Sun Chol. Following the NKPA
collapse, the division had been able to maintain its organization while infiltrating northward from the Pusan
Perimeter and raiding the villages for food. The mission was reported to be the occupation and control of the
upper Imjin valley as a base for guerrilla operations, with the Majon-ni road junction being designated one of the
main objectives.[11]

Enemy numbers were said to reach a total of 11,000. But that figure, like most Oriental estimates of
numbers, had to be taken with the traditional grain of salt.

At any rate, the Marines had no further doubt on the morning of 2 November that they were opposed by a
resolute enemy skilled at guerrilla tactics. Second Lieutenant Harvey A. Goss’ platoon of How Company,
reinforced with 81mm mortars, light machine guns, an artillery forward observer (FO) team and a FAC, was
ambushed in a deep gorge five miles south of Majon-ni while conducting a motorized patrol. The Marines, raked
by rifle and automatic small-arms fire from an unseen enemy hidden along the heights on both sides, got off only
the message, “We’ve been hit, send help, send help” before the radio was hit.[12]

Effective deployment in the narrow road was prevented by stalled vehicles. Casualties were mounting
when Second Lieutenant Kenneth A. Bott and PFC Donald O. Hoffstetter ran the gauntlet of fire in a jeep. They
reached Majon-ni unhurt although one tire of the jeep had been shot.

The 3/1 CP was delayed in summoning air because of the difficulties in radio transmission.[13] This
break in communications alarmed Major Simmons, acting as SAC. He persuaded the pilot of an OY to fly him
over the scene of the ambush. From his point of vantage Simmons had a good view of the deployment of Captain
Corley’s remaining two rifle platoons, riding artillery trucks and reinforced with heavy machine guns and 81mm
mortars, which had been sent out from Majon-ni to extricate the patrol. The 81mm mortars were set up just off
the road and began pounding the North Korean cliffside positions. PFC Jack Golden, a one-man task force, climbed
with a 94-pound heavy machine gun to a height where he could fire down on the Communists. Marine Corsairs
came on station, somewhat tardily because of the poor radio communication, and the remnants of the enemy
disappeared into the hills.

Lieutenant Robert J. Fleischaker, (MC) USN, the battalion medical officer, and his assistants cared for
the less critical Marine casualties. One man died during the night but most of the others were evacuated during the
next day in three helicopter flights—much to the astonishment of the natives. Fleischaker and his assistants also
treated Korean civilians on occasion, and the saving of a village boy’s life by an emergency appendectomy did
much to gain the good will of the community.[14]
Radio communication between Majon-ni and Wonsan was so uncertain, because of the intervening hill mass, that it was possible to get through for only a few hours at night. The surest means of communication was a written message carried by helicopter or OY pilots, who had to insure delivery to regiment after landing at the Wonsan airfield.[15]

The supply problem had already begun to pinch before the first week ended. A convoy came through from Wonsan without molestation on 29 October, but it was the last for a week. On 1 November, just to play safe, Lieutenant Colonel Ridge requested a practice air drop which went off satisfactorily. His judgment was upheld on the morning of the How Company ambush when a 3/1 supply convoy was attacked seven miles west of Wonsan (see Map 5) and forced to turn back.

First Lieutenant James D. Beeler commanded the George Company rifle platoon escorting the column of supply vehicles which was under the charge of Second Lieutenant James L. Crutchfield of H&S Company. The third truck in line, loaded with diesel fuel and C–3 composition,[16] burst into flames after running into a hail of enemy rifle and automatic weapons bullets. Meanwhile the first two trucks continued until they came to a roadblock created by blowing a crater. Turning around under intense fire, they got back to the point of original ambush just as the other vehicles were trying to reverse direction; and in the confusion two trucks went off the narrow road, making a total of three lost.

A flight of three VMF–312 Corsairs led by Lieutenant Colonel J. Frank Cole dispersed an enemy force estimated at 200 to 300 men. The convoy was extricated and brought back to Wonsan after the 1st Marines sent out a task force consisting of four tanks, a tank dozer and six trucks filled with infantry. Personnel losses in the ambush were nine men killed and 15 wounded.[17]

Ridge now had to call for an air drop in earnest. Gasoline, rations, grenades and artillery, mortar and machine gun ammunition to a total of more than 21 tons were packaged at the Wonsan airfield on 2 November by Captain Hersel D. C. Blasingame’s 1st Air Delivery Platoon. Four hours after the receipt of the message, the Air Force C–47s released 152 parachutes over the Majon-ni perimeter. This was one of the 141 replenishment missions of the Air Delivery Platoon in November, amounting to 864 man-hours of flying time and 377 tons of supplies dropped.[18]

Less than the usual amount of breakage resulted, but Colonel Puller considered it so necessary to push a truck convoy through to Majon-ni that he assigned a rifle company as guards. This mission fell to Captain Barrow’s Able Company, reinforced by one platoon of Captain Lester G. Harmon’s Company C engineers, Technical Sergeant Shelly Wiggins’ section of 81mm mortars, and Second Lieutenant Harold L. Coffman’s section of 75mm recoilless rifles. Thirty-four supply vehicles were in the column which left Wonsan at 1430 on 4 November.[19]

The late hour of departure was a handicap; and though an OY flew reconnaissance, the convoy had no FAC. A TACP jeep well back in the column could communicate with the OY, which relayed the message to the two VMF–312 Corsairs on station.

Barrow reasoned that because so many of the enemy road-blocks required engineer equipment, it would be advisable for Harmon’s vehicles to lead, followed by First Lieutenant William A. McClelland’s infantry platoon. This scheme promised well when four undefended crater roadblocks were encountered and speedily filled in by the engineers. The fifth, however, was the scene of an ambush by Red Koreans occupying the steep
heights on both sides of the narrow, winding road.

The engineers soon had a hot fire fight on their hands. Taking cover behind the vehicles, they gave a good account of themselves. But the stalled trucks delayed the infantry platoon coming to their aid; and lack of a FAC resulted in less effective close air support than the Corsairs usually rendered. Thus, with the early November dusk approaching, Captain Barrow decided on a return to Wonsan.

By a near-miracle the trucks turned about safely on the narrow shelf that passed for a road. As the enemy long-range fire increased, Barrow ordered lights out when the column commenced its eight-mile return trip. In the darkness a truck loaded with 20 Marines missed a hairpin turn and plunged over the edge. Fortunately, the accident happened at one of the few spots where the vehicle could land on a wooded shoulder instead of hurting through space to the rocky valley floor several hundred feet below. It was found that nothing worse than broken bones and concussion had resulted after a human chain brought the injured men back up to the road.

Lights were turned on and the convoy got back without further trouble. Barrow reported to his regimental commander at Togwon that his losses amounted to eight men wounded and 16 injured in addition to five vehicles destroyed.

Colonel Puller assured him that his failure had been due to an unavoidably late start and lack of a FAC rather than faulty judgment.

The following morning, after departing Wonsan at 0830, the air controller was not needed. Barrow had put into effect a new tactical plan based on the premise that the guerrillas of Ambush Alley would be waiting as usual for the sound of approaching trucks. He prepared a surprise, therefore, by directing his infantry platoons to take turns at leading the column on foot, keeping a thousand yards or more in advance of the vehicles.

The scheme worked to perfection as Second Lieutenant Donald R. Jones’ platoon rounded a bend near the scene of yesterday’s ambush and surprised about 70 guerrillas as they were eating. The ambushers had in effect been ambushed. The Marines opened up with everything they had, and only a few of the Reds escaped with their lives. There was no further trouble after the convoy got under way again, arriving at Majon-ni early in the afternoon of 5 November without a single casualty. Losses of 51 killed and three prisoners were inflicted on the enemy.
The supplies were no less welcome than the Marines who brought them, for the CIC team had warned of an attack on Majon-ni at 0100 the following night. Colonel Puller placed Able Company under the operational control of 3/1 for the defense, and the commanding officer assigned the three rifle platoons and their reinforcing elements a sector between How and George Companies on the perimeter.

This addition to his strength made it possible for Lieutenant Colonel Ridge to send out his executive officer, Major Reginald R. Myers, in command of a motorized patrol large enough to cope with a reported enemy build-up of 2000 to 3000 men about six miles northwest of Majon-ni on thePyongyang road. Intelligence received by Corps indicated that this force was assembling in an old mining area, and a 3/1 reconnaissance in force was ordered.

The Marine task force, consisting of George and Item Companies, plus elements of Weapons Company, was supported by artillery from Majon-ni. Nothing more formidable was encountered than a few guerrillas firing at long-range, but Myers brought back 81 willing prisoners.\[20\]

That night at 0130, trip flares and exploding booby traps were the prelude to the first NKPA probing attacks on the perimeter. The enemy was half an hour late, but otherwise the assault developed pretty much as the CIC team had predicted, even to the identification of elements of the 45th Regiment of the 15th NKPA Division. The assailants showed no disposition to close, and the assault turned into a desultory fire fight. At 0500, with a fog reducing visibility almost to zero, the enemy could be heard but not seen in his assault on the battalion OP. This position was located on the How Company front and manned by wiremen and artillery and mortar FO teams. When their ammunition ran out, these Marines were forced to withdraw; but Captain Thomas E. McCarthy, Second Lieutenants Charles Mattox and Charles R. Stiles with an assortment of H&S Company personnel recaptured the position the moment that the fog lifted. The enemy withdrew into the hills after the Corsairs came on station, and the action ended at 0730 with two wounded Marines representing the casualty list of 3/1 in the engagement.\[21\]

Able Company returned to Wonsan that morning with 619 of the prisoners who had been accumulating at Majon-ni until the stockade was almost overflowing with Korean humanity. Captain Barrow packed the captives into open trucks covered with tarpaulins. This precaution was taken in order not to advertise the nature of the cargo while passing through Ambush Alley, since it might be embarrassing if the guerrillas attempted to liberate prisoners who outnumbered their keepers three to one.

Simultaneously with the return of Able Company, Colonel Puller ordered his 2d Battalion (—) to proceed via the Majon-ni road to Munchon-ni. Lieutenant Colonel Sutter’s mission was similar to that of Lieutenant Colonel Ridge at Majon-ni: to block enemy movement along the trails leading north and to screen civilians. The hamlet of Munchon-ni squatted near the top of the highest pass along Ambush Alley. Trucks could be supplied for only one reinforced rifle company —Easy—which departed Wonsan at 0830.

Four miles short of the objective, the motorized column entered a horseshoe bend large enough to contain all the vehicles. On the left of the road was a sheer drop, and on the right rose cliffs 200 feet in height. The last truck had just entered the bend when the first was stopped by a landslide roadblock. As the column ground to a halt the enemy opened up with rifles and automatic weapons from well camouflaged positions in the high ground at the far end of the horseshoe.\[22\]

The Marines scrambled out of the trucks and returned the fire. But it was necessary to attack in order to
dislodge the enemy, and during the advance Easy Company took a total of 46 casualties—8 KIA and 38 WIA—in addition to six wounded truck drivers. Five of the seven officers were wounded, including the company commander, Captain Charles D. Frederick.

It was estimated that the roadblock had been defended by about 200 Red Koreans, who left 61 counted dead behind them and probably removed at least as many wounded. Fifty cases of 120mm mortar ammunition were destroyed by the Marines and 300 cases of small arms cartridges.

At 1615 Sutter and the remainder of the 2/1 force arrived on the scene from Wonsan just as Able Company and its prisoners appeared from the opposite direction. Helicopters having already evacuated the Easy Company’s critical casualties, Able Company brought the lightly wounded and prisoners to Wonsan without further enemy interference. Sutters’ force proceeded to Munchon-ni as originally planned.

Chapter 4. Majon-ni and Ambush Alley
KMC Battalion Sent to Majon-ni

At Majon-ni an OP manned by two squads of Lieutenant Ronald A. Mason’s 2d Platoon of How Company was threatened with encirclement on the 8th when a Red Korean force gradually built up to an estimated 250 men worked around to the rear. The other two platoons of the company, reinforced with heavy machine guns and an Item Company platoon, were sent out from the perimeter. Artillery and mortars helped to scatter the enemy in confusion with estimated 40 per cent losses. Marine casualties were one man killed and ten wounded.[23]

On 10 November, reflecting the concern of CO 1st Marines over enemy activity in the Majon-ni area, the 3d KMC Battalion arrived as reinforcements together with a convoy of supplies. CO 3/1 assigned the unit to the sector in the perimeter recently vacated by Able Company of 1/1.[24]

The celebration of the 175th birthday of the U.S. Marine Corps was not neglected at Majon-ni. Somehow the cooks managed to bake a prodigious cake, with thinly spread jam serving as frosting, and all hands were rotated a few at a time to their company CPs to receive a slice.[25]

That afternoon an OY of VMO-6 spotted an estimated 300 enemy troops about four miles west of Majon-ni. Under direction of the aerial observers, Captain Strohmenger’s howitzers broke up this concentration.[26]

The CIC team warned that another attack on the perimeter by the 45th NKPA Regiment would take place on the night of 11–12 November. As a prelude, General Pak made an effort to terrorize inhabitants who had kept the team informed of his plans and movements. Some of the villagers took his threats seriously enough to prepare for a hurried leavetaking, but the Civil Affairs section reassured them and put a curfew into effect.[27]

After such a menacing build-up, the second attack on the perimeter fizzled out like a damp firecracker. A few probing jabs, beginning at 0130, were followed by a weak main assault on the KMC front which was easily repulsed. The enemy tried again to overrun the OP but gave up the attempt after stumbling into a field of “Bouncing Betty” mines. At 0600 the last action of the Majon-ni operation came to an end as the Communists withdrew. Friendly losses were two men killed and six wounded.[28]

This was the final appearance of the 15th NKPA Division, which apparently abandoned Majon-ni as an objective and transferred its guerrilla operations southward along the Imjin valley. The relief of the Marines and KMCs on position began the next afternoon as elements of the 1st Battalion, 15th Infantry, U.S. 3d Infantry Division, arrived to take over the perimeter.

The Army column, including 34 Marine supply vehicles, had moved out from Wonsan at 1030 the day before. Although 2/1 (less Dog Company) had maintained its blocking positions at Munchon-ni, the convoy was stopped a few miles beyond the Marine outposts by a wrecked bridge and three large craters. Guerrillas poured in small-arms fire from the high ground which resulted in two soldiers being killed and four wounded. Two Marine trucks and a jeep were destroyed.

Extensive repairs to the road being needed, Lieutenant Colonel Robert M. Blanchard, the commanding officer of 1/15, formed a defensive perimeter for the night. The column reached Majon-ni without further incident at 1530 on the 13th.[29]

Following relief by the Army unit, the Marine battalion departed at 1015 on the 14th by truck for the Wonsan area. A total of 1395 prisoners had been taken during the 17 days of Majon-ni—a large proportion of them voluntary—and more than 4000 Korean transients screened. Enemy battle casualties were estimated at 525 killed and an unknown number wounded.[30]
Losses of the Marine battalion numbered 65—16 KIA, 4 DOW and 45 WIA. Nonbattle casualties were remarkably low, owing to strict enforcement of sanitary and health regulations.[31]

The vulnerability of a tenuous MSR must also be taken into account, and casualties of nine killed and 81 wounded or injured were incurred by Marines escorting supply convoys through Ambush Alley.
Chapter 4. Majon-ni and Ambush Alley
Movement of 1st Marines to Chigyon

From the 1st Marines in the Wonsan area to the 7th Marines leading the northward advance, a distance of more than 130 road miles separated the elements of the 1st Marine Division. But the arrival of more U.S. Army units made possible a first step toward concentration.

On 29 October the 17th RCT of the 7th Infantry Division had begun landing at Iwon (see Map 2), about 60 air miles northeast of Hungnam. Other units and reinforcing elements followed until all had completed unloading by 8 November—a total of 28,995 troops, 5924 vehicles, and 30,016 short tons of cargo.[32] Transports had been sent by CTF–90 on 31 October to Moji, Japan, for the first units of the 3d Infantry Division. The 65th RCT landed at Wonsan on 5 November, but it was not until the 18th that the last elements arrived.[33] All four of the major units of X Corps—the two Army divisions as well as the 1st Marine Division and I ROK Corps—were then in the zone of operations, even though dispersed over a wide area.

The commanding generals of both Army units were “old China hands.” Major General Robert H. Soule, CG 3d Infantry Division, had been U.S. military attaché in Nationalist China during the last months of the civil war. During this same period Major General David G. Barr, CG 7th Infantry Division, was senior officer of the United States Military Advisory Group in China.[34]

On 31 October, by order of ComNavFE, JTF–7 had been dissolved and the TG 95.2 Support and Covering Group passed to the operational control of CTF–90, Admiral Doyle. As the center of gravity of X Corps gradually shifted to the north, General Almond moved his advanced CP from Wonsan to Hamhung on 2 November and the remainder of his headquarters on the 10th. He was joined four days later by Admiral Doyle and his staff as the Mount McKinley anchored off Hungnam.[35]

The 1st Marine Division CP had displaced from Wonsan to Hung-nam on 4 November as the 5th and 7th Marines carried out assignments in the north. This movement included 2/5, which had been under the operational control of the 1st Marines for patrolling missions in the Wonsan area. Not until a week later was General Smith able to plan the northward advance of Colonel Puller’s regiment. On the 12th, X Corps OpnO 6 directed the 3d Infantry Division to relieve elements of the 1st Marines. The mission of the Army division was to protect the left flank of X Corps and prepare for an advance to the west.[36]

For a time it had appeared that 1/1, which had the responsibility for security in the Wonsan area after its return from Kojo, might be sent to Chongjin, 220 air miles northeast of Wonsan, in accordance with X Corps OpnO 10–50, issued on 5 November, but four days later X Corps cancelled this requirement.[37]

Before departing the Wonsan area, Puller’s headquarters had another false alarm. Small craft sighted by air on 8 November, and two mysterious explosions, led to the report that 500 to 1000 enemy boats were attempting an amphibious landing ten miles north of Wonsan. An armored patrol of Company C, 1st Tank Battalion, was sent to investigate but reported no contact.[38]

X Corps directed that upon the relief of the Marines by the 3d Infantry Division, the 3d and 5th KMC Battalions, which had been under the operational control of RCT–1, would then be attached to the Army unit.[39] After lack of transport imposed a delay of two days, 1/1 initiated the northward movement of RCT–1 by rail and closed Chigyon, eight miles southwest of Hamhung, by 1820, 14 November. A motor convoy followed. Relief of 2/1(–), which had been holding screening and blocking positions on Ambush Alley, was
completed on the 15th by the 3d Battalion of the 15th Infantry. Other Army elements relieved Dog Company in the rear area near Wonsan. On the 16th 2/1 moved by rail to Chigyong, followed by 3/1 and the last elements of RCT–1 the next day.[41]

Thus the 1st Marine Division achieved a relative and temporary degree of concentration. The farthest distance between components had been reduced from 130 to less than 60 miles by the middle of November, but a new dispersion of units was already in progress.
The Chosin Reservoir Campaign

Chapter 5. Red China to the Rescue

UP TO THIS TIME the 1st Marine Division had virtually been waging two separate wars. In the southern zone, as was related in the last two chapters, blocking and screening operations were conducted by RCT-1 against NKPA remnants. RCT-7, with RCT-5 in reserve, had meanwhile been confronted in the north by some of the first Chinese Communist troops to enter the Korean conflict.

In order to trace the movements of these two Marine regiments, it will be necessary to go back over chronological ground previously covered. Division OpnO 18-50, issued on 28 October to implement X Corps OI-13 and supplementary telephone orders received from Corps, assigned RCT-7 the mission of proceeding from Wonsan to Hamhung, prepared for an advance to the Manchurian border 135 miles to the north. RCT-5 was assigned a zone behind RCT-7 (see end-paper maps).

Plans for the northward advance brought up the vital problem of providing security for the 78-mile main supply route (MSR) and the parallel railway stretching along the coast from Wonsan to Hamhung. Division orders of the 28th assigned RCT-5 (less 2/5), temporarily under the operational control of RCT-1, the responsibility for the security of the Munchon and Yonghung areas, 16 and 57 miles north of Wonsan respectively. Company A, 1st Tank Battalion, attached to RCT-5, had orders to establish blocking positions on three main roads joining the MSR from the west.[1]

RCT-7, after being partially issued cold weather clothing at Wonsan, moved by road and rail to the Hamhung area during the last three days of October. The 1st Motor Transport Battalion and Division Reconnaissance Company were attached along with other reinforcing units, since this regiment had been designated to lead the advance of the 1st Marine Division to the Manchurian border.[2]

RCT-5 completed a motor march meanwhile from its assembly area near Wonsan to assigned positions along the Wonsan-Hamhung MSR. General Almond’s OI-15 (30 October) had directed the dispatch of two Marine RCTs to the Hamhung area, which meant that Lieutenant Colonel Murray’s regiment was to follow RCT-7. On the 31st General Smith ordered him to advance a battalion to Chigyong, eight miles southwest of Hamhung. Murray selected his 1st Battalion and directed that one of its companies be detached to relieve an RCT-7 company guarding the Advance Supply Point at Yonpo Airfield, five miles southwest of Hungnam.[3]

Two additional Marine units were assigned to assembly areas along the MSR. The 1st Tank Battalion (less Company C, attached to the 1st Marines) moved up to Munchon and regained its Company A. Since the landing of the 11th Marines (less the battalions attached to RCTs) the artillery regiment (-) had occupied positions at Munpyong-ni, five miles northwest of Wonsan.[4]

When four days passed without enemy contacts along the MSR, General Almond decided to expedite the movement of RCT-5 to the Hamhung area. In a conference with General Smith on 2 November, he outlined a plan for using patrols instead of blocking positions. Under this system RCT-1, with elements of the 1st Tank Battalion, would be made responsible for MSR security as far north as Munchon. The 54-mile stretch between Munchon and Chigyong would be assigned to the Special Operations Company, USA, and Korean agents, both under Corps control. As soon as these arrangements could be put into effect, RCT-5 would be free to advance to Hamhung. That same day, 2 November, the 2d Battalion was released from operational control of RCT-1 and moved to Hamhung.[5]

Ironically, the 2d was also the date of the first guerrilla raid on the MSR. A patrol from the 1st Tank Battalion was sent by Division to the aid of the Special Operations Company, which had reported an attack west of Munchon resulting in a wound casualty and loss of equipment. The Marines drove the guerrillas back into the
hills.[6]
Red Korean guerrilla activities were overshadowed by confirmation of reports that organized CCF units had appeared in the X Corps zone as well as on the Eighth Army front. After crossing the Yalu, they had secretly infiltrated through the mountains, marching by night and hiding by day from air observation. Their numbers and intentions remained a mystery at this date, but late in October the 8th U.S. Cavalry Regiment and the 6th ROK Division were surprised by Chinese in northwest Korea and badly mauled.[7]

First-hand evidence of CCF penetrations in northeast Korea was obtained by three Marine officers of RCT-7. Shortly after arrival in the Hamhung area, the regimental commander sent out reconnoitering parties in preparation for the northward advance of 1 November. The 1/7 patrol on 31 October consisted of a fire team in three jeeps led by Captain Myron E. Wilcox and First Lieutenants William G. Graeber and John B. Wilson. As a result of their visit to the CP of the 26th ROK Regiment of the 3d ROK Division, which RCT-7 was scheduled to relieve near Sudong (see Map 7) on 2 November, the Marine officers reported to their regimental headquarters that they had seen one Chinese prisoner.[8]

As a matter of fact, the ROK regiment took 16 Chinese prisoners in all. They were identified as belonging to two regiments of the 124th CCF Division, one of the three divisions of the 42d CCF Army. This force had crossed the Yalu about 16 October, according to POW testimony, and moved southward without being observed into the Chosin Reservoir area during the following ten days.[9]

Not only was Colonel Litzenberg aware that he would be facing Chinese adversaries in this area; he also suspected that they had infiltrated toward his left rear. He sent a patrol consisting of 20 men and five jeeps of Recon Company as far as Chigyong on the 31st without making any enemy contacts. The following morning CO RCT-7 ordered Recon Company in 21 jeeps to conduct a reconnaissance to the Huksu-ri area, approximately 45 miles northwest of Hamhung. After bypassing a blown bridge, First Lieutenant Ralph B. Crossman’s force dug in for the night 4500 yards short of its objective. Shots were exchanged several times that night and early the following morning with North Korean guerrillas in company strength, but the patrol returned with a negative report as far as Chinese forces were concerned.[10]

News was received on 1 November of the heavy losses taken by the 1st Cavalry Division at the hands of the Chinese in northwest Korea. There was no change, however, in Corps orders calling for the advance of Litzenberg’s regiment to the border. Koto-ri, 23 road miles north of Majon-dong, was the first objective. The right flank of the Eighth Army was about 60 air miles southwest of Majon-dong, so that RCT-7 must advance without protection for its left flank except for Division Recon Company, which was to be relieved as soon as possible by RCT-1.

“Under these circumstances,” commented General Smith at a later date, “there was no alternative except to continue forward in the hope that the Eighth Army situation would right itself and that we would succeed in our efforts to close up the entire 1st Marine Division behind RCT-7.”[11]
Chapter 5. Red China to the Rescue
Introducing the New Enemy

Here it is hardly a digression to pause for a brief survey of the organization, tactics and aims of the new enemy who was about to prolong the Korean conflict by intervening on behalf of the beaten NKPA. The powerful, ever-ready military instrument which the Chinese Reds knew as the People’s Liberation Army (PLA) had been forged and tempered in the fires of civil strife. It came into being in the late summer of 1927 during the abortive Nanchang rebellion. Following their defeat, the Communists found a refuge in Kiangsi Province of south China and gained strength as disaffected Kuomintang units came over to their side.\[12\]

The infant PLA managed with difficulty to survive the first four “bandit suppression campaigns” waged by Chiang Kai-shek. When he launched his fifth in 1933, the Chinese Reds planned the celebrated “Long March” which has become one of their most cherished traditions. Breaking out of Chiang’s encirclement in October, 1934, they took a circuitous, 6000-mile route to avoid Nationalist armies. Of the 90,000 who started, only 20,000 were left a year later when the PLA reached Yenan in Shensi Province.\[13\]

This destination in northwest China gave the Communists a refuge with Mongolia and Soviet Russia at their backs. There Mao Tse-tung and his colleagues alternately fought and negotiated with the Government. Finally, in 1941, the Communists and Nationalists agreed to cease fighting one another in order to make common cause against the Japanese invaders.

The Communists took advantage of their membership in the People's Political Council—a Nationalist-sponsored organization which theoretically united all factions in China against the Japanese—to continue their “boring-from-within” tactics. Chiang’s estimate of his troublesome allies was summed up in a quotation attributed to him in 1941:

“You think it is important that I have kept the Japanese from expanding. . . . I tell you it is more important that I have kept the Communists from spreading. The Japanese are a disease of the skin; the Communists are a disease of the heart.”\[14\]
In late 1945, with the Japanese no longer a menace, the grapple for mastery began anew. Chiang Kai-shek held the material and moral advantage as a result of the arms and other assistance supplied by the United States. The Nationalists controlled all the important centers of population and industry and the major lines of communication. The Communists, with their backs to the wall, eagerly accepted the United States proposal for a cease fire in January 1946. General George C. Marshall, as personal representative of President Truman, flew out to Nanking in December, 1945, and tried for 12 months to arrange a workable compromise between two irreconcilable ideologies. Meanwhile, the Reds retrained and reequipped their forces with the vast supply of weapons which had fallen into their hands as a result of the collapse of the Japanese Army in Manchuria in August, 1945. By the spring of 1947, they were ready again for war. They denounced the truce and recommenced military operations. From that time the balance of power swung steadily in their favor.[15]

Although the PLA had seized the initiative, the Government still had an army of about 2,700,000 men facing 1,150,000 Reds, according to estimates of American military advisers in China. But Chiang was committed to a positional warfare; his forces were dangerously over-extended, and for reasons of prestige and political considerations he hesitated to withdraw from areas of dubious military value. Mao’s hard and realistic strategy took full advantage of these lapses. As a result the Communists won the upper hand in Manchuria and Shantung and by the end of the year had massed large forces in central China.

Early in 1948, the year of decision, the PLA recaptured Yenan along with thousands of Government troops. But the most crushing Communist victory of all came with the surrender of Tsinan, the capital of Shantung, and its garrison of 85,000 to 100,000 Nationalists.

In his summary of Nationalist reverses, Major General David G. Barr, senior officer of the United States Military Advisory Group in China, reported to the Department of the Army on 16 November 1948:

“No battle has been lost since my arrival due to lack of ammunition and equipment. Their [the Chinese Nationalists’] military debacles in my opinion can all be attributed to the world’s worst leadership and many other morale destroying factors that lead to a complete loss of will to fight.”[16]

By the early spring of 1949 the military collapse of the Nationalists had gone so far that the enemy controlled the major centers of population and the railroads from Manchuria south to the Yangtze Valley. Nanking, Hangkow, and Shanghai were soon to fall into the hands of Communists whose military strength increased every day as they captured Nationalist arms and were joined by Nationalist deserters. Perhaps the best summary of the Chinese Civil War was put in a few words by Dean Acheson, the U.S. Secretary of State:

“The Nationalist armies did not have to be defeated; they disintegrated.”[17]

In addition to the aid extended during World War II, Washington had authorized grants and credits to Nationalist China amounting to two billion dollars since V-J Day. Nor was American assistance confined to arms and monetary grants. From 1945-1947 the occupation of certain key cities in North China, e. g., Tientsin, Peiping, Tsingtao, [18] etc., by sizeable U.S. Marine forces held those bases secure for the Nationalist government and permitted the release of appreciable numbers of Chiang’s soldiers for offensive operations, who would otherwise have been tied up in garrison type duty.[19]

The Marines, upon their withdrawal, were directed to turn over vast stores of weapons and munitions to the Chinese Nationalists. In addition, the Nationalists were “sold” large quantities of military and civilian war
surplus property, with a total procurement cost of more than a billion dollars, for a bargain price of 232 million. [20]
Although the victorious army continued to be called the People’s Liberation Army by the Chinese Reds themselves, it was known as the Chinese Communist Forces by commentators of Western nations. At the head of the new police state were the 72 regular and alternate members of the Central Committee, or Politburo. Formed at the Seventh Party Congress in 1945, this body consisted for the most part of Mao’s close associates—leaders identified with the revolutionary movement from the beginning.

From top to bottom of the Chinese state, the usual Communist dualism of high political and military rank prevailed. The highest governing body, the People’s Revolutionary Military Council, consisted of leaders holding both positions. After they determined policies, the execution was left to the General Headquarters of the army. [21]

This organization comprised a general staff section, a rear Services section and a general political bureau. The largest CCF administrative unit was the field army, which reported directly to Headquarters. Composed of two or more army groups, the field army had a small headquarters of its own.

The army group, as the largest unit encountered by UN forces, was comparable to an army in the American military system. CCF army groups in Korea consisted of two to four armies with an average total strength of 60,000-120,000 troops. Equivalent to an American corps was the CCF army, an organization including three infantry divisions and an artillery regiment. Thus the average strength of a CCF army was about 30,000 men.

The CCF infantry division, with a paper strength of 10,000 men, averaged from 7,000 to 8,500 men in Korea, according to various estimates. Triangular in organization, it included three infantry regiments and an artillery battalion.

Divisional units consisted of reconnaissance and engineer companies of about 100 men, a 150-man transport company, a 100-man guard company, and a 60-man communications company. Transport companies had only draft animals and carts, since little motor transport was organic to a CCF division at that time.

The CCF infantry regiment, averaging about 2,200 men in the field, broke down into the following units: three infantry battalions; an artillery battery of four to six guns; a mortar and bazooka company; a guard company; a transportation company; a medical unit with attached stretcher personnel (often composed of impressed civilians) and a combined reconnaissance and signal company.

The CCF infantry battalion, with an authorized strength of 852 men and an actual strength of perhaps 700, consisted of a mortar and machine gun or heavy weapons company, a signal squad, a medical squad and a small battalion headquarters in addition to the three rifle companies of about 170 men each. Each of the latter was composed of a headquarters platoon, a 60mm mortar platoon and three rifle platoons.

The CCF artillery battalion, organic to every division, must be considered theoretical rather than actual as far as Korean operations of 1950 are concerned. As a rule, only a few horse-drawn or pack howitzers were brought into action by an infantry division depending chiefly on mortars.
Chapter 5. Red China to the Rescue
The Chinese Peasant as a Soldier

Perhaps the most distinctive feature of the CCF, from the viewpoint of a Western observer, was the lack of any official provision for the honorable discharge of a soldier. Once he became a cog in the CCF military machine, a man remained in the ranks until he was killed, captured, became a deserter, or was incapacitated for active service by reason of wounds, disease or old age.

Theoretically depending on a “volunteer” system, the recruiting officers of the CCF knew how to apply political or economic pressure so that a man found it prudent to become a soldier. After putting on a uniform, he was vigorously indoctrinated in political as well as military subjects.

Both self-criticism and criticism of comrades were encouraged at platoon meetings held for that purpose. Every recruit was subjected to a course of psychological mass coercion known to the Chinese as *hsi-nao* and to the non-Communist world as “brain-washing.” Spying on comrades and reporting political or military deviations was a soldier’s duty.\[22\]

Inured to hardships from birth, the peasant in the ranks did not find that the military service demanded many unwonted privations. He was used to cold and hunger, and he could make long daily marches on a diet which the American soldier would have regarded as both insufficient and monotonous. It would appear, however, that some of the Western legends about Oriental stoicism and contempt for death were a little far-fetched. At any rate, the CCF had to deal with the problem of straggling from the battlefield; and U.S. Marines in Korea could attest that on occasion the Chinese soldier showed evidences of fear and low morale. Nor was he as much of a fanatic as might have been expected, considering the extent of his political indoctrination.

Although the CCF departed in most respects from the Chinese military past, the policy of organizing units along ethnic lines was retained. Men from the same village were formed into a company; companies from the same area into battalions; and battalions from the same province into regiments or divisions. Replacements were drawn from the localities where the unit was originally recruited.\[23\]

On the other hand, the Chinese Reds broke with both Nationalist and Communist tradition in their policy of avoiding a permanent rank system. Officers (in Korea denoted by red piping on their sleeves) were divided into company, field, and general groups. The company commander and political officer held about equal authority in an infantry unit, and the only NCOs mentioned in CCF field reports are sergeants and squad leaders.\[24\]
Chapter 5. Red China to the Rescue
CCF Arms and Equipment

The CCF depended on a wide assortment of weapons, so that it was not uncommon to find several different kinds of rifles of varying calibers in the same regiment. Japanese arms acquired after the surrender of 1945; Russian arms furnished by the Soviets; and American, German, Czech, British, and Canadian arms taken from the Chinese Nationalists—these were some of the diverse sources. And it is a tribute to the adaptability of the Chinese Reds that they managed to utilize such military hand-me-downs without disastrous confusion.

Paper work was at a minimum in a force which kept few records and numbered a great many illiterates. As for logistics, each soldier was given a four-day food supply in the winter of 1950-1951 when he crossed the Yalu—usually rice, millet or soy beans carried in his pack. Afterwards, food was to be procured locally by extortion or confiscation, though the Communists were fond of using such euphemisms as “purchase” or “donation” to denote those processes.[25]

The CCF soldiers who fought in Korea during the winter of 1950-1951 wore a two-piece, reversible mustard-yellow and white uniform of quilted cotton and a heavy cotton cap with fur-lined ear flaps. Issued to the troops just before crossing the Yalu, the quilted cotton blouse and trousers were worn over the standard summer uniform and any other layers of clothing the soldier may have acquired.

The first CCF units in action had canvas shoes with crepe rubber soles. Later arrivals were issued a half-leather shoe or even a full leather boot. Chinese footwear was of poor quality and few of the troops wore gloves in cold weather. The consequence was a high rate of frostbitten hands and feet.[26]

The CCF soldier usually carried a shawl-like blanket in addition to the small pack containing his food as well as personal belongings. These were few and simple, for it could never be said that the Chinese Reds pampered their soldiers.
China’s “Hate America” Campaign

Mao was held in such reverence as a veteran Chinese Communist leader that long passages of his writings were committed to memory. His strategic ideas, therefore, deserve more than passing consideration. In the first place, his concept of war itself differed from that of Western nations.

“It is the business of revolutionaries to present a new world view and to urge humanity to advance toward it. This is the task of revolutionaries in the contradictions of society and the social revolution. It is not the task of modern imperialists and their agents, who wish to preserve the old world and maintain the status quo. The modern imperialists and their agents are the chief advocates of the old world view.”

From the Western viewpoint, Mao’s followers had fought four different wars in close succession—against the Chinese Nationalists from 1927 to 1936; against the Japanese from 1937 to 1945; against the Nationalists in a second war from 1946 to 1949; and against the United Nations, beginning in 1950. But Mao and his colleagues saw this period as one prolonged war in which revolutionists were pitted against counter-revolutionary adversaries. The fact that the conflict had lasted for a generation did not disturb Communist leaders who envisioned a continual state of war “to save mankind and China from destruction.”

“The greatest and most ruthless counter-revolutionary war is pressing on us,” continued Mao. “If we do not hoist the banner of revolutionary war, a greater part of the human race will face extinction.”

Early in December, 1949, following Red China’s victory over the Nationalists, Mao arrived in Moscow for a series of talks with Stalin which lasted until 4 March 1950. The decisions reached in these conferences are not known, but it was probably no coincidence that the Communist puppet state in North Korea violated the world’s peace a few months later. It is perhaps also significant that the head of the Soviet Military Mission in Tokyo, Lieutenant General Kuzma Derevyanko, was absent from Tokyo during the same period and reported in Moscow.

It was the Year of the Tiger in the Chinese calendar, and a “Resist America, Aid Korea” movement was launched in Red China when the United States came to the aid of the Republic of Korea. Every dictatorship must have some object of mass hatred, and Mao found the United States ideal for the purpose. A “Hate America” campaign was inaugurated after the CCF intervention, with the following serving as an example of anti-American propaganda:

“This [the United States] is the paradise of gangsters, swindlers, rascals, special agents, fascist germs, speculators, debauchers, and all the dregs of mankind. This is the world’s manufactory and source of such crimes as reaction, darkness, cruelty, decadence, corruption, debauchery, oppression of man by man, and cannibalism. This is the exhibition ground of all the crimes which can possibly be committed by mankind. This is a living hell, ten times, one hundred times, one thousand times worse than can possibly be depicted by the most sanguinary of writers. Here the criminal phenomena that issue forth defy the imagination of human brains. Conscientious
persons can only wonder how the spiritual civilization of mankind can be depraved to such an extent.”[31]

Communist doctrine held that the people must be incited by such propaganda to a constant high pitch of emotional intensity for the sacrifices demanded by total war. The prevalence of illiteracy made it necessary to depend largely on street-corner loud speakers blaring forth radio harangues. Realistic broadcasts of the torture and execution of political deviates were also heard at times, and such spectacles were exhibited for the edification of the public.[32]
CCF strategy was so rudimentary at first that its basic tenets could be summed up in a 16-word principle adopted by the Central Committee:

“Enemy advancing, we retreat; enemy entrenched, we harass; enemy exhausted, we attack; enemy retreating, we pursue.”[33]

But as time went on, other principles were added. Mao favored a planned defensive-offensive as the only valid strategy against superior enemy numbers. He made it plain, however, that any withdrawal was to be merely temporary as the preliminary to advancing and striking at the first advantageous opportunity. And he reiterated that annihilation of the enemy must always be the final goal of strategy.[34]

It was in the field of tactics that the essentially guerrilla character of the CCF was most fully revealed. Since Communist dialectics insisted that there was a correct (Marxist) and an incorrect (“petty bourgeois” or “opportunist” or “reactionary”) way of doing everything, CCF tactics were reduced to principles whenever possible.

A generation of warfare against material odds had established a pattern of attack which proved effective against armies possessing an advantage in arms and equipment. One Marine officer has aptly defined a Chinese attack as “assembly on the objective.”[35] The coolie in the CCF ranks had no superior in the world at making long approach marches by night and hiding by day, with as many as fifty men sharing a hut or cave and subsisting on a few handfuls of rice apiece. Night attacks were so much the rule that any exception came as a surprise. The advancing columns took such natural routes as draws or stream beds, deploying as soon as they met resistance. Combat groups then peeled off from the tactical columns, one at a time, and closed with rifles, submachine guns, and grenades.

Once engaged and under fire, the attackers hit the ground. Rising at any lull, they came on until engaged again; but when fully committed, they did not relinquish the attack even when riddled with casualties. Other Chinese came forward to take their places, and the build-up continued until a penetration was made, usually on the front of one or two platoons. After consolidating the ground, the combat troops then crept or wriggled forward against the open flank of the next platoon position. Each step of the assault was executed with practiced stealth and boldness, and the results of several such penetrations on a battalion front could be devastating.[36]

The pattern of attack was varied somewhat to suit different occasions. As an example of an action in which the CCF used mortars, the following is quoted from a Marine field report:

“Five to nine men [CCF] patrols were sent out forward of the main body in an attempt to locate or establish [our] front lines and flanks. After these patrols had withdrawn or been beaten off, white phosphorus mortar shells were dropped about the area in an attempt to inflict casualties. By closely watching the area for movement in removing these casualties, they attempted to establish the location of our front lines. After establishing what they believed were the front lines, white phosphorous shells were dropped in the lines and used as markers. While this was taking place, the assault troops crawled forward to distances as close as possible to the front lines . . . [and] attacked at a given signal. The signal in this particular instance was three blasts of a police whistle. The attacking troops then rose and in a perfect skirmish formation rushed the front line.”[37]

It might be added that this attack resulted in a CCF penetration on a platoon front. Friendly lines were restored only by dawn counter-attacks.

The ambush was a favorite resort of Chinese commanders. Whatever the form of attack, the object was
usually fractionalization of an opposing force, so that the segments could be beaten in detail by a local superiority in numbers.

CCF attacking forces ranged as a rule from a platoon to a company in size, being continually built up as casualties thinned the ranks. Reports by newspaper correspondents of “hordes” and “human sea” assaults were so unrealistic as to inspire a derisive Marine comment:

“How many hordes are there in a Chinese platoon?”

After giving CCF tactics due credit for their merits, some serious weaknesses were also apparent. The primitive logistical system put such restrictions on ammunition supplies, particularly artillery and mortar shells, that a Chinese battalion sometimes had to be pulled back to wait for replenishments if the first night’s attack failed. At best the infantry received little help from supporting arms.[38]

POW interrogations revealed that in many instances each soldier was issued 80 rounds of small arms ammunition upon crossing the Yalu. This was his total supply. The artillery and mortars were so limited that they must reserve their fire for the front line while passing up lucrative targets in the rear areas. Some attempts were made to bring reserve stocks up to forward supply dumps about 30 miles behind the front, but not much could be accomplished with animal and human transport.

A primitive communications system also accounted for CCF shortcomings. The radio net extended only down to the regimental level, and telephones only to battalions or occasionally companies. Below the battalion, communication depended on runners or such signaling devices as bugles, whistles, flares, and flashlights.[39]

The consequence was a tactical rigidity which at times was fatal. Apparently CCF commanding officers had little or no option below the battalion level. A battalion once committed to the attack often kept on as long as its ammunition lasted, even if events indicated that it was beating out its brains against the strongest part of the opposing line. The result in many such instances was tactical suicide.

After these defects are taken into full account, however, the Chinese soldier and the Korean terrain made a formidable combination. Ironically, Americans fighting the first war of the new Atomic Age were encountering conditions reminiscent of the border warfare waged by their pioneer forefathers against the Indians. These aborigines, too, were outweighed in terms of weapons and equipment. But from time immemorial the night has always been the ally of the primitive fighter, and surprise his best weapon. Thus the Americans in Korea, like their ancestors on the Western plains, could never be sure when the darkness would erupt into flame as stealthy foes seemed to spring from the very earth.
Chapter 6. The Battle of Sudong

THE COASTAL PLAIN of the Songchon estuary is one of the most spacious flatlands in all North Korea. Its 100 square miles divide into two irrigation districts, which regulate cultivation in a virtual sea of rice paddies. The Songchon River, swollen by tributaries in its descent from the northern hinterland, nourishes this agricultural complex before flowing into the Sea of Japan.

Flanking the mouth of the waterway are the port city of Hungnam to the north and the town of Yonpo, with its modern airfield, to the south. Eight miles upstream lies Hamhung, an important transportation center with a population of approximately 85,000 Koreans and Japanese in 1940.

Hamhung straddles the main railroad connecting Wonsan and Sonjin as it follows the coastal route to the border of Soviet Russia. A narrow-gauge line (2' 6'') stems from Hungnam and passes through Hamhung before penetrating into the mountainous heart of North Korea. Parallel to this railroad is the only highway that could be utilized by the transport of the 1st Marine Division for its advance to the north.
Soon the eyes of the world would be fixed on maps of the narrow, winding 78-mile stretch of dirt and gravel road leading from the supply port of Hungnam to the forlorn village of Yudam-ni at the western tip of the Chosin Reservoir. Distances in road miles between points along the route are as follows:

- Hungnam to Hamhung: 8 miles
- Hamhung to Oro-ri: 8 miles
- Oro-ri to Majon-dong: 14 miles
- Majon-dong to Sudong: 7 miles
- Sudong to Chinhung-ni: 6 miles
- Chinhung-ni to Koto-ri: 10 miles
- Koto-ri to Hagaru: 11 miles
- Hagaru to Yudam-ni: 14 miles

**TOTAL: 78 miles**

The first half of the distance—the 43 miles from Hungnam to Chinhung-ni—is traversed by a two-lane road passing through comparatively level terrain. Rolling country is encountered north of Majon-dong, but it is at Chinhung-ni that the road makes its abrupt climb into a tumbled region of mile-high peaks. There are few straight or level stretches all the rest of the 35 miles to Yudam-ni, but the route from Chinhung-ni to Koto-ri is the most difficult.

Funchilin Pass, comprising eight of these ten miles, represents an ascent of 2500 feet for a straining jeep or truck. The road is merely a twisting, one-way shelf, with a cliff on one side and a chasm on the other.

About two miles south of Koto-ri the trail reaches a rugged plateau region. There it rejoins the railway along the Changjin River, though the narrow-gauge line was operative only from Hamhung to Chinhung-ni.

Hagaru, at the southern tip of the Chosin Reservoir, with highways branching off on both sides of that body of water, was an important communications center before the war. And even though many buildings had been flattened by bombing, the town was still impressive as compared to such wretched mountain hamlets as Koto-ri and Chinhung-ri.

The road from Hagaru to Yudam-ni climbs from the tableland at the foot of the Chosin Reservoir and winds its way up to 4000-foot Toktong Pass. Descending through gloomy gorges, it finally reaches a broad valley leading to Yudam-ni, where roads branch off to the north, west, and south from a western arm of the Reservoir. 

This was the 78-mile main supply route that would soon be claiming its page in history. In only a few weeks it would be known to thousands of Marines as the MSR, as if there never had been another.

Officers and NCOs of the 7th Marines, which was fated to be the first United States unit to defeat the Chinese Communists in battle, were given a verbal preview of the MSR and the part it might play in their future. This was as the result of a flight of inspection made by Major Henry J. Woessner on 30 October, following a briefing at the X Corps CP in Wonsan. The S-3 of the 7th Marines was fortunate enough to arrive just in time to hear the briefing given General Barr by General Almond. Pointing to the map, the X Corps commander indicated that the 7th Infantry Division would push northward to Hyesan-jin on the Yalu. Meanwhile the Marines were to head for the border by way of Chinhung-ni, Koto-ri and Hagaru while the 3d Infantry Division took over responsibility for the rear area.
“When we have cleared all this out,” concluded General Almond, pointing again to the map, “the ROKs will take over, and we will pull our divisions out of Korea.”[1]

At the X Corps CP, Woessner met a U.S. Army liaison officer just returned from the 26th ROK Regiment with a report of that unit’s encounter with Chinese Communists. The ROKs had been north of Sudong when they collided with the new enemy and were pushed back, after taking 16 prisoners.

Colonel Edward H. Forney, ranking Marine officer on the X Corps staff, arranged for Major Woessner to make a reconnaissance flight over the Hamhung-Hagaru route in an Air Force T-6. The S-3 saw no sign of enemy troop movements all the way to the northern end of the Chosin Reservoir, but he did not fail to note the formidable character of the terrain through which the new MSR passed.

When he returned that evening with his report, Colonel Litzenberg called a meeting of officers and NCOs at the regimental CP. In an informal talk, he told them that they might soon be taking part in the opening engagement of World War III.

“We can expect to meet Chinese Communist troops,” he concluded, “and it is important that we win the first battle. The results of that action will reverberate around the world, and we want to make sure that the outcome has an adverse effect in Moscow as well as Peiping.”[2]
On 1 November the 7th Marines trucked out of Hamhung to an assembly area midway between Oro-ri and Majon-dong. Moving into position behind the 26th ROK Regiment without incident, Colonel Litzenberg ordered a reconnaissance which took Lieutenant Colonel Raymond G. Davis’ 1st Battalion about four miles northward to the South Korean positions above Majon-dong. Late that afternoon the regiment secured for the night in a tight perimeter.[3]

Attached to the regiment were the 3d Battalion, 11th Marines (Major Francis F. Parry); Division Reconnaissance Company (First Lieutenant Ralph B. Crossman); Company D, 1st Engineer Battalion (Captain Byron C. Turner); 1st Motor Transport Battalion (Lieutenant Colonel Olin L. Beall); Company E, 1st Medical Battalion (Lieutenant Commander Charles K. Holloway); and detachments from the 1st Signal Battalion, 1st Service Battalion, and Division Military Police Company.[4]

Intelligence based on the questioning of the 16 prisoners taken by the ROKs had revealed that they had been attacked by elements of the 124th CCF Division. Along with the 125th and 126th, the other two divisions of the 42d CCF Army, the 124th had crossed the Yalu during the period 14–20 October. After marching southeast via Kanggye and Changjin, the unit deployed for the defense of the Chosin Reservoir power complex while the 126th pushed eastward to the Fusen Reservoir and the 125th protected the right, flank of the 42d CCF Army.[5]

X Corps G-2 officers concluded that these CCF forces were “probably flank security” for the enemy’s 4th Army Group across the peninsula in the EUSAK zone.[6] The G-2 section of the 1st Marine Division arrived at this interpretation:

“The capture by the 26th ROK Regt. of 16 POWs identified as being members of the 124th CCF Division . . . would seem to indicate that the CCF has decided to intervene in the Korean War. It would indicate, also, that this reinforcement is being effected by unit rather than by piecemeal replacement from volunteer cadres. However, until more definite information is obtained it must be presumed that the CCF has not yet decided on full scale intervention.”[7]

Division intelligence officers concluded their analysis with the comment, “The advantage to be gained by all-out intervention, at a time when the NK forces are on the verge of complete collapse, is not readily apparent.”[8]

There was little activity in the valley on 31 October and 1 November. The ROKs, upon learning that they would be relieved shortly by the 7th Marines, withdrew from advance positions near Sudong to a valley junction about four miles south of that town. Here, at 0600 on 2 November, they were hit by an enemy “counterattack” which, since it was of about two-platoon strength and of only 30 minutes duration, amounted really to a CCF combat patrol action.[9]

Shortly after this clash, Lieutenant Colonel Raymond G. Davis’ 1st Battalion, 7th Marines, moved out of the regimental assembly area and marched toward the ROK lines at Majon-dong in route column. Major Webb D. Sawyer’s 2d Battalion followed at an interval of 500 yards, while overhead the Corsairs of VMF-312 orbited on station for reconnaissance and close air support missions.[10]

The passage of lines proceeded smoothly and quietly, save for the drone of aircraft as they probed the reaches of the valley. It was over by 1030. Thereafter, progress to the front was slow and watchful. Led by Company A, under Captain David W. Banks, the 1st Battalion took ineffectual long-range CCF fire with only a
few casualties. Batteries G and H of 3/11 displaced forward during the morning, and at noon Battery I opened up with the first of 26 missions fired by the artillery battalion that day.

Though second in the tactical column, 2/7 was responsible for high ground on both sides of the MSR, dominated on the left by Hill 698. Company D ascended the eastern slopes early in the afternoon to relieve a ROK unit that apparently had been unable to hold the crest. When the South Koreans saw the Marines approaching, they promptly abandoned their position about midway up the slope and headed for the rear.

Dog Company continued up the exposed hillside. Scattered enemy shots from the top of the ridge gradually merged into a pattern of light resistance as the Marines climbed higher. Captain Milton A. Hull ordered his troops to halt, deployed his machine guns for return fire, and radioed for an air strike. Within a few minutes a flight of Corsairs swept down and worked over the ridgeline.

Hull’s only assault route traversed a barren area about 50 yards from the crest. His two assault platoons, fully exposed to the enemy’s observation, inched upward by fire and movement, taking casualties, and finally reached the top. Their foothold on the ridgeline did not discourage the Red Chinese, who continued to pour fire from skillfully camouflaged positions. To prevent continued attrition among his now exhausted troops (by this time they had climbed some 1600 vertical feet from ground level over an average gradient of 25 per cent), Hull recalled the two platoons to the eastern slopes and radioed for supporting fire.

This fire was not forthcoming. Company D held a line near the summit until about 2200 when Easy Company passed through to occupy a small plateau about 150 yards below the crest for the night.

Meanwhile, down in the valley, Litzenberg’s “walking perimeter” completed a 1300-yard advance by 1630. Owing to the nature of the terrain, with the attendant 360-degree vulnerability, the regimental commander stipulated that the 7th Marines’ column extend not less than 4000 (the minimum distance which would allow for close-in artillery support) nor more than 6000 yards in length. This allowed sufficient depth for over-all protection, with no loss of mutual support among the three infantry battalions.

Enemy resistance had flared up now and then in the course of the day, but Marine supporting arms so ruled the valley that no serious challenge by the Chinese developed. VMF-312 flew 12 close support missions in the Sudong area, and VMF(N)-513 assisted with several more. The whole precipitous skyline on either side of the regiment was blasted with 500-pound bombs, 20mm shells, and high-velocity rockets.

By way of reply to the heavy shelling and bombing, Chinese mortars and at least one small artillery piece began to fire sporadically as the day wore on. A 120mm mortar round struck 1/7’s CP at 1700 and wounded three men.
Chapter 6. The Battle of Sudong
CCF Counterattack at Sudong

Although the unit commanders of the 7th Marines anticipated more fighting with the new enemy, they probably did not suspect what the night held in store when the regiment dug in at dusk on 2 November. They did not know that the 371st Regiment, 124th CCF Division, was massed to the north and west, nor that the 370th Regiment occupied high ground east of the MSR in strength—both units within easy striking distance of Litzenberg’s perimeter. The 372d Regiment, in reserve, stood poised in its hidden encampment several miles to the rear.[11]

Leading elements of the 7th Marines deployed defensively less than a mile south of Sudong (see Map 8). To the right of the MSR, Able Company’s 3d, 2d, and 1st Platoons, in that order, formed a line which extended across Hill 532 and part way up a spur of massive Hill 727, then bent rearward sharply to refuse the east flank. Emplaced along the road in anti-mechanized defense was the company’s 3.5-inch rocket squad. The 60mm mortar section and company CP set up in the low ground behind the spur, but Captain Banks himself decided to spend the night in an OP with his rifle platoons.

Lieutenant Colonel Davis of 1/7 deployed Charlie Company (-) across the MSR from Able, on the northeast slopes of Hill 698.[12] To the rear, headquarters and one platoon of Company B dug in on an arm of the same hill, while the other two platoons went into position on the lower reaches of Hill 727 behind Company A. One platoon of Charlie Company, Davis’ CP and the battalion 81mm mortars were located in low ground behind Able Company and the elements of Baker on the right of the road.

South of 1/7 lay Major Sawyer’s 2d Battalion with Company D at the foot of Hill 698, E on its crest and slopes, and F spread along the steep incline of 727. Sawyer’s CP and elements of the 7th Marines’ Anti-tank and 4.2-inch Mortar Companies were situated in a shallow meadow along the road beneath the Fox Company positions. Several hundred yards to the rear, south of a sharp bend in the road, Major Maurice E. Roach’s 3d Battalion deployed in what was in effect a second perimeter protecting the regimental train, 3/11, and Litzenberg’s CP on the valley floor. Tying in at the MSR, Companies H and I occupied ridges on the left and right of the road respectively, while G(-) arched through the low ground as the southernmost element of the regiment. Colonel Litzenberg was concerned about the valley which joined the Sudong Valley below Oro-ri lest it contain Chinese. He had Major Roach make a helicopter reconnaissance during the afternoon. Roach sighted nothing.[13]

Except for the occasional thump of an incoming mortar round, night settled on the valley and the Marine perimeter with deceptive quiet. Deceptive, since at Sudong two CCF battalions were poised to smash at the 7th Marines with a well-coordinated double envelopment.

At 2300, Davis’ 1st Battalion reported itself under attack from the right flank, the enemy apparently descending the higher slopes of Hill 727. This announcement was somewhat premature, as the Marines of Company A were merely experiencing the infiltration and probing that precede almost every Communist assault. At 2400, 2/7 reported two enemy battalions on the left flank.[14] During the first hour of 3 November, sobering messages were received from Litzenberg’s northernmost units. What had begun at 2300 as a staccato of small-arms fire swelled in volume by imperceptible degrees until Hills 698 and 727 were engulfed in a ceaseless din. And by 0100 the 1st and 2d Battalions of the 7th Marines bent under the weight of a full-scale attack on both flanks.

Avoiding the obvious approach through the corridor leading south from Sudong, the commander of the
371st CCF Regiment had dispatched a battalion along each of the ridgelines bordering the valley. Bursting flares and bugle calls signaled when the two assault units came abreast of the Marine positions on the lower reaches of Hills 727 and 698. Then, treading swiftly and silently in their rubber sneakers, the Chinese infantrymen swept down obliquely and struck Able and Fox Companies on the east and Baker on the west. Charlie on the slopes of Hill 698 was undisturbed. Where the Chinese met resistance, they slugged it out at close range with grenades and submachine guns. Where they found gaps, they poured through and raced to the low ground. To the Marines, the specific CCF objectives were not readily apparent in those hectic hours before dawn, for the enemy seemed to be everywhere.[15]

Shortly after the battle was joined high on the hillsides, Marines at Able Company’s CP heard the clanking sounds of a tracked vehicle on the MSR to the north. When the machine passed the rocket section at the roadblock without incident, they dropped their guards momentarily, believing it to be a friendly bulldozer. The big vehicle rumbled into the CP and stopped, one headlight glaring at exposed mortar crews and headquarters personnel.

“Tank!” shouted Staff Sergeant Donald T. Jones, section chief of Able Company’s 60mm mortars. It was a Russian T-34, one of the five remaining to the 344th North Korean Tank Regiment, supporting the 124th CCF Division. The troops at the roadblock had been caught napping.

A burst of machine-gun fire from the tank sent the lightly armed Marines scurrying for cover. The armored vehicle quickly withdrew to the road and drove farther south, into 1/7s’ CP. After a short, inquisitive pause, it rumbled toward the 1st Battalion’s 81mm mortar positions. The Russian 85mm rifle flashed four times in the darkness, but the shells screamed harmlessly over the mortars and detonated in the high ground beyond.

Rocket launchers of Charlie Company and the recoilless rifles of 7th Marines Antitank Company opened up from positions around 1/7’s headquarters. At least one 75mm round struck home, and the belt of sandbags around the T-34’s turret began to burn. The tank swung back onto the MSR and headed north. Approaching Able Company’s roadblock, through which it had entered the Marine position, it took a hit from the 3.5-inch rocket section. In reply, one 85mm shell at pistol range all but wiped out the Marine antitank crew. The enemy vehicle, trailing flame and sparks, clanked around a bend in the road and disappeared.

Not long after this astounding foray, the fighting on Hills 698 and 727 spread down to the MSR. The 1st and 2d Platoons of Company A, pressed now from three directions and suffering heavy casualties, retracted to the 3d Platoon positions at the tip of the spur. Some of the men were cut off and forced back on the Baker Company elements east of the MSR. Ultimately, one of the two Company B platoons in this area was driven down to the low ground, and the other forced to fall back. Later they counterattacked and recovered their foxholes.

West of the MSR, the remainder of Company B fought off assaults on its left flank and rear by Chinese who had skirted around Charlie Company’s advance positions.[16] Lieutenant Colonel Davis sent the battalion reserve, Lieutenant Graeber’s 2d Platoon of Baker, to reinforce the hard pressed left platoon. Attempting to lead his men across the MSR, Graeber found the route effectively blocked by the enemy in the river bed.

Descending now from both sides of the road, enemy infantrymen swarmed over the valley floor. They overran most of the 7th Marines 4.2-inch Mortar Company and captured one of its tubes. They seriously threatened the 1st and 2d Battalion CPs and the AT Company in the same general idea. High on the slopes in 2/7’s zone, Companies E and F were beset by small bands of infiltrators. And though these two companies held their ground, the Reds found their flanks, slipped behind them, and entrenched at the key road bend separating 2/7 from 3/7 to the south. The principal Marine unit at the sharp curve in the MSR was Battery I, whose position in the low ground became increasingly precarious as the night wore on.
Dawn of 3 November revealed a confused and alarming situation in the valley south of Sudong. Enemy troops shared the low ground with Marine elements between the 1st and 2d Battalion CPs, and they had blown out a section of the MSR in this locale. The 2d Battalion’s commander later remarked, “When daylight came, we found that we were in a dickens of a mess. The rifle companies were well up in the hills, and the Chinese were occupying the terrain between the CP and the companies.”

Between 2/7 and 3/7, a company of Reds had dug in on a finger of high ground overlooking the road bend and Battery I from the east. Scattered Chinese forces roamed Hills 698 and 727 almost at will. On the latter height, elements of the 371st CCF Regiment had been reinforced by a battalion of the 370th, so that pressure against the right flank of 1/7 and 2/7 continued long after daybreak.

With his lead battalions thrown back on the defensive, Colonel Litzenberg relied on overwhelming superiority in supporting arms to tip the scales on 3 November and regain the initiative. While the regimental 4.2-inch mortars fired, howitzers of Batteries G and H thundered almost ceaselessly the whole night long from positions within 3/7’s perimeter. Battery I, after being extricated from the enemy dominated road bend at 1100 with the help of a platoon of G Company, added its metal to the bombardment. In the course of the day, the 18 field pieces of the battalion fired a total of 1431 rounds in 49 missions.

VMF—312 provided constant air cover after first light. Its planes not only scourged enemy assault troops left exposed on the ridges, but also searched out and attacked CCF artillery positions and vehicles. This squadron alone flew 18 close support missions on 3 November, the alternating flights being led by Major Daniel H. Davis, Captain Harry G. C. Henneberger, Captain George E. McClane, and First Lieutenant Shelby M. Forrest. VMF (N)—513 dispatched a flight of night fighters to Sudong at 0910 under Major Robert L. Cochran. After raking enemy troops with 1500 rounds from their 20mm cannon, Cochran and his three pilots unloaded three general purpose and fragmentation bombs along with 15 high-velocity rockets.

As much supporting fire fell within the 7th Regiment’s perimeter as outside. Since the crack of dawn it had been the principal mission of the advance Marine elements to eject scores of Chinese troops, individuals and small bands, who were scattered along the hillsides and valley floor within the zones of the 1st and 2d Battalions. While accomplishing this task, the Marines established a tactical principle for coming weeks: that to nullify Chinese night tactics, regardless of large-scale penetrations and infiltration, defending units had only to maintain position until daybreak. With observation restored, Marine firepower invariably would melt down the Chinese mass to impotency.

This was the case on 3 November, although the melting down process was a savage, all-day affair. With the help of air, artillery, and mortars, the 1st Battalion cleared the low ground by midmorning and restored its right flank later in the day. The Chinese in the valley were crushed, the main group being annihilated by the heavy machine guns of Weapons Company as they attempted to march northward along the railroad in column at daylight. Counted enemy dead in 1/7’s zone alone amounted to 662.

The main effort in the 2d Battalion’s zone was aimed at the CCF concentration on the spur of Hill 727 overlooking the bend in the MSR. Owing to this barrier, Litzenberg had to call for an airdrop of supplies to sustain his leading elements on 3 November. Major Sawyer ordered Company D, on the base of Hill 698 to the south of the roadblock, to move up the valley, cross the river, and clean out the spur at Hill 727. Finding the low ground blocked by heavy fire, Captain Hull circled to the left along the incline of Hill 698, intending to come
abreast of the Chinese strong point before striking at it across the MSR. [25]

Meanwhile, Captain Walter D. Phillips’ Easy Company, perched on the side of Hill 698, struggled to secure the peak of that hill mass. A rush by First Lieutenant John Yancey’s 2d Platoon at about 0800 secured a small plateau about 50 yards below the crest against the opposition of one Chinese soldier. First Lieutenant Robert T. Bey’s 3d Platoon then passed through and frontally assaulted the peak only to be thrown back by what Bey calls “the most concentrated grenade barrage this writer has had the dubious distinction to witness.” Following an air strike at about 1400 Easy Company secured the crest with its 40 Chinese dead. [26]

With all of the rifle companies involved in fire fights or security missions, Litzenberg resorted to supporting arms and headquarters troops to knock out the roadblock. From his regimental CP he dispatched First Lieutenant Earl R. Delong, Executive Officer of the AT Company, with a reserve 75mm recoilless rifle and a makeshift crew. Delong moved into position opposite the strong point at a range of 500 yards, while air and artillery hammered the enemy positions. [27]

Simultaneously, the Division Reconnaissance Company ascended the high ground east of the MSR in the vicinity of Litzenberg’s headquarters, then advanced northward along the ridge to envelop the roadblock. This unit, just returned from an active, overnight patrol to Huksu-ri, moved into a hillside position and took the rear of the Chinese under fire across an intervening gulley. [28]

Delong’s 75 had begun firing high explosive and white phosphorus into the enemy’s front; and Company D, after cleaning up the scattered resistance on the slopes of Hill 698, closed on the roadblock under cover of two air strikes and prepared to assault. The Chinese, obviously shaken by the pounding of supporting arms, had commenced a withdrawal into the hills east of the roadbend when Hull’s men began their assault. From Recon Company’s positions, Lieutenant Crossman called for air and artillery to catch the retreating Reds in the open. But the request was turned down because Dog Company troops were already filtering through the objective area. By 1810 the roadblock was eliminated, although Dog Company had to withstand two counterattacks before its hold on the spur was secure. The Chinese had left behind 28 dead, strewn among the boulders and recesses of a natural redoubt. [29]

The main enemy encroachments having been smashed, the 7th Marines’ MSR was again clear for traffic, save for long-range harassment by an occasional CCF rifleman hidden in the hills. At dusk, trucks streamed northward from the regimental CP to deliver supplies to the 1st and 2d Battalions and to evacuate about 100 battle casualties from those units. The wounded were rushed to the Division Hospital and the 121st Army Evacuation Hospital in Hungnam. [30]
The coming of darkness on 3 November marked the finish of the first phase. Litzenberg’s perimeter remained essentially the same as on the previous day, the only changes being Company D’s occupation of the high ground east of the road bend, Recon Company’s assumption of local security at the regimental CP, and 3/11’s tighter concentration within the zone of 3/7. What few light contacts occurred during the night were decided quickly by Marine artillery and mortars.[31]

Later intelligence evaluations proved that these contacts could have involved only CCF patrols or stragglers, for it was in this same period that the 370th and 371st CCF Regiments withdrew some three miles from Sudong to a defense line established by elements of the 372d Regiment north of Chinhung-ni. The two assault units had paid a high price for failure during the 2–4 November fighting. The 371st Regiment lost the equivalent of five companies out of its 1st and 3d Battalions, with the total dead estimated at 793. And the 3d Battalion, 370th Regiment, was reduced by the destruction of two companies.[32]

It was a wobbly 124th CCF Division, then, that dug in with heavy machine guns and mortars on two massive hills, 987 and 891, flanking the MSR about two miles north of Chinhung-ni. The depleted 344th NKPA Tank Regiment could not avail itself of such defensible terrain, for until Marine engineers widened the tortuous cliff road through Funchilin Pass it would not accommodate armor.[33]

Apparently the Chinese Communists had left their North Korean comrades of the 344th to fend for themselves. The NKPA unit had already dwindled considerably from its original organization of three armored and three infantry companies. On 2 November it comprised only five T-34s and their crews. One of these machines, after being damaged during the single-handed raid on the 7th Marines’ perimeter that night, was abandoned the next day. The NKPA crews put the remaining four vehicles into camouflaged positions next to the MSR at Chinhung-ni, where they waited resignedly at a tactical dead-end.[34]

Colonel Litzenberg was aware of the probability of further resistance along the road, since on 3 November Marine air had reported approximately 300 enemy trucks—in groups of 15 or 20—on the move south of the Chosin Reservoir.[35] At dawn of 4 November, after a night of relative calm around the old perimeter, he ordered his subordinates to conduct vigorous patrolling preparatory to continuing the advance.[36]

Troops of 1/7 moved forward in the early light and scouted the valley as far north as the edge of Sudong. They met no opposition and returned to the perimeter. Litzenberg then formed the 7th Marines in column, with the Reconnaissance Company in the lead, followed by 1/7 and 3/7 in that order. He left the 2d Battalion in position on Hills 698 and 727 to protect the regimental flanks.[37]

Recon Company moved out in jeeps at 0800, First Lieutenant Ernest C. Hargett’s 1st Platoon in the lead. Entering Sudong a short time later, the vanguard rounded a bend in the middle of town and surprised a group of CCF soldiers. In a 30-minute fight, Hargett’s men killed three and captured about 20. The 2d and 3d Platoons of the Reconnaissance Company meanwhile inspected the high ground above Sudong without opposition.

Lieutenant Crossman reorganized his company in column on the road and set out for Chinhung-ni with Second Lieutenant Donald W. Sharon’s 2d Platoon in the lead. About the same time, 1000, the 1st Battalion moved out of the 7th Marines’ perimeter south of Sudong and traced Crossman’s route through the low ground.

At Chinhung-ni the highway runs along the east side of the river while the railroad traces the west side.
The narrow-gauge track enters the village over a bridge spanning a branch stream. Just beyond is Samgo station, which served as a railhead for the cable-car system of Funchilin Pass. As the Reconnaissance Company approached Chinhung-ni on 4 November, a small group of Chinese soldiers milled around the train cars and buildings of Samgo Station. They probably had some tactical connection with the four T-34 tanks camouflaged opposite them across the river and road; but the two forces seemed oblivious not only of each other but also of the Marines bearing down on them.

Lieutenant Sharon’s platoon advanced rapidly from Sudong at 1400, followed closely by the rest of the Reconnaissance Company and a section of 75mm recoilless rifles. About 2000 yards south of Chinhung-ni they halted on sighting fresh tank tracks but quickly moved out again on orders of Lieutenant Colonel Davis. At the highway entrance to Chinhung-ni, Sharon’s troops unknowingly passed the first T-34, hidden on the right of the road. Coming abreast of the second Communist tank, which also remained undetected for the moment, the Marines spotted the Chinese soldiers across the river at Samgo Station and opened fire.

The CCF infantrymen scattered under the hail of small-arms fire and many of them were cut down. This was fortunate for Company C of 1/7, which was marching along the railroad tracks and just then nearing the bridge south of the station, where it could have been taken under enfilade fire by the enemy soldiers and tanks.

It was during the exchange with the Chinese that Sharon and his men spotted the second North Korean tank under a pile of brush on the right of the road. The platoon leader, accompanied by Staff Sergeant Richard B. Twohey and Corporal Joseph E. McDermott, climbed upon the dormant vehicle. Suddenly the periscope began to revolve. McDermott smashed the glass and Twohey dropped in a grenade. With Sharon they jumped to the ground just as the grenade exploded inside the machine.

The tank engine roared and the vehicle lurched toward the three Marines. Twohey jumped on it again and dropped another grenade down the periscope. After the dull thump of the second explosion, the T-34 stopped dead and began smoking.

By this time Staff Sergeant William L. Vick’s 75mm recoilless gun section and 3.5-inch rocket crews of Company C had moved up. Together they gave the coup de grace to the damaged T-34. Simultaneously, Sharon’s men saw a thatched hut farther down the road disintegrate as tank number three emerged, its 85mm rifle swinging menacingly toward the valley crowded with Marines and vehicles. First Lieutenant Raymond J. Elledge fired his 75s from their carts, and Company C’s rocket launchers opened up. The T-34 took hits but rumbled on. Seconds earlier, First Lieutenant Dan C. Holland, Forward Air Controller for 1/7, had radioed overhead Corsairs for assistance. One of the gull-winged planes plummeted out of formation and unleashed a pair of five-inch rockets. They were direct hits. The T-34 blew up and died on the road.\[38\]

Sharon and his men moved forward cautiously. While passing the blazing hulk, they spotted enemy tank Number Four, camouflaged against a hillside just ahead. At almost the same moment, Marines passing Chinhung-ni stumbled upon docile tank Number One in the midst of their formation. Recoilless rifles and rocket launchers blasted the machine, and its crew climbed out and surrendered. Sharon then led the antitank crews through the river bed toward the fourth T-34. The Communist tankmen, entrenched on the slope behind their empty vehicle, gave up without a fight. The tank itself was knocked out by 3.5-inch rockets and 75mm shells; and the 344th NKPA Tank Regiment ceased to exist.
After the destruction of enemy armor, Colonel Litzenberg began deploying the 7th Marines in perimeter around the valley junction at Chinhung-ni. The advance had netted about 6000 yards by midafternoon, and the remaining daylight was needed to bring all elements forward and consolidate the newly won ground.[39]

Aware that the Chinese were at the top of Funchilin Pass but not that he was directly under their guns, the regimental commander at 1600 ordered Reconnaissance Company to patrol some 2000 yards into Funchilin Pass and outpost the southern tip of Hill 891. The high ground selected for the outpost coincided with the eastern half of the Chinese forward line, and it would later be remembered as “How Hill” in honor of Company H of 3/7.[40]

As 1/7 dug in on the heights flanking Chinhung-ni, Recon Company, with Second Lieutenant Charles R. Puckett’s 3d Platoon leading, advanced in motorized column about a mile into the pass. At this point, Hill 987 looms up on the west and the highway veers sharply to the east for approximately 1000 yards. After a hairpin turn, the road climbs on a parallel line almost to its starting point, then resumes its northerly course, clinging to the rocky wall of Hill 891 which rises abruptly from the chasm that separates it from Hill 987.

Puckett’s platoon had approached the road bend warily, for a sizeable enemy group had been spotted earlier near the base of Hill 987 across the gorge. At 1630 the first two jeeps of the column eased around the curve and immediately came under fire from Hill 987 to the left, 891 to the front, and from a CCF patrol to the right, on the road itself.[41]

For 45 minutes Puckett and his men were pinned to the road and hillside, and only darkness and a strike by Marine air finally enabled the whole column to withdraw to the 7th Marines’ lines. The clash cost Recon two killed and five wounded, and heavy machine-gun fire had destroyed the two lead jeeps.[42]

During the relatively quiet night of 4–5 November, Colonel Litzenberg issued his order for the next day’s advance. The 1st Battalion was to hold the flanks at Chinhung-ni while 3/7, followed at a distance of 500–1000 yards by 2/7, passed through and attacked into Funchilin Pass. Major Parry’s 3/11 and the 4.2 Mortar Company were to support the infantry by high-angle fire from positions south of Sudong. [43] Resistance could be expected, for even as the 7th Marines peacefully sat out the hours of darkness, the night fighters of VMF(N)-513 were bombing and strafing enemy convoys around the southern tip of the Chosin Reservoir.[44]

At 0700 Lieutenant Hargett’s 1st Platoon of Recon Company departed Chinhung-ni along the MSR to patrol on the right flank. Reaching the hairpin curve, the platoon was pinned down by enemy fire at exactly the same place where Puckett’s unit had come to grief. VMF-312 and 3/11 promptly went into action, and Hargett ultimately withdrew his patrol under the shield of their supporting fire. Marine casualties were four wounded.[45]

Major Roach’s 3d Battalion moved out for the attack at 0800, passing through the high-ground positions of 1/7 on either side of Chinhung-ni. Company I advanced toward Hill 987 and G toward 891 (see Map 10). Both units were hit hard by small-arms and machine-gun fire as they came abreast of the road bend; and for the remainder of the day, the “advance was negligible.”[46]

From 1000 onward, the second phase of the battle roared to a climax as a duel between supporting arms. In 26 missions during 5 November, the batteries of 3/11 threw 943 shells into the enemy positions. The Chinese answered with counterbattery fire from their 122mm mortars, but toward the end of the day these weapons were silenced by Marine howitzer barrages. A forward observer with Company G reported an enemy ammunition dump destroyed. This information was later verified by a POW who mentioned the following additional losses in
CCF mortars: 10 crewmen killed and 17 wounded, one mortar destroyed, two mortars put out of action, and the dispersal of “most of the remaining personnel.”

VMF-312 flew 37 sorties in 90 hours of close support combat on the 5th. Between Chinhung-ni and the Chosin Reservoir, 21 enemy trucks were destroyed. Pilots reported that “the surrounding ridges were filled with enemy troops” and that their strikes against these Chinese were “extremely effective.” Led by Major Cochran and Captain Otis W. S. Corman, flights from VMF (N)-513 blasted troops, buildings, supply vehicles, and gun emplacements scattered from Koto-ri at the top of Funchilin Pass to Hagaru at the reservoir. General Smith, during a helicopter visit to Litzenberg’s CP, remarked that a “considerable number of planes . . . really worked the place over.”[47]

On the ground, the fight ended at dusk with the Chinese retaining their firm grip on these well camouflaged positions studding Hills 891 and 987 despite heavy losses.[48] Marine casualties were light, for it was the tortuous terrain in conjunction with enemy bullets, not enemy fire alone, that obstructed the attackers. Since General Smith earlier in the day had named Koto-ri as the 7th Marines’ immediate objective, Colonel Litzenberg ordered the 3d Battalion to resume the advance at 0800 the next morning.

The night of 5–6 November witnessed only minor contacts around the regimental perimeter. Some 200 Korean laborers accounted for most of the activity during darkness as they carried supplies to forward Marine positions and evacuated casualties to the rear.

Major Roach’s plan for 6 November called for How Company, supported by the fire of George, to envelop the southeast slope of Hill 891 while Item continued its attack on Hill 987. At about 0800 First Lieutenant Howard H. Harris led How Company out of its reserve position. It took him until nearly 1500 to traverse the rugged landscape and get into position. Meanwhile, Item Company under First Lieutenant William E. Johnson had beaten off one counterattack and edged about 300 yards closer to Hill 987, with its most effective opposition coming from bunkers on a spur overlooking the MSR.

Captain Thomas E. Cooney had been wounded twice the previous day while leading Company G against the trenches and foxholes on the southern tip of Hill 891. Except for a feint by one platoon along the MSR into the hairpin turn, his company spent the day in a long-range fight with the Chinese defenders.

Lieutenant Harris led his men over the high ground behind G into positions to the east. Cooney’s experience showed that the only possible approach to Hill 891 was to flank it from the southeast. Although the fresh company arrived sometime after 1400, its attack was held up until about 1600 to await air. Following a strike by two Corsairs, the howitzers of 3/11 and the regimental 4.2 mortars began pounding the Chinese positions.

How Company jumped off at about 1615. Two assault platoons, led by Second Lieutenants Robert D. Reem and Minard P. Newton, descended into the intervening gulley at the tip of the hairpin curve. During a quick reorganization in the low ground, machine guns were posted to cover the ascent. Then the platoons started up towards the enemy-held summit through companion draws, Harris accompanying Newton’s outfit on the left.

The powdery soil of the steep slope made climbing difficult and exhausting. About a hundred yards up, Newton’s platoon began receiving light fire, followed a few yards farther by a hail of grenades and machine gun slugs. The Marines inched forward and were stopped by the Chinese fire. On the right, meanwhile, Reed climbed against no opposition, so it appeared that the envelopment was working. Unexpectedly, the two draws converged near the top of the hill, with the result that the platoons met.

Lieutenant Harris revised his plans by directing Newton, with his left squad supporting by BAR fire, to lead Reem to the top of the hill. Once there, Newton was to swing right and Reem left to envelop the Chinese positions. Newton worked a squad up onto a nose extending out from the summit. The Chinese replied with a renewed barrage of grenades and counterattacked Newton’s left. Sergeant Charlie Foster, seeing apparent victory turning into defeat, lunged forward to break up the attack. He reached the top and died but the men behind him
repulsed the Reds.

During the close fighting on the left, Lieutenant Reem had gathered his squad leaders for instructions preparatory to the final assault on the right. An enemy grenade fell into the midst of the group, and Reem was killed as he smothered the explosion with his body. Staff Sergeant Anthony J. Ricardi took over the platoon.

At about 1800 Harris radioed Roach that his troops were exhausted. Although it was already dusk, he was bringing up his reserve platoon, he said, for the Chinese still held the crest in strength. Company H had taken only eight casualties, but ammunition was low and the approaching darkness prevented the dispatching of more fresh troops. The battalion commander relayed the report to Colonel Litzenberg, who immediately ordered the company to disengage and withdraw. The fighting descent under cover of a 4.2 mortar and artillery bombardment brought Company H back within the lines of 3/7 by 2000 with its six wounded and the body of Lieutenant Reem.
Disappearance of CCF Remnants

Darkness on the night of 6 November descended like a cloak over the 124th CCF Division. In the morning the Chinese had vanished. The 3d Battalion, 7th Marines, encountered no opposition whatever as it occupied the southern tips of Hills 891 and 987. [49]

The mysterious disappearance of this unit, following the equally strange withdrawal of the Chinese Reds who made the first CCF contacts in the EUSAK zone, aroused no end of speculation. Officers of the 7th Marines believed that enemy losses had been heavy enough for a disabling effect. This opinion was confirmed the following year when a Marine Corps Board visited Korea for a special analytical study of Marine operations of 1950, based on all Army and Marine records available at that time as well as interviews and interrogations. The Board concluded that “the 124th CCF Division was estimated to have been rendered militarily noneffective.” [50]

Following the enemy’s disappearance on the night of 6–7 November, the 7th Marines occupied the southern reaches of Hills 891 and 987 while reconnoitering to the top of 891. The rest of the day and all the next was devoted to consolidating positions along the MSR and sending out patrols in a vain search for the vanished 124th CCF Division.[51]

On 8 November, General Almond visited the 7th Marines. Upon hearing of the valor of Captain Cooney at “How Hill,” he awarded that officer the Silver Star medal on the spot. There being neither pendant nor citation available, the Corps Commander pinned a slip of paper to Cooney’s jacket in the brief ceremony. Scrawled on the fragment was the inscription, “Silver Star Medal for Gallantry in Action—Almond.” [52]

While the 7th Marines advanced astride the MSR, a volunteer patrol of fifteen men, led by First Lieutenant William F. Goggin of 2/7, traced a lonely, circuitous route in the mountains to the west. Having left Chinhung-ni at 1200 on 8 November, the scouting party covered some 25 miles through perpendicular wilds during the following 26 hours. This journey brought it to the Chosin Reservoir plateau at a point just southwest of Koto-ri.

Lieutenant Goggin, his slight wound the only scar of the patrol’s single clash with Chinese, radioed Colonel Litzenberg that Koto-ri was clear of enemy. He then led his party southward, and in the evening of the 9th, returned through the lines of 3/7.[53]

The Marines had been told that big game animals were hunted before the war in the mountains of northeast Korea. But not until the otherwise calm night of 9–10 November did a four-legged enemy invade the positions of RCT-7. Near the cable-car trestle, midway through Funchilin Pass, an unfriendly bear, no doubt a Russian bear, paid a nocturnal visit to the 1st Platoon of George Company. An unnamed Marine PFC, awakened in his sleeping bag, swore afterwards that the animal was wearing a hammer and sickle emblem. However this may be, the intruder was routed by his startled yell and disappeared into the night. [54]
At 0830 on 10 November—the Marine Corps Birthday—the 1st Battalion passed through the 3d and emerged from Funchilin Pass onto the open plateau. Koto-ri (designated as Objective One) was occupied without opposition an hour and a half later. Litzenberg halted his column and drew up a perimeter around the mountain village.

Upon reaching the Koto-ri plateau the 7th Marines was first to meet a new enemy who would take a heavier toll in casualties than the Chinese. This was General Winter, who has won many a historic campaign. When the first cold blasts struck, “our men were not conditioned for it,” commented Litzenberg. “The doctors reported numerous cases where the men came down to the sickbay suffering from what appeared to be shock. Some of them would come in crying; some of them were extremely nervous; and the doctors said it was simply the sudden shock of the terrific cold when they were not ready for it.”

The Marines recovered quickly after “thawing out,” and platoon warming tents, heated by camp stoves burning fuel oil, were set up at Koto-ri. Buckets of steaming water were provided for the warming of “C” rations. Hot weather, however uncomfortable it may be, is fighting weather as compared to sub-zero cold which seems to numb the spirit as well as flesh. Cold weather clothing is a handicap to movement and the use of firearms; and some weapons, particularly the carbine, are not dependable at low temperatures. It was probably as well for morale that the Marines at Koto-ri could not foresee that this was only the beginning of a prolonged operation in sub-zero weather without a parallel in the nation’s history.

Until 13 November, when the 7th Marines advanced toward Hagaru, patrols from Koto-ri repeatedly sighted bands of Chinese in the distance. Except for a fight on 11 November in which C Company claimed to have inflicted 40 casualties on the enemy and lost four killed and four wounded, there was little action. With a little pressure on the ground or from the air, the enemy vanished, and thus the uneasy calm continued.

While the 7th Regiment had been fighting, marching, and climbing toward the Chosin Reservoir in early November, the 5th Marines peacefully combed the approaches to the Fusen Reservoir to the east. After detaching 1/5 to Division control on 4 November and stationing 3/5 near Oro-ri, Lieutenant Colonel Murray sent the 2d Battalion into the Sinhung Valley to relieve the 18th ROK Regiment. The relief took place at 1145 on the 4th, and Lieutenant Colonel Harold S. Roise deployed 2/5 around a valley junction five miles north and 15 miles east of the then embattled 7th Marines.

Roise’s mission was twofold: to block the Sinhung corridor while determining the strength and disposition of the enemy, if any; and to check certain northerly routes shown on maps as possibly leading to either the Fusen or Chosin Reservoirs, or both. Reconnaissance patrols in squad strength and combat patrols of reinforced platoons and company size fanned out in a broad arc during 5–9 November. They determined that no usable route led to either reservoir from the south, but that the highway continuing northeast from the town of Sinhung, leading to the 7th Infantry Division’s zone and the Manchurian border, would carry military traffic. From 7 November, Roise’s troops made daily contact with Army patrols coming down the highway, but no units tried to penetrate the apparent screen of enemy defenses close to the Fusen Reservoir.

Major Merlin R. Olson, 1/5’s Executive Officer, led Companies A and B on 7 November in a reconnaissance in force to Huksu-ri, that annoying road junction west of Oro-ri. On the 8th Olson’s force had a running fight with North Koreans before being recalled while still short of his objective. Olson’s recall resulted from reports of 2000 North Koreans moving towards the MSR.
On 8 November, Company D (Reinf) made an overnight trek deep into a branch valley northwest of Sinhung, reaching a point about 10 miles due east of Koto-ri. One CCF soldier was captured while asleep in a house. He said he belonged to the 126th Division and that Red China would commit a total of 24 divisions against the UN forces in Korea. [61]

On 9 November, Colonel Murray received orders to concentrate his regiment along the MSR leading to the Chosin Reservoir. During the next two days he deployed the 1st and 3d Battalions at Majon-dong and Chinhung-ni respectively. The ambush of a Charlie Company patrol on the 10th delayed the departure of 1/5 from the Chigyong area. The patrol had to be rescued by a battalion attack the next day before the force could move to Majon-dong. [62] On the 13th while operating out of Majon-dong a 1/5 patrol ran into 50–150 enemy who inflicted 7 KIA and 3 WIA before withdrawing. [63]

The 2d Battalion moved out of the Sinhung Valley on 13 and 14 November to relieve the 7th Marines of the responsibility for defending Koto-ri and thus free Colonel Litzenberg’s regiment for the advance to Hagaru and the north. Lieutenant Colonel Roise’s battalion had completed its mission without firing more than a few shots and with a total prisoner bag of 12 North Koreans and one Chinese. [64]

Although the new enemy had seemingly evaporated from the path of the 1st Marine Division, there was good reason to believe that he was not forsaking his aggressive designs in North Korea. For in addition to the ominous but questionable predictions of Chinese POWs, eye-witness accounts of pilots of VMF (N)-542 provided G-2 officers with information of the gravest portent in early November. The Marine airmen made nightly strikes from the 1st to the 9th against Sinuiju at the mouth of the Yalu, and they repeatedly reported a steady stream of trucks moving into northwest Korea from Antung, Manchuria. Time after time they blasted Sinuiju with bombs, rockets, and 20mm shells, and though parts of the city were continuously aflame, it still seethed with activity. They described southward bound traffic as “heavy, “very heavy,” and even “tremendous,” and at least one convoy was reported to be “gigantic.” [65]
ON 4 NOVEMBER, WHILE RCT−7 was at the height of its fight with the Chinese, the Division CP displaced from Wonsan to Hungnam. General Craig, the ADC, who inspected the area on the 2d, recommended the abandoned Engineering College on the western outskirts as the best location. During his visit he was shown a knoll outside the city where the bodies of some 200 Korean civilians were laid out in a perfect row. All had been victims of the retreating NKPA forces.[1]

A location in Hamhung would have been preferred, but available sites were already taken by X Corps. General Smith flew to Hungnam by helicopter and opened the new CP at 1100 on the morning of the 4th. That evening a train carrying 160 officers and men of Headquarters Battalion and the Division staff arrived at 2130 from Wonsan. En route it had been fired on by guerrillas but no casualties resulted.[2]

A perimeter defense, consisting of two outposts and eight machine-gun positions, was set up to command all likely approaches to the new CP. Defensive wiring and trip flares were installed, with the gun positions and outposts being connected by telephone.

During these proceedings everyone was blissfully unaware of the existence of 250 tons of NKPA high explosive, stored only 600 yards from the CP in three connecting caves. Undiscovered for a week, this enemy cache was believed capable of demolishing the command post. A 16-man security detachment was placed on guard until the explosive could be removed and detonated.[3]
Protection of the Wonsan-Hungnam MSR took on added importance as the 1st Marine Division speeded up its move to the north. This responsibility, it may be recalled, was shared by Division and Corps on 3 November in accordance with a decision by General Almond. The 1st Marines and elements of the 1st Tank Battalion maintained security from Wonsan 15 miles northward to Munchon, while the 1st Battalion of the 5th Marines was responsible from Hamhung southward to Chigyong. This left the 54-mile stretch between Chigyong and Munchon without any protection except the patrols of the Korean CIC agents and the Special Operations Company, USA, both under Corps control.

On 4 November this company reported that large numbers of North Koreans were moving into the area to the west. That same afternoon Corps notified Division that a group of mounted guerrillas had fired on railway police in the yards at Kowon, 15 miles north of Munchon.[4]

On 6 November, immediately after landing at Wonsan, the 65th RCT of the 3d Infantry Division (less one battalion, placed temporarily under 1st Marine Division control for the Majon-ni operation) was ordered by Corps to relieve elements of the 96th Field Artillery Battalion, USA, which had been recently sent to Yonghung. The Army RCT was assigned a mission of protecting the Yonghung-Kowon area and patrolling to the west (see map on Page 122).[5]

The Wonsan-Hamhung rail line took on special importance after the announcement that water transportation would be delayed until enemy mines were cleared from the harbor at Hungnam. This made it necessary for the 1st Marine Division to send daily supply trains from Wonsan.[6] The first two completed the run without incident, but after departing Wonsan at dusk on the 6th the third train was halted at Kowon by the destruction of rails ahead. North Korean guerrillas attacked the train, guarded by a lieutenant and 38 men from Company C of the 1st Amphibian Tractor Battalion.[7]

The detachment was taken by surprise in the darkness by foes firing from both sides of the track. When the Marines attempted to reverse the train, the enemy wounded the engineer and put a hole in the boiler with grenades. In the darkness the guard became separated into two groups, the smaller of which was surrounded in a car. The guerrillas fired through the wooden sides, forcing the Marines to the floor, and threw grenades through the windows until all ten men were killed or wounded, only two of them surviving.

The remaining 29 men of the guard made a stand on an embankment about 200 yards from the track. Six Marines were wounded in the ensuing fire fight. The train guard broke off the action and withdrew to the area of the Army artillery battalion.

An empty train from Hamhung, guarded by a platoon from Company A of the Amtracs, was halted at 1700 on the afternoon of 6 November by railway officials at Yonghung. Reports of guerrilla activity in the area had proved to be only too well founded when elements of the 96th Field Artillery Battalion were attacked early that morning. Their perimeter south of the town was breached with losses to the Army unit of equipment and ammunition.

The 2d Battalion of the 65th RCT, which arrived at Yonghung late that afternoon, had its baptism of fire within a few hours. Guerrillas in estimated strength of 500 to 800 attacked at 0300 on the 7th, inflicting casualties of six killed and 14 wounded. Troops of the 96th Field Artillery Battalion also came under attack, as did elements of the 4th Signal Battalion, USA. Company D of the 1st Tank Battalion sent a Marine tank and “Weasel” (M-29) to evacuate the wounded with the assistance of the Amtrac platoon guarding the empty train at Yonghung.[8]
At 1400 that afternoon the empty train resumed its run to Wonsan. Only two miles had been covered when the locomotive and six cars were derailed by a split rail and wrecked just south of Yonghung. Personnel losses amounted to one man killed and 14 injured. \[9\]

At almost exactly this same hour the fourth supply train was stopped south of Kowon by a blown section of track. The guard proceeded on foot to investigate and encountered the depressing spectacle of the third supply train, abandoned by the enemy after being plundered. One ammunition car was still burning and in another riddled car the bodies of the trapped Marines were found. So extensive was the damage to tracks and switches that rail service could not be resumed until 9 November. \[10\]

The Corps commander summoned General Smith to Wonsan that morning for a conference on measures for the security of the rail line. It was decided that only daytime runs would be made thereafter, with the train guard increased from 38 to 50 men. The 65th RCT, the 26th ROK Regiment and a battery of the 96th Field Artillery Battalion were placed under the temporary control of the 1st Marine Division with a mission of guarding bridges and other key points. \[11\]

General Smith worked out a plan for the ROK regiment to drive the guerrillas southward from the Chigyong area toward the 65th RCT at Yonghung. As it proved, elements of both units were given Corps commitments which prevented this maneuver from being put into effect. They remained only a few days under nominal Division control, being used for a variety of security missions along the Wonsan-Hamhung MSR. \[12\]

By 9 November, when the Division supply trains resumed their runs, 95 loaded cars had accumulated at Wonsan. The 1st Combat Service Group continued to route supplies northward from the railhead at the Wonsan airfield. Corps orders required troops to ride in open gondola cars. \[13\]
Chapter 7. Advance to the Chosin Reservoir

Appraisals of the New Enemy

It is understandable that an atmosphere of uncertainty should have enveloped military decisions of this period. With the Joint Chiefs of Staff and the UN command groping their way through a fog of war, division commanders in Korea could not be expected to see very far ahead.

Disconcerting as it had been to have the Chinese appear in the first place, it was even more disturbing to have them break off contact and vanish so inexplicably. Nevertheless, General MacArthur and his staff had a fairly accurate idea of CCF numbers at this time. On 2 November the UN command estimated that 16,500 Chinese Communist soldiers had crossed the Yalu and 450,000 CCF regulars were in Manchuria. Three days later, Major General Charles A. Willoughby’s intelligence summary warned that the Chinese had the potential to start a largescale counteroffensive.[14]

General MacArthur, reporting to the United Nations for the first half of November, stated that 12 CCF divisions had been identified in Korea, indicating a total of perhaps 100,000 troops. Nine of these units had appeared on the Eighth Army front and three in the X Corps zone north of Hamhung.

“At the same time,” the report continued, “United Nations aerial reconnaissance disclosed heavy troop movements near the border, in Manchuria, and into Korea.”[15]

Quite as important as the new enemy’s numbers was the question of his intentions. Did the CCF divisions consist merely of so-called volunteers making a demonstration to encourage the beaten NKPA remnants? Or were the Chinese contemplating an all-out military intervention?

President Truman asked JCS on 4 November to obtain from General MacArthur an estimate of the situation.[16] The general’s reply stated that it was “impossible to authoritatively appraise the actualities of Chinese Communist intervention in North Korea.” He recommended “. . . that a final appraisement should await a more complete accumulation of military facts.”[17]

During the next three days the issue of bombing bridges across the Yalu posed a question that has remained a controversial subject ever since. General MacArthur was granted permission, after being at first refused, but cautioned “that extreme care be taken to avoid violation [of] Manchurian territory and airspace.”[18]

In two messages of 7 November, the UN commander confirmed his original appraisal to the effect that the Chinese were not making a full-scale intervention. But he conceded that reinforcements might enable the new enemy to stop the UN advance or even throw it into reverse. He planned a resumption of the initiative, he said, in order to take “accurate measure . . . of enemy strength.” And he repeated that the restriction of his bombing operations provided “a complete sanctuary for hostile air immediately upon their crossing of the Manchuria-North Korean border.” This factor, he warned, could “assume decisive proportions. . . .”[19]

On this same date, with the wary phase of UN strategy at its height, General Almond flew to Hungnam to confer with General Smith. The X Corps commander still wore another hat as General MacArthur’s chief of staff; and though he could not function actively in this position, he kept in close touch with strategic aims at Tokyo. Thus the cautious spirit of the UN commander’s messages of 7 November was reflected in Almond’s changed viewpoint. Where he had previously urged haste in the X Corps drive to the border, he was now disposed to put on the brakes and carry out that mission with less scattering of forces.

The prospect of a winter campaign was discussed, and the Marine general recommended that only enough territory be held for the security of Hamhung, Hungnam and Wonsan. Almond believed that Hagaru...
should also be included, but he agreed that a greater degree of concentration was advisable. [20]

As day after day passed without further CCF contacts of importance, however, operations again took on the character of an occupation rather than a drive which might end in a collision with a powerful new enemy.

X Corps OpnO 6, issued at 2400 on 11 November, called for an advance to the border by I ROK Corps on the right, the 7th Infantry Division in the center and the 1st Marine Division on the left. The 3d Infantry Division, with the 26th ROK Regiment attached, was to have the responsibility for the Wonsan-Yonghung area after relieving elements of the 1st Marine Division; the Marines were directed to take blocking positions at Huksu-ri and Yudam-ni. In the Corps rear, the 1st KMC Regiment (−) had a zone to the south and west of Kojo.

The Marine zone on the Yalu, about 40 miles in width, was approached and bounded by two roads branching off from the Changjin area. One of them ended at Huchanggangu and the other at Singalpajin. From that point the zone of the 7th Infantry Division extended east to Hyesanjin (where the border turns north at a right angle) and thence again eastward to the Hapsu area. I ROK Corps was to operate from the line Hapsu-Chuchonhujang and drive northward along the coast with Chongjin as an objective. [21]

Such a dispersion of forces, depending for supplies on poor secondary roads through wild mountain regions, could hardly have been contemplated if large-scale CCF opposition were expected. As a further indication of renewed confidence, General MacArthur asked informally and indirectly that X Corps do everything possible to assist the Eighth Army in its drive to the Yalu. This request was conveyed in a personal letter of 11 November from General Wright, G-3 of FECOM, to the Corps commander. [22]
Chapter 7. Advance to the Chosin Reservoir

The Turning Point of 15 November

The date of General Almond’s reply, the 15th, is worthy of recognition as a turning point. For it was also the occasion of messages from the UN commander-in-chief and the commanding general of the 1st Marine Division which had an effect on strategy. Indeed, the entire course of the Chosin Reservoir campaign was channeled into new directions as a result of the concepts advanced in these three communications of 15 November 1950.

Obviously the gap of 80 miles separating the Eighth Army from X Corps would have to be reduced before much help could be given by the latter. General Almond replied to General Wright in a letter proposing that X Corps attack to the west of the Chosin Reservoir while also continuing to advance northward in zone to complete its original mission.

That same day, while the letter was en route to Tokyo, General MacArthur came to a far-reaching decision. In a radio message he directed the X Corps commander to develop, as an alternative to OpnO 6, a plan for reorienting his attack to the west on reaching Changjin in order to cut the Chinese MSR, as represented by the Manpojin-Kanggye-Huichon road and rail line.

This was the first indicated change in mission, according to the X Corps command report, since CINCFE’s directive late in October calling for a drive to the border. The amendment “was made necessary,” the report continued, “by the enemy build-up in front of the Eighth Army and the fact that the enemy action had halted the first attempt . . . to advance Eighth Army to the border. An estimate of the Eighth Army situation . . . fixed the relative combat power as 100,000 UN to 100,000 enemy with UN forces having air superiority and superior artillery support. . . . The enemy was given an offensive capacity which he could implement with an estimated reserve of 140,000 CCF troops north of the Yalu River. In view of the enemy’s offensive capacity, Eighth Army adopted a conservative plan to make a general advance with the main effort in the center generally parallel to the enemy MSR (Huichon-Kanggye). This course of action was designed to meet any course of action which might be adopted by the enemy. To assist the Eighth Army advance, X Corps was to initiate a main attack to the West from the Chosin Reservoir area, cutting the enemy MSR at Mupyong-ni, and advance in a northwesterly direction to the Yalu River line at Manpojin.”[23]

By a coincidence it was also on Wednesday, 15 November, that General Smith wrote a letter which foreshadowed future military events. Addressed to General Clifton B. Cates, Commandant of the Marine Corps, this communication made it plain that the 1st Marine Division commander and his staff did not share in the renewed optimism as to the course of the UN war effort. Not only did the Marines accept the possibility of imminent and formidable CCF intervention, but they were making preparations to meet it.

“So far our MSR north of Hamhung has not been molested, but there is evidence that this situation will not continue. . . .

“Someone in high authority will have to make up his mind as to what is our goal. My mission is still to advance to the border. The Eighth Army, 80 miles to the southwest, will not attack until the 20th. Manifestly, we should not push on without regard to the Eighth Army. We would simply get further out on a limb. If the Eighth Army push does not go, then the decision will have to be made as to what to do next. I believe a winter campaign in the mountains of North Korea is too much to ask of the American soldier or marine, and I doubt the feasibility of supplying troops in this area during the winter or providing for the evacuation of sick and wounded.”

The letter mentioned such preparations as the work done by Marine engineers to strengthen the
Hamhung-Hagaru road for tanks and heavy vehicles. Plans had been approved, added General Smith, for an airstrip at Hagaru capable of landing cargo planes for resupply and casualty evacuation.

He emphasized that he did not mean to be pessimistic. “Our people are doing a creditable job,” he said; “their spirit is fine, and they will continue to do a fine job.” But in conclusion he reiterated his doubts about his “wide open left flank” and his concern over “the prospect of stringing out a Marine division along a single mountain road for 120 air miles from Hamhung to the border.”[24]

General Smith had no more than finished dictating his letter when two Navy officers called at the CP—Rear Admiral Albert K. Morehouse, chief of staff to Admiral Joy, and Captain Norman W. Sears, chief of staff to Admiral Doyle. Both were old acquaintances of the Marine general, who had led the assault landing force on Peleliu in 1944 while Sears commanded an LST group. Smith felt that he could speak frankly, therefore, and expressed his concern over the aspects of the strategic situation he had discussed in the letter.[25]

CinCFE had requested in his message of the 1st that the plan for re-orienting the X Corps attack be submitted to him as an alternative to OpnO 6. General Almond put his staff to work on the 16th, and that same day Draft No. 1, of OpnO Plan 8 was completed. This was a concept of an attack on Kanggye by means of a drive westward from Changjin.[26]
Almond disapproved the first draft on the grounds that the MSR of the Corps element making the effort would be too far extended. He requested the preparation of a new plan based on the concept of an advance farther south on the Hagaru-Mupyong-ni axis and west of the zone of the 1st Marine Division. The X Corps commander also directed:

1. That the Hamhung-Hagaru road be developed as a Corps MSR with intensive effort on the part of Corps troops, including Corps engineers;
2. That an RCT of the 7th Division be assigned the mission of seizing Changjin in order to protect the right flank of the 1st Marine Division.

The Corps commander considered that Changjin and Mupyong-ni were too widely separated as objectives to be assigned to a single division, not to mention the difficult terrain. His staff worked for four days on Draft No. 2 of OpnO Plan 8 before submitting it to him. He accepted it with several modifications and directed that the third draft be taken to Tokyo by Lieutenant Colonel John H. Chiles, the Corps G–3, for presentation to GHQ.
General Smith, for his part, lost no time in putting into effect his preparations for trouble in the shape of a formidable CCF attack. The completion of mine clearance at Hungnam had opened that port on 15 November, thus easing the transportation situation. That same day the 7th Marines occupied Hagaru, being greeted by a temperature of four degrees below zero which threatened an early and bleak winter.

Only four days previously, X Corps OpnO No. 6 had directed the 1st Marine Division to take up blocking positions to the west, at Huksu-ri and Yudam-ni, while continuing the northward advance to the Yalu. This meant a further dispersion at a time when Smith hoped to reduce the 163 road miles separating his infantry battalions.

In order to carry out the Corps directives, Division OpnO 21−50 of 13 November assigned the following tasks:

“RCT−1—to seize Huksu-ri;

“RCT−7—to seize Hagaru, and, on order, to seize Yudam-ni;

“RCT−5—to protect the MSR from positions at Majon-dong, Chinhung-ni and Koto-ri, while preparing to pass through RCT−7 in the Hagaru area and advance to Changjin (approximately 40 miles northward);

“Division Reconnaissance Company—to screen the Division right flank by operating in the Soyang-ni−Sinhung valley to the east Division boundary.”[27]

In connection with the mission of RCT−7, the words “on order” deserve special notice. For the commanding officer was directed by Smith’s oral instructions to take up blocking positions at Toktong Pass, about halfway between Hagaru and Yudam-ni, until additional units of the Division could be moved up to the Hagaru area. In other words, the Division commander believed that the possibilities of large-scale CCF intervention were such as to justify caution in the drive to Yudam-ni.[28]

Not only would the concentration of the Marine units ease General Smith’s concern over the tactical situation; it would also greatly simplify the administrative load. Colonel Bowser has commented, “Division was faced with the problem of handling a division scattered from Wonsan and Majon-ni in the south to the heavy engagement of the 7th Mar in the north. Add to this the problem of guerrilla bandits between Wonsan and Hungnam/Hamhung as well as a completely unknown situation to the West, and you have a task of considerable magnitude for any division staff.”[29]

RCT−1 was delayed several days by lack of railway facilities in its move 70 miles northward to Chigyong after being relieved in the Wonsan area by the 3d Infantry Division.[30] But most of the other Marine units had been pulled up—a battalion or even a company at a time—as far as the Hungnam area. Along the new MSR north of Hamhung, the column of advance on 15 November consisted of these units:

Hagaru—RCT−7;
Koto-ri—2d Battalion, RCT−5;
Chinhung-ni—3d Battalion, RCT−5; Battery K, 4th Battalion, 11th Marines; Detachment 1st Ordnance Battalion; Detachment 1st Service Battalion; 1st and 2nd Platoons, Company A, 1st Engineer Battalion; Company B (less 3d Platoon), 1st Engineer Battalion;
Majon-dong—1st Battalion RCT−5; Company D, 1st Tank Battalion.

The Division command and staff took a dim view of the possibility of completing “the race to the Yalu” before winter. It was already too late, if sub-zero temperatures were any indication; and preparations must now be
made for tactical and logistical support of a midwinter campaign in the mountains. Among the most essential provisions were the selection of a forward base, the construction of airstrips along the MSR, and the strengthening of the road to make it fit for tanks and heavy vehicles.

Hagaru, at the foot of the Chosin Reservoir, had been recommended by General Craig as the best location for a forward base when he visited here on the 15th. The commanding generals of the Division and Wing arrived for a tour of inspection the next day. General Harris made the trip at the express request of General Almond, who believed that a strip long enough to land R4Ds was necessary to insure resupply and casualty evacuation in a midwinter emergency. One of the few comparatively flat pieces of real estate in northeast Korea was found just south of the town. The black loam promised to make a hard surface in freezing weather, so that the prevailing arctic temperatures offered at least one consolation.[31]

An OY strip had been completed on 13 November at Koto-ri, but heavier engineer equipment was needed at Hagaru. Before it could be brought forward, the road from Chinhung-ni to Koto-ri required strengthening and widening. This task had already been assigned to Lieutenant Colonel Partridge, commanding the 1st Engineer Battalion. After a survey by jeep, he decided to begin operations at the highest point of the one-way dirt road.

“By working down,” he explained, “we could first of all provide for what we considered to be a dangerous accumulation of snow, and the problem of land slides. . . . The work on the road involved a good bit of drainage in order to insure that the melting snows from day to day during the sunlight hours would not filter across and destroy the road bed. It involved demolitions and drilling and a good deal of dozer and grader work.”[32]

Enough progress had been made by 18 November so that armor could be sent forward to support RCT−7. Only the day before, the 1st Tank Battalion had begun functioning with its Headquarters and Service Companies at Soyang-ni, eight miles northwest of Hamhung. The road between Chinhung-ni and Koto-ri was still impassable for M−26 (Pershing) tanks until the engineers could widen some of the turns. But Lieutenant Colonel Harry T. Milne, the battalion commander, organized a provisional tank platoon consisting of two M4A3 (Sherman) tanks from Headquarters Company and four dozer tanks from Company D at Majon-dong. They proceeded without incident on the 18th to Hagaru, operating as a gun platoon.[33]

Opening the mountain road to heavy traffic made it possible on the 18th to begin work on the Hagaru airstrip. Five large dozers with pans of eight cubic yards capacity arrived at the site the next day, and Company D of the 1st Engineer Battalion tackled the job of hacking out a runway from ground frozen as hard as granite. Plans called for a cut of 90,000 cubic yards and a fill of 60,000 for a 3200-foot runway. The rub was that engineering field manuals prescribed a runway of 3600 feet for R4Ds or C−47s at sea level, plus an additional 1000 feet for each 1000 feet of altitude. And since Hagaru was about 4000 feet above sea level, it could only be hoped that pilots were right in estimating that a strip of 3000 to 4500 feet might do in a pinch.[34]

The 19th also dated the establishment of the Supply Regulating Station at Hagaru for the purpose of building up stockpiles. Prior to this time, the 1st Service and 1st Ordnance Battalions had been in charge of division dumps at Hamhung. Supplies arrived by rail after being unloaded from the ships at Wonsan by the 1st Shore Party Battalion and the 1st Combat Service Group.

The completion of mine clearance made it possible to order the latter organization to Hungnam by sea to operate in-transit depots for X Corps. Practically all Division supplies were soon being received by sea at this port, where the 1st Combat Service Group separated the incoming cargo into proper classifications and forwarded it to the dumps at Hamhung. Port operation was the responsibility of the 2d Engineer Special Brigade, USA. After the project got into full swing, from 2000 to 2500 Korean laborers were employed at Hungnam and as many as 6000 tons of cargo unloaded in 24 hours.[35]

A limited amount of rolling stock was available for the narrow-gauge railway from Hungnam to
Chinhung-ni. But it was up to the Marines to put the line back into operation, for the X Corps Railway Transportation Section already had its hands full with the Wonsan-Hamhung route. The 1st Service Battalion was authorized to make the attempt, and enough Korean crews were rounded up to operate the trains. Chinhung-ni thus became the railhead for supplies trucked the rest of the way to Hagaru.[36]

Preparations were also made for large-scale casualty evacuation to the Division hospital at Hungnam. H&S, A and B Companies of the 1st Medical Battalion remained there to set up the Division hospital while D, C and E Companies were attached to RCTs 1, 5 and 7 respectively. As the Division center of gravity shifted northward, medical officers foresaw the need of a hospital-type facility at Hagaru in addition to the clearing stations contemplated at Koto-ri and Chinhung-ni. Plans were approved, therefore, for Companies C and E to pool their resources at Hagaru and establish a medical supply dump. Additional surgical teams were to be flown to Hagaru in an emergency by Companies A and B from the hospital at Hungnam.

Meanwhile the hospital ship *Consolation*, commanded by Captain John W. McElroy, USNR, prepared to move from Wonsan to Hungnam. There the Division hospital had been enlarged to 400 beds, and an additional 100 to 150 were planned for the new annex at Hamhung. In order to speed up casualty evacuation, several heated railway cars were equipped for that purpose on the 35-mile narrow-gauge line from Chinhung-ni.[37]
The Chosin Reservoir Campaign  
Lynn Montross and Nicholas A. Canzona

Chapter 7. Advance to the Chosin Reservoir  
Supplies Trucked to Hagaru

Provisions for the advance of RCT–5 east of the Chosin Reservoir were included in Division OpnO 22–50, issued at 0800 on 17 November. As a preliminary, RCT–7 was given a two-fold mission: (1) to protect the Division left flank between Hagaru and Yudam-ni with a minimum of a battalion; and (2) to relieve elements of RCT–5 and protect the MSR in zone from positions in the vicinity of Hagaru, Koto-ri and Chinhung-ni.

RCT–5 was assigned these missions: (1) to pass a minimum of a battalion through RCT–7 at Hagaru; (2) to move up the east side of the Chosin Reservoir and seize Sinhung-ni, about 7 miles northeast of Hagaru; and (3), on order, to seize the road junction at Kyolmul-ni, some 20 miles north of Hagaru.

Division Reconnaissance Company was to screen the left flank of the MSR in the vicinity of Majondong, and the 11th Marines to maintain its 4th Battalion in that area prepared for employment in the north on order.

OpnO 22–50 directed the Supply Regulating Detachment (1) to establish a truckhead at Hagaru after taking over and consolidating the dumps of RCT–7; (2) to control traffic between Koto-ri and Chinhung-ni; and (3) to support RCTs 5 and 7, with priority to RCT–5. The following supply levels were fixed:

- Classes I and III, five days;
- Class V, 1 Unit of fire;
- Classes II and IV, as required for all troops operating to the north and west of Koto-ri.[38]

Although the advance westward to Huksu-ri remained the mission of RCT–1, the shortage of rail and motor transport slowed the movement from Wonsan to Chigyong. The last elements had not arrived on the 18th when Corps asked and received the consent of Division to the employment of the 26th ROK Regiment for the attack on Huksu-ri, with the understanding that the objective would be turned over to RCT–1 at a later date. On the morning of the 19th the ROK unit left Chigyong to execute its mission.[39]

Two days later RCT–1 was relieved of this responsibility when Corps verbally notified Division that Huksu-ri had been placed within the modified boundary of the 3d Infantry Division. This was confirmed the next day by X Corps OI 17, which also directed the Division to establish blocking positions at Yudam-ni.[40]

Up to this time General Smith had not been able to make much progress toward Yudam-ni without dispersing his units to an extent which he regarded as imprudent. But with the availability of RCT–1 to occupy positions on the MSR behind the other two infantry regiments, he could now push ahead.

As an added factor, the 1st Marine Division had just acquired a new unit. Early in November Admiral Joy had inquired if General Smith could use the 41st Independent Commando, Royal Marines. This British unit of 14 officers and 221 enlisted men, commanded by Lieutenant Colonel Douglas B. Drysdale, and attached to ComNavFE in Japan, had requested service with the U.S. Marines. Smith replied that he would be glad to have these fine troops. Highly trained in reconnaissance, they could operate with the Division Reconnaissance Company in protecting the flank of the Marine advance. The British Marines arrived at Hungnam on the 20th and reported to the 1st Marine Division.[41]

Division OpnO 23–50, issued at 0800 on the 23d, directed the Commandos to locate and destroy enemy forces on the left flank, ranging as far as 13 miles west of Koto-ri. It was hoped that the British unit and the Division Reconnaissance Company might flush out CCF troops beyond the reach of routine infantry patrols. Other tasks assigned to elements of the Division were as follows:

“RCT–7—to seize Yudam-ni and maintain one battalion in that position;
“RCT−5—to seize Kyolmul-li (20 miles north of Hagaru) and be prepared to seize Toksil-li (10 miles northwest of Kyolmul-li) and Tuan-di (15 miles northeast of Kyolmul-li) on order;

“RCT−1—to relieve elements of RCT−7 in the vicinity of Hagaru and Koto-ri and protect the Division MSR from positions in the vicinity of Hagaru, Koto-ri and Chinhung-ni;

“1st Tank Battalion (less detachments)—to protect the MSR from positions in the vicinity of Majon-dong and Soyang-ni;

“1st Engineer Battalion—to support Division operations with priority to the maintenance of the MSR and construction of the airfield at Hagaru.”

OpnO 23−50 also provided that the Supply Regulating Station Detachment continue operation of the truckhead at Hagaru and stock supplies at the following levels: Classes I and III, 8 days; Classes II and IV, as required; and Class V, one and one-third U/F for all troops operating to the north and west of Chinhung-ni.[42]

The trucking facilities of the Division had been strained to the limit ever since the Wonsan landing. Shortly afterwards the bulk of the 7th Motor transport Battalion was taken under the operational control of X Corps, and it became necessary to attach the 1st Motor Transport Battalion to RCT−7. On 19 November, however, the 1st MT (less detachments) had passed to the control of the 1st Supply Regulating Detachment at Hagaru. There the truckers not only built up the stockpile of supplies but rendered the best support that units of the division had known so far along the MSR. [43]
General MacArthur did not appear to be shaken by EUSAK G−2 reports during the third week of November which called attention to a formidable CCF build-up on both sides of the Yalu. On the contrary, a UN order of the 20th, giving directions for the conduct of troops at the border, indicated that an occupation rather than a fight was expected:

“Elements of minimum size only will be advanced to the immediate vicinity of the geographical boundary of Korea. No troops or vehicles will go beyond the boundary between Korea and Manchuria, or between Korea and the USSR, nor will fire be exchanged with, or air strikes be requested on forces north of the northern boundary of Korea. Rigid control of troop movements in vicinity of northern boundary will be exercised. Damage, destruction or disruption of service of power plants will be avoided. No personnel, military or civilian, will be permitted to enter or leave Korea via the Manchurian or USSR border. Commanders will insure that the sanctity of the international border is meticulously preserved.”[44]

The italicized sentence emphasizes an assumption which had made converts in high State Department as well as Defense circles in Washington. The Chinese, according to this conjecture, were concerned chiefly with defending their Manchurian frontier and guarding the power complexes along the Yalu. As evidence, it was pointed out that early in November the Sinuiju radio described the CCF troops crossing the river as a “volunteer corps” for the protection of the hydro-electric plants along the Yalu serving Mukden, Dairen and Port Arthur. Proceeding from this premise, it was a logical conclusion that if no provocation were given these forces, a large-scale fight might be avoided.[45]

General MacArthur, after receiving a qualified permission to bomb the Yalu bridges, had enjoined UN airmen not to violate territory or air space on the other side of the river. This meant that the bomber crews must take much greater risks, since their restricted axes of approach and flight paths were known to enemy antiaircraft gunners in advance. Moreover, CCF jet fighters could attack and retire to the sanctuary of Manchuria when hard-pressed.[46]

Despite these handicaps, Air Force and Navy bombers knocked out four of the twelve international bridges and damaged most of the others. These efforts doubtless imposed delays, but troops and supplies continued to cross throughout November.[47] After arrival in North Korea, they seemed to vanish into that void of mystery which had swallowed up Chinese Communist troops ever since they broke off contact.

Students of history may have recalled at this time that one of the most significant engagements of modern history was known as the Battle of the Yalu. From a tactical viewpoint, to be sure, the clash of 30 April 1904 was not a great affair. The Japanese army, after disembarking at Chemulpo (Inchon) and marching up the Korean peninsula, numbered five times the Russian force which opposed the crossing of the Yalu at Uiji, just east of Sinuiju. A Japanese victory was doubtless to be expected, yet a new page of history had opened. For the first time in modern chronicles, an Asiatic army had successfully challenged a European army with the weapons and tactics of the Machine Age.

Now, nearly half a century later, history was repeating itself as another Asiatic army crossed the Yalu with unknown capabilities and intentions. If the Chinese Communists were merely sending a force to guard the hydro-electric complexes and frontier, hopes of peace by Christmas might be realized. But if the invaders were secretly massing for an all-out counter-offensive, a great new war might soon be flaming up from the ashes of the old.
Little fault can be found with current G–2 estimates of CCF numbers, which hold up surprisingly well even when viewed with the wisdom of hindsight. Quite as much depended on interpretations of CCF intentions by the UN command, and there can be no doubt that an end-of-the-war atmosphere prevailed on the eve of the Eighth Army offensive of 24 November.

Thanksgiving Day, which fell on the 23d, was celebrated both in Korea and the United States in a spirit of rejoicing over a victorious peace which seemed almost within grasp. It was a tribute to American bounty as well as organizational genius that the troops in Korea were served a dinner which would have done credit to a first-rate Stateside restaurant. The menu, as proposed by X Corps to component units, included shrimp cocktail, stuffed olives, roast young tom turkey with cranberry sauce, candied sweet potatoes, fruit salad, fruit cake, mince pie and coffee.[48]

As an item of good news for this Thanksgiving, it was learned the day before that the 17th Regiment of the 7th Infantry Division had reached the Yalu at Hyesanjin. Not a single Chinese soldier had been encountered by troops who had troubles enough with sub-zero temperatures and mountain roads.[49]

Since the first week of November, in fact, there had been no clashes of any importance with the invaders from Red China. On the 24th, as usual, the front was quiet everywhere except for minor patrol contacts. Yet this was the D-day of the great Eighth Army offensive, and the stirring communiqué of the commander-in-chief was read to all troops in Korea. It was a message in the bold spirit of Inchon, and no one could doubt the confidence of the UN command after hearing these words:

“The United Nations massive compression envelopment in North Korea against the new Red Armies operating there is now approaching its decisive effort. The isolating component of the pincer, our air forces of all types, have for the past three weeks, in a sustained attack of model coordination and effectiveness, successfully interdicted enemy lines of support from the north so that further reinforcement therefrom has been sharply curtailed and essential supplies markedly limited. The eastern sector of the pincer, with noteworthy and effective naval support, has now reached commanding enveloping position, cutting in two the northern reaches of the enemy’s geographical potential. This morning the western sector of the pincer moves forward in general assault in an effort to complete the compression and close the vise. If successful, this should for all practical purposes end the war, restore peace and unity to Korea, enable the prompt withdrawal of United Nations military forces, and permit the complete assumption by the Korean people and nation of full sovereignty and international equality. It is that for which we fight.”

/s/ DOUGLAS MACARTHUR, General of the Army, United States Army, Commander-in-Chief”[50]

Eighth Army troops found it something of an anticlimax, after this message, to jump off without meeting any large-scale opposition. General MacArthur, who flew to the front for the occasion, watched from his plane as the UN columns moved out unmolested, as if conducting a motor march.

“The Army offensive began, as scheduled, at 1000 hours on 24 November,” said the EUSAK report. “Since for some time there had been little contact with enemy forces the advance of EUSAK elements was in the nature of a meeting engagement, with little or no resistance in the initial stage. Across the Eighth Army front as a whole, advances were made from 4000 to 16,000 yards.”[51]
Chapter 7. Advance to the Chosin Reservoir

Marine Concentration on MSR

On this same day Lieutenant Colonel Chiles presented X Corps OpnPlan 8, Draft 3, at Tokyo. It was approved at UNC Headquarters with only one modification—the shifting of the proposed boundary between X Corps and Eighth Army farther to the south in the zone of the 1st Marine Division.

This plan was the basis of X Corps OpnO 7. Issued on the 25th, it provided for a reorientation of the X Corps attack to provide more assistance for Eighth Army. H-hour was to be 0800 on the 27th, and the principal units of X Corps were assigned these tasks:

“1st Marine Division—to seize Mupyong-ni and advance to the Yalu;
“7th Infantry Division—(1) to attack from east side of Chosin Reservoir and advance to Yalu in zone; (2) to secure Pungsan area, coordinating with 1 ROK Corps;
“1 ROK Corps—to advance from Hapsu and Chongjin areas, destroying enemy in zone to north boundary of Korea;
“3rd Infantry Division—(1) to gain and maintain contact with the right flank of Eighth Army in zone; (2) to protect the left flank of X Corps; (3) to support the 1st Marine Division on X Corps order; (4) to protect harbor and airfield at Wonsan; (5) to destroy enemy guerrillas in zone.”

A Corps warning order, issued on the evening of the 24th, was supplemented by a briefing session at Corps Headquarters at 1000 the next morning. General Smith learned that his division was to be the northern arm of the pincers in the “massive compression envelopment” while the 7th Infantry Division took over the previous Marine mission of advancing east of the Chosin Reservoir to the Yalu.

The new Marine boundary cut across Korea to the north of Eighth Army. From Yudam-ni the Marine route of advance led to Mupyong-ni 55 miles to the west. This objective was about halfway between Huichon in the south and Kanggye in the north (see map, Page 130). From the latter, which was believed to be the assembly area of the NKPA remnants, a good road led about 40 miles north to Manpohjin on the Yalu.

In accordance with Corps OpnO 7, the rear boundary of the 1st Marine Division had been moved north to a line just south of Hagaru. The 3d Infantry Division had the responsibility for the area south of Hagaru, but this unit had so many other commitments that it could assign few troops to the task. General Smith was granted permission, therefore, to retain garrisons at Koto-ri and Chinhung-ni. This left the 3d Infantry Division responsible for the protection of the MSR from Sudong southward to Hamhung.

Corps OpnO 7, in short, provided for a wide envelopment to be spearheaded by the 1st Marine Division on 27 November. The other arm of the pincers, of course, was to be the Eighth Army; but on the evening of the 25th came the disturbing news that its right wing, the II ROK Corps, had been hurled back by a surprise CCF counterstroke. This reverse took place in the vicinity of Tokchon, about 70 air miles southwest of Yudam-ni.

EUSAK intelligence reports, as it proved, were not far off the mark in estimating enemy strength on the Eighth Army front at 149,741 troops at this time. During the past few days, however, estimates of probable enemy courses of action had been so reassuring as to justify the confidence of CinCFE’s communique on D-day. Even the setback of the 25th was not regarded as alarming.

“With the possible exception of the relatively vague situation on the east flank,” said the next day’s G–2 report, “the enemy reaction to the EUSAK attack has been one of active defense with local counterattacks in strength.” The enemy’s probable course of action was believed to be “an active defense in depth along present lines employing strong local counterattacks in conjunction with continued guerrilla activities with bypassed units;
limited air activity; and further reinforcement by CCF or USSR forces.”[57]

On the X Corps front the reorientation of the attack to the west gave General Smith a long-sought opportunity to collect his dispersed units and achieve a relative degree of concentration. The release of RCT–1 from its Huksu-ri mission made it possible to bring that infantry regiment up behind the other two. This move in turn enabled RCT–5 to advance east of the Chosin Reservoir and RCT–7 to push on to Yudam-ni.

Progress might have been more rapid for all units if adequate transportation had been available for RCT–1 in the Chigyong area. Only by using vehicles of the 11th Marines was it possible to move 1/1 to Chinhung-ni, where it relieved the 3d Battalion of the 5th Marines on 23 November. During the next two days the 2d Battalion and RCT–1 Headquarters relieved 2/5 at Koto-ri. After the return of the vehicles, 3/1 (less Company G, left behind for lack of trucks) was lifted to Hagaru on the 26th to relieve the 2d Battalion, 7th Marines.[58]

All three battalions of RCT–5 were operating east of the Chosin Reservoir by 24 November. Until supply levels were built up at Hagaru, however, General Smith kept a careful check on the advance in this quarter. The farthest penetration took place on the 25th when a platoon-size patrol of 3/5, reinforced by two tanks, drove nearly to the northern end of the Reservoir. Scattered enemy groups were flushed out and an abandoned 75mm gun destroyed after a pursuit resulting in five Chinese killed and one captured. This was one of the few encounters in an area combed by patrols from all three battalions, and no signs of large-scale enemy activity were reported by Lieutenant Colonel Robert D. Taplett, CO of 3/5, after a helicopter reconnaissance.[59]

Meanwhile RCT–7 began its move to Yudam-ni. This objective had first been mentioned as early as 11 November in X Corps OpnO 6. But until RCT–1 could be brought up to the MSR, the Division Commander limited the advance to the vicinity of Toktong Pass. There an estimated 150 to 200 enemy resisted with machine-gun fire but were scattered with the aid of air strikes and artillery support.

On the 23d, in accordance with Division OpnO 23-50, the 1st Battalion led the advance of RCT-7. During the next two days Lieutenant Colonel Davis’s reinforced battalion methodically cleared booby-trapped but undefended road blocks and scattered small groups of enemy along the route. The men of 1/7 belatedly celebrated Thanksgiving on the 24th with a full, hot turkey dinner—their last full meal for 17 days—and seized battered Yudam-ni the next day against negligible resistance.[60] The 3d Battalion, regimental headquarters, and 3/11 (−) followed.

Marine operations east of the Chosin Reservoir came to an end at 1200 on the 25th with the relief of RCT–5 by the 1st Battalion, 32d Infantry, 7th Infantry Division. Corps orders called for this unit to remain under operational control of the 1st Marine Division until the assumption of command in the area by the CO, 31st Infantry. All elements of RCT–5 were to be relieved by the following noon for the mission of advancing to Yudam-ni and then passing through RCT–7 to lead the attack toward Mupyong-ni.[61]

This was in accordance with Division OpnO 24–50, issued at 0800 on the 26th to implement the provisions of Corps OpnO 7. The jump-off was to be at 0800 on 27 November, with the first objective the road junction at Yongnim-dong (27 road miles west of Yudam-ni), in preparation for further advance on order to the high ground about one mile south of Kogae-gol and 35 miles west of Yudam-ni. Other provisions of OpnO 24–50 were as follows:

“RCT–7—to seize and secure Yudam-ni without delay, and when passed through by RCT–5, to protect the Division MSR from Sinhung-ni (7 miles west of Hagaru) to Yudam-ni;

“RCT–5—to pass through RCT–7 west of Yudam-ni by 0800, 27 November, advance to the west and seize first objective, prepared for further advance;

“RCT–1—in Division reserve, to occupy positions in the vicinity of Chinhung-ni, Koto-ri and Hagaru for the protection of the MSR;

“11th Marines—less detachments, to provide general support from positions in the vicinity of Yudam-ni;

“41st Commando—reinforced, to move to Yudam-ni prepared for operations to the southwest to protect
Division left flank;

“Reconnaissance Company—to move to Yudam-ni and reconnoiter to the north in co-ordination with operations of RCT–7.”[62]

General Smith, flying by helicopter from Hungnam to Yudam-ni on the morning of the 26th, could survey the MSR below him and reflect with satisfaction that it was now easier to count the Marine outfits south of Chinhung-ni than those to the north. These included the 1st Tank Battalion with the exception of the provisional platoon at Hagaru and the 2d Platoon of Company D at Chinhung-ni. Transportation had not yet been provided for the 41st Commando, but the new unit was scheduled to move up in convoy on the 28th with Headquarters Battalion when the Division CP displaced from Hungham to Hagaru. By that time only service units and a few platoons of tanks and engineers would be left in the rear area.

At Hagaru the C–47 airstrip was taking shape as the dozers hacked away at the frozen earth night and day, working under flood lights in the darkness. Companies C and E of the 1st Medical Battalion had set up clearing stations and built up dumps of medical supplies. Troop units at Hagaru and Yudam-ni had two days’ supplies of rations and fuel, but only a unit of fire was stockpiled at Hagaru in addition to the half unit carried by the troops.

Marine motor columns were winding along the narrow, twisting mountain road from Hagaru to Yudam-ni in preparation for the attack in the morning. Upon arrival at Lieutenant Colonel Davis’s 1/7 CP, General Smith learned to his discomfort that the hovering ability of a rotary-wing aircraft is curtailed at high altitudes. The helicopter dropped like a stone the last ten feet, but fortunately no injury resulted to passenger, pilot or machine.[63]

On the 26th intelligence arrived at Hamhung from the 7th Marines, reporting capture of three soldiers from the 60th CCF Division. They asserted that the 58th, 59th, and 60th Divisions of the 20th CCF Army had reached the Yudam-ni area on the 20th. According to these enlisted men, Chinese strategy envisioned a move south and southeast from Yudam-ni to cut the MSR after two Marine regiments passed.[64]

X Corps had received similar reports of Chinese movement southeast from Yudam-ni as well as air reports of enemy activity north and northeast of the Chosin Reservoir. Six Chinese divisions had now been identified in northeast Korea but both Corps and Division intelligence estimates of probable enemy action continued to be optimistic. Although Chinese attacks on the division’s MSR or along the Huichon-Huku-ri-Hamhung axis were not ruled out, G–2 officers seemed to consider a continued westward withdrawal more likely.[65]

Division planning went ahead on the assumption of commander and staff that the enemy would be met in strength in the mountainous country west of Yudam-ni. This was the basis for the decision to pass the relatively fresh 5th Marines through the 7th for the attack westward.[66]

It was a cold, clear Sunday afternoon when General Smith returned to Hungnam. From his helicopter he could see for several miles on either side, and no signs of enemy activity were discerned in the snow-clad hills. After his arrival at the Division CP, however, the Marine general was informed that the situation had gone from bad to worse in west Korea. The II ROK Corps on the right flank had disintegrated on the 26th under a second day’s heavy blows, thus exposing the 2d Infantry Divisions and Turkish Brigade to flank attack. In short, the Eighth Army offensive had been brought to a standstill before the Marines could jump off in the morning as the other arm of the United Nations envelopment.
The 2D Battalion, vanguard of the 5th Marines, completed its move from the east coast of the Chosin Reservoir to Yudam-ni during the afternoon and evening of 26 November. After deploying his command south of the village, Lieutenant Colonel Roise and his S-3, Major Theodore F. Spiker, made a reconnaissance in preparation for the next day’s attack. [1]

Yudam-ni lies in the center of a broad valley surrounded by five great ridges, named in relation to their direction from the village: North, Northwest, Southwest, South, and Southeast. Beginning at the rim of the valley, each of these ridges extends several thousand yards and includes many peaks, spurs, and draws, certain of which took on special significance as the crisis at Yudam-ni unfolded. [2]

A finger of the Chosin Reservoir reaches toward Yudam-ni in the valley between North and Southeast Ridges. The other four corridors radiating from the valley are highway routes. Lieutenant Colonel Roise surveyed the westerly road, which leaves Yudam-ni between Northwest and Southwest Ridges. His assigned objective encompassed distant spurs of these heights, bordering the road about a mile and a half west of the village. [3]

The 7th Marines (-) was disposed in perimeter around Yudam-ni on terminal hills of four of the five ridges: D and E Companies (attached to 1/7) on North Ridge, 3/7 on Southwest, and 1/7 on South and Southeast. [4] Since the high ground occupied by 3/7 overlooked the route of attack and Roise’s objective, Colonel Litzenberg later in the day specified a new destination for 2/5, a pass ten miles west of Yudam-ni. It was a big order, but Litzenberg’s troops would support the 5th Marines’ outfit by making limited advances along the skylines of Northwest and Southwest Ridges. With this protection on his flanks initially, Roise could concentrate more strength for the drive through the low ground. [5]

Nightfall of 26 November was accompanied by an abrupt temperature drop to zero degrees Fahrenheit. The north wind screamed across the frozen reservoir and lashed the Marines on the valley floor and hillside around Yudam-ni. At 2200, a group of half-frozen company commanders gathered within the flapping walls of Roise’s blackout tent to receive their orders. The attack was to start at 0800 the next morning, with 2/5 passing through the 7th Marines in a column of companies. Recoilless rifles and 4.2-inch mortars of the 5th Marines would support the advance, along with First Lieutenant Wayne E. Richards’ 2d Platoon of Able Company Engineers. Two Corsairs of VMF-312 and a spotter plane from VMO-6 were to provide aerial reconnaissance and close air support. [6]

In other wind-blown tents, 7th Regiment officers learned of their missions as assigned by Colonel Litzenberg. The 3d Battalion would move farther along the crest of Southwest Ridge on 27 November and also seize the terminal peak, Hill 1403, of Northwest Ridge across the MSR, in order to support 2/5’s attack more effectively. Dog and Easy Companies were to patrol North Ridge and the west coast of the Reservoir, while 1/7 scouted both South and Southeast Ridges and their adjoining corridors. Particular attention would be paid to the valley running southward between these hill masses, for therein lay the vital road to Hagaru. [7]
The Chosin Reservoir Campaign
Lynn Montross and Nicholas A. Canzona

Chapter 8. Crisis at Yudam-ni
Marine Attack on 27 November

The Yudam-ni perimeter was quiet throughout the long, frigid night of 26-27 November. At dawn the basin and hillsides came alive with parka-clad figures stamping and clapping life back into leaden limbs. Gradually they began to cluster around small fires to thaw out the morning rations and their weapons.

Companies G and H of 3/7 jumped off in the attack at 0815, the former to extend the foothold on Southwest Ridge, the latter to seize Hill 1403, terminal height of Northwest Ridge. Led by Captain Leroy M. Cooke, How Company advanced unopposed and secured its objective by midmorning.[8] Captain Cooney’s Company G moved rapidly 1200 yards along the crest of Southwest Ridge and occupied a commanding peak, Hill 1426, at 0845 without meeting opposition. But when Cooney resumed the advance, his troops almost immediately came under fire from enemy positions on another peak 500 yards away.[9]

During 3/7’s operations on the high ground the 2d Battalion, 5th Marines, had marched out of Yudam-ni and launched the main attack along the road. Company F, under Captain Uel D. Peters, led 2/5 as it passed beneath the steep walls of Southwest and Northwest Ridges. The first objective was a long spur of the latter height, 500 yards across a draw from the 7th Marines on Hill 1403. Approaching the mouth of the draw on the right of the road, Fox Company was hit by long-range small-arms fire from enemy emplacements on the objective. About the same time, 0935, a message from the VMO-6 spotter plane told of CCF positions all across the front. Captain Peters held up momentarily to appraise the situation, and engineers moving behind his outfit began to clear the first of nine unmanned enemy roadblocks that obstructed the MSR.

Click here to view map

According to plan, Company F ascended part way up the slopes of Hill 1403 and then advanced across the front of the 7th Marines to the head of the long draw that set off the Communist-held spur. Simultaneously, 4.2-inch and 81mm mortar crews positioned their weapons along the road to support this envelopment. The flatlands south of Yudam-ni trembled as the 105mm howitzers of Lieutenant Colonel Harvey A. Feehan’s 1st Battalion, 11th Marines, opened up at 1015 with a 15-minute preparation.[10]

While Company F moved overland to strike at the left (north) flank of the CCF position, Captain Samuel S. Smith’s Dog Company edged forward along the MSR to the mouth of the draw. Like the earlier unit, it was met by a hail of bullets. The regimental 4.2-inch mortars opened fire on the crest of the spur, and recoiless rifles slammed 75mm shells into bunkers just now sighted on the forward slopes. At 1115, after ground supporting arms had partially neutralized the CCF positions, Corsairs of VMF-312 blasted the objective with rockets and bombs.

In the wake of the air strike, First Lieutenant Gerald J. McLaughlin led Fox Company’s 1st Platoon against the enemy’s north flank, the rest of the company supporting the assault by fire from Hill 1403. Most of the Chinese defenders fled to the west, and McLaughlin’s troops cleared the northern half of the spur by 1300, capturing three Red soldiers. The 2d Platoon, commanded by Second Lieutenant Donald J. Krabbe, then passed through to secure the southern half, overlooking the road. Although the attackers encountered only negligible local resistance, they were slowed by heavy machine-gun fire sweeping in from a peak 1000 yards farther west.

During Company F’s action on the high ground, Dog Company filed around the road bend at the south end of the spur and moved toward a valley junction a few hundred yards away. This fork is dominated by Sakkat Mountain to the west; and the Chinese, in order to block the Marine advance, had dug tiers of entrenchments on the eastern slopes of the massive height. Frontal fire from these positions converged on Company D’s column. Faced by such formidable resistance and terrain Lieutenant Colonel Roise discontinued the attack. At 1430 he
ordered Fox Company to set up on Northwest Ridge for the night, and Dog to deploy defensively across the MSR on a spur of Southwest Ridge.

On the crest of the latter, the 3d Battalion, 7th Marines, had found progress increasingly costly during the afternoon of 27 November. The peak beyond Hill 1426 was occupied by Company G at 1500,[11] bringing that unit on line with Dog Company of 2/5 in the low ground to the north. Like the 5th Marines’ outfit, Company G was now confronted with the broad crescent of CCF fortifications buttressed by the defensive complex on Sakkat Mountain. Machine-gun barrages drove the 7th Marines’ unit off the hilltop, and Company I of 3/7 rushed forward from the high ground overlooking Yudam-ni to add its firepower in support. Baker Company of 1/7, on patrol in the valley between Southwest and South Ridges, ascended into the bullet-swept zone at 1230 to help out. When it became heavily engaged, elements of Company C were ordered forward from the Yudam-ni vicinity as reinforcement. Thus parts of three battalions, 2/5, 3/7, and 1/7, felt the storm of steel and lead on Southwest Ridge throughout the afternoon.

While fighting raged in an arc from south to west on the 27th, another danger area was discovered to the north and northeast, completing a vast semicircle of known CCF concentrations in proximity to Yudam-ni. A patrol from Company D of 2/7, moving over North Ridge along the west coast of the reservoir, ran into heavy machine-gun and mortar fire about 4000 yards from the village. Marine air struck at the entrenchments of an estimated enemy company, and at 1645 the patrol withdrew with several casualties to Company D’s lines on the southern tip of North Ridge.

At dusk on the 27th a general calm settled over Yudam-ni, broken only occasionally by scattered exchanges of small-arms fire. The main Marine attack had netted about 1500 yards, placing 2/5 on the objective originally assigned by the regimental commander, Lieutenant Colonel Murray. That the Chinese did not allow this battalion to advance three more miles, to its new objective and into hopeless entrapment, seems inconsistent in view of the CCF plans for the night of 27-28 November. The auxiliary attack by 3/7 won 1200 more yards of the crest of Southwest Ridge, and the occupation of Hill 1403 by How Company of that battalion represented a gain of about 2000.

In a few hours, the Marines would give thanks that their successes on 27 November had been modest ones.
Chapter 8. Crisis at Yudam-ni
Marine Dispositions Before CCF Attack

The units of Yudam-ni will be listed counter-clockwise, beginning with those on North Ridge, according to the positions they occupied around the perimeter on the night of 27-28 November. North Ridge, bounded on the east by the reservoir and on the west by the valley separating Northwest Ridge, lay closest to the village and was therefore of immediate tactical importance. Facing this hill mass from Yudam-ni, one sees four distinct terminal heights: Hill 1167 on the right, Hills 1240 and 1282 in the center, and the giant spur of Hill 1384 on the left. Companies D and E of the 7th Marines, occupied Hills 1240 and 1282 respectively. Since the combined front of these two units was a mile wide, they concentrated on their assigned hilltops and relied on periodic patrols to span the gaping, 500-yard saddle between. Although both flanks of each company dangled “in the air,” they were backed by two-thirds of the 5th Marine Regiment in the valley of Yudam-ni.[12]

The 3d Battalion, 5th Marines, had arrived from the east coast of the Chosin Reservoir at noon on the 27th, while the attacks to the west were in full progress. Lieutenant Colonel Taplett placed his unit in an assembly area at the base of North Ridge, beneath the large, unoccupied spur leading to Hill 1384. The 1st Battalion, 5th Marines, did not complete its move to Yudam-ni from the east side of the reservoir until after dark. Lieutenant Colonel John W. Stevens, II, secured for the night in the valley below Hills 1282 and 1240; and with Taplett’s nearby command, 1/5 thus comprised a formidable reserve behind the thin high-ground defenses of Companies D and E of 2/7.

To the left of North Ridge, going round the clock, Company H of 3/7 dug in on the crest of Hill 1403, terminal height of Northwest Ridge. Farther to the left, in the broad draw through which Company F had earlier enveloped the CCF-held spur, Company E of 2/5 took up strong blocking positions. The latter unit was not tied in with the 7th Marines’ troops on Hill 1403, there being a steep and rugged gap of about 200 yards on the intervening hillside. Easy Company’s line extended up the left side of the draw and connected with Fox’s on the northern tip of the newly won spur. Company F manned the remainder of that finger of high ground, its left flank overlooking the road separating Southwest Ridge.

As mentioned before, Company D, 2d Battalion, 5th Marines, occupied a finger of Southwest Ridge jutting out toward the road and directly opposite Fox Company’s spur. To the left, but beyond physical contact, Companies G and I of the 3d Battalion, 7th Marines, defended the topographical crest of Southwest Ridge. As an example of altitudes and distances involved around the perimeter, the latter company, perched atop Hill 1426 (meters), sat 1200 feet above the valley floor at Yudam-ni[13] and at a lineal distance of a mile and a half from the village. To its left rear, 2000 yards away on the same hill mass, Company A of 1/7 defended a terminal peak, Hill 1294, overlooking the broad valley separating South Ridge. A platoon of Company C, 1/7, was deployed on the valley floor to block that avenue into Marine artillery positions.

South Ridge, capped by a conical peak jutting 1600 feet skyward, points at Yudam-ni and the reservoir like a great arrowhead. Company B of 1/7, after returning from the active patrol mentioned earlier, entrenched on the tip, Hill 1276, to cover the deep gorge between South and Southeast Ridges. In this narrow ribbon of low ground, the MSR from Yudam-ni travels southward four miles before turning abruptly east into Toktong Pass. Company C of 1/7, less one platoon, occupied a spur of Southeast Ridge near the sharp turn—three miles from the Valley of Yudam-ni and five from the village itself.

Even farther out on a tactical limb was Fox Company of 2/7, which had departed Hagaru at noon on 27 November[14] to take up hilltop positions in the center of Toktong Pass. Its mission, like that of Company C, was
to guard the vulnerable MSR between Hagaru and Yudam-ni. But it was seven miles from the friendly perimeter at Hagaru on the one side and over two mountainous miles from Company C on the other. Fox Company, numerically and geographically, appeared to be fair game for some CCF regiment on the prowl—although appearances are sometimes deceiving.

This, then, was the disposition of the 5th and 7th Marines in the evening of 27 November: a total of ten understrength rifle companies of both regiments on the high ground around Yudam-ni; two battalions of the 5th in the valley near the village; and two rifle companies, Charlie and Fox, of the 7th in isolated positions along the 14-mile route to Hagaru.

The regimental command posts of Colonel Litzenberg and Lieutenant Colonel Murray were located at Yudam-ni along with the usual headquarters elements, except for the Antitank Company of the 7th Marines, at Hagaru. Also at Hagaru were Lieutenant Colonel Randolph S. D. Lockwood’s headquarters of 2/7, and Weapons Company (—) of that battalion. For this reason, Companies D and E, on Hills 1240 and 1282 at Yudam-ni, came under temporary control of 1/7.

Despite the lack of tanks, the Yudam-ni perimeter encompassed an impressive array of Marine supporting arms. The 1st and 4th Battalions, together with Batteries G and I of the 3d, represented almost three-fourths of the fire power of the 11th Regiment. The 48 howitzers—thirty 105mm and eighteen 155mm—were emplaced in the expansive flats generally south of the village, in the direction of South and Southeast Ridges. In position to the north were the 75mm recoilless rifles of the 5th Marines and the 4.2-inch mortar companies of both infantry regiments.

The Yudam-ni lines bristled with enough firepower to give any commander confidence, but the supply situation was not reassuring. Although Captain Robert A. Morehead and a detachment from the 1st Service Battalion arrived during the 27th to begin establishment of a division dump, the supply level was low. The dumps of the 5th and 7th Marines contained about 3 days’ rations, 3 days’ POL, and 2 U/F of small arms ammunition in addition to amounts in the hands of the troops. Very little artillery ammunition was available beyond that held by the firing batteries. During the 27th Colonel Litzenberg sent his S-4, Major Maurice E. Roach, to Hagaru to arrange for the dispatching of about five truckloads each of rations, POL, and ammunition. They arrived late on the evening of the same day—the last supplies to get through from Hagaru. That same evening Lieutenant Colonel Beall, commanding officer of the 1st Motor Transport Battalion, led all the organic vehicles (except 40-50) of the 5th and 7th Marines back to Hagaru with the intent of returning them the following day loaded. The Chinese, who had already invested the road, for some reason permitted the trucks to pass. Beall reached Hagaru without incident. The trucks were never able to return.

Chapter 8. Crisis at Yudam-ni
The Battle of Northwest Ridge

At 1830, two hours after the looming mass of Sakkat Mountain had blotted out the sun on 27 November, Yudam-ni was pitch black. The temperature dropped to 20 degrees below zero.[18]

On Northwest Ridge the infantrymen of 3/7 and 2/5 slowly grew numb from the penetrating cold. Trigger fingers, though heavily gloved, ached against the brittle steel of weapons, and parka hoods became encrusted with frozen moisture. In the cumbersome shoe-pacs, perspiration-soaked feet gradually became transformed into lumps of biting pain.

When men are immobilized for hours in such temperatures, no amount of clothing will keep them warm. Yet, even more disturbing to the Marines on the Yudam-ni perimeter was the effect of the weather on carbines and BARs. These weapons froze to such a degree that they became unreliable or, in some cases, completely unserviceable. The M-1 rifle and Browning machine guns showed stubborn streaks but retained their effectiveness, provided they had been cared for properly.

While the Marines sat in their holes and cursed the frigid night, the quiet hills around them came alive with thousands of Red Chinese on the march. Unseen and unheard, the endless columns of quilted green wound through valleys and over mountain trails leading toward the southern tips of North and Northwest Ridges. These were the assault battalions of the 79th and 89th CCF Divisions. With seven other divisions they comprised Red China’s 9th Army Group led by Sung Shin-lun, one of the best field commanders in the CCF. Lin Pao, commanding the 3d Field Army, had dispatched Sung’s army group to northeast Korea specifically to destroy the 1st Marine Division. The knockout blow, aimed at the northwest arc of the Yudam-ni perimeter, amounted to a massive frontal assault. Another CCF division, the 59th, had completed a wide envelopment to the south, driving in toward South Ridge and Toktong Pass to cut the MSR between Hagaru and Yudam-ni.[19]

This was the main effort of the CCF in northeast Korea: three divisions against two regiments of Marines. And in addition to the advantage of mass, the Reds held the trump cards of mobility and surprise. They enjoyed superior mobility because they were unencumbered by heavy weapons and hence could use primitive routes of approach in the darkness. They had the advantage of surprise because their practice of marching by night and hiding by day had concealed their approach to a large degree from UN air observation. To offset these odds, the outnumbered Marines would have to rely on superior firepower, command of the air, and another weapon called *esprit*.

By 2100, Northwest Ridge was crawling with Chinese only a few hundred yards from the positions of Companies E and F, 5th Marines, and Company H, 7th Marines. The enemy troops, padding silently in their rubber sneakers, had as yet given no hint of their presence. To divert attention, the Red commander sent a patrol against 2/5’s roadblock on the MSR between Northwest and Southwest Ridges. Troops of Company D, 5th Marines, exchanged grenades with the Chinese and killed two of them. The remainder they quickly dispersed with mortar fire.

Simultaneously with the thrust at the roadblock, small enemy teams probed Fox Company’s line on the spur of Northwest Ridge, vanishing into the night after each light contact. These disturbances in the center of 2/5’s zone enabled CCF infiltrators and grenadiers on the northern tip of the spur to crawl undetected within a few yards of the limiting point between Company F and Company E on the right. Bugle calls cut through the darkness, and the grenadiers began heaving their missiles while the submachine gunners opened up. The din of this first
attempt to unnerve the defenders lasted several minutes. Then came a sustained mortar bombardment of Marine front lines. While the shells rained down, the Chinese opened fire with crew-served automatic weapons emplaced all across Northwest Ridge.

At 2125 the mortar eruptions began to walk toward the Marine rear. Whistles screeched, enemy machine guns fell silent, and the first Chinese assault waves hurled themselves against the juncture of Companies E and F. The enemy attacked on an extremely narrow front in order to maintain control. His troops advanced in column within grenade range, then deployed abruptly into skirmish lines that flailed the Marine positions ceaselessly and without regard to losses.

The machine guns and rifles of Companies E and F piled the attackers in grotesque heaps up and down the front, but the pressure of human tonnage was unremitting. Ultimately, the Reds broke through on the northern tip of the spur, where the two units were joined. They poured troops into the gap, and as they attempted to roll back the newly exposed flanks, they overran part of Fox Company’s right wing platoon. Captain Samuel Jaskilka, commanding Easy Company in the draw, dispatched a light machine-gun section and a squad from his 3d Platoon (deployed in the rear) to reinforce his 1st Platoon at the edge of the breakthrough. The latter unit, under Second Lieutenant Jack L. Nolan, held firm and bent back its left to prevent encroachment on the rear. Staff Sergeant Russell J. Borgomainero, of the 1st Platoon, deployed the reinforcements to contain the penetration, while 2/5’s 81mm mortars laid barrages on the salient.

At 2215, as the attack against Companies E and F was reaching its height, Lieutenant Colonel Roise ordered H&S Company of 2/5 to deploy for the immediate defense of his command post. The Chinese, blocked in their attempts to get behind Easy Company, continued to stab at the rear of Fox. If their envelopment succeeded, they could swarm over the headquarters and supporting arms positions of the 2d Battalion.

Roise’s precaution proved unnecessary. As fast as the Red commander sent troops into the salient, they were cut down by mortar, machine-gun, and rifle fire. The few who did worm their way into Marine supporting positions died in individual combat. At 2230, on the right of Company E’s front, the 2d Platoon turned its machine guns on a native hut 200 yards up the draw and set it ablaze. The brilliant illumination exposed all CCF troops in the narrow corridor and on the adjoining slopes; and the Marines commenced a turkey shoot that ended at 2400 with the virtual annihilation of the main enemy force.

The Chinese maintained their grip on the northern tip of the spur, however, and fought off patrols from Easy Company trying to re-establish contact with Fox. Since the gap remained, leaving the enemy in position to fire on the Marine rear, Roise shifted the reserve platoon of Company D to Fox Company’s side of the salient. This redeployment, in conjunction with Company E’s earlier action on the other side, converted the penetration area into a gantlet for the Chinese. Already weakened by casualties numbering in the hundreds, the Red commander apparently wrote off the salient as a net loss, for he never used it again.
Chapter 8. Crisis at Yudam-ni
Chinese Seize Hill 1403

At 2135, just as the first assault waves were pounding 2/5’s front, the vanguard of another enemy force began to feel out the lines of Company H, 3/7, on Hill 1403 to the north. Captain Cooke’s three platoons were deployed in an arc from the road to the peak of the hill to protect the line of communication to the valley of Yudam-ni. Out of physical contact with all friendly elements, How Company was assailable from every direction, as the Chinese quickly discovered.[20]

Following a half hour of lightning probes, the enemy launched a strong attack against First Lieutenants Elmer A. Krieg’s platoon on the right front. Communications with Cooke’s CP went out almost immediately, and in the space of a few minutes the Marine right flank collapsed under the weight of CCF numbers. Krieg shifted his remaining men to the left and joined Second Lieutenant Paul E. Denny’s platoon.

At the company CP on the reverse slope, Captain Cooke and his forward observers radioed for all available supporting arms. The prompt barrages by artillery and mortars in the valley stopped the Communists on the right half of the summit and enabled Cooke to reorganize his forward platoons. As the supporting fires lifted, he personally led an assault to restore the right flank. But the CCF machine guns and grenades smashed the counterattack, and Cooke was cut down at the head of his men.

Second Lieutenant James M. Mitchell, executive officer, temporarily took command of Company H. When word of Cooke’s death reached 3/7’s CP, Lieutenant Colonel William F. Harris[21] dispatched Lieutenant Harris (no relation), recently returned to duty after illness, to take over the beleaguered unit.

The younger Harris, who had been out of action since shortly after the “How Hill” battle in early November, safely ascended the enemy-infested slopes of Hill 1403 in the darkness. About midnight he reached How Company’s positions and found all of Cooke’s officers wounded but one, Lieutenant Newton. The platoons of Krieg and Denny were badly depleted, but Harris moved Newton’s platoon from the left flank to the right. Newton’s men regained enough ground in a counterattack to cement the company’s position.

After these first attacks against 2/5 and H/7 over the two-mile breadth of Northwest Ridge, the Chinese remained generally inactive for a period of about two hours. They had paid heavily for minor gains—so heavily that fresh battalions were called from reserve to stamp out the Marine resistance on the tip of the ridge. And at 0300, several hundred CCF riflemen, grenadiers, and submachine gunners commenced the second general assault, striking at 2/5 and Company H simultaneously.

In the low ground at the center of the two-mile front, Jaskilka’s Easy Company threw a curtain of machine-gun fire across the draw in the path of 300 Chinese advancing frontally. The first enemy ranks marched into the fire lanes and were mowed down like rows of grain. The CCF soldiers in subsequent formations apparently viewed the grisly, corpse-strewn corridor with misgivings, for they stopped several hundred yards up the narrow valley and took cover. Thereafter, the main fighting in Company E’s zone involved long-range exchanges of machine-gun and mortar fire, although clashes at close quarters occasionally flared up on the flanks.

Approximately 200 Communist troops had concentrated meanwhile against Fox Company on the spur to the left, where the ground afforded more cover and space for maneuver. Stumbling over a carpet of their own dead, the Reds thrust repeatedly at the center of the Marine line. They inflicted many casualties on the defenders and ultimately overrun two machine-gun positions. But this was the sum total of their success; and fighting on the north half of the spur, at the edge of the gap between Companies E and F, continued sporadically for the rest of the night with neither side gaining any appreciable advantage.
On the right of the 2d Battalion, the second CCF onslaught had struck the front and both flanks of Company H on Hill 1403. Human cannon fodder of Red China was hurled against the Marine positions for a full hour, but Lieutenant Harris’ command held. H Company’s roadblock, commanded by Sergeant Vick, decisively beat off a Chinese attack in the valley; and at 0400 Lieutenant Colonel Harris ordered the hard pressed company to pull back toward the rear of Easy Company, 2/5. Two hours later How Company completed its fighting withdrawal.

The loss of Hill 1403 posed a grave threat to the whole defensive network around the village. Not only were the Chinese now ideally situated to strike at the rear of 2/5 and sever it from the two regiments, but in sufficient strength they could attack the rear and flanks of the Marine units on North and Southwest Ridges. Moreover, at dawn, they would be looking down the throats of some 2000 Marines on the valley floor.
The partially successful assault on Northwest Ridge involved two regiments, the 266th and 267th, of the 89th CCF Division. Operating abreast of this force, the 79th Division had meanwhile advanced over the rugged spine of North Ridge toward the two isolated companies of the 2d Battalion, 7th Marines, occupying terminal Hills 1282 and 1240 of that huge land mass. Elements of the 79th Division’s three regiments were in the fore, and each regiment was apparently disposed in a column of battalions. Facing south toward the Marine positions on North Ridge, the CCF order of battle, with probable objectives assigned, was as follows:

237th Regt: Hill 1384 (Unoccupied)
235th Regt: Hill 1240 (D/7)
236th Regt: Hill 1167 (Unoccupied)

For reasons unknown, the commander of the 235th Regiment did not include Hill 1282 in his plan for seizing the high ground above Yudam-ni. He ordered his 1st Battalion to take only Hill 1240, and the commanding officer of that unit in turn assigned the mission to his 1st and Special Duty Companies. After these two outfits had seized the objective, the 2d and 3d Companies would pass through and, in conjunction with other CCF forces in the locale, “... annihilate the enemy at Yudam-ni.”[22]

Approaching the terminal high ground in darkness, the 1st Battalion, 235th Regiment, veered off its course and mistakenly ascended a spur toward Hill 1282. The 3d Battalion, 236th Regiment, keeping contact as it advanced on the left, participated in the error and wound up at the foot of Hill 1240. Thus confronted with this precipitous mass instead of low, gently sloping Hill 1167, the 3d Battalion floundered for several hours and did not take part in the first attack against the Marine perimeter. It did, however, send out the usual screen of infiltrators.

At 2200, submachine gunners and grenadiers of the 1st and Special Duty Companies, 1/235, commenced the preliminaries against Company E, 7th Marines on Hill 1282, believing they were engaging a Marine platoon on Hill 1240. The harassing force was driven off after failing to disrupt the Marine defenses. Almost two hours later, at 2345, Company D of 2/7 reported enemy infiltration on Hill 1240 a thousand yards to the east. Both Marine companies cancelled the patrols scheduled for the long saddle connecting their positions and went on a 100% alert.

Captain Phillips, commanding Easy Company, had arranged two platoons in perimeter around the summit of Hill 1282, and the third he had deployed to the right rear, on a spur that dipped toward Yudam-ni. At midnight, after a period of silence across the company front, the initial CCF assault wave slammed into the northeastern arc of the perimeter, manned by First Lieutenant Yancey’s platoon. Marine firepower blunted this frontal attack, and the Reds tried to slip around the east side of the hilltop. They ran head-on into First Lieutenant Bey’s platoon entrenched on the spur and were thrown back.

Resorting to grinding tactics, the Chinese repeatedly assaulted Company E’s position from midnight to 0200. Whistles and bugles blared over the reaches of North Ridge, and the charging squads of infantry met death stoically, to the tune of weird Oriental chants. When one formation was cut to pieces by machine-gun fire and grenades, another rose out of the night to take its place. By 0200, as the first attack began to taper off, the northeastern slopes of Hill 1282 lay buried under a mat of human wreckage. An hour later, the 1st and Special Duty Companies of the 1st Battalion, 235th CCF Regiment, had ceased to exist, having lost nearly every man of their combined total of over 200. Company E’s casualties had been heavy, but the Marines still held Hill 1282.
On Hill 1240, a thousand yards to the east, infiltrators of the 3d Battalion, 236th CCF Regiment, probed Dog Company’s perimeter while Easy was under attack. By 0030, some of the harassing parties had side-slipped through the saddle separating Hill 1282 and opened fire on the 5th and 7th Regimental headquarters in Yudam-ni.

The sniping from the slopes of North Ridge did not surprise the Marines in the valley, for they had long been preparing for a possible threat from that direction. Early in the evening, Lieutenant Colonel Taplett had redeployed 3/5 from an assembly area just north of the village to a broad tactical perimeter in the same locale. Companies H and I, the latter on the right, he positioned facing Northwest Ridge—specifically Hill 1403. Two platoons of Company G held blocking positions near the base of Southwest Ridge, and the third manned an outpost on the slopes of that high ground. At the bottom of North Ridge, in the draw between Hill 1282 and the spur of 1384, Taplett established his CP with H&S and Weapons Companies providing local security.

When 3/5’s commander learned that the spur of Hill 1384 was unoccupied, he dispatched a platoon of Company I to an outpost position 500 yards up the slope. About 300 yards behind the Item Company unit, on a portion of the spur directly above the battalion CP, a platoon of South Korean police deployed with two heavy machine guns.

At 2045, fifteen minutes before any other unit on the Yudam-ni reported a contact, the outpost platoon of Item Company began receiving fire from above. This harassment, probably involving advance elements of the 237th CCF Regiment, continued sporadically for several hours, throughout the period of the first Communist attacks against other fronts.

In the valley at 2120, a few men of How Company, 7th Marines, entered 3/5’s positions barefooted and partially clothed. Taplett, personally noting the time of their arrival, questioned them in the battalion aid station, and they told how their 60mm mortar position on Hill 1403 had been seized by the Chinese.[23]

The battalion commander returned to his CP, and after listening to the far-off din of the initial Communist attacks, placed his perimeter on a 100% alert at 0115. Half an hour later, the Item Company platoon on the spur of Hill 1384 reported an increase in enemy fire coming from above. A message from H/7 next warned that CCF troops were moving around Hill 1403 to cut the MSR. Company I observed activity in that quarter shortly afterwards, and at 0218 opened fire on an enemy platoon, which promptly retracted.

A few minutes later, a company—possibly two companies—of Chinese swept down the spur of Hill 1384, overran the Item Company platoon outpost, and continued on towards the police platoon. The South Koreans, after inflicting heavy casualties on the Reds with their two machine guns, vacated the high ground. Enemy troops then spread out along the crest and poured plunging fire into H&S and Weapons Companies defending the draw.

Weapons Company, on the far side of the depression, held its ground, but H&S, directly under the gun, shortly fell back across the MSR. Taplett’s CP was left in a no man’s land, with enemy bullets raining down out of the night and Marine fire whistling back from across the draw and road. Upon learning of the withdrawal, the battalion commander elected to remain in the tent in order to keep telephone contact with his rifle companies, which were as yet uninvolved. He did not consider the situation too serious, and it seemed as though the police platoon’s machine guns had taken the sting out of the enemy assault.

Except for a few individuals, the Chinese did not descend from the spur. Nor did they direct much fire at Taplett’s blackout tent, which they probably took to be unoccupied. Inside, the battalion commander studied his maps, received reports and issued instructions over the field phone while his S-3, Major Thomas A. Durham, sat nearby with pistol drawn. Major John J. Canney, the executive officer, left the CP to retrieve H&S Company and was killed as he approached the MSR. Private First Class Louis W. Swinson, radio operator, whose instrument had proved unreliable in the severe cold, took position outside the tent and covered the approaches with his rifle.
This unique situation—a battalion commander under fire in an exposed position while his rifle companies lay peacefully entrenched several hundred yards away—lasted for over an hour.
Chapter 8. Crisis at Yudam-ni
The Battle of North Ridge

At approximately 0300, when Taplett, Durham, and Swinson began their lonely vigil, the 79th CCF Division launched another assault on North Ridge (see Map 16). As a result of the enemy’s first attack, and in anticipation of the second, Colonel Murray earlier had moved elements of the 1st Battalion, 5th Marines, into position behind 3/5.

Second Lieutenant Nicholas M. Trapnell’s 1st Platoon of Company A left the battalion assembly area in the valley at 0100 and started up the steep incline of Hill 1282. Climbing the icy slopes by day was difficult enough, but darkness and a minus-20-degree temperature made it a grueling and perilous ordeal. Trapnell’s outfit did not reach the crest until after 0300, when the CCF assault was at the height of its fury and Company E was facing imminent annihilation. The Able Company unit moved into position with Lieutenant Bey’s platoon on the spur jutting back from the peak. As yet, the full force of the Chinese drive had not spread to this area.

The Red commander of the 1st Battalion, 235th Regiment, used his 3d Company for the second attack against the cap of Hill 1282. With the few survivors of the 1st and Special Duty Companies attached, the fresh unit probably numbered about 125 troops. In squads of eight to ten, the Chinese struck again and again at the perimeter on the summit, and the two depleted platoons of Easy Company dwindled to a mere handful of tired, desperate Marines. First Lieutenant Robert E. Snyder’s 3d Platoon of A/5, having been sent up from the valley shortly after Trapnell’s outfit, arrived as reinforcements. Snyder did not have contact with Bey and Trapnell, whose platoons were still intact, so he integrated his men with the remnants of the two platoons on the peak.

Both sides suffered crippling losses during the close fighting on Hill 1282. The Reds finally drove a wedge between the Marine defenders on the summit and the platoons of Bey and Trapnell on the spur. According to Bey:

“It soon became obvious that a penetration had been made to our left. The positions atop the hill and the Command Post area were brightly illuminated by flares and other explosions. By this time [approximately 0400] nothing but Chinese could be heard on the telephone in the command post and my Platoon Sergeant, Staff Sergeant Daniel M. Murphy, requested permission to take what men we could spare in an attempt to close the gap between the left flank of the platoon and the rest of the company. I told him to go ahead and do what he could.”

Meanwhile, the center and rear of Easy Company’s perimeter was reduced to the chaos of a last stand. Yancey, already wounded, was hit again as he tried to reorganize the few Marine survivors on the peak. First Lieutenant Leonard M. Clements, the other platoon leader, fell wounded as did First Lieutenant William J. Schreier of the mortar section and Lieutenant Snyder. Captain Phillips, hurling grenades in the midst of the melee, was killed. His executive officer, First Lieutenant Raymond O. Ball, took command of Company E, shouting out encouragement as he lay immobilized by two wounds. He was hit several more times before he lapsed into unconsciousness and died after reaching the aid station. Lieutenant Snyder took command.

By 0500, CCF infantrymen of the 3d Company, 1/235, occupied the summit of Hill 1282, still believing it to be Hill 1240. The remnants of the platoons of Yancey, Clements, and Snyder had been driven to the reverse slope in the west, while the units of Trapnell and Bey clung to the crest of the southeastern spur, overlooking Yudam-ni. Up to this point, Chinese casualties on Hill 1282 probably numbered about 250, with Marine losses approximating 150. Easy Company had been reduced to the effective strength of a rifle platoon (split in two), and
the pair of A/5 platoons paid with upwards of 40 killed and wounded during the brief time on the battle line; only six effectives remained of Snyder’s platoon.

The danger from enemy-held Hill 1282 was compounded by the success of the 3d Battalion, 236th Regiment on Hill 1240 to the east. At about 0105 the Chinese who had previously been content only to make probing attacks on Captain Hull’s Dog Company shifted to a full-scale assault. Sergeant Othmar J. Reller’s platoon, holding the northwest portion of the company perimeter, beat off three attacks before being overrun at about 0230. First Lieutenant Richard C. Webber, the machine gun platoon leader, attempted to plug the gap with the available reinforcements but was prevented by a fire fight outside the Company CP. First Lieutenant Edward M. Seeburger’s platoon holding the perimeter on the right (east) was under too heavy an attack to extend to the left and tie in with Webber. The Chinese overran Hull’s CP at about 0300, and he ordered Seeburger and First Lieutenant Anthony J. Sota, commanding the rear platoon, to reorganize at the foot of Hill 1240.

Captain Hull, wounded, his command cut to the size of a few squads, rallied his troops on the hillside and led a counterattack against the crest. The surprised Chinese recoiled and the Marines won a small foothold. Then the enemy smashed back from the front, right flank, and right rear. Hull was wounded again but continued in action as his hasty perimeter diminished to the proportions of a squad position. With the approach of dawn, he had only 16 men left who could fight. The enemy was on the higher ground to his front, on both flanks, and on the slopes in his rear.
OF THE MARINE artillery units at Yudam-ni, those most directly imperiled by CCF gains on North Ridge were Major Parry’s 3d Battalion and Battery K of the 4th. The latter, under First Lieutenant Robert C. Messman, lay beneath the southeastern spur of Hill 1282, having gone into position at 2100 on 27 November. Rearward of King Battery, 3/11 was positioned below the steep slopes of Hill 1240 where its 105s had fired in direct support of the 7th Marines on 26 and 27 November (see Map 12).[1]

The 1st Battalion, 11th Marines, which had arrived at Yudam-ni early on the 27th to support the 5th Regiment, was emplaced in the valley between the tips of South and Southwest Ridges. Major William McReynolds, commanding the 4th Battalion, reached the perimeter with his outfit later. He had two batteries in action by 1900 and all three by 2300 on the low ground separating South and Southeast Ridges. Battery K, firing under the direction of 1/11 pending the arrival of the parent unit, then reverted to McReynolds’ control, although it did not displace rearward to 4/11’s positions until the next day.

The TD-14 bulldozers of the 11th Marines had proved to be no match for the eight-inch frostline around the Reservoir, with the result that all batteries and security positions sat fully exposed on the concrete-like flatlands. Incoming mortar fire harassed the artillerymen throughout the day of 27 November, and after dark CCF flat trajectory weapons stepped up the tempo of bombardment. Marine casualties in the valley were light, however, for the enemy gunners seemed unable to group their erratic pot shots into effective barrages.[2]

It was the imminent threat of Communist infantry attack from North Ridge that weighed down on the artillerymen of the 11th Regiment during the predawn hours of 28 November. Since the beginning of the CCF onslaught, they had been firing their howitzers almost ceaselessly in a 180-degree arc, and ammunition stocks were fast dwindling to a critical level. Their gun flashes providing brilliant targets for enemy infiltrators, they could reasonably expect a full-scale assault in the event of the dislodgment of Easy and Dog Companies from Hills 1282 and 1240. The effect of countermoves by Colonels Litzenberg and Murray would not be known until after dawn, and meanwhile the Marine gunners kept on firing their howitzers while the black outline of North Ridge loomed ever more menacing.
The Chosin Reservoir Campaign

Chapter 9. Fox Hill
Encirclement of Company C of RCT-7

While the 79th and 89th CCF Divisions pounded the northwest arc of the Yudam-ni perimeter during the night of 27–28 November, the 59th completed its wide end-sweep to the southeast and moved against the 14-mile stretch of road to Hagaru. At the moment the Communist effort in that quarter could be considered a secondary attack, but if ever a target fulfilled all the qualifications of a prime objective, it was this critical link in the MSR—the very lifeline to most of the 1st Marine Division’s infantry and artillery strength.

During the 27th Captain Wilcox’s Baker Company of the 7th Marines patrolled along South Ridge. As darkness fell, it was heavily engaged and incumbered with a number of litter casualties. With the permission of the regimental commander, Lieutenant Colonel Davis led Captain John F. Morris’s Charlie Company (–) down the MSR to positions across the road from Hill 1419. Aided by Charlie Company, Baker was then able to withdraw and return to Yudam-ni with Davis while Morris and his reduced company took up positions on Hill 1419.[3]

He deployed his two rifle platoons and 60mm mortar section in a crescent on the lower slopes of the eastern spur, facing the distant crest. At 0230, five hours after Yudam-ni came under attack, a CCF force descended from the high ground and struck the right flank.[4]

After overrunning part of First Lieutenant Jack A. Chabek’s platoon and inflicting heavy casualties, the Reds lashed out at the left flank of the crescent-shaped defense. Here Staff Sergeant Earle J. Payne’s platoon, less one squad in an outpost on higher ground, bent under the weight of the attack and was soon in danger of being driven out of position. Captain Morris reinforced the platoons on each flank with men from his headquarters and the mortar section. The reshuffling was accomplished in the nick of time and just barely tipped the scales in favor of the defenders. A seesaw battle raged until after dawn on the 28th when, with the help of artillery fire from Yudam-ni, the Marines drove the Chinese back into the hills.

Although the critical pressure eased at daybreak, Company C remained pinned down by enemy fire coming from every direction, including the crest of Hill 1419 directly above. The Chinese were in absolute control of the MSR to the south, toward Toktong Pass, and to the north, in the direction of Yudam-ni. Morris had taken about 40 casualties—a dangerously high proportion, since he had only two of his three rifle platoons. His radio had been knocked out by enemy bullets, and the 60mm mortar section was left with but a few rounds of ammunition. For want of communication, he could get no help from the Marine Corsairs on station overhead.

The outpost squad from Payne’s platoon could not be contacted in its position on the higher slopes of Hill 1419. Corporal Curtis J. Kiesling, who volunteered to search for the lost unit, was killed by CCF machine-gun fire as he attempted to scale the rugged incline. Other men of Company C repeatedly exposed themselves in order to drag wounded comrades to the relative safety of a draw leading down to the MSR.

Surrounded and outnumbered, Morris had no alternative but to await help from Yudam-ni. He contracted his perimeter on the hillside east of the road, and from this tiny tactical island, for the rest of the morning, his men watched Communist troops jockey for position around a 360-degree circle.
Where Morris had taken a reduced infantry company into its lonely assignment on the MSR, Captain William E. Barber went into position at Toktong Pass on the 27th with a heavily reinforced outfit. His Fox Company of 2/7, augmented by heavy machine gun and 81mm mortar sections of Weapons Company, numbered 240 officers and men. At the midpoint of the pass, Barber chose an isolated hill just north of the MSR for his company perimeter. He placed the 3d Platoon (First Lieutenant Robert C. McCarthy) on the summit, facing generally north, with the 1st (First Lieutenant John M. Dunne) on the right and the 2d (First Lieutenant Elmer G. Peterson) on the left. The 3d Platoon formed a hilltop perimeter with two squads forward and the third in reserve to the rear. Tied in on each flank, the 1st and 2d Platoons stretched down the respective hillsides and bent back toward the MSR. These two were connected on the reverse slope by company headquarters and the rocket squad. Just below, at the base of the hill next to the road, were Barber’s CP together with the 81mm and 60mm mortar sections. All machine guns, including the heavies from Weapons Company, were emplaced with the rifle platoons.

During the first half of the night of 27–28 November, Toktong Pass rumbled with the reverberations of truck convoys—the final serials of 1/5 and 4/11 outbound for Yudam-ni and Lieutenant Colonel Beall’s empty trucks inbound for Hagaru. It was after 2000 before the last trucks climbed to the summit, then nosed downhill, whining and roaring through the night as they made the twisting descent. Chinese Communists had already launched their first attacks against Southwest Ridge at Yudam-ni, but Fox Company’s perimeter remained quiet, even during the first hour of 28 November.

It was actually too quiet at 0115 when Lieutenant McCarthy inspected the 3d Platoon positions atop Fox Hill, now glittering in the light of a full moon. Finding his men numbed by the severe cold, he called together his squad leaders and admonished them to be more alert. A short time later, during his next inspection, McCarthy heard the proper challenges ring out at every point.

There was no lack of watchfulness at 0230. For it was then that Chinese in estimated company strength lunged out of the night and assaulted the north, west, and south arcs of Company F’s perimeter. On the summit, the two forward squads of McCarthy’s platoon were overwhelmed almost immediately, losing 15 killed and nine wounded out of a total of 35 men. Three others would later be listed as missing. The eight uninjured fell back to the reserve squad’s position on the military crest to the rear, and the enemy took over the topographical peak.

Fighting with small arms and grenades also raged on the hillside to the left, where the Chinese attempted to drive a wedge between the 2d and 3d Platoons. Repeated assaults were hurled back with grievous losses to the Reds, and they apparently threw in fresh units in their bid for a critical penetration. That they failed was due largely to the valor of three Marines who made a determined stand at the vital junction: PFC Robert F. Benson and Private Hector A. Cafferatta of the 2d Platoon, and PFC Gerald J. Smith, a fire team leader of the 3d. These men, assisted by the members of Smith’s team, are credited with annihilating two enemy platoons.

While the enemy had undoubtedly planned the attack on the two rifle platoons with typical precision, it seems that he literally stumbled into the rear of Fox Company’s position. Corporal Donald R. Thornton, member of a rocket launcher crew, reported that a group of Chinese walking along the MSR suddenly found themselves at the edge of Barber’s CP and the mortar positions. The Communist soldiers recovered from the surprise and closed aggressively, forcing the company commander and the mortar crews to ascend the hill to a protective line of trees. An embankment where the MSR cut through the base of the hill prevented pursuit by the Chinese. When
they tried to climb over it they were cut down by small-arms fire; when they hid behind it they were riddled by
grenades that the Marines rolled downhill; when they finally gave up and tried to flee, they were shot as they ran
into the open.

On the right (east) side of the perimeter, the 1st Platoon was engaged only on the flanks, near the summit
where it tied in with the 3d and down the slope where it joined the headquarters troops and mortar crews
defending the rear.

Fighting around the 270° arc of the perimeter continued until after daybreak. Despite losses of 20 dead
and 54 wounded, Fox Company was in complete control of the situation. Lieutenant McCarthy described the
breaking-off action as follows:

“By 0630, 28 November, the Chinese had received so many casualties that the attack could no longer be
considered organized. Few Chinese remained alive near the company perimeter. Individual Chinese continued to
crawl up and throw grenades. A Marine would make a one-man assault on these individuals, shooting or
bayoneting them. The attack could be considered over, although three Marines . . . were hit by rifle fire at 0730.
We received small arms fire intermittently during the day, but no attack.”

McCarthy estimated that enemy dead in front of the 2d and 3d Platoons numbered 350, while yet another
100 littered the 1st Platoon’s zone and the area at the base of the hill along the MSR.[6]
Chapter 9. Fox Hill

Marine Counterattacks on North Ridge

As Companies C and F of the 7th Marines were fighting on the MSR in the hours just before dawn of 28 November, the first of a series of Marine counterattacks commenced at Yudam-ni. It was essential to the very survival of the 5th and 7th Regiments that the Chinese be driven back, or at least checked, on the high ground surrounding the village.

Lieutenant Colonel Taplett, operating his CP in the no man’s land at the base of North Ridge, ordered Company G of 3/5 to counterattack the spur of Hill 1384 at about 0300.[7] The platoon of George Company outposting Southwest Ridge was left in position, but the other two platoons, under Second Lieutenants John J. Cahill and Dana B. Cashion, moved out abreast shortly after 0300. Driving northward aggressively, they crossed the MSR, “liberated” Taplett’s CP, and cleared the draw in which Weapons Company of 3/5 was still entrenched. Troops of H&S Company followed the attackers and reoccupied their old positions in the gulley.

Cahill and Cashion, displaying remarkable cohesion on unfamiliar ground in the darkness, led the way up Hill 1384. Their men advanced swiftly behind a shield of marching fire and routed the few Chinese on the spur. The position earlier vacated by the police platoon was recaptured, and the Marines saw numerous enemy dead in front of the South Korean machine gun emplacements. About 500 yards beyond the battalion CP the two platoons halted until daylight. The seven men who had formed the Item Company outpost on Hill 1384 arrived shortly afterwards and were integrated into Cashion’s platoon.

He continued the attack soon after daybreak, with Cahill’s platoon giving fire support. Cashion and his men plunged into enemy territory along the ridge line leading northward to the topographical crest of Hill 1384, about 1000 yards distant. They had reached the final slopes when Taplett received the radio message, almost incredible to him, that the two platoons were nearing the peak of Hill 1384. He directed them to discontinue the attack and withdraw to the top of the spur. There they were to establish a defense line overlooking Yudam-ni until receiving further orders. The spirited drive led by the two young officers had taken considerable pressure off the Marine units in the valley west of the village. One immediate effect was that approximately 80 officers and men of How Company, 7th Marines, were able to retire into 3/5’s perimeter from the slopes of Hill 1403 on Northwest Ridge.

To the east of 3/5, a second successful counterattack by the 5th Marines brought stability to yet another critical point. Company C of 1/5 had deployed shortly after midnight to back up 3/5, in the event of a breakthrough in the valley. Owing to the adverse developments on Hills 1282 and 1240, however, it was later placed under operational control of the 7th Marines. One platoon left for Hill 1240 in the middle of the night to reinforce D/7, and the remainder of the company, led by Captain Jack R. Jones, ascended 1282 to assist E/7 and the two platoons of A/5 earlier committed.[9]

Charlie Company moved up a draw with Jones and his executive officer, First Lieutenant Loren R. Smith, in the van of the column, followed by the 1st and 2d Platoons and the 60mm mortar section. Light machine-gun sections were attached to the rifle platoons. The climb took almost two hours in the predawn darkness, the company frequently halting while Jones questioned wounded men descending from the top. Numb from cold, shock, and loss of blood, they could give no intelligible picture of a situation described as grim and confused.

At approximately 0430, the head of the column came under heavy fire from above as it reached a point just below the military crest, about 100 yards from the summit of 1282. Here, Jones found Staff Sergeant Murphy
from E/7’s 3d Platoon which, along with Trapnell’s, was out of sight on the spur to the right. Also out of sight but far to the left were Snyder’s platoon of A/5 and a handful of men of Easy Company. While CCF grenades and small-arms fire rained down, Murphy explained that E/7’s main position had been overrun and that he was attempting to form a holding line in the center with some 20 survivors of the summit battle.

Jones quickly deployed his two platoons for the attack, the 2d under Second Lieutenant Byron L. Magness on the right, the 1st under Second Lieutenant Max A. Merrit on the left. Murphy’s small contingent joined the formation. Second Lieutenant Robert H. Corbet set up his 60mm mortar section to support the advance, then took a place in the assault line. Down in the valley the 81mm mortars of 1/5 opened up with a preparatory barrage. Artillery could not fire because of the short distance between friendly and enemy lines, and the first flight of Corsairs was not yet on station.

The frontal attack against the 3d Company, 1st Battalion, 235th CCF Regiment began shortly after daybreak. Jones personally led the Marine skirmishers against more than 50 enemy soldiers armed with machine guns and grenades. His troops moved upward through a hail of fire and overran the Communists after a savage clash that included hand-to-hand fighting. The Marines then deployed with the just-arrived 2d Platoon of Able Company bridging the gap between Jones and Trapnell in time to thwart the advance of enemy reinforcements.

According to enemy reports, only six or seven men survived the 3d Company’s defeat. One of them happened to be the company political officer, who conveniently had retired from the battle line during the crucial stage of the struggle. At 1/235’s CP, a few hundred yards to the rear, he was given a platoon of the 2d Company “in order to evacuate the wounded and to safeguard the occupied position on Hill 1282. . . .” The fresh unit ascended the northern slopes of the height while Jones’ company was battling its way up from the south. By the time the Red soldiers of the 2d Company neared the summit, they were confronted from above by the muzzles of Marine rifles and machine guns. The whole story unfolds in CCF records as follows:

“As soon as the 1st Platoon [2d Company] advanced to the 3d Company’s position its assistant company commander came up with the platoon. At that time, the enemy [C/5] counterattacked very violently. Accordingly, the assistant company commander ordered the 1st Platoon to strike the enemy immediately and determinedly. Before the 1st Platoon’s troops had been deployed, Lee Feng Hsi, the Platoon Leader, shouted: ‘Charge!’ So both the 1st and 2d Squads pressed forward in swarms side by side. When they were within a little more than ten meters of the top of the hill they suffered casualties from enemy hand grenades and short-range fire. Consequently, they were absolutely unable to advance any farther. At that time, the assistant company commander and the majority of the platoon and squad leaders were either killed or wounded.

“While the 1st and 2d Squads were encountering the enemy’s counterattack, the 3d Squad also deployed and joined them in an effort to drive the enemy to the back of the hill. As a result, more than half of the 3d Squad were either killed or wounded. When the second assistant platoon leader attempted to reorganize, his troops suffered again from enemy flanking fire and hand grenades. Thus, after having fought for no more than ten minutes, the entire platoon lost its attacking strength and was forced to retreat somewhat to be able to defend firmly the place it held.”

Meanwhile, according to Chinese accounts, Tsung Hui Tzu, commander of the 2d Company, had arrived at the CP of 1/235 with his 2d Platoon at 0620. Noting that his 1st Platoon was in trouble, he said to the leader of the 2d, “There are some enemy soldiers on the hill [1282] in front of us; attack forward determinedly.”

The 2d Platoon jumped off immediately with two squads abreast and one trailing. Within 30 meters of the crest, the Reds attempted to rush Charlie Company’s position behind a barrage of hand grenades. The assault failed. On the right the assistant platoon leader fell at the head of the 4th squad, which was reduced to three survivors. Tsung, the company commander, rushed forward and led the 6th squad on the left. He was wounded and the squad cut to pieces. Incredibly, the platoon leader ordered the three remaining men of the 4th squad to assault the summit again. They tried and only one of them came back. The 5th squad, advancing out of reserve,
had no sooner begun to deploy than it lost all of its NCOs. “As it mixed with the 4th and 6th squads to attack, they suffered casualties again from enemy flanking fire and hand grenades from the top of the hill. Therefore, the entire platoon lost its combat strength, with only seven men being left alive.”

Not only was the commanding officer of 1/235 down to his last company, but that company was down to its last platoon. Forever hovering in the rear, the 2d Company’s political officer, Liu Sheng Hsi, ordered the platoon to “continue the attack.” The assault began with two squads forward, led by the platoon leader and his assistant. They charged uphill into the teeth of Charlie Company’s position. Like all the others, they were ground into the mat of corpses on the blood-soaked snow. To complete the suicide of the 1st Battalion, 235th Regiment, the reserve squad of this last platoon was committed. A few minutes later, “. . . there were only six men left.”

The 2d Company paid for its failure with 94 of the original 116 officers and men. This loss, added to those of the 1st, 3d, and Special Duty Companies, would place 1/235’s casualties on Hill 1282 at approximately 400, including practically all the company commanders, platoon leaders, and NCOs. It can be assumed that nearly all of the wounded succumbed, since evacuation was well nigh impossible with Marines in control of the summit for the next 24 hours.

Marine losses were not light. Able and Charlie Companies of 1/5 together suffered 15 KIA and 67 WIA. Easy Company of 2/7, according to best estimates, made its stand at a cost of about 120 killed and wounded.
At daybreak of 20 November, several of Easy Company’s casualties still lay in their foxholes on the forward slopes of Hill 1282. To recover them was an undertaking of great risk, even after the defeat of 1/235; for CCF survivors continued to fire at the summit from positions on the lower slopes. Captain Jones directed the evacuation and repeatedly ran forward of his lines to rescue half-frozen Marines who were immobilized by wounds.\[10\]

Headquarters personnel of 1/5 spent the whole morning removing casualties from 1282 and carrying them to the battalion and regimental aid stations, which soon were filled to overflowing. In the meantime, Able Company joined Charlie on the crest and assimilated the depleted platoons of Trapnell and Snyder. A new defensive line was drawn across the vital peak with C/5 in the center, A/5 on the right, and E/7, now under the command of Lieutenant Bey, on the left. By mid-morning, despite the continued exchange of fire with CCF troops on the slopes, there was no doubt that the Marines would hold the hill.\[11\]

This was not the case 1000 yards to the right, where daybreak had found the shattered remnants of D/7 clinging to a toehold on Hill 1240 and beset from every direction by troops of the 3d Battalion, 236th CCF Regiment.\[12\] The 3d Platoon of C/5, which had been dispatched from the valley at 0400 to help, was delayed by darkness and terrain. Second Lieutenant Harold L. Dawe’s small relief force became hotly engaged on the lower slopes, far short of Dog Company’s position, but made a fighting ascent after dawn.

Initially Dawe missed contact with the beleaguered outfit, but afterwards the two forces cleared the Chinese from 1240. From his position on the northeastern spur of the hill he could see the enemy massing on the reverse slopes of 1240 and 1282. Communications were out and he could not call for fire. At about 1100 the Reds counterattacked with an estimated two or more battalions and forced Dawe to withdraw about 150 yards. There his depleted platoon and the 16 remaining men of Dog Company held under heavy mortar fire until relieved by B/5 at 1700. The price of a stalemate on Hill 1240 was to Dawe about half of his platoon, and to Hull practically his whole company.
To the left of North Ridge, dawn of 28 November revealed a tactical paradox on the looming massif of Northwest Ridge. Both Marines and Red Chinese occupied the terminal high ground, and it was difficult to determine which had emerged victorious from the all-night battle. How Company, 7th Marines, had withdrawn from Hill 1403, and from this commanding peak soldiers of the 89th CCF Division could observe and enfilade the whole of Yudam-ni valley. In addition to the 80 officers and men of How Company who had pulled back to the lines of 3/5 during the early morning, another group found its way to the rear of Easy Company, 2/5, as mentioned earlier.[13]

The appearance of the latter contingent at 0430 was a cause of consternation to Lieutenant Colonel Roise. His rifle companies had thrown back repeated CCF attacks along the draw and spur on the left of the 7th Marines’ outfit, but the loss of 1403 now offset his victory and gravely imperiled his line of communications to the rest of the 5th Marines at Yudam-ni, a mile to the rear. Nevertheless, 2/5 continued to hold. At 0600 Company E counterattacked and drove the Chinese from the northern tip of the spur which they had occupied during the night. Fox Company, its right flank now restored and in contact with Easy, lashed out at 0800 and recaptured the two machine guns overrun by the enemy four hours earlier. Fifteen CCF soldiers who had found their way into the rear of Company F some time in the night were destroyed. Easy Company, after its successful counterattack on the spur, drove off a large Communist force attempting to move against its right flank.[14]

Incredibly, 2/5’s losses for the night-long fight were 7 KIA, 25 WIA, and 60 weather casualties. Chinese dead piled across the front of Easy and Fox Companies numbered 500, according to a rough count.[15] There was no estimate made by How Company, 7th Marines, of enemy losses on Hill 1403.

At 0145 on the 28th, Roise had received Murray’s order to continue the attack to the west after daybreak, so that 3/5 could move forward, deploy, and add its weight to the X Corps offensive. Events during the night altered Murray’s plans, of course, and at 0545 the regimental commander alerted Roise to the probability of withdrawing 2/5 to Southwest Ridge later in the morning. The battalion commander, not realizing the extent of the crisis at Yudam-ni, thought a mistake had been made when he checked the map coordinates mentioned in the message. Despite the fact that his whole front was engaged at the time, he was prepared to continue the westward drive, and he questioned regimental headquarters about the “error” which would take his battalion rearward. Needless to say, the correctness of the map coordinates was quickly confirmed.[16]

Lieutenant Colonel Murray visited Colonel Litzenberg at dawn on the 28th, while elements of the 5th Marines were counterattacking the Chinese forces on North and Northwest Ridges. They agreed that the enemy had appeared in sufficient strength to warrant a switch to the defensive by both regiments, and Murray cancelled the scheduled westward attack by his 2d and 3d Battalions. At 1100 he ordered 2/5 to pull back to Southwest Ridge, tying in on the left with 3/7 on the same hill mass, and on the right with 3/5, whose line extended from the valley northwest of Yudam-ni to the crest of North Ridge.[17]

Orders officially halting the northwestward advance and directing the 5th Marines to coordinate positions with the 7th Marines were sent by General Smith at 1650.[18] Twenty-three minutes earlier he had ordered the 7th Marines to attack to the south and reopen the MSR to Hagaru.[19]

To coordinate better the defense of the new perimeter, Murray moved his CP from the northeastern edge of Yudam-ni to the center of the village, where the 7th Marines’ headquarters was located. He spent most of his time thereafter with Litzenberg, while Lieutenant Colonel Joseph L. Stewart, his executive officer, ran the 5th
Regiment command post.[20] Through constant contact and a policy of close cooperation in all matters, the two regimental commanders and their staffs came up with joint plans for the defense of Yudam-ni and the ultimate breakout to Hagaru.

The first of these plans had to do with the realignment of forces at Yudam-ni and the rescue of Charlie and Fox Companies, 7th Marines. Early in the afternoon of 28 November, 2/5 began withdrawing from Northwest Ridge a company at a time, with Company E providing covering fire as rear guard. The battalion’s displacement to Southwest Ridge was completed by 2000 against CCF resistance consisting only of harassing fires.[21]

Directly across the valley of Yudam-ni, Company I of 3/5 relieved the elements of 1/5 on Hill 1282 of North Ridge in late afternoon. George and How Companies of 3/5 deployed in the low ground to protect the corridor approaches to Yudam-ni from the northwest. Lieutenant Colonel Stevens, keeping the bulk of 1/5 in reserve, dispatched Company B at 1400 to relieve the battered handful of Marines on Hill 1240.

While this reshuffling took place on the 28th, Colonel Litzenberg listened anxiously to the grim reports from his 1st Battalion, which had set out in the morning to retrieve both Charlie and Fox Companies from their encircled positions on the MSR leading to Hagaru.[22] Able Company led off for the relief force at 1015, entering the gorge between South and Southeast Ridges. Five hours of fighting, marching, and climbing took it to a point about three miles from the Yudam-ni perimeter and one mile short of Company C’s position. Here, while moving through the high ground east of the MSR, the vanguard met heavy resistance and was stopped cold.

Lieutenant Colonel Davis, who was following with the remainder of the 1st Battalion, committed Company B to a flanking movement west of the road. Air and 81mm mortars supported the auxiliary attack and routed the Chinese. Both companies advanced to high-ground positions abreast of Charlie Company’s perimeter, then bent toward the MSR to provide a protective crescent between the beleaguered outfit and the enemy-infested ground to the south.

By now it was dark. Fox Company, according to plan, was supposed to have fought its way from Toktong Pass. Owing to the burden of casualties and the ring of Chinese around its distant hilltop, it was not able to do so. Litzenberg, concerned lest 1/7 be similarly trapped in the gorge, recalled Davis to Yudam-ni. The relief force returned at 2110 with Charlie Company and its 46 wounded.
Fox Company, with 54 wounded on its hands, spent an active day at the top of Toktong Pass. After the Chinese attacks subsided in the morning, Barber’s men collected ammunition and weapons from Marine casualties and Communist dead. Included among enemy arms were several of the familiar U.S. Thompson submachine guns and Model 1903 Springfield rifles.

At 1030 a flight of Australian F-51s (Mustangs) blasted CCF positions around Toktong Pass, particularly a rocky promontory several hundred yards to the north on Hill 1653, which the enemy already had transformed into a redoubt. Within the Marine perimeter, the wounded were placed in two tents on a sheltered hillside where Navy corpsmen attended them constantly. According to Lieutenant McCarthy’s account, the medics, “by candlelight . . . changed the bandages, slipped men in and out of sleeping bags, warmed C-rations for the men, and melted the morphine syrettes in their mouths before the injections. Because the plasma was frozen the corpsmen had to watch men die for the lack of it.”

During late morning and the afternoon, Barber sent out patrols to screen the areas immediately beyond his lines. The scouting parties met only sniper fire, but other evidence of enemy activity indicated that Fox Hill was completely surrounded. An appeal for resupply by air was answered later in the day when Marine R5Ds dropped medical kits and ammunition at the base of the hill. At a cost of two wounded, the precious supplies were recovered before sundown.

Fox Company’s perimeter for the night of 28–29 November was the same as before, except that the ranks were noticeably thinner. Nevertheless, a feeling of confidence pervaded the men on the hilltop; they believed implicitly that they could hold. They believed it despite the fact that strong relief columns from both Yudam-ni and Hagaru had been unable to break through to them.

All was quiet on Fox Hill until 0215, when CCF mortar rounds killed one Marine and wounded two others in the 3d Platoon, now reduced to some 20 able-bodied men. About 40 Chinese made a penetration in this area after a series of probing attacks all along the line. One Marine crew turned its light machine gun about and brought it to bear on the bunched-up attackers with deadly effect. A gap in the lines on both flanks caused the platoon to pull back about 20 yards. At sunrise, however, Staff Sergeant John D. Audas led a counterattack which regained the lost ground at a cost of only two wounded.

The second night’s fighting cost Fox Company a total of five killed and 29 wounded. Both Captain Barber and Lieutenant McCarthy suffered leg wounds, but continued in action after receiving first aid. The company commander directed that the open ground on Fox Hill be marked with colored parachutes from the previous day’s air drops. This provision resulted in accurate drops and easy recoveries when Marine transport planes arrived at 1030 on the 29th with ammunition and supplies. Shortly afterwards First Lieutenant Floyd J. Englehardt of VMO–6 landed with batteries for the SCR-300 and 619 radios. Although his helicopter was damaged by hits from long-distance Chinese fire, he managed to take off safely.

Air drops that afternoon by C–119s of the Combat Cargo Command missed the marked zone at times, and much of the mortar ammunition landed about 500 yards to the west of the perimeter. Lieutenant Peterson, already twice wounded, led Marines who recovered some of the rounds but were pinned down by CCF fire and got back, one at a time, with difficulty. At dusk, under cover of fire from How Battery, another detail recovered the ammunition without enemy interference.
Chapter 9. Fox Hill
Not Enough Tents for Casualties

The night of 28–29 November passed with only minor activity in the Yudam-ni area for the infantry of RCT-5; but the regimental surgeon, Lieutenant Commander Chester M. Lessenden (MC) USN, had his hands full. During the fighting of the previous night the joint aid station had been west of Yudam-ni. Tents sheltering the wounded were riddled by enemy small-arms fire from the North Ridge battle, and on the morning of the 28th the aid station displaced to a safer location southwest of Yudam-ni. The seriously wounded filled the few tents initially available, and the others were protected from freezing by being placed outdoors, side by side, and covered by tarpaulins while lying on straw. Primitive as this hospitalization was, DOW cases were no more than might have been expected under better conditions.[24]

The crowding in the aid stations was much relieved on 30 November by the erection of sufficient tentage by 4/11 to provide shelter for approximately 500 casualties.

“Everything was frozen,” said Lessenden later in an interview with Keyes Beech, a press correspondent. “Plasma froze and the bottles broke. We couldn’t use plasma because it wouldn’t go into solution and the tubes would clog up with particles. We couldn’t change dressings because we had to work with gloves on to keep our hands from freezing.

“We couldn’t cut a man’s clothes off to get at a wound because he would freeze to death. Actually a man was often better off if we left him alone. Did you ever try to stuff a wounded man into a sleeping bag?”[25]

The joint defense plan for the night of 28–29 November provided for RCT-5 to take the responsibility for the west and north sectors, while RCT-7 was to defend to the east, south and southwest. Enemy mortar fire was received during the night in both regimental zones, but there were few infantry contacts. This lack of activity could only be interpreted as a temporary lull while the enemy regrouped for further efforts.

As for the next attempt to relieve Fox Company and open the MSR to Hagaru, the joint planners at Yudam-ni decided on the night of the 28th that all troops of the two regiments now in line were needed for defense. There were actually no men to spare for a relief column, and yet Division had ordered the effort to be made. The solution seemed to be a composite battalion consisting of perimeter reserve units. In order to replace these troops, personnel were to be assigned from headquarters units and artillery batteries. This was the genesis of the Composite Battalion, consisting of elements from Able Company of 1/5, Baker Company of 1/7 and George Company of 3/7, reinforced by a 75mm recoilless section and two 81mm mortar sections from RCT-7 battalions. These troops were directed to assemble at the 1/7 CP on the morning of the 29th, with Major Warren Morris, executive officer of 3/7, in command.[26]

At 0800 the striking force moved out southward with the dual mission of relieving Captain Barber and opening up the MSR all the way to Hagaru. After an advance of 300 yards, heavy machine-gun fire hit the column from both sides of the road. Groups of Chinese could be plainly seen on the ridges, affording remunerative targets for the 81mm mortars and 75 recoilless guns. Forward air controllers soon had the Corsairs overhead to lead the way. At a point about 4500 yards south of Yudam-ni, however, Marine planes dropped two messages warning that the enemy was entrenched in formidable force along the high ground on both sides of the MSR.

Similar messages were delivered by the aircraft to the regimental CP at Yudam-ni. They caused Colonel Litzenberg to modify the orders of the Composite Battalion and direct that it relieve Fox Company and return to Yudam-ni before dark.

By this time Morris’ troops had become engaged with large numbers of Chinese who were being
constantly reinforced by groups moving into the area along draws masked from friendly ground observation. Litzenberg was informed on a basis of air observation that Morris was in danger of being surrounded, and at 1315 he sent an urgent message directing the force to return to Yudam-ni. Contact was broken off immediately with the aid of air and artillery cover and the Composite Battalion withdrew without further incident.

Chapter 9. Fox Hill
The Turning Point of 30 November

The Yudam-ni area had a relatively quiet night on 29–30 November. But even though there was little fighting, the continued sub-zero cold imposed a strain on the men when at least a fifty per cent alert must be maintained at all times. This was the third virtually sleepless night for troops who had not had a warm meal since the Thanksgiving feast.

“Seldom has the human frame been so savagely punished and continued to function,” wrote Keyes Beech. “Many men discovered reserves of strength they never knew they possessed. Some survived and fought on with power alone.”[27]

Certainly there was no lack of will power on Fox Hill as Captain Barber called his platoon leaders together at about 1700 on 29 November and told them not to expect any immediate relief. Chinese attacks, he warned, might be heavier than ever this third night, but they would be beaten off as usual.

The area was quiet until about 0200 on the 30th, when an Oriental voice called out of the darkness in English, “Fox Company, you are surrounded. I am a lieutenant from the 11th Marines. The Chinese will give you warm clothes and good treatment. Surrender now!”[28] The Marines replied with 81mm illumination shells which revealed targets for the machine guns as the Chinese advanced across the valley from the south.

Thanks to the afternoon’s air drops, Fox Hill had enough mortar ammunition and hand grenades for the first time, and good use was made of both. An estimated three CCF companies were cut to pieces at a cost of a single Marine wounded.

At sunrise, as the Corsairs roared over, all tension vanished on Fox Hill. For it was generally agreed that if the Chinese couldn’t take the position in three nights, they would never make the grade.

The troops in the Yudam-ni area also felt that the enemy had shot his bolt without achieving anything more than a few local gains at a terrible cost in killed and wounded. It was recognized that some hard fighting lay ahead, but the morning of the 30th was a moral turning point both in the foxhole and the CP.

It was evident even on the platoon level at Yudam-ni that big events were in the wind. Marine enlisted men are traditionally shrewd at sizing up a tactical situation, and they sensed that a change was at hand. For three days and nights they had been on the defensive, fighting for their lives, and now the word was passed from one man to another that the Marines were about to snatch the initiative.

The regimental commanders and staff officers had a worry lifted from their minds when a helicopter brought the news that Hagaru had passed a quiet night after repulsing large enemy forces in a dusk-to-dawn battle the night before. It would have added enormously to the task of the Yudam-ni troops, of course, if the Chinese had seized that forward base with its air strip and stockpiles of supplies. Thus it was heartening to learn that a single reinforced Marine infantry battalion and an assortment of service troops had beaten off the attacks of large elements of a Chinese division at Hagaru. The following two chapters will be devoted to an account of that critical battle and its aftermath before returning to Yudam-ni.
Chapter 10. Hagaru’s Night of Fire

THE IMPORTANCE of Hagaru in the Marine scheme of things was starkly obvious after the Chinese cut the MSR. Hagaru, with its supply dumps, hospital facilities and partly finished C-47 airstrip, was the one base offering the 1st Marine Division a reasonable hope of uniting its separated elements. Hagaru had to be held at all costs, yet only a reinforced infantry battalion (less one rifle company and a third of its Weapons Company) and two batteries of artillery were available for the main burden of the defense.

Owing to transportation shortages, the 3d Battalion of the 1st Marines did not arrive at Hagaru until after dusk on 26 November. Even so, it had been necessary to leave George Company and a platoon of Weapons Company behind at Chigyong for lack of vehicles.[1]

The parka-clad Marines, climbing down stiffly from the trucks, had their first sight of a panorama which reminded one officer of old photographs of a gold-rush mining camp in the Klondike. Tents, huts, and supply dumps were scattered in a seemingly haphazard fashion about a frozen plain crossed by a frozen river and bordered on three sides by low hills rising to steep heights on the eastern outskirts. Although many of the buildings had survived the bombings, the battered town at the foot of the ice-locked Chosin Reservoir was not a spectacle calculated to raise the spirits of newcomers.

It was too late to relieve 2/7 (–) that evening. Lieutenant Colonels Ridge and Lockwood agreed that Fox Company, 7th Marines, and Weapons Company (–) of 2/7 would occupy positions jointly with 3/1. The hours of darkness passed quietly and relief was completed the next day. Fox Company then moved to its new positions near Toktong Pass.
Chapter 10. Hagaru’s Night of Fire
Four-Mile Perimeter Required

On the morning of 27 November, of course, an all-out enemy attack was still in the realm of speculation. But it was evident to Lieutenant Colonel Ridge, CO of 3/1, that one to two infantry regiments and supporting arms would be required for an adequate defense of Hagaru. With only a battalion (–) at his disposal, he realized that he must make the best possible use of the ground. For the purposes of a survey, he sent his S–3, Major Trompeter, on a walking reconnaissance with Major Simmons, CO of Weapons Company and 3/1 Supporting Arms Coordinator.

After a circuit of the natural amphitheater, the two officers agreed that even to hold the reverse slopes would require a perimeter of more than four miles in circumference (see Map 17). The personnel resources of 3/1 would thus be stretched to an average of one man for nearly seven yards of front. This meant that the commanding officer must take his choice between being weak everywhere or strong in a few sectors to the neglect of others. In either event, some areas along the perimeter would probably have to be defended by supporting fires alone.[2]

“Under the circumstances,” commented General Smith, “and considering the mission assigned to the 1st Marine Division, an infantry component of one battalion was all that could be spared for the defense of Hagaru. This battalion was very adequately supported by air, and had sufficient artillery and tanks for its purposes.”[3]

The terrain gave the enemy two major covered avenues of approach for troop movements. One was the hill mass east of Hagaru, the other a draw leading into the southwest side of the town, where the new airstrip was being constructed. Nor could the possibility of a surprise attack from some other quarter be dismissed entirely, since CCF observers would be able to watch Marine preparations from the surrounding hills in daylight hours.

Lieutenant Colonel Ridge decided that final troop dispositions must depend not only on terrain but equally on intelligence as to enemy capabilities. Until he had more information, the units of 3/1 were to remain in the areas formerly occupied by 2/7.
Chapter 10. Hagaru’s Night of Fire
Attempts to Clear MSR

The Battalion CP had been set up in a pyramidal tent at the angle of the road to Yudam-ni. Most of the day on the 27th was given over to improving positions. At the southwest end of the perimeter, First Lieutenant Fisher’s Item Company took over from Captain Barber’s Fox Company, the only rifle company of 2/7 remaining at Hagaru.

On the strength of preliminary S–2 reports, Ridge instructed the commanders of his two rifle companies to improve their sectors, which included the entire south and southwest curve of the perimeter. All the Division Headquarters troops except one motor convoy had reached Hagaru by the 27th, and it was due to leave Hungnam the next morning. The new Division CP was located in the northeast quarter of town, near the long concrete bridge over the frozen Changjin River. Rows of heated tents surrounded a Japanese type frame house repaired for the occupancy of General Smith, who was expected by helicopter in the morning. Already functioning at the CP were elements of the General Staff Sections and Headquarters Company.[4]

The busiest Marines at Hagaru on the 27th were the men of the 1st Engineer Battalion. While a Company B platoon built tent decks for the Division CP, detachments of Company A were at work on the maintenance of the MSR in the area, and Company D had the job of hacking out the new airstrip. Apparently the latter project had its “sidewalk contractors” even in sub-zero weather, for this comment found its way into the company report:

“Dozer work [was] pleasing to the eye of those who wanted activity but contributed little to the overall earth-moving problem of 90,000 cubic yards of cut and 60,000 cubic yards of fill.”[5]

Motor graders and scrapers with a 5.8 cubic yard capacity had been moved up from Hamhung. So difficult did it prove to get a bite of the frozen earth that steel teeth were welded to the blades. When the pan was filled, however, the earth froze to the cutting edges until it could be removed only by means of a jack hammer.

The strip was about one-fourth completed on the 27th, according to minimum estimates of the length required. Work went on that night as usual under the flood lights.[6] Not until the small hours of the morning did the first reports reach Hagaru of the CCF attacks on Yudam-ni and Fox Hill.

Some remnants of 2/7 were still at Hagaru, for lack of transportation, when Lieutenant Colonel Lockwood, commanding officer of the battalion, received a dispatch from Colonel Litzenberg directing him to proceed to Toktong Pass and assist Fox Company. At 0530 he requested the “loan” of a rifle company of 3/1 to reinforce elements of Weapons Company (–), 2/7. Lieutenant Colonel Ridge could spare only a platoon from How Company, and at 0830 the attempt was cancelled. An hour later Weapons Company and three tanks from the 2d Platoon of Company D, 1st Tank Battalion, made another effort. They pushed half-way to the objective, only to be turned back by heavy Chinese small-arms and mortar fire from the high ground on both sides of the road. Supporting fires from 3/1 helped the column to break off contact and return to Hagaru at 1500.[7]

No better success attended a reinforced platoon of How Company, 3/1, accompanied by three Company D tanks, when it set out on the road to Koto-ri. On the outskirts of Hagaru, within sight of Captain Corley’s CP, the men were forced to climb down from their vehicles and engage in a hot fire fight. They estimated the enemy force at about 50, but an OY pilot dropped a message warning that some 300 Chinese were moving up on the flanks of the patrol. The Marines managed to disengage at 1530, with the aid of mortar and artillery fires from Hagaru, and returned to the perimeter with losses of one killed and five wounded.[8]

A similar patrol from Item Company, 3/1, struck off to the southwest of the perimeter in the direction of Hungmun-ni. Late in the morning of the 28th, this reinforced platoon encountered an estimated 150 enemy and
called for artillery and mortar fires. After dispersing this CCF group, the patrol routed a second enemy detachment an hour later after a brief fire fight. [9]

Any lingering doubts as to the extent of the Chinese attack on the MSR were dispelled by reports from the OY and HO3S–1 pilots of VMO–6. They disclosed that defended enemy road blocks had cut off Yudam-ni, Fox Hill, Hagaru, and Koto-ri from any physical contact with one another. The advance units of the 1st Marine Division had been sliced into four isolated segments as CCF columns penetrated as far south as the Chinhung-ni area. [10]
There was no question at all in the minds of Lieutenant Colonel Ridge and his officers as to whether the Chinese would attack at Hagaru. As early as the morning of the 27th, the problem had simply been one of when, where, and in what strength. It was up to the S–2 Section to provide the answers, and upon their correctness would depend the fate of Hagaru, perhaps even of the 1st Marine Division.

Second Lieutenant Richard E. Carey, the S–2, was a newcomer to the battalion staff, recently transferred from a George Company infantry platoon. His group consisted of an assistant intelligence chief, Staff Sergeant Saverio P. Gallo, an interpreter, and four scout observers.[11] There were also two CIC agents assigned to 3/1 by Division G–2.

At Hagaru, as at Majon-ni, the Marines had won respect at the outset by allowing the Korean residents all privileges of self-government which could be reconciled with military security. The police department and town officials had been permitted to continue functioning. They in turn briefed the population as to restricted areas and security regulations, particularly curfew. Korean civilians entering Hagaru through Marine road blocks were searched before being taken to the police station where they were questioned by an interrogation team from the S–2 Section.

Hagaru’s resemblance to a gold-rush mining camp was heightened on the 27th by a tremendous influx both of troops and Koreans from outlying districts. A large truck convoy from Headquarters Battalion arrived to set up the new Division CP, and detachments from various Marine or Army service units entered in a seemingly endless stream. The Korean refugees had much the same story to tell; most of them came from areas to the north and west of Hagaru, and they had been evicted from their homes by large numbers of CCF troops.

Carey instructed his CIC agents to converse with incoming Koreans and learn everything possible about the enemy situation. Again, as at Majon-ni, people who had been thoroughly indoctrinated with Communism were found “highly co-operative.” As untrained observers, however, their estimates of CCF numbers and equipment could not be taken too literally. Since their statements agreed that the enemy was in close proximity, Carey decided to take the risk of sending his two CIC agents on the dangerous mission of establishing direct contact. They were enjoined to make a circuit of the perimeter, mingling whenever possible with the Chinese and determining the areas of heaviest concentration.

The results went beyond Carey’s fondest expectations. Not only did his agents return safely from their long hike over the hills, but they brought back vital information. Well led and equipped Chinese Communist units had been encountered to the south and west of Hagaru. And since Marine air also reported unusual activity in this area, it was a reasonable assumption that the enemy was concentrated there approximately in division strength.

This answered the questions as to “how many” and “where.” There remained the problem as to “when” the attack might be expected, and again on the 28th Carey sent out his CIC agents to make direct contact. “I expected little or no information,” he recollected, “but apparently these men had a way with them. Upon reporting back, they told me that they had talked freely with enemy troops, including several officers who boasted that they would occupy Hagaru on the night of 28 November.”

Major enemy units were reported to be five miles from the perimeter. Dusk was at approximately 1800, with complete darkness setting in shortly afterwards. Adding the estimate of three and a half hours for Chinese movements to the line of departure, the S–2 Section calculated that the enemy could attack as early as 2130 on the night of the 28th from the south and west in division strength.[12]
Positions of Marine Units

These intelligence estimates were accepted by Lieutenant Colonel Ridge as the basis for his planning and troop dispositions. As the main bastion of defense, the tied-in sectors of How and Item Companies were extended to include the south and southwest sides of the perimeter—nearly one-third of the entire circumference—in a continuous line 2300 yards in length, or more than a mile and a quarter. Each platoon front thus averaged about 380 yards, which meant that supporting arms must make up for lack of numbers.[13]

East Hill, considered the second most likely point of enemy attack, was to be assigned to George Company on arrival. Captain Sitter’s outfit had orders to depart the Chigyong area on the morning of the 28th, so that it could be expected at Hagaru before dark.

The southeast quarter of the perimeter, between East Hill and the left flank of How Company, was to be held by the following units: (1) Weapons Company (less detachments reinforcing the rifle companies and its 81mm mortars emplaced near the battalion CP) manning a road block on the route to Koto-ri and defending the south nose of East Hill; (2) Dog Company, 1st Engineer Battalion (less men at work on the airstrip), occupying the ground south of the concrete bridge; and (3) Dog Battery, 2d Battalion, 11th Marines, which had the mission of covering 75 per cent of the perimeter with observed indirect fire and 25 per cent with direct fire.

These dispositions left a gap between Weapons Company and the engineer and artillery units on the west bank of the Changjin River. But this stretch of frozen marshland was so well covered by fire that an enemy attack here would have been welcomed.

The first reports of the CCF onslaughts at Yudam-ni and Fox Hill, as interpreted by Lieutenant Colonel Ridge, “clearly indicated that no time was to be lost at buttoning up the Hagaru perimeter.” He called on Colonel Bowser, the Division G–3, on the morning of the 28th and recommended that an overall defense commander be designated with operational control over all local units. Ridge also requested that George Company and the 41st Commando be expedited in their movement to Hagaru.

Before a decision could be reached, General Smith arrived by helicopter and opened the Division CP at 1100. A Marine rear echelon had remained at Hungnam to cope with supply requirements. Colonel Francis A. McAlister, the G–4, left in command, accomplished during the forthcoming campaign what General Smith termed “a magnificent job” in rendering logistical support.[14]

The CP at Hagaru had been open only half an hour when General Almond arrived by helicopter and opened the Division CP at 1100. A Marine rear echelon had remained at Hungnam to cope with supply requirements. Colonel Francis A. McAlister, the G–4, left in command, accomplished during the forthcoming campaign what General Smith termed “a magnificent job” in rendering logistical support.[14]

The CP at Hagaru had been open only half an hour when General Almond arrived in a VMO–6 helicopter to confer with the Division commander. Departing at 1255, he visited the 31st Infantry troops who had been hard hit the night before by CCF attacks east of the Chosin Reservoir. On his return to Hamhung, the Corps commander was informed that CinCFE had directed him to fly immediately to Tokyo for a conference. There he learned that the Eighth Army was in full retreat, with some units taking heavy losses both in personnel and equipment. Generals Almond, Walker, Hickey, Willoughby, Whitney, and Wright took turns at briefing the commander in chief during a meeting which lasted from midnight to 0130.[15]

At Hagaru it was becoming more apparent hourly to Ridge that his prospects of employing Captain Sitter’s company on East Hill were growing dim. As he learned later, the unit had left Chigyong that morning in the trucks of Company B, 7th Motor Transport Battalion, commanded by Captain Clovis M. Jones. Sitter was met at Koto-ri by Lieutenant Colonel Robert W. Rickert, executive officer of RCT–1, and directed to report to the regimental S–3, Major Robert E. Lorigan. Efforts to open up the road to Hagaru had failed, he was told, and it would be necessary for George Company to remain overnight at Koto-ri.[16]
The probability of such an outcome had already been accepted by Ridge on the basis of the resistance met on the road to Koto-ri by his How Company patrol. With this development added to his worries, he received a telephone call at 1500 from Colonel Bowser, informing him that he had been named defense commander at Hagaru by General Smith.[17]

Just ten minutes later a single CCF shell, assumed to be of 76mm caliber, exploded in the Battalion CP area and fatally wounded Captain Paul E. Storaasli, the S–4. The perimeter was so cluttered with tents and dumps that artillery fire at random could hardly have been wasted; but the enemy gun remained silent the rest of the day, doubtless to avert Marine counter-battery reprisals.

Only three hours of daylight remained when the newly designated defense commander summoned unit commanders to an initial conference. It was not made clear just what troops had been placed under his operational control. “A primary reason,” commented Ridge, “was that no one knew what units were there, this being compounded by the numerous small elements such as detachments, advance parties, etc., of which many were Corps and ROK units. Hence, the Battalion S-1 and his assistants were a combination of town criers and census takers. We did, however, get most of the commanders of major units (if such they could be called) to the initial conference, but the process of locating and identifying smaller units was thereafter a continuous process which we really never accurately completed.”[18]

The larger outfits could be summoned to the conference by telephone but it was necessary to send out runners in other instances. With George Company not available, the question of defending East Hill loomed large. Ridge decided against all proposals that one of the two rifle companies be used for that purpose. On the strength of the S–2 report, he preferred to concentrate as much strength as possible against an attack from the southwest. This meant taking his chances on East Hill with such service troops as he could scrape up, and it was plain that a strong CCF effort in this quarter would have to be met in large part by fire power from supporting arms.

The two main detachments selected for East Hill (excluding the south nose) were from Dog Company of the 10th Engineer (C) Battalion, USA, and elements of X corps Headquarters. Since the mission called for control of mortar and artillery fires as well as tactical leadership, two officers of Weapons Company, 3/1, were assigned—Captain John C. Shelnutt to the Army engineer company, and First Lieutenant John L. Burke, Jr., to the Headquarters troops. Each was to be accompanied by a Marine radio (SCR 300) operator.

Smaller detachments were later sent to East Hill from two other service units—the 1st Service Battalion, 1st Marine Division, and the 4th Signal Battalion of X Corps.

The Antitank Company of the 7th Marines defended the area to the north of East Hill. Next came How Battery, 3d Battalion, 11th Marines, which had the primary mission of supporting Fox Company, 2/7, on the hill near Toktong Pass. But by moving gun trails the cannoneers could with some difficulty fire on the 270º arc of the perimeter stretching from the right flank of Item Company around to the north nose of East Hill.

Between the sectors held by How Battery, 3/11, and Item Company, 3/1, were troops of five Marine units: Regulating Detachment, 1st Service Battalion; 1st Motor Transport Battalion; Marine Tactical Air Control Squadron 2 (MTACS–2); Division Headquarters Battalion; and H&S Company 3/1. The only other unit in this quarter was Weapons Company (–), 2/7, which held the road block on the route to Yudam-ni.

At the conference it was decided that since Lieutenant Colonel Charles L. Banks’ Regulating Detachment had taken the lead in organizing the Supply Area on the north side of Hagaru, the arc of the perimeter east of the river and west of East Hill was to be made into a secondary defense zone. Banks thus became in effect a sub-sector commander. The only infantry troops in the Supply Area being detachments of 2/7 units, it was also agreed that tactical decisions concerning the zone should be discussed with the two ranking battalion officers — Lieutenant Colonel Lockwood, the commander, and Major Sawyer, the executive.[19]

These matters having been settled, the conference broke up shortly after 1700 and the various commanders hastened back to their outfits to make last-minute preparations for the night’s attack. A strange hush
had fallen over the perimeter, broken only by the occasional crackle of small-arms fire, and the damp air felt like snow.
Chapter 10. Hagaru’s Night of Fire
CCF Attack from the Southwest

How and Item Companies were ready. All platoon positions were well dug in, though the earth was frozen to a depth of six to ten inches.

The men of Item Company used their heads as well as hands after Lieutenant Fisher managed to obtain a thousand sandbags and several bags of C3. This explosive was utilized in ration cans to make improvised shape charges which blasted a hole through the frozen crust of snow and earth. Then it became a simple matter to enlarge the hole and place the loose dirt in sandbags to form a parapet.[20] This ingenious system resulted in deluxe foxholes and mortar emplacements attaining to the dignity of field fortifications.

Both company fronts bristled with concertinas, trip flares, booby traps, and five-gallon cans of gasoline rigged with thermite bombs for illumination. Three probable routes of enemy attack channeled the low hills to the southwest—a main draw leading to the junction between the two company sectors, and a lesser draw providing an approach to each. The ground in front of the junction had been mined, and two tanks from the Provisional Platoon were stationed in this quarter. Detachments from Weapons Company also reinforced both rifle companies. Thus the six platoons faced the enemy in the following order:

Click here to view table

Beginning at 1700, hot food was served to all hands in rotation. A fifty per cent alert went into effect after dark as the men were sent back on regular schedule for coffee and a smoke in warming tents located as close to the front as possible. The first snowflakes fluttered down about 1950, muffling the clank of the dozers at work as usual under the floodlights on the airstrip behind the How Company’s sector. Just before 2130, the expected time of CCF attack, both company commanders ordered a hundred per cent alert, but the enemy did not show up on schedule. It was just over an hour later when three red flares and three blasts on a police whistle signaled the beginning of the attack. Soon trip flares and exploding booby traps revealed the approach of probing patrols composed of five to ten men.

A few minutes later, white phosphorus mortar shells scorched the Marine front line with accurate aim. The main CCF attack followed shortly afterwards, with both company sectors being hit by assault waves closing in to grenade-throwing distance.

The enemy in turn was staggered by the full power of Marine supporting arms. Snowflakes reduced an already low visibility, but fields of fire had been carefully charted and artillery and mortar concentrations skillfully registered in. Still, the Communists kept on coming in spite of frightful losses. Second Lieutenant Wayne L. Hall, commanding the 3d Platoon in the center of Item Company, was jumped by three Chinese whom he killed with a .45 caliber automatic pistol after his carbine jammed. The third foe pitched forward into Hall’s foxhole.

On the left flank, tied in with How Company, First Lieutenant Robert C. Needham’s 2d Platoon sustained most of the attack on Item Company. The fire of Second Lieutenant James J. Boley’s 60mm mortars and Second Lieutenant John H. Miller’s light machine guns was concentrated in this area. It seemed impossible that enemy burp guns could miss such a target as Lieutenant Fisher, six feet two inches in height and weighing 235 pounds. But he continued to pass up and down the line, pausing at each foxhole for a few words of encouragement. By midnight the enemy pressure on Needham’s and Hall’s lines had slackened, and on the right flank Second Lieutenant Mayhlon L. Degernes’ 1st Platoon received only light attacks.

This was also the case on the left flank of How Company, where Second Lieutenant Ronald A. Mason’s
2d Platoon saw little action as compared to the other two. A front of some 800 yards in the center of the 2300-yard Marine line, including two platoon positions and parts of two others, bore the brunt of the CCF assault on How and Item Companies.

Captain Corley had just visited his center platoon when the first attacks hit How Company. Second Lieutenant Wendell C. Endsley was killed while the company commander was on his way to Second Lieutenant Roscoe L. Barrett’s 1st Platoon, on the right, which soon had its left flank heavily engaged.

Never was CCF skill at night attacks displayed more effectively. Barrett concluded that the Chinese actually rolled down the slope into the How Company lines, so that they seemed to emerge from the very earth. The 3d Platoon, already thinned by accurate CCF white phosphorus mortar fire, was now further reduced in strength by grenades and burp gun bursts. About this time the company wire net went out and Corley could keep in touch with his platoons only by runners. The battalion telephone line also being cut, he reported his situation by radio to the Battalion CP.

Two wiremen were killed while trying to repair the line. The Chinese continued to come on in waves, each preceded by concentrations of light and heavy mortar fire on the right and center of the How Company position. About 0030 the enemy broke through in the 3d Platoon area and penetrated as far back as the Company CP. A scene of pandemonium ensued, the sound of Chinese trumpets and whistles adding to the confusion as it became difficult to tell friend from foe. “Tracers were so thick,” recalled Sergeant Keith E. Davis, “that they lighted up the darkness like a Christmas tree.”

Corley and five enlisted men operated as a supporting fire team while First Lieutenant Harrison F. Betts rounded up as many men as he could find and tried to plug the gap in the 3d Platoon line. This outnumbered group was swept aside as the next wave of CCF attack carried to the rear of How Company and threatened the engineers at work under the floodlights.

A few Chinese actually broke through and fired at the Marines operating the dozers. Second Lieutenant Robert L. McFarland, the equipment officer, led a group of Dog Company engineers who counter-attacked and cleared the airstrip at the cost of a few casualties. Then the men resumed work under the floodlights.

The Battalion reserve, if such it could be called, consisted of any service troops who could be hastily gathered to meet the emergency. Shortly before midnight Ridge sent a platoon-strength group of X Corps signalmen and engineers under First Lieutenant Grady P. Mitchell to the aid of How Company. Mitchell was killed upon arrival and First Lieutenant Horace L. Johnson, Jr., deployed the reinforcements in a shallow ditch as a company reserve.

About midnight the fight had reached such a pitch of intensity that no spot in the perimeter was safe. The Company C medical clearing station, only a few hundred yards to the rear of Item Company, was repeatedly hit by machine gun bullets whipping through the wooden walls as surgeons operated on the wounded. The Division CP also took hits, and a bullet which penetrated General Smith’s quarters produced unusual sound effects when it ricocheted off pots and pans in the galley.

The Chinese seemed to be everywhere in the How Company zone. Shortly after midnight they surrounded the CP, portable galley and provision tent. “It is my personal opinion,” commented Captain Corley, “that if the enemy had decided to effect a major breakthrough at this time, he would have experienced practically no difficulty. However, he seemed content to wander in and around the 3d Platoon, galley and hut areas.”

The Chinese, in short, demonstrated that they knew better how to create a penetration than to exploit one. Once inside the How Company lines, they disintegrated into looting groups or purposeless tactical fragments. Clothing appealed most to the plunderers, and a wounded Marine in the 3d Platoon area saved his life by pretending to be dead while Communists stripped him of his parka.

About 0030 the Battalion CP advised Corley by radio that more reinforcements were on the way. Lieutenant Johnson met the contingent, comprising about 50 service troops, and guided them into the company
area, where they were deployed as an added reserve to defend the airstrip.

    Item Company was still having it hot and heavy but continued to beat off all CCF assaults. Elements of Weapons Company, manning the south road block, came under attack at 0115. Apparently a small enemy column had lost direction and blundered into a field of fire covered by heavy machine guns. The hurricane of Marine fire caught the Communists before they deployed and the result was virtual annihilation.
Chapter 10. Hagaru’s Night of Fire
East Hill Lost to Enemy

Half an hour later, with the situation improving in the How Company zone, the Battalion CP had its first alarming reports of reverses on East Hill. The terrain itself had offered difficulties to men scrambling up the steep, icy slopes with heavy burdens of ammunition. These detachments of service troops, moreover, included a large proportion of newly recruited ROKs who had little training and understood no English.

The largest of the East Hill units, Company D of the 10th Engineer Combat Battalion, commanded by Captain Philip A. Kulbes, USA, was composed of 77 American enlisted men and 90 ROKS. Combat equipment (in addition to individual weapons) consisted of four .50 caliber machine guns, five light .30 caliber machine guns, and six 3.5 rocket launchers.[25]

The Army engineers had arrived at Hagaru at 1200 on the 28th, shortly before the enemy cut the MSR. After being assigned to the East Hill sector during the afternoon, the company used the few remaining hours of daylight to move vehicles and gear back to an equipment park in the perimeter. It was 2030 before the four platoons got into position on East Hill after an exhausting climb in the darkness with heavy loads of ammunition. Some use was made of existing holes, but most of the men were not dug in when the Chinese attacked.

On the left the collapse of a ROK platoon attached to X Corps Headquarters led rapidly to confusion everywhere on East Hill. Captain Shelnutt, the Marine officer assigned to the Army engineers, found that he could not close the gap by extending the line to the left. Nor did the men, particularly the ROKs, have the training to side-slip to the left under fire and beat off flank attacks. The consequence was a general withdrawal on East Hill, attended in some instances by demoralization. Shelnutt was killed as the four engineer platoons fell back some 250 yards in “a tight knot,” according to Lieutenant Norman R. Rosen, USA, commander of the 3d Platoon.

This was the situation as reported by the Marine radio operator, PFC Bruno Podolak, who voluntarily remained as an observer at his post, now behind enemy lines. At 0230 a telephone call to Colonel Bowser from the 3/1 CP was recorded in the message blank as follows:

“How Company still catching hell and are about ready to launch counterattack to restore line. About an hour ago, enemy appeared on East Hill. A group of enemy sneaked up to a bunch of Banks’ men and hand-grenaded hell out of them and took position. Sending executive officer over to see if we can get some fire on that area. Should be able to restore the line but liable to be costly. Reserve practically nil. Do have a backstop behind the break in How lines on this side of airstrip, composed of engineers and other odds and ends.”[26]

At 0400 there was little to prevent the enemy from making a complete breakthrough on East Hill and attacking the Division CP and the supply dumps. A friendly foothold had been retained on reverse slopes of the southern nose, but the northern part was held only by artillery fires. Along the road at the bottom of East Hill a thin line of service troops with several tanks and machine guns formed a weak barrier.

All indications point to the fact that the Chinese themselves were not in sufficient strength to follow up their success. Their attack on East Hill was apparently a secondary and diversionary effort in support of the main assault on the sectors held by How and Item Companies. At any rate, the enemy contented himself with holding the high ground he had won.

Some of the defenders of East Hill had fought with bravery which is the more admirable because of their lack of combat training. Battle is a business for specialists, and Lieutenant Rosen relates that the Army engineers “had a great deal of difficulty with our weapons because they were cold and fired sluggishly. We had gone into
action so unexpectedly that it had not occurred to us to clean the oil off our weapons.” As an example of the difficulties imposed by the language barrier, the officers were given to understand by the ROKs that they had no more ammunition. “Weeks later,” commented Rosen, “we found that most of them had not fired their ammunition this night, but continued to carry it.”[27]

In view of such circumstances, the service troops put up a creditable if losing fight in the darkness on East Hill. The 77 Americans of the Army engineer company suffered losses of 10 KIA, 25 WIA, and nine MIA; and of the 90 ROKs, about 50 were killed, wounded, or missing, chiefly the latter.[28]
The Chosin Reservoir Campaign
Lynn Montross and Nicholas A. Canzona

Chapter 10. Hagaru’s Night of Fire
The Volcano of Supporting Fires

As usual, the men in the thick of the fight saw only what happened in their immediate area. The scene as a whole was witnessed by a young Marine officer of Company A, 1st Engineer Battalion, on duty at a sawmill two miles north of Hagaru. From the high ground he could look south down into the perimeter, and the awesome spectacle of a night battle made him think of a volcano in eruption. Gun flashes stabbing the darkness were fused into a great ring of living flame, and the thousands of explosions blended into one steady, low-pitched roar.[29]

Seldom in Marine history have supporting arms played as vital a part as during this night at Hagaru. It is possible that a disaster was averted on East Hill when the Marines of Captain Benjamin S. Read’s How Battery shifted trails and plugged the hole in the line with howitzer fires alone. Lieutenant Colonel Banks and Major Walter T. Warren, commanding the antitank company of the 7th Marines, acted as observers. Reporting by telephone to the gun pits, they directed the sweating gunners so accurately that an enemy attack would have come up against a curtain of fire.[30]

Captain Strohmenger’s Dog Battery had been attached to 3/1 so long that a high degree of co-ordination existed. His 105s fired about 1200 rounds that night, and POW interrogations disclosed that enemy concentrations in rear areas were repeatedly broken up.

When CCF guns replied, shortly before midnight, there was danger of a fuel or ammunition dump being hit and starting a chain reaction of detonations in the crowded perimeter. Strohmenger ordered five of his howitzers to cease fire while he moved the sixth out about 150 yards to act as a decoy. Its flashes drew fire from the enemy, as he had hoped, revealing the positions of the Chinese artillery. Dog Battery officers set up two aiming circles and calculated the range and deflection. Then the command was given for all six Marine howitzers to open up. The enemy guns were silenced for the night. A later survey established that two CCF 76mm guns had been destroyed and two others removed.[31]

The 60mm mortars of the two rifle companies fired a total of more than 3200 rounds; and on both fronts the heavy machine guns of Weapons Company added tremendously to the fire power. Illuminating shells being scarce, two Korean houses on the Item Company’s front were set ablaze by orders of Lieutenant Fisher. The flames seemed to attract CCF soldiers like moths, and the machine guns of the two tanks stationed here reaped a deadly harvest. Curiously enough, the Chinese apparently did not realize what excellent targets they made when silhouetted against the burning buildings.

By 0400 it was evident that the enemy’s main effort had failed. No further attacks of any consequence were sustained by the two rifle companies. It remained only to dispose of the unwelcome CCF visitors sealed off in the How Company zone, and at 0420 Captain Corley rounded up men for a counterattack.

“It will be just as dark for them as for us,” he told his NCOs.

Second Lieutenant Edward W. Snelling was directed to fire all his remaining 60mm mortar ammunition in support. Corley and Betts led the service troops sent as reinforcements while Johnson advanced on the left. A bitter fight of extermination ensued, and by 0630 the MLR had been restored. How Company, which sustained the heaviest losses of any Marine unit that night, had a total of 16 men killed and 39 wounded, not including attached units.[32]

After it was all over, the stillness had a strange impact on ears attuned the whole night long to the thump of mortars and clatter of machine guns. The harsh gray light of dawn revealed the unforgettable spectacle of hundreds of Chinese dead heaped up in front of the two Marine rifle companies.[33] Shrouds of new white snow
covered many of them, and crimson trails showed where the wounded had made their way to the rear.
Chapter 10. Hagaru’s Night of Fire
Marine Attacks on East Hill

But even though the enemy’s main attack had failed, his secondary effort on East Hill represented a grave threat to perimeter security. At 0530 Ridge decided to counterattack, and Major Reginald R. Myers volunteered to lead an assault column composed of all reserves who could be scraped together for the attempt.

It was broad daylight before the Battalion executive officer moved out with an assortment of Marine, Army, and ROK service troops, some of them stragglers from the night’s withdrawals from East Hill (see Map 18). Their total strength compared to that of an infantry company. About 55 separate units were represented at Hagaru, many by splinter groups, so that most of Myer’s men were strangers to one another as well as to their officers and NCOs.

The largest Marine group was the platoon led by First Lieutenant Robert E. Jochums, assistant operations officer of the 1st Engineer Battalion. Clerks, typists, and truck drivers were included along with Company D engineers. Armed with carbines or M-1s and two grenades apiece, the men carried all the small arms ammunition they could manage. Few had had recent combat experience and the platoon commander knew only one of them personally—a company clerk whom he made his runner.

It was typical of the informality attending this operation that a Marine NCO with a small group attached themselves to Jochums, giving him a total of about 45. They had an exhausting, 45-minute climb up the hill to the line of departure, where Myers directed them to attack on the left of his main force.

The early morning fog enshrouded East Hill and Myers’ attack had to wait until it cleared. The jump-off line lay along a steep slope with little or no cover. From the outset the advancing troops were exposed to scattered small-arms fire as well as grenades which needed only to be rolled downhill. New snow covering the old icy crust made for treacherous footing, so that the heavily laden men took painful falls.

Myers’ little task force can scarcely be considered a tactical organization. His close air support was excellent; but both artillery and mortar support were lacking. Jochums did not notice any weapons save small arms and grenades.

“Our plane assaults were very effective, especially the napalm attacks,” he commented on the basis of a personal log kept at the time. “During these strikes, either live or dry runs, the enemy troops in the line of fire would often rise and run from their positions to those in the rear.”[34]

Marine air came on station at 0930 as VMF–312 planes peeled off to hit the enemy with napalm and bombs. The squadron flew 31 sorties that day at Hagaru, nearly all in the East Hill area. Enemy small-arms fire crippled one aircraft; but the pilot, First Lieutenant Harry W. Colmery, escaped serious injuries by making a successful crash landing within the perimeter.[35]

All accounts agree that the ground forces met more serious opposition from the terrain at times than from the enemy. So cut up into ridges and ravines was this great hill mass that the troops seldom knew whether they were advancing in defilade or exposing themselves to the fire of hidden adversaries. Thus the attack became a lethal game of hide-and-seek in which a step to the right or left might make the difference between life and death. On the other hand, when the Corsairs provided shooting gallery targets by flushing out opponents, only a few men could get into effective firing position along the narrow, restricted ridges before the Communists scuttled safely to new cover.

It took most of the energies of the attackers to keep on toiling upward, gasping for breath, clutching at bushes for support, and sweating at every pore in spite of the cold. At noon, after snail-like progress, the force
was still far short of the main ridge recognized as the dividing line between friendly forces and the enemy. By this time more than half of Myers’ composite company had melted away as a result of casualties and exhaustion. Jochums saw no more than 15 wounded men in the attacking force during the day. He noted about the same number of dead Chinese. As for enemy strength, he estimated that the total may have amounted to a company or slightly more.

It was his conviction that “three well organized platoons could have pressed the assault without serious consequences and seized the immediate highest objective. What was behind that I am unable to say, but I feel that taking this high ground would have solved the problem.”[36]

Most of the friendly casualties were caused by the grenades and grazing machine-gun fire of concealed opponents who had the law of gravity fighting on their side. Jochums was painfully wounded in the foot but continued with his platoon. “The age-old problem of leadership in such an operation,” he concluded, “may be compared to moving a piece of string—pulling it forward will get you farther than pushing.”

Enemy small-arms fire increased in volume when Myers’ remnants, estimated at 75 men, reached the military crest of the decisive ridge. There the groups in the center and on the right were halted by the Chinese holding the topographical crest and reverse slope. On the left Jochums’ men managed to push on to an outlying spur before being topped by CCF fire from a ridge to the northeast. Jochums’ position was still short of the commanding high ground, yet it was destined to be the point of farthest penetration on East Hill.

Myers ordered his men to take what cover they could find and draw up a defensive line “short of the topographical crest” while awaiting a supporting attack.[37] This was to be carried out by elements of Captain George W. King’s Able Company of the 1st Engineer Battalion, which had been stationed at a sawmill two miles north of Hagaru to repair a blown bridge. These troops reached the perimeter without incident at noon and proceeded immediately to the assault.

First Lieutenant Nicholas A. Canzona’s 1st Platoon led the column. Orders were to ascend the southwestern slope of East Hill, pass through Myers’ force and clear the ridge line. But after completing an exhausting climb to the military crest, the engineer officer was directed to retrace his steps to the foot. There Captain King informed him that a new attack had been ordered on the opposite flank, from a starting point about 1000 yards to the northeast.

Moving to the indicated route of approach, Canzona began his second ascent with two squads in line, pushing up a spur and a draw which became almost perpendicular as it neared the topographical crest. Only his skeleton platoon of about 20 men was involved. There were neither radios nor supporting arms, and a light machine gun was the sole weapon in addition to small arms and grenades.

Upon reaching the military crest, the engineers were pinned down by CCF machine-gun fire along a trail a few feet wide, with nearly vertical sides. Only Canzona, Staff Sergeant Stanley B. McPhersen and PFC Eugene B. Schlegel had room for “deployment,” and they found the platoon’s one machine gun inoperative after it was laboriously passed up from the rear. Schlegel was wounded and rolled downhill like a log, unconscious from loss of blood.

Another machine gun, sent up from the foot, enabled the platoon to hold its own even though it could not advance. Canzona put in a request by runner for mortar support, but only two 81mm rounds were delivered after a long delay. It was late afternoon when he walked downhill to consult King, who had just been ordered to withdraw Company A to a reverse slope position. Canzona returned to his men and pulled them back about halfway down the slope while McPherson covered the retirement with machine-gun fire. The winter sun was sinking when the weary engineers set up a night defense, and at that moment the howitzers of How Battery cut loose with point-detonation and proximity bursts which hit the Chinese positions with deadly accuracy.

Canzona estimated the enemy strength in his zone at no more than a platoon, which might have been dislodged with the aid of artillery or even mortar fire.[38]
About 500 yards south of the engineers, Major Myers held a defensive position with his remaining force of about two platoons. The Battalion CP had reason to believe that the outposts on East Hill would be relieved shortly by George Company, with the 41st Commando in perimeter reserve. Both had departed Koto-ri that morning in a strong convoy which also included an Army infantry company, four platoons of Marine tanks, and the last serial of Division Headquarters Battalion.

It was still touch and go at Hagaru at dusk on the 29th, but the defenders could take satisfaction in having weathered the enemy’s first onslaught. General Smith, courteous and imperturbable as always, visited the Battalion CP to commend Ridge and his officers for the night’s work. Two rifle companies had inflicted a bloody repulse on several times their own numbers, and the counterattacking forces on East Hill had at least hung on by their eyelashes.

In the final issue, a bob-tailed rifle battalion, two artillery batteries and an assortment of service troops had stood off a CCF division identified as the 58th and composed of the 172d, 173d, and 174th Infantry Regiments reinforced with organic mortars and some horse-drawn artillery. Chinese prisoners reported that the 172d, taking the principal part in the attacks on How and Item Companies, had suffered 90 per cent casualties. Elements of the 173d were believed to have figured to a lesser extent, with the 174th being kept in reserve.[39]

This was the situation in the early darkness of 29 November, when the disturbing news reached Hagaru that George Company and the Commandos were being heavily attacked on the road from Koto-ri and had requested permission to turn back.
BEFORE THE CHINESE struck at Yudam-ni, they had penetrated 35 miles farther south along the MSR. At Chinhung-ni, on the night of 26 November, the Marines of the 1st Battalion, RCT–1, exchanged shots in the darkness with several elusive enemy groups making “light probing attacks.”

Lieutenant Colonel Donald M. Schmuck, the new battalion commander, had set up a defensive perimeter upon arrival with his three rifle companies reinforced by 4.2-inch mortar and 75mm recoilless rifle platoons.[1] The identity of the enemy on the night of the 26th was not suspected, and patrols the next day made no contacts. At 1900 on the 27th, however, another light attack on the perimeter was repulsed. During the next two days, patrol actions definitely established that Chinese in estimated battalion strength were in a mountain valley to the west, hiding in houses by day and probing by night apparently in preparation for a determined attack.

Schmuck decided to strike first. On the 29th, a Baker Company reconnaissance patrol searched out the enemy positions, and the next day the battalion commander led an attacking force composed of Captain Barrow’s Able Company and part of Captain Noren’s Baker Company, reinforced by 81mm and 4.2-inch mortars under the direction of Major William L. Bates, Jr., commanding the Weapons Company.

While First Lieutenant Howard A. Blancheri’s Fox Battery of 2/11 laid down supporting fires, the infantry “ran the Chinese right out of the country,” according to Major Bates’ account. “We burned all the houses they had been living in and brought the civilians back with us. We had no more difficulty with the Chinese from that valley.”

The Communists were found to be warmly clothed in new padded cotton uniforms and armed with American weapons presumably captured from the Nationalists. An estimated 56 were killed by the ground forces before the Corsairs of VMF–312 took up a relentless pursuit which lasted until the enemy remnants scattered into hiding. Some of the Chinese were mounted on shaggy Mongolian ponies.[2]
During this same period, Lieutenant Colonel Sutter’s 2d Battalion of RCT–1 had several hard-fought encounters with the new enemy. After arriving at Koto-ri on the 24th, he set up a perimeter defense facing west, north, and east which included a 4.2-inch Mortar Platoon as well as Easy Battery of 2/11, commanded by Captain John C. McClelland, Jr. Some commanding ground was left unoccupied, but Sutter believed that a tight perimeter offered advantages over widely separated blocking positions. In addition to 2/1, the regimental CP and H&S Company, the AT Company (–), the 4.2 Mortar Company (–), Company D of the 1st Medical Battalion and the 2d Battalion of the 11th Marines (less Batteries D and F) were at Koto-ri.

The perimeter, second in importance only to Hagaru as a base, was to be jammed during the next few days with hundreds of Marine and Army troops held up by CCF roadblocks to the north. On 27 November, the enemy made his presence known. A motorized patrol of platoon strength from Captain Jack A. Smith’s Easy Company, supported by a section of tanks, engaged in a fire fight with about 25 Chinese in the hills west of Koto-ri. Two wounded CCF soldiers were left behind by the dispersed enemy. At this point the patrol proceeded on foot until it was stopped by the fire of an estimated 200 Communists dug in along ridge lines. At 1600 the Marines returned to the perimeter with two men wounded.

Enemy losses were reported as eight killed and 15 wounded in addition to the two prisoners. Upon being questioned, these Chinese asserted that they belonged to a Chinese division assembling to the west of Koto-ri with a headquarters in a mine shaft.[3]

There could be no doubt the next day that the enemy had swarmed into the area in fairly large numbers. A Marine outpost on a hill northeast of the perimeter received heavy small-arms fire at 0845 and was reinforced by a platoon from Easy Company. Finally these troops had to be withdrawn and an air strike called on the hill to evict the enemy.

At 1058 General Smith ordered Colonel Puller to push a force up the MSR to make contact with the tank patrol being sent south from Hagaru and to clear the MSR.[4] Groups of Chinese, sighted during the day to the north, west and east, were taken under artillery fire by Captain McClelland’s battery. Reconnaissance planes landing at the Koto-ri OY strip reported CCF roadblocks on the way to Hagaru; and at 1330 Captain Gildo S. Codispoti, the S–3, dispatched Captain Welby W. Cronk’s Dog Company in vehicles with orders to open up the route. Following in Dog Company’s wake came the last serial of Division Headquarters troops, on its way to Hagaru.[5]

Less than a mile north of the perimeter, the convoy ran into a storm of rifle and automatic weapons fire from Chinese entrenched along the high ground on both sides of the road. The Marines of Dog Company piled out of their vehicles and deployed for a hot fire fight, supported from Koto-ri by 81mm mortars of Captain William A. Kerr’s Weapons Company. Two platoons swung around to clear the enemy from the ridge. The other platoon and the Headquarters troops advanced along the road.

At 1615 a platoon from Captain Goodwin C. Groff’s Fox Company was ordered out to assist in evacuating casualties. But as the afternoon wore on, it grew apparent that the Chinese were in greater strength than had been anticipated, and all troops were directed to return to Koto-ri at 1735. They did so under cover of strikes by the Corsairs of VMF–312.

Marine losses numbered four KIA or DOW and 34 WIA. Enemy casualties were estimated at 154 killed
and 83 wounded in addition to three prisoners taken from a unit identified as the 179th Regiment of the 60th CCF Division. Captured Chinese weapons included 130 rifles, 25 machine guns, and two cases of grenades.

That evening George Company of 3/1, 41st Commando, Royal Marines, and Baker Company of the 31st Infantry, 7th Infantry Division, arrived at Koto-ri on their way to Hagaru (see Map 20). Colonel Puller and his S–3, Major Lorigan, organized the newcomers into a task force under the command of Lieutenant Colonel Drysdale, CO of the British unit, with orders to fight its way to Hagaru the following day.

Luckily the enemy did not elect to attack the overcrowded perimeter on the night of the 28th. Every warming tent was packed to capacity, and a CCF mortar round could hardly have landed anywhere without doing a good deal of damage.

After a quiet night the Chinese began the new day by digging emplacements in the hills to the west under harassing fire from F Company. The howitzers of Easy Battery and the mortars of 2/1 provided supporting fires for Task Force Drysdale when it moved out at 0945 followed by a convoy of Division Headquarters troops. A platoon of Easy Company, 2/1, went along with corpsmen and ambulances to assist in evacuating any early wounded back to Koto-ri. Stubborn CCF resistance resulted in casualties from the outset, and it was 1600 before the Easy Company escort platoon got back to the perimeter.

The Chinese, keeping the perimeter under observation all day, evidently concluded that the northern rim, defended by Easy Company, offered the best opportunity for a penetration. Marine air strikes were called on the Chinese swarming over the near-by high ground during the last minutes of daylight, but enemy mortar rounds hit Easy Company at 1745. They were followed by bugle calls and whistle signals as the CCF infantry attacked from the high ground to the northeast.

The assault force was estimated at company strength, with the remainder of a battalion in reserve. Unfortunately for the Chinese, they had made their intentions clear all day with unusual activity in the surrounding hills, and Easy Company was not surprised. Major Clarence J. Mabry, the 2/1 executive officer, could be heard above the machine guns as he shouted encouragement to Marines who poured it into the advancing Communists. They came on with such persistence that 17 managed to penetrate within the lines, apparently to attack the warming tents.[6] All were killed. In addition, about 150 CCF bodies lay in front of the sector when the enemy withdrew at 1855, after suffering a complete repulse.

It was conjectured that the Chinese had interpreted the return of the Easy Company platoon late that afternoon as an indication that a gap in the line needed to be hastily plugged. But the supposed weak spot did not materialize, and at 1935 the enemy signed off for the night after pumping four final mortar rounds in the vicinity of the Battalion CP without doing any harm. Losses of 2/1 for the day were six KIA and 18 WIA, total CCF casualties being estimated at 175 killed and 200 wounded. Ten heavy machine guns, seven LMGs, 12 Thompson submachine guns, 76 rifles, four pistols, and 500 grenades were captured.

That was all at Koto-ri, where Recon Company arrived during the day to add its weight to the defense. But during intervals of silence the sound of heavy and continuous firing to the north gave proof that Task Force Drysdale was in trouble.
Lieutenant Colonel Drysdale’s plan of attack had called for his British Marines to lead out at 0930 and seize the first hill mass to the east of the road. Captain Sitter’s George Company of 3/1 was to follow and pass through to attack Hill 1236, with Baker Company of the 31st Infantry in reserve. LtCol Sutter, assisted by his staff, had the responsibility for planning and coordinating preparatory artillery and mortar fires from Koto-ri and attaching an air liaison officer to the task force.[7]

The first hill was taken without meeting serious resistance, but Sitter came up against well entrenched CCF troops when he attacked Hill 1236, about a mile and a half north of Koto-ri. It was nip and tuck until Master Sergeant Rocco A. Zullo fired his 3.5 rocket launcher at a range of 200 yards. Several rounds brought the Chinese out of their holes and the Marines took possession of the hill.

The Commandos and George Company moved up about a mile astride of the road toward the third objective, Hill 1182. There the enemy resisted strenuously with well-placed mortar as well as machine-gun fire from strong positions on the high ground. The impetus of the attack had been stopped when Sitter received orders from the task force commander to break off action, withdraw to the road, and await new instructions.

Drysdale had received a message from RCT–1 at 1130 advising him that the armor of Company D (less 2d platoon), 1st Tank Battalion, would be available to him at 1300. He decided to wait, therefore, and re-form the column before continuing the advance.

The two platoons of Company D tanks, reinforced by the tank platoon of the AT Company, RCT–5, reached Koto-ri at noon after moving out that morning from Majon-dong. Company B, 1st Tank Battalion, departed Tongjong-ni, just south of Majon-dong, but did not arrive at Koto-ri until 1500. The 2d Platoon being attached to Sutter’s battalion, the remainder of the company was directed to bring up the rear of the Task Force Drysdale, which by that time had renewed its attack. Thus the convoy was made up of the following components, including the elements which joined in the late afternoon of 29 November:

- 41 Ind. Commando, RM: estimated strength = 235
- Co. G, 3/1: estimated strength = 205
- Co. B, 31st Infantry, USA: estimated strength = 190, estimated vehicles = 22
- Det. 1st Sig. Bn.: estimated strength = 8, estimated vehicles = 4
- Det. 7th MT Bn.: estimated strength = 12, estimated vehicles = 22 (Trailers are included among the vehicles. George Company, 3/1 lacked organic transport and was mounted in the vehicles of 7thMTBn. For similar reasons ServCo, 1stTkBn, supplied the transportation for the 41st Commando and 377th Transportation Truck Company, USA, for B/31stInf.)
- Det. Serv. Co., 1st Tank Bn.: estimated strength = 18, estimated vehicles = 31
- Co. B(-), 1st Tank Bn.: estimated strength = 86, estimated vehicles = 23, estimated tanks = 12
- Co. D(-), 1st Tank Bn.: estimated strength = 77, estimated vehicles = 22, estimated tanks = 12
- Tank Plat., AT Co., RCT-5 estimated strength = 29, estimated tanks = 5

TOTALS: estimated strength = 922, estimated vehicles = 141, estimated tanks = 29

At 1350 the head of the column had resumed the advance, with the order of march as shown below:
Shortly after moving out, Sitter’s men were hit by heavy small-arms fire from houses on the right of the road. The company commander went forward and requested the tanks to open up with their 90mm guns, and the Chinese flushed out of the houses were destroyed by machine-gun fire.

Progress was slow because of the necessity of further halts while the tanks blasted out pockets of CCF resistance. Enemy mortar as well as small-arms fire was encountered, and a round scored a direct hit on one of the trucks carrying personnel of 3d Platoon of George Company, wounding every man in the vehicle.

Further delays resulted while the tanks made their way over roadblocks or around craters. For the three infantry companies, the advance consisted of brief periods of movement alternated with interludes in which the troops scrambled out of the trucks to engage in fire fights. Finally, about 1615, the column ground to a complete halt about four miles north of Koto-ri. At that time the tanks of Company B were just leaving the 2/1 perimeter to join the convoy.
Drysdale and Sitter were informed by the tank officers that they thought the armor could get through, but that further movement for the trucks was inadvisable in view of road conditions and increasing enemy resistance. The task force commander requested a decision from Division Headquarters as to whether he should resume an advance which threatened to prove costly. It was a difficult choice for General Smith to make, but in view of the urgent necessity for reinforcements at Hagaru he directed Drysdale to continue.[8]

The tanks had to refuel, so that more time was lost. CCF fire was only moderate during this delay, thanks to the air strikes of VMF-321 planes directed by Captain Norman Vining. When the column stopped, the vehicles had pulled off into a dry stream bed. Upon resuming the advance, unit integrity was lost and infantry elements mingled with headquarters troops.

Not far south of the halfway point to Hagaru, increased enemy fire caused an abrupt halt in a long valley. The high ground rose sharply on the right of the road, while on the left a frozen creek wound through a plain several hundred yards wide, bordered by the Changjin River and wooded hills. This was Hell Fire Valley—a name applied by Drysdale—and it was to be the scene of an all-night fight by half the men of the convoy (see Map 21).

Such a possibility was far from their thoughts when they piled out of the trucks once more, as they had done repeatedly all day, to return the enemy’s fire. It did not even seem significant when an enemy mortar shell set one of the trucks in flames at the far end of the valley, thus creating a roadblock and splitting the column. The enemy took advantage of the opportunity to pour in small-arms and mortar fire which pinned down the troops taking cover behind vehicles or in the roadside ditches and prevented removal of the damaged truck. During this interlude the head of the column, consisting of Dog/Tanks, George Company, nearly three-fourths of the 41st Commando and a few Army infantrymen, continued the advance, with Drysdale in command, in obedience to orders to proceed to Hagaru at all costs. Left behind in Hell Fire Valley were 61 Commandos, most of Company B, 31st Infantry, and practically all the Division Headquarters and Service troops.

Lieutenant Colonel Arthur A. Chidester, assistant Division G–4 and senior officer caught south of the roadblock, ordered the barred vehicles to turn around and attempt a return to Koto-ri. Before his orders could be carried out, a Chinese attack severed the convoy about 200 yards to the north of him. Other enemy attacks cut the road south of the stalled convoy, both Chidester and Major James K. Eagan being wounded and captured.

Shallow ditches on either side of the road and the unused narrow-gauge railway were utilized by the isolated troops as protection from the fire of the Chinese occupying the high ground rising abruptly at the right. The valley was about a mile long, covered with a frozen crust of snow; and far from affording much cover, it offered the enemy a convenient approach to the rear by way of the wide plain and frozen river.

The Chinese fire was not heavy at first. But when darkness put an end to Marine air strikes, the enemy became increasingly bolder. Even so, there was no attempt for several hours to close within grenade-throwing distance. During this interlude the defenders had time to recover from their confusion and take defensive positions.

As nearly as the scene can be reconstructed from confused and contradictory accounts, one large and three small perimeters were strung out over a distance of perhaps 1200 yards from north to south. Toward the north, near the outskirts of the village of Pusong-ni, was the largest perimeter. It contained the troops caught north
of the second fracture of the column and was led by Major John N. McLaughlin. His hodgepodge of 130 to 140 men included Captain Charles Peckham and part of his B Company, 31st Infantry; Warrant Officer Lloyd V. Dirst and a group of Marine MPs; some Commandos, Associated Press photographer Frank Noel, and assorted Marine service and headquarters troops.

The three smaller perimeters appear to have resulted from the splintering of a larger group originally containing nearly all the men caught south of the second cut in the convoy. Major Henry J. Seeley, Division motor transport officer, attempted to form a perimeter with these men but was frustrated by Chinese attacks which forced the men to fall back in small groups. About 300 yards south of McLaughlin’s perimeter the remnants of two Army platoons crouched in a drainage ditch. Apparently several Marines, including CWO Dee R. Yancey, were with them. Some 30 yards farther down the ditch were Captain Michael J. Capraro, the Division PIO, First Lieutenant John A. Buck, General Craig’s aide, and about 15 headquarters troops. A few other Marines clustered around Major Seeley, perhaps a hundred yards south of Capraro’s group.

There was some hope at first that the tanks of Baker Company, 1st Tank Battalion, would come to the rescue. But the Marine armor ran into heavy opposition near Hills 1236 and 1182 along the road cleared only a few hours before by Task Force Drysdale.

When attacking a convoy, the Chinese usually strove to split the motorized column into segments suitable for tactical mastication. That is what happened to Baker Company. The tanks and trucks nearest to Koto-ri got back without much trouble at 2110 after the enemy cut the column into three groups. The middle group, comprising most of the service trucks, was hit hardest. Lieutenant Colonel Harvey S. Walseth, the Division G–1, was wounded as this group finally fought back to Koto-ri at 0230 after heavy losses in trucks. This left the tank platoon which had proceeded farthest; and it formed a tight perimeter for the night about half a mile south of Seeley’s position, boxed in by friendly artillery fires from Koto-ri. At dawn the tanks returned to Koto-ri without further enemy interference.

No knowledge of these events reached the beleaguered troops in Hell Fire Valley. They continued to hope that the tanks might arrive to Baker Company. The tanks and trucks nearest to Koto-ri got back without much trouble at 2110 after the enemy cut the column into three groups. The middle group, comprising most of the service trucks, was hit hardest. Lieutenant Colonel Harvey S. Walseth, the Division G–1, was wounded as this group finally fought back to Koto-ri at 0230 after heavy losses in trucks. This left the tank platoon which had proceeded farthest; and it formed a tight perimeter for the night about half a mile south of Seeley’s position, boxed in by friendly artillery fires from Koto-ri. At dawn the tanks returned to Koto-ri without further enemy interference.

Not until the early hours of 30 November did the Communists resort to probing attacks by small groups armed with grenades. The headquarters and service troops gave a good account of themselves in the fire fight. Signalmen, clerks, cooks, truck drivers, military policemen—the Marines of Hell Fire Valley included a good many veterans of World War II, and they proved as steady as the tough combat-trained Commandos. Once again the value of the Marine Corps insistence on good basic training showed itself.

Major McLaughlin sent reconnaissance parties south in an unsuccessful attempt to link up with the other perimeters. He decided, therefore, to remain in his positions and fight off the Chinese until air could come on station at dawn. The wounded were placed in the deepest of the three ditches and Army medics gave first aid.

As the night wore on, McLaughlin’s situation became increasingly grave. By 0200 his men were out of grenades. An Army crew performed valiantly with the 75mm recoilless, firing at enemy mortar flashes until all the soldiers were killed or wounded and the gun put out of action. Twice McLaughlin’s men drove the Chinese from their mortars only to have them return.

Some of the Commandos managed to slip out of the perimeter in an effort to reach Koto-ri and summon assistance. But an attempt by Noel and two men to run the gantlet in a jeep between 0200 and 0300 ended in their capture before they proceeded a hundred yards.

At about 0430 the Chinese sent their prisoners to the perimeter with a surrender demand. McLaughlin,
accompanied by a Commando, went out to parley through an interpreter in the hope of stalling until help arrived, or at least until some of the men escaped.

“Initially I demanded a CCF surrender!” he recalls. “But it made little impression.”

The Marine officer stalled until the Chinese threatened to overrun the perimeter with an all-out attack. They gave him ten minutes to discuss the capitulation with his officers. McLaughlin went from one to another of the approximately 40 able bodied men he had left. Some had no rifle ammunition at all and none had more than eight rounds. For the sake of his wounded, he consented to surrender on condition that the serious cases be evacuated. The Chinese agreed and the fight in Hell Fire Valley ended.

McLaughlin succeeded in killing enough time so that more men were given the opportunity to slip away while the enemy relaxed his vigilance during the prolonged negotiations. Largest of these groups was composed of the survivors of the three small perimeters. Capraro and Buck, both of whom were slightly wounded, managed to unite with the Army infantrymen just north of them and nine Commandos, who joined them at about 0200. An hour and a half later they linked up with the Marines under Seeley, who led the combined group in a withdrawal to the high ground across the river. Outdistancing their CCF pursuers, after shooting down several, they made it safely to Koto-ri.

Other groups, including three more Commandos and 71 Army infantrymen, also contrived to straggle back to the 2/1 perimeter.

Although the Chinese did not keep their word as to evacuation of the wounded, they did not interfere with the removal of the more critical cases to a Korean house. When the enemy retired to the hills for the day, an opportunity was found to evacuate these casualties to Koto-ri.\[11\]

An accurate breakdown of the Task Force Drysdale casualties will probably never be made, but the following estimate is not far from the mark:

- 41st Commando: 18 KIA/MIA, 43 WIA
- Co. G, 3/1: 8 KIA/MIA, 40 WIA
- Co. B, 1/31: 100 KIA/MIA, 19 WIA, 22 vehicles lost
- 1st Sig. Bn.: 4 KIA/MIA, 2 WIA
- 7th MT Bn.: 2 KIA/MIA, 3 WIA, 4 vehicles lost
- Serv. Co., 1st Tank Bn.: 5 KIA/MIA, 6 WIA, 30 vehicles lost
- Co. B(-), 1st Tank Bn.: 12 WIA
- Co. D(-), 1st Tank Bn.: 8 WIA, 1 vehicle lost
- Plat, AT Co., RCT-5: 1 WIA

**TOTALS**: 162 KIA/MIA, 159 WIA, 75 vehicles lost

“The casualties of Task Force Drysdale were heavy,” commented General Smith, “but by its partial success the Task Force made a significant contribution to the holding of Hagaru which was vital to the Division. To the slender infantry garrison of Hagaru were added a tank company of about 100 men and some 300 seasoned infantrymen. The approximately 300 troops which returned to Koto-ri participated thereafter in the defense of that perimeter.”\[12\]

The head of the Task Force Drysdale column, with the Company D tanks leading George Company and the Commandos, was not aware at dusk on the 29th that the convoy had been cut behind them. There had been previous gaps during the stops and starts caused by enemy fire, and it was supposed at first that the thin-skinned vehicles would catch up with the vanguard.

Progress was fairly good, despite intermittent fire from the high ground on the right of the road, until the tanks reached a point about 2200 yards from Hagaru. There the column was stopped by concentrated CCF mortar and small-arms fire. One of the tanks was so damaged by a satchel charge that it had to be abandoned, and several
vehicles were set afire. After Drysdale was wounded the command passed to Sitter, who formed his force into a perimeter until the repulse of the Chinese permitted the march to be resumed.[13]

Several pyramidal tents just outside the Hagaru perimeter were assumed to be occupied by friendly troops until enemy in the vicinity destroyed two George Company trucks and caused several casualties. Later it was learned that the tents had been originally occupied by troops of the 10th Engineer Battalion and abandoned when the Chinese attacked on the 28th.

At 1915, Captain Sitter reported to Lieutenant Colonel Ridge, who directed that George Company and the 41st Commando spend the night in perimeter reserve. After their all-day fight, the men of the column could scarcely believe their eyes when they saw the Marine engineers at work on the airstrip under the floodlights.

Contrary to expectations, the hours of darkness on 29–30 November passed in comparative quiet at Hagaru except for CCF harassing fires. It was not a coincidence that the enemy kept his distance. Attacks on the East Hill and Item and How Company positions of 3/1 actually had been planned and partly executed by troops of the 58th CCF Division, according to POW testimony. They were broken up by Marine air attacks and supporting fires which hit the assembly areas.

The effectiveness of these fires owed a good deal to the intelligence brought back to Lieutenant Carey, the Battalion S–2, by CIC agents who circulated among Chinese troops on 27 and 28 November. The Battalion S–2 had a work table at the CP beside Major Simmons, the SAC, who directed six sorties of the night hecklers of VMF(N) –542. He guided the planes through the darkness to their targets with a fiery arrow as converging machine-gun tracer bullets crossed over suspected CCF assembly areas.

The 81mm mortars of Weapons Company, 3/1, fired about 1100 rounds during the night, and the corresponding unit of 2/7 made a noteworthy contribution. The following day, according to Carey, Chinese prisoners reported that “most of the units employed around Hagaru were very badly hit.”[14]

A few white phosphorus mortar rounds fell in the lines of How and Item Companies, and a CCF green flare caused an alert for an attack which never materialized. In the early morning hours of the 30th an enemy concentration appeared to be taking place on the Item Company front, but intensive 60mm mortar fire put an end to the threat.
At 0800, the battalion commander ordered George Company to retake East Hill while the Commandos remained in reserve. Sitter’s plan called for his 1st and 2d platoons, commanded by Second Lieutenants Frederick W. Hopkins and John W. Jaeger respectively, to pass through Myers’ group, then make a sharp left turn and attack on either side of the ridge. First Lieutenant Carl E. Dennis’ 3d Platoon and two platoons of Able Company engineers were to follow in reserve.

Slow progress caused the George Company commander to modify the plan by giving his 3d platoon and the two engineer platoons the mission of enveloping the CCF right flank (see Map 22). Lieutenant Dennis led the attack, with First Lieutenant Ernest P. Skelt’s and Lieutenant Canzona’s engineer platoons following.

Neither of the George Company attacks was successful. The trampling of hundreds of feet over the snow had made the footing more treacherous than ever; and once again the combination of difficult terrain and long-range Chinese fire accounted for failure to retake East Hill. Sitter’s request to set up defense positions on the ground previously occupied by Myers was granted. Meanwhile Dennis’ platoon and the engineers were directed to withdraw to the foot of the hill, so that the Corsairs could work the CCF positions over with rockets and bombs.
Although the Marines at Hagaru had little to do with the higher levels of strategy, it was evident that the continued retreat of the Eighth Army in west Korea must ultimately affect the destinies of X Corps. Of more immediate concern was the deteriorating situation of the three battalions (two infantry and one artillery) of the 7th Infantry Division east of the Chosin Reservoir. Brigadier General Henry I. Hodes, assistant division commander, informed General Smith at noon on the 29th that the Army troops had suffered approximately 400 casualties while falling back toward Hagaru and were unable to fight their way out to safety. At 2027 that night, all troops in the Chosin Reservoir area, including the three Army battalions, were placed under the operational control of the Marine commander by X Corps. The 1st Marine Division was directed to “redeploy one RCT without delay from Yudam-ni area to Hagaru area, gain contact with elements of the 7th Inf Div E of Chosin Reservoir; co-ordinate all forces in and N of Hagaru in a perimeter defense based on Hagaru; open and secure Hagaru-Koto-ri MSR.”

On the afternoon of the 30th a command conference was held at Hagaru in the Division CP. Generals Almond, Smith, Barr, and Hodes were informed at the briefing session that a disaster threatened the three Army battalions. Almond was also much concerned about the attacks on the Marine MSR. He had been given a firsthand account that morning by the senior Marine officer on the X Corps staff, Colonel Edward H. Forney, who had just returned from Koto-ri.

At the Hagaru conference the X Corps commander announced that he had abandoned any idea of consolidating positions in the Chosin Reservoir area. Stressing the necessity for speed in falling back toward Hamhung, he promised Smith resupply by air after authorizing him to burn or destroy all equipment which would delay his withdrawal to the seacoast.

The Marine general replied that his movements must be governed by his ability to evacuate his wounded. He would have to fight his way out, he added, and could not afford to discard equipment; it was his intention, therefore, to bring out the bulk of it.

Almond directed Smith and Barr to draw up a plan and time schedule for extricating the Army battalions east of the Reservoir. Those two generals agreed, however, that not much could be done until the Yudam-ni Marines arrived at Hagaru, and the conference ended on an inconclusive note. That same afternoon X Corps OpnO 8–50 was received. It defined the Corps mission as “maintaining contact with the enemy to the maximum capability consistent with cohesive action, oriented to the Hamhung-Hungnam base of operation.”

The decision to concentrate X Corps forces in that area meant the evacuation of Wonsan. General Harris lost no time in directing MAG–12 to move from Wonsan Airfield to Yonpo. Hedron–12 and the three combat squadrons began shifting personnel and equipment at once. Transfer of the aircraft was completed on 1 December. In many instances the planes took off on combat missions from Wonsan and landed at Yonpo, so that the ground forces were not deprived of air support.

High level naval commanders were already preparing for an evacuation of northeast Korea if matters came to the worst. Admiral Joy foresaw as early as the 28th that if the retreat of the battered Eighth Army continued, X Corps would have to choose between falling back and being outflanked. In view of the time needed to collect the enormous quantities of shipping required, he warned Admiral Doyle on that date that a large-scale redeployment operation might be necessary. Doyle in turn directed his staff to commence planning for
redeployment either by an administrative outloading or by a fighting withdrawal. [21]
During the early hours of darkness on 30 November, it appeared that Hagaru might have a second quiet night. Three bugle calls were heard by Item Company at 2015, and the enemy sent up a green flare an hour later. But no unusual CCF activity was reported until 2330, when small patrols began probing for weak spots in the Item Company lines.

The enemy could scarcely have chosen a less rewarding area for such research. As usual, Lieutenant Fisher had built up an elaborate system of concertinas, trip flares, and booby traps; and his sandbagged foxholes and weapon emplacements afforded his men maximum protection. At midnight, when the enemy came on in strength, each successive assault wave shattered against the terrific fire power which a Marine rifle company, aided by artillery, tanks, 81mm mortars, and heavy machine guns, could concentrate.

Several times the enemy’s momentum carried him to the Item Company foxholes but no Communists lived to exploit their advantage. On one of these occasions Sergeant Charles V. Davidson, having expended his ammunition, proved that cold steel still has its uses by bayoneting the last of his attackers.[22]

Again, as on the night of the 28th, the enemy had chosen to launch his major attack against Marine strength, though his daytime observation must have disclosed the preparations for a hot reception in the Item Company sector. An estimated 500 to 750 Chinese were killed on this front at a cost to Fisher’s men of two KIA and 10 WIA.[23]

The Chinese also repeated themselves by carrying out another attack on East Hill which ended in a second costly stalemate. The western slope up to the military crest was held by the following units from right to left: First Lieutenant Ermine L. Meeker’s 1st Platoon of Baker Company engineers; the 2d, 1st, and 3d Platoons of George Company; and Lieutenant Skelt’s 3d Platoon of Able Company Engineers. To the left of Skelt, near the foot of the hill, were Lieutenant Canzona’s 1st Platoon of Able engineers; two tanks of the AT Company, 2/7; and elements of Lieutenant Colonel Banks’ 1st Service Battalion.[24]

The action began shortly before midnight with one of those comedy situations which develop on the grimmest occasions. The sign or password was “Abraham” and the countersign “Lincoln,” but two Company A engineers on a listening post did not pause for the customary exchange. Having been jumped by what their startled eyes took to be a Chinese regiment, they sprinted downhill yelling, “Abraham Lincoln! Abraham Lincoln!” as they slid into Skelt’s lines with the enemy close behind.

His engineers had no leisure for a laugh. Within a few seconds they were mixing it in a wild melee with Communists who seemed literally to drop on them from above. Meanwhile, George Company was hard hit by well aimed mortar fire which threatened to wipe out Lieutenant Hopkins’ 1st Platoon. The ensuing double-headed CCF attack bent back the left flank of George Company, with both the 1st and 3d Platoons giving ground.

On the left Skelt’s platoon was pushed down to the foot of the hill by superior enemy numbers after exactly half of his 28 men were killed or wounded. Here the fight continued with Banks’ service troops lending a hand until the Chinese were exterminated.

This penetration was a hollow triumph for the enemy. No friendly forces being left in the center, the How Battery howitzers walked shells up and down the western slope. Mortars and machine guns chimed in, and Lieutenant Canzona’s platoon was in position to direct the fire of the two tanks of AT Company 2/7.

The scene became bright as day after an enemy artillery shell set 50 drums of gasoline ablaze in a Supply Area dump. Like an enormous torch, the flames illuminated the battle so vividly that General Smith looked on.
from the doorway of his CP, some 1200 yards away. Several bullets pierced the roof and walls during the night.

Again, as in the fight of 28–29 November, Marine fire power blocked the gap on the central and northwest slopes of East Hill. Marine and Army service troops took a part in the fighting which is the more creditable considering that they were ordered out in the middle of the night, placed in a provisional unit with strange troops, and marched off into the darkness to attack or defend at some critical point.

Lieutenant Meeker’s engineer platoon, on the right of George Company, had a long-drawn fire fight but got off with losses of one man killed and three wounded. At 0100 the CCF pressure on Sitter’s troops was so heavy that Lieutenant Carey, former commander of the 1st Platoon, was taken from his S–2 duties to lead a group of reinforcements which he described as “all available hands from the CP or any other units in Hagaru who could spare personnel.” Carrying as much ammunition as possible, he arrived at the George Company CP to find Sitter still commanding in spite of his wound. Scarcely a full squad was left of Carey’s old outfit when he helped to restore the lines.

It was necessary for Ridge to send a further reinforcement consisting of British Marines of the 41st Commando before George Company’s left flank was secured. A counterattack at daybreak regained lost ground, and the situation was well under control when air came on station at 0900.

Thus ended another night of confusion and frustration for both sides on East Hill. While the Chinese attack had been better organized and in larger force than the effort of the 29th, it was too little and too late for decisive results in spite of heavy losses. On the other hand, George Company and its reinforcing elements had suffered an estimated 60 men killed and wounded.

Although the Marines of Hagaru could not have suspected it on the morning of 1 December, the enemy had, for the time being, shot his bolt. His first two large-scale attacks, as POW interrogations were to confirm, had used up not only the personnel of a division but most of the limited supplies of ammunition available. Thus it is probable that the following estimates of CCF casualties, as published in the 3/1 report, for the period of 28 November to 5 December, were nearer to accuracy than most such summaries:

“(1) 58th CCF Division: Estimated casualties of 3300 for the 172d Regiment; 1750 each for the 173d and 174th Regiments.

“(2) 59th CCF Division: Estimated 1750 casualties for the 176th Regiment. No other units identified.”

The known Chinese dead in the two night battles amounted to at least 1500; and if it may be assumed that three or four times that number were wounded, the total casualties would have crippled an enemy infantry division of 7500 to 10,000 men, plus an additional regiment. Considering the primitive state of CCF supply and medical service, moreover, it is likely that hundreds died of wounds and privations behind their own lines.

The losses of 3/1 at Hagaru were given as 33 KIA, 10 DOW, 2 MIA, and 270 WIA—a total of 315 battle casualties, nearly all of which were incurred from 28 November to 1 December.[25] There are no over-all casualty figures for Marine or Army service troops, but it is probable that their total losses exceeded those of 3/1.
Chapter 11. Task Force Drysdale
Rescue of U.S. Army Wounded

Casualties estimated as high as 75 per cent were suffered by the three U.S. Army battalions east of the Reservoir. At 2200 on the night of 1 December, the first survivors, most of them walking wounded, reached the Marine lines north of Hagaru with tales of frightful losses suffered in the five days of continual fighting since the first CCF attack on the night of 27–28 November.

Following this action Colonel Allan D. MacLean, commanding the 31st Infantry, had set up a perimeter near Sinhung-ni with the 3d Battalion of his regiment and the 1st Battalion of the 57th Field Artillery. Along the shore farther to the north, Lieutenant Colonel Don C. Faith, USA, held a separate perimeter with the 1st Battalion, 32d Infantry (see Map 20).[26]

Both positions were hard hit by the Chinese on the night of 27–28 November and isolated from each other. During the next 24 hours they beat off CCF attacks with the support of Marine and FEAF planes, and Faith fought his way through to a junction with the Sinhung-ni force.

When the senior officer was killed, Faith took command of all three battalions. Immobilized by nearly 500 casualties, he remained in the Sinhung-ni perimeter, where he was supplied by air. On the 29th General Hodes sent a relief force in company strength from 31st Infantry units in the area just north of Hagaru. These troops, supported by several Army tanks, were hurled back by superior CCF numbers with the loss of two tanks and heavy personnel casualties.

On 1 December, fearing that he would be overwhelmed in his Sin-hung-ni perimeter, Faith attempted to break through to Hagaru. After destroying the howitzers and all but the most essential equipment, the convoy with its hundreds of wounded moved out under the constant cover of Marine close air support, controlled by Captain Edward P. Stamford, USMC.[27]

Progress was slow and exhausting, with frequent stops for fire fights. There were many instances of individual bravery in the face of adversity, but losses of officers and NCOs gradually deprived the units of leadership. As an added handicap, a large proportion of the troops were ROKs who understood no English.

The task force came near to a breakout. At dusk it was only four and a half miles from Hagaru when Faith fell mortally wounded and the units shattered into leaderless groups.[28] Soon the column had ceased to exist as a military force. A tragic disintegration set in as wounded and frostbitten men made their way over the ice of the Reservoir in wretched little bands drawn together by a common misery rather than discipline.

By a miracle the first stragglers to reach Hagaru got through the mine fields and trip flares without harm. Before dawn a total of about 670 survivors of Task Force Faith had been taken into the warming tents of Hagaru.

Lieutenant Colonel Beall, commanding officer of the 1st Motor Transport Battalion, made a personal search in the morning for other survivors. Finding more than his jeep could carry, he organized a task force of trucks, jeeps, and sleds. The only CCF opposition to the Marines came in the form of long-distance sniping which grew so troublesome late in the afternoon that the truckers set up a machine gun section on the ice for protection. Far from hindering the escape of the Army wounded, the Chinese actually assisted in some instances, thus adding to the difficulty of understanding the Oriental mentality.[29]

Of the 319 soldiers rescued by Beall on 2 December, nearly all were wounded or frostbitten. Some were found wandering about in aimless circles on the ice, in a state of shock.

A company-size task force of Army troops from Hagaru, supported by tanks, moved out that day to bring in any organized units of the three shattered battalions which might have been left behind. Known as Task Force
Anderson after Lieutenant Colonel Berry K. Anderson, senior Army officer at Hagaru, the column met heavy CCF opposition and was recalled when it became evident that only stragglers remained.[30]

Beall and his men kept up their rescue work until the last of an estimated 1050 survivors of the original 2500 troops had been saved. A Marine reconnaissance patrol counted more than 300 dead in the abandoned trucks of the Task Force Faith convoy, and there were apparently hundreds of MIA. The 385 able-bodied soldiers who reached Hagaru were organized into a provisional battalion and provided with Marine equipment.[31]
Casualty evacuation had become such a problem by 1 December that Captain Eugene R. Hering, (MC) USN, the Division surgeon, called at General Smith’s CP that morning. He reported that some 600 casualties at Hagaru were putting a severe strain on the limited facilities of C and E Companies of the 1st Medical Battalion. It was further estimated that 500 casualties would be brought in by the Yudam-ni units and 400 from the three Army battalions east of the Reservoir.[32]

Although both figures were to prove far too low, they seemed alarmingly high at a time when only the most critical casualties could be evacuated by helicopter or OY. Flying in extreme cold and landing at high altitudes where the aircraft has less than normal lift, the pilots of Major Gottschalk’s VMO-6 saved scores of lives. From 27 November to 1 December, when the transports took over, 152 casualties were evacuated by the OYs and helicopters—109 from Yudam-ni, 36 from Hagaru, and seven from Koto-ri.[33]

Two surgical teams from Hungnam had been flown to Hagaru by helicopter, but the evacuation problem remained so urgent on 1 December that the command of the 1st Marine Division authorized a trial landing on the new airstrip. Only 40 per cent completed at this time, the runway was 2900 feet long and 50 feet wide, with a 2 per cent grade to the north.

It was a tense moment, at 1430 that afternoon, when the knots of parka-clad Marine spectators watched the wheels of the first FEAF C–47 hit the frozen, snow-covered strip. The big two-motored aircraft bounced and lurched its way over the rough surface, but the landing was a success. An even more nerve-racking test ensued half an hour later when the pilot took off with 24 casualties. It seemed for a breath-snatching instant that the run wouldn’t be long enough for the machine to become airborne, but at last the tail lifted and the wings got enough “bite” to clear the hills to the south.

Three more planes landed that afternoon, taking off with about 60 more casualties. The last arrival, heavily loaded with ammunition, collapsed its landing gear on the bumpy strip and had to be destroyed and abandoned.[35]

At the other end of the evacuation chain, clearing stations had been established by X Corps at Yonpo Airfield to receive and distribute casualties. A 30-day evacuation policy was maintained, and the casualties to remain in the area went to the 1st Marine Division Hospital in Hungnam, the Army 121st Evacuation Hospital in Hamhung, and the USS Consolation in Hungnam harbor. Casualties requiring more than 30 days of hospitalization were flown from Yonpo to Japan, though a few critical cases were evacuated directly from Hagaru to Japan.[36]

It was planned for incoming transports at Hagaru to fly both supplies and troop replacements. Meanwhile, on 1 December, the 1st Marine Division had its first C–119 air drop from Japan. Known as “Baldwins,” these drops consisted of a prearranged quantity of small arms ammunition, weapons, water, rations, and medical supplies, though the amounts could be modified as desired.[37]

Air drops, however, did not have the capability of supplying an RCT in combat, let alone a division. At
this time the Combat Cargo Command, FEAF, estimated its delivery capabilities at only 70 tons per day; and even though in practice this total was stepped up to 100, it fell five short of the requirements of an RCT. Fortunately, the foresight of the Division commander and staff had enabled the Supply Regulating Detachment to build up a level of six days’ rations and two units of fire at Hagaru. [38] This backlog, plus such quantities as could be delivered by Baldwin drops, promised to see the Division through the emergency.

Infantrymen are seldom given to self-effacement, but at nightfall on 1 December only an ungrateful gravel-cruncher could have failed to pay a silent tribute to the other services as well as to the supporting arms of the Marine Corps. Navy medics, FEAF airmen, Army service units—they had all helped to make it possible for the Marines to plan a breakout. Yet it is likely that the 1st Engineer Battalion came first in the affections of wounded men being loaded in the C–47s for evacuation.

In just twelve days and nights the engineers of Company D had hacked this airstrip out of the frozen earth. Marine infantrymen could never forget the two critical nights of battle when they looked back over their shoulders from combat areas at the heartening spectacle of the dozers puffing and huffing under the floodlights. In a pinch Lieutenant Colonel Partridge’s specialists had doubled as riflemen, too, and several platoons were riddled with casualties. Thanks in large part to the engineers, the Hagaru base was no longer isolated on 1 December. And though the enemy did not yet realize it, he had lost the initiative on this eventful Friday. The Marines at Yudam-ni were coming out, and they were coming out fighting with their casualties and equipment.
Chapter 12. Breakout From Yudam-ni

The FIRST STEPS toward regaining the initiative were taken by the Marine command as early as 29 November. Upon being informed that the composite battalion had failed to open up the MSR south of Yudam–ni, General Smith concluded that it was a task for a regiment. At 1545 that afternoon he issued the following orders to RCTs 5 and 7:

“RCT–5 assume responsibility protection Yudam-ni area adjusting present dispositions accordingly. RCT–7 conduct operations clear MSR to Hagaru without delay employing entire regiment.”[1]

That same evening the Division CP received X Corps OI 19, providing that an RCT be redeployed from the Yudam-ni area to Hagaru.[2] No further directives from Division were necessary to implement this instruction, since it had been anticipated in General Smith’s orders.

Upon receipt, the two Yudam-ni regimental commanders began joint planning for measures to be taken. The unusual command situation at Yudam-ni, in the absence of the assistant division commander, was explained by Colonel Litzenberg:

“The 5th and 7th Marines were each acting under separate orders from the Division. The Division would issue orders to one regiment with information to the other, so that Division retained the control; and, of course, the 4th Battalion, 11th Marines, in general support of both regiments, was not actually under the control of either of us. Lieutenant Colonel Murray... operated in very close coordination with me, sometimes at his own command post and sometimes at mine. We called in [Major] McReynolds, the commander of 4/11, discussed the situation with him, and thereafter Lieutenant Colonel Murray and I issued orders jointly as necessary... This command arrangement functioned very well. There was never any particular disagreement.”[3]

For purposes of planning the supporting fires for the breakout, an artillery groupment was formed and Lieutenant Colonel Feehan given the responsibility of coordination. It was further agreed that no air drops of 155mm ammunition would be requested because of the greater number of 105mm rounds which could be received with fewer difficulties.[4]

The problems of the two RCTs, commented General Smith, could not be separated. “The only feasible thing for them to do was pool their resources... The assignment of command to the senior regimental commander was considered but rejected in favor of cooperation.”[5]

At 0600 on the 30th, the two RCTs issued their Joint OpnO 1–50, which called for the regroupment of the Yudam-ni forces in a new position south of the village and astride the MSR as a first step toward a breakout. [6] Thus in effect the two RCTs and supporting troops would be exchanging an east-and-west perimeter for one pointing from north to south along the road to Hagaru. Not only was the terrain south of the village more defensible, but a smaller perimeter would serve the purpose.

Lieutenant Colonel Winecoff, Assistant G–3 of the Division, flew to Yudam-ni on the 30th to observe and report on the situation. He was given a copy of Joint OpnO 1–50 for delivery to General Smith on his return to Hagaru.[7]

That same afternoon, during a conference with General Almond at Hagaru, the Marine commander received X Corps OpnO 8, directing him to operate against the enemy in zone, withdrawing elements north and northwest of Hagaru to that area while securing the Sudong-Hagaru MSR. And at 1920 that evening, Division issued the following dispatch orders to RCTs 5 and 7:

“Expedite execution of Joint OpnO 1–50 and combined movement RCT–5 and RCT–7 to Hagaru prepared for further withdrawal south. Destroy any supplies and equipment which must be abandoned during this
As a prerequisite, a good deal of reorganization had to be effected at Yudam-ni. In order to provide a force to hold the shoulders of the high ground through which RCT–7 would advance, it was decided to put together another composite battalion.

The new unit consisted of George Company, 3/7, Able Company, 1/5, and the remnants of Dog and Easy Companies, 2/7, combined into a provisional company under Captain Robert J. Polson; a section of 81s each from 2/7 and 3/7’s Weapons Companies; and a communications detachment from 3/7. Major Maurice E. Roach, regimental S–4 placed in command, realized that such a jury-rigged outfit might be subject to morale problems. Noting that one of the men had made a neckerchief out of a torn green parachute, he seized upon the idea as a means of appealing to unit pride. Soon all the men were sporting green neckerchiefs, and Roach gave the new unit added distinction by christening it the Damnation Battalion after adopting “Damnation” as the code word.

Beginning in the early morning hours of the 30th, regroupment was the chief activity at Yudam-ni. Enemy opposition during the night took the form of scattered small-arms fire varied with minor probing attacks. This comparative lull lasted until 0710, when Item Company of 3/5 beat off an enemy assault on Hill 1282 (North Ridge) with the support of Marine air strikes and 81mm mortar fire. In the same area George Company had a brisk fire fight from 1315 to dusk.

The plan of the regroupment envisioned a gradual withdrawal from the north and west of Yudam-ni by RCT–5 for the purpose of relieving units of RCT–7 and enabling them to extend the perimeter southward from the village (see Map 23). It fell to 2/5 to execute the most difficult maneuver of the day. Roise’s battalion held a line stretching from Hill 1426 on Southwest Ridge along the high ground to 3/5’s positions on Hill 1282. After disengaging with the help of Marine air and artillery, 2/5 gave up Hill 1426 and pulled back nearly a mile, relieving elements of 3/7 on the left. Roise’s new line included Hill 1294 on Southwest Ridge, overlooking the MSR, and extended northeast to Hill 1282 as before. Meanwhile 1/5 continued to hold a defensive line from Hill 1240 eastward to Hill 1167.

These movements freed 3/7 to re-deploy to new positions astride the MSR about 4000 yards south of Yudam-ni. In this same general area, 1/7 continued to block the valley to the southwest while holding Hill 1276, of South Ridge, about 2500 yards south of the village.

“The question of whether we should make these movements during daylight or at night was a difficult one,” said Colonel Litzenberg. “We finally decided to make the movements in daylight when we could have advantage of observation for air cover and artillery. The movement, piecemeal by battalion, was successfully executed.”

The enemy took surprisingly little advantage of the readjustment. Movements were completed in an orderly and methodical manner as the units drew rations and ammunition for the breakout. Preparations were made for the destruction of all equipment which could not be carried out, and air drops of ammunition and other supplies were received.

As a solution for the problem of casualty evacuation, General Smith had suggested the construction of an OY strip. A start was made at 0900 on the 30th by the TD–18 dozers of Major McReynolds’ artillery battalion, but the area came under enemy fire the next day and the nearly completed strip could be used only twice.
The plan, as finally agreed upon, called for a combination of the two solutions. Since it was essential to relieve hard-pressed Fox Company and secure vital Toktong Pass prior to the arrival of the main column, one force would advance across country. And since it would have been physically impossible to carry the wounded over the mountains, the main body would fight its way along the road to Toktong Pass.\[12]\n
The over-all plan for the Yudam-ni breakout, after being flown to Hagaru by helicopter for General Smith’s approval, was incorporated into Joint OpnO 2–50. This directive, later modified by fragmentary orders, was issued in the morning of 1 December 1950.

It meant dispensing with the vehicles and heavy equipment of the cross-country force. Only the barest military necessities could be taken by men loaded down with ammunition while struggling through snowdrifts.

The unit selected for the attempt was the 1st Battalion, 7th Marines, commanded by Lieutenant Colonel Davis. The plan of maneuver called for him to strike off across the mountain tops under cover of darkness on the night of 1 December. As the other units moved out astride the MSR from Yudam-ni to Hagaru, 3/5 was to be the advance guard.

Lieutenant Colonel Taplett’s battalion had the mission of passing through 3/7 to seize the commanding ground on both sides of the road and lead the way for the rest of the Yudam-ni troops. Thus the attacks of 1/7 and 3/5 would converge in the general area of Fox Hill and Toktong Pass.

The point of the advance was to be the only Marine tank to reach Yudam-ni while the MSR was still open. It was left stranded after the recall of the crew to Hagaru; but Staff Sergeant Russell A. Munsell and another crewman were flown up from Hagaru by helicopter at Colonel Litzenberg’s request. They were to man Tank D–23 when it moved out with the point. Plans also called for a battery of 3/11 to advance near the head of the column, so that it could go into position near Sinhung-ni and provide covering fires for the rearguard while other artillery units displaced.

The 4th Battalion of the 11th Marines had orders to fire most of its 155mm ammunition before departure. All the men who could be spared from this unit were formed into nine provisional infantry platoons. Two were assigned to reinforce the 7th Marines and three to the 5th Marines; four were retained under Major McReynold’s command to protect the flanks of the vehicle train. It was further prescribed that the guns of 4/11 were to bring up the rear of the convoy, so that the road would not be blocked in the event of any of its vehicles becoming immobilized.

Only drivers and seriously wounded men were permitted to ride the trucks in the middle of the column along with critical equipment and supplies. Since all additional space in the vehicles would doubtless be needed for casualties incurred in the breakout as well as Fox Company casualties, it was decided not to bring out the dead from Yudam-ni. A field burial was conducted by chaplains for 85 officers and men.\[13]\n
All available Marine aircraft were to be on station. Moreover, carrier planes of TF 77 had been released from other missions by the Fifth AF to reinforce the aircraft of the 1st MAW in direct support of the Yudam-ni troops.
The transition from planning to execution began on the morning of 1 December. Only the 1st and 3d Battalions of RCT–5 were left to the north of Yudam-ni, and pulling them out was to prove equivalent to letting loose of the tiger’s tail.

The 3d Battalion began its withdrawal at 0800, followed 90 minutes later by the 1st. The initial phases of the maneuver were carried out without great difficulty. The first major problem came when 3/5’s last unit, George Company, pulled down from Hill 1282 (see Map 24). There the Marines had been in such close contact with the enemy that grenades were the main weapon of both sides. The problem of preventing the Chinese from swarming over the top of the ridge at the critical moment and pursuing the Marines down the slope was solved by First Lieutenant Daniel Greene, the FAC, with a dummy run by close supporting aircraft. While the first pass of the Corsairs kept the Communists down, Captain Chester R. Hermanson commenced his withdrawal. As soon as his men moved out at a safe distance he signalled to the FAC, who called for live runs of Marine air in coordination with the fires directed by the artillery liaison officer, First Lieutenant Henry G. Ammer. First Lieutenant Arthur E. House’s 81mm mortar platoon also rendered skillful support during the withdrawal.[14]

Click here to view map

The ancient ruse was so successful that George Company disengaged without a single casualty. Ammunition left behind by the rifle platoons was detonated just as the rockets, bombs, and napalm of the Corsairs hit the Chinese, followed by artillery and mortar shells. Hill 1282 seemed to erupt in one tremendous explosion. While Captain Hermanson’s men crossed the bridge south of the burning town, an engineer demolitions crew waited to destroy the span.

The rear guard unit for the withdrawal of the two battalions was First Lieutenant John R. Hancock’s Baker Company of 1/5. He felt that his best chance would be to “sneak off” Hill 1240. Accordingly he requested that no supporting fires be furnished Baker Company, except at his request. Making very effective use of his light machine guns to cover his withdrawal with a spray of fire, Hancock disengaged without a casualty.

The next stage of the regroupment was carried out in preparation for the attacks of 3/5 and 1/7. In order to clear the way on both sides of the MSR, 3/7 (minus How Company) moved out at 0900 on 1 December to attack Hill 1542 while How Company went up against Hill 1276.

Joint OpnO 1–50 was modified meanwhile by verbal instructions directing 2/5, instead of 3/5, to relieve 1/7 on Hill 1276, thus freeing Colonel Davis’ battalion for its assigned mission. The 1st Battalion of RCT–5 took positions stretching from Hill 1100 on the west side of the MSR to the low ground southeast of the arm of the Reservoir. This meant that after 3/7 (−) seized Hill 1542, three Marine infantry battalions would occupy a defensive line about three and a half miles in length, stretching diagonally northeast from that position to the arm of the Reservoir, with Hill 1276 as its central bastion.[15]

Shortly before dusk Lieutenant Colonel Taplett’s 3/5 arrived in position to pass through Lieutenant Colonel Harris’ 3/7. The two battalion commanders agreed that 3/5 would execute the movement even though 3/7 had not yet secured its objectives, and 3/5 attacked astride the MSR at 1500.[16]

Harris’ battalion had been having it hot and heavy all day on Hills 1419 and 1542 after jumping off at 0900. These objectives were too far apart for a mutually supported attack and the Chinese defended the difficult terrain with tenacity.

Item Company, reinforced by artillerymen and headquarters troops, made slow progress west of the road.
against the Chinese dug in on Hill 1542. At 1700 George Company moved into position on the left. Both companies attempted an assault but the 3/7 report states, “Each attack by ‘I’ Co and ‘G’ Co never reached full momentum before it was broken up.” One platoon of Item Company reached the military crest before being repulsed. When night fell, the Marines were still on the eastern slopes of 1542.[17]

On Hill 1419, about 1000 yards east of the road, How Company of 3/7 met stiff opposition from Chinese dug in along four finger ridges as well as the main spur leading to the topographical crest. It became evident that How Company alone could not seize the hill and about noon Able Company of Davis’ battalion joined the attack, on How’s left.

The heavy undergrowth gave concealment to the enemy, though it also offered footholds to the Marines scrambling up the steep and icy slopes. Air strikes were laid down just ahead of them, blasting the Chinese with bombs, rockets, and 20mm fire. Artillery support, however, was limited by the relative blindness of the forward observer in the brush, but mortars succeeded in knocking out several enemy positions. How Company’s attack had come to a standstill because of casualties which included Lieutenant Harris. First Lieutenant Eugenous M. Hovatter’s Able Company regained the momentum, thanks to the efforts of First Lieutenant Leslie C. Williams’ 1st Platoon. Aided by How and by Baker, which was committed late in the afternoon, Able Company secured Hill 1419 about 1930. Thus the jump-off point for the 1/7 advance across the mountain tops had been seized.

After setting up hasty defenses, Davis directed that all dead and wounded be evacuated to 3/5’s aid station on the road. How Company was attached to his battalion by order of Colonel Litzenberg, since all units had been thinned by casualties. Then the battalion tail was pulled up the mountain and the last physical tie broken with other Marine units in the Yudam-ni area.[18]

The Marines had seized the initiative, never again to relinquish it during the Chosin Reservoir campaign.
Planning at the battalion level was done by Davis, his executive officer, Major Raymond V. Fridrich, and his S-3, Major Thomas B. Tighe. It was decided to take only two of the 81mm mortars and six heavy machine guns. They were to be manned with double crews, so that enough ammunition could be carried to keep them in action.

Pack-set radios (AN/GRC–9) were to provide positive communications in case the portable sets (SCR–300) would not reach to the Yudam-ni perimeter. The artillery liaison officer was to carry a pack set (SCR–610) to insure artillery communication.[19]

All personnel not sick or wounded were to participate, leaving behind enough walking wounded or frostbite cases to drive the vehicles and move the gear left behind with the regimental train. Extra litters were to be taken, each serving initially to carry additional mortar and machine gun ammunition; and all men were to carry sleeping bags not only for the protection of the wounded but also to save their own lives if the column should be cut off in the mountains for several days. Every man was to start the march with an extra bandolier of small arms ammunition, and personnel of the reserve company and headquarters group were to carry an extra round of 81mm mortar ammunition up the first mountain for replenishment of supplies depleted at that point.

After driving the enemy from the topographical crest of Hill 1419, the four companies were not permitted a breathing spell. Davis feared the effects of the extreme (16 degrees below zero) cold on troops drenched with sweat from clawing their way up the mountain. He pressed the reorganization with all possible speed, therefore, after no enemy contacts were reported by patrols ranging to the southeast. And at 2100 on the night of 1 December the column set out in this order:

Baker Company, First Lieutenant Kurcaba
1/7 Command Group, Lieutenant Colonel Davis
Able Company, First Lieutenant Hovatter
Charlie Company, Captain Morris
Headquarters Group, Major Fridrich
How Company, Second Lieutenant Newton

The night was dark but a few stars showed over the horizon in the general direction to be taken. They served as a guide, with a prominent rock mass being designated the first objective.

The snow-covered peaks all looked alike in the darkness, and the guide stars were lost to sight when the column descended into valleys. Repeated compass orientations of the map examined by flashlight under a poncho never checked out. The artillery was called upon to place white phosphorus on designated hills, but the splash of these rounds could seldom be located.

The point was slowed by the necessity of breaking trail in snow that had drifted knee-deep in places. After a path had been beaten, the icy footing became treacherous for the heavily burdened Marines. Some painful falls were taken on the downhill slopes by men who had to climb the finger ridges on hands and knees.

Apparently the enemy had been caught by complete surprise, for the Marines had the desolate area to themselves. A more immediate danger was loss of direction, and the head of the column veered off to the southwest while crossing the second valley. A drift in this direction would eventually take the battalion toward the enemy-held road to Hagaru (see Map 25), which had been scheduled by the Marine artillery for harassing and interdiction fires.
Radio failures kept Kurcaba, at the point, from receiving messages sent in warning. An attempt was made to communicate by word of mouth, but the shouts from behind often did not penetrate to ears protected from the cold by parka hoods. At last the loss of direction became so alarming that Davis himself hurried forward with his radio operator and runner. In the darkness he lost touch with them and floundered on alone, panting and stumbling.

It took such effort to overtake the point that he did not make it until the men were scrambling up the next steep ridge. There the westward drift was corrected just in time, for the battalion was running into its first CCF opposition.

The column had been heading up Hill 1520, the eastern and western slopes of which were held by the enemy. An increasing volume of small-arms fire was received as Davis gave his company commanders orders to reorganize units in preparation for attack. Exhausted though the men were, they summoned a burst of energy and advanced in two assault columns supported by 81 mm mortars and heavy machine guns. Now the exertion of carrying extra ammunition paid dividends as Baker and Charlie Companies closed in on a CCF position held in estimated platoon strength. Some of the Chinese were surprised while asleep or numbed with the cold, and the Marines destroyed the enemy force at a cost of only a few men wounded.

The attack cleared the enemy from the eastern slope of Hill 1520, but distant small-arms fire was received from ridges across the valley to the east. Davis called a halt for reorganization, since the troops had obviously reached the limit of their endurance. Suddenly they began collapsing in the snow—"like dominoes," as the commanding officer later described the alarming spectacle. And there the men lay, oblivious to the cold, heedless of the Chinese bullets ricocheting off the rocks.

A strange scene ensued in the dim starlight as company officers and NCOs shook and cuffed the prostrate Marines into wakefulness. The officers could sympathize even while demanding renewed efforts, for the sub-zero cold seemed to numb the mind as well as body.

Davis had even requested his company commanders to check every order he gave, just to make sure his own weary brain was functioning accurately. At 0300 he decided to allow the men a rest—the first in 20 hours of continuous fighting or marching under a double burden. As a preliminary, the battalion commander insisted that the perimeter be buttoned up and small patrols organized within companies to insure a 25 per cent alert. Then the pack radio was set up to establish the night's first contact with the regimental CP, and the men took turns at sleeping as an eerie silence fell over the wasteland of ice and stone.
Chapter 12. Breakout From Yudam-ni
Attack of 3/5 on 1-2 December

Returning to the Yudam-ni area, it may be recalled that Lieutenant Colonel Taplett’s 3/5 had passed through 3/7 at 1500 on 1 December with a mission of attacking astride the MSR to lead the way for the main column. Tank D-23, a How Company platoon and a platoon of Able Company engineers set the pace, followed by the rest of How Company and the other two rifle companies. After an advance of 1400 yards the battalion column was stopped by heavy CCF fire from both sides. How and Item Companies fanned out west and east of the road and a longdrawn fire fight ensued before the Marines cleared the enemy from their flanks at 1930.[20]

Artillery support for the breakout was provided by 1/11 and 3/11 (minus Battery H). The plan called for 1/11 to take the main responsibility for furnishing supporting fires at the outset while 3/11 displaced as soon as possible to the vicinity of Sinhung-ni, whence the last lap of the march to Hagaru could be effectively covered. The 1st Battalion would then join the vehicle column and move with it to Hagaru.[21]

Taplett gave 3/5 a brief rest after securing his first objectives—the high ground on both sides of the road just opposite the northern spurs of Hill 1520. Then he ordered a renewal of the attack shortly before midnight. How Company on the right met only moderate opposition, but was held up by the inability of Item Company to make headway against Chinese dug in along the western slope of Hill 1520. Neither 1/7 nor 3/5 had any idea at the moment that they were simultaneously engaged on opposite sides of the same great land mass, though separated by enemy groups as well as terrain of fantastic difficulties. So rugged was this mile-high mountain that the two Marine outfits might as well have been in different worlds as far as mutual support was concerned.

Item Company stirred up such a hornet’s nest on the western slope that Captain Harold O. Schrier was granted permission by the battalion commander to return to his jump-off position, so that he could better defend the MSR. There he was attacked by Chinese who alternated infantry attacks with mortar bombardments. Radio communication failed and runners sent from the battalion CP to Item Company lost their way. Thus the company was isolated during an all-night defensive fight. Second Lieutenant Willard S. Peterson took over the command after Schrier received a second wound.

Taplett had ordered his reserve company, George, and his attached engineers into defensive positions to the rear of Item Company. The engineers on the right flank were also hit by the Chinese and had several wounded, including the platoon commander, First Lieutenant Wayne E. Richards, before repulsing the attack.

Counted CCF dead in the Item Company area totaled 342 at daybreak on the 2d, but the Marines had paid a heavy price in casualties. Less than 20 able-bodied men were left when George Company passed through to renew the attack on Hill 1520. For that matter, both George and How Companies were reduced to two-platoon strength. Taplett requested reinforcement by an additional company, and was assigned the so-called Dog-Easy composite company made up of the remnants of 2/7. This outfit moved directly down the road between George and How Companies.[22]

It took George Company until 1200 to secure the western slope of Hill 1520. The composite company ran into difficulties meanwhile at a point on the MSR where the Chinese had blown a bridge over a deep stream bed and set up a roadblock defended by machine guns. While George Company attacked down a long spur above the enemy, Dog-Easy Company maneuvered in defilade to outflank him. Lieutenant Greene, the FAC, directed the F4Us on target and the ground forces were treated to a daring exhibition of close support by Corsairs which barely cleared the ridge after pulling out of their runs. The roadblock was speedily wiped out, but the vehicle column had to wait until the engineers could construct a bypass. Then the advance of 3/5 was resumed, with
George and How Companies attacking on opposite sides of the MSR, and the composite company astride the road, following the tank and engineer platoons.
Chapter 12. Breakout From Yudam-ni
The Ridgerunners of Toktong Pass

All the rest of their lives the survivors of the two spearhead Marine battalions would take pride in nicknames earned during the breakout from Yudam-ni. For Taplett’s outfit it was “Darkhorse,” after the radio call sign of the battalion, while Davis’ men felt that they had a right to be known as the “Ridgerunners of Toktong Pass.”

At daybreak on 2 December, 1/7 corrected its westward drift of the previous night and attacked toward Hill 1653, a mountain only about a mile and a half north of Fox Hill. Davis’ men got the better of several fire fights at long range with CF groups on ridges to the east, but the terrain gave them more effective opposition than the enemy.[23]

The radios of 1/7 could not contact Marine planes when they came on station, and relays through tactical channels proved ineffective. Moreover, all efforts to reach Fox Company by radio had failed. This situation worried the Battalion commander, who realized that he was approaching within range of friendly 81 mm mortar fire from Fox Hill.

The ancient moral weapon of surprise stood Davis and his men in good stead, however, as the column encountered little opposition on the western slope of Hill 1653. How Company, bringing up the rear with the wounded men, came under an attack which threatened for a moment to endanger the casualties. But after the litters were carried forward, Newton managed to keep the Chinese at a respectful distance without aid from the other companies. Charlie Company was given the mission of seizing a spur covering the advance of Able and Baker companies east from Hill 1520 to Hill 1653. The command group had just passed Morris on this position when the radio operator shouted to Davis:

“Fox Six on the radio, sir.”

Captain Barber’s offer to send out a patrol to guide 1/7 to his position was declined, but Fox Company did control the strike by planes of VMF-312 which covered the attack of Kurcaba’s company on the final objective—a ridge about 400 yards north of Fox Hill. Aided by the air attack and supporting 81 mm mortar fires, Baker Company seized the position and Able Company the northern portion of Hill 1653. It was 1125 on the morning of 2 December 1950 when the first men of Baker Company reached Fox Company’s lines.

Able Company held its position on Hill 1653 until the rest of the battalion was on Fox Hill. After grounding their packs, men from the forward companies went back to help carry the 22 wounded men into the perimeter. While supervising this task, the regimental surgeon, Lieutenant Peter A. Arioli, (MC) USN, was instantly killed by a Chinese sniper’s bullet. There were no other death casualties, though two men had to be placed in improvised strait jackets after cracking mentally and physically under the strain. Both died before evacuation was possible.

The first objective had been reached, but there was to be no rest until Toktong Pass was secured. Baker Company paused on Fox Hill only long enough for Kurcaba’s men to eat a hasty meal of air-dropped rations. Then they moved out to seize the high ground commanding the vital terrain feature at a point where the road describes a loop from north to south. Able Company followed shortly afterwards and the two outfits set up a single perimeter for the night while the rest of the battalion manned perimeters on the high ground east of Fox Hill. Barber’s men remained in their positions.

Five days and nights of battle had left Fox Company with 118 casualties—26 KIA, 3 MIA, and 89 WIA. Six of the seven officers were wounded, and practically all the unwounded men suffered from frostbite and...
digestive ills.
The Chosin Reservoir Campaign
Lynn Montross and Nicholas A. Canzona

Chapter 12. Breakout From Yudam-ni
CCF Attacks on Hills 1276 and 1542

While the two spearhead battalions advanced, the Marine elements in the rear could not complain of being neglected by the enemy. All three infantry battalions were kept busy with CCF attacks which persisted from midnight until long after daybreak (see Map 24). Lieutenant Colonel Roise’s 2/5, which had been designated as rearguard, was hit on Hill 1276 in the early morning hours of 2 December. Under cover of rifle and machine-gun fire, the Chinese advanced on the Fox Company positions with their “inverted wedge” assault formation. Testimony as to its effectiveness is found in the 2/5 report:

“The [Chinese] . . . used fire and movement to excellent advantage. They would direct a frontal attack against our positions while other elements of their attacking force moved in closer to ‘F’ Company flanks in an attempt at a double envelopment. Then in turn the forces on both flanks would attack while the forces directly to our front would move closer to our position. In this, the enemy, by diverting our attention in the above manner, were able to maneuver their forces to within hand grenade range of our positions.”

One Fox platoon, assailed from three sides, was forced to withdraw at 0110 and consolidate with the rest of the company. At 0200 the FAC requested an air strike from two night fighters on station. The aircraft were directed on the target by 60mm mortar white phosphorus bursts and conducted effective strafing and rocket runs within 200 yards of the Marine front line. In all, five aircraft of VMF(N)-542 were employed with excellent results during the night.

At 0230 Roise directed Fox Company to retake the left-flank hill from which the platoon had been driven. Two attempts were made before daybreak with the support of 4.2-inch mortar fire, but enemy machine guns stopped the assault. At 0730 an air strike was requested. After strafing and rocket runs, Fox Company fought its way to the crest, only to find the position untenable because of machine-gun fire from the reverse slope. At 1000 the Corsairs blasted the enemy for 25 minutes with napalm and 500-pound bombs, and CCF troops were observed vacating the objective area. It was nearly time for the battalion to displace as the rearguard, however, and the enemy was left in possession of a scarred and scorched piece of real estate.

Both Dog and Easy Companies received probing attacks which the Chinese did not attempt to push home. At daybreak some of them broke and ran along the Dog Company front, throwing away their weapons as they scattered in disorder. Marine fire pursued the retreating Communists and cut down many of them. Captain Arthur D. Challacombe’s provisional company of artillerymen on Dog Company’s right counted over 50 dead in front of its positions.[24]

On the eastern flank 1/5 came under attack about 2100 by 75-100 Chinese who crossed the arm of the reservoir on ice. Mortar and artillery fire drove them back at 0100 with heavy losses, but attempts at infiltration continued throughout the night. In the morning 51 CCF dead were counted in front of one Charlie Company machine gun, and total enemy KIA were estimated at 200.[25]

At the other end of the Marine line, a CCF attack hit 3/7(–) on Hill 1542. The assault force, according to the enemy report, consisted of Sung-Wei-shan’s 9th Company, 3d Battalion, 235th Regiment, the 5th Company of 2/235, and apparently two other companies of 3/235. All were units of the 79th CCF Division, and their mission was “to annihilate the defending enemy before daylight.”[25]

George and Item Companies of 3/7, following their repulse from the upper reaches of Hill 1542, had formed a defensive perimeter on the eastern slope. As reinforcements the depleted units were assigned a
composite outfit known as Jig Company and consisting of about 100 cannoneers, headquarters troops, and any other elements which could be hastily put together. First Lieutenant Alfred I. Thomas, of Item Company, was placed in command of men who were for the most part strangers to him as well as to one another.

Sung led the 9th Company’s attacking column. Although the Chinese account states that his men were advancing from the northwest toward the topographical crest of Hill 1542, they actually held the summit. Their attack was downhill, though some climbing of spurs and finger ridges may have been necessary. After reconnoitering to a point within 25 yards of the Marines, the Chinese jumped off at 0430 with the support of fires from battalion weapons. Relying on the “inverted wedge,” the attackers bored in alternately right and left while seeking an opportunity for a knockout blow. The 2d Platoon on the Chinese left took a severe mauling, losing its commander and almost half of its men. The other two platoons had heavy casualties but succeeded in routing the jury-rigged Jig Company. Since it was a composite outfit not yet 24 hours old, there is no record of either its operations or losses. Apparently, however, a majority of the men straggled back to their original units. Lieutenant Thomas, who had commanded ably under difficult circumstances, rejoined First Lieutenant William E. Johnson’s Item Company with such men as he had left. The Marines gave ground slowly under Chinese pressure until daybreak, when they held positions abreast of George Company, which had not been heavily engaged.

The two companies were reduced to a total of fewer than 200 men. After being reinforced by H&S Company personnel, they formed a defensive line in an arc stretching from the MSR about 1100 yards and taking in the eastern slopes of Hill 1542. [27]

Apparently the Communists, like military forces everywhere, did not err on the light side when estimating the casualties of opponents. The Marine losses for the night were listed in the CCF report as “killed, altogether 100 enemy troops.” This figure, indicating total casualties of several hundred, is manifestly too high. Owing to the loss of 7th Marines records, the statistics for Item Company are not available, but it does not appear that more than 30 to 40 men were killed or wounded.
Several CCF daylight attacks in platoon strength were received between Hills 1542 and 1276 during the morning hours of 2 December. All Marine units in this area were in process of disengaging, so that the emphasis was placed on breaking off action rather than attempting to defend ground soon to be evacuated.

The vehicle train in the rear made slow progress during the afternoon of 2 December. Infantry strength was not sufficient to occupy all the commanding terrain during the passage of the motor column, and CCF groups infiltrated back into areas vacated by Marine riflemen. Effective air support reduced most of these efforts to harassing attacks, but Marine vehicle drivers were singled out for special attention, making it necessary to find replacements among near-by troops.

To 1/5 fell the mission of furnishing close-in flank protection on the left. Marine air and artillery supported infantry attacks clearing the flanks and the column jolted on with frequent halts. The night passed without incident except for a CCF attack on 3/11. George Battery gunners had to employ direct fire to repulse the Communists, and a 105mm howitzer was lost as well as several vehicles.

Darkhorse, leading the way, was meanwhile fighting for nearly every foot of the road during the advance of 2 December. George Company on the left went up against Hill 1520 while Dog-Easy moved astride the MSR. By noon George had secured its objective. Dog-Easy advanced against moderate resistance to a point about 300 yards beyond Hill 1520 where a demolished bridge had spanned a rock ravine as the road turns from south to east. Here Chinese automatic weapons fire halted the column until a strike by 12 Corsairs cleared the enemy from the ravine. On the right Captain Harold B. Williamson’s How Company was to have joined in the attack, moving through the high ground south of the bend in the road. A Chinese strongpoint delayed its advance and How was pinned down by heavy enemy fire while attempting to cross a stream bed halfway to its objective. The last air strike of the day freed Captain Williamson’s unit, which secured its objective after dark. During the last minutes of daylight, the engineer platoon, now commanded by Technical Sergeant Edwin L. Knox, constructed a bypass around the blasted bridge. About 1900 the first vehicles followed the tank across.

Taplett’s battalion continued its slow progress with George and How Companies clearing the high ground on opposite sides of the road while Dog-Easy moved astride the MSR. At about 0200 on the 3d the advance came to a halt 1000 yards short of Fox Hill. Dog-Easy, which had suffered heavy casualties, particularly among its key NCOs, had reached the limit of exhaustion, and 3/5 secured for the rest of the night. Not until daylight did How Company discover that it had halted 300 yards short of its final objective, the hill mass southwest of Fox Hill.

At dawn on 3 December the ground was covered with six inches of new snow, hiding the scars of war and giving a deceptively peaceful appearance to the Korean hills as the Marine column got under way again with Sergeant Knox’s engineers at the point, just behind Sergeant Munsell’s lone tank. Alternately serving as engineers and riflemen, this platoon came through with 17 able-bodied men left out of the 48 who started.

Dog-Easy Company having been rendered ineffective by its casualties, Taplett moved George Company down from the left flank to advance astride the road. First Lieutenant Charles D. Mize took over the reorganized outfit, assisted by Second Lieutenant August L. Camaratta. The two riddled Dog-Easy platoons were combined with George Company under the command of Second Lieutenant John J. Cahill and Technical Sergeant Don Faber.
Cahill had the distinction of leading the platoon which fought the first action of Marine ground forces in the Korean conflict. But it hardly seemed possible on this sub-zero December morning that the encounter had taken place barely four months before, or that the temperature that August day had been 102° in the non-existent shade. Korea was a land of extremes.

Darkhorse was not far from a junction with the Ridgerunners. The night of 2-3 December had passed quietly in Toktong Pass, where the five companies occupied separate perimeters. The Marines on Fox Hill lighted warming fires in the hope of tempting the enemy to reveal his positions. The Chinese obliged by firing from two near-by ridges. One CCF group was dug in along a southern spur of the hill held by Able and Baker Companies, and the other occupied a ridge extending eastward beyond Toktong Pass in the direction of Hagaru.

Simultaneous attacks in opposite directions were launched by 1/7. Davis led Morris’ and Newton’s companies against the CCF force barring the way to Hagaru. Tighe moved out with Kurcaba’s and Hovatter’s companies meanwhile against a larger CCF force on high ground south of the big bend in the road. This stroke took the Chinese by surprise. As they fell back in disorder, the Communists did not realize that they were blundering into the path of the oncoming Marines of Williamson’s How/5, attacking south of the MSR. Colonel Litzenberg, who had been informed by radio, turned to Lieutenant Colonel Murray and said, “Ray, notify your Third Battalion commander that the Chinese are running southwest into his arms!”[28]

Taplett was unaware that Tighe’s attack was forcing about a battalion of Chinese into his lap. He had spotted the Chinese in strength on the high ground south of the road when day broke. Attempts to lay artillery on the Chinese having failed because of the range from Hagaru, the 3/5 commander called for an air strike. The overcast lifted just as the Corsairs came on station. They hit the demoralized Communists with napalm and rockets while the 81mm mortars and heavy machine guns of the two converging Marine forces opened up with everything they had. Probably the greatest slaughter of the Yudam-ni breakout ended at 1030 with the CCF battalion “completely eliminated,” as the 3/5 report phrased it, and How Company in possession of the CCF positions.

At 1300 on 3 December, after Davis had cleared the enemy from the ridge northeast of Toktong Pass, the basic maneuver of the breakout was completed by the junction of 3/5 and 1/7. Several more fights awaited Taplett’s men on the way to Hagaru, but at Toktong Pass they had fulfilled their mission. That the victory had not been gained without paying a price in casualties is indicated by the following daily returns of effective strength in the three rifle companies:

This is a total of 243 battle and nonbattle casualties as compared to the 144 suffered by the same units during the CCF attacks of 27 to 30 November.
Chapter 12. Breakout From Yudam-ni
Entry into Hagaru Perimeter

When the truck column with its wounded men reached Toktong Pass, it halted to receive the casualties of 1/7, 3/5, and Fox Company of 2/7. Lieutenant Commander John H. Craven, chaplain of the 7th Marines, helped to assist the litter cases into vehicles. Since there was not room for all, the walking wounded had to make room for helpless men. They complied with a courage which will never be forgotten by those who saw them struggling painfully toward Hagaru alongside the truck column.[29]

When the tank leading the 3/5 column reached Toktong Pass it halted only long enough for Colonels Taplett and Davis to confer. D–23 then moved out and the four companies of 1/7 came down from their hillside positions and fell in behind.

Stevens’ 1/5, having leap-frogged 3/5, followed next on the way to blocking positions farther east on the MSR. Taplett remained in Toktong Pass until after midnight, acting as radio relay between Colonels Litzenberg and Murray, by now in Hagaru, and 2/5 in the rear. At about midnight the 3/5 commander sent G and H Companies into the vehicle column to furnish security for the artillery, and an hour later the remainder of the battalion joined the column. Roise’s 2/5, which had passed through 3/7 came next, followed by Harris’ rear guard.

Interspersed among the infantry were elements of artillery and service troops with their vehicles, and the column became more scrambled after each halt.[30] Two observation planes of VMO–6 circled overhead to give warning of enemy concentrations. Marine planes were on station continuously during daylight hours, strafing and rocketing to the front and along both flanks. A total of 145 sorties, most of them in close air support of troops advancing along the Hagaru–Yudam-ni MSR, were flown on 3 December by the following units:[31]

At the other end of the route the Royal Marine Commandos, reinforced by a platoon of tanks, were sent out from Hagaru at 1630 on 3 December, to drive the Chinese from the road leading into that perimeter.

Thanks to excellent air support, 1/7 met no opposition save harassing attacks. One of Davis’s flanking patrols reported the flushing out of a few Chinese so exhausted by cold and hardships that they had abandoned their weapons and holed up together for warmth. If these Marines had been in a mood for such reflections, they might have recalled that the American press of late had been bemoaning the supposed decline of the nation’s young manhood. UN reverses in the summer of 1950 had led editorial writers to conclude that our troops had neither the legs for long marches nor the backs for the bearing of military burdens. Mechanization had gone so far, they lamented, that we had become the servants rather than the masters of our own wheeled and tracked vehicles.

The Marines of Davis’ battalion might have taken a grim satisfaction, therefore, in encountering Chinese peasants, inured all their lives to privations, whose will to fight had been broken by the hardships of the past week. These Marines had not known a full night’s sleep during that week. They had subsisted on a diet of crackers varied with canned rations thawed by body heat. They had been under continuous nervous pressure as
well as physical strain, and yet they were able to summon one last burst of pride when the point neared the Hagaru perimeter at 1900 on 3 December 1950. Several hundred yards from the entrance a halt was called while the men closed up into a compact column.[32] Then they came in marching, their shoulders thrown back and their shooepacs beating a firm tread on the frozen road.

The Marines at the head of the column were followed by the walking wounded and the vehicles loaded with more serious cases, some of whom had been strapped to the hoods. All casualties were given medical care and the remaining troops taken into warming tents for hot coffee. Many of them appeared dazed and uncomprehending at first. Others wandered about aimlessly with blank faces. But there were few who had suffered any psychological disturbances that could not be cleared up with a good night’s sleep and some hot food.

Troops of 4/11 and 3/5 were due to arrive next at Hagaru while 1/5 and 2/5 echeloned companies forward along the MSR to provide flank protection. Not all the Chinese had lost aggressiveness, but the column had little difficulty until 0200 on 4 December. Then it came to a halt when prime movers of eight 155mm howitzers ran out of diesel fuel. As far back as Sinhung-ni 150 gallons had been requested but none had been delivered.[33] While the troops ahead, including G and H of 3/5, continued on towards Hagaru, unaware of the break, a bad situation developed around the stalled guns.

Following the halting of the convoy Major Angus J. Cronin, in charge of 4/11’s vehicle column, and his handful of truck drivers and cannoneers drove off a platoon of Chinese. These Marines were soon joined by Lieutenant Colonel Feehan’s 1/11 and Able Company of 1/5. By the time Lieutenant Colonel Taplett arrived, the 155s had been moved off the road by Captain O. R. Lodge of 4/11, who continued in spite of a wound until more severely wounded in the head.

Roise and Stevens arrived shortly afterwards and the three battalion commanders drew up a hasty plan. While 3/5 built up a base of fire a platoon of Easy Company, 2/5, would move through the ridge north of the road to knock out the Chinese strong point. Up to this time there had been few and minor instances of panic during the breakout from Yudam-ni. But some confusion resulted when the enemy took advantage of the delay to blow a small bridge ahead and increase his rate of fire. Thus a new roadblock awaited after the howitzers were removed, and two truck drivers were killed while the engineers repaired the break. Other drivers bypassed the bridge and made a dash for safety by crossing the little stream on the ice.

A comparatively few men, giving way to panic, were endangering the entire column. Behind one of the fleeing trucks an angry warrant officer pounded in pursuit, shouting some of the most sulphurous profanity that Lieutenant Colonel Taplett had ever heard.[34] This was CWO Allen Carlson of Baker Battery, 1/11. He disappeared around a bend in the road, only to return a moment later with a chastened driver towing a 105mm howitzer. Carlson hastily recruited a crew and set up the piece beside the road for point-blank fire at the enemy position while Taplett directed the fire of a 75mm recoilless rifle.

A Charlie Battery howitzer and a 1/5 heavy machine gun added their contribution as a platoon of Easy Company, 2/5, attacked under cover of air strikes. The Chinese position was overrun at 0830 at an estimated cost to the enemy of 150 dead. Two other attacks were launched by infantry units of Roise’s battalion on the high ground to the left before the MSR was cleared.

When the 155mm howitzers were pushed off the road, it had been assumed that they would be retrieved. Only 1000 yards farther down the MSR was a cache of air-dropped diesel fuel, but efforts to bring back replenishments were frustrated by enemy fire. Attempts at recovery by the British Marines failed later that day, and orders were given for the destruction by air of the eight stalled howitzers plus a ninth which had previously been abandoned after skidding off the road. This was the largest loss of weapons in the Yudam-ni breakout.

At 1400 on 4 December the last elements of the rearguard, 3/7, entered the perimeter and the four-day operation passed into history. Some 1500 casualties were brought to Hagaru, a third of them being in the non-
battle category, chiefly frostbite cases. It had taken the head of the column about 59 hours to cover the 14 miles, and the rear units 79 hours.

“Under the circumstances of its execution,” commented General Smith, “the breakout was remarkably well conducted. Since centralized control of the widespread elements was a difficult task, particularly with a joint command, unit commanders were required to exercise a high degree of initiative .... The spirit and discipline of the men under the most adverse conditions of weather and terrain was another highly important factor contributing to the success of the operation and also reflecting the quality of the leadership being exercised.”[35]
THE MARINES AT Hagaru would have been astonished to learn how much anxiety over their “encirclement” was being currently felt in the United States. It had been a rude shock for Americans who believed that the troops in Korea would be “home by Christmas” to realize that the unexpected Chinese intervention had created virtually a new war. This war, moreover, was apparently going against the UN forces. On Thanksgiving Day the victory over Communist aggression had seemed almost complete, yet only a week later the headlines announced major reverses. The Eighth Army was in full retreat, and an entire Marine division was said to be “trapped.”

So disturbing were the reports from Korea, newspaper readers and radio listeners could scarcely have imagined the mood of confidence prevailing at Hagaru after the arrival of the troops from Yudam-ni. Even prior to that event, few Marines had any doubts as to the ability of the Division to fight its way out to the seacoast.

The Hagaru perimeter presented a scene of bustling activity during the first days of December. Trucks and jeeps bounced along the bumpy roads in such numbers as to create a traffic problem. Twin-engined planes roared in and out of the snow-covered airstrip at frequent intervals throughout the daylight hours. Overhead the “Flying Boxcars” spilled a rainbow profusion of red, blue, yellow, green and orange parachutes to drift earthward with heavy loads of rations, gasoline and ammunition.

The busy panorama even had its humorous aspects. Parka-clad Marines displaying a five-day growth of beard went about with their cheeks bulging from an accumulation of Tootsie Rolls—a caramel confection much esteemed by Stateside youngsters for its long-lasting qualities. The Post Exchange Section had originally brought merchandise into Hagaru on the assumption that it would be established as a base. No space in vehicles was available for its removal and the commanding general directed that the entire remaining stock, $13,547.80 worth, chiefly candies and cookies, should be issued gratuitously to the troops. Tootsie Rolls proved to be a prime favorite with men who would have scorned them in civilian life. Not only were they more tasty than half-frozen “C” rations, but they resulted in no intestinal disorders. Moreover, they were useful as temporary repairs for leaking radiators.

There was nothing during the daytime to indicate the presence of CCF troops near Hagaru. Even in hours of darkness the enemy was quiet throughout the first five nights of December. Apparently the Chinese were powerless to renew the attack until reinforcements and replenishments of supplies and ammunition reached the area.
Evacuation of the wounded was the chief problem on 2 December, when it became evident that previous estimates of losses at Yudam-ni and among the Army troops east of the Reservoir were far too low. A total of 914 casualties were flown out by the C-47s and R4Ds that day and more than 700 on the 3d. Captain Hering and his assistants had assumed that the Air Force evacuation officer was screening the casualties until he informed them that this was not his responsibility. The Division surgeon then set a Spartan standard. He passed personally on all controversial cases and approved for evacuation only those in as bad shape as Lieutenant Commander Lessenden, the 5th Marines surgeon who had refused to be flown out and continued on duty after both feet were painfully frozen. Apparently it was not too severe a test for men who could stand the pain, since Lessenden suffered no permanent injuries.[2]

Captain Hering had to use his medical authority in several instances to overcome the objections of Yudam-ni casualties who declined evacuation, though in obvious need of hospitalization.[3]

The liaison airstrip at Koto-ri had been of little use, since it was outside the perimeter and exposed to enemy fire. But the completion of a new strip on the 2d made it possible to evacuate about 47 casualties that day from the 2/1 perimeter.[4]

More than 1400 casualties remained at Hagaru on the morning of 5 December. They were all flown out before nightfall, making a total of 4312 men (3150 Marines, 1137 Army personnel and 25 Royal Marines) evacuated from Hagaru by air in the first five days of December, according to Marine figures.[5] X Corps estimated a total of 4207 for the same period.[6]

R4Ds of the 1st MAW, flying under Wing operational control, were represented in the flights to and from Hagaru as well as the C-47s of the Combat Cargo Command, FEAF.[7] The large-scale casualty evacuation was completed without losing a man, even though the aircraft landing on the rough strip careened precariously as they bounced along the frozen runway. Only two planes could be accommodated simultaneously at first, but Marine engineers widened the 2900-foot strip until six planes could be parked at a time.

A four-engine Navy R5D made a successful landing with stretchers flown in from Japan. After taking off with a load of wounded, the pilot barely cleared the surrounding hills, and it was decided to risk no further evacuations with such large aircraft. Two crash landings marred operations on the field. An incoming Marine R4D, heavily loaded with artillery ammunition, wiped out its landing gear on the rough surface and was abandoned after its load had been put to good use by the gunners. A second accident involved an Air Force C-47 which lost power on the take off and came down just outside the Marine lines without injury to its load of casualties. Troops from the perimeter were rushed out immediately to rescue its occupants but the plane had to be destroyed.[8]

Not until long later were final official casualty reports rendered for the period of the Yudam-ni regroupment and breakout. Regimental figures are not available, and the totals included the losses suffered by the troops at Hagaru during the night of 30 November-1 December. Following are the figures for the 1st Marine Division as a whole throughout this five-day period:

Click here to view table
At 1359, on 3 December, X Corps issued OI 22, directing the 1st Marine Division to withdraw all elements to Hamhung area via the Hagaru-Hamhung axis as rapidly as evacuation of wounded and other preparations would permit. General Almond flew to Hagaru that same day for a conference with General Smith. Nothing further was said about destruction of equipment. At that very time, in fact, various critical items were being salvaged and flown out from Hagaru when space on planes was available.

Surplus weapons had accumulated as a result of casualties and the Marine general wished to avoid the destruction of any material that could be removed by air without interfering with casualty evacuation. It was particularly necessary to salvage and fly out the parachutes and packages used for air drops, since a critical shortage of these had been reported from Japan. Before leaving Hagaru, the Division also planned to evacuate large quantities of stoves, tents, typewriters, rifles, machine guns and damaged 4.2" mortars.

Space in empty planes landing at Hagaru was utilized not only for bringing in equipment and medical supplies, but also replacements. Since the Wonsan landing some hundreds of Marines, most of them wounded in the Inchon-Seoul operation, had returned from hospitals in Japan. These men, upon reporting at Hungnam, were temporarily assigned to the Headquarters Battalion, since the Division had no provision in its T/O for a replacement organization. Ordinarily they would have been returned to their units, but enemy action made this procedure impossible until the completion of the airstrip.

During the first five days of December, therefore, 537 replacements were flown to Hagaru, fit for duty and equipped with cold-weather clothing. Those destined for the 1st Marines were assigned to the 3d Battalion for perimeter defense, and personnel for the 5th and 7th Marines joined those units after their arrival at Hagaru.

Major General William H. Tunner, USAF, the chief of the Combat Cargo Command, expressed astonishment during his visit of 5 December on learning about these replacements. He had come to offer his C-47s for troop evacuation after the casualties were flown out, but General Smith explained that all able-bodied men would be needed for the breakout.
Visitors and press correspondents arrived daily at Hagaru in the empty C-47s and R4Ds. Among them was Miss Marguerite Higgins, reporter for the New York Herald-Tribune. General Smith ruled that for her own protection, considering the possibility of enemy attack, she must leave the perimeter before nightfall.

French and British publications were represented as well as most of the larger American dailies and wire services. At one of the press conferences the question arose as to the proper name of the Marine operation. A British correspondent had intended to refer to it as a “retreat” or “retirement,” but General Smith held that there could be no retreat when there was no rear. Since the Division was surrounded, he maintained, the word “retreat” was not a correct term for the coming breakout to the coast.[11]

General Smith and Lieutenant Colonel Murray were interviewed for television by Charles de Soria, who also “shot” Marines on infantry duty and casualties awaiting evacuation. These pictures and recordings were later shown in the United States under the title Gethsemane.

The correspondents were astonished to find the Hagaru perimeter so lacking in enemy activity. This quiet was shattered at 2010 on 5 December when two B-26s bombed and strafed the area. Marine night fighters were absent on a search mission, but one was recalled to offer protection against further efforts of the sort. A possible explanation was advanced by First Lieutenant Harry S. Wilson, of VMF(N)–542, who reported that he had received orders by radio to attack Hagaru. It was his conviction that Chinese use of captured radio equipment accounted for the B–26 attack.[12]

The interlude of CCF inactivity gave the 1st Marine Division an opportunity to build up a stock of air-dropped ammunition and supplies. Poor communications had prevented the obtaining of advance information as to the requirements of the Yudam-ni troops, and their needs had to be estimated by the assistant G–4.

It was planned that units moving out from Hagaru would take only enough supplies for the advance to Koto-ri. Materiel would be air-dropped there to support the next stage of the breakout.

The C–119s of the Combat Cargo Command were called upon to fly in the largest part of the total of the 372.7 tons requested for air delivery at Hagaru. C-47s and R4Ds were available for some items, particularly of a fragile nature; and specially packaged small drops to meet specific needs could be made by planes of the 1st Marine Aircraft Wing.

Officers and men of the Headquarters Battalion at Hagaru were ordered to assist the 1st Regulating Detachment in the operation of the Hagaru airhead. Army service troops were also assigned to the task, and dumps were set up adjacent to the drop zone for the direct issuing of supplies. The major items requested were artillery, mortar and small arms ammunition, hand grenades, gasoline and diesel oil, rations, and communication wire.[13]

There is no record of the amounts actually received. Pilots sometimes missed the drop zone so far that the containers were “captured” by the enemy or landed in areas where recovery was not feasible because of enemy fire. In other instances, the supplies fell near the positions of front-line units which issued them on the spot without any formalities of bookkeeping.

Breakage rates were high, due to the frozen ground. About 70 per cent of the POL products and 70 to 80 per cent of the rations were recovered in usable condition. Of the artillery ammunition delivered to the drop zone, 40 per cent was badly damaged and only 25 per cent ever reached the gun positions. About 45 per cent of the small arms ammunition was recovered and usable. A hundred per cent of the requested mortar ammunition and 90
percent of the 81mm rounds were put into the air over the drop zone, though the damage rate was nearly as high as that of the artillery shells.[14]

In spite of the seemingly low percentages of receipts as compared to requests, it was considered that the Hagaru air drops had been successful on the whole. “Without the extra ammunition,” commented General Smith, “many more of the friendly troops would have been killed. . . . There can be no doubt that the supplies received by this method proved to be the margin necessary to sustain adequately the operations of the division during this period.”[15]
The need of the Yudam-ni troops for recuperation was so urgent that 6 December was set as the D-day of the attack from Hagaru to Koto-ri. On the recommendation of his staff, General Smith decided that the need of the troops for rest and regroupment outweighed the advantages of a speedy advance, even though the enemy would be allowed more time to get his forces into position along the MSR.

Another factor influencing this decision was the thinning of the command group and staff sections of the Division. It will be recalled that General Craig, the Assistant Division Commander, had recently been returned on emergency leave to the United States. Colonel Walseth (G-1) was wounded on 30 November, while Lieutenant Colonel Chidester, had been MIA since that date. Colonel McAlister (G–4) had been directed to remain at Hungnam to co-ordinate logistic functions.

A serious handicap to planning was the shortage of staff personnel. This was due in part to the casualties suffered by the last convoy of Headquarters troops to move up from Hungnam. Moreover, the office force had been depleted by calls for reinforcements to defend the perimeter.

By dint of working round the clock, however, planning for the breakout to Koto-ri was completed on Schedule. OpnO 25–50, issued at 0800 on 5 December, provided for an advance of the 1st Marine Division at first light the following morning on the Koto-ri-Chinhung-ni-Majondong axis to close the Hamhung area. The principal subordinate units were assigned these tasks:

“(a) RCT–5 (3/1 attached) to relieve all elements on perimeter defense in the Hagaru area by 1200, 5 December; to cover the movement of RCT–7 out of Hagaru to the south; to follow RCT–7 to the south on the Hagaru-ri–Koto-ri–Chinhung-ni axis; to protect the Division rear from Hagaru to Koto-ri; and to follow RCT–7 from Koto-ri to the Hamhung area as Division reserve.

“(b) RCT–7 to advance south at first light on 6 December on the Hagaru–Koto-ri–Chinhung-ni axis to close the Hamhung area.

“(c) RCT–1 (–) to continue to hold Koto-ri and Chanhung-ni, protecting the approach and passage of the remainder of the Division through Koto-ri; and to protect the Division rear from Koto-ri to the Hamhung area.”[16]

All personnel except drivers, relief drivers, radio operators, casualties and men specially designated by RCT commanders, were to march on foot alongside motor serials to provide close-in security. It was directed that vehicles breaking down should be pushed to the side of the road and destroyed if not operative by the time the column passed. During halts a perimeter defense of motor serials was to be established.

Nine control points were designated by map references to be used for reporting progress of the advance or directing air drops. Demolitions to clear obstacles from the front and to create them to the rear were planned by the Division Engineer Officer.

Division AdminO 20–50, which accompanied OpnO 25–50, prescribed that the troops were to take enough “C” rations for two days, equally distributed between individual and organic transportation. Selected items of “B” rations were to be loaded on organic vehicles, and the following provision was made for ammunition:

“On individual, up to 1 U/F per individual weapon; on vehicle, minimum 1 U/F, then proportionate share per RCT until dumps depleted or transportation capacity exceeded.”

Helicopter evacuation was indicated for emergency cases. Other casualties were to be placed in sleeping
bags and evacuated in vehicles of the column.

Two Division trains were set up by AdminO 20–50. Lieutenant Colonel Banks commanded Train No. 1, under RCT–7; and No. 2, under RCT–5, was in charge of Lieutenant Colonel Milne. Each motor serial in the trains was to have a commander who maintained radio communication with the train commander.

Truck transportation not being available for all supplies and equipment at Hagaru, a Division destruction plan was issued on 4 December, making unit commanders responsible for disposing of all excess supplies and equipment within their own areas. “Commanding officer 1st Regulating Detachment is responsible for destruction all classes supplies and equipment remaining in dumps,” the order continued. “Unit commanders and CO 1st Regulating Detachment report types and amounts of supplies and equipment to this headquarters (G–4) prior to destruction. Permission to use fuel and ammunition for destruction purposes must be obtained from this headquarters (G–4).”
The Chosin Reservoir Campaign
Lynn Montross and Nicholas A. Canzona

Chapter 13. Regroupment at Hagaru
3/1 Relieved by RCT–5 at Hagaru

General Smith held conferences on 4 and 5 December of senior unit commanders. During the afternoon of the 4th General Almond arrived by plane and was briefed on the plan for the breakout. In a brief ceremony at the Division CP he presented the Distinguished Service Cross to General Smith, Colonel Litzenberg and Lieutenant Colonels Murray and Beall.

The night of 5–6 December was the fifth in a row to pass without enemy activity at Hagaru. But if Division G–2 summaries were to be credited, it was the calm before the storm. For the Chinese were believed to be assembling troops and supplies both at Hagaru and along the MSR to Koto-ri. Up to this time seven CCF divisions, the 58th, 59th, 60th, 76th, 79th, 80th and 89th, had been identified through POW interrogations. But there were evidences that the 77th and 78th were also within striking distance.[17]

At 1200 on 5 December the 5th Marines relieved 3/1 of the responsibility for the defense of the Hagaru area. Division elements other than infantry were withdrawn from the front line, leaving Lieutenant Colonel Murray’s three battalions, with 3/1 attached, disposed around the perimeter as follows:

1/5—From the Yudam-ni road around the north of Hagaru and astride the Changjin Valley to a point at the base of the ridge about 1,000 yards east of the bridge over the Changjin River.

2/5—In position on western slopes of East Hill.

3/5—From the south nose of East Hill west across the river to link up with 3/1 south of the airstrip.

3/1—South and southwest of airstrip in sector formerly held by How and Item Companies of 3/1.[18]

Not only were the CCF positions on East Hill a threat to Hagaru; they also dominated the road leading south to Koto-ri. Thus the plan for the breakout called for simultaneous attacks to be launched at first light on the 6th—RCT–5 to regain the enemy-held portion of East Hill, and RCT–7 to lead the advance of the Division motor column toward Koto-ri.

A plan for air support, prepared by the command and staff of the 1st MAW, was brought to Hagaru by Brigadier General Thomas J. Cushman, Assistant Wing Commander, on 5 December. Aircraft were to be on station at 0700 to furnish close support for the attack on East Hill. Along the MSR to Koto-ri an umbrella of 24 close support aircraft was to cover the head, rear and flanks of the breakout column while search and attack planes scoured the ridges flanking the road and approaches leading into it. Support was also to be furnished after dark by the night hecklers. All strikes within three miles of either side of the MSR were to be controlled by the ground forces while the planes were free to hit any targets beyond.

The concentration of aircraft covering the advance south from Hagaru was one of the greatest of the whole war. Marine planes at Yonpo would, of course, continue approximately 100 daily sorties to which VMF–323 would add 30 more from the Badoeng Strait. The Navy’s fast carriers, Leyte, Valley Forge, Philippine Sea, and Princeton were to abandon temporarily their deep support or interdiction operations and contribute about 100 or more attack sorties daily. The Fifth Air Force was to add more power with additional U.S. and Australian fighter-bombers as well as medium and heavy bomber interdiction beyond the bomb line. To augment the carrier support for the X Corps consolidation and possible redeployment by sea, VMF-212 had departed Yonpo on 4 December and was re-equipping in Itami for return to battle aboard the newly arrived USS Bataan. The Sicily was also heading for the area to take back aboard the Corsairs of VMF-214 on 7 December.[19]

Continuous artillery support, both for RCT-5 and RCT-7, was planned by the 11th Marines. Two batteries of the 3d Battalion and one of the 4th were to move out at the head of the RCT-7 train, the two from 3/11
to occupy initial positions halfway to Koto-ri to support the attack southward to that objective, and the 4/11 battery to take position in Koto-ri and provide general support northward in combination with the battery of 2/11 attached to that perimeter. The remaining batteries of the 3d and 4th Battalions would provide initial support from Hagaru southward until ordered to move out.

The three batteries of 1/11, with D/11 attached, were to support the operations of RCT-5 in a similar manner. Two batteries would move out at the head of the regimental train to positions halfway to Koto-ri, the remaining two would fire to the south in support of withdrawing units and then displace when the first two were in position. [20]

Throughout the night of 5–6 December, the darkness was stabbed by flashes as the artillery at Hagaru fired concentrations to saturate the area along the Hagaru-Koto-ri axis. In order to prevent cratering of the road the 155’s fired VT rounds. A secondary purpose of this bombardment was to expend profitably the surplus of ammunition which could not be brought out. [21]

At daybreak on the 6th the Division Headquarters broke camp. General Smith had decided to fly the command group to Koto-ri in advance of the troops, so that planning could begin immediately for the breakout from Koto-ri southward. General Barr visited during the morning and was informed that the 7th Infantry Division casualties who had reached Hagaru had been flown out. The remaining 490 able-bodied men (including 385 survivors of Task Force Faith) had been provided with Marine equipment and organized into a provisional battalion under the command of Lieutenant Colonel Anderson, USA. This battalion was attached to the 7th Marines and sometimes referred to as 31/7.

Throughout the morning General Smith kept in close touch with the progress of RCT-7 toward Koto-ri. At 1400 a reassuring message was received from Colonel Litzenberg, and the commanding general took off from Hagaru by helicopter. Ten minutes later he and his aide, Captain Martin J. Sexton, landed at Koto-ri. The other members of the command group, following by OY and helicopter, set up in a large tent at Koto-ri and started planning for the next stage. [22]

Chapter 13. Regroupment at Hagaru
East Hill Retaken from Chinese

Meanwhile, at Hagaru, Lieutenant Colonel Murray had designated his 2d Battalion for the assault on East Hill. At 0700 on 6 December, as the 4.2” mortars began their planned preparation, the 7th Marines had already initiated the breakout to Koto-ri. When Marine planes arrived on station at 0725, a shortage of napalm tanks limited the air attack to bombing, rocket and strafing runs. These had little apparent effect on the objective. Further air strikes were directed by the FAC, First Lieutenant Manning T. Jeter, Jr., who was severely wounded while standing on the crest to direct the Corsairs to the target. Captain David G. Johnson, the air liaison officer, took his place. A total of 76 planes participated in the day’s air attacks.

At 0900 Captain Smith’s Dog Company moved out to the assault (see Map 26) with First Lieutenant George A. Sorenson’s 3d Platoon in the lead, followed by the 2d and 1st Platoons in that order.[23] Attacking to the northward, Sorensen was pinned down by fire from Objective A before he had covered 50 yards. This was the enemy’s main forward position on East Hill, which he had held against Marine attacks ever since seizing it in the early morning hours of 29 November. First Lieutenant John R. Hinds replaced Sorensen, after that officer was wounded. While he engaged the enemy frontally, First Lieutenant George C. McNaughton’s 2d Platoon poured in flanking fires and First Lieutenant Richard M. Johnson’s 1st Platoon executed a flanking movement.

Chinese resistance suddenly collapsed about 1100. Thus it seemed almost an anticlimax that East Hill, after holding out against the Marines more than a week, should have been retaken at a cost of one man killed and three wounded. About 30 CCF dead were found.

As events were to prove, however, this was but the first round in a hard-fought 22-hour battle for the hill mass. The next phase began at 1130, when Roise ordered Captain Peters’ Fox Company to relieve Smith so that Dog Company could resume the attack against Objective B, a ridge about 500 yards to the southeast. The lower slopes of this position were now being cleared by 2/7.

After a 10-minute artillery preparation, the three platoons of Dog Company jumped off at 1250. The Chinese put up a stubborn resistance and it took until 1430 to seize the new objective. Marine casualties were moderate, however, and Captain Smith set up three platoon positions along the ridge running to the south whence he could control the road leading out of Hagaru.

Late in the day the enemy appeared to be massing for a counterattack in the saddle between the two objectives. Johnson called an air strike and all Dog and Fox Company troops within range opened up with everything they had as McNaughton led a patrol against the Chinese in the saddle. Caught between the infantry fires and the rocket and strafing runs of the Corsairs, the CCF survivors surrendered en masse to McNaughton and his platoon. About 220 prisoners were taken to set a record for the 1st Marine Division in the Reservoir campaign.[24]

At the request of Captain Smith, the saddle between the two Marine companies was occupied by reinforcements consisting of an officer and 11 men from the regimental AT Company and an officer and 32 men from the 4th Signal Battalion, USA. Shortly after dark the enemy launched a vigorous counterattack. Tanks and 81mm mortars fired in support of Marines who made good use of 2.36” white phosphorus rockets at close range.

Although the Chinese endured frightful casualties, they returned again and again to the attack until midnight. It was evident that they considered this a fight to a finish for East Hill, and at 0205 they renewed the assault against all three companies of the 2d Battalion as well as Charlie Company of the 1st Battalion.
The struggle during the next three hours was considered the most spectacular if not the most fiercely contested battle of the entire Reservoir campaign even by veterans of the Yudam-ni actions. Never before had they seen the Chinese come on in such numbers or return to the attack with such persistence. The darkness was crisscrossed with a fiery pattern of tracer bullets at one moment, and next the uncanny radiance of an illumination shell would reveal Chinese columns shuffling in at a trot, only to go down in heaps as they deployed. Marine tanks, artillery, mortars, rockets and machine guns reaped a deadly harvest, and still the enemy kept on coming with a dogged fatalism which commanded the respect of the Marines. Looking like round little gnomes in their padded cotton uniforms, groups of Chinese contrived at times to approach within grenade-throwing distance before being cut down.

The fight was not entirely one-sided. The Marines took a pounding from CCF mortars and machine guns, and by 0300 Dog Company was hard-pressed in its three extended positions pointed like a pistol at the heart of the enemy’s assembly areas. Both McNaughton and the executive officer, First Lieutenant James H. Honeycutt, were wounded but remained in action.

This was the second time in three months that Dog Company had spearheaded a Marine attack on a desperately defended hill complex. Northwest of Seoul in September, only 26 able-bodied men had survived to break the back of North Korean resistance. The company commander, First Lieutenant H. J. Smith, had died a hero’s death at the moment of victory, and First Lieutenant Karle F. Seydel was the unit’s only unwounded officer.

Now another Smith commanded Dog Company, and Seydel was killed as enemy pressure from front and flank threatened to overwhelm the three riddled platoons. Casualties of 13 KIA and 50 WIA were taken in the battle for East Hill as Dog Company and the provisional platoons fell back fighting to the former Objective A and tied in with Fox Company.

Along the low ground at the northern end of East Hill the Chinese were beaten off with ruinous losses by Jaskilka’s Easy Company of 2/5, Jones’ Charlie Company of 1/5 and three Army tanks (see Map 27). Enemy troops had to cross a comparatively level expanse which provided a lucrative field of fire for Marine supporting arms. Heaps of CCF dead, many of them charred by white phosphorus bursts, were piled up in front of the Marine positions.

Next, the Chinese hit Captain James B. Heater’s Able Company of 1/5, still farther to the left, and overran several squad positions. One platoon was forced to withdraw to the rise on which the Division CP had previously been located. The lines were restored at 0546 with the help of Lieutenant Hancock and his Baker Company, which had been in reserve. Altogether the 1st Battalion had suffered casualties of ten killed and 43 wounded, while the counted CCF slain numbered 260 in front of Charlie Company and 200 in the area of Able Company. George Company of 3/1 also beat off a Chinese attack on the south of the perimeter. With the coming of daylight these Marines found that they had one of the Chinese withdrawal routes under their guns. Mortar and rifle fire annihilated one group of about 60 enemy and another group of 15 Reds surrendered.[25]

The new day revealed a scene of slaughter which surpassed anything the Marines had seen since the fight for the approaches of Seoul in September. Estimates of CCF dead in front of the 2d Battalion positions on and around East Hill ran as high as 800, and certain it is that the enemy had suffered a major defeat.

When Marine air came on station, the Chinese as usual scattered for cover. About 0200 Murray ordered 3/5, which had not been in contact with the enemy during the night, to displace to the south at the head of Division Train No. 2, followed by 1/5 and Ridge’s battalion of the 1st Marines. This meant that Roise’s men with a platoon of tanks and the engineers in charge of demolitions would be the last troops out of Hagaru.
During the 22-hour battle on East Hill the 7th Marines had been attacking toward Koto-ri (see Map 28). On the eve of the breakout the gaps in the infantry ranks were partially filled with 300 artillerymen from the 11th Marines, bringing Litzenberg’s strength up to about 2200 men. 7th Mar OpnO 14–50 called for the advance to be initiated at first light on 6 December as follows:

“1st Battalion—to move out at 0430 to clear the ground to the right of the river;
“2d Battalion—supported by tanks, to attack as advanced guard along the MSR;
“Provisional Battalion (31/7)—to clear the ground to the left of the MSR;[26]
“3d Battalion—to bring up the rear of the regimental train, with George Company disposed along both flanks as security for the vehicles.”[27]

Daybreak revealed a peculiar silvery fog covering the Hagaru area.[28] The 1st Battalion, with Charlie Company in assault, had as its first objective the high ground southeast of Tonae-ri. No resistance was encountered, though 24 Chinese were surprised asleep in their positions near the objective and 17 of them killed.

The 2d Platoon of Dog Company, 1st Tank Battalion, was attached to 2/7 when the advance guard jumped off at 0630 from the road block south of Hagaru. Almost immediately the column ran into trouble. Upon clearing the road block the lead dozer-tank took three hits from a 3.5 bazooka. Within twenty minutes the column came under heavy fire from CCF positions on the high ground on the left. Fox Company, in the lead, was allowed to pass before the enemy opened up on the Battalion Command Group, Dog-Easy Company and Weapons Company. The fog prevented air support initially. When it lifted, First Lieutenant John G. Theros, FAC of 2/7, brought in Marine aircraft and 81mm fire on the CCF position.[29] It took a coordinated attack by the two infantry companies and the tanks, however, before the resistance could be put down and the advance resumed at 1200. Two and a half hours later the upper reaches of this hill were cleared by D/5.

After 2/7 and air smothered the initial Chinese resistance, Fox Company and the platoon of Dog/Tanks advanced down the road. About 4000 yards south of Hagaru they met the next resistance. Although the Chinese positions were in plain sight of 1/7, neither 2/7 nor air could spot them. Colonel Litzenberg and Lieutenant Colonel Lockwood attempted to coordinate mortar fires from 2/7 with observation from 1/7, but were unsuccessful because of poor radio communications. Following an erratic artillery barrage and some good shooting by the tanks, Fox Company cleared the enemy position about 1500, aided by a Dog-Easy flanking attack and the Provisional Battalion. In order to assist 2/7, Baker Company of 1/7 came down from the ridge west of the river to act as right flank guard.

Meanwhile 1/7 continued to push ahead methodically to the right of the MSR as the three rifle companies leapfrogged one another. Enemy contact was continual but no serious opposition developed during the daytime hours. On the left flank the Provisional Battalion had several fire fights, while the advance was uneventful for the 3d Battalion following in the rear of the regimental train.

About 5000 yards had been covered by dusk. Enemy resistance stiffened after dark, as had been anticipated. The planners had realized that the movement could have been made in daylight hours with fewer losses in personnel and equipment. But intelligence of the expected arrival of CCF reinforcements influenced the decision to continue the march throughout the night even at the cost of increased opposition. By noon long lines of Chinese could be seen along the sky line to the east of the road moving towards the MSR. Air attacked these
reinforcements but could not stop their movement, as later events proved.

About 8000 yards south of Hagaru, in Hell Fire Valley, a Chinese machine gun on the left stopped the 2d Battalion at 2200. The column was held up until midnight before Army tank fire knocked out the enemy gun. After covering 1200 more yards a blown bridge caused another halt while Dog Company engineers made repairs. Movement was resumed at 0200 when a second blown bridge resulted in a delay of an hour and a half before it could be bypassed.
